deception of the disciples long after the falseness of the supposed heavenly mission has been internally suspected or perceived. This is the main truth of the poem. Another is one equally well attested, and certifies that if the fanatical dupe of his own hallucinations and aspirations is so far successful in the highways and byways as to gather around him a body of believers, it often happens that he is joined by a pretended convert of abilities which are strictly supplementary to his own, and as capable of coping in earnest with worldly forces in the contest for power or wealth, and of ruling men, as incapable of apprehending the things of the spirit. As David in Mr. Taylor's poem stands for the self-duped fanatic and prophet, who afterwards gives in to a policy which his better self does not approve, so Master Nimrod Kraft is the worldly right-hand of the divinely commissioned one, the unscrupulous organizer and administrator and the possible usurper by-and-by of the chief place. Still another of the truths on which the poem is built is that prophets are liable to the seductions of handsome, clever, energetic women, whose acquaintance they make after their wives have become faded perhaps; or perhaps after they have ceased to keep up with their prophet-husband's advances in spiritual development. Such a "brilliant" woman—tall, dark-eyed, mistress of several languages, accomplished in music, a poetess of facile skill, sharp-witted, very well acquainted with several of the ways of the world, and convinced she knows them all, a child of wealth, hungry-hearted withal—is Livia Romney, who, in all respects very unlike the faithful Rhoda, seeks control of David's heart and career, obtains it, is chiefly instrumental in causing polygamy to be adopted as the policy of the faithful, and in every way exercises a baleful influence. Also, incidentally, she teaches us, we suppose, that the Rhodas sitting beside their children and their work-baskets are infinitely more respectable than their brilliant sisters, which they certainly are as the two types are here exhibited.

To clothe with life this collection of observed truths which we have enumerated, to utilize them and make them serve for a poem, Mr. Taylor has had recourse to the old Mormon history of a generation or more ago. He has not literally followed it in its details; sad work that would have made with the David and Rhoda love-tale, which struggles throughout for ascendancy over the story of the Latter-Day Saints, and at last, so far as the reader is concerned, and apparently so far as the writer is concerned, fairly gets the better of its antagonist. But without the necessity of being literal, he has been easily able to appropriate a mass of material which has saved his invention much labor: the deluded student of Scripture, who very soon makes himself half-distracted by ignorant ponderings on the naked but obscure words of the New Testament; the shrewd and worldly-minded Kraft, who joins the leader when he sees the people will follow the new apostle; the promulgation very soon of the revealed command that the faithful must turn pilgrims and seek a new land and free homes; the setting up of a productive tithe and tax system; the hostility of the Gentile world outside; the revelation from heaven of the plural system of wives—these events are all approximately true to the course of early Mormon history, and Mr. Taylor finds his general purpose well served by the records of the Smiths and Youngs and their band. His own peculiar contribution to the poem is the characters of David, Rhoda, Livia, Nimrod, and the one or two other figures of the *dramatis personæ* that rise to the rank of characters, and of these the least successfully depicted is at the same time the most important, and the one very much the most difficult to describe or to depict dramatically. We speak of David—a weak mind who passes through three stages of mental experience before our eyes. At first he is religiously confused and convulsed by a set of emotions which it is extremely hard to realize to ourselves, but to which, unfortunately, it is extremely easy to fit any quantity of a peculiar phraseology which is thought to be expressive of them. Our author gives us much of the peculiar language, but apart from that he does little to make us appreciate the fanatic's state of mind. At least, he does little in this direction when he shows us that the searcher into mysteries, betaking himself into the desert mountain, sees on the second day a snake looking at him, tries the power of his eye on the intruder to see whether the prophet or the serpent-tempter is the more powerful, and rejoices, as over a confirmation of his call, when the latter slips away. A "God-intoxicated man," who is within two years to lead a host into the wilderness, might reveal, we think as we read, a little more force than this. Perhaps, with the same intention of showing us how the absorbed devotee is ready for the acceptance of miracles anywhere, Mr. Taylor makes Rhoda, who is alarmed at her betrothed lover's long absence in the mountain, carry him out some food, which her servant secretly sets on a rock near a brook. This David soon finds, and, as he had not long before spoken of a supply of food as something that would be taken by him to indicate the authenticity of God's call to him, he is of course greatly strengthened and edified when he beholds the viands spread on the rocky table. But this incident could have been but as corroborative evidence of an inward proof buried in the heart of David, which not only assured him of his mission but alone after all made his preaching the effective means which we are asked to believe it was. Nor, no more than we get a good view of David's time of darkness, do we anywhere get any good sight of his time of triumph, or of his later time of perhaps deeper trouble, when he more than suspects himself of chicane, knows himself false to his first love and its concomitant duties, and more than doubts if he had ever been other than a miserably false messiah. While we make this objection to Mr. Taylor's dealing with David in his most important capacity, we may remark that the only really dramatic moment in this poem—the only point where interest overpowers a pervading gentle dulness—has reference to this same breakfast beside the mountain brook: David is hesitating about the establishment of polygamy, and wears a troubled countenance about the house. Rhoda attempts to share his counsels and to soothe him, and slowly he imparts to her the new revelation of which he is now daily expecting the signs; he has been led so far on the way that he feels it is the Lord's doing. Rhoda, as may be supposed, is much affected; she sees the hands of Livia and Nimrod Kraft, and energetically declares that this policy is neither the Lord's nor David's. David then asserts that he has felt the Divine guidance in the matter; asks how he can refuse obedience to the power which so long has directed his steps; and, recurring to the early days, speaks of the great interposition in his behalf when, after long wrestling with the spirit, he awoke from his trance on the dividing verge between this world and the next, but, lo! he saw his bread prepared for him:

" . . . I ate and I was saved."

Then follows what we have called the best scene of the tragedy, with its highly dramatic collision of deep feelings and powerful interests—the wife's and mother's, the husband's, leader's, and prophet's:

RHODA.
(*Eagerly.*)
. . . . . Who saved you then
May save again! 'Tis naught to offer food;
But I obeyed a voice, this moment clear,
And charged, I feel, with all the Lord's high will
In woman manifest. I pray you, take,
Even from my hands, which then were hid from view,
Now, openly, my evidence from him!

DAVID.
What double sense is in your words? I hear,
Not comprehending.

RHODA.
How could I refrain?
Two days had passed: I dared not interrupt
Your solitude of soul, and prayers that fed
Upon the life of your forgotten frame;
But, guided near you, oh, thank Him for that!
I left the food—

DAVID.
You? you!

RHODA.
As was his will.
What ails you, David?
(*Aside.*)
He is deadly pale;
There's something fierce and strange within his eyes:
He frightens me.

DAVID.
You brought me food?

RHODA.
I did.

DAVID.
What else? What more have you in secret done?
Who taught you so to counterfeit the Lord?
Woman! to burrow underneath my feet,
And make a hollowness where rock should be!
How dared you cheat me?

RHODA.
Slay me with your hand,
Not with such face and words! If I but saved
(You say it saved you), how could love refrain?
I have obeyed, believed all else in you,
As I believe and worship still: forgive!
[*She falls on her knees before him.*

DAVID.
Not unto me your husband, David, man;
But, if I be a Prophet of the Lord,
Yes, *if!* It seems to you a little thing:
Rise up! I cannot answer now: the house
Rocks to and fro, the temple's pinnacles
Dance in the air like devils' shuttlecocks:
There's nothing stable. Rise, I say again!
[*She rises to her feet.*
Now take your seat and sew! I've heard it said
Women think better when the hand 's employed:
If 'tis so, think!
[*He moves toward the door.*

RHODA.
. . . . David!

DAVID.
. . . . . I go to pray.
(*Exit.*)

RHODA.
Come back! He's gone. O God! what have I done?

Rhoda is so drawn as mostly to look rather pale, though she conciliates the

reader's regard by several times showing signs of active life and personal existence. The lurid Mrs. Romney, on the other hand, is of a commonplace bookish type and purely a stage figure. The "line of goods," as they say, is well known, and there is nothing about this particular sample to make looking at it worth while.

THE RAILROAD MANUALS.*

THERE are now about 60,000 miles of railroad in this country, *represented* by over three thousand millions of dollars in securities, good, bad, and indifferent, and actually *representing*—for the two things are very different—an investment of twenty-five hundred millions of dollars. It is in no way surprising, therefore, that a very considerable demand exists for publications purporting to furnish some reliable information as to the condition of the various enterprises in which so large a proportion of the accumulated savings of the country has been put away. It is greatly to be regretted that these are no better than they are. The two best are undoubtedly those compiled by Messrs. Poor and Vernon. The sixth of Mr. Poor's annual series and the second of Mr. Vernon's are now before us, and each is rather suggestive of what it ought to be than of commendation of what it is. Poor's book is statistical, and Vernon's historical. In a certain respect they are thus complementary to each other, and, in its make-up, its maps, and its general effect, Vernon's book is decidedly creditable. Here, however, commendation must stop. Mr. Vernon hardly appreciates the duty of an editor of a railroad manual. His introductory chapter is badly written and worse conceived, reminding one painfully of Mr. Poor's earlier efforts in the same line. Editors of this class of compilations seem, almost as a matter of course, to misconceive their functions. They have an abiding faith, which is truly admirable, that people go to their pages for philosophy as well as for facts. Accordingly, Mr. Poor, through all the earlier volumes of his series, was wont annually to dribble out to us his views on things in general connected with railroads and their administration, and Mr. Vernon has now taken up the practice at the point where the former dropped it. By so doing, he has deprived his manual of just half its value. The twenty pages of editorial matter which should have been devoted to a most careful tabulation of statistics, to comparisons, and the consequent rigid sifting of results and exposure of suppressions—all this room is wasted in commonplaces about the financial panic, the decline in railroad construction, the decease of prominent railroad officials, the Grange movement, and abortive efforts at Congressional legislation. We have a surfeit of all that in the columns of the daily press. When we buy "manuals" we want something else—figures, and nothing but figures. In the first place, we want the statistics of the various roads well grouped together and made intelligible by maps properly prepared. With these neither Vernon nor Poor yet furnishes us. We then want a thorough system of tabulation—synthetical and analytical, positive and comparative—which will enable us to see at a glance what the whole thing amounts to. All beyond this is surplusage. Neither of the present manuals is complete in these respects; each possesses features which the other might advantageously borrow. Poor's manual is wholly unsupplied with maps, and makes no pretence at all at arrangement. Indeed, the returns of the various corporations seem to be thrown into some common receptacle as received, and then fished out hap-hazard as the printer calls for copy. Different members of the same group of roads are thus found at opposite ends of the volume, while the corporations of Texas, without rhyme or reason, appear cheek by jowl with those of Maine. Vernon, on the other hand, has maps and a system of arrangement, but there is a deficiency in his statistics, and not unseldom he is, to say the least, reckless in his statements of fact.

Leaving, however, the "get up" of the manuals, it would be well to consider for a time their contents. Just now they are very melancholy reading. It was but one short year ago that every one was rich; coupons were continually maturing, and were promptly paid; stock which had cost nothing, was sold at 20, at 50, at 100 per cent. of its face value; new forms of securities, each more profitable than the other, were put upon the market as fast as they could be printed and signed, and faster than the joyous brood of brokers could place them. To-day, one-quarter part of the whole railroad bonded indebtedness of the country is discredited; the coupons of every fourth bond, when presented at maturity, are returned unpaid. As for the stock of the roads, the figures are simply incredible. After you leave the Atlantic seaboard, and get fairly into the area of recent "wild-cat" construction, as compared with dividends angels' visits seem matter of daily and almost hourly occurrence. Not a dividend is paid by any road in Michigan, and but one in Indiana. Illinois boasts five dividend-paying companies, Wisconsin one, and Iowa three; but Kansas, Nebraska, Minnesota, and almost all the Southern States, are a dreary, hopeless blank.

Indeed, it requires some study of the figures to enable us to realize how all-absorbing the mania for railroad investment of the last six years really was. It was a simple craze. Under the stimulus of the land-grant system, it swept through the country like a first-class epidemic, and is probably in its effects to-day occasioning not less quiet suffering. Kansas was the very hot-bed of the disease, and a very few figures, drawn from these manuals, will illustrate the madness which prevailed as regards that region, which differed only in degree from others. Ten years ago Kansas had no railroad at all; it now has little less than 2,500 miles, about 33 per cent. more than Massachusetts, with one-third of her population; in other words, Massachusetts has seven times the population of Kansas in comparison with *its* railroad mileage. But the Kansas railroads were built on the sale of their bonds, not on their stock capital; accordingly, we find them loaded down with over $70,000,000 of indebtedness. The interest on none of this is now paid, but as long as money could be borrowed with which to pay it, it did not average less than 8 per cent., or $5,600,000 per annum. All that the Kansas roads in their best condition ever pretended to earn was about $3,400,000, or less than 5 per cent. on their bonded indebtedness. Nor indeed did they ever earn that amount, or anything which approached to it. The claim was that in a business which averaged but $3,800 per mile in gross receipts, the net receipts were no less than 40 per cent. of that amount. To one accustomed to dealing with railroad accounts such a claim is simply preposterous. To produce such a result, the operating and construction account would be muddled beyond all comprehension. This is the time for liquidation; the day for doctored balance-sheets is, for the time being, gone. Kansas, like many other of the Western States, is poor and sparsely settled. To its railroad system it can contribute but very sparingly even for its population. It is probably safe to say that the cost of operating and maintaining the Kansas railroad system will consume for years to come 75 per cent. of its gross receipts. The problem will then be how to make at most $3,000,000 per annum pay 8 per cent. interest on $70,000,000 of principal, besides a large amount of accrued and unpaid coupons which are covered by the mortgages.

The simple truth is that madness has ruled the hour—that the whole system of recent railroad construction in the West was dishonest and rotten to the very core. The only people who made anything by it are the people of the West—they secured their railroad system, and, curiously enough, it is they who are loudest in their complaints over the results. Three hundred millions of external capital, upon which not one cent of interest is now paid, have within the last few years been applied to Western railroad construction. It is all there, and cannot be removed. Yet the race of unthrifts who have thus stripped themselves of their substance in a feverish pursuit of gain are now fiercely denounced as "grasping capitalists" by those who alone enjoy an assured use of the wealth, without the unpleasant necessity of paying interest therefor. The bubble, however, is burst, and it will probably be some years before the hardy pioneer of the West is again burdened by a too great eagerness on the part of the East to develop his means of transportation. It has cost a great deal to learn the lesson, and after all it was a somewhat elementary one. We call ourselves a shrewd people, and yet we have just paid some $300,000,000 to satisfy ourselves that railroads in a wilderness are poor property.

RECENT NOVELS.*

IN a book which bears on its title-page the statement that it is a novel of New York and Hartford one may be pretty sure of finding a good supply of local color, and it cannot be denied that we have it in 'Scrope; or, The Lost Library' in good, fast tints, which contrast very strongly with the pallid hues of most American novels. Certain parts of New York, for instance, are described with the utmost exactness, and deep familiarity with life in this city is shown by the introduction of a fire in Broadway, of adventures in a low saloon, in a gambling-hell, in various business offices, and of an important newspaper reporter, whom it would delight us to be able to regard as a fair representative of his class. The underground bar-room is also brought in, or, as some say, lugged in; but our author is never sparing of details.

We have often had occasion to speak of Mr. Benedict's writings, but generally only with a certain feeling of disappointment that so painstaking a writer should still come no nearer the mark than he did in his earlier novels, which bear a very close resemblance to the ordinary English novels. In most of them he drew characters which are more familiar to us in the

'John Worthington's Name. By Frank Lee Benedict.' New York: Harper & Brothers. 1874.

printed page than in our daily experience; and hence it is with some surprise as well as satisfaction that in 'John Worthington's Name' we find at last brought upon the scene personages who may be called lifelike enough if we will begin by appreciating that they are acting in an atmosphere highly charged with the rather cheap sensational. This is more than we could ever before say in Mr. Benedict's praise; and we admit that what we say now is not full of promise for his future. The heroine, Mrs. Marchmont, a widow lady of this city, has fallen by her extravagance into money troubles, and, from having placed confidence in a Wall-Street broker, gets to a certain extent in his power, and is exposed to his odious attentions. These harass her extremely, and being obliged to borrow a sum of money to rid herself of him, she has recourse to a professional money-lender, who requires an endorsement upon her note. She has no one to turn to; her friend and possible lover, John Worthington, has made a vow, as she knows, never to put his name to any paper; so, in her despair, being unable turn to him, she forges his name.

'The Clique of Gold' is the title of a translation from the French of Gaboriau of a very sensational novel, in which we find a good hero and heroine, and a bad hero and heroine, with each pair plotting against the other pair, until, after all manner of singular perils and attempts at murder and suicide, justice stalks in red-handed at the close. M. Gaboriau, no more than many of his betters, ever neglected to spice his novels with social relations in what the cooks would call a "high" state. But, to do him justice, his own apparent strongest desire was to make the wonderful detective and the unsuspected criminal the real centre of the momentary interest which he was capable of imparting. These always occupy the first place; and, indeed, the reprehensible social relations occupy a place no higher than the third—the second, we should say, being taken by the author's more or less indirect assaults on the French method of administering criminal justice. But he is not worth many words; he was, we believe, an industrious workman—no prodigy and no eight-hour man—at the business of manufacturing the Detective novel. This he has done here, doing it, too, very ill, for the book is perhaps his dullest.

Mr. Eggleston's stories have had from the beginning a great popularity with a large circle of readers, and it has been in many ways well deserved. They are full of incident; all of these rapid events occur amid scenes almost entirely new to the Eastern reader and the new generation of Westerners; and they have, in a high degree, the element of dialectic speech, which intrinsically for itself is a popular element, and which, delusively perhaps as often as really, confers upon the personages of the story that appearance of reality and individuality for which the novel-writer has to watch so keenly and work so hard. Another important quality of Mr. Eggleston's books, and one which does much to hold fast the sort of readers whom his novelty and liveliness attract, is his good nature, which never fails to make him always kind to his characters and keeps for him a constant supply of a practical poetic justice which ensures the marriage of the almshouse girl to the hero of the tale, and makes out of the hero the sheriff of the self-same county where the regulators had nearly had him convicted for horse-stealing. It may be doubted if we ought to set down another of the traits of Mr. Eggleston's books as one of the causes of the popular favor with which they have met; but it will not now be doubted so much as it would have been a little while ago. We refer to his preaching with great freedom, indeed with a camp-meeting *abandon*, a theology and religion which at the same time are in one way most exacting and in another most loose. But it may be roughly said of the system, that much of the strictness and loftiness must be theoretical, while of the looseness much may be found in the practice of frequently backsliding but readily repenting sinners. It is, in brief, a rude sort of "revival" religion of the general type known all over the country—a religion of sudden conversions accompanied with wrestlings of the soul and perturbations of the body; little or no learning of any kind; a scanty knowledge and a correspondingly small respect for the theological fabric which has been reared by the Christian intellect working under all circumstances through many ages; a reliance upon the testimony of the patient's class-leader and his own inner feelings as evidence that the works which he does are or are not works such as should be wrought by a true member of the "Church of the Best Licks," as Mr. Eggleston calls it in one of his books. We dare say that any description which we should give of the tenets of a given church would be open to objections and contradictions. We mean only in brief to indicate the kind of religious experience through which Mr. Eggleston, in a way whose sort of coarse familiarity with sacred things will offend some persons, causes his personages to pass. The "getting of vital religion" is a critical incident in his stories as common as the hero's having a fever in the old-time novels; and it will be accordingly as one thinks concerning the magnitude of religious questions whether he will hold that Mr. Eggleston properly appreciates the fact that he has settled a question more important than Tom Jones's having a fever or falling off a horse at the right door.

In this particular novel there is nothing that calls for special remark. Mr. Eggleston has had to suffer from the demand made upon him as soon as he wrote a readable story that he should turn himself into the coming native novelist. This he has not done; but we do not see that he does not write as before, nor why he should not continue to amuse an audience which, if not very critical, or, to tell the truth, not critical at all, is respectable for many things. We wish to suggest that while Mr. Eggleston is doubtless not to be the great American novelist, neither is he to be the great Anglo-German or the great Anglo-Irish novelist whom we are to produce. His German broken-English and his Irish broken-English have had the effect of casting us into doubt about the authenticity of his Hoosier dialect. There seems, however, little occasion to doubt that in his picture he has been faithful to the main features of the singular life which is his theme. The riot and roughness of "the boys"; the sort of sneaking desperadoism of the disguised bands of thieves infesting the rural neighborhood, unsuspected at first, and at last dealt with by the vigilants; the development of a rude manliness of character; the scenes, simple and often sordid, of the daily life of the people—all these seem to be given us by Mr. Eggleston with as much practical truthfulness as by the realistic author of the first part of Lamon's 'Life of Lincoln.' By-and-by, it is true, it will be time to remind Mr. Eggleston that we have had enough.

In the 'Floating City' M. Verne gives an account of a trip from Liverpool to New York in the *Great Eastern* in 1867, and the romantic adventures with which some of the passengers met. This was the same trip which brought over "the celebrated Cyrus Field of New York, the Honorable John Rose of Canada, the Honorable J. MacAlpine of New York, Mr. and Mrs. Alfred Cohen of San Francisco, Mr. and Mrs. Whitney of Montreal, Captain McPh —— and his wife," who will all no doubt be glad to certify to the leading incidents of the voyage narrated by M. Verne. One of these was an extremely interesting duel with weapons described by the author as basket-hilted "battle-swords," in which two of the passengers, with good reason, engage. A duel on ship-board is an unusual thing, and it may be worth while to mention that the place of rendezvous in this case was the stern of the vessel, though whether on the poop-deck or just aft of the round-house we do not quite make out; but, wherever it was, it speaks volumes for the steadiness of the *Great Eastern*. The story is an amusing extravaganza which will not bear the closest critical analysis, yet, like so many other things in this world which do not satisfy the imperious demands of the intellect or the ardent longings of the heart, may still make the reader laugh. The 'Blockade-Runners' is a romance of the late war, of which the scene is laid on board a blockade-runner, in Glasgow, and in Charleston.

'Prudence Palfrey' is a slight sketch of New England life, with numerous bits of satire and humor, in which many of the peculiarities of the people of that section are touched upon in the usual manner. The story opens with the young hero, John Dent, penniless, and, as a natural consequence, soon madly in love with his uncle's ward, Miss Prudence. Since he is anxious to make a sudden fortune before marrying, he leaves for the West in search of gold-mines, but without any formal engagement to his lady-love. In this new region he makes his fortune, and loses it again by the treachery of his partner, "Nevins." Meanwhile, Miss Prudence hears nothing from him for a long time after his first letter, and lends a not wholly unwilling ear to the love-making of a Mr. James Dillingham, a young clergyman who had lately come to the place where she lived. News is brought to the uncle, who favors Dillingham, that John Dent is dead. Dent returns, however, and it turns out that Dillingham, the clergyman, is really Mr. "Nevins" himself, who had been a road-agent, or something of the sort, on the Western plains for many years before John Dent met him. He it was who had already robbed Dent, and had afterwards had him half-killed by an accomplice, and now, although he fails to win Miss Palfrey, he manages to keep possession of his enemy's fortune. It cannot be denied that this turn of affairs is a surprise to the reader, who could nohow have imagined that the gentlemanly, polished clergyman was really a desperate ruffian fit for the gallows, and if keeping the plot a secret were the most commendable thing in fiction, 'Prudence Palfrey' would at once take a very high rank. It would almost seem that Mr. Aldrich, having recently had success with a bright, clever trifle, 'Marjorie Daw' (in which the most commendable thing was just this same

'Prudence Palfrey. By T. B. Aldrich.' Boston: J. R. Osgood & Co. 1874.

keeping of the plot a dead secret), had been led to the belief that it is a good thing for the author at the end of any story, of what kind soever, to come out and say "Boh" to the reader, and ask him what he thinks of that for a somersault. In this case his course has occasioned the turning at the last of a sketchy tale of sentiment and New England character into a tale of clumsy incident, and this is a rudimentary artistic blunder.

PEEPS AT OUR SUNDAY-Schools.

By Rev. Alfred Taylor. 12mo, price $1 25. Sent by mail on receipt of price.

Full of interest to the friends of Sunday-schools. The author carries you with him on his visit to the schools, and makes the trip an exceedingly lively, pleasant, and profitable one. In his preface he says:

"As you go with me to look at the Sunday-schools, and we enjoy our brief glimpses at them, please to remember that these pages are not meant to contain finely spun theories or didactic disquisitions on what a Sunday-school ought to be, but rather pictures of what our schools are."

JUST PUBLISHED.

A RARE NEW HISTORICAL WORK.

SWINTON'S OUTLINES

OF

The World's History.

ANCIENT, MEDIÆVAL, and MODERN, with special reference to the History of Civilization and the Progress of Mankind. For use in the Higher Classes in Public Schools, and in High Schools, Academies, Seminaries, etc. By WILLIAM SWINTON, M.A., Author of 'Condensed History of the United States,' 'Campaigns of the Army of the Potomac,' etc. With numerous single and double page maps and many illustrations. 500 pages, 12mo. Price $2. Specimen Copies by mail on receipt of $1, if desired for examination with a view to introduction.

Prof. Swinton has brought to the preparation of this book three rare advantages: 1. A ripe historical scholarship, derived from years of special study; 2. Ample experience in teaching, every paragraph in the OUTLINES having been tested over and over in the class-room; 3. An eminent faculty for making practical text-books. The publishers issue the work in the best style of the publishing art, and have confidence that it will prove one of the most valuable contributions ever offered to educational literature.

The Literary Reader.

TYPICAL SELECTIONS from the best British and American authors, from Shakspere to the present time, chronologically arranged; to which are added Biographical and Critical sketches and numerous notes, a Glossary of the difficult words in the text, and a Dictionary of some of the most familiar of British and American authors. Intended for the use of Schools, Academies, and Seminaries, as also for the home. By GEORGE R. CATHCART, M.A. 1 vol., cloth, leather backs, 12mo, 438 pages. Price $1 60. By mail on receipt of $1, if desired for examination with a view to introduction.

The Complete Algebra.

ROBINSON'S SHORTER COURSE. For Schools and Colleges. By JOSEPH FICKLIN, Ph.D., Professor of Mathematics in the University of Missouri. 1 vol. 8vo, sheep, 425 pages. Price $2 20. Specimen Copies by mail to teachers on receipt of $1 25, if desired for examination with a view to introduction.

This work has been prepared with much care, and abounds in new and striking features. Very many of the definitions, rules, and demonstrations are entirely new. The arrangement of the book differs from that of any other now before the public, and the whole work is well graded and progressive, and in style and typography unsurpassed.

NEW BOOKS.

THE PROPHET: A Tragedy. By BAYARD TAYLOR. 1 vol. 12mo, $2. In this dramatic poem, based upon the earlier history of Mormonism, Mr. Taylor portrays very effectively the scenes and circumstances in which the "prophet" saw visions and at length attained full assurance of his mission. The delineation of varied characters is admirably distinct; the corrupting influence of ambition and self-indulgence is depicted with graphic force; while the unconscious sublimity of woman's pure love and loyalty is touchingly revealed.

BOYESEN'S GUNNAR. $1 50.

"A love-story of Norwegian life, of wonderful freshness, the very breath of nature in its pages. It has the charm of Björnson himself, and is true poetry in prose."—*New York Evening Mail.*

WALKER'S THE INDIAN QUESTION. $1 50.

"What shall we do with the Indian? Those who wish a considerate and noble-minded answer to the various forms of this question can hardly do better than to turn over the pages of this book. It is, indeed, a book of uncommon value."—*Christian Union.*

ALBERT MASON, Publisher,

NEW YORK.

THE TENTH VOLUME OF THE INTERNATIONAL

Scientific Series.

D. APPLETON & CO.,

549 AND 551 BROADWAY, NEW YORK,

Publish this day

THE SCIENCE OF LAW. By Sheldon Amos, M.A., Barrister-at-Law, Professor of Jurisprudence in University College, London. 1 vol. 12mo, cloth, price $1 75.

"This little book deserves to be widely welcomed by the reading public. The names are few, in the list of great writers belonging either to this country or England, who have made contributions of any weight to legal science. Professor Amos comes forward to do what he may toward supplying this deficiency, and he has proved himself equal to the task. He has produced a work on the science of law which will not only have its interest for the legal profession, but will have a greater interest beyond that profession."

The volumes already issued are:

I. FORMS OF WATER, in Clouds, Rain, Rivers, Ice, and Glaciers. By Prof. John Tyndall, LL.D., F.R.S. 1 vol. 12mo, price $1 50.
II. PHYSICS AND POLITICS. By Walter Bagehot. 1 vol. 12mo, cloth, price $1 50.
III. FOODS. By Edward Smith, M.D., LL.D., F.R.S. 1 vol. 12mo, cloth, price $1 75.
IV. MIND AND BODY. The Theories of their Relation. By Alex. Bain, LL.D., Professor of Logic in the University of Aberdeen. 1 vol. 12mo, cloth, price $1 50.
V. THE STUDY OF SOCIOLOGY. By Herbert Spencer, author of 'A System of Philosophy,' 'Descriptive Sociology,' etc. 1 vol. 12mo, price $1 50.
VI. THE NEW CHEMISTRY. By Josiah P. Cooke, Jr. 1 vol. 12mo, cloth, price $2.
VII. THE CONSERVATION OF ENERGY. By Balfour Stewart. With an Appendix, treating of the Vital and Mental Applications of the Doctrine. 1 vol. 12mo, price $1 50.
VIII. WALKING, SWIMMING, AND FLYING. By J. B Pettigrew, M.D. 1 vol. 12mo, price $1 75.
IX. RESPONSIBILITY IN MENTAL DISEASE. By Henry Maudsley, M.D. 1 vol. 12mo, cloth, price $1 50.

Either of the above, when not to be had in bookstores, sent, post-paid, by mail to any part of the United States, on receipt of the price.

THE WEEK IN TRADE AND FINANCE.

SEPTEMBER 21, 1874.

THE money market has remained easy at 2 and 3 per cent. for call loans with time money, secured by collaterals, ranging from 3 to 6 per cent. according to the length of time the loans run, varying from 30 days to 4 months. Commercial paper is in good demand; prime endorsed names running 3 and 4 months are quoted at 5 to 6½ per cent., and that having a shorter time to run 3 to 5 per cent., according to its length.

London advices by cable are favorable, the Bank of England gaining £121,000 in bullion for the week ending on Thursday; the discount rate remains standing at 3 per cent.

The weekly statement of the New York banks for the week ending September 18 showed no important changes affecting their surplus reserve; the gain of $1,041,700 in the deposits is nearly met by a corresponding gain in legal-tenders, while the specie remains at very nearly the same figures as those of the previous week. The following shows the changes in the different items going to make up the statement:

	Sept. 12.	Sept. 19.		Differences.
Loans	$280,867,800	$280,569,200	Dec..	$298,600
Circulation	25 605,700	25,638,600	Inc..	32,900
Deposits	237,882,500	236,840,800	Dec..	1,041,700
Specie	19,863,100	19,952,100	Inc..	89,000
Legal-tenders	65,325,900	64,804,800	Dec..	521,100
Total re-erve	$85,189,000	$84,756,900	Dec..	$432,100
Reserve required against deposits	59,470,625	59,210,200	Dec..	260,425
Excess of reserve above legal requirem't,	25,718,375	25,546,700	Dec..	171,675

The stock market was fairly active during the week, with prices tending upward. The decision of the court in Wisconsin against the railroads created a temporary depression in the entire list of stocks, as well as in those directly affected by it—the Chicago and Northwestern and Milwaukee and St. Paul, the decline in which was 3¼ per cent. in the common stock of the former and 2¼ per cent. in that of the latter; the preferred stocks of the roads were affected only 2½ for the Northwestern and 1¾ for the St. Paul. Union Pacific and Lake Shore have been the strongest stocks on the speculative list, and show an improvement during the week of 2 per cent. on the former and 1¾ on the latter. On the balance of the list, prices were irregular, Central and Hudson, Rock Island, Western Union, Hannibal and St. Joseph, and the Quicksilver stocks being firm, and Wabash and Pacific Mail weak.

In the investment shares the demand has been greatest for New Jersey Central and Delaware, Lackawanna and Western, both of which have been firm in price with a decidedly upward tendency, especially for New Jersey Central, which improved upon the announcement to-day that the untaken consolidated bonds recently offered to the stockholders, amounting to $1,000,000, had been placed by the Company at 95 per cent., against 90 per cent., the price at which the entire $5,000,000 had been previously offered to the stockholders.

The market to-day was strong, and prices seemed to take a fresh upward start. Union Pacific sold up to 36¾; Lake Shore to 76¾; New Jersey Central, 105½; Delaware, Lackawanna and Western to 109¼; Western Union, 78¾, extra dividend of 2 per cent.; C., C. and I. C. to 11⅞; and Erie to 37½. Northwestern and Milwaukee and St. Paul also improved from Saturday's prices. The effect of an adverse decision to these roads in the Wisconsin court seems to have been almost fully discounted in Wall Street; as it is, it affects only about one-fourth of the mileage of the Northwestern, and one-third of that of the St. Paul, as to local tariffs, and does not have any bearing whatever on the through traffic of either.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending Saturday, September 19, 1874:

	Monday.		Tuesday.		Wed'day.		Thursday		Friday.		Saturday		Sales.
Erie	34⅜	34⅞	34⅞	35¼	34	34⅞	34¼	34½	34¼	34⅞	34	35¼	52,300

Governments improved during the early part of the week in sympathy with the higher price of gold. Later, the market was a shade weaker, and closed on Saturday at very nearly the same prices as those at the close of the previous week.

The Syndicate which took the new 5's has brought out the loan in Europe, and offers the bonds for sale in amounts to suit purchasers.

The market closed this evening at the following quotations:

	BID.	ASKED		BID.	ASKED
Registered 6's, 1881, c	117¾	118⅛	Registered 5-20's, 1867, c	116⅝	116¾

The New Orleans trouble created a strong feeling in gold, the price on Wednesday advancing to 110⅛, but with the withdrawal of the McEnery party the premium quickly receded, and the price finally settled down to 109⅝. The following shows the range of quotations during the week:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Monday, Sept. 14	109⅜	109⅜	109⅜	109⅜
Tuesday, Sept. 15	109½	109⅞	109½	109¾
Wednesday, Sept. 16	109⅞	110⅛	109¾	110
Thursday, Sept. 17	110	110	109¾	109⅞
Friday, Sept. 18	109¾	109¾	109⅝	109⅝
Saturday, Sept. 19	109⅝	109⅝	109⅝	109⅝

NOTICE TO THE HOLDERS

OF THE

FIRST-MORTGAGE BONDS OF THE OREGON AND CALIFORNIA RAILROAD.

The undersigned Trustees are prepared to purchase, for the Sinking Fund, a certain amount of the First Mortgage Bonds of the Oregon and California Railroad Company, and hereby invite offers of such bonds from holders.

The lowest offers will be accepted up to the amount of the available means which are derived from the sale of the Company's lands; but no proposals above par and accrued interest in gold will be considered.

Communications stating amount and price of bonds, and marked "Offer of Oregon and California Railroad Bonds," may be addressed to the undersigned, care of the London and San Francisco Bank, San Francisco, California.

The Nation.

NEW YORK, THURSDAY, OCTOBER 1, 1874.

The Week.

THE Republican Convention has met at Utica, and in an entirely harmonious manner renominated the old ticket—General Dix being perhaps the only name on it which possesses much interest for the general public. The retention of General Dix, whether the convention felt it to be necessary or not, will be received by men of all parties, we venture to say, with genuine satisfaction. His administration has been successful to a rare degree. It is worthy of notice, and especially by professional politicians, that the success has been largely due to thorough independence. He has not made himself subservient to any prejudice or passion or private interest, and has not tried to please anybody in particular, and the result is that he has pleased everybody. The platform is in no way remarkable, or rather is more remarkable for what it does not contain than for what it does. It adheres to the old jargon, which has been so judiciously and effectively abandoned in the Democratic platform, and produces in it a string of very harmless propositions, which do not touch many of the principal topics of the day. It opens, as usual, by "pointing to the past," etc., and then, as might also be expected, denounces "Ku-klux assassins" and "White-League revolutionists," and informs the public that "armed attempts to subvert the government of a State is revolution," which of course is wrong, and that "the supremacy of the law must be maintained at any cost." It then calls for payment of the public debt in coin, and a return to specie payments, denounces inflation, and lauds the Administrations of President Grant and of Governor Dix.

Mr. Conkling of course dwelt on the Louisiana affair with great gusto and true professional solemnity. But he did not get very far into the subject without indulging in a characteristic piece of untruthful suppression. He said that even if it was true that Kellogg was fraudulently counted into the governorship—"what of it—suppose he was," said he; "we in New York have known equal wrongs; it is an open secret that John T. Hoffman was counted in as governor when John A. Griswold was elected. We did not know then that in two cities forty thousand was added to the count; but we had far more conclusive evidence that Mr. Hoffman was not elected than has yet been discovered in the case of Mr. Kellogg. But we did not . . . seize by force the capital of the State, shoot down the police, barricade the streets, and inaugurate a reign of terror on the ruins of the law." The asterisks in the above cover a highly-colored account of the disorders in the interior of the State. The dishonesty of it does not lie simply in the embellishment of the circumstances attending the overthrow of Kellogg. It lies also in the deceitfulness of the parallel between what occurred here in 1868 and what occurred in New Orleans. Kellogg was not fraudulently counted in as Hoffman was, because he did not wait for a count at all. There was, in fact, no counting whatever prior to his installation. The comparison would be accurate and truthful if after the election, and before the votes were canvassed, Judge Barnard, or a man like him, on the Federal bench, had issued an order in the night from Josephine Mansfield's house in Twenty-third Street, in a trumped-up suit; and the United States marshal had under this order taken United States regulars up to Albany, seized the State capital at two o'clock in the morning, and then called on Hoffman to come and take possession, and bring his members of the legislature with him, and had then and there installed him and them in the government by force of arms, and the Attorney-General at Washington had telegraphed his approval, and directed the marshal to kill with rifles and artillery anybody who offered any opposition to it.

The seizure of the State-house in New Orleans by the McEnery party led to the capture and examination of Kellogg's letters and check-book, from which it appears that he had retained among others Caleb Cushing, B. F. Butler, and Senator Carpenter as counsel in the proceedings before the Supreme Court arising out of the attempt to overrule Durell's orders, and had paid them all heavy fees, Butler, as might be expected, clamoring for more. There has, we think, been more fuss made over these revelations than they merit. They show undoubtedly that leading men in the Republican party occupied the position of feed lawyers in matters which they were called on as legislators to decide judicially; but in one case at least—Senator Carpenter's—the fee had no influence on his senatorial judgment, as nobody could more strenuously oppose the Kellogg usurpation than he has done. In fact, there is no sign that the fees had any effect on the political course of anybody who took them, and yet there can be no question of the impropriety of the practice of taking fees as counsel by members of Congress in political cases in which Congress is likely to have to act judicially. The whole tone of political circles at Washington with regard to money has, however, been so much lowered since General Grant's accession to the Presidency, that we feel there is little use in commenting on this kind of thing until we have a change at headquarters. To scold Chandler, the Chairman of the Republican National Committee, who appears to have come into the case *ex officio*, for taking Kellogg's money when Boss Shepherd is the President's intimate friend, and was renominated by him for the government of the District after he had been swept out of office by a legislative act for gross corruption and disorder, seems to us a waste of energy; just as we think it has been, since Butler was allowed to put Simmons in the Boston Custom-house, a waste of energy to grumble over the condition of the Civil Service. We denounce Marshal Packard, who, by the bye, drew heavily also on Kellogg's bank account, as the prime mover in the Louisiana troubles, but more as an act of justice to the unfortunate people whom he plagues than because we have any hope of his removal.

The Committee of Seventy of New Orleans have issued to the people of the United States an address of the same able, forcible, and temperate character as that which came from the same source in 1872. They declare that Kellogg was defeated by a clear majority of the votes cast, as was shown by the official count, and quote the report of the Senate Committee in support of their assertion. They show that after the Durell outrage had been perpetrated, they appealed respectfully to the President, but were repelled with insult by the Attorney-General; they then appealed to Congress during two successive sessions without any result; and, finally, they went to the Supreme Court, which dismissed them for want of jurisdiction. They thus had only one hope left—a new election. The Governor holds for four years, and consequently does not vacate until 1877. But this fall a State treasurer, all the members of the House of Representatives, and half the Senate were to be chosen. If the Conservatives could have elected a majority, they would have gained a solid victory, which would at least have given them a fair representation in the State government. They therefore went to work in the ordinary peaceful way by the holding of a convention, the nomination of candidates, and the formation of clubs in every ward of the city of New Orleans and of every parish in the State. But they were here met by the new registration law passed by the Kellogg Legislature, which "gives to the supervisors of registration supreme power, so that they may refuse to register a citizen or strike his name from the registry at their mere will and pleasure, and no court can or dare, under a penalty of $500, entertain any application to enforce the right of the voter to be registered as such." Under this law, Kellogg appointed none but creatures of his own, many of them persons of disreputable character. The result was

what the address stigmatizes as "a fraudulent registration, in which white citizens were arbitrarily excluded from the registry and certificates distributed lavishly among the colored people." To test the right of the supervisors to exclude persons thus arbitrarily from the lists, a voter, clearly entitled, applied to the Superior District Court for a mandamus; but his motion was denied on the ground that the courts were expressly prohibited from interfering. All peaceful modes of redress having thus been tried in vain, the citizens took arms—and the Kellogg government disappeared. An obvious error crept into our article on the "Louisiana Revolution" last week, when the taxes were made to rise from "37½ cents on the dollar to $2," instead of "on the $100." The figures appeared correctly in the *Nation* of Jan. 11, 1872.

The difficulty between Chicago and the insurance companies is coming to a head. Some of the demands made by the companies have been complied with by the city, but as to others nothing has been done, and the National Board of Underwriters has again issued a notice that on the 1st of October it will advise all insured members of the Board to cease writing policies in Chicago. In all probability this will lead to some arrangement, for it is inconceivable that the authorities in a place so exposed to fire will not take all means in their power to render themselves safe, and there seems at present to be some misunderstanding as to the powers of the legislature and the city in the premises. The tone of public discussion, however, in Chicago on the subject might be more enlightened than it is. The Chicago *Tribune*, for instance, calls the action of the insurers a "dastardly blow," evincing a "mean spirit," and intimates that the "animus of their conduct" is to be "sought for in the city of New York." What this means we do not understand, unless it has some reference to the Mayor and Mr. John Kelly's differences. The *Tribune* adds that if they were going to withdraw at all, the obviously "decent and businesslike way" for them to have taken would have been through private instructions to their agents. Instead of that, their resolutions have been published in all the papers, and it is just as well known in St. Louis that Chicago is in trouble as it is in Illinois. This is undoubtedly tyranny; and we are surprised to see no suggestion that the companies should be wound up and the National Government undertake the business. At any rate, we are glad to hear from the *Tribune* that the National Board "has done its worst," that the *Tribune* has "no respect for it or its executive committee," and wants no more of "its insolent dictation—the product of combined ignorance and jesuitism." This is conceived in the right spirit, and will probably show the tyrants that the people are in earnest. On the other hand, the tyrants seem to be in earnest too.

There are now three parties in the field in South Carolina—the Regular Republicans, the Republican bolters, and the Taxpayers. The dissatisfaction with the nomination of Chamberlain has caused a serious split among the regulars, and at a colored ratification mass-meeting held last week at Charleston, a strong anti-Chamberlain feeling was manifested among the negroes—Ransier, an Independent member of Congress, being elected chairman, and the voices of the Chamberlain speakers being drowned by cheering for Judge Green, the Independent Republican candidate for governor. The ratification resolutions were not even offered. The Independents have a strong hope of being able by a union with the Taxpayers to elect Mr. Green, who, on the score of ability and principle, seems to have everything to recommend him. Chamberlain, meanwhile, is trying, without much success, to persuade the public that he is in no way responsible for the bond frauds of Scott's administration. A correspondent of the *Tribune*, who seems to have looked into the question pretty thoroughly at the time, and to have been in a position which gave him peculiar opportunities of getting information, writes to that paper to say that he considers Chamberlain one of the most deeply involved. As Attorney-General, Chamberlain was a member of the Financial Board through which the frauds were committed, and on his sole recommendation the financier Kimpton (a college classmate of Chamberlain's), was appointed agent to negotiate the State loans in New York. Kimpton was a "curbstone broker," without property or responsibility, and the only bond he was required to give was his own recognizance.

The correspondent who narrates the history of the transactions which followed says that, on enquiring of Scott why he had accepted such a bond, Scott had replied that he had not examined it thoroughly, "because Chamberlain had told him it was all right." Besides this, all the acts for the increase of the State debt were drawn by Chamberlain, and were cunningly worded, so that the Board might be able, or at any rate were able, to sell any number of bonds, reporting if they chose only the net sum obtained, and thus being enabled to make this net sum whatever they pleased. Finally, when the orange had been sucked dry, and it was plain that the nominal total debt could not be increased, "a bill was prepared by Chamberlain, and put through the legislature in February, 1872, if I remember right, known as the Conversion Bond Act. This act authorized the issue of a new species of bond in exchange for any of the old bonds out, the ostensible object being to simplify the debt by converting it all into one kind of obligation. What the real object was is only too well known now to the swindled purchasers of these pretended securities. Six millions of these bonds were sold or hypothecated by Kimpton in New York, and not one cent of the money he got for them was ever used to cancel any portion of the former indebtedness of the State. What he and his fellow-conspirators in the Bond Ring did with the money remains a mystery." The correspondent admits that Chamberlain is educated and has "æsthetic tastes," and that he would make a better governor than Scott or Moses. But he thinks also that, until the natural inference from the facts he gives—that Chamberlain was privy to the conspiracy—be disproved, Chamberlain had better be kept in a strictly private station.

The international rifle-match between Ireland and America took place on Saturday at Creedmoor, and resulted in an American victory after a very close and exciting contest. The score was 934 to 931, and the shooting is said to have been the best ever done. The result reflects great credit upon the gentlemen who got the match up, and will, we trust, encourage them to further efforts. A generation ago America had a world-wide fame as a rifle-using country, and it is gratifying to know from the result of contests like that at Creedmoor that, not only in the backwoods, but in scientific shooting also, we still hold our own. One of the most pleasing things about this match, when we consider that it was international, was that it did not break up in confusion amid loud accusations of fraud on both sides and threats of violence from the spectators, followed for the succeeding week by letters to the newspapers proving that the targets used by the two sides were not the same size; that the ground was not measured fairly; that the score was not correctly kept; and that the sights of the rifles had been tampered with. On the contrary, the greatest good feeling seems to have prevailed, and the match terminated with a festive procession to the Windsor House, from the balcony of which the Lord Mayor had the pleasure of addressing an enthusiastic public, a large portion of which was quite as Irish as himself. The visit of the Lord Mayor and his party has been from the first an immense success. The friends of peace might perhaps have feared for the result of the necessary interview with the Mayor, but it went off very nicely, no race hostility being developed on either side.

The election for the Department of Maine-et-Loire, which was looked for with some anxiety as the first which was to take place after the Bonapartist triumph in Calvados, came off on the 14th ult. There were three candidates—M. Bruat, an Orleanist by conviction and a Septennalist by force of circumstances; M. Berger, the Bonapartist; and M. Maille, the Republican, who was not long ago Mayor

of Angers, but was removed for publicly reproaching the Lyceum—or public school of that town—for having dismissed an inspector because he was a Republican. The department has been in times past strongly Legitimist, but the Monarchists put up no candidate this time, on the ground that it is not worth while to struggle for seats in an Assembly which must shortly be dissolved. The Comte de Chambord was appealed to to decide what course his followers should adopt, but all he would say was that they must not support the Septennate; with this reservation, they were left free to vote as they pleased, and the general expectation was that they would support the Bonapartist sooner than the Republican. The result has been that the Republican has been elected by over three thousand majority. The great uncertainty as to the course pursued by the Legitimists in a strongly Legitimist district of course deprives these figures of a large part of their value as an indication of the drift of public opinion.

The Prussian Government continues to carry on the war against the Ultramontanes with the greatest vigor. All foreign-born nuns have received orders to quit the country, and the same rule is about to be, or has already been, applied to foreign-born priests and monks. The Old-Catholic movement at the same time begins, in spite of Father Hyacinthe's troubles at Geneva, to assume an appearance of greater strength and solidity. The late congress at Freiburg received an account from Bishop Reinkens of the most encouraging character as to its progress, as the result of a journey he had been making through Germany, although the number of members he ascribed to the Church—100,000—is nothing very formidable. Delegates were present from the American, English, and Greek Churches, though the amount of authority with which they were entitled to speak was, of course, a point on which there might be a difference of opinion. Two committees have been formed for the purpose of discussing terms of union, one with the Greek and the other with the Anglican Church, Dr. Döllinger being the chairman of the latter. As regards the relations of the new church to the state, the congress proclaimed that the Old Catholics were entitled to their share of the church property, although they did not seek the exclusive use of it, and declared that it was the duty of the Government to take a vote in each parish upon the question of adhesion or non-adhesion to the decrees of the Council of the Vatican.

The "Institute of International Law," which held its first meeting at Ghent last year, has this year held a second one, which has attracted rather more attention, at Geneva. Mr. John Westlake, one of the English members, has sent an account of the body and its proceedings to the London *Times*, from which it appears that it is limited to fifty members, of whom there are now forty-four, and twenty-three took part in the recent meeting, either personally or by written communication. The American members are Mr. David Dudley Field, Mr. William Beach Lawrence, and Dr. Woolsey of New Haven. The discussion this year was confined to three subjects: (1) The regulation of procedure in international arbitration. (2) The "Three Rules" agreed on by Great Britain and the United States in the *Alabama* case. (3) The utility of rendering obligatory for all states, by means of one or more international treaties, a certain number of general rules of private international law to secure the uniform decision of conflicts between different civil and criminal legislations. The meeting seems to have expended most of its attention on this last point, as that on which its opinions and reclamations are likely to have most influence, and that on which most progress had already been made by international negotiation. Mr. Westlake mentions, in illustration of his report, the difference between the rules of Anglo-American jurisprudence and those of the Continent, as to what fixes a man's "personal law"—that is, the law regulating the age at which he attains his majority, the validity of his marriage, the distribution of his personal property in case of intestacy, etc. In England and here it is the law of his domicile; on the Continent, or at least in France and Italy, it is the law of his political nationality; and the adoption of a common rule would in these days of incessant migration be of course a great gain.

The International has again shown its head in Europe after many troubles and reverses, and has once more startled society a little by its strange doctrines. The Seventh Congress met at Brussels on the 8th ult., and the report of proceedings has just reached us. The attendance was thin, and the proceedings somewhat gloomy, but the gospel preached was just as ferocious as ever. The smallness of the gathering was due to the fact that the Association is now under the ban of the police in its principal seats. The "Latin races"—that is to say, Frenchmen, Italians, and Spaniards—are its principal supporters, but neither in France, Spain, nor Italy is it able to emerge from the comparatively powerless condition of a secret society. The Italians and Spaniards made up for their feebleness in numbers and resources, however, by sending on addresses, which are the only truly radical calls to reform we ever remember to have seen. Here is a passage from them which contains the pith of their programme:

"It is with a heart filled with an immense faith in the realization of that programme that to-day we conspire for the complete destruction of the state, with all its malevolent institutions, the annihilation of every kind of authority under whatever form it may present itself, and for taking possession by the uplifted masses of all the implements of labor, machines, and raw material, including the soil and all the riches which, by the most flagitious robbery—the exploitation of the starving multitude—alone it has been possible to accumulate in the hands of a small number of enjoyers. These acts we propose to carry out with a provident promptitude, not by decreeing to accomplish with an efficacious energy, not by proclaiming; we find all summed up in the two words 'Anarchy' and 'Collectivism,' conditions which we consider indispensable to ensure the triumph of the social revolution and the realization of our programme."

What a poor, time-serving, weak-kneed, cowardly, heartless, conservative epicurean this makes even our own Phillips seem!

The principal speaker at the Congress was a German delegate, who gave a very doleful account of the political and social abasement of the working-classes in Germany. He said the war had made their condition worse than ever, and reproached Bismarck bitterly with the exclusion of men under twenty-five from the franchise, because, he said, the young men were generally revolutionists. He had, however, little to say that was very comforting with regard to the Socialist cause in Germany, except that 400,000 votes had been cast at the last election for Socialist candidates. That Socialist ideas gain ground in Germany and that the German Socialist is a peculiarly ferocious and untamable variety there is, however, unhappily little doubt; but the picture, nevertheless, has its bright side, and it is very bright in some ways. For instance, the Schulze-Delitzsch "co-operative savings-banks," which that gentleman started in 1853, and which enable the workingman to get credit through his own economy and industry, during their first year only did a business of $620. It was, however, announced at the Co-operative Congress—for the sane men have their congresses, too—held in August at Bremen, that there were now in Germany 2,049 of these banks in existence. Only 834 sent in their reports to the Congress, and these alone had during the year 1873 a paid-up capital of $20,000,000; had advanced in loans to their members during the same period over $300,000,000; had a reserve fund of nearly $10,000,000, and deposits to the amount of $65,000,000. It must be remembered that all this is the money of small shopkeepers, mechanics, and laborers. The eight hundred associations we have mentioned have 1,300,000 members. They are, from the fact that they only have sent in their reports, probably the largest and most prosperous. But even if we treat the remaining two-thirds as only equal to these in numbers and volume of business, it must be acknowledged that a new and formidable bulwark has been added to the defences of rational civilization.

THE INFLATION OF THE ATTORNEY-GENERAL.

WE took occasion once or twice, during the Boutwell-Richardson period, to call attention to the enormous accession to the powers and responsibilities of the Secretary of the Treasury which had resulted from the relation of the General Government to the banks and the currency created by the war. This officer at the foundation of the Government was charged simply with the duty of collecting the revenue, keeping a proper account of it, and disbursing it in the manner and for the objects prescribed by Congress. This was the whole extent of his functions down to 1860. He by no means occupied the position of an English chancellor of the exchequer or of a Continental minister of finance. He was not authorized or expected to frame schemes of taxation, or estimates of receipts or liabilities. He was not allowed to have a seat in Congress, or to exert any direct influence on that body in favor of or against any financial plan. The report which Alexander Hamilton made on the finances of the infant Republic was called for by a special resolution of Congress. His successors as a rule confined themselves in their annual report to the President to a recital of the manner in which the formal work prescribed by the legislature had been done in their department. The more enterprising, perhaps, made a few suggestions, which rarely received any attention; but the more modest or timid were at perfect liberty to make no suggestions at all. This state of things whether desirable or undesirable was the state of things created by the Constitution and contemplated by Congress in establishing the Treasury Department. The Secretary of State was, in short, a sort of head-clerk, who looked after the financial business of the Executive and supplied Congress with information when he was asked for it. The management of the finances, in the higher sense of the term, was reserved to committees of the two Houses, and especially to the Committee of Ways and Means of the Lower House, which might communicate with the Secretary of the Treasury if it pleased, but was not bound to do so.

How all this was changed by the war we do not need to tell over again. Mr. Chase, through the terrible and unlooked-for necessities of the case, was for a time forced into the position of a real minister of finance. At that period, the country was only too glad to allow anybody to assume responsibility who was willing to do so. Mr. McCulloch, presuming on the precedent thus created, endeavored for a short time to play the same part, and would probably have been allowed to play it if it had not been for his connection with Andrew Johnson. But his successor, who was more favorably situated, and was by no means bashful, made the best possible use of Mr. Chase's example. By the end of Grant's first term, the Secretary of the Treasury had armed himself with powers such as neither Colbert nor Turgot, nor Fould nor Pitt, nor Peel nor Gladstone, ever dreamed of claiming. Not only was he the chief of a great many thousand officials holding their places, not during good behavior but during his pleasure, but he was armed with discretion in the construction of obscure, vague, and contradictory revenue laws, in the remission of fines and penalties of enormous amount to which the most honest-minded manufacturer, trader, or merchant might any day render himself liable; was able to build up national banks by his indulgence or ruin them by his hostility; and, though last not least, was controlling the money market, and raising and lowering the prices of goods, by sales of gold made when he pleased, and by expanding and contracting the paper legal-tender currency at such times as he thought proper, over a margin amounting to one-seventh of the whole issue. Nobody, we believe, was ever in modern times, and in a civilized country, put in possession of such power over men's property and business as Mr. Boutwell exercised; yet in one of his reports he actually, with a curious simplicity and self-confidence, asked Congress to enlarge it still further. Now, all this may have been good or bad; which it was, we shall not discuss here. We merely wish to point out now that this expansion of the functions of the Treasury Department has occurred indirectly, without specific legislation, and without its being foreseen or expected by the country, and without proper provision being made for it in the shape of responsibility. No man should, under a constitutional government, be armed with such powers as Mr. Boutwell possessed unless the public is at the same time furnished with the means of calling him to account and compelling him to explain himself at short intervals.

We wish to-day to direct attention to the fact that the very same process of inflation is now going on in the Attorney-General's office, or, as a recent act has magniloquently designated it, the "Department of Justice." When this officer was first created by Congress in 1791, it was simply provided that he should be a "meet person, learned in the law," whose duty it should be to conduct such suits in the Supreme Court as concerned the United States, and give legal advice to the President and heads of departments when he should be asked for it. This modest position he occupied down to 1861, when, in view of the complications occurring in different parts of the country, he was charged with the superintendence and direction of the United States marshals and district-attorneys in the discharge of their duties, and they were ordered to report to him. This was a very natural and proper arrangement, and when it was made probably no one had the least idea of what would grow out of it.

What has grown out of it is this: As a result of the Reconstruction Acts and the Constitutional Amendments, a large number of the Southern States have been divided between, not two political parties, but two bitterly hostile factions, which are only prevented from flying at each other's throats by the armed force of the United States, and one of which is led by adventurers from the North, who act under the superintendence or advice of the United States marshals, who have the control of the soldiers. The marshals are, in truth, everywhere political chiefs, who derive their strength from the fact that if the worst comes to the worst—that is, if their opponents lose all patience—they can bring up the troops. The importance of such an officer in States which are liable after any election to have two governors and legislatures disputing each other's claims to power, may be readily imagined. The control of the troops in the Southern States has, therefore, been transferred to the Attorney-General, who moves them on the marshal's report; for the claimants who demand Federal protection of course act under the marshal's direction. Indeed, the history of Louisiana since 1872, which has been so often told, fully illustrates the whole matter. Now, the result is that the Attorney-General's office has become a kind of political bureau, to which competitors for the government of sovereign States carry their petitions and proofs. Southern governors now report to him on the State elections, on the general condition of the State, on its finances and taxation, its criminal justice, and take his advice as to internal legislation. Political parties send in to him statements of their grievances, and ask him for redress against the tyranny or exactions of the local rulers, and he accepts all the power and influence which the position brings him with great equanimity. He snubs the proud, warns the unruly, discourages the wicked, and cheers on the faithful supporters of the Administration. His functions, indeed, are a combination of those of the French Minister of Justice and Minister of the Interior and of the Governor-General of British India. That is, he has the supervision of the officers of the law courts in the discharge of their ordinary duties; he has the direction, also, of a kind of prefects of departments in the United States marshals, whose functions are semi-political; and his relations to the Southern governors are very like those of the Governor-General to the native princes who are still allowed to hold their territory. He admonishes them if they administer badly, upholds them by force if he approves of them, and, as in Kellogg's case, calls on them to resign if he thinks the public interest requires it.

It must be admitted that this is a remarkable kind of officer to be evolved in a dozen years out of a "meet person, learned in the law," charged with giving his opinion when he was asked for it. Moreover, unless some great change comes over the South, of which as yet there is little sign, his functions are likely to be still further enlarged. It must not be supposed that even now they are limited to

cases in which the interference of the Executive is permitted by the Constitution. In Arkansas, the troops were employed under his orders for six weeks, not in defending the State government against insurrectionary violence, but in preventing the *de facto*, and, as it was afterwards decided, the *de jure* Governor from using the State forces to expel a usurper, who had seized the State-house, and held possession of it with an armed mob. For this the Attorney-General did not take the trouble to offer the slightest excuse. Finally, the officer now exercising these extraordinary powers is one in whose selection the people have no voice, and who has not displayed any talent either legal or political. When he was nominated for the Chief-Justiceship, the country was thoroughly indignant. He is, moreover, acting as the servant of a President who treats his ministers as members of his staff, and all criticism of them by the public as an impertinence unworthy of notice. We draw no conclusions from these facts. We simply offer them as food for reflection.

SCHOOLS AND SCHOLARSHIP.

PRESIDENT PORTER, of Yale College, has been discussing recently, in the columns of the *College Courant*, existing defects in the "secondary" school-system—in the schools, that is, which undertake to fit boys for college; but his remarks obviously apply, and indeed he apparently restricts them, to schools supported by taxation. He does not make any remarks about the numerous private schools scattered all over the country which undertake to fit boys for college. But with the growth of the country in wealth, these schools, which receive most of the children in comfortable circumstances who are fitting for Harvard, Yale, or Princeton, are growing every year in numbers and importance. At no time in the history of the country have the older colleges been so crowded as at present, and at no time probably has a father who desires to find for his son a good place of education, been so embarrassed by the number and variety of the opportunities afforded him. There are Catholic, Orthodox, Episcopalian, and Unitarian schools. There are French, German, and American schools. There are schools which endorse and schools which repudiate the dormitory system; schools which give their pupils the benefit of country air and improving scenery, and schools in which the pupils are turned out every afternoon by the right flank to get their scenery and air in Washington Parade Ground or in Tompkins Square. There are schools which advertise modestly and truthfully, and schools which are conducted on the same sound business principles which have led to success and wealth many an enterprising vendor of patent medicines. There are good schools and bad schools; and the difficulty in which parents find themselves is, among so many, to know which are good and which are bad. The intentions of parents are as a rule honorable, and what they desire is to find some one who will give a boy a home, keep him strong and well, sound in mind and pure in morals, and give him such an education as will enable him to enter college creditably. There are difficulties in the way, however.

In making enquiry into the character of the various schools which offer themselves, he is surprised to find that there is no common standard to which to refer them. They "fit boys for college," it is true, but with most of them this is only an incidental aim. They are not connected in any way with any particular college. They have a few boys who would like to enter Harvard, others who would like perhaps to go to Dartmouth, and still others who have no definite idea what to do. Some of them are going to travel abroad, some are not going to college at all but are going into business. With this variety of tastes and intentions, the most obvious thing for teachers is to undertake to teach everything—to have classical studies, modern languages, music, drawing, and science all provided for, and to have, as the result, a smattering of many things and the mastery of nothing. The bewildered parent is perfectly unable to tell whether his son can be fitted for the particular college he has selected for him, because every college has prescribed qualifications of its own, and the school must be ready to fit boys for any of them. There is no test which he can apply. The teacher appears to be an educated man; his references are always good; and the result is that, after going about from one school to another, some good, some bad, until, what with references and curriculums and conversations about the limits and the necessities of culture, he has been nearly driven crazy, the poor man very likely ends with the very place he meant to avoid, and falls into the hands of some loud-mouthed charlatan—and there are plenty of them at work—who, having failed in every legitimate business, has at last determined to try the educational trade, has got out his fall circular requesting the public to give him a call and "see for themselves" whether he cannot furnish them with the real genuine educational article. If the parent does not fall into the hands of one of these educators, he is apt to end by settling the question at haphazard, and the chances are that in the end the boy, in getting to college, finds himself unprepared and heavily handicapped with conditions.

This is unquestionably a bad state of affairs, and for no one is it worse than the school-teachers themselves. That there should be no protection for a patient, hard-working school-master, who has sent generations of boys with credit to pass their college examinations, against scheming charlatans who go into education to make what they can out of it, or incompetent addle-brains who are secured a school by their friends to prevent them from going to the poor-house, is a great hardship. There never was a time in the history of the world when sound education was more universally needed than now, and when really good teachers—men who in teaching do not merely fill their pupils' heads with verbal learning, but who broaden their minds, elevate their character, and fill them with generous ambition instead of sordid and grovelling aims—were more needed, and yet the man who is all this to his pupils is obliged to compete in the open market with rivals who, to get money, hunt up pupils as a Tombs lawyer does clients. It cannot be denied, either, that an educator who does this shows a good deal of intelligence. His boys may very likely not get into college, but this awkward fact can often be explained away by charging the boy with laziness; and the boys' fathers have, as a general rule, no means of telling whether the teacher is right or wrong. The school, too, is continually changing—old boys going and new boys coming—and unless it is in the immediate neighborhood of some college, and connected directly with that, it takes a long time to discover whether there is any radical defect in it.

Both in this country and in England the question of preparatory schools is beginning to attract a good deal of attention, owing to the increasing number of ill-prepared pupils who every year present themselves for admission. In England there is a connection between the universities and the great public schools, such as Harrow, Eton, and Rugby, to which we have nothing exactly corresponding in this country. But in that country, as in this, the want of adequate certainty as to the preparation of boys is a crying evil. The origin of the trouble is different in the two countries. On the other side of the water, the traditions of the great schools and the absence of inspection of them by the universities have had a tendency to send a number of boys to Oxford or Cambridge every year who are good cricketers at the bat or in the field, run well, swim well, and row well, but are not well grounded in the rudiments of Latin, Greek, and mathematics. In this country, owing to there being no supervision of the "secondary" schools by the universities, and owing to the absence of any system of public schools like that in England, the country has filled itself with an infinitude of schools calling themselves preparatory, all claiming to do pretty much the same things, some actually doing it well and some very ill, but affording to those most interested in education no means of knowing which are good and which are bad. The remedy adopted in England is very simple. Oxford and Cambridge have by joint action instituted a system of school examinations, the object of which is to test the instruction furnished in the preparing schools, and

which is to be extended to those which are not public. The universities offer to any school which sends pupils for examination to give those who are successful a certificate or diploma, which is to be considered as the equivalent of passing the first university examination. This certificate, besides being of advantage to the student, is also a direct inducement to the schools to greater thoroughness in preparation. Under the new system, there will be no sort of doubt as to which schools succeed most thoroughly in their work; and indeed, the best possible proof we could have of this is the publication of the results of the first examination in the *Times*, showing the relative standing of the schools. It has caused such a sensitive feeling among the less successful that several of them have felt obliged to publish letters explanatory of their low standing. Now, if this system recommends itself in England, it will be found ten times more useful here. Let Harvard and Yale, or any number of the older colleges which have the same or nearly the same scheme of education, institute a similar system. Let them announce that they will give diplomas or certificates in the same way. These diplomas would be the best proof of the character of secondary schools. Schools which generally secured them would rise in consideration, and those that generally failed to get them would fall. Of course, it will be objected to this plan that the colleges could not examine together, because they all have different standards. But it is not necessary that the examination should be for admission. It might be solely for the determination of the relative merits of schools, and for this purpose a special examination might be devised. Even now, with schools in the immediate neighborhood of the principal colleges, the practical test of admission is rigidly applied. It is perfectly well known about Boston, for instance, which of the local schools succeed in entering their boys and which do not, and the reputation of those schools is in the exact ratio of their success. With regard to schools at a distance, however, little or nothing is known, and we do not see how, until some such supervision is undertaken, it can be; or why under present circumstances the gentleman who treats education as a branch of trade, and invites the public to "walk up and see for themselves" whether his school is or is not all that it ought to be, is not wise in his generation.

AN EPITAPH.

WORLD, Flesh, and Devil gave him all they could,
Wealth, harlots, wine, and disbelief in good;
Fame, too, he bought, our modern kind of fame,
The morning-column reeking with his name;
Lifelong he never did his lusts deny
One pleasure sin could give, or money buy.
The halter bilked, a pandar's coward shot
Sent him to where he—nay, I had forgot;
That's *passé*, so they tell us who should know,
Put out with milk and water years ago:
No retribution, then? Yes, something worse
Than angry justice e'er distilled in verse;
He had (could shame or vengeance this exceed?)
Living, Gould's friendship, dead, the tears of Tweed!

1872.

STRASBOURG REVISITED.

PARIS, September 11, 1874.

I HAD paid a visit to Strasbourg two years before the war, and I could not bear the idea of seeing the beautiful old town torn by the bombardment. One of my friends had sent me an album of the photographs of the ruins just after the siege. I waited until there were no longer any ruins, and with some reluctance visited Strasbourg again during the last month. "The ruins of a church," says La Fontaine in one of his fables, "can be repaired—not so the ruins of a religion." In its material aspect Strasbourg is not much changed. The Faubourg de Pierre, which was the most exposed part of the town, and which was after the siege a heap of burning ruins, looks now quite new, and the pretty houses built in red sandstone have a much better appearance than the old wooden houses. The only monument of historical value which has been destroyed is the old Temple, containing the valuable library, which was burnt to the last volume. Some precious manuscripts were destroyed in the fire. In the place of the old Gothic church called the Temple, which had become the public library, you see now the rising walls of a new church, built in the purest Roman style (of the Alsatian Roman school, the model of which can be admired at Rosheim, in a little village church which is a jewel of art). The theatre and the prefecture had been completely destroyed, but are now rebuilt, and Herr von Moller, the Ober-President of Alsace, already inhabits the gorgeous rooms of the prefecture. The statue of Lezay-Marnesia, a prefect of the First Empire, still stands in front of it, but the bronze suffered during the siege, and the coat of this venerable functionary looks as if it had holes and had been badly mended. General von Fransecki, the hero of Sadowa, is now the commander of Strasbourg, and he lives in the rooms left by the last French general on the Place de Broglie, which bears the name of the grandfather of the present duke. Opposite, there is a new and splendid building, the Officers' Club, as the German officers live much by themselves. It cannot be said that society is shut against them. There is nothing left in Strasbourg of which to constitute anything which could go under the name of society. All the families which used to form it are gone; the liberal classes have made an exodus. Nothing has remained but the small bourgeoisie, the shopkeepers, and the people. In consequence of the absence of the cultured class, Strasbourg has become much more provincial than of old. The German functionaries, though they are much better paid than I had supposed, have also more provincial habits than the French functionaries. The most distinguished in every respect are those who belong to the bench; the German judges bear a very high character; but they live very much as do the small functionaries of the police or the administration—they smoke long pipes, drink in the *Bierhalle*, eat sausages and cheese in public, leave their wives at home. The inhabitants of Strasbourg were very much surprised at the difference of station, if I might say so, and of habits of most Germans and their wives. The gentleman, officer or civilian, eats a good dinner in the hotel, drinks good wine, and leaves his *Frau* at home to study and practise all the arts of simplicity. The wives of the highest functionaries were seen arriving almost without any luggage. I have seen with my own eyes an advertisement in a Strasbourg paper thus conceived: "I wish to find a good cook, one who can make *feine Kuchen*," and under it this name, "Generalin von Fransecki." Such a notice could not be found in a French paper. These are perhaps minute details; but details become important when you have two populations watching each other with sentiments of antipathy. The few Frenchmen of the higher class who have been obliged by circumstances to remain in Strasbourg, have incessant stories to tell, which all go to prove that society is extinct in Strasbourg, and that nothing can revive it.

Among the middle-classes and among the people I judged that much resentment was felt at the bombardment of the town. An old hop-merchant said to me: "After the battles of Woerth and Spicheren, Alsace was lost to France. The Germans by a mere blockade were sure to force our capitulation. If they wished to make us Germans, if they constantly appeal to the old ties of Strasbourg and the Empire, why did they burn our houses and keep us during fifty days under a rain of iron?" I doubt if this hop-merchant will ever forgive the conquerors the long hours of agony of the bombardment. I went to see in the botanical garden of the University the tombs of many victims of that time; flowers are constantly brought there and placed on the little wooden crosses. A plain stone monument has been erected there, but quite out of view of the street. It bears this simple date, 1870—not a word, not an inscription; the German authorities would not permit it. Not far from the University buildings is the citadel; not a single stone is left of the barracks, and of the chapel which formed a quadrangle in the citadel everything was burned, and iron lay almost a foot deep over the whole area after the capitulation. New buildings are now erected in the place of the old ones, but the citadel will never be any longer the centre of the defence; immense forts are rising all round Strasbourg at a great distance; they are not yet finished, but bands of Italian workingmen are engaged in finishing the casemates and the parapets. A railway and a telegraphic line join all the forts together. These forts are not shut at the gorge; they form only powerful salients, and will be armed with heavy artillery. They will at least have one advantage: they will prevent a new bombardment of Strasbourg.

Much of the beauty of the promenades is gone; rows of trees were cut down during the siege in every direction. The road to the Rhine, once so shady, is now quite burnt by the sun. The old pontoon bridge is still there; and a *Trinkhalle*, called the "Rheinlust," has been built close by, where the German soldiers and the girls of Baden may be seen dancing on Sundays. There was something indescribably saddening to me in this gayety of the conquerors—for they are still looked upon as conquerors. I returned slowly back to Strasbourg, along the old familiar dykes of the Rhine, gazing at the

mystic spire of the cathedral. How often, in my infancy, I had gazed upon it for hours! There it stood, as tall, as majestic as ever—quite unchanged. It is only when you go round it on the *place* which surrounds it on three sides that you can see the wounds of the bombardment. The roof of the nave, which was burned one night, has been completely restored, but in every direction you see patches of new stones, which mark the place of the bombs. How many balustrades, columns, gargoyles, were thus broken. The four open staircases which stand on the four sides of the tower were so dangerously broken that ascent of them is still forbidden, and you cannot go higher than the terrace. The great cross, which sits on the crown of the spire, became a target during the bombardment. I overheard a guide showing an English traveller a photograph of this cross as it was after the siege, broken and looking as if it was going to fall (it was, in fact, only preserved by the iron bars of the lightning-rod): "It was an officer, sir, who hit the cross from the battery of Kehl. Was it not a good shot?" Here an Alsatian, who was also looking at the photograph, sharply interposed: "No, it was not a good shot; it was a very bad shot," and quickly walked away, perhaps for fear of the policeman who was walking about with his helmet on his head. I was informed that the work of repairs on the cathedral would last two years longer; but even now it looks as fine as ever; its wounds are like holes in a fine lace-work, which do not affect the lines and the general effect. Many churches have I seen in many countries; none has ever given me the sensation of sublimity so much as this spire of Strasbourg. The sensation cannot be analyzed; it is almost painfully intense. The old quaint houses, built of wood and carved at every angle, are still to be seen on the *place* of the cathedral; they were almost miraculously saved: next to the finest of all, a house was burnt to the ground.

There is hardly a street of the old town which I did not visit. I looked even for the old sign-posts; they are still written in French, but the names of the streets have been carefully translated into German. In the small country towns the innkeepers are obliged to have their sign-posts in German whenever they wish to have a new one or to repair the old one; the *Ours* must become the *Bär;* in Strasbourg this petty tyranny has not been tried. Large and handsome buildings have been erected by German companies in various places; cigar-shops, kept by Germans, are found everywhere, as the tobacco trade is now free; but the physiognomy of the town is not much altered. The Alsatians are a very open, inquisitive, and frank population; they are essentially what the Germans calls "gemüthlich," a word which cannot be well translated. They have none of the characteristics of the conspirator; they do not conspire, they probably will never do so; they are not hypocrites, they cannot well conceal their sentiments; they have a certain sort of simplicity which often must puzzle the Prussian authorities more than would an attitude of reserve. They do not show any personal aversion to the Germans, but they are never tired of explaining that their feelings have not and cannot be altered with regard to France. Old men will quietly say to the Germans, "How can you expect us to change at our time of life, and to forget what we have always cherished?" They have an irritating frankness sometimes, and will ask an official, "Are you a Prussian or a Saxon or a Bavarian? You are a Saxon; oh! then I will not hesitate to tell you what I could not tell a Prussian." The Prussians have contrived to make themselves the objects of the most marked aversion; they will say such insulting things; they have all the qualities and all the knowledge which science can give, but very little besides. "We don't want your affection," they say to the Alsatians; "we are quite contented with your obedience." Of course, I speak of the generality; there are everywhere to be found men of refined and delicate sentiment; these men must suffer, living as they do in an atmosphere of sorrowful hostility. Many ladies, wives of functionaries, would not remain in Alsatia; and the officials now sent there are the adventurers who want to make a rapid fortune. Alsatia must seem a California to men who were born in the sands of Brandenburg. When Napoleon entered this province, which seems made only for fishes to live in its lakes, he could not help exclaiming: "This is what these fellows call a fatherland." Fancy the Brandenburger arriving in this magnificent province, dotted with rich towns and villages, adorned with lovely hills crowned with castles—this valley which is a garden as rich as Lombardy, with its fields of tobacco, of Indian corn, its vineyards. The prey is worth many more battles, and it cannot be expected that these battles will not be fought. Alsatia is occupied rather than conquered; the statue of Kleber still stands on the *place*, which is crossed constantly by the Danes of Schleswig, the Brandenburgers, the Hessians, the Poles of Posen. The arms of the German Empire have been placed everywhere; the heraldic eagle, with his claws open and his two curling tongues, is everywhere to be seen; the wooden boxes of the sentries have been painted with the colors of the Empire; but it looks after all like the decoration of a theatre—you feel that there is no reality in it; a few strings pulled at Berlin might change all in a minute. Europe is on the eve of some hundred-years struggle between conflicting races and conflicting ideas. The revolution is a hidden force which may derange all the calculations of the statesman. I left Strasbourg convinced that after all there was not much reality in the tenure of it by Germany; there are dreams in history as there are in our sleep. Two hundred years of association, of common sufferings and pleasures, the long impression of the French culture and literature and language, are things which cannot be effaced by the blood of a few thousand men.

Notes.

IT should be generally known that a committee of the American Society of Civil Engineers has been instructed to consider two questions of the greatest importance for this city—the best means of rapid transit for passengers, and the best means of delivering, storing, and distributing goods and freight. Suggestions of all kinds from without are desired, and may be sent in writing to the secretary, Mr. G. Leverich, 63 William Street.——The little volume of poems by Omar Khayyam has met with so much appreciation in this country as to have exhausted the original edition and led to the publication of a second in England. Meantime, the importers have enjoyed the profits on a rise from sixty cents for the first copies to something like three dollars for the later. We learn that an admirer of the poet, the Rev. George Folsom, of Dedham, Mass., intends importing one or two hundred copies for private sale at cost, or about a dollar apiece.——The second volume of the Transactions of the Wisconsin Academy of Sciences, Arts, and Letters (1873–4) has appeared. The contents are somewhat scrappy, and of a greater local than general importance. The scientific department is best sustained. Prof. W. F. Allen continues his researches into the condition and classification of the English peasantry in the thirteenth century, and treats also of ranks and classes among the Anglo-Saxons. His colleague, Prof. J. B. Feuling, examines the etymology of the word *church*, and proposes a new derivation from Latin *cura, curatio (sc. animarum)*.——The recent very long rain-storm (Sept. 16 to 20 inclusive) furnishes a striking illustration of the truth of the discovery by the late Judge Butler (of Connecticut) of the belt of rain in the temperate zones, which he said passes over the latitude of New Haven at about the Autumnal Equinox in its journey southward, returning northward about the last of May. During August it is usually over British America, while an area of drought exists to the southward of it.——The soundings of the *Challenger* expedition furnish the *Geographical Magazine* for September with the materials for a contour chart of the Atlantic; and in Petermann's *Mittheilungen* for July 25 we have numerous sections through the North and South Atlantic Oceans, showing both the contour and the temperature. Both these periodicals have timely articles on Arctic exploration. Rear-Admiral Sherard Osborn's advocacy of the Smith Sound entrance to the circumpolar region is confirmed by the return of the Austrian Weyprecht and Payer expedition; and this event also lends interest to the account of the geology of Novaia Zemlia given in the *Mittheilungen* by Prof. Höfer, companion of Count Wilczek in his visit to that dreary and very ancient land in the summer of 1872. No. 51 of the Berlin Geographical Society's *Journal* has an article, illustrated by a map and profile, on the Peruvian railroad from Mollendo to Puno, on Lake Titicaca.——Prof. Wurtz's address, to which we have once or twice referred, is contained in *Nature*, No. 252 (Macmillan & Co.)

—The story, for which the *Tribune* was our authority, that Butler and B. G. Jayne were part owners of the *Graphic*, is now pronounced by the former journal, on further enquiry, to be untrue.

—At last we have an official U. S. Postal Guide which is worthy of the magnitude of our service, and which will, like its British exemplar, be revised and published quarterly. The work, as we lately mentioned, has been committed to the Riverside Press, and bears the imprint of Hurd & Houghton, New York, through whom, or through postmasters, subscriptions may be procured at $1 50 per annum, the single copy selling for fifty cents. It consists mainly (1) of an alphabetical list of post-offices in the United States; (2) of a list by State and county; (3) of a list of money-order offices. The last occupies sixteen pages and is manifestly superfluous, since the alphabetical list can be made to serve the same purpose by means of asterisks for domestic, and the letters B., G., S. for foreign money-order offices. The list of offices whose postmasters are appointed by the President, and whose salaries are therefore annexed, appears to be inserted not for the convenience of an office-seeking public, but of postmasters themselves. Among the topics of the index (and of the Guide) we miss the carrier system of free delivery. There is no list of the cities enjoying this privilege, nor any statement of the rule regulating its extension. The index is otherwise not what it ought to be; *e. g.*, postal cards to foreign countries have but a

single reference, requiring in the case of Germany another reference, and in the case of Switzerland and Canada two others. While the typographical execution of the Guide is characteristically excellent, there is room for improvement in the Foreign Postage Table. Here the columns are too wide for the figures, and the eye cannot keep to the line. In this respect the British Postal Guide, whose "suggestions to the public" have been very literally adopted, might again be copied to advantage.

—Simultaneously with the elevation in England of a statue to Bunyan, under circumstances which fed with pride and joy the soul of British Dissent, a little tribute to the immortal tinker was in preparation on this side the water. Mr. A. H. Ritchie, the favorably-known engraver, has now finished the plate, from a painting of his own, representing the most delicate of Bunyan's varied characterizations. That the rude dreamer of Bedford Jail could find in his soul so sweet an image as that of "Mercy," and caress it into shape with touches of such rare invention, heightened (as in the episode of Mercy's lovers) with a humor so pathetic, goes far to redeem the character of the seventeenth-century *plebs* for inborn chivalry and refinement. Only the elect among artists are fit to handle this Protestant Dolorosa, this lady of sorrow, whose nights are passed in accusing the hardness of her heart. Huntington has done well, and the present delineator has succeeded with a plate that forms a suitable pendant for that artist's "Mercy's Dream." In Ritchie's picture she is knocking at the Wicket Gate. Timidity and self-distrust are expressed in the gesture with which she reaches for the iron knocker, and a tear stands half-dried upon her cheek, indicating that the poor child has already made acquaintance with Despair's hard spouse, Diffidence. Through the ivy-grown wicket is seen the narrow way, winding past crosses and ruins towards the Delectable Hills. The posture of the figure is certainly expressive, and the face well modelled and distinguished in type, but it is not beautiful, and the execution—of stipple, braced here and there with line—is too confused to be entirely artistic. What is encouraging in the production of such a work is that the author of it, like some of the great engravers and aquafortists of old, has been his own designer, and we hope to be always able to praise the efforts of our capable burins in the way of autographic delineation.

—We have been permitted to examine the proofs of such of the maps and letterpress of Part II. of General F. A. Walker's Statistical Atlas as illustrate the growth of population in the United States from 1790 to 1870. The maps represent the country east of the 100th meridian, and show (1) the density, (2) the extension, and (3) the centre of population at each decade. Their value in studying the history of the country at any given epoch need not be pointed out. The letterpress discusses the "Progress of the Nation," beginning with the successive total areas of settlement and the aggregate population. The area of 1790, 239,935 square miles, had become 1,272,239 square miles in 1870; the population had grown from 3,929,214 to 38,558,371; the average density of settlement from 16.4 persons to the square mile to 30.2. General Walker's Table III. marks the linear extension of population for each degree of latitude from ° to 7° N. inclusive, calculated from the average projection of the coast line in each case. The greatest distance attained (E. of the 100th meridian) is 1,325 miles, on the 41st degree; and this degree exhibits also the greatest extension since 1790, viz., 1,087 miles. Next follows an analysis of the density of settlement for each decade, according to the progress or decline of the five groups: 2 to 6, 6 to 18, 18 to 45, 45 to 90, and 90 or more to the square mile. Of this intricate subject it is impossible to convey a clear notion in the space at our command. Table V., of cities, shows one only of the class 8,000 to 12,000 in 1790, against ninety-two in 1870; three of 12,000 to 20,000, against sixty-three; one of 20,000 to 40,000, against thirty-nine; and one of 40,000 to 75,000, against fourteen. The class 75,000 to 125,000 began in 1810; 125,000 to 250,000 in 1830; 250,000 to 500,000 in 1840; 500,000 and upwards in 1850. The next census will institute a new class of 1,000,000 and upwards. The city population of 1790 was 3.4 per cent. of the total population of the United States; that of 1870, 20.9 per cent. An interesting chapter is devoted to the "centre of population" of which we have heard so much, and which is in effect a sort of centre of gravity—"twelve individuals in San Francisco exerting as much pressure at the pivotal point—say the crossing of the 83d meridian and the 39th parallel—as forty individuals in Boston." This centre is represented on the several large maps (and on a wood-cut in the text) by a star. It rested in 1790 about twenty-three miles east of Baltimore, in 39° 16′.5 N. lat., and in 1870 it was within forty-eight miles of Cincinnati, in 39° 12′ N. lat. What is remarkable is that during eighty years "the extreme variation in latitude has been less than nineteen minutes," and only twice has the centre crept south of the 39th parallel. It is curious that the westward movement of this "star of empire" coincided with the change in the political preponderance of the two sections of the country. In 1850, the centre was in Western Virginia; about the time of Kansas-Nebraska it crossed the Ohio; and in 1860, it was securely located on the free side of that river. The sceptre had passed finally and for ever from the South. Moving at the average rate of about five miles a year, the centre of politics and of population was still thirty-eight miles from Cincinnati when the abortive attempt was made in that city to effect a political revolution by means of the Greeley movement. Probably no other city can so well lay claim in 1876 to being the centre of a population rising 45,000,000, according to the estimate of Mr. E. B. Elliott with which General Walker closes his review.

—American geologists have of late years developed a remarkable activity in the department of exploration and field research. Their indoor performance has, however, fallen seriously behind. Contented with the larger features of geographical interest, they have conspicuously neglected the patient, minute digestion of field results, and the application of such analytical methods, both chemical and microscopical, as alone could put their results on a footing of common terminology with those of European writers. As a consequence, American petrography is for the most part written in a language unknown to the scientific world, and passes unnoticed among foreign scholars. The Geological Exploration Corps of the Fortieth Parallel, having completed their outdoor work, have now broken ground in the right direction by inviting Dr. Ferdinand Zirkel, the eminent Leipzig professor, to come over and co-operate with them in the classification of their great collection of rocks. This distinguished savant is now here, at the Fortieth Parallel quarters in Lafayette Place, hard at work with Messrs. King, Emmons, and Hague upon the crystalline rocks of Nevada, Utah, Colorado, and Wyoming. It will be remembered that Zirkel's first paper on rocks was published as early as 1859. In 1861, he was made Ph.D. at Bonn, and in 1871, after filling several honorable positions, was elected the successor of Naumann at Leipzig. His geological travels in Iceland, written when he was only twenty years of age, and the maturer study of the Pyrenees, are among his outdoor labors. His excellent works on petrography and microscopical geology are everywhere regarded as standards of excellence.

—General Sherman has published through the *Army and Navy Journal* the concluding chapter of his "Memoirs" of the war. This chapter is a general summing-up of conclusions, which are interesting as coming from an officer who has seen so much and such extraordinary fighting. The greater part of his essay relates to organization and tactics, and his conclusions frequently confirm the popular opinions on the subject of war which the four years of popular fighting during the rebellion made for the time being a sort of common civil and military property. How long it will take for the military experience of that period to die out, and whether at the beginning of our next great war it will all need to be learned over again, we do not undertake to say; but at the end of the rebellion there was certainly an accumulated store of military wisdom in the breast of every private or officer then mustered out of the service which led him to believe himself, as he often was, perfectly competent to form, and quite ready to express, an opinion on many an intricate military subject. Among the things which were at that time considered pretty well settled by the ex-military population was, for example, that the practice of filling up old regiments with new men was a better plan than sending out new and untrained regiments, and that the election of officers by men did not, as a rule, work well. On both these points General Sherman confirms the popular impression, saying as to the first: "The greatest mistake made in our civil war was in the mode of recruitment and promotion. When a regiment became reduced by the necessary wear and tear of service, instead of being filled up at the bottom, and the vacancies among the officers filled from the best non-commissioned officers and men, the habit was to raise new regiments with new colonels, captains, and men, leaving the old and experienced battalions to dwindle away into mere skeleton organizations"; and he adds that, owing to the fact that the State of Wisconsin pursued the true plan in this matter, "we estimated a Wisconsin regiment equal to an ordinary brigade." With regard to arms of precision, General Sherman agrees with most European observers of the Franco-Prussian war that the effect of their introduction will be mainly to make a higher order of intelligence necessary among soldiers—those arms leading to a development of the importance of the skirmish-line, and modern skirmishing being impossible without men who can be trusted to do their work without much superintendence from officers, and who have self-reliance and intelligence enough to move upon the enemy, each man almost by himself, in open irregular order, without the moral support given by ranks of men on each side. Strategy, General Sherman thinks, is the same science that it was in the days of Jomini, and unlikely to be changed by any alteration in the mode of warfare.

—It was the fortune of Mr. Fechter before his first successful appearance in this country to have himself heralded to the public by a sort of voucher from Mr. Charles Dickens, and so Mr. Toole, who is now acting at Wallack's, though not in the same conspicuous way, has had his merits vouched for in a

general way by reminiscences of Mr. Dickens's approval. Dickens, who was himself an amateur, almost a professional actor (for his success in reading was certainly quite as much due to his theatrical talent, and essentially theatrical management of voice, as to the interest of the subject, or even to the excitement caused by the presence in the flesh of the author of 'Nicholas Nickleby' and 'Oliver Twist'), had a good right to criticise the actors of his time, and however exaggerated his way of speaking of Mr. Fechter's acting may have been, there is no doubt that in melodrama there was much to be said for it. Mr. Toole's acting belongs to a widely different category from that which "Monte Cristo" or "Ruy Blas" demands, his range being from broad farce to low comedy, for we can hardly suppose that such plays as "Uncle Dick's Darling" or "Wig and Gown" are held out to the public as high comedy. He is a good and at the same time a disappointing actor, for in some parts he makes so pleasing an impression as to spoil the audience for his representation of others in which he is weaker. On his first appearance here in "Wig and Gown," a tedious play, written, we believe, by the unfortunate author of "Fortune," he was received by the audience with unmistakable delight, which, as the evening wore on, grew to positive enthusiasm, and on looking over the list of his plays we are inclined to think that this was his most successful appearance. In "Paul Pry" Mr. Toole did not, according to our observation, succeed in doing more than make the character ridiculous, while in one or two farces he does not even do that. His strong point is his management of the transition from the comical to the serious or the pathetic, as in "Wig and Gown," when, in the court scene, he suddenly changes from the farcical barrister, who has been convulsing the room with his absurd and almost idiotic behavior, to the terrible avenger of fraud, and, by his hot but steady cross-examination of the witness in the box, fairly drives the wretch out of it a convicted perjurer. In such a scene as this, as in some of the scenes in "Dearer than Life"—in which his part is that of an indulgent father reduced to beggary (as he supposes) by the wickedness of his good-for-nothing son—he exhibits genuine pathos, and it must have been a hardened theatre-goer who could have remained unmoved by his acting.

—What plays are decent and what are not decent will, we suppose, always remain a moot question in dramatic ethics, and one rather to be settled for himself by each individual member of the audience in the case of a particular play, than by any general rule. It seemed to have been settled among certain moralists a few years ago that a convenient line might be drawn at *opéra bouffe*, and that while there was no particular objection to being seen at a representation of the "Dame aux Camélias" or "Article 47," the "Grande Duchesse" or "Périchole" must be considered tabooed. There seems, however, some likelihood just now that this decision will be reversed for the time being, for as to the examples of the two schools now in process of representation here there cannot be much doubt that in every way Offenbach's "Princesse de Trébizonde" is preferable to the extraordinary play called the "Sphinx," adapted from Octave Feuillet, acting at the Union Square Theatre. The plot of the latter is simple enough: A wife falls in love with her best friend's husband, and is tortured for two or three acts by love, jealousy, and remorse at once. Meantime she always carries about with her some poison in a finger-ring, and, on the discovery of her unhappy predicament, she takes this and dies in great agony, the details of which are thus described by a competent critic:

"As the poison begins to work she is thrown into violent convulsions, her eyes distend, her mouth is drawn tense, and a greenish emission starts from her lips. As she motions *Berthe* to throw a veil over her face she tears open her corsage in the agony of death, and then, sinking back upon a chair, stiffens in a last convulsive throb and dies with staring eyeballs and foaming mouth."

There is nothing in the play but this, as it is acted in New York. Of course in Paris it may have been given with much delicacy, and the various shades of feeling brought out by the situations depicted in such a way as to be interesting; but Miss Clara Morris's forte is not depicting shades of feeling, but dying in horrible agonies, which she always accomplishes with great skill; and the play may be, therefore, considered to be a good realistic exhibition of the effect of poison taken into the human stomach in excessive quantities. The comparative decency of such plays as this and the opera called the "Princesse de Trébizonde" do not seem to us to admit of question, and the latter is, as may be imagined, much more amusing than the "Sphinx." The Aimée troupe have been acting it, too, with as much reserve as *bouffe* actors can be expected to show, and a person must be either very prudish or very prurient to find anything out of the way in the libretto. The music is extremely gay and often pretty.

—Insectivorous or carnivorous plants—the subject of Dr. Hooker's address as president of a section at the recent meeting of the British Association—have of late attracted no small degree of popular attention in this country, mainly through our two articles in April last, which have been more than once reprinted abroad, as also has the account of Dr. Mellichamp's further discoveries, published in the *Tribune*, and likewise communicated to the American Association at Hartford. Mellichamp's researches were upon pitcher plants, and went to show that the lure or sweet secretion at the orifice is not intoxicating or narcotic, but that the watery secretion below, into which the insects fall, is asphyxiating in the case of *Sarracenia Variolaris*. What is still more curious, Dr. Mellichamp discovered in this species, and at the time of their greatest activity, a narrow line or trail of sweet secretion leading from that within the orifice of the pitcher and along the edge of the wing down nearly to the ground, this serving as an effective lure to ants, the dead bodies of which generally form the larger portion of the contents at the bottom of the pitcher. Mr. Canby continued his contributions to this subject by reading to the Hartford meeting an account of the manner in which the Californian Pitcher-plant (*Darlingtonia*) entraps insects of various kinds, mainly butterflies.

—Dr. Hooker's address at Belfast, which was received with great and well-deserved applause, recapitulated the various facts now familiar here, adding several matters of history, of which the most interesting is a forgotten suggestion by Linnæus, substantially to the effect "that *Sarracenia* was originally aquatic in its habits; that it had nymphœa-like leaves [Linnæus having sagaciously discerned the relationship to water-lilies]; and that when it took to a terrestrial life its leaves became hollowed out, to contain the water in which they could no longer float. In fact, he showed himself to be an evolutionist of the true Darwinian type." Dr. Hooker continued with an exposition of his own researches, principally upon *Nepenthes*, the pitcher-plants of the Asiatic Archipelago and of hot-houses. The main points made out are, that the rim of the cup here also secretes honey; that flying insects, which are obviously the kind of game these high-hung pitchers are intended for, are abundantly caught; that the watery fluid is secreted by innumerable and very minute glands; that this secretion is considerably augmented when insects or other animal matters are dropped in, which is not the case when inorganic matter is used—the increased flow occurring only after the reception of something savory and digestible. Moreover, this liquid, which is always acid, like gastric juice, appears to have its solvent powers as well as its quantity increased upon ingestion of food. For, while the liquid removed from a freshly-opened pitcher hardly acts at all upon bits of meat, white-of-egg, or cartilage, little cubes of these, dropped into the pitcher, had their edges eaten away and their surfaces gelatinized after twenty-four hours' immersion, and pieces of fibrine weighing several grains dissolve and totally disappear in two or three days. From which "it would appear probable that a substance acting as pepsine is given off from the inner wall of the pitcher, but chiefly after placing animal matter in the acid fluid." So goes to the limbo of exploded ideas the last absolute distinction upon which we prided ourselves, that animals alone possess a stomach. Those who never could take kindly to what Charles Lamb called "our poor relations," may perhaps go further without faring worse in their sentiments, join Dr. Hooker in the recognition of "our brother-organisms—plants," and allow the fullest meaning to the poet's line,

"One touch of nature makes the whole world kin."

—The Board of Administration of the Caucasus Mountains is doing a good work in studying the characteristic features of the population of this region, and making a record of them, before they pass from their wild state into civil life under Russia. The relations, or 'Sbornik,' which now number five, extend from 1868–71, and are published in Russian at Tiflis. They treat of the topics usual in such studies, the ethnology of the people, their customs and customary law, religious notions, their history and legends. Daghestan is the principal and most populous province of this region—its inhabitants in 1868 amounting to 478,000 in a total of nearly a million for the whole Caucasus district—and the most of the essays in these collections refer to this province. The observations published are by a number of hands, and some can hardly claim a scientific value. Probably a large number of people, for instance, would look with a good deal of caution at one writer who states as a fact that many Jews who, as he believes, had settled in pre-Christian times in considerable numbers in Transcaucasia, had already accepted the doctrine of Christ as the Messiah in the very year of his crucifixion. The author ought at least to have added the grounds of his conclusions, and to tell us in just what year he understands the historical fact to have occurred which he takes as giving the precise date of this conversion.

—Austria-Hungary is but slowly recovering from the effects of the great crisis of last year, and public attention has been directed with more than usual interest to the prospects of this year's harvest as the only means of a return to better days. Professor F. X. Neumann of Vienna has seized the occasion to enquire somewhat deeply into the influence of good and bad harvests on the prosperity of the empire, and he embodies the result in a pamphlet,

'Die Ernten und der Wohlstand in Oesterreich Ungarn' (Berlin: Carl Habel), which deserves the attention of students of political economy. Guided by carefully gathered statistics, he pronounces it an illusion to look forward either with excessive hopes or excessive fears to the result of this year's harvest. He shows that in the years 1868–1873 the annual revenue derived from cereals was on an average 950 million florins. During that period the extremes were marked by the harvest of 1869, which was valued at 828 millions, and that of 1870, which amounted to 989 millions. Thus the harvest of 1869, which was all but a failure, fell short of the average by 122 millions, while the very good harvest of 1870 exceeded the average only by 39 millions. If, on a very low estimate, the annual value of the total agricultural and industrial labor of the monarchy (*das rohe Volkseinkommen*) is set down at 5,500 million florins, the difference between the proceeds of a good and a bad grain crop represents only about three per cent. of the total income. Besides, a failure of crops is no longer, as it was twenty years ago, identical with high prices of grain. Now, the prices of cereals are regulated not within any particular country, but by the combined production and consumption of all European and American markets. This accounts for the fact that, since 1862, years of bad crops have generally witnessed considerably lower prices than the best years, when grain was plentiful, and there was a surplus for export. It follows that a considerable increase in the national prosperity may be looked for only in those years when, as in 1870, good crops coincide with low prices; while a considerable diminution is only to be feared when, as in 1873, a failure of crops is attended with high prices.

MISS AIKIN'S CORRESPONDENCE.*

MISS AIKIN met Dr. Channing during his short visit to England. In 1826, he sent her a copy of his work on Milton. She acknowledged the present, and thus commenced a correspondence which lasted twenty years, and ended only with Dr. Channing's death. This correspondence has just been published, and is well worth publication; for though the letters of both the writers are undoubtedly often dull, they are also in many respects interesting. The correspondence is, in short, exactly what we might expect from the character of its authors. Neither Miss Aikin nor Dr. Channing was endowed with any of the gifts which make a good letter-writer. They have neither of them the least touch of literary grace. They neither of them have any sense of humor. Of the two, Miss Aikin is the better writer. But even her best letters read like chapters from a work on the religious and political condition of England, and, from an occasional desire to be sprightly, she sometimes falls into a tone of heavy banter from which Dr. Channing's unvarying gravity preserves him. On the other hand, both the correspondents were, it is hardly necessary to say, persons of far more than average ability. When they began to interchange letters they had each attained middle life, and were enabled both from character and position to look with a certain impartial interest on the state both of society and of religion. Both of them were singularly free from that pettiness of mind which confines most persons' interests to the little everyday matters which concern themselves. Miss Aikin no less than Dr. Channing seems to have found the chief pleasure of life in considering and discussing the great questions of the day. The time was a period of great movement and excitement. Newspapers and telegraphs did not then diffuse information with a rapidity which renders the efforts of a private correspondent to supply news absolutely useless. Miss Aikin acted, in fact, as Dr. Channing's "English correspondent." She got up the religious or political information which was likely to interest him, and hence her letters give a good picture both of her own character and of the condition of society in England between thirty and fifty years ago as seen from the point of view of intelligent Unitarians.

The picture of Miss Aikin herself is worth some notice. She is one of those very commendable authors who, without a touch of genius, possess a rare amount of shrewdness, industry, and intelligence. She devoted herself to the study of history at a time when historical studies were far less common than at present, and produced works of some permanent value at a time when a female authoress was something of a rarity. An intelligent reader of her letters feels in fact some surprise that Miss Aikin has not achieved a more permanent fame as a historian than seems likely to fall to her. Dr. Channing had made some remarks on the character of Henry VIII., to which she replies as follows: "Great weight must also be given to the consideration that the memory of the civil wars was still so recent and so bitter that Englishmen were then willing to yield to almost anything for a quiet life. It is also true that the personal character of Henry, by all its qualities, good and bad, was formed to assert a strong ascendancy over the minds of his people, by whom he was at once more admired, esteemed, and dreaded than any other English king." These sentences were written in 1828. They read like a summary of Mr. Froude's estimate of the great Tudor king. They prove convincingly that Miss Aikin had anticipated by nearly thirty years all that is true in his paradoxical eulogies of Henry VIII., and afford a singular proof of Miss Aikin's capacity, not only for getting up, but for understanding history. She displays, in fact, not only in her historical criticisms, but throughout her letters, a remarkable power of thinking for herself and seeing things with her own eyes. On several occasions, she questions the judgment of her correspondent, and almost invariably has, in point of shrewdness and common-sense, the advantage of Dr. Channing. He, for example, appears at 1830 to have been filled with the highest hopes as to the destiny of France. Miss Aikin, partly from the influence of English prejudice, but in great part also from her coolness of judgment, never fairly enters into his sanguine views. She shows a radical distrust of the French character which the events of the last forty years have done much to justify, and that this distrust is not the mere result of English sentiment may be inferred from the fact that if she discerned the weaknesses of France she sagaciously predicts the progress of Italy. At the time when she wrote, the Italians could have been known in England only through a few political exiles, but Miss Aikin noticed the great merits of these exiled Italians, and ventures to predict that a nation which can produce such men will show itself capable of improvement.

Miss Aikin's character is worth study; but, after all, the main interest of her letters is not a personal one. They are worth reading, not so much from the light they throw on the character either of Miss Aikin or of Dr. Channing, as from the insight they give into the condition of England at a period which, though not far distant in point of years, is in several respects very different from the present time. Nothing, for instance, is more strange to persons who live at a time of something like political apathy than the enthusiasm for reform which is expressed by a person so little enthusiastic as Miss Aikin. The following eulogy of William IV. reads now as a grotesque satire on one of the most commonplace of English monarchs: "But the conduct of the king is our grand piece of good luck and a most unexpected one. A patriot king! once in a millennium such a phœnix is seen on earth. Alfred was our last. A levity in the manners of his majesty had caused him to be suspected of an unsound head, but he has under this a plain good sense, and, what is better still, a real love of seeing his people happy, which . . . has led him admirably right." But these sentiments, though they sound oddly enough to a generation who know what a commonplace mortal the patriot king in reality turned out, express not the partiality of an enthusiastic lady, but the sincere feeling of all the Liberals and Reformers of 1831. Moreover, there are passages in this correspondence which explain the fervor with which persons who now would be Conservative Liberals, or not very Liberal Conservatives, supported forty years ago measures of reform which appeared almost revolutionary. "Mr. Whishaw," writes Miss Aikin, "was one of the auditors of public accounts, and you will wonder to be told that he struggled in vain to carry the reform of keeping those accounts in Arabic numerals and in the English language, instead of in Roman numerals and bad Latin; but Lord Granville, then minister, would hear of nothing so revolutionary as writing 'hair-powder duty' instead of '*debitum super pulverem crinalem*'; so much for following the wisdom of our ancestors." The anecdote exactly describes the spirit of English Toryism for the fifty years which preceded the Reform Bill. The nation had become, in 1830, filled with disgust at the so-called wisdom of our ancestors, and the object of the reformers (which it must be added they at last completely attained) was to introduce into every department of Government rules of plain common-sense which might make it impossible to use Roman numerals and bad Latin instead of Arabic numerals and plain English. The mass of small abuses which had been allowed to accumulate in every part of English political institutions, explains both the general enthusiasm for reform and the very practical, so to speak, external form which Liberal reforms took when the overthrow of the Tories enabled the Whigs to carry out their policy.

It is in fact impossible to read a line of Miss Aikin's letters without seeing that she and her friends, in spite of their zealous liberalism, were really inspired by no desire whatever to change fundamentally the state of English society, and believed only in the immense importance of what to enthusiastic politicians would seem small improvements rather than sweeping reforms. This is apparent even in the parts of the letters of the correspondence—and they are, on the whole, its most interesting portion—which refer to religious questions.

A Unitarian and a Liberal writing to a celebrated Unitarian preacher might naturally be expected to express a desire for root-and-branch religious innovations, but nothing is more remarkable than the extreme moderation of Miss Aikin's aspirations. She expects and apparently wishes for the ex-

* 'Correspondence of Wm. Ellery Channing, D.D., and Lucy Aikin from 1826 to 1842. Edited by A. L. Le Breton.' London: Williams & Norgate; Boston: Roberts Bros.

pulsion of the bishops from the House of Lords. She fears evangelical intolerance. She hopes for the gradual spread of Unitarian Christianity, and expects the influence of Whately and of writers of his school to produce a far greater effect than it has in fact exerted on English opinion. But every line of her letters proves that she would be, if now alive, very much astonished and probably not very much pleased at the present freedom of thought and opinion which is the most striking characteristic of modern English society. It is hard to put one's self back in imagination to a period at which Mrs. Hannah More's works exerted a great influence, and young ladies modelled their lives after the precepts contained in 'Cœlebs.' It is still harder for any one who looks at English society as it now exists to realize that not much more than thirty years ago what would now be called very moderate opinions could hardly find free expression. In 1841, Miss Aikin could thus express herself: "Our corn-laws are at the last gasp, and in timber and sugar I believe we are going right, but, alas! what avails all this if free speculation is taxed to prohibition, if religious liberty lies oppressed, stifled, down-trodden, if no man dares to say in the face of the world that all opinions have equal rights, that no one ought to believe himself entitled to put another to silence because his doctrines are not those of the majority, those that the state has endowed?" Let any critic take up the *Pall Mall Gazette*, 'Literature and Dogma,' any number of the *Contemporary Review*, or Professor Tyndall's address to the British Association, and then ask himself whether any sensible person could now re-echo Miss Aikin's complaint that freedom of opinion is taxed to prohibition. But one answer is possible. On all theological topics, greater freedom of discussion is now allowed in England than has been hitherto admitted in any European country. Yet there is no reason whatever to hold that the language used in 1841 was exaggerated. Miss Aikin's letters show, if they show nothing else, that English opinion is passing through a strange revolution. Interest in political reform has declined, but the energy which was expended forty years ago in political agitation is now transferred to the domain of theological controversy. As a sign of this curious change in sentiment, letters far duller than Miss Aikin's would have for intelligent critics a permanent interest.

THE MAGAZINES FOR OCTOBER.

ONE of the most noticeable magazine articles of the month is in *Old and New*, and consists of the address delivered at Detroit a few weeks since by Mr. A. D. White, President of the Cornell University. It was an oration before a convention of teachers and other persons interested in education, and its object was to attack our American system of setting up sectarian colleges, and to urge the propriety of granting State aid and United States aid to the higher institutions of learning, just as it is granted in support of our common schools. In some respects the address is very conclusive. Recollecting what it is that Mr. White attacks, and then what it is that he recommends, we may remind ourselves of the remarks made about the "Tirocinium"—Cowper's assault on the great public schools of England. It was to the effect that, on the one hand, what the poet had to assail was a system whose defects and vices were notorious, and undeniable; and, on the other hand, that what he had to assert by way of remedy was a principle the practical value of which depended entirely on its successful administration. We suppose no one who has given much thought to the matter will say that the interests of the higher education are anything but very ill subserved by our two or three hundred sectarian colleges; Mr. White has as little difficulty in making that appear to be true of the whole class of small colleges as Cowper had in showing that the British public school could be made a nursery of brutality and other kinds of vice. But the cautious reader of enthusiastic speeches feels an inclination to draw back when Mr. White's remedy coming along takes on the shape of thirty-seven noble universities, "true universities," one for each State in the Union, and perhaps ten more for the ten Territories. We may as easily have forty-seven noble, true universities, we suppose, as thirty-seven or thirty-eight; for Mr. White is not averse to seeing one District of Columbia University, which shall be still better than its sisters, and shall have its seat at the national capital, and be supported and of course partly governed by Congress and its committees, just as the State legislatures are partly to govern such colleges as may be subventioned by the various States. We do not criticise in detail Mr. White's remarks about the desirableness of giving public money to the various agricultural colleges, technological schools, and so forth which States may deem it for their pecuniary and other interest to set up and maintain. It seems reasonable, and at all events the scheme is already under experiment in many States, though as yet it is hardly time to say what the general results will be. He may perhaps learn what they are by the time "the noble university at Ann Arbor," as Mr. White calls it, itself assumes that title—a time which we doubt not is at some distance, nobody knowing so well as "true university" makers that making them is a slow process. Other articles in *Old and New* are one of Mr. E. E. Hale's short stories; a short story called "Pilchards," which may be described as a very cool, satisfactory October love-story; and a miscellaneous article entitled "The Record of Progress." This last is largely taken up with an account of some progress made by Massachusetts in so altering its law of "settlement" for paupers as to make it easier for this class of persons to obtain the official assistance of the municipalities in the State. As for Mr. Hale's short story, it is an invention in the Jules Verne manner, but with less in it to amuse than one of Verne's improbabilities. Unless indeed the reader is one to be pleased with the air of verisimilitude given to a story written in Boston by the casual mention of "Mr. Firth at the Albany"—that is to say, Mr. Firth of the Boston and Albany Railroad—as having told Mr. Hale something this morning after breakfast. This is an old trick of Mr. Hale's, and is as good as real dirt in the grave-digging scene in "Hamlet."

Professor Simon Newcomb begins in the October *Harper's* a serial article called "Some Talks of an Astronomer," in which he proposes to explain the facts of astronomical science in so easy a way that the general reader may be able to profit by the conversation. To us Professor Newcomb seems to have gauged the abilities and acquirements of the general reader not altogether accurately, and we should hope that before other talks are mapped out he may come to a better judgment of the extreme scientific incapacity of readers of scientific treatises and hearers of scientific lectures. Pilgrims newly returned from the sea-shore and from old towns and country places will be glad to look at two illustrated papers—one by Mr. T. B. Aldrich, who writes about Portsmouth with that accustomed dreaminess and mild humor which gable-ends more than eighty years old seem to inspire in our authors; and the other by the Rev. J. W. Chadwick, whose theme is the "Isles of Shoals," of which he writes with a zest which bespeaks him a genuine lover of nature, and especially of the sea and the Isles. Indeed, as a writer in the *Atlantic* well points out, nothing is harder to remove from the human composition than the early drop of salt water which gets into the veins of those born by the sea and who pass their early days in its presence, as appears indubitably to have been the case with Mr. Chadwick. For the rest, *Harper's* is as full as usual. Mr. Moncure D. Conway begins a continued article, illustrated, in which he is to treat of "Decorative Art and Architecture in England," with such degree of taste and discernment as shall please the gods, but no doubt with a great deal of knowledge, much of it concerning works of art and artists of contemporaneous repute, though unknown to Mr. Conway's American audience. Señor Emilio Castelar contributes the twelfth of his tedious essays on "The Republican Movement in Europe."

In *Scribner's*, a very elaborate review of "George Eliot, as a Novelist and as a Woman," is attempted by Mr. W. C. Wilkinson, who conceals in a cloud of ambitious verbiage some generally correct though not new conclusions in regard to the moral spirit of George Eliot's works and in regard also to the moral influence which they tend to exercise upon their readers. As for Mr. Wilkinson's remarks on the literary qualities of these works, they are of a miscellaneous character, some being not a little curious. One is worth quoting as an illustration of the sudden and fatal collapse to which the half-taught dissertator is liable when he goes too far. Mr. Wilkinson has had out the analytic machine, and the synthetic machine, and the objective and subjective mirrors, and has been making great play with them, and by-and-by remarks as follows: "But when, ceasing to be dramatic [and she can be 'every whit as dramatic as Shakspere'], she uses the privilege of the novelist to be expressly psychological, her analyses of character and motive become so subtle and searching that mere dramatic exhibition seems almost vulgar in comparison. Hamlet's soliloquy is greatly admired for the depth and subtlety of psychological implication which it contains. But there is many and many a passage of clairvoyant vision and revelation in the sphere of human character and motive to be found in George Eliot's works that makes Hamlet's soliloquy superficial and tame." All this involves a singular misconception. Not to speak irreverently of George Eliot, it is something like saying that there is more subtlety and psychology in the bottom of a fortune-teller's tea-cup than there is in the wide waste of ocean. Nobody but himself has ever told Mr. Wilkinson that the distinguishing mark of Hamlet's speech is expressed or implied subtlety of psychological analysis. That famous soliloquy holds the place in literature which has been awarded it for the reason that it is the full and masterly utterance, not at all of a very subtle, but of a very elemental affair—the problem, namely, in which we may be sure man began to be entangled as long ago as when he had made his departure from Eden, and which demands for its settlement a statement from him as to the value after all of this transitory life. It is a simple and uncomplex question, at least in its terms, but to think

about the answer is to save one's self from the ineptitude of styling its best expression as "tame and superficial." As regards the other parts of Mr. Wilkinson's essay, we have said that the judgments expressed were in the main correct. Credit is given the moralist for the loftiness of her morality, and the spirit of altruistic piety which penetrates her writings is recognized; the tendency of this high and austere creed to break down the average human soul when unsupported by the prop of faith in a personal God is insisted upon (we imagine most of George Eliot's readers capable of being injured by the discovery will never make it, though they will "feel" that she is repellent); the uneasiness of the novelist's own spirit while inculcating her doctrine is thought to be indicated plainly in the lowering or cold heavens of her habitual world; and, finally, the source of this uneasiness is sought, not where some seek it, in the fact of the less energetic, courageous, and wide-experienced character of the feminine mind, even when informed by talent or genius, but in the fact that George Eliot has not yet had personal knowledge of the power of vital religion.

The *Galaxy* and *Lippincott's* are of light weight this month, but the former goes, in an article entitled "Fig Leaves and French Dresses," rather entertainingly over the old ground of the Englishwoman's dowdiness, or rather her positive achievement of indecorous and almost brutal disregard of the becoming. The latter discourses with sufficient gravity of the British peerage. In both the *Galaxy* and *Lippincott's* we have some of the outpourings of the mind of Mr. Junius Henri Browne. "The Loadstone of Love" is the name of the *Galaxy* essay, and it is a mass of rubbish as creditable and as intelligible as the circulars of a business astrologer or a quack doctor might be. A few random sentences are as follows: "The witch of Endor was a magnet; so were the soceresses of the East, the theosophists of Alexandria, the mystics of the last century"; "The woman who attracts and repels by turns, who alters with the days of the week and the hours of the day, who seems subject to inward, involuntary revolutions is polarized"; "Christina of Sweden was completely polarized," and led a life to correspond, as is here set forth; "A true magnet with a remarkable variation was Mary Stuart"; "Hardly any man except John Knox ever approached her without a flush of erotic fever"; "No woman can be so magnetic as to be ensured against magnetism by man—every woman has her master," etc. Mr. Browne has been producing matter of about the speculative and moral value of this that we quote for now a long term of months, and his presence has come to amount to a serious infestation of periodical literature.

The October *Atlantic* is entirely readable, but perhaps it carries to a still higher degree than its contemporaries the proof that our magazines are in very great part written for a female audience. We commend to the attention of our readers a sketch, in pretty strong black and white, we should say, called "Marty's Various Mercies," which gives some very amusing aspects of the negro nature; worth noticing as also of an unusual quality are a poem by Miss Elizabeth Stuart Phelps, and some letters (never designed for publication) from a young Bostonian lady abroad, who wrote home to her friends about her music lessons, about the music that she heard in Berlin and other German seats of harmony, and about the great performers Clara Schumann, Tausig, Rubinstein, and their compeers. What she says is interesting in various ways, and not least for the writer's warm admirations and enthusiasms: "But I wish you *could* hear Joachim, for it is simple ecstasy to listen to him. Oh! he is to me the wonder of the age, and unless I were to *rave* I could never express him." The musical reader will see that letters written in this spirit are not likely to be dull, nor anything but very grateful to the musical palate. Miss Phelps's poem merits the praise of being finely imaginative, and seems to us of higher literary worth than anything which she has hitherto published.

RECENT NOVELS.*

MR. BOYESEN'S 'Gunnar' was first printed in the *Atlantic Monthly*, where, on account of its relative freshness, it appeared to more advantage than now, but the reader will get a decided pleasure from it in its present form. As yet there is to the mind of our public something very agreeable in the novelty and apparent vigor and simplicity of the remote, quiet, and yet sometimes passionate life of the Scandinavian northern region. The face of nature there and that of human existence are alike strange and impressive to us. Moreover, the first introduction of the general public to this new land was a fortunate one, it being effected through a man amply endowed with the kind of genius best suited to display its principal charm. The lyrical, idyllic spirit in which Björnson wrote has been noticed by all critics and readers, and the extreme and delicate beauty of his productions, gratefully acknowledged by all, continually draws us to approach with complacent expectation each new Scandinavian candidate for favor.

Mr. Boyesen's book is not at all on the level of Björnson's, which indeed is a small masterpiece by a natural-born artist; but that it very often recalls the latter is a subject for self-gratulation on the reader's part and not for regret. Exceptions to this statement might be made—one, for example, based on the similarity between the scene where her mother shows Ragnhild the chestful of fine things she is to inherit when she marries, and the really delightful scene, not to be carelessly meddled with or copied after, where Björnson's Eli Boen listens while Arne's old mother, solicitous for her son, tells the girl of the gifts that will belong to her who shall accept Arne as a husband. But although kept by its subject-matter and by the author's Scandinavian birthright up to a good level, 'Gunnar' essentially resembles those New England tales and sketches of years ago in which on a slender twist of plot and narrative were strung accounts of cattle-fairs, militia musters, election trainings, corn-huskings, "evening meetings," meetings of the Dorcas Society, turkey-shoots at Thanksgiving time, and numerous other scenes and humors of life Down East. Similar scenes, but Norwegian instead of American, are the staple of Mr. Boyesen's book. Yet while the underlying structure of 'Gunnar' is such as we have said, Mr. Boyesen brings to the execution of the work more spirit than our old-fashioned writers were accustomed to bring to their donation parties and town-meetings, and he has also the use of a vein of poetry which sometimes does him good service. His string of a love-story is as artlessly planned as the rest of the work, and the reader is from the beginning justly inclined to accept it without making difficulties. For whenever a simple "houseman's" son, who while yet a boy has formed an affection for a "gardman's" (rich man's) daughter, is early found to have a talent for drawing on birch-bark, and to be unfit for executive power about the farm and barn-yard, it is as certain as anything well can be (without prearrangement) that by-and-by the pastor will be pleased with his catechism lessons, will accidentally see some of his drawings, and will use his influence to have the youth sent to the capital, where soon he will carry off the Academy's first prize and come home an eligible suitor for Ragnhild or Eli.

A novel that may be commended to those who are willing to let careful drawing of character outweigh an almost unprecedented absence of plot, is Comte Gobineau's 'Les Pléiades.' It gives us in the beginning three young men—a Frenchman of the present time, who has managed to let himself wither into a sceptical, amiable, but inactive seeker of pleasure; a German artist, who does not stand so much as a representative of the new Germany as of a certain class of minds which excel more in artistic power than in strength of character; and an Englishman, an admirable fellow, full of force, enthusiastic, and honest. These distinctions are not forcibly thrust upon the reader's attention, but are made to appear in the development of the story. The heroines are, respectively, a married lady for whom the Frenchman has a moderate feeling of friendship, which, out of a sense of what becomes his position, he mistakes for love; a Polish countess, a great coquette, who exerts a great deal of influence on the lives of all the men she meets; and a young English girl, who is a most worthy person, and who is capitally drawn. There is no attempt at an artistic weaving of the different threads; the chapters succeed one another at random, but, in spite of that, the thoughtful reader will find much to entertain him. Too much space is devoted to the long conversations of the young men, and the introductions to them are for the most part exceedingly clumsy, but their talk is that of human beings. The women, too, are well portrayed. The Polish countess is set before us as vividly and as attractively as she could have been by any French writer of comedies, and it is a striking proof of the author's breadth that he could also give us to the life a sensible English girl, a model of sincerity and self-sacrifice; the countess, on the other hand, is a very complex character, apparently full of coquetry; but when we are let into her thoughts we see that her striving after some real emotion is not merely the conventional ennui of a jaded flirt, but a genuine want, and there could hardly be a greater surprise for the reader than her end, as far as the story is concerned. It is in spite of his wilful refusal to follow regular models that the author has written so interesting a novel, which is very different from the ordinary French novel we all know so well. At times he contrives to show that if he had chosen he could have equalled his rivals with their own tools, but he has preferred to carry the heavy weight of his independence.

A wide berth is best given to 'Prince Serebrenni,' by Count Tolstoy. It reads like the nightmare one might have after protracted study of some of the darker chapters of Russian history. One may learn from it the origin of the slow patience of the oppressed people of that race, and of their unfailing patriotism, but only by wading very deep in horrors. There is no pause in the terrible scenes it describes.

'Les Pléiades. Par le Comte Gobineau.' Paris and Stockholm. 1874.
'Prince Serebrenni. By Count A. Tolstoy. Translated from the Russian by the Princess Galitzine.' London: Chapman & Hall. 1874.

There is disappointment in store for the youthful student of fiction who is attracted by the title, 'The Honeymoon,' of the Count de Medina Pomar's novel. In place of the good, old-fashioned love-making for which he hungers, he will find the equally old-fashioned religious discussion, only this time between a young English nobleman and his Spanish bride. With the brief docility of that period of life, she listens patiently to his theological and philosophical soliloquies and his more profuse than apt quotations from modern poetry. It would seem impossible that the noble author can expect the same consideration from any one else.

Miss Trafton's story relates the adventures, happy and unhappy, of a young lady born in Poplar Street, Boston, twenty years or more ago, in "one of those great wooden mansions in which our forefathers of pre-Revolutionary times delighted," but which "progress and so-called necessity, and above all the restless spirit of Young America," have since swept away. We may observe, in passing, that old, by-gone dwellings of any kind, since replaced by new ones or changed in some form, are naturally enough with romancers and novelists of all sorts what the real-estate brokers call "choice locations," and many novels by eminent hands have borrowed from the old-fashioned, once new-fashioned, structures an interest which the story alone would not yield. It may be doubted, however, whether it would not require the hand of a master to invest with any very romantic associations one of our forefathers' wooden houses in Poplar Street, Boston, at a period so recent as the days of the anti-slavery agitation and the Kansas-Nebraska Bill. Of course it would be impossible in these matters to draw any hard and fast line, and, if we did so, no doubt it could be easily shown by example that any rule that might be framed had been successfully violated by writers of fiction; but for Bostonian novelists it would be safe to say that, generally speaking, no additional romance would be lent to a tale by laying the scene in one of the buildings in the wholesale dry-goods district recently visited by the 'Fire Fiend,' and for New York novelists, it would be well to avoid the memory-haunted structures modernized by Tweed's street-widening operations. This however is a small matter, and we have mentioned it merely because it seems to point to a want in Miss Trafton of that sobriety of judgment which is important to great imaginations, and, when the imaginative powers are of no more than ordinary calibre, even more essential still. Miss Trafton's story is that of a young New England girl who falls in love with a mysterious young man, named Dacre Home, who has been implicated in a bank-robbery, and who though, as we understand it, he was innocent of this crime, was apparently guilty of being very ignorant of the condition of his affections, and, though on one or two occasions he gives Miss Earle every reason to suppose she is all in all to him, in the end marries some one else. Miss Earle, however, marries at about the same time Professor Dyce, with whom she has got lost in the woods, and who introduces her at the first house they reach as his wife. This he does, as he says, because as a man of the world he felt it was necessary under the circumstances, but it seems like strange behavior in a professor and leads the reader to suspect that the author is not quite right in her analysis of his character, and that perhaps, if all were known, he knew something about the bank-robbery. This however is a gratuitous piece of injustice, for which there is no warrant in the book.

Mr. James Payn's 'At Her Mercy' opens well with some clever sketches not very far removed from caricature, of English people; but as soon as the action begins, and the evil-disposed young woman, who is malicious and ambitious, and filled with mock humility, is seen weaving her toils around the simple, innocent young woman and her lover, the interest falls off. To be sure, we are treated to a strong suspicion of murder, and matters can only be set right by a violent death and a death-bed confession, but even this rich seasoning palls on the experienced novel-reader. In 'The Best of Husbands,' by the same author, we find a good deal of the same tendency to look on life very much as a hired assassin must when business is brisk. There is Maggie Thorne in love with the scapegrace Richard Milward, and loved by his meritorious brother, John. Richard is guilty of every crime in the calendar, and disappears, and Maggie, who had ceased to love him, consents to marry John. Accidental murder; ingenious attempts at blackmail, made void by equally ingenious devices; a villain; the accomplished police officer, a pure creature of the imagination, so opportune is his arrival and so judicial his mind; and hair turning gray in a single night, are the chief properties of this novel.

Mrs. Craik's 'My Mother and I' is a very sloppy love-story, in the form of an autobiography. It is filled with the gushing love of Miss Elma Picardy, the daughter of an officer who had died young after marrying the humble tradesman's daughter, for her lowly-born mother. Her father's father, General Picardy, takes her to live with him, and Cousin Conrad appears upon the scene. She falls in love with him, and there is more washy sentiment in what follows than in any novel of the size with which we are familiar.

"In sending forth another book," Mrs. Jay says in her preface, "belonging to the class known as religious novels, the author is moved to say a word to the critics who received a former one with so pleasant a mixture of praise and deprecation." One of these gentlemen, it seems, avowed it as his opinion that he and his friends liked a pill "none the better for being sugar-coated." In reply to this, the author says that "persons to whom religion is a pill—a bitter, nauseous compound, to be bolted in sickness and kept out of sight in health—are not the persons for whom the author writes." There is, however, another class of objectors, who "talk solemnly of art and its canons," and wish to know how "a tract in the hands of the Venus de' Medici" would look. These critics, Mrs. Jay replies, and we entirely agree with her, are more ingenious than convincing. They should remember that Venus was not the result of a purely artistic imagination, but was herself a religious conception, and she asks why, if sculpture could ally itself with religion in pagan times, may not literature find a true basis in religion in Christian times? "Why, then, should not the great novel of the world be a religious novel?" Mrs. Jay continues, and why should not she "humbly help to prepare the way" for the great religious novelist of the future? We confess ourselves unable to answer these questions. As to what is to be the precise character of the future novel, or the future architecture, or the future music, or the future poetry, or the future ceramic art, we have always felt the danger of committing ourselves to any "record." But as to this present religious novel, there can be no doubt that it is more interesting than most fictions of the same class. Mrs. Jay is a writer of a great deal of natural power, having quite as much, for instance, as nature gifted Miss Braddon with, and she uses it in a less flamboyant way; but we fear that her power is not, as she supposes it to be, religious. 'Holden with the Cords' is a modern romance, the scene laid principally on and near a Southern plantation, and the person who is "holden with the cords" is one Edmund Roath, otherwise known as Earle Roy or Dr. Remy, and the cords with which he is holden are those of his sins, for he is a nefarious character, an atheist or materialist of the old school, who believes neither in God nor man, virtue nor vice, is always sceptical and hollow, but goes directly to his ends, or indirectly as the case may be, without remorse and with the most frightful depravity. In this volume he murders two men, tries to kill a third, he forges a will, he intercepts letters, and in every way conducts himself like the infidel he is. His schemes are all thwarted and brought to naught, on the other hand, by the good young man from the North, who represents the religious interest, converts one or two of the characters, and in the course of the story shows himself to be the possessor of a noble and courageous heart. Mrs. Jay seems to be a writer of a good deal of originality, and her forte lies in her management of the development of her plot, which she succeeds in keeping interesting with all its intricacy. We have not, as we say, found the religious part of the book so good as the story, but the fault may be with us. There does not appear to be much theology in the religious faith which Mrs. Jay desires to inspire. Her hero, for a young man who "prefers not to use alcoholic stimulants in any form," is a pleasantly robust and manly character.

'Chaste as Ice,' an English novel, gives a rather tedious account of a beautiful Mrs. Grey, deserted by her husband on account of a misunderstanding of her relations with a certain Mr. L'Estrange. Mr. L'Estrange is affected in a peculiar way by the fascination of Mrs. Grey's beauty, and instead of running away with her he kidnaps her child, and then persuades the little girl to accompany him on a sentimental tour in search of the father. It all ends happily in a reconciliation. Meantime, Arthur, the youthful hero, early in the book sees Mrs. Grey, and falls in love with her, and this leads to the breaking off of an engagement with his cousin Adèle, but he recovers from his infatuation and renews his engagement.

The Earth as Modified by Human Action. A new edition of 'Man and Nature.' By George P. Marsh. (New York: Scribner, Armstrong & Co. 1874.)—Since the first appearance of 'Man and Nature,' about ten years ago, Mr. Marsh has given evidence of his continued interest in the subject, by issuing an Italian edition at Florence in 1870, in which numerous changes and additions were made, in order to keep abreast with the most recent ad-

'The Honeymoon. Remembrances of a Bridal Tour through Scotland. By the Count de Medina Pomar.' Philadelphia: J. B. Lippincott & Co. 1874.

'Katherine Earle. By Miss Adeline Trafton, author of 'An American Girl Abroad,' etc.' Illustrated. Boston: Lee & Shepard; New York: Lee, Shepard & Dillingham. 1874.

'At Her Mercy. A Novel. By James Payn.' New York: Harper & Brothers. 1874.

'The Best of Husbands. A Novel. By James Payn.' New York: Harper & Brothers. 1874.

'My Mother and I. A Love Story. By the Author of 'John Halifax, Gentleman,' etc. With Illustrations.' New York: Harper & Brothers. 1874.

'Holden with the Cords. By W. M. L. Jay, Author of 'Shiloh,' etc.' New York: E. P. Dutton & Co. 1874.

'Chaste as Ice, Pure as Snow. A Novel. By Mrs. M. C. Despard.' Philadelphia: Porter & Coates.

vances in knowledge. Not less extensive changes have been made in this the second American edition, which is an improvement upon the Italian; and whether or not it be his design, Mr. Marsh has certainly the advantage of being able to revise his work and clear his note-books every five years by the simple expedient of ten-yearly editions in two languages. We have endeavored to compare the differences between the Florence edition and the present one, but the transpositions alone have been so extensive as to make this no easy undertaking. The foot-notes show a gain sometimes on one side, sometimes on the other. For instance, the note on page 353, Italian ed., is very much condensed on page 369, Am. ed., with the loss of some needless detail, perhaps, but also of some references to authorities. The American edition could better afford this than the Italian, as it has a bibliographical list of works consulted by Mr. Marsh, in which, however, the authorities omitted from the foot-note do not appear. We miss, by the way, from the list, and from the notes (in both editions) on the German forests, so important a work as that of Ebermayer of Aschaffenburg ('Physical Effects of Forest Atmosphere and Soil'). In the Italian edition, again, doubtless owing to Mr. Marsh's own supervision of it, we have a much better index than in the American. Lastly, in point of size, the duodecimo form of the Italian is certainly preferable to the unhandy octavo of the two American editions, besides answering better the popular character and intention of Mr. Marsh's treatise so far as his own countrymen are concerned. To this point we would once more call the attention of his publishers.

The great merits of 'Man and Nature' have long since made it an American classic as well as given it an international reputation. It is, in our opinion, one of the most useful and suggestive works ever published, and to those who have never reflected on the various ways in which mankind consciously or unconsciously disturb the equilibrium of nature, with effects beneficial, indifferent, or disastrous, as the case may be, Mr. Marsh's observations and laboriously collected facts will come with the force of a revelation. The least observant and reflecting will find entertainment in reading him, and all may profit by his teachings. The agriculturist, as being in closest contact with nature, will perhaps derive the most profit from these pages, as an illustration may show. Plenty of reasons have been adduced in favor of planting trees on our Western plains, but the following may never have occurred to the granger who now mourns his devastated crops in Minnesota or Kansas:

"The insects most injurious to the rural industry of the garden and the plough-land," says Mr. Marsh, p. 299, "do not multiply in or near the woods The locust, which ravages the East with its voracious armies, is bred in vast open plains which admit the full heat of the sun to hasten the hatching of the eggs, gather no moisture to destroy them, and harbor no bird to feed upon the larvæ. It is only since the felling of the forests of Asia Minor and Cyrene that the locust has become so fearfully destructive in those countries; and the grasshopper, which now threatens to be almost as great a pest to the agriculture of some North American soils, breeds in seriously injurious numbers only where a wide extent of surface is bare of woods."

And in a foot-note to this passage, citing Rentzsch, it is stated that

"Smela, in the government of Kiev, has for some years not suffered at all from the locusts, which formerly came every year in vast swarms; and the curculio, so injurious to the turnip crops, is less destructive there than in other parts of the province. This improvement is owing partly to the more thorough cultivation of the soil, partly to the groves which are interspersed among the plough-lands. . . . When in the midst of the plains woods shall be planted and filled with insectivorous birds, the locusts will cease to be a plague and a terror to the farmer."

RECENT GOVERNMENT PUBLICATIONS.

Annual Report of the Chief Signal Officer to the Secretary of War for the Year 1873 Washington: Government Printing Office. 8vo, pp. 880, with 47 Plates. 1874.

This volume, in its present magnitude, illustrates the rate of growth of a highly important department of the public service, the annual account, during the few years since the work began, having increased year by year in more than geometrical ratio. At present, according to General Myer, chief of the bureau, there are 181 observers, of whom 88 are sergeants and 93 assistants, occupying 78 stations. The service of 11 stations in the Dominion of Canada is, however, to be added to this enumeration. The details of the doings of the Signal Service establishment during the year are much too numerous to permit even a partial review of them here. In addition to the publication in the daily papers of the weather forecasts (so familiar to all our readers), we may, however, call attention to the fact that, for the purpose of imparting the same information to the rural districts, the eastern half of the United States is divided into areas of a hundred miles or more in diameter, with a central station in each, from which printed slips containing these forecasts are mailed daily to all the post-offices within the district. These are posted up in conspicuous places for consultation by all who are interested. Other features of the weather, such as the stage of the water in the principal rivers, the temperature of the water, and sundry special points, also receive attention. A new feature of this report is the record of the weather for long periods continuously at distant places—viz., the Island of St. Paul, off Alaska, and the vessel *Polaris* in the North Polar Expedition. Records are given also from a second mountain, Mount Mitchell, in N. C., which is very little higher than Mount Washington; and a comparison of the reports from these two mountains elicits several noteworthy phenomena—viz., simultaneous changes in the barometer, simultaneous changes in the velocity of the wind, independently of its direction, the direction being utterly dissimilar, but no correspondence in temperature; the temperature at Mount Mitchell averages about 15 degrees warmer than at Mount Washington. It is a blemish that in giving reports from stations part way up these mountains, the bearing from the summit is not always stated (*e.g.*, Station 3 on Mount Washington), for this affects the direction of the wind materially. In collating the daily record of Knoxville (which is inserted for comparison with Mount Mitchell), there appears proof of gross error somewhere, in that the barometer was represented as unchangeable during several days, upon one of which the chart of monthly tracks of areas of low pressure gave a minimum very near Knoxville. Another serious fault in this report, and one which materially mars its usefulness, is the entire absence of anything in the way of a table of contents or alphabetical index. As a scientific document, and one to which frequent reference may be needed by the physicist and meteorologist, its permanent value is greatly lessened by this omission, which we hope will be remedied in succeeding reports.

Forty-third Congress, First Session. Senate. Executive Document, No. 58. Annual Report of the Commissioner of Patents for the year 1873. Quarto, pp. 396. Washington: Government Printing Office. 1874.

This volume, in its general appearance, forms a very marked contrast to the Patent Office Reports of former times, which were published annually in three or four bulky octavo volumes, profusely illustrated with cuts, and in editions sometimes exceeding one hundred thousand copies. The present document is a thin quarto, without illustrations, and consists almost entirely of tables (the enumeration of the titles of patents), without any specifications or explanations. In no branch of the Government service has there been a more desirable reform than in the publication of the Patent Office Report. The annual expense used to be enormous, while the number of copies actually utilized bore a very small proportion to that published; and the reports were, after all, of very little service, in view of the very diminutive figures and scanty text. At the present time, as soon as a patent is actually completed it is printed on a folio sheet, with any illustrations accompanying it photolithographed on a large scale. Extra copies of these are always kept on hand, and are sold at a very moderate rate to any applicant; indeed, an arrangement can readily be made, on depositing a certain sum of money, to receive, as they are published, copies of all patents that bear upon any particular subject. This reduces the annual report to a simple volume of enumeration of the patents issued during the year. In the one before us we have, first, an alphabetical list of patentees for the year 1873, followed by a list of patents extended during the same time, and an alphabetical list of inventions and of reissues, extensions, disclaimers, and trade-marks. The total number of applications during the year amounted to 20,414; of patents issued, including reissues and designs, 12,864. The number of trade-marks registered was 492. Of the patentees themselves, 12,371 were citizens of the United States; 341 of Great Britain; 64 of France; and 88 of other foreign Governments—making the aggregate of 12,864 inventors. The total receipts of the office during the year amounted to $703,191; the expenditures to $691,178. The balance in the Treasury to the account of the Patent Office fund is at present $306,124, representing the profits of the office, from its inception, over and above the expenditures. The regular publications of the United States Patent Office, at the present time, in addition to the annual report just mentioned, consist of the *Official Gazette*, published weekly, on Tuesdays, and containing all the patents of the week, up to date, with illustrations. This embraces the Commissioner's decisions; the decisions of the courts; applications for extension; extensions granted; designs patented; trade-marks registered; index of inventions; index of patentees and inventions patented—the specifications, titles, and claims of each patent being published, together with the reduced figures. This forms, annually, two stout octavos, each of about 712 pages of text and 104 of illustrations. Its price is six dollars per annum, or five dollars to clubs of not less than five sent at one time. Formerly a volume was published weekly with the specifications in full. This is now issued monthly, with the drawings complete, on a reduced scale. Each of these monthly volumes contains about 900 pages of letterpress. The monthly volumes are usually about four months behind. An index volume of the year also makes its appearance, containing about 384 pages. All these weekly, monthly, and index

publications are in demi-quarto. In addition to these volumes, as already stated, each specification and claim is published on a separate sheet, with its illustrations, and is furnished to any applicant at twenty-five cents, or at ten cents if twenty are taken at a time. A whole class may be ordered at the rate of five cents per copy, and this opportunity is eagerly embraced by many persons who desire to know whatever appears bearing upon their own business. Most first-class patent agents take the entire series. Considerable progress has been made in reproducing the patents issued prior to the 30th of May, 1871; and, in time, there is no reason to doubt that the entire series, from the opening of the office, will be available to the public. The large scale drawings are all photolithographed by the process of J. W. Osborn & Co., the negatives being taken in the office itself by Mr. Osborn, and transferred to stone for the printing of impressions. But few copies of any of these works are distributed gratuitously, only a certain number being supplied to Government officials requiring them and to certain libraries. The whole enterprise is therefore to a considerable degree self-sustaining, and at the same time meets the wants of the public very much better than heretofore.

HENRY HOLT & CO.'S SCHOOL-BOOKS

Include among others, Freeman's Historical Course, the Class-room Taine, Siglar's English Exercises, the Ordo Series of Classics, Whitney's German Course, Otto's French and German Courses, etc. Reference is made to the faculties of all leading institutions. Catalogues sent on application. Address

NEW HISTORICAL WORKS.

BANCROFT AND PARKMAN.

MESSRS. LITTLE, BROWN & CO.

Will publish, October 5,
The following important contributions to the History of America:

A HISTORY OF THE UNITED States from the Discovery of the American Continent. By George Bancroft. Vol. X., completing the work. 8vo, cloth, $2 50.

With this volume is brought to a close a work to which the author has devoted the labor of forty years, and which has won for him a place among the ablest historians of all time. Each succeeding volume has confirmed the judgment of Edward Everett, pronounced soon after the beginning of the enterprise, that "it does such justice to its noble subject as to supersede the necessity of any future work of the same kind." To read this 'History' is a patriotic duty, and it should constitute the nucleus of every household library.

Price of the work complete in 10 vols., cloth, $25; sheep, $35; half calf, $45; calf, $55.

THE OLD REGIME IN CANADA. By Francis Parkman, author of 'The Jesuits in North America,' 'Conspiracy of Pontiac,' etc. (Vol. IV. of 'France and England in North America.') Small 8vo, cloth, $2 50.

In this volume the author presents the results of his researches into the early history of Canada under French rule, including in his view the century bounded by 1653 and 1753. He has had access to a mass of state papers in the archives of France which have never before been drawn upon, and with the material thus derived has wrought a historical fabric at once substantial and fascinating. The influences which controlled the colony in its beginning and during its first century of life, the Roman Catholic mission spirit, and the monarchical ambition of Louis XIV., are delineated in character and operation with remarkable skill; and the extracts from the voluminous official correspondence maintained between France and Canada lend a singular and delightful piquancy to the narrative.

PARKMAN'S WORKS, Complete, 7 Vols., Cloth, $17 50.

LITTLE, BROWN & CO., PUBLISHERS,
110 Washington Street, Boston.

SONGS OF THE SUNLANDS. By Joaquin Miller. 16mo. Uniform with 'Songs of the Sierras.' Price $1 50.

"Joaquin Miller comes to us as a poet; only those have a right to judge him as a man who have known him. His poetry has on the face of it intrinsic merit sufficient to recommend it anywhere. It appeals to the whole world, simply because the genius of poetry is universal."—*N. Y. Independent.*

SONGS FROM THE SOUTHERN Seas. By John Boyle O'Reilly. 16mo, cloth, gilt top, price $1 50.

"These poems for the most part are fresh and lifelike as the lyrics which led our forefathers to deeds of glory. With scarce a line of mawkish sentiment, there is the deep heart-feeling of a true poet. We are much mistaken if this man does not in the course of a few years walk the course, and show the world how narrative poetry should be written. He has it in him, and genius cannot be kept under hatches."—*The Inter-Ocean.*

Sold by all Booksellers. Mailed, post-paid, by the publishers,

ROBERTS BROTHERS, BOSTON.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of ten cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

NEW BOOKS.

THE ANCIENT NATION: A SIGN and a Wonder. A story illustrative of the earlier history of the Jews. With 21 illustrations. 12mo, cloth, $2.

"The best tribute we can pay the book is to recommend it as the most successful child's history of the Jewish nation accessible to English readers."—*Jewish Messenger.*

HISTORY OF INDIA. FROM THE Earliest Times to the Present Day. By L. J. Trotter, Author of 'Studies in Biography,' etc. 12mo, cloth, with numerous illustrations and map. Price $3.

"The theme is a grand and fascinating one, and the treatment of it is not unworthy. We commend the book in the warmest terms."—*Congregationalist, Boston.*

"We are quite sure that he who reads it will urge his friends to procure and read it also."—*Episcopal Register.*

FIRST STEPS IN GENERAL Knowledge. Five instructive volumes for the Young. By Mrs. Charles Tomlinson. 18mo, square, cloth. Each volume fully illustrated. $2 50.

Part I. The Starry Heavens.
Part II. The Surface of the Earth.
Part III. The Animal Kingdom.
Part IV. The Vegetable Kingdom.
Part V. The Mineral Kingdom.

"Whether to awaken enquiry in the young, or to whet the appetite for information about the curious and the wonderful in nature, we do not remember to have seen a more admirable collection of little books than those now under notice. We cordially commend them to parents."—*Church Journal.*

"Five little books which we cordially commend."—*Independent.*

DEAN GOULBURN'S BOOK FOR CHILDREN.

THE GOSPEL OF THE CHILD- hood. Designed as a help to meditation on the Holy Scriptures for Children and Young Persons. By the Rev. E. M. Goulburn, D.D., Author of 'Thoughts on Personal Religion,' etc. 16mo, cloth, $1 25.

"Simply but beautifully written, and exhibiting the features of Christ's character distinctly and forcibly."—*Literary World.*

"We commend it to clergymen, teachers, and parents, as the eminently successful fulfilment of a wise and judicious plan."—*Churchman.*

"These lectures are excellent."—*Church Journal.*

NEW BOOKS.

THE BUILDING OF A BRAIN. By Edward H. Clarke, M.D., author of 'Sex in Education.' 1 vol. 16mo, $1 25.

A book on the proper education of girls, treating more fully certain questions that were purposely omitted, or but very briefly touched, in the author's famous 'Sex in Education.' Dr. Clarke's eminence as a physician, and the special attention he has given to the brain and the causes of its imperfect or abnormal development, lend great weight to his opinions, and authoritatively commend this book to all who are interested in the education of girls.

IDOLATRY: A Romance. By Julian Hawthorne, author of 'Bressant.' 1 vol. 12mo, $2.

A story of marked originality and power, rich in fancy, subtle in psychological speculations, brilliant in imagery, and possessing many qualities of thought and style which will engage and repay the interest of those who read the best romances.

NEW AND IMPORTANT BOOKS.

Manual of Mythology,

FOR THE USE OF

SCHOOLS, ART STUDENTS, AND GENERAL READERS.

Founded on the works of Petiscus, Preller, and Welcker.

By ALEXANDER S. MURRAY,

Department of Greek and Roman Antiquities, British Museum. With 45 plates on tinted paper, representing more than ninety Mythological Subjects.

1 vol. crown 8vo, $2 25.

There has long been needed a compact, manageable manual of mythology which should be a guide to the art student and the general reader, and at the same time answer the purposes of a school text-book. This volume which has been prepared by the Director of the Department of Greek and Roman Antiquities in the British Museum, upon the basis of the works of Petiscus, Preller, and Welcker, has had so extensive a sale in the English edition as to prove that it precisely supplies this want. The American edition has been reprinted from the latest English edition, and contains all the illustrations of the latter, while the chapter upon Eastern Mythology has been carefully revised by Prof. W. D. Whitney, of Yale College.

A THEORY OF

FINE ART.

By Prof. JOSEPH TORREY,

Of the University of Vermont, Burlington, Vt.

One vol. 12mo, $1 50.

Prof. Torrey's Lectures upon the Fine Arts were long regarded as one of the most attractive parts of the curriculum of the University of Vermont. His death gives them additional interest, while their method and the clearness and attractiveness of their style, combined with their substantial merit, entitle them to a wide circulation.

SCRIBNER, ARMSTRONG & CO.,
654 BROADWAY, NEW YORK.

WHAT ARE ENGLISH CHAN- nel Shoes? Sewed shoes have the seam that unites the sole and upper sunk into a channel cut in the sole. Americans cut this channel from the edge of the sole, and the thin lip turns up in wearing. The English channel, which never turns up, is cut from the surface, leaving a dark line when closed. As it cannot be cut in thin, poor leather, it indicates a good article.

THE WEEK IN TRADE AND FINANCE.

SEPTEMBER 29, 1874.

THE money market remains easy at the rates quoted last week. Call loans range between 2 and 3 per cent., with the bulk of transactions at 2½ per cent. Commercial paper is in good demand, with very little offering; we quote the market as follows: 5 to 5½ for short date, and 5½ to 7 for prime names running three and four months.

The weekly statement of the New York Clearing-House banks on Saturday shows that the banks hold $25,505,100 in lawful money in excess of the amount they are required by law to keep against their deposits and circulation—a small falling off of $41,600 as compared with the amount so held last week. The following shows the changes in the different items going to make up the statement:

	Sept. 19.	Sept. 26.	Differences.
Loans	$280,569,200	$279,539,400	Dec.. $1,029,800
Specie	19,952,100	18,919,900	Dec... 1,032,200
Legal-tenders	64,804,800	65,700,400	Inc.. 895,600
Deposits	236,840,800	236,460,800	Dec.. 380,000
Circulation	25,638,600	25,625,800	Inc.. 12,800

The following shows the relations between the total reserves and the total liabilities:

	Sept. 19.	Sept. 26.	Differences.
Specie	$19,952,100	$18,919,900	Dec.. $1,032,200
Legal-tenders	64,804,800	65,700,400	Inc.. 895,600
Total reserve	$84,756,900	84,620,300	Dec.. $136,600
Reserve required against deposits	59,210,200	59,115,200	Dec.. 95,000
Excess of reserve above legal requirem't	25,546,700	25,505,100	Dec.. 41,600

The stock market was strong and buoyant throughout the week upon the entire list of stocks, and prices advanced from 1 to 5½ per cent., the greatest rise being in Harlem, which sold up to 131 from 125½, Michigan Central, which advanced 4 per cent., and C. C. & I. C., 4¾ per cent. A strong upward movement was shown in Ohio and Mississippi, which sold from 24¼ up to 27¾, with every indication of a further advance in price. Union Pacific reached 37¾, but at that figure there was a halt, the stock becoming less active, and a subsequent reaction carried the price down to 37½ on Saturday, at which it closed.

The market opened to-day with an unsettled feeling. Shortly after the opening prices declined from ¼ to 1 per cent. A false rumor that Commodore Vanderbilt was very ill caused a sharp decline in New York Central, carrying the price down to 100⅛. A better feeling existed later in the day, and the market rallied from ¼ to 1¼ per cent. from the lowest prices of the morning. Ohio and Mississippi advanced to 28⅞ and closed strong at 28⅝ bid. The "Grangers"—Milwaukee and St. Paul—and the Northwestern stocks also showed a considerable improvement, St. Paul closing at 35¾ and Northwestern common at 39⅛. There are indications that other stocks than those which have been most active during the last few weeks will be made to move before long, the same as Ohio and Mississippi has been taken in hand and advanced. The St. Paul and Northwestern stocks seem, for the moment, to have touched bottom, and a further recovery in them of several points is by no means improbable. Rock Island is also likely to make an upward movement.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending Saturday, September 28, 1874:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday	Sales.

Government bonds have been dull, the demand being only for the purpose of supplying investors, no speculative enquiry whatever being shown for any of the different issues. The investors of importance consist of banks and other financial institutions who prefer investing in Governments to loaning their money out at current market rates. The following are the latest quotations this evening:

	BID.	ASKED		BID.	ASKED
Coupon 6's, 1881	118	118⅛	Coupon 6's, 5-20's, 1867	117	117⅛

Coupon 6's, 5-20's, 1865, J. & J.	115¾	116	U. S. Currency 6's	117⅜	117⅝

Railroad bonds of the better class have shown considerable activity, with prices strong. The Pacific Railroad first mortgages have been in short demand, especially for those of the Union Pacific, which sold as high as 89⅞. The 7 per cent. consolidated bonds of the N. Y. Central and Hudson River Railroad Company sold in large amounts at 108⅞. Proposals were received at Albany on Friday for $2,000,000 six per cent. registered loan of the State of New York; the total amount bid for was $8,500,000, in gold; the whole loan was taken by the Comptroller for the sinking fund at 103, gold.

Very little interest has been shown in the gold market during the week; the transactions were very small in amount, and mainly confined to the trading brokers at the Exchange. The following shows the course of the market:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Monday, Sept. 21	109⅝	109⅝	109⅜	109⅜
Tuesday, Sept. 22	109⅜	109⅝	109⅜	109⅜
Wednesday, Sept. 23	109⅝	109¾	109⅝	109⅝
Thursday, Sept. 24	109⅝	109⅝	109⅝	109⅝
Friday, Sept. 25	109⅝	109⅝	109⅜	109⅜
Saturday, Sept. 26	109⅜	109⅞	109⅜	109¾

The specie shipments for the week amounted to $564,602.

NOTICE TO THE HOLDERS

OF THE

FIRST-MORTGAGE BONDS OF THE OREGON AND CALIFORNIA RAILROAD.

The undersigned Trustees are prepared to purchase, for the Sinking Fund, a certain amount of the First Mortgage Bonds of the Oregon and California Railroad Company, and hereby invite offers of such bonds from holders.

The lowest offers will be accepted up to the amount of the available means which are derived from the sale of the Company's lands; but no proposals above par and accrued interest in gold will be considered.

Communications stating amount and price of bonds, and marked "Offer of Oregon and California Railroad Bonds," may be addressed to the undersigned, care of the London and San Francisco Bank, San Francisco, California.

A GENERAL CONVENTION

OF THE

PROTESTANT EPISCOPAL CHURCH

Meets in New York, October 7, 1874.

The following resolution was unanimously adopted by the last General Convention which met at Baltimore in 1871:

"*Resolved*, That the thanks of this House be tendered to Messrs. M. H. Mallory & Co. for their very accurate report of the daily proceedings of the House, and that they be requested to make arrangements for similar reports of the next session of this body."

In accordance with the request above made, we have engaged Mr. D. F. Murphy, Chief of the Congressional Corps of Reporters, with his assistants, who made the "very accurate" report for 1871, which has proved itself so useful to the Church, to make a

VERBATIM REPORT

of the debates in the House of Deputies this year.

This report will be issued in a

DAILY MORNING EDITION

OF

THE CHURCHMAN.

It is the intention to publish this edition so that subscribers shall receive it by mail as early as they now do the New York daily morning papers.

Subscribers will please give address in full, including street or P. O. Box and county.

Catalogues can be had at the Museum.

The Nation.

NEW YORK, THURSDAY, OCTOBER 8, 1874.

The Week.

NEW ORLEANS is now very quiet, a compromise having been effected between the two parties. By the terms of this agreement, the Kellogg party pledges itself to a fair election, and the Conservatives to peace and order, and an "Advisory Committee" of five is appointed, consisting of two Republicans, two Conservatives, and a "jointly-selected" umpire. This committee is to "supervise and carry on the registration throughout the State on behalf of all parties," Kellogg pledging himself to act upon the advice and suggestions of the committee whenever it is legally possible. Besides this, at the expiration of twenty days, if everything goes well, the Returning Board is to be remodelled, two vacancies are to be created by the resignation of Republicans and filled by Conservatives. Mr. Charles O'Conor, of this city, has written a letter to the *Herald*, in which he points out that the notion that Grant is compelled to recognize Kellogg to the end of time, because he has recognized him once, is erroneous. The mere fact that he has on a certain occasion come to the conclusion that a given *de-facto* government shall be sustained in any State, may be conclusive against all the world under the Constitution in certain cases carefully enumerated in that instrument; but this does not preclude him from a reconsideration and reversal of his decision. We fear, however, that neither referring General Grant to Luther *v.* Borden, nor recalling to his recollection even judicial reversals of opinion such as that in the legal-tender cases, will have any effect. Almost official notice has been given that he does not read "what the newspapers say."

Mr. John Kelly has put the Mayor in an uncomfortable position by proving pretty conclusively that his charges for summoning jurors, returning convictions, and carrying convicts to and fro, were all justified by the laws of the State, or, where the meaning of statutes was in doubt, by the established practice, which, however, like most sheriffs' practice, seems in some cases to have been lax. Even in the case of the supposed exorbitant charges for shaving condemned criminals and the expenses attending executions, Mr. Kelly comes off triumphant. The Mayor promised to ruin him, indeed, in a supplementary statement; but we doubt if the document has much effect. The Mayor has succeeded in injuring his own reputation more than he has any of his enemies; and very few people are likely to pay any attention to what he says. The only other event of importance during the week in municipal politics has been the acquittal of the Commissioners of Charities by the Grand Jury, accompanied by a testimonial to their diligent endeavors to execute their duties faithfully, which, however, a minority of the jury declined to agree to. Speaking for ourselves, we must say that we have been unable to find, after a somewhat careful examination of the charges and the Commissioners' reply, any evidence of corruption.

Mr. S. J. Simmons of Boston, said to be the brother of the Collector of the Port, has made some revelations during the past week which looked interesting at first, because the newspapers, making a natural confusion of identity, mistook this Simmons for the other Simmons whose appointment caused so much noise last winter; and it was supposed for twenty-four hours that Butler's chief janissary had turned state's evidence and that some startling facts would indeed be laid before the people. Public excitement, however, has since much abated. What Mr. Simmons reveals is that "Butlerism" and "chicanery, fraud, and corruption" are convertible terms; that he himself has done things for the Butler party which "bring the blush of shame" to his face; that he has used his power as a United States officer to intimidate men in the liquor business; that he has "packed caucuses"; received money from one Usher, United States marshal, and from "Butler's partner," for such purposes; that he is now ready to take the stump and denounce Butler, even at the risk of being considered insane, and being accused of treachery and falsehood; and in conclusion he "throws down his gage." Mr. Simmons has for some time past been a bold, bad man, being not merely in the employ of the Butler faction, but doing some much-needed, earnest, and useful work for them; going about on the eve of conventions or rather caucuses among the vendors of liquors, and enquiring of them in a secretly hostile but ostensibly amicable manner, whether they were provided with licenses, as required by the laws of Massachusetts, and, after a good deal of light and agreeable conversation on other topics, dropping a hint, as he left the premises, that an important political meeting would soon be held in their ward by the Republicans, and that there was no class in the community whose moral support at this reunion would be more welcome than that of unlicensed vendors of intoxicating drinks. This Mr. Simmons now repents as a crime against the purity of the ballot.

We have received from a friend of Mr. D. H. Chamberlain a reply to many of the charges made against him. This reply consists of a denial of most of the accusations; but for two reasons it is not complete. In the first place, the reply is dated Aug. 19, while the only definite charge to which we have given any publicity or attached any weight appeared first in the *Tribune* of September 26, in a letter from a Philadelphia correspondent. In the second place, Mr. Chamberlain and his friends seem to suppose that the *gravamen* of the accusation against him is corrupt use of public funds. It is nothing of the kind. Mr. Chamberlain is accused of the same sort of crime for which Mr. A. Oakey Hall of this city has been once or twice indicted—guilty knowledge of and connivance at thefts from the public treasury. The correspondent of the *Tribune* makes the statement, for instance, that Chamberlain himself drew the acts under which the thieving in South Carolina took place. Mr. Chamberlain, like Hall, will no doubt say that he "did not know what was going on"; but the difficulty with this reply is that the accusation practically contains an additional charge that he took pains not to know what was going on. This is what Mr. Chamberlain and his friends ought to disprove; but, unfortunately for them, they cannot easily get rid of the strong presumption against the innocence of any one who allowed him to become the political partner of such a man as Tweed or such a man as Scott. Ninety-nine people in this city out of a hundred believe Hall guilty to-day though no jury has been able to agree on a verdict in his case; and though he, too, is a man of "education and æsthetic tastes," he would not make a good candidate in New York for Reform Governor. In South Carolina, the principal duty of a Reform magistrate now would be to keep the hands of thieves (who are always on the look-out, and have a great many excellent opportunities) out of the public Treasury; in this work Mr. Chamberlain must himself admit that he lamentably failed while in office. Finally, we may add that the mere fact that a man has not been or even cannot be convicted of felony is not of itself sufficient reason for electing him to office.

Mr. Frelinghuysen of New Jersey, who has always had the reputation of being a respectable and honest man, has made a reply to the charges against him in connection with the "gag-law," so-called, of the last session of Congress. He says that Congress passed no gag-law; that the law which did pass, had no effect on the law of libel whatever; that the law introduced by Mr. Carpenter of Wisconsin relating to service of process on agents of corporations

doing business in Washington (though that, too, would have no effect on the law of libel) did not pass. It seems to us that Mr. Frelinghuysen clears the skirts of his party, as well as his own, of any suspicion of having actually enacted a gag-law, while grave doubts may yet remain in the minds of many people as to the purity of Mr. Carpenter's designs in the introduction of his measure. As to the actual condition of the law, one proof of the truth of Mr. Frelinghuysen's statement is the fact that no paper appears as yet to have been gagged—if we may judge from the editorial columns of those which it is our good fortune to see from week to week. The Democrats make a great mistake in trying to get political capital out of this "gag-law," for a child can see that the newspapers never were freer than at the present moment to say what they pleased; and, besides this, from there being some papers which make a regular business of slandering and lying right and left, and from the fact of these papers never receiving any punishment, a good many quiet people are just now inclined to be rather indifferent as to whether a paper here and there is gagged or not.

Mr. Beecher has obtained indictments against Tilton and Moulton from the Grand Jury of Kings County, and they will be tried in November, in advance of the civil action brought by Tilton. The probabilities are that somebody will be broken down on cross-examination, and this, rather than a verdict of the jury, is what the public has to hope for. In the Proctor case, however, there can be little doubt that the jury will agree. Moulton's position in this is a ludicrously absurd one for "a man of the world." He published a disgusting story about a lady, which he said Beecher told him. It had nothing to do with the Tilton business, and was produced solely for the purpose of disgracing Beecher, and he published a paper in corroboration of it. The lady was at once recognized by the paper, and she had Moulton indicted. When the case is called, Beecher will come forward and swear he never told him such a story; the lady will come forward and swear there is not a word of truth in it, and will prove that the paper produced referred to a totally different transaction, leaving the defendant without a word to say for himself in the presence of an exasperated jury, a pitiless judge, and an impatient sheriff. "Men of the world" in Brooklyn, in fact, seem to be hardly shrewder than old ladies from the country.

There are signs of reconciliation between the city of Chicago and the insurance companies. The Common Council proposes to raise money to improve and enlarge the Fire Department and increase the supply of water, both of which are recommendations of General Shaler of this city, who went out on invitation to inspect. The most difficult task, however, will be to persuade the owners of the wooden shanties within the proposed fire limits to be "fire-policed." These are a class which Chicago has encouraged, and who were her pride before the great fire; they have now become her shame and danger, and yet they are voters, and have their rights—amongst others, that of being burnt out periodically and setting fire to everybody near them. By the bye, if the business of fire insurance had been carried on in immovable property, like railroads or mills, would the Chicago people, under the new Granger philosophy, have allowed the companies to withdraw from the city? Should we not have heard that "corporations were the creatures of the law"; that it was the solemn duty of the State to fix rates so as to save citizens from "grinding monopoly"; that the persons insured knew better than the managers what the premiums on policies ought to be; that the people of Chicago had built up these heartless speculators, and demanded relief. Finally, perhaps Butler would have come on and proposed, as a compromise, to examine the books of the companies, and allow none to withdraw except such as could show that they had lost money in their business during the preceding year. Buckle was clearly in error when he said that no progress was made in morals, that as much was known of it five thousand years ago as now. Moral science has in fact made strides in the West during the last two years which may well put physicists to shame.

The President of the Milwaukee and St. Paul Railroad has written an admirable letter to the Governor of Wisconsin, telling him that the decision of the Supreme Court leaves open to the Company only one of two courses—either a severe pecuniary loss or a reduction in the quality of services rendered. This last course, Mr. Mitchell says, would only be taken with great reluctance, and it has therefore been decided to submit to the loss, obey the law, and wait for the legislature of Wisconsin to decide, with the case fully before them, whether the Potter law ought to be repealed or not. The annual report of the Northwestern Road also contains a review of the Granger legislation. Mr. Keep, the President of the road, uses, like Mr. Mitchell, very moderate language; points out that, of all the laws passed on the subject in the West, the Potter law is the most arbitrary and unjust; but adds that, "while the State of Wisconsin has made herself conspicuous by legislation which would utterly subvert the rights of property and deprive the owners of her railroads of their beneficial use, yet it is due to her people to say that throughout the controversy upon this Potter Act, with a very few annoying exceptions, they have evinced the most friendly disposition, and generally concurred in condemning the hasty legislation which has brought so much evil, without just provocation, upon railway property within the State. It cannot be possible that the business community or the farmers of Wisconsin, whose honesty and intelligence are equal to those of the people of any State, can be fairly represented in the passage of this act, and it is confidently believed that, when the present excitement shall subside and calmer views prevail, they will demand the repeal of the obnoxious measure, and prevent the recurrence of so great an injustice."

Professor Bonamy Price was very pleasantly and informally received by the Chamber of Commerce of this city last Thursday. The reception consisted of an address by Mr. Price to the Chamber, followed by a sort of conference between the audience and the lecturer on the subject of the discourse—financial crises. Mr. Price, in spite of his years, is as enthusiastic in manner as many a man just entering on life, and he laid down the law on economical subjects to the merchants gathered about him with such an absolutely impersonal interest in the truth of what he was saying, that the general effect of his remarks was excellent. That peculiar condescension which in a well-known and amusing essay is noticed as one of the "differentiating" marks of the British foreigner in this country, and which he has been accused of showing in several other countries, and even on occasion in his own, is not so noticeable in Mr. Price's manner as is a determination at all hazards to do a little necessary teaching. During his address he asked a few questions of the audience, very much as a professor might ask his class at college for the purpose of testing their knowledge; and being rather surprised at receiving no immediate answer, assured the members of the Chamber with much *naïveté* that half-a-dozen of his Oxford class would have answered at once. This, however, only pleased the audience, some of whom, it must be confessed, may be suspected of being not so well "up" in the 'Wealth of Nations' as they are in the various ways and means practised in this and other countries of adding year by year to that of the individual citizen. We understand that Mr. Price has declined to deliver any public lectures. We are sorry to hear it, for he would, we are confident, not only succeed, but do a great deal of good in popularizing knowledge of a much needed kind.

There is a good deal of disputation still going on as to the meaning of the Maine-et-Loire election, owing to the uncertainty as to what became of the Legitimists. About 50,000 voters staid at home, but there is a great difference of opinion as to who they were. The Monarchist papers maintain that they were Legitimists, as the policy of abstention was preached by the party journals. The matter has, however, lost much of its importance, in view of the elections of the councils-general, which have just taken place in all the Departments, and which apparently show Republican losses and Bonapartist and Conservative gains. The figures show that out of

1,300 elections there are 590 Republicans, 550 Monarchists, and 130 Bonapartists, leaving 30 districts in which there will have to be new elections; that the Republicans are disappointed there seems to be little doubt. Three more elections for the Assembly are to take place in November. In fact, the Assembly is being gradually renewed by the slow process of filling vacancies, but the small amount of change in the relative strength of parties in it produced by the change of men is another proof of the exaggerations of the stories about the rush of the rural population into Republicanism.

England is just now occupied with a fresh "problem," known as "the Indian problem," which has been raised by the late famine, or rather late expectation of famine in Bengal, for, owing to the precautions taken by the Government, the suffering has been very small, and the loss of life hardly perceptible. This is, however, the first time that a famine has been prevented from causing terrible loss of life, and it gives fair grounds for believing that, with the growing increase of means of transportation, no fatal famines will occur again. But now up start a number of social philosophers, who say that the population of India is and always has been utterly improvident; that it lives on one crop—the rice crop—and never stores a supply for the ensuing year, and always, like all races with a low standard of living, breeds up close to the means of subsistence. In old times, however, the increase was checked by tremendous famines in which millions perished, by the pestilence which usually follows famines, and by devastating wars. The British rule has apparently removed these checks, and the increase will go on without any check, moral or physical. How will the Government take care of this vast, growing, and all but helpless multitude? The answer which this question has called out from qualified observers is that the only remedy is the establishment of manufactures, to draw people off from agriculture, diversify employments, and raise the standard of living. The main difficulty in the way of this is the traditional discouragement of white adventurers by the Indian Government. The old Company wanted no whites in Hindostan but its own officers, and snubbed, frowned upon, and treated as "interlopers" such Englishmen as went out to engage in trade or planting. The reason of this has long passed away, but the tradition has survived in the manners. Englishmen not specially connected with the Government are not made comfortable or encouraged, and the result is that until very lately English capital and enterprise have not flowed into India as they might have done. There has been a good deal of indigo-planting, some Scotchmen have begun the raising of jute, and the tea-plant is extensively cultivated in the hills, and now there is a call for cotton-mills. The agitation will probably work a change, but the regeneration of Indian society is still a long way off.

The English Railroad Commission, which was appointed last year, has made its first annual report, which is very interesting reading. The English Act "regulating railroad and canal traffic" was passed in 1853, and its execution was left to the ordinary law courts, which were, however, found inadequate to the task. Last year, therefore, a board of three Commissioners was created to hear all complaints against railroads, and determine all disputes between them under the Act. The work reported by them for the past year will give a good idea of the nature and extent of their duties and of the efficiency of their performance of them. The first case brought before them was a complaint of the town of Dover that the London, Chatham and Dover Railroad had given undue advantages to other places in the way of cheapness of fares and frequency of trains, so as to injure its prosperity. The company demurred as to the jurisdiction of the Commission, and, this being overruled, pleaded that they were at liberty to charge what they pleased within the legal maximum. This, too, was decided against them, and before the merits of the case were reached they surrendered, and the complaint was withdrawn. Two carriers or expressmen complained that a company had discriminated against them by delivering goods entrusted to the company itself in the first place at lower rates than the expressmen could deliver them after paying the company's charges. Here again the company came down and settled, discrimination in their own favor as well as between customers being forbidden. Two coal-dealers complained that a company had ceased to deliver coal to them at a certain station, though they still delivered it at that station to the corporation of Manchester for the city gas-works. The company pleaded a change of station, and an exception in favor of the city on the ground of public interest. The Commission ruled that their change of the station was "reasonable," and also their exception in favor of the city. The Commission is also empowered to arbitrate between different railways, and between railroads and the Board of Trade and the Post-Office—as for instance in a "postal-car controversy." One of the Commission's duties is the inspection of all contracts between companies, such as leases, for instance, none of which are valid without their approval.

The Conference at Bonn to which Dr. Döllinger lately invited the Old Catholics and their friends and sympathizers in the Protestant and Greek Churches, met on Monday the 14th of September, as appointed, and some account of the proceedings appear in the papers received by the last mail. It must be admitted that they have not a very hopeful sound. In the first place, hardly anybody present understood anybody else's language, and Dr. Döllinger had to interpret a large number of the speeches himself, which must have been a very blind mode of discussing such very delicate matters as the definition of doctrines. In the next place, the members of the Congress were not really delegates but volunteers, and representing nobody in particular, or only very small bodies of persons. The platforms they drew up cannot of course bind the great body of Christians. The attempts made to bring the churches together by changes in the mode of expressing beliefs, can hardly be considered very effective. The Anglican doctrine that we are saved "by faith only" is something for which the Old Catholics are not prepared; so a compromise was effected by declaring "that we are saved by faith working by love, and not faith without love, as the means and condition of man's justification." This may do for theologians, but it is by far too nice for the perception of the common run of Christians. Another phrase in the Anglican Articles—"the finite merit of men's good works," was changed, in order to accommodate the Old Catholics, into "the finite good of man's works," though what this means it would puzzle most people to say. The Eucharist was decided to be not a sacrifice, but the memorial of a sacrifice and also a holy feast. The treatment in fact of nearly every doctrine consisted in an elaborate attempt to conceal real differences under a new and somewhat cloudy form of words, under which any number of men may take totally different views of the same thing. The one great fact of the affair is that the Old Catholics have really broken with the Pope—but we knew this before. How they stand towards the Greeks or Anglicans we make bold to assert nobody knows.

There are "disquieting rumors," as the stockbrokers say, about the Carlists. The inability of Don Carlos to leave the mountains and push into the plains, and bring on a crisis of any kind, is apparently wearing out the patience of his followers, and stories of insubordination and desertion have been very rife for the past month, crowned now by one which makes Don Carlos receive a mortal wound at the hands of a mutineer. Should there be any truth in this, and it seems to be authentic, it will probably bring the war to an end for the present, no other Legitimist chief being ready to raise the standard. The Pretender has lately had the satisfaction of receiving sympathizing letters from the Czar and the Count de Chambord. The Czar cannot understand what has got into the Spaniards to make them so hostile to their king. Carlos has tried hard to get an "endorsement" from the Pope, but his Holiness is not to be caught in that way. He does not commit himself readily in writing, and by no means displays that fondness for the weak or losing side in which the Church was once not afraid to indulge.

THE "THIRD TERM."

THE "third term" discussion does not seem to make much headway. Nothing that has been said in it, as yet, has made any perceptible impression on the public mind. Indeed, it would be difficult to meet anybody not an official, outside of a newspaper office, who thinks there is anything in it. That General Grant himself looks forward to a third term, we do not in the least believe. We have no doubt that when the proper time comes he will announce his intention of retiring into private life, and will carry it out if he is left to himself. He has many faults, but he certainly never has shown the slightest trace of morbid ambition. The quality which just now seems growing on him—love of ease—is not one that leads to prolonged success in political life, and it has certainly not been due to any political exertions of his own that he has filled the Presidential chair so long. His own inertia, the growing dissatisfaction with his use of the civil service, the strong repugnance, to use a very mild term, of the people to anything like a departure from established political usage in the direction of greater concentration or fixity of power, combined with the natural longings of the leading politicians for a change, will probably put an end to all talk of a third term before the convention meets, unless some catastrophe should occur at the South in the meantime calling for a renewed exertion of military strength on the part of the North.

This talk is, however, none the less a very unpleasant phenomenon. It may be mere raving, but then raving is not a healthy symptom. "Wandering," we know, is often the first sign of prolonged illness. The talk has undoubtedly a certain gravity, not because it is likely to result in anything, but because it is one of, and is due to, a number of conditions of the body politic just now which may fairly be called very morbid. There can be little doubt, for instance, that it would hardly have been raised were it not for the prevailing public apathy about all political questions. There has been for several years profound discontent among the best portion of the voting population with the manner in which politicians are "running" the Government, but all attempts at reform have met with very indifferent success. The Cincinnati movement took the public at a very favorable moment, when its disappointment with General Grant's Administration was in its first flush, but the result was so pitiful that it produced a distrust of all organized opposition which has as yet by no means passed away, nor has there been any revival of confidence in the Republican management. The chiefs evidently try to believe that the so-called "reforms" of the last year or two have reconciled people to the existing régime; but everybody who knows anything of the feeling outside Custom-house circles, knows that this is a mistake. The reforms in question have all been mere removals of abuses which the party itself had created. To suppose that it can in this way renew its hold on the popular confidence, is very like supposing that a readiness to pay on detection for the crockery he smashes, or to restore the spoons he has stolen, will convince people that a man is a useful and upright citizen. There is, on the contrary, deep disgust with the party management, great sorrow and astonishment over the morals and manners of its leading men, but there is at the same time a deep-seated unwillingness to take any active steps to overthrow them and put anybody else in their place, and it is the appearance of stolid indifference which this unwillingness assumes that has led some of the lighter heads of the organization and some of the quidnuncs of the press to begin talking about an indefinite extension of General Grant's Presidency—for a third term would of course mean indefinite extension. If we have to make any man President for twelve years, there will be no good reason for turning him out as long as his faculties are sound.

Now, this unwillingness to make any change, which no intelligent man can under the circumstances help considering a very unwholesome sign, is in truth simply due to the growing doubt and hesitation of the North over the experiment of Reconstruction at the South. That experiment, which was one of the noblest as well as most difficult any people ever undertook—the raising of four millions of slaves into the citizens of a free state—was unfortunately undertaken with instruments which everybody now acknowledges were entirely inadequate. The machinery which works well at the North in industrious, homogeneous communities has been tried at the South, and found very defective. The negroes have not displayed any capacity for self-government, and the whites, so far from helping them out, witness their failure with a sort of glee; and the result is, that from one-half of the Union not only does there not come any support for free and orderly administration, but there do come constant solicitations and temptations to arbitrary and violent processes. In other words, to one-half of the States of the Union the President appears simply as a military commander; and the officer who once was his legal adviser, the Attorney-General, has been converted into a kind of Adjutant-General. The negroes in many of the States are constantly calling for armed guards to supersede the sheriff, and the whites openly declare that, so far from dreading military rule, they desire it. Anybody who reflects upon the exceeding delicacy and subtlety of the influences on which constitutional government rests, and must rest—on the curious and inscrutable combination of affection, habit, tradition, and forethought in political matters, among all classes and conditions of persons, in all parts of the country, which is necessary to make such a government work—must see that this state of things at the South is a source of enormous danger. A single discontented province puts the institutions of a free state in peril. Moreover, it is not only the defection of the South which is dangerous. The influence of that defection on the temper of the North is also dangerous. No thoughtful man can avoid anxiety about the future when he sees the way in which the news of Southern disturbances is received at the North—the rage for violent measures, the disregard of American traditions and of the vital conditions of American government, and for the most solemn and impressive lessons of history, which they produce among many. When we heard of the recent rising in Louisiana, excusable as it was in many of its features, there was on the part of large numbers of the very best of us an outburst of the true despotic temper—that is, a choleric readiness to put the worst possible construction on the motives of the actors, and to take the darkest possible view of the consequences of any display of forbearance towards them—a fierce irritation over their insolence in resisting the arrangements their conquerors had made for them—and, worst of all, a portentous eagerness to send down infantry, cavalry, and artillery as the best mode of dealing with such wretches. In one highly respectable illustrated publication, a picture of the affair represented the President of the United States charging a battery in the streets of New Orleans on horseback, in uniform, as if this was the true way for the chief civil officer of the United States to deal with political discontent. It carried one back to Vienna or Berlin in 1849, and made one ask whether this was the view of the character and functions of that office which we wished to impress on the minds of the rising generation; and whether the American people were really forgetting the great political lessons they were the first to teach the world, and particularly that greatest of all, that malcontents are hardly ever sheer devils who rebel from love of disorder, that behind all violence on the part of large bodies of men there is pretty sure to be ignorance or prejudice or solid grievance, and that it is not wise or just to try grape-shot on them until all other remedies have failed.

We have all along held that the worst sufferers from the state of things we have allowed to grow up in several of the States lately in rebellion were the negroes. Nothing more debauching could possibly happen an ignorant people, without even the smallest social training, than to fall at their very entrance into free civilized life into the hands of the class of white and colored men who poured down to take charge of their politics after Reconstruction. It is, therefore, in their interest, even more than in that of the whites, that the Northern people are bound to take this Southern problem into their own hands and put an end to the delusion which is furnishing to the small party of designing and selfish men who manage the

Republican party their sole capital, and their chief excuse for neglecting totally every other measure of reform. We are far from defending the policy or conduct of the Southern whites during the last ten years, but we are deeply sensible of their difficulties and temptations, as every thinking man must be, and hold that nobody has any right to condemn them, much less legislate for them or bombard them, without having honestly tried to put himself in their place. Nobody who has done so can help feeling a good deal of human sympathy with men who—belonging, in spite of their unhappy history and surroundings, to the foremost civilization of the world, and ranking among the very highest in capacity for all the arts—find their social organization, with all its delicate machinery of credit, industry, justice, finance, and taxation, suddenly taken possession of by a large body of people sunk in barbarism, and managed by the dregs of Northern society, and administered solely for purposes of spoliation. It is not the unrest of the whites under this régime that inspires us with alarm. On the contrary, it makes us hopeful. If the whites of South Carolina and of Louisiana accepted their fate with silent melancholy, we should see no better future for them than Guatemala or Costa Rica.

The theory on which most Northern men refuse them their sympathy, and on which the Conklings and Mortons use the Southern disturbances as capital for the Republican party, and as reasons why, whatever it does or leaves undone, it should be kept in office, is that the whites of the South will not let the negroes alone, but keep murdering and harassing them, and, if it were not for the interference of the Federal troops, would reduce them to "practical slavery." Now, if this theory were correct, the negroes ought to be worst off in the States in which the whites are most numerous and powerful and happiest, and most secure in those States in which they are themselves the largest proportion of the population. We have been for some time, however, struck by the fact that the complaints of turbulence, and the call for infantry, cavalry, and artillery, and the thanks to God that we "had a soldier in the White House," come from those States in which there are most negroes, or, in other words, in which the whites ought to be most cowed and submissive. Impelled by this suggestion, we examined the census of 1870, in connection with as honest reports as we can get, both public and private, of the condition of the various Southern States. Those we have used here are, however, those of the Republican press most eager to magnify Southern disorders.

	Population. White.	Colored.	Political Condition.
Alabama	521,384	475,510	"Reign of terror"; "Midnight assassins"; "No safety for the colored men"; "Thousands begging to be taken back into slavery."
Georgia	638,926	545,142	Perfect peace and great material prosperity.
Louisiana	362,065	364,210	Great oppression of the colored men; constant attempts to rob and murder him; "Reign of terror."
North Carolina	678,470	391,650	Tolerably and increasingly peaceful.
Virginia	712,089	512 841	Peaceful and prosperous.
Mississippi	382,896	444,201	No safety for the blacks; "need of more troops."
Maryland	605,497	175,391	No talk of colored wrongs whatever.
Florida	96,057	91,689	Peaceful, but white men very designing and dangerous. Need great vigilance from the colored man's friends. Population very sparse.
Missouri	1,603,146	118,071	Great prosperity; more or less brigandage, but white men the objects of it. No colored oppression whatever.
Tennessee	936,119	322,331	More or less disorder, but colored men not specially the victims of it.
Kentucky	1,098,692	222,210	A great deal of impartial brigandage; no colored problem whatever.
Arkansas	362,115	122,169	No oppression of the colored man whatever; no disturbances between races.
South Carolina	289,667	415,814	Terrible oppression of the colored man; "Masked robbers and assassins." Need of troops everywhere. Whites untamable and bloodthirsty.

Now, the conclusion we draw from the foregoing is that in those States in which the whites, in virtue of their numbers, take and hold the State government beyond all peradventure, there is as much order and security for blacks as for whites, and there is financial purity and considerable prosperity; while in those States in which the blacks have the majority, or the two races are nearly equal in numbers, there is constant disorder and violence and great material depression. The meaning of this is that the whites are restive under the rule of poor ignorant negroes led by Northern thieves, defaulters, and adventurers, and try in wild and lawless ways to get rid of their oppressors. It furnishes a complete answer to those who say the negroes cannot trust the whites to govern them. Where they are forced to trust them, all goes well.

POTTER AND HIS LAW.

THIS Wisconsin law has been discussed so much in our columns o late that we shall refrain from saying a great many things which Mr. Adams's letter in another column suggests, and are quite content to accept his history of the "Potter law" as accurate. There are a few observations on it which, however, we feel bound to make:

1. He defends the Farmer's honesty at the expense of his knowledge and common-sense. This is not reassuring to investors in Wisconsin, seeing that the farmers there at least hold the balance of power. It matters little to me, for practical purposes, whether I place my property in the power of a designing knave or of a passionate fool. If the accounts which have been sent on to the New York *Tribune* by its correspondent, speaking for the Grangers, and which Mr. Adams gives us of Granger notions of rights and duties, be correct, we repeat that it is not safe to hold any immovable property at their mercy. A man who considers bonds to be "devices by which certain people called bondholders get railroad-construction gangs to double honest farmers' taxes," may be a good fellow, and may mean well, but if he gets absolute control of the government of a civilized state, people with money to invest will do well to give him a wide berth.

2. "The people of the West who are struggling to get the railroads, as a whole, to submit to be governed by law," appear to forget that on the two points on which they are most excited—"unreasonable rates" and "unjust discrimination"—the railroads are already governed by law, or might be. They are and always have been common carriers, which have been from time immemorial forbidden by the common law to charge unreasonable rates or to discriminate between forwarders of freight. What was wanted, therefore, was not a new law, but better machinery for enforcing the old one. There was needed also, however, owing to the novelty of railroads and the complexity of their management and of their operating expenses, and of their relations to the community, a new definition of reasonableness and of discrimination. Anybody could have told in Coke's day what was reasonable for a carrier to charge for conveying goods in his wagon. Every man who owned a horse was an expert on that point, and competition was open and easy. But the elements which enter into railroad charges are so varied, so obscure, and burdened with such a variety of considerations, that the fixing of them has become one of the most difficult of modern occupations. If the law is to undertake the creation of any standard, it ought to be drawn, after the most careful enquiry, by disinterested and skilled men, and not by a politician from a county "which does not possess a railroad of any kind, and who is said to be without experience in railroad matters."

3. The railroad is, however, not only a common carrier—it is a public highway of a novel and peculiar kind. The great function it discharges toward modern society, and the one which has produced the most striking social and industrial results, is the equalization of distances from the great markets. That is to say, the most valuable and important thing it has done for the world is the putting of producers who live far away on an equality with those who live near by. It is this which has created the wonderful industrial activity which we are now everywhere witnessing. It has absolutely

called the West into existence, by enabling the Illinois and Wisconsin farmer to sell in New York and Liverpool at as low rates as the Pennsylvania or English farmer. Now, this result has been and is achieved solely by "discrimination," which seems on the surface to the enraged and ill-informed farmer to be unjust, but which is in reality both wise and just, and ought to be encouraged as a matter of public policy. The evidence given on this point before the English Railroad Commission, three or four years ago, showed that, without discrimination in favor of localities far from London, vast manufactories in the interior would be destroyed, and thousands of operatives thrown out of employment through inability to compete with producers near the market and on the seaboard. Illustrations vastly more forcible than this might be adduced from the history of our own railroads. There ought, therefore, to be discrimination, and it will be found that, on the whole, the interests of railroads on this point coincide with those of the public. That is, whatever discrimination the managers make with the view of swelling the volume of their own business, will probably be that which will most promote the general welfare. When, therefore, the farmer demands that the railroad shall charge at the same rate for carrying goods from St. Paul to Milwaukee that it charges for conveying them from St. Paul to New York, even if the rate of cost were actually the same, which it is not, he ought not to be listened to any more than the good-for-nothing bricklayer who asks that no bricklayer shall be allowed to lay more bricks in a day than weak and lazy bricklayers find convenient. We are now, of course, talking of honest discrimination on business principles. Discrimination in favor of individuals or firms, or vindictive discrimination against particular places, we would treat as criminal and punish by heavy penalties; and this is where legislators eager for work might find a field for thoughtful activity.

4. The clamor about the amount of stock and bonds with which railroads are saddled, and on which "the farmer has to pay interest," we hold to be in the main senseless, and an illustration of the part words often play in darkening counsel. Railroads have been for the last forty years constructed in the United States on the only theory on which they could have been constructed, viz., that they were an extremely hazardous speculation, particularly in the sparsely settled frontier regions. There, a large portion of them were constructed, not to meet the wants of busy communities like New York and Philadelphia, or Liverpool and Manchester, but to open the way through a wilderness for a possible population. To have offered such undertakings to practical business men, therefore, as an ordinary investment, would have been preposterous, and have excited laughter. They were therefore offered as enterprises containing enormous risks, but at the same time holding out some prospects of very high profits. They in fact bore in their commercial aspects a close resemblance to blockade-running. In most cases, however, the prospect of profit was not sufficiently strong to induce moneyed men to touch them at all without aid in the shape of land-grants or money, which were offered and accepted as business transactions. The rate at which the bonds were sold, and the amount of bonus given in stock to purchasers, were all controlled by the same great fact: the unwillingness of prudent people to buy them at all, or, in other words, the commercial rule that you must sell very low what but few persons want. So that, after brushing away all the rant about "loads of indebtedness," "watered stock," "greedy speculators," "impoverished farmers," "grinding taxation," we get at the naked truth of the whole matter, which is, that money used in Western railroad-building had, owing to the risky nature of the enterprise, to be borrowed from people of a speculative turn, at a very heavy discount. Business men have this experience every day; but when, after having got the money, and used it on the terms offered by themselves, they are called on to pay, they do not begin to weep and call names.

5. Not only, however, had the Western railroads to be constructed as hazardous undertakings, but they had to be constructed on the theory that they were and would remain *private property*. This was the theory of the American law, and the theory which best accorded with American manners. There was really no place in either our jurisprudence or our politics for great works of this kind owned by the State. The New York canals were an experiment of a very novel kind in the European direction, which met with success at the outset, but which have not on the whole worked well, of which no rational man would now advise the repetition. Moreover, it was a necessary theory, and no money would have been got for railroads on the understanding that the people living along the line were to have a voice in the management of them, and that the mode of working them was to be settled every election at the polls. The private-property theory was therefore part of the contract between the projectors and the community, and was fortified by our judicial rules and political usages. The theory that the railroads are somehow the property of the people who use them is a new theory, which may be a wise one, but which, if enforced against the present proprietors without compensation, would have all the signs and consequences of a swindle, particularly as the original wicked projectors have now for the most part passed away, and the property lies in the hands of that class of which the law is so careful—"innocent third parties without notice." The discoveries of that eminent legist and moralist, Mr. Matt. Carpenter, and of many other Western demagogues, on this subject, are painful reading for honest and patriotic men.

6. But what if the community is dissatisfied now with this theory, and feels that it is prejudicial to morals and industry, and that it needs modification, and that justice and public policy require that the "unearned increment" in the value of railroad property, created by the growth of population and trade, should go to the public in the shape of lower charges or better accommodation, and not to the stockholders in the shape of increased dividends or watered stock? Is not this a reasonable view? Perfectly reasonable. The arguments for and against would have, it seems to us, to be drawn altogether from considerations of expediency. When we come to examine the mode in which the state should reach this consummation, we find it in a position strikingly analogous to that of a government which has borrowed money in a time of war at a heavy rate of interest, and wishes, in more prosperous days, to reduce this rate. To lower it by force is universally acknowledged to be robbery. What honest governments do under such circumstances is to give the creditor the option of taking new bonds at the reduced rate or being paid off. And what the state which wishes to change the theory on which the railroads are administered should do, is to draw up its railroad code, and tell any stockholder who does not like to invest his money under it that if he is dissatisfied he can have the full value of his stock under the theory of railroad property which was held when he bought it. If the code was found likely to be well administered, and the rate of profit allowed reasonable, few regular investors would withdraw, and railroad stock would become what Government bonds are—the refuge of trustees, widows, and prudent people generally.

7. As regards the work which the state might and ought properly to do for the regulation of railroads under any theory of railroad property, we may mention the following, as at least, some of the duties which plainly devolve on it: (*a*) The provision of a regular system of railroad book-keeping, to which all railroads should be compelled to adhere, departure from which should be treated as criminal fraud, and with which the public could make itself familiar, so as to prevent the concealment of the real condition of the road by peculiar modes of crediting and charging, which are now a fertile source of deception; (*b*) compelling the publication of the accounts thus kept at stated intervals, with the working expenses and net receipts stated under oath; (*c*) the registry of all railroad contracts in books accessible to the public, and the prohibition as criminal of all interest of directors in such contracts; (*d*) the prohibition of all discrimination in favor of individuals or firms, and the granting of free passes; (*e*) the examination of discrimination in charges by competent persons, for the purpose of ascertaining whether it is justifiable on business grounds, without regard, however,

to its aspect in the light of "eternal justice"; (*f*) the provision of increased protection for the minority, by making the votes of a larger number of shares than a bare majority necessary for the authorization of certain designated acts; and the curtailment of the arbitrary power of the president.

Of course, if the state undertook to fix a maximum of profits, it would have to see, by some system of inspection, that the surplus was really applied to lowering rates and improving accommodation. We do not pretend that there is anything very original or complete in the above suggestions. We throw them out simply as illustrations of the kind of work there is for statesmen to do in this "transportation problem," and as reasons why gentlemen "who live in counties which do not possess a railroad, and who are said to be without experience in railroad matters," like the eminent Potter of Wisconsin, should, to use a bit of political slang, "take a back seat in the rear car."

NEWSPAPER ETHICS.

A POINT of a good deal of interest, both to newspapers and their readers, will probably before long be submitted to the United States Court in this District, in the shape of an application by the trustee in bankruptcy of the estate of Jay Cooke & Co. to set aside a contract made by that firm with Mr. Henry C. Bowen, the publisher and proprietor of the *Independent*, and to recover the consideration on which it was based. The contract provided that Mr. Bowen was to lend the use of his editorial columns and otherwise exert himself to promote the sale of the bonds of the Northern Pacific Railroad, in return for which he was to receive in bonds and stock a percentage on the amount of bonds sold through whatever channel, and he did actually thus receive $50,000 in bonds and $460,000 in stock, face value of course. The trustee now repudiates this contract as *contra bonos mores*, and asks that the bonds and stock be surrendered to the estate. It is possible that as between Jay Cooke and Mr. Bowen the contract would stand under the rule known to the lawyers as "*in pari delicto, potior est conditio defendentis*," which may be freely translated by saying, that where there is rascality on both sides, the defendant may keep what he has got. The Court will, therefore, probably have to decide whether the trustee stands morally in Cooke's shoes, and, if not, whether the contract is immoral. If it decides the latter point in the affirmative, of course the bonds would have to be restored to the estate, for distribution among the creditors.

Mr. Bowen has, we believe, done a great deal of business of this sort, and we are bound to presume that, being a Christian man who is engaged, as we learn from statements of his own in the *Independent*, in "saving wicked men" and "overthrowing the power of the devil," he does not believe it to be wrong. Whether it is wrong or not is a matter which has had, and has still, a good deal of practical as well as of theoretical importance. During the period of railroad construction which closed with the panic of 1873, when the promoters were constantly offering bonds to an enormous amount to the investing public, every possible means had of course to be resorted to in order to dispose of them. On its face, one railroad bond looks as good as another, if it bears the same rate of interest. It is equally well engraved, and makes equally fine promises. Whether these promises are likely to be kept, ninety-nine investors out of a hundred have no means of learning except through consultation with better-informed friends. In other words, they have to take somebody's word for a bond's having any value whatever. How to get round this very awkward fact was of course, therefore, the great problem of bond-selling. The best mode of solving it was to secure the recommendation of persons whose position and character inspired confidence. Thus Mr. Jay Cooke did an enormous business in the sale of five-twenties during the war by employing the cashiers of country banks as agents. Each of these gentlemen is listened to with attention by a considerable number of thrifty persons who are apt to have a little money to invest, and to believe that the man in charge of their bank knows a "good thing" when he sees it. But, then, the number of irreproachable men whose advice about money matters people are likely to take is on the whole small. It is not every "truly good man" who knows how to take care either of his own money or other people's, and it is not every shrewd man whose recommendations about money matters one is willing to trust. It would be hard, indeed, to find any class as well situated for persuading investors as country bankers. It was, therefore, not unnatural for gentlemen who had bonds to sell to turn for aid to the religious press. A religious paper circulates among an excellent class of the community—the saving, sober, industrious, God-fearing, law-abiding, home-loving, field-ploughing, store-tending class, whose members have probably, in a large majority of cases, a hereditary respect for religion and religious teaching, and look for their paper every week as a source not only of entertainment but of edification. They probably would not mind what the editor said about investments. He is usually a scholar and divine, who can give good advice about religion and morality, but knows nothing about Wall Street. But they do mind what the publisher with whom such an editor is willing to work says. They think, and not unreasonably, that anybody who takes charge of the secular side of such an enterprise as a flourishing paper must be a good business man, and that, if the paper is religious, he must be an upright, trustworthy man. If, therefore, he undertakes to give financial advice, he is pretty sure to be listened to by thousands of honest, simple folk scattered all over the country, who are making provision out of hard earnings for children, for widows, for sickness, and for old age. The man who deliberately misled such a class in the investment of its money would be a more than usually worthless impostor, and it is, therefore, the duty of anybody who undertakes to advise it to make peculiarly sure of his ground. He takes upon himself, whoever he may be, a terrible load of responsibility.

And yet this class was misled most grievously. Millions of railroad bonds were sold during the last few years to farmers, and ministers, and country lawyers, and doctors, and storekeepers, through the exertions of religious papers, and of these bonds it is safe to say a majority have made default in the payment of their interest and will not pay it for a good while to come, and a considerable minority will never pay it at all. The suffering and anxiety that have been caused in this way have been terrible, though, as people usually keep the sorrows of bad investments to themselves, only a very small proportion of the calamity which the late panic has caused has been visible to human eyes. Now, we are very far from saying that the motives of all those who have been of late engaged in selling or promoting the sale of railroad bonds were bad. We have no doubt whatever, for instance, that Messrs. Fisk & Hatch honestly believed in the wisdom of buying Chesapeake and Ohio bonds, and we are ready to make the same admission in the case of Messrs. Jay Cooke & Co. and the Northern Pacific bonds. Both of these firms backed their opinions with their fortunes. Even if they had not risked anything in the undertakings they were promoting themselves, they were saved from moral responsibility to investors as long as they did not make false representations about matters of fact, by their being openly and notoriously brokers—that is, persons who made a business of selling securities for a commission. This put them in a perfectly sound and proper relation to the community. The public heard what they had to say about their wares, with their interest in them present to everybody's mind. Any person who bought of them made the same allowance for the effect of this interest on their assertions and recommendations that he would make in buying dry-goods from a jobber or real estate from an agent.

But a newspaper, and especially a religious newspaper, stands in a very different relation to its readers from that of a broker to his customers—so different that the mere comparison is enough to make one smile. The periodical press—even the secular press—has undertaken to discharge functions toward the community which are to all intents and purposes judicial. It professes to be a thoroughly independent spectator of men and things, and to comment on them and describe them for the sole purpose of instructing and enlightening its readers. Its pretensions in this direction have, in fact, been growing so rapidly of late years that it is, in the opinion of many people, taking the place both of the pulpit, the legislature, and the more permanent forms of literature. It oversees the government, the bench, the bar, the army, the navy, and public and private morals, with a searching and impartial eye. Its reputation for honesty is in fact a large part of its capital. When any one wishes to say something peculiarly severe of it he calls it "venal," meaning that its praises or censures can be bought—just as he would, if he wished to stigmatize the judges, say that they were "corrupt," meaning that their decisions could be bought. If a newspaper were to announce that it would sell the use of its editorial columns at so much a line, or would editorially commend any man or scheme or measure for a sum of money, it would be utterly ruined. We doubt if there has ever been an editor bold enough to make any such announcement. The most degraded man who has ever followed the calling—and he must have been a very bad fellow—has always pretended at least that he was incorruptible. He *had* to pretend it in order to make his corruptibility pay. Nor has an editor ever ventured to defend his selling his columns by the plea that he only sold them to good men for good purposes. The public would no more listen to such an excuse than it would listen to a judge's saying that he only took bribes from the right side. Bacon's gratuities from suitors were mostly received after the causes were decided, but that did not save him, for men even then thought that no man's virtue was proof against the temptation which came of taking gratuities at any time. All

this is of the more importance because the power of the press over men's fortunes and reputation is daily increasing. It can already lift charlatans into places of honor, and cover heroes and philosophers with shame and tribulation. The way in which this enormous power is sometimes abused is one of the "burning questions" of the day. Everybody has more or less occasion to ponder it, and thus far no better solution has been found than the exaction by the public from every newspaper of at least pecuniary integrity. Freedom from envy, hatred, and malice it would, perhaps, in the present state of human nature, be unreasonable to look for; and even pecuniary integrity we do not always find, but most assuredly, any suspicion of the want of it brings some punishment, and every reader who detects the want of it owes it to the country to do his part in making it disgraceful and unprofitable.

The application of the foregoing to the aid given by religious newspapers to the sale of railroad bonds is obvious enough. We do not say that a religious newspaper may not lawfully recommend people to invest their money in a particular way. If the editor or publisher believes that he is rendering them a service by calling their attention to a particular security, undoubtedly he has a right to do so without being accused of dishonesty, although he takes upon himself a very heavy responsibility. We do not know also that we can make any moral objection to his selling bonds on commission, provided he practises no concealment as to the part he plays in the transaction, although we think something ought to be said against it on the score of incongruity, at least. The greater portion of the paper is given up to fervid religious and moral exhortation. Its mission is, as Mr. Bowen says, to "save wicked men," and when people's attention has been secured for admonitions touching their souls' health, it is hardly becoming to seize the opportunity, on the last page or two, to begin peddling stocks and bonds. It resembles, in a very unpleasant way, the use of a pulpit as an auction-block. What should we say to a minister who at the close of his sermon should announce that after the benediction he could offer for sale to the highest bidder a lot of first-class securities, which he could confidently recommend as a safe and desirable investment? But whatever may be said in defence of open brokerage under such circumstances, it must be admitted that concealed brokerage—that is, the recommendation to simple people, by persons who have secured their confidence as religious teachers, of investments in goods which these teachers are secretly paid for puffing—is a practice which can hardly be too severely reprobated. It is one to which those who value religion as a means of social regeneration cannot pay too much attention. If the courts can be got to stamp it with judicial condemnation, it will be a solid gain for the cause of morality. There is a great deal said just now of the influence of science in destroying spiritual-mindedness, and promoting short and material views of life and its ends. We wonder if those who are making these observations ever consider seriously whether the rapid decline of faith is not due in a far larger degree to the open connection of religion with trade, and to the extent to which the religious world connives at the use of religious phraseology to give a sort of theatrical decency to base and vulgar lives.

JEFFRIES WYMAN,

Died 4th September, 1874.

THE wisest man could ask no more of Fate
Than to be simple, modest, manly, true,
Safe from the Many, honored by the Few;
Nothing to court in World, or Church, or State,
But inwardly in secret to be great;
To feel mysterious Nature ever new,
To touch, if not to grasp, her endless clew,
And learn by each discovery how to wait;
To widen knowledge and escape the praise;
Wisely to teach, because more wise to learn;
To toil for Science, not to draw men's gaze,
But for her lore of self-denial stern;
That such a man could spring from our decays
Fans the soul's nobler faith until it burn. J. R. L.

Correspondence.

THE GRANGER MORALITY.

To the Editor of the Nation:

Sir: Your comments on my letter in regard to the railroad question in Wisconsin (*Nation*, No. 477) suggest to me that there is still a side of that question which, in simple justice to the Wisconsin "Reformers," ought to be laid before your readers. The *Nation* appears to have reasoned itself *a priori* into the conviction that there is a reckless communistic spirit at the West, which just now is manifesting itself in an attempt to plunder the railroads, but which is liable at any time to extend its attacks to capital in other forms. Those familiar with society here know that the *Nation* is mistaken, but to its Eastern readers I wish to show how it may be that unjust legislation, even if approved by the people, does not always indicate dishonest public sentiment, or ignorance, or perversity, such as to endanger invested capital. And I would respectfully represent, both to the *Nation* and its readers, that while the class of innocent investors for whom it expresses so much sympathy are certainly entitled to every protection consistent with the rights of others, yet, if the legal representatives of their interests, with or without their consent, continue to violate laws, outrage public sentiment, and "carry on" generally in the way the *Nation* says they do, it will be impossible for the community, in trying to protect itself, to discriminate between the wicked managers and the innocent shareholders. If a supposed merchantman turns pirate, and tries to take my ship, I must be excused for defending myself, even if I maim or kill the pirate's innocent passengers. Besides, who ever heard of a shareholder, whether innocent or otherwise, complaining of the management of a road that paid him good dividends? The people of the West are now struggling to bring the railroads as a whole to submit to be governed by law, and they appear to meet with pretty unanimous resistance from everybody connected with them, without regard to age, sex, or previous condition. When the roads can be brought to the point of submitting to law at all, there will be time and knowledge, which are wanting now, to make sure that all interests are properly protected.

The "true story" of the passage of the "Potter law" is very instructive, and is not generally known. It is abused as the "Granger law," when in fact it was passed in opposition to the judgment and the wishes of all the best men in the Reform party, although it was accepted by them, and ratified by public sentiment in the State, as the best thing attainable under the circumstances. The account as here given I have heard everywhere, and believe to be correct; but, as it will serve my argument just as well, I will call it the "Reformers'" side of the story, and say that I had it as such from a gentleman whose name the editor of the *Nation* will recognize as that of one as well qualified as anybody in Wisconsin to speak in behalf of the "Reform" party.

The "Reformers" who carried last fall's elections were pledged to attempt, among other things, the solution of the railroad problem. All the abuses, so well described by the *Nation*, were as apparent here as in any other State in the West. No means known to railroad operators by which the fruits of the industry of many are unjustly diverted to the advantage of a few, had here been left untried. During the preceding winter the time of the legislature had been taken, and the whole State kept in a turmoil for three months, in deciding which of two rival corporations should receive a land-grant then at the disposal of the State. It was finally awarded to one of them on terms proposed by itself, but when, after the adjournment of the legislature, the vigilant governor refused to take any steps towards securing the patent until, as required by law, he had received *good* security for the building of the promised road, the grant was deliberately *refused*, thus showing that this company had in bad faith offered more than the grant was worth, in the hope either of getting possession of the land on inadequate security, or, failing that, of preventing the building of a road which might benefit a rival corporation.

This high-handed insult to the whole State aroused an indignation that was deep and hot, and doubtless unreasoning. How could it be otherwise? Even the *Nation*, with all its opportunities and ability, seems unable to understand both sides of the question; how shall the "farmer," with his limited knowledge and slight experience, be expected to be wiser than the *Nation*? The people of the State have done their full duty by the railroads. They have procured for them valuable land-grants, and exempted them from taxation for long periods. They have incurred town, county, and city indebtedness in their behalf, in some cases entirely beyond their ability to pay. Along some lines they have made heavy private subscriptions, which have been collected to the utter ruin of many of the subscribers. A people thus situated has a view of the genesis of railroads very different from that taken by the *Nation*. The *Nation* sees trusting capitalists cautiously advancing funds on the earnest representations of Western communities. The Western "farmer" sees wealthy and crafty men inducing him to mortgage his farm and burden himself with taxation by promises of plentiful cash dividends, in addition to the advantage and comfort of the railroad. If there have been rascally go-betweens, alternately personating, alternately deceiving, and continually cheating both these parties, I could wish to see the *Nation's* influence employed to bring about an understanding between the victims, rather than in calling either hard names or embittering the strife between them.

That the "Farmer," if left to himself, would raise the devil with the railroads until experience taught him wisdom, is very likely, but he would do

it ignorantly, and not dishonestly. His notion of railroad reform is doubtless crude. The *Nation* expresses it exactly. It is "to get himself and his baggage carried cheap." That is *his* side of the question. What else could it be? They have got his money, and left him burdened with taxation;* and he is told that he cannot get back his money or escape his taxes, so he very naturally turns his attention to the tariff, and insists that "he and his baggage shall be carried cheap." And as the "farmer" looks at it, who shall blame him? How is he to distinguish between swindling directors and swindled shareholders? They are all "railroad men" to him. Investments by "widows and orphans" in railroad stocks he dreams not of. All the money he can save he lends on bond and mortgage at ten per cent., and he supposes that everybody else does the same. "Rings," "combinations," "pools," "stock-jobbing," he has heard of, and understands to be mysterious and wicked practices, for which those engaged in them will be punished in another world. "Bonds" are more familiar to him. He knows them as devices by which certain people, called "bondholders," get railroad-construction gangs to double honest farmers' taxes; and as to these particular transgressors he has his theory, and is inclined to attend to their cases himself if he can get at them. It all looks simple to him. He hears of railroad men rolling in wealth, and he thinks they have stolen it from him, and his indignation is hot and blind, just as under the circumstances it must be; but there is nothing dishonest about it. He only wants what he thinks he is entitled to; and, with all the feeling against railroads, there is not a county in Wisconsin in which they need fear to submit any question concerning themselves to a vote, if they were first sure that all the facts were understood, and if they were content to receive a just decision.

The wrath of the rural communities, however, hot though it might be, could cause the railroad managers little trouble, unless backed by the more intelligent indignation of the cities and villages. This the course of the railroads in various matters had been gradually rousing, until the grand contest of the winter of 1872 drew the attention of everybody upon them, and convinced honest men of all parties that there could never be good times in Wisconsin until the railroads had learned that the people were stronger than they, and that valid laws of the State must be obeyed by them whether they liked them or not. So the "Reformers" carried the State, and the legislature met, pledged not to any particular course towards the railroads, but to pass such laws as seemed wise and just, and to *make the railroads obey them.*

Early in the session of the legislature the subject was entrusted to the care of a joint committee of the two houses, who wrestled with it till towards the close of the session, and then reported a bill which, whether wise or unwise, was much more favorable to the railroads than the bill finally passed.

During the preparation of this bill the railroads were represented at Madison, not by their responsible managers, whose suggestions were much desired and would have been gladly received in perfecting a bill which should be just to all concerned, but by certain ancient and unsavory parties, who had for years manipulated all the dirty legislative work required in behalf of the companies. These persons, so far as they did anything, opposed the passage of any railroad bill whatever, plainly intimating that the companies would contest the validity of any act, whether good, bad, or indifferent, which in any way interfered with their freedom in regulating tariffs.

The "Reformers," in assuming the responsibility of legislation, felt their ignorance of the subject and the necessity of proceeding with the greatest caution. The bill reported by the committee was a mild measure, not undertaking to establish a schedule of rates, but only to provide against "discriminations"; it was amended and made still milder by the Assembly, passed, and sent to the Senate. This was a Republican body, left so by the holding over of half its members, and containing a much larger proportion than the Assembly of those whose instincts and interests placed them in sympathy with the railroads. The bill, as sent to the Senate, was popular in the State, and was expected to become a law. The Republican "managers," however, were unwilling to see the success of a measure of this kind originated by the Reform party; and a new bill was prepared, it was never known by whom, and introduced by a Mr. Potter, a gentleman whom I do not know, but who is from a county which does not possess a railroad of any kind, and who is said to be without experience in railroad matters.

It is openly charged by the "Reformers" that this bill was prepared and managed in the combined interests of the Republican party and the railroads —in the interest of the Republican party, in being made to bear more heavily on the railroads, and thus fully to equal and perhaps lead the popular demand; in the interest of the railroads, in being purposely made so harsh that it probably could not pass at all.

When the committee bill was reported to the Senate simultaneously with its appearance in the Assembly, that body struck out all after the enacting clause, inserted the "Potter bill," and sent it to the Assembly. Now, what were the "Reformers" to understand? Here were two bills before a body in which the railroad interest, although not strong enough in the existing state of public feeling to prevent action altogether, was yet *unquestionably* strong enough to shape that legislation almost as it might deisre. The mild bill supported by the "Reformers" would have tested the power of the legislature with trifling inconvenience to the companies, and with little danger to vested interests of any kind. The "Potter bill," whether just or unjust, was certainly too strong a measure to be passed with the information then available. But the railroad men, when they could certainly have had their choice, allowed the "Potter bill" to pass. In a short time the joint committee bill again came before the Senate on the question of concurring with the Assembly, which had already passed it. They again struck out all after the enacting clause, inserted the "Potter bill," and returned it to the Assembly.

I am satisfied in my own mind that most of the leaders of the Reform party at that time were honest men, who desired to discharge their duty by passing the wisest bill they could learn how to frame. They felt that the Potter bill was not such as they wished to assume responsibility for, and yet they believed that it was pressed in the railroad interest, in the expectation of preventing all legislation by the disagreement of the two houses. They therefore caused another bill to be prepared, like the "Potter bill" in that it fixed rates of charges, but much milder in its operation and its penalties. This bill was called the "West bill," and was prepared by a gentleman as competent as could be found outside of railroad circles for that purpose. It was passed in the Assembly by almost a strict party vote, all those persons known to be in the railroad interest voting *against* it. By this time the session was drawing to a close. The action of all the interests concerned had convinced the "Reformers" that they must either pass the "Potter bill" or adjourn, leaving the victory to the railroads, and spend the summer in quarrelling as to whether it was a "Reform" or a "Republican" *fiasco.* In those circumstances, what ought the Assembly to have done? I do not assume to judge whether the promoters of the "Potter bill" were actuated by the motives I have indicated or not; but I know—for I was in Madison at the time—that they were almost universally *credited* with those motives, both by "Reformers" and by intelligent people outside of politics; and if the suspicions were correct—and perhaps if they were *not* correct—I am inclined to believe that the wise course was to pass the bill as they did, and go home. The railroads' revenues have not been injured, for the law has not been obeyed. All the judicial questions involved are in the way of a speedy decision by the highest tribunal, and the summer's experience has probably shown railroad managers that they must submit to the valid laws of the State. The legislature will meet in the winter, and I can assure the *Nation* that if the railroads will lend their aid to perfecting *good* legislation, instead of exerting themselves to oppose *any* legislation, there need be no injustice done to anybody.

In this connection, however, it is believed by many, and with much more reason than the *Nation* could ever have had for believing the masses at the Northwest to be impregnated with dishonesty, that this whole quarrel was precipitated and is kept alive by astute railroad "operators" for the purpose of depreciating shares to a point where they may be profitably bought in. Although many circumstances seem to point to this theory, it may be without any foundation. I am sure I know nothing about it, but I mention it because many believe it, and to show the *Nation* that it is just as easy and as reasonable to impugn the motives of the railroad men as to call the "Farmers" dishonest.

I have said so much, not in defence of the "Potter law," which I presume is unwise and unjust, but to show that it does not necessarily indicate an *animus* of which honest investors could complain. I have no doubt that the real interests of minorities of shareholders are so nearly identical with the public interests that such shareholders will be soon found working in hearty co-operation with the leaders in all honest political reforms, if they are not kept separate by a mutual misunderstanding of the other's motives. And the first step toward the securing of mutual confidence is for investors to understand that our great Western communities are not reckless or dishonest, and that their present action on railroad questions, although perhaps unwise, has still much to be said in its favor, and may perhaps hereafter be seen to be the best course possible under the circumstances.

As to the expressed intention of the *Nation* to discourage investments, public or private, in Wisconsin, all I have to say is that it will be very unjust to all parties if it carries it out. I have the opportunity each year, in the business of a single firm, to see how several hundred thousand dollars of indebtedness, public and private, is met; and we invariably find the collections in Wisconsin as prompt as those in any other State in the West, and far more prompt than in most of them. As to small investors, however, the

* They have increased the value of his farm fivefold.—Ed. Nation.

Nation cannot too strongly advise them not only to lend no more money to build railroads in Wisconsin, but not to invest their funds in any shares whatever of a nature such that a controlling interest in the enterprise is likely to fall into the hands of persons whom they do not know.

If the *Nation* really wishes to assist thoughtful men at the West to see what is right in this matter, it will dismiss the notion that a majority of us are rogues or fools, and candidly discuss for us such questions as these:

How can the State ensure equitable railroad charges with the least restriction of the freedom of trade? How can it ensure the economical administration of railroad revenues in the interest of shareholders? Shall the State allow charges to be high enough, if possible, to pay interest on funds misapplied by the directors? If so, shall such interest be paid only to Eastern and foreign investors who are the present owners of the roads, or shall some way be found to recompense the persons and communities along the roads who have usually constructed the road-bed, and lost their legal claim when it was sold for the benefit of the mortgagees who furnished the iron? If interest is to be paid only on capital properly invested, what methods shall be followed, and what principles shall guide in determining what has been stolen or squandered, and what has been properly applied?

On these and similar questions nobody can give us more light than the *Nation*—if it will.

EDWARD F. ADAMS.

CHICAGO, September 19.

Notes.

THE Cincinnati May Musical Festival for 1875 promises to be of much interest. From an official circular, we learn that seven performances will be given during the second week in May, under the direction of Theodore Thomas. The programme of the evening performances embraces the names of Beethoven, Liszt, Mendelssohn, Bach, Schubert, and Wagner. In arranging the concerts, Mr. Thomas has wisely avoided crowding the programmes, three numbers being the utmost given on any evening. Singing societies are invited to join the chorus, which is to be larger than that of 1873.——The publishers of the *International* announce that their "November–December" number will appear on the 25th of October, and will contain several "vastly important articles, practically treated by thoroughly informed writers." Among these will be one on "The Domestic Commerce of the United States," by the Hon. S. Shellabarger of Ohio; one on "Our Iron Resources and Manufactures," by Prof. Newberry of Columbia College; one on "International Communication by Language," by Philip Gilbert Hamerton of England; and one on "Tyndall," by Dr. McCosh.——G. W. Carleton & Co. announce two new novels, 'West Lawn,' by Mary J. Holmes, and 'Ten Old Maids' (with a sub-title which the publishers very justly call "odd"), by Julie P. Smith; as well as a Spiritualistic work, 'The Identity of Primitive Christianity and Modern Spiritualism,' by Eugene Crowell, M.D.——An article in the *Literary World* for October 1, called "A Critic Criticised," is a review of an article on Auerbach in the *Atlantic* for the same month by Mr. T. S. Perry, the American correspondent of the *Academy*. With the *Literary World's* criticism of Mr. Perry's English we have nothing to do, but the article contains one passage which we are compelled to notice. "Mr. T. S. Perry," the *Literary World* says, "has recently become somewhat famous as a writer and critic. He is or has been a tutor in Harvard College; was, for some time, acting editor of the *North American Review;* and is the chief literary critic of the *Nation*, in whose columns, sitting on an empyrean throne, he disdainfully reviews the throng of authors passing below him. It is natural and reasonable to assume that the occupant of the three positions above-mentioned must be a man of thorough education, a vigorous and logical thinker, and the master of a forcible and elegant style"—and then, of course, proceeds to show that the unfortunate man is neither one nor the other. We beg the *Literary World* to take notice that, so far as this statement concerns us, it is not correct. Mr. Perry is not and never has been "the chief literary critic of the *Nation*," and hence the statement that he sits on an empyrean throne in our columns, disdainfully reviewing the throng of authors passing below him, is erroneous, and the reference to him in another part of the article as the "avowed and trusted representative" of the *Nation* is a mistake, and indeed a gratuitous piece of impertinence. The passion for inventing authors for articles published anonymously, which seems to beset some of our contemporaries, and which frequently leads them into speculations on the motives and character of the imaginary author, deduced from his imaginary birth, parentage, early life, college training, and political connections, is unsafe, and the practice of publishing the results of these imaginations is indecent, and often calumnious.——William F. Gill & Co. have in press a new story by Wilkie Collins, 'The Frozen Deep,' which they will publish October 10. The story is a development of the play of the same name, in which Charles Dickens and Mr. Collins appeared together some years since, and which had a good run, if we remember right, in this country.

—The *Republic*, the new daily newspaper, made its appearance on Monday, and, as its price is one cent less than any other morning paper, has carried consternation among existing editors and proprietors wherever it has found its way. The treasonable secret history of the new enterprise has been made public by the intelligent and enterprising correspondents of the country papers, and is familiar to everybody. Some time since General Grant, plotting, as ever, the destruction of the Government of the United States and the overthrow of all our liberties, began to cast about him for means by which to accomplish his wicked designs. At first it was supposed that the *Times*, from its well-known sympathies for any *de facto* government, no matter what its origin, might be relied upon to persuade the people that what the country needed was a third term. But the wild and reckless behavior of that newspaper as a party organ caused the abandonment of this plan, and, after several conferences held at Long Branch, it was decided that the next best thing would be to establish a new daily paper in New York, and by making it cheaper than the others gradually undermine the opposition press and in this way the free institutions of the country. For this purpose large sums of money were subscribed by the President, all the members of the Cabinet, the governors of many of the States; but it was felt to be prudent to put the nominal capital at a moderate figure. The exact amounts of money subscribed by Grant and Murphy are well known. To some of our readers it may seem strange that a newspaper which is to be a Republican organ should have its headquarters in a building in Ann Street said to be connected in some way with the *Herald;* but the explanation of this is simple enough. The *Times's* attitude toward the *Herald* has for a long time been one not calculated to encourage journalistic amenities between the two, it having at different times used expressions of a certain sort with regard to the *Herald*, such as accusing it of not being fond of quoting the commandment, "Thou shalt not steal"; making a dark and mysterious reference to a connection supposed to exist between it and Mr. Oakey Hall; speaking of it as "mischievous and unprincipled," and as supporting many writers who are "foolish"; making allusions to the *Herald* as an "enlightened organ of public opinion," obviously sarcastic, and suggesting that the Pope should send over a fool's cap for the benefit of its intellectual department; and though we have not observed any evidence of unchristian spirit on the part of the *Herald* in return, such expressions must always tend to the cooling of friendship between public teachers. Therefore, when we are given to understand that the new paper has entered into an alliance, offensive and defensive, with the *Herald;* that a new press association—a rival of the Associated Press—is to be formed by the *Herald*, the *Republic*, and one or two other journals which do not now receive their news from that grinding monopoly, we can understand more easily the interest which the *Herald* takes in welcoming the new paper to the field of journalism with such wise words of advice as are contained in its issue of Sunday—suggesting to the editors that it will be well for them to "be courteous"; that they should recollect that to assume that because a man is a Democrat he must be damned is a *non sequitur;* that they would be wise not to "discuss questions of emigration and the English Church to the exclusion of American themes"; and that, if it is necessary to be independent, they can always abuse Butler and Havemeyer.

—The Second International Orientalist Congress, held this year at London, was opened by Dr. Samuel Birch of the British Museum with an interesting inaugural address. In speaking of the extensive recent discoveries throughout the East, Dr. Birch noticed the curious fact that the prosecution of Oriental discovery depends for its success and even for its existence as a branch of active enquiry on continuous excavation, for "without fresh materials these studies languish, and the interest in their pursuit diminishes," and he therefore urges the importance of the Congress's encouraging excavation. Another interesting point touched upon is the "transliteration of Oriental texts into European characters." Great progress in this direction has been made of late years, and many schemes have been proposed. Dr. Birch considers that if some mutual agreement can be arrived at on this subject, it would be of the highest importance, as it would "in many instances supersede the necessity of printing in various characters and different Oriental types—an expensive and difficult process. It would not, indeed, effect this for languages written with syllabic characters, but for those only which have an alphabetic one, and the same mode of transliteration would be an invaluable aid to the simplification and rendering of words in these languages

and making them universally intelligible." This is not the same question as that of a universal alphabet—such a one as should, for the Orientals themselves, supersede the necessity of writing in their own different characters the different languages of the East—though could such an alphabet as this be invented, it would be a great advantage in the acquisition of these languages for the West, "months, and perhaps years, being now spent in mastering alphabets and syllabaries of complete kinds." Among the Polynesian Islanders, it is true, the European script has been successfully introduced and adopted; but this was because they never had a written language of any kind before their intercourse with Europeans, and there was no national *amour propre* to contend with; no script already in use to supersede. In the East this is of course not so. "But it is evident that, clothed in an European alphabet, there would be no greater difficulty in mastering many of the Aryan and Semitic languages by the Western scholars than in acquiring the different languages spoken in Europe—a task much facilitated by their having one common mode of printing and writing the same sounds. It may be considered the first step to writing among the European nations, this adoption of a common alphabet, when entirely carried out, and nothing would more powerfully connect the East and the West than the removal of these barriers, which prevent an easy acquisition of those keys of thought necessary for the mutual understanding and happiness of mankind."

—Passing from this subject to that of pasigraphy, or the art of writing by ciphers, Dr. Birch discusses the system of communication at sea already in use, by means of numbers, and says that this device contains the elements of a universal language, limited, indeed, to a few stereotyped sentences, such as are generally wanted in maritime intercourse. He mentions the fact that a modification of this system has been adopted for telegraphic use, to supersede the necessity for long and continuous messages; and it is now proposed to adopt another modification, consisting principally in the substitution of numbers for words, the same number answering to the same equivalent word in all languages. "It is evident that when dictionaries on this principle shall have been compiled, it will be possible for a limited communication to be held in writing with Orientals, of whose language the European is ignorant, in the same manner as by maritime signals. It is a step towards universal language, and, although a feeble one, probably the only step which will ever be made." Dr. Birch notices the fact that the chronology of the Jews and the Assyrians, as they at present stand, do not harmonize—there is a want of synchronism. "It is not possible at present to decide where the error lies, but nothing but an act of violence, such as the alteration of text, or the forced hypothesis of an omission of years in the Assyrian canons, can at present reduce them to a common level." With reference to the antiquity of the Egyptian civilization, he says that evidence is still required to determine whether Babylonia is any older, and it is interesting to observe that the progress of discovery strengthens the value of all Egyptian remains:

"The arts of Egypt exercised an all-powerful influence on the ancient world—the Phœnicians copied their types, and Greece adopted the early Oriental style of architecture, for the Doric style came from Egypt, the Ionic from Assyria, the later Corinthian came from Egypt. If Phœnicia conferred an alphabet on Greece, Egypt suggested the use of such characters to Phœnicia. Already, in the seventh century before Christ, the hieroglyphs represented a dead form of the Egyptian language, one which had ceased to be spoken, and Egyptian traders used a conventional mode of writing, simpler than the older forms, and better adapted for the purposes of vernacular idiom. Greek philosophy—the transmigration doctrine of Pythagoras—that of the immortality of the soul of Plato, pervaded the Hellenic mind from the colleges of Thebes. . . . The Elysian fields, the stream of Styx, burning Phlegethon, the judges of the dead, are Egyptian conceptions; the sun-worship is Egyptian; medicine and astronomy, geometry, truthful history, and romantic fictions are found in an extensive literature. Many dogmas and practices of an Egyptian origin have descended to the present day, and exercise more influence than is generally supposed on modern religious thought."

These sentences state facts, most of which to-day are common enough learning, but which not many years ago were only obscurely guessed at, and which are, perhaps, insignificant in importance as compared with the discoveries yet to be made. In conclusion, Dr. Birch specially directs attention to the necessity of enquiry into the extensive forgeries of Oriental inscriptions and other objects, perpetrated of late years in Jerusalem and in Arabia, the number of imitations of gems or engraved stones being greater than that of the really ancient remains of the same kind in existence, and some requiring for detection considerable practical knowledge.

—That the problem of pasigraphy is susceptible of solution to a certain degree is demonstrated by the many ideographic signs of Egyptian, Chinese, and Mexican writing; but a solution that would satisfy the requirements of our advanced civilization and thought has not yet been attained, and the gravest doubts have been entertained as to its practicability. Leibnitz and Wilkins, the Orientalist, one of the earliest promoters of the study of Sanskrit, made some attempts at it. In our day, several societies have been organized in Germany for the purpose of inventing a pasigraphic system and promoting its introduction. At a meeting of the central section, held in Munich August 26, the chairman, A. Bachmeier, gave notice that during the present year pasigraphic societies had been organized in Vienna and in London, the latter under the auspices of Dr. Birch himself. Both societies are composed of members belonging to a great variety of nationalities, many of whom have pledged themselves to prepare grammars and dictionaries by transcribing their own idioms into pasigraphy. The Vienna society is said to have been very proficient in perfecting the system, and to have been active also in interesting foreign princes and governments in the introduction of pasigraphy into general use. Transcription into pasigraphic signs has already been commenced for the Japanese, Arabic, Turkish, Persian, Czech or Bohemian, Magyar, Polish, and Serbian languages. The chairman also stated that the Centralverein would exhibit at the Centennial Exhibition in Philadelphia numerous specimens of the art, and try every appropriate means for its furtherance and dissemination; that he was hopeful of introducing it into general use through the support of the governments of civilized countries; and that he was going himself to London to arouse the English public in behalf of the great work he has in view.

—The *American Garden*, after returning thanks for our appreciative notice, and being "aware that literary gentlemen in their extensive reading often find incidentally scraps of information at variance with accepted facts," desires to know our reasons for doubting that the "Jerusalem artichoke" came from Brazil, and for thinking it probable that it went to Europe from Louisiana. We will give them, just to show, if nothing more, that "literary gentlemen" in the *Nation* do not make random statements. But first let us strengthen the *Garden's* case. Not one of the many authorities it cites as affirming a Brazilian origin dates very far back, and they have all copied from one another or from a common source. It is better to go back to Linnæus, who, in his earliest work in which the plant is mentioned, attributes it to Canada, in all the later ones to Brazil. His authority for the Canadian origin was probably Parkinson, who, about the middle of the XVIIth century, called it *Battatas Canadensis:* his warrant for the Brazilian origin was probably Bauhin's equally early name of *Chrysanthemum Brazilianum.* Some recent writer, to us unknown, has probably put the two together in the statement, relied on by the *Garden,* that it came from Brazil by way of Canada. Now, on the other hand: 1. There is no historical evidence that it was ever brought from Brazil. 2. It is not known to occur there. Von Martius never met with it, nor did Humboldt find it in cultivation in any part of South America. 3. It is much too hardy a plant to be a native of Brazil, and its whole behavior indicates a temperate climate. 4. It has no brethren in Brazil, but nearly all its near kin are natives of Mexico and the United States, chiefly of the latter. Finally, our surmise that this "artichoke" reached Europe by way of Louisiana, directly or indirectly, was founded upon our knowledge that a species of sunflower very much like the *Helianthus tuberosus* abounds in the valley of the Mississippi, and bears tubers sufficiently resembling "artichokes" to suggest that they may be their wild original; and a cultivation of them for about fifteen years well-nigh confirms this opinion. To this view, however, an apparently fatal objection may be made—namely, that "Jerusalem artichokes" were known in Europe before La Salle's discovery of the mouth of the Mississippi. Yet they might have reached France by way of Canada, or, more likely, Spain by way of Florida. In that case, they must have been employed as an article of food by our Indians of the Mississippi Valley; and one object of this note is to enquire whether there is any record of their having such an article.

DOROTHY WORDSWORTH'S RECOLLECTIONS.*

IN bringing forward for the first time the long-known but little-known 'Recollections of a Tour in Scotland,' Principal Shairp remarks that the work may expect its warmest welcome from avowed Wordsworthians who already have had glimpses of it and have learned to wish for a full view. This no doubt is true; but it is probable—the 'Tour' has so much of a quiet charm—that no reader at all gentle who is now to begin his acquaintance with Miss Wordsworth and her book will refuse to either a welcome as cordial as any Wordsworthian need wish. Apart from the interest and liking which Miss Wordsworth herself inspires, and which alone would win the reader's kindness, he will find himself helped forward to a full enjoyment of the work by a judicious device of the editor's—not a great matter seemingly, but important. Wherever in the 'Tour' we find the original suggestion out of which grew one of the poet's Scottish poems, we find in an appendix or in the text the poem itself given at full length, so that the poet and the traveller mutually

* 'Recollections of a Tour made in Scotland, A.D. 1803. By Dorothy Wordsworth. Edited by J. C. Shairp, LL.D., etc.' New York: G. P. Putnam's Sons. 1874.

illustrate each other, and the reader of "The Solitary Reaper," for example, or "Yarrow Unvisited," or "Stepping Westward," may here read those productions with such a new knowledge of them as shall give him a new pleasure. As this is one of the marked features of the work, we will illustrate it, and do so in the instance of the poem 'Stepping Westward.' Probably, to every one at the first hearing the words of this title have a certain largeness of reach and scope—the same vague dignity which they persisted in having in the ear of the poet years afterwards, when he made a poem out of the occasion on which he first heard them. We give the incident in the prose of his sister—if, indeed, the brother's poetic rendering is more poetic than the sister's unmetred version:

"The sun had been set for some time, when, being within a quarter of a mile of the ferryman's hut, our path having led us close to the shore of the calm lake, we met two neatly-dressed women, without hats, who had probably been taking their Sunday evening's walk. One of them said to us in a friendly, soft tone of voice, 'What! you are stepping westward?' I cannot describe how affecting this simple expression was in that remote place, with the western sky in front yet glowing with the departed sun."

The civil words were evidently a wayside greeting, as "Good evening" might have been, or "A pleasant road to you," or what not; but ours were no common travellers to accost:

"'What! you are stepping westward?' Yea,
'Twould be a wildish destiny
If we, who thus together roam
In a strange land and far from home,
Were in this place the guests of chance:
Yet who would stop, or fear to advance,
Though home or shelter he had none,
With such a sky to lead him on?

"The dewy ground was dark and cold,
Behind all gloomy to behold,
And stepping westward seemed to be
A kind of heavenly destiny;
I liked the greeting, 'twas a sound
Of something without place or bound;
And seemed to give me spiritual right
To travel through that region bright.

"The voice was soft; and she who spake
Was walking by her native Lake;
The salutation was to me
The very sound of courtesy;
Its power was felt, and while my eye
Was fixed upon the glowing sky,
The echo of the voice enwrought
A human sweetness with the thought
Of travelling through the world that lay
Before me in my endless way."

No one will say that the journal and the poet's works are not here reciprocally indebted to each other; nor, to speak of the editor's rather bold method, to which we owe this explicatory juxtaposition, will any one say that it is not justified by the results.

Among the points of literary interest in the 'Tour,' the one which comes next after or next before the throwing of light upon the poems, and the poet's way of working, is Miss Wordsworth's very remarkable exhibition of her powers as a painter. Her range is very wide. Walking over a Highland moor, the travellers suddenly come upon a little hamlet where they see a potato field in blossom: "We passed by one patch of potatoes that a florist might have been proud of; no carnation-bed ever looked more gay than this square plot of ground on the waste common. The flowers were in very large bunches and of an extraordinary size, and of every conceivable shade of coloring, from snow-white to deep purple. It was pleasing in that place, where perhaps was never yet a flower cultivated by man for his own pleasure, to see these blossoms grow more gladly than elsewhere." Compare with this the melancholy impressiveness of this landscape with its one solitary figure beneath the cold sky: "But we soon came in sight of a spot that impressed us very much. At the lower end of this new reach of the vale was a decayed tree, beside a decayed cottage, the vale spreading out into a level area, which was one large field, without fence and without division, of a dull yellow color; the vale seemed to partake of the desolation of the cottage, and to participate in its decay. And yet the spot was in its nature so dreary that one would rather have wondered how it ever came to be tenanted by man than lament that it was left to waste and solitude. . . . We went on, looking before us, the place losing nothing of its hold upon our minds, when we discovered a woman sitting right in the middle of the field, alone, wrapped up in a gray cloak or plaid. She sat motionless all the time we looked at her, which might be nearly half an hour. We could not conceive why she sat there, for there were neither sheep nor cattle in the field; her appearance was very melancholy." Of a kind between these two sketches is this one which we happen upon a page later than the passage just quoted: "As we were passing along we saw an old man, the first we had seen in a Highland bonnet, walking with a staff at a very slow pace by the edge of one of the moorland corn-fields; he wore a gray plaid, and a dog was by his side. There was a Scriptural solemnity in this man's figure, a sober simplicity, which was most impressive." We have mentioned that this description occurs only a page later than the one just previously quoted; but in this instance specially remarkable points are a little more thick-coming than is usual with Miss Wordsworth. Yet in this as in all other instances the noticeable thing is set quietly amid the ordinary details of travel—the behavior of the horse, the goodness of the road, the chances of getting a good night's lodging.

Indeed, as the editor points out, not a small part of the pleasure which these 'Recollections' give the reader is that, being jotted down in the most unaffected manner for perusal by members of the family circle who did not make the journey, the passages of striking description almost always come upon the reader with an effect of surprise, which increases their power to please. And an agreeable lowness of tone is preserved by a complete disregard, perhaps ignorance, of the fine-writing art, though Miss Wordsworth can be entirely enthusiastic, and, when she is so, so writes. Witness her delight in the islands of Loch Lomond as seen upon a day of shifting mists and rain. More generally, however, we find in close connection with what the common run of writers on these subjects would regard as "effects" of which the utmost should be made, some such statement as we omitted in quoting the scene of desolation. After describing the dreariness of the valley and the hut before getting to the old woman sitting alone in the open field, she says to her home readers: "It was as much of a field as Mr. King's best pasture, scattered over with his fattest cattle."

We might take from this volume dozens more of specimens of Miss Wordsworth's gift for seeing nature not only with the clear eye which marks every object, but with the poetic vision also, and for describing what has appeared to her with a peculiar power. We prefer, however, to take a passage which shows that she not only had this natural gift and its complementary power of expression, but that her eye was the organ of a trained as well as a gifted mind. She seems to be combatting the notion of various tourists that Inverary, the seat of the Duke of Argyll, the McCallum More of song and story, looks too modern, and is not mediæval, unkempt, and shaggy enough. She, on the contrary, thinks of the Argyll of the close of the eighteenth century, with his town-house in Grosvenor Square, and finds a harmony and fitness in the spacious and smiling castle, the clear bay, the town standing white on its shore, the sweep of the smooth hills:

"There is in the natural endowment of Inverary something akin to every feature of the general character of the country; yet even the very mountains and the lake itself have a kind of princely festivity in their appearance. I do not know how to communicate the feeling, but it seems as if it were no insult to the hills to look on them as the shield and enclosure of the ducal domain, to which the water might delight in bearing its tribute. The hills near the lake are smooth, so smooth that they might have been shaven or swept; the shores, too, had somewhat of the same effect, being bare and having no roughness, no woody points; yet, the whole circuit being very large and the hills so extensive, the scene was not the less cheerful and festive, rejoicing in the light of heaven."

We ourselves, fond of itineraries with their record of small adventures, have been pleased with a portion of Miss Wordsworth's work which may, we fear, prove tedious to some, and even may drive some others to drop the book, for we are bound to say that this same portion constitutes by far the greater part of its contents. There is much concerning our wayfarers' cart, which is described as "a Hibernian" one, but does not seem to have been a jaunting-car; concerning the horse who, while in Wordsworth's guardianship, appears to have been neither a perfectly well-understood nor a perfectly well-engineered beast, and who does more or less jibing, backing towards torrents, and fighting at ferries; also concerning one after another, and then one after another again, of the poor Highland cottages, huts, and inns, where abounding smoke and filth made still less palatable the fare, almost always scanty. There is much also concerning the brighter side of the travellers' daily round, but this may be as little pleasing to some readers as the chronicle of the soakings in the rain, the wanderings from the road, and the disputes with the barefooted landladies of the mud-floored cabins. To others again there is an almost personal sense of sharing in the adventure and sharing in the recompense when the tourist tells in his journal of the opportuneness of the back-country tavern, with its log fires and a pair of dry stockings to be lent. But apart from all this indubitable but confessedly rather unturbulent pleasure, the fulness of detail with which Miss Wordsworth wrote for her family may be gladly enjoyed by the reader, both for the sense of acquaintance with her personally which it gives, and for a certain amount of knowledge of the Scotland of 1803 which it half insensibly conveys—the Scotland, be it remembered, when Sir Walter Scott had not yet "invented Scotland" for the outside world, and when few but native eyes had ever looked upon the Trosachs. A simple, pious, industrious, poor, intelligent, rather sombre people, worthy of respect as respecting themselves and others, seems to be what the poet and his sister found, for they were not superficial observers, or capable of being unjust because they found much of which to disapprove and much that repelled them.

TYSON'S ARCTIC EXPERIENCES.*

THE work whose title is given below was based on communications from Mr. Tyson, the assistant-navigator of the late *Polaris* expedition, and composed by Mrs. E. Vale Blake. That the lady has entered on her task with enthusiasm and with a high admiration of the hero of her Odyssey, is evident from her preface. Nevertheless, the responsibility for the observations recorded falls entirely upon Mr. Tyson, and our remarks will have reference to him as the real author, the more justly inasmuch as there are copious extracts from what purports to be his journal, and which would to a casual reader appear to have been written at the time indicated by the dates. We learn, however, that the real journal was lost after the disaster of the *Polaris*, and our hero freely confesses that he wrote what is now given as the journal subsequently. It is much to be feared that in the interval between the observations recorded in the diary and the time of writing them out the author's memory has frequently failed. For instance, one passage runs thus: "December 24, 1871. The ship continues to rise and fall with the tide, her stem resting on the foot of the iceberg. At neap-tide the leak might be repaired—gradually, if not all at once—by working a few hours at a time as the tide permits; but no orders are given to attempt it." Now, on the 24th of December, 1871, when this entry purports to have been made, the ship was sound and whole, as the combined evidence of both her officers and men, given before the Secretary of the Navy, proves. From that document we learn that the *Polaris* was in good condition until the spring of 1872, when she was discovered to be damaged and making water.

Any book designed to be a valuable contribution to the literature of travel and exploration must, at the present period, comprise something more than the personal experiences of the traveller. Costly expeditions sent out at the expense of the nation, for purposes almost purely scientific, may be reasonably expected to yield some other return than a mere book of adventure. A careful perusal of Mr. Tyson's narrative has deeply disappointed us. We hoped to find in it a good and intelligible summary of the work done by the different members of the exploring party and the actual discoveries made—at the very least, some discussion of the geographical problems and the additions to our knowledge of those remote regions. The objects of the expedition and the phenomena to be investigated were duly set forth in Capt. Hall's instructions and in the memoranda prepared by the board of which Prof. Joseph Henry was chairman. The expedition was preeminently a scientific one, and its success or failure can be judged only by the scientific results.

But it is quite obvious that Mr. Tyson, although he was the assistant navigator, was totally unable to comprehend the proper work of the expedition, or the means of accomplishing it. His book is merely a narrative of his personal experiences, in which he duly parades his own courage, wisdom, sagacity, and reliance upon Divine Providence, at the expense of a majority of his companions. At the beginning of the journey he gives a miserable picture of discord, insubordination, and want of enthusiasm in the members and crew, and every forward movement has its prelude of foreboding. We find him the advocate and promoter of every successful achievement, and a warning counsellor before every disaster. In addition to all this, we are told in the preface:

"In regard to the personal experiences of Captain Tyson, the natural reticence and modesty of that officer have compelled the editor to underestimate and suppress much that is fairly due to him; and the reader is reminded that far more emphasis might fairly be given to his share in whatever of success was achieved by the *Polaris* expedition but for this peculiarity of the assistant navigator,

'Who, like a statue solid set,
And moulded in colossal calm,'

appears quite unaware that he has done anything extraordinary, or more than what any right-minded, honest man would have done under the same circumstances."

The introductory chapter, occupying 75 pages, is useful as epitomizing the well-known facts recited more fully and in a better style by Barrow Richardson, Peschel, Markham, and others, and serves very well to refresh the memory of the ordinary reader of Arctic travel. The second chapter, on "Captain Tyson's Early Arctic Experiences," will probably prove more interesting to himself than to the public at large. About one hundred pages are devoted to the cruise of the *Polaris* and the winter quarters at Polaris Bay, bringing us to the calamitous separation of Tyson's party from the vessel, and the beginning of the memorable and perilous journey upon the ice-floe. During the winter and spring it is customary, in all Arctic expeditions, to make journeys with sledges, and to establish an observatory for recording physical phenomena. These receive very brief mention from Mr. Tyson, whose mind and diary appear to be filled with matters like the following:

"Dec. 18–24.—Nothing occurring that is pleasant or profitable to record I wish I could blot out of my memory some things which I see and hear. Capt. Hall did not always act with the clearest judgment, but *it was heaven to this.*

"Jan. 1, 1872 . . Considering the heterogeneous elements of which this expedition is composed, it is something to be thankful for that we all commence the year in good health, and without any open and acknowledged disagreement, which considering, too, some circumstances, I think remarkable. . . . Well, all I can do is to keep silent; my position does not warrant interference.

"June 9.—Chester's party have all returned, having had the misfortune to lose their boat and nearly their lives. . . . I called the cape, near which they lost the boat, Cape Disaster, and the bay they were on, beyond Cape Lupton, Folly Bay, which I believe was rather displeasing to Mr. Chester."

Passages like the foregoing may readily serve to explain the difficulty experienced by Captain Buddington in enforcing discipline, and exonerate him from the gross charges brought against him upon the landing of the Tyson party.

The voyage upon the ice-floe is one of the most remarkable in the whole category of adventures. The fearful uncertainty, the utter helplessness of the castaways, their constant bordering on starvation, and the certainty of an ultimate dissolution of the strange craft which floated them, are well depicted by the writer, but even here, where harmony and mutual forbearance in the presence of awful dangers were most essential to the well-being of the party, Mr. Tyson has nothing but complaints to offer with regard to his fellow-sufferers, particularly Mr. Meyer. Not only does he reject the latter's opinions with contempt, but he implies that Meyer spread disaffection and mutiny among the seamen, and secretly counselled them to abandon Tyson and the Esquimaux and seek their own safety. He even insinuates, ultimately, that his life was in danger from his desperate and greedy companions. Suggestions of this character, which can never be proved nor even rendered plausible, should not have been written: they are far more damaging to the author than to those against whom they are aimed. It is perfectly clear that Mr. Tyson committed a grievous error in accompanying this expedition. He found in the other officers (Capt. Hall excepted) nothing but matter for complaint, sneering, and dark insinuations. According to his own showing, he was the only hero, and the only man possessed of common intelligence.

The Life of Benjamin Franklin. Written by Himself. Now first Edited from Original MSS., and from his Printed Correspondence and Other Writings, by John Bigelow. 3 vols. (Philadelphia: J. B. Lippincott & Co. London: Trübner & Co.)—Of the two Americans—the only two who by the general voice of the civilized world have been placed among the immortals—Washington has faded to a grand, statuesque, but somewhat chilling figure; while Franklin is still full of life and color. For if Franklin was as wise as Socrates, he was also as picturesque, and his shrewd, homely sayings, many of which have become proverbs, and his charming Memoirs, help to explain the freshness and durability of his fame. There are other well-read autobiographies —Gibbon's, Rousseau's, Béranger's suggest themselves at once—but there is none like Franklin's. It is as interesting to a boy as Robinson Crusoe. If we turn to it later in life, we are delighted with his kindly wisdom, the delicacy of his humor, and the simple felicity of his style. Yet "one of the half-dozen most widely popular books ever printed" had a fault. It was incomplete. Franklin brought his Memoirs down to the year 1757, and never found time to finish them. The next twenty-eight years were among the most important of his life. With the exception of two short visits to America, he passed them in London as Agent for the Colonies and in Paris as Minister Plenipotentiary of the United States. Fortunately, he left a nearly complete record of these years in his correspondence, which was collected and edited by Sparks. It was a happy conception of Mr. Bigelow to complete the autobiography by extracts from these letters and others in his possession, arranged in their natural order, "thus making Franklin himself tell the story of the remainder of his life." The date and the address of every letter used is noted in the margin, so that any one who desires it may easily refer to the originals. In three volumes of convenient size, we have everything Franklin "left behind him that any one not pursuing special investigations now cares to read about." As the Sparks collection is in ten large volumes, and has become so rare and expensive as to be beyond the reach of ordinary book-buyers, the present edition supplies a real want. This is not the only good service Mr. Bigelow has done for the admirers of Franklin. It is probably known to many readers of the *Nation* that in 1867 Mr. Bigelow succeeded in procuring two unique memorials of Franklin: the pastel portrait by Duplessis, done in 1783, and presented by Franklin to M. Le Veillard, mayor of Passy; and the autograph MSS. of the famous Memoirs, which he had written mainly at the earnest request of the same dear

* 'Arctic Experiences: Containing Capt. George E. Tyson's Wonderful Drift on the Ice-floe. A History of the *Polaris* Expedition. Edited by E. Vale Blake.' New York: Harper & Brothers. 1874.

friend. Le Veillard was guillotined in 1794. From his widow the MSS. passed to her daughter, at whose death, in 1834, it was inherited by her cousin, M. de Sinarmont, whose grandson sold it to the present owner. Dr. Franklin bequeathed his papers to his grandson, William Temple Franklin, who withheld them from publication until 1817 for reasons which have never been fully explained. The edition of 1817 has been reprinted ever since. When Mr. Bigelow came to collate his MSS. with this edition, he found that the last eight pages of the MSS., "which are second in value to no other eight pages of the work, were omitted entirely," and that more than twelve hundred changes had been made in the text. Most of them are not material. It seems as if William Temple Franklin had tried to improve his grandfather's style by adapting it to the rhetorical fashions of his day. Mr. Bigelow, thinking that Franklin wrote as good English as any author of the eighteenth century, and that a book which seems to have the gift of perpetual youth should be read as it came from the hands of its maker, published in 1868 an edition of the Memoirs from the Le Veillard MSS., with a preliminary sketch of its history. The same text has, of course, been adopted in the first volume of the present work. He has added a few notes, a catalogue of the works written "by and about Franklin," and a copious index. It is always pleasant to have an excuse for reading once more an old favorite. A new edition would attract us if it came in a questionable shape. In this instance the shape is in all respects worthy of the celebrated printer, and the editor has done his share of the work thoroughly. It is fortunate that the original MSS. should have fallen into the keeping of a man so well fitted for the trust. Himself an able journalist, he has had the rare distinction of filling successfully the position in France first held by Franklin, at a time, too, when the future of our nation was as uncertain as it seemed to be in the year 1777.

Franklin's friends—Le Veillard, Vaughan, and James—urged him to write the story of his life, to teach young men the advantages of industry, frugality, and self-control. It has, no doubt, been of great service, especially to the men of the last generation. If few were found able to become proficient in the "art of virtue," many learned to imitate some of his admirable qualities. Possibly the public spirit and the readiness to give liberally for public purposes which have been so marked a feature in the character of the better class of Americans, may be a result of his example. But the great secret of Franklin not even his teaching can impart. Owing to "some exquisite conjunction and balance of qualities," he seems never to have been led astray by his reason, his feelings, or his wants. He had none or nearly none of the weaknesses and errors of his time. Every American is familiar with Franklin's noble head—cheap plaster casts and shabby lithographs cannot disfigure it. He has heard Poor Richard's maxims, knows the story of the kite and the key, and has a picture in his mind of the old philosopher in his Quaker costume playing chess with princes and peers; but we suspect that the average American does not know that Franklin was "the most eminent journalist, philosopher, diplomatist, and statesman of his time," and that he did such great things that even Turgot's melodramatic *Eripuit fulmen cœlo, sceptrumque tyrannis,* is hardly an exaggeration.

We agree with Mr. Bigelow that Franklin's "influence was never more needed than at this moment," when grave doubts have arisen in so many acquisitive minds of the truth of one of his favorite maxims: "Honesty is the best policy." Whether the application of a new edition of his life, excellent as this one is, can cure this deep-seated consumption of the conscience is uncertain; but it may alleviate some of the symptoms. We do not hesitate to recommend it. If it should not prove a complete remedy at least no one will regret having taken it.

I.

By the author of 'The Dodge Club.'

THE LILY AND THE CROSS. A Tale of Acadia. By Prof. James De Mille. 16mo, Illustrated, $1 50.

"Prof. James De Mille's novel entitled 'The Lily and the Cross,' will be eagerly sought for by the large circle of admirers which his earlier works have won for him. The experienced novel-reader may not find it so replete with exciting scenes and rollicking fun as some of his previous books, yet the plot is well developed, the story is full of incident, and there are no prosy interpolations of the author to interfere with its progress. The scene of the tale is laid in Nova Scotia—the ancient Acadia of the early French settlers—during the wars of the French and English in the early part of the eighteenth century."—*Inter-Ocean, Chicago.*

II.

By the author of 'Amateur Dramas.'

RUNNING TO WASTE. The Story of a Tom-Boy. By Geo. M. Baker. 16mo, Illustrated, $1 50.

"The style of the book is intensely dramatic. The characters are strongly drawn and consistent throughout. Mr. Baker's old friends and new readers will unite in hoping that this, his first novel, will not be his last."—*Boston Globe.*

"This the author's first venture in the field of fiction is a decided success. It is dramatic in its spirit and movement, so that the reader almost feels that he is seeing, instead of seeing that he reads."—*Golden Age, New York.*

LEE, SHEPARD & DILLINGHAM, NEW YORK.

WHAT ARE ENGLISH CHANnel Shoes? Sewed shoes have the seam that unites the sole and upper sunk into a channel cut in the sole. Americans cut this channel from the edge of the sole, and the thin lip turns up in wearing. The English channel, which never turns up, is cut from the surface, leaving a dark line when closed. As it cannot be cut in thin, poor leather, it indicates a good article.

WORK: A Story of Experience. Louisa M. Alcott, author of 'Little Women,' 'An Old-Fashioned Girl,' 'Little Men.' With Character Illustrations by Sol Eytinge. Price $1 75.

"We cordially welcome the book as one of the freshest and most practical contributions toward a solution of the vexed problem of the woman-work-and-wages question. And if some of the talkers would follow Christie's example, and undertake to settle this troublesome question in the same spirit of self-reliance and with the same honest purpose and resolute will, we might have less conventions, to be sure, but we should have less occasion for them; we might not have so many lectures, but we certainly should not have so many failures in the struggle for life."—*Universalist Quarterly Review.*

THE WEEK IN TRADE AND FINANCE.

OCTOBER 5, 1874.

THE week closing on Saturday was marked by increased activity in all the different markets in Wall Street. Government bonds were in demand in large amounts; gold was stronger; stocks were active, with a good demand for both speculation and investment purposes; and the business in railroad bonds increased considerably. One or two failures were reported, but as they were not unexpected, they had very little effect upon business affairs in the Street.

Money remains easy at 2½ per cent. on call as the ruling rate; the extreme range of rates has been between 2 and 3 per cent., excepting for a short time on Friday, when 5 per cent. was paid, the market having been "bid up" by the brokers engaged in loaning money for the large banking-houses. Commercial paper is quoted 5½ to 7 per cent. for prime names running three to four months, and 8 per cent. for lower grades running the same length of time.

The statement of the Clearing-House banks for the week ending Saturday, October 3, was unfavorable, and indicates an increasing demand for money, which is shown by an increase of $1,737,600 on the item of loans. The surplus reserve is down to $2,396,275 below what it was last week. The following shows the changes in the averages for the past two weeks:

	Sept. 26.	Oct. 3.	Differences.
Loans	$279,539,400	$281,277,000	Inc... $1,737,600
Specie	18,919,900	18,374,200	Dec... 545,700
Legal-tenders	65,700,400	63,966,100	Dec.. 1,734,300
Deposits	236,460,800	236,925,900	Inc... 465,100
Circulation	25,625,800	25,419,600	Dec.. 206,200

The following shows the relations between the total reserves and the total liabilities:

	Sept. 26.	Oct. 3.	Differences.
Specie	$18,919,900	$18,374,200	Dec.. $545,700
Legal-tenders	65,700,400	63,966,100	Dec.. 1,734,300
Total reserve	$84,620,300	82,340,300	Dec.. $2,280,000
Reserve required against deposits	59,115,200	59,231,475	.....
Excess of reserve above legal requirem't,	25,505,100	23,108,825	Dec.. 2,396,275

The stock market has shown increased activity and buoyancy. The leading feature of the market was Lake Shore, which, owing to the favorable closing out of the remaining $3,000,000 second mortgage bonds, and the uncovered short interest in the stock, advanced with little or no opposition from 78 to 83¾, with a subsequent reaction to 82¾, at which figure it closed on Saturday. Next in importance to Lake Shore was Western Union Telegraph, which fluctuated between 78¾ and 81½, with a large amount of transactions. Pacific Mail advanced from 50 to 51½, but fell off on Saturday to 49½. Central and Hudson was strong throughout the week, and sold at the highest price of the season, 102⅞. Northwestern Common was strong, and advanced nearly 3 per cent.

Government bonds were moderately active. An enquiry was reported for large lots, which developed a scarcity of supply. Another call was issued October 1 by the Secretary of the Treasury for $10,000,000 5-20s, upon which interest will cease January 1, 1875.

Railroad bonds have been strong and active, the principal demand being for the bonds of the older roads in good credit. New York Central and Hudson River firsts rose to 110⅜, but afterwards fell off to 110. The Lake Shore and Michigan Southern Railroad Company have succeeded in placing the unsold balance of their second mortgage bonds—$3,000,000—at a price which nets the Company about $2,700,000, an amount sufficient to pay off the existing floating debt of about $1,300,000, and leave $1,400,000 in the treasury.

The sale of $2,384,000 New York City stock was a prominent feature of the week. Bids were invited for the whole or any part of the above amount—the stock to be either 6 per cent. gold or 7 per cent. currency. The entire amount was taken by one firm, in 6 per cent. gold stock, at 104.27½.

The gold market has shown considerable strength for the first time in several weeks, the price advancing to 110⅜ from 109½, the lowest quotation of the week. The rise in gold is due to the increased firmness in foreign exchange and the prospect of gold shipments to meet the European balance against us. The rise was further encouraged by the short interest, which was considerable, as indicated by the small premium which was paid at times for the use of cash gold. The specie shipments for the week were unimportant in amount—$220,459, chiefly in silver bars.

NOTICE TO THE HOLDERS OF THE

FIRST-MORTGAGE BONDS OF THE OREGON AND CALIFORNIA RAILROAD.

The undersigned Trustees are prepared to purchase, for the Sinking Fund, a certain amount of the First Mortgage Bonds of the Oregon and California Railroad Company, and hereby invite offers of such bonds from holders.

The lowest offers will be accepted up to the amount of the available means which are derived from the sale of the Company's lands; but no proposals above par and accrued interest in gold will be considered.

Communications stating amount and price of bonds, and marked "Offer of Oregon and California Railroad Bonds," may be addressed to the undersigned, care of the London and San Francisco Bank, San Francisco, California.

NOW READY.

The Daily Service.

A Book of Offices for Daily Use through all the Seasons of the Christian Year.

1 vol. 16mo, pp. 536, cloth, $2 50.

This work, the result of a long and careful study by several clergymen, is intended not as a substitute for the Prayer-Book, but as a supplement to it. It meets the want, often expressed, for a more varied service at special seasons, and is drawn from Scripture and the Ancient Liturgies. It contains

Seven Daily Offices for Public Worship.

A Morning and Evening Service for each Season.

Special Services for Christmas-Eve, Passiontide, and Easter-Morn.

The Psalms arranged under Seventy-nine Selections.

Fifty Canticles from the Scriptures.

Seven Litanies and Five Hundred Prayers.

Especially adapted to family use and use in schools, colleges, seminaries, and Sunday-schools.

HISTORY AND BIOGRAPHY.

MESSRS. LITTLE, BROWN & CO.

Call attention to the following important contributions to American History and Biography, published and in preparation:

A HISTORY OF THE UNITED States from the Discovery of the American Continent. By George Bancroft. Vol. X., completing the work. 8vo, cloth, $2 50.

The completion of this enterprise, which in its earliest stages took rank among the grandest and most successful historical works of all time, is a notable event in American literary annals. This history presents the first adequate record and analysis of events, political and military, that have occurred in North America from its discovery down to the close of the Revolutionary War.

Price of the work complete in 10 vols., cloth, $25; sheep, $35; half calf, $45; calf, $55.

THE OLD REGIME IN CANADA. By Francis Parkman. Small 8vo, cloth, $2 50.

This volume constitutes the fourth in the author's admirable series of 'France and England in North America,' the other volumes of which are 'Pioneers of France,' 'The Jesuits in North America,' and 'The Discovery of the Great West.' It gives a view of Canada in the century bounded by 1653-1753, including its religious, political, social, and industrial conditions. The author has drawn largely on manuscripts from the royal archives, never before used by an historian, and has wrought his materials into a fabric of substantial historical value and romantic interest.

PARKMAN'S WORKS, Complete, 7 Vols., Cloth, $17 50.

THE RISE OF THE REPUBLIC OF the United States. By Richard Frothingham. Third Edition. 8vo, cloth, $3 50.

"A glorious work, building for the author an undying reputation."—*George Bancroft.*

THE LIFE OF TIMOTHY PICKER- ing. The First Volume by his son, Octavius Pickering, and completed by Charles W. Upham. With Portrait. 4 vols., 8vo, cloth, $15.

"Few of the public men of America have had so long a public life as Col. Pickering, and there are few lives better worth the telling."—*The Independent.*

LIFE AND TIMES OF JOSEPH Warren. By Richard Frothingham. 8vo, cloth, $3 50.

"The volume is in all respects an addition and an ornament to American History."—*Philadelphia North American.*

Nearly Ready.

MEMOIR OF THE LIFE OF JOSIAH Quincy, Jr., of Massachusetts, 1744-1775. By his Son, Josiah Quincy. Second Edition, with additions. Edited by Eliza Susan Quincy.

The Nation.

NEW YORK, THURSDAY, OCTOBER 15, 1874.

The Week.

SOME short time since, Mr. Charles Hays, an Alabama Congressman, wrote a terrible letter to General Hawley, in which he gave, with great circumstantiality and minuteness, a list of the outrages perpetrated by the Democrats in that State. In this letter he undertook to give only "well-authenticated facts," among which were that a hotel-keeper named Allen, having asserted that one Billings had been murdered "on account of his politics," was set upon by a gang of ruffians, who "beat him unmercifully with their pistols," and threatened to kill him "if he didn't keep his mouth shut about that d—d Yankee, Billings"; another was that, on or about August 24, five negroes were shot for no known cause in North Sumter, and Mr. Hays quoted a correspondent of the Meridian *Mercury* as his authority; another was that in Pickens County such terror existed that "no white man ever cast a Republican vote and lived through the year"; that in Hale County "a negro benevolent society was ordered by white men, on the night of August 26, to hold no more meetings; that masked men, on the same night, visited the house of a negro, James Bliss, who, seeing them, had left, and that he has fled the country; and that Major James G. Stokes, who made a Republican speech in Greensboro, 'was warned (after his room in the hotel had been entered at one o'clock at night) by a band of pistolled and armed ruffians that he must not visit the county again or make Radical speeches'"; that in Choctaw County ten negroes had been killed and thirteen wounded, about August 1, by a party of whites; and finally, that Mr. W. A. Lipscomb, an "earnest Republican," was "found dead on the public road in Marengo County," shot to death. These statements of Mr. Hays were quoted in every direction, and, no doubt, did more to persuade people that the "war of races" was going on actively in the South than any other evidence adduced.

The *Tribune* has very judiciously had this matter investigated on the spot by a correspondent, with this result: first, Allen says that he was assaulted by a solitary gentleman, apparently armed only with the weapons of nature, who scratched his face; the letter in the Meridian *Mercury*, instead of saying that the five negroes were killed without any known reason, shows that three of them were killed by negroes, one in a fracas, and one by accident, while one case was a wife-murder; the other two were shot by parties unknown while stealing corn; as to Pickens County, it seems that there are not only Republican voters, but Republican office-holders there, while in Hale County the correspondent saw the affidavits of the officers of both the negro benevolent societies in Greensboro denying that they had ever been disturbed in their meetings, or warned to discontinue them; the affidavit of Dr. T. R. Ward, of Hale County, in whose employ the negro Bliss formerly was, embracing a statement by Bliss himself, denying that he had been run out of the county, and explaining that he did not return for want of money, and had therefore gone to work to obtain it; also the affidavits of the hotel-keeper at Greensboro, and of the Judge of Probate, the Mayor, the Postmaster, the United States Commissioner, and others, both Republicans and Democrats, denying the truth of the whole story about the warning of Major Stokes. The Choctaw massacre is denied by the massacred negroes, the leader of whom swears that he assured Hays himself that no one had been injured. Finally, Mr. Lipscomb has written a letter saying that he is alive and well, and, far from being murdered, has never been even assaulted, or had an unkind word spoken to him. In fact, Hays's story turns out to be a complete tissue of lies from beginning to end. It will be worth while, by the way, for such Republicans as believe in the existence of the "war of races" to observe what becomes of the Republican party in Alabama in the coming elections, and how much it is helped by Hays's stories. The State is now in the hands of the Republicans, but it is pretty evenly divided between whites and blacks, and, owing to the agitation about the Civil-Rights Bill, is very likely to go Democratic at the next election. The Republicans are even now, at the very time they are busy inventing Ku-klux, forced to go about denouncing the attempt to "enforce social equality" for the sake of catching white votes.

The leading colored men of New Orleans issued an address on the 8th inst., signed by a committee of fifteen, among whom are Pinchback, the late Lieutenant-Governor, Brown, the Superintendent of Education, and Deslonde, the Secretary of State, which is in many ways very remarkable and hopeful. They declare that the Republican party in the State has been managed and controlled since the reconstruction by men in all respects as bad as "the most rampant White-Leaguer"; that they have so used their patronage as to shut out the colored wealth and intelligence from prominence, and to put in office "illiterate and unworthy colored men"; that the representative men of the colored population are totally ignored by the Republican party; for which they especially denounce Kellogg, of whose election, however, they entertain no doubt, and they thank the Administration for supporting him. They say that while any overtures for peace and conciliation on their part between the two races might have been heretofore taken as a sign of fear, the present state of affairs removes all difficulty on that score, and that "they are depressed and sickened" by the prevailing disorder, and "are ready to adopt any honorable adjustment tending to harmonize the races, and they authorize an executive committee to confer with any body of citizens in furtherance of united action for law and order and a higher standard of administration of public offices." It is singular, but true, that the documents issuing from both parties in New Orleans during the present troubles—this one included—are markedly superior in both tone and expression, and especially in expression, to the platforms and addresses got up by political bodies at the North. The increasing turgidity and vapidness of the latter is one of the bad signs of the times. An average Northern platform now reads for all the world like an old patched-up Papal Encyclical badly translated. The only improvement we have of late noticed in it is the omission of that comic demand for the prompt payment of the pensions of the soldiers and sailors; but we must except from this criticism the last Republican platform in Connecticut and the last Democratic one in this State.

The debt of the State of Virginia was contracted for internal improvements, the chief among them being the James River and Kanawha Canals. Interest on it was paid down to the end of the Rebellion, but it cannot any longer be raised. The default is set down to these causes: First, the destruction of a large part of the State's basis of credit by emancipation and the war. Second, the division of the State and the creation of West Virginia out of one-third of the territory of Virginia, and the inability of the two States to agree upon the proportion of the debt each should assume. Third, mismanagement of the State's assets, which, if properly used, might have been made to reduce the principal so as to have rendered it practicable to pay the interest. Fourth, the passing of the "Funding Bill," the compounding of long overdue interest, and the issuing of bonds having self-collectable coupons attached. Fifth, the depreciation of the value of lands, by a succession of bad crops, and the absence of buyers, while thousands of acres were being forced into the market by judgments of the courts on private indebtedness contracted anterior to secession. Sixth, the reduction of the State assessments, in part consequent upon the decrease of the value of lands, and in part consequent upon every county desiring to bear as little as possible of the public burden. According to the Balti-

more *American*, the first of these is undoubtedly the principal difficulty, and it applies, of course, to most other Southern States as well. The annual deficit is about $650,000, and the State now proposes to declare itself insolvent, and to try to make some arrangement with its creditors. This seems the only thing that is practicable under the circumstances, and with the settled government the State now enjoys, and her vast resources, there can be little doubt that the creditors in the end will not lose anything.

The *Tribune* is working away very hard, and we dare say usefully, in keeping the public mind alive to the possible dangers of a third term. We are quite certain that no harm can be done by this as long as it is mere speculation. One of its correspondents, signing himself "Jefferson," declares that "every Republican outside of politics denounces the idea, while the office-holders are dumb as statues," and he predicts that unless we all now act in the belief that the managers will put Grant in for a third term in spite of the clever incapables, like himself, his brothers, and the editor of the *Nation*, who do not go to ward meetings, a third term there will surely be; and he relates his own experience at the Philadelphia Convention in 1872, where, though the best portion of the body did not want Grant, the sly chiefs renominated him by acclamation. His conclusion is, therefore, that if we vote for Dix on the Utica platform, we shall prepare the way inevitably for four years more of Grant. We feel sure that we saw this gentleman and his "brothers" at the Cincinnati Convention, and nothing then could exceed his delight over the way the practical, knowing men had "euchred" the poor visionaries, who evolved politics in their libraries instead of going to caucuses, by nominating Horace Greeley and coalescing with the Democrats. The thing was sure to be a success, because Greeley was to draw off half the Republicans, and then the whole of the Democrats were to come over to him; and what was then to become of poor Grant and his office-holders at Philadelphia? We need not recount what followed. We now wish to warn the practical "workers" who are trying to make the "third term" bogey a reason for voting the Democratic ticket, that if they are in any degree successful they will bring about exactly the same result they brought about in 1872—that is, they will flop into a wet ditch of their own digging. If they set the Democratic beggar on horseback, he will surely, as before, ride to the devil. That is, the chiefs will cut such capers and excite such hopes among the malcontents at the South, that by the time the Republican Convention meets in 1876 we shall have the whole North in a state of wild alarm, and all thought of calm, rational reform, of which we now see signs, will have been thrown aside, and there will be once more an outcry for "a soldier in the White House," to save the Union with cavalry, infantry, and artillery, instead of a statesman to save it by conciliation, moderation, purity, and respect for law.

General Butler has secured his renomination to Congress without much difficulty. We should be inclined to hope that there might be a bolt, but any anti-Butler campaign is so sure to be thoroughly mismanaged, that it seems perhaps hardly worth while. There never has been a time since the end of the war when there was a better chance of defeating General Butler in his own district than during this autumn. The General's shocking exposure of himself last winter at Washington, his advocacy of inflation, and the revelations of his scandalous connection with Jayne and Sanborn, really made him for the time being unpopular, even in Massachusetts, and the Simmons affair did not tend to strengthen him with the general public. Under these circumstances, if his opponents had made use of their opportunities, they might easily have prevented his going back to Congress. But instead of doing so, they gave a sigh of relief that the winter's work was over, and solemnly assured one another that Butler was annihilated. The next thing that took place was the circulation of stories that Butler was disgusted with politics; that he thought of going abroad; that he was worried and tired with what in Brooklyn they call "strife." The anti-Butlerites took this as renewed proof that the General's fortunes were on the wane; and to convince the public of their confidence in the strength of their own position, they managed to secure two candidates to run against him, one of whom apparently believed that the other was a Butler man in disguise. The result is that Butler is triumphantly vindicated. The difference between Butler and his opponents seems to be—looking at the matter from a purely practical point of view—that he works with money, friends, and the party machine; his opponents expected to beat him by means of gusts of popular indignation.

The Hon. John McKeon's exposure of Mr. Tilden shows that the Democratic candidate for governor is engaged in conspiracies against the liberties of the people which are worse even than the third-term plot. The fact that small railroads are frequently swallowed up by big ones has been long known, and the voracity of the larger corporations has been frequently protested against without much effect. As a general thing, however, the vices of railroad consolidation have been supposed to come from the greedy disposition of Tom Scott or Commodore Vanderbilt. It seems, however, that Tilden has really been at the bottom of the whole thing; that he has now for years made it his business "to investigate and make a proper diagnosis of moribund roads, to ascertain their condition, and particularly the number and value of the mortgages, to learn the rights of the stockholders, bondholders, and all parties interested in insolvent and struggling corporations"—not, however, for the purpose of aiding these stock and bond holders, or of assisting these insolvent and struggling corporations to extricate themselves from their embarrassments, as a Christian would have done, but "to foreclose the bonds, and generally to conclude by a scheme of consolidation of several small roads into one grand colossal line." Over the once flourishing States of New York, Pennsylvania, Ohio, Indiana, Illinois, and Michigan, Mr. Tilden has reached forth his arm; poor Scott and Vanderbilt are only his tools. And this is the man, Mr. McKeon says, who is nominated on an anti-monopoly platform. It is strange, indeed; and the only way that we can explain it is that the people are tired of bombshells, and don't read them. The "campaign of principle" which we were promised this year has consisted mainly of charges of fraud and lying brought against Dix, counterbalanced by these charges of corruption against Tilden; and of charges of fraud against Kelly (who is not a candidate for any office), counterbalanced by pretty conclusive proof that the mayor (for whom neither party is responsible) is a foolish old man.

The last Legislature of this State passed an act at the instance of the Chamber of Commerce of this city, providing for an experiment of a novel and interesting kind, by creating a court of arbitration for the use of members of the Chamber, and all other inhabitants of the city who may wish to resort to it. The court consists of a judge, who is a lawyer, appointed by the Governor, and such assessors as the parties in each case may choose. Any member may cite another before it by summons, and, if the defendant does not file an objection to the jurisdiction, the trial goes on, and the judgment has all the force of that of a full court of law. Parties other than members of the Chamber may obtain decisions by joint submission. The Governor has appointed a highly qualified lawyer, Judge Fancher, to the judgeship, and the sittings of the court have begun. The gain to merchants of having mercantile disputes settled by an immediate hearing before experts will undoubtedly be very great, and the possibility is that the calendar of this court, like that of the courts of law, will before long be overloaded with cases. The experiment is in fact an attempt to escape, not only from the ordinary delays of the law, but from the ignorance and stupidity of the average jury—the employment of which in complicated civil cases is simply a piece of barbarism.

The *Law Review* for October contains an article on the Wisconsin railroad legislation, which points out that the Potter law, intended to prevent unjust discrimination, is in reality a discriminating measure of the most monstrous kind. It not only fixes absolute

rates, but it classifies all the Wisconsin roads into three classes, and then "requires that Class A should do for three cents exactly the same work for which it permits Class B to charge three and one-half cents, and Class C to charge four cents. It also imposes thereby unequal burdens upon all travellers, and severely discriminates against all residents on the lines of Classes B and C. The owner of a farm on any railroad in Class C is thus forced to pay one-third more for moving his wheat to Milwaukee than the farmers on Class A, and, in undertaking to prevent the railroads from regulating their own charges, the legislature itself has adopted a system which, if persisted in, would render it impossible for towns and farms on Class B, and still more on Class C, to compete with those on Class A; and would inevitably result in the depreciation of homesteads and farms, and gradual diminution of business, on Classes B and C; while it would prevent new settlements on those lines, and stimulate them on the lines of the favored Class A." "Manifestly, the legislature has in reality instituted, on a larger scale than any railroad could possibly do, the very system of discriminating rates it undertook to destroy."

A "Workman's League" has been founded at Geneva by seceders from the International, who declare with much show of reason that the International made a mistake when it undertook to "overthrow modern society" and substitute for it a new political and economical organization. They also denounce it for introducing into a cosmopolitan society the political troubles of particular countries; of putting at the head of it political philosophers and revolutionists who were not workingmen, and could not fully understand or sympathize with them. The aim of the new society is simply the gradual emancipation of the working-classes from dependence on their employers under the régime of wages, and to affect this they propose to agitate for universal suffrage in those countries in which it does not exist, and use it to promote legislation in favor of "liberty and equality" and the general welfare, and to form unions of the various bodies, headed by a federal body, so as to enable workmen to negotiate on equal terms with their employers. All this would be very sensible and practical if "liberty and equality" were not such vague terms. "Fraternity" seems to be dropping out of the radical programme on the continent of Europe, and, considering the part that a tremendous war against the "privileged classes" has always played in it, it is wonderful that the pretence of brotherly feeling was kept up so long. "Be my brother, or I'll kill you," is a bit of satire which it called forth a generation ago.

Bismarck has been giving a fresh illustration of that quality of his which his enemies call cynical contempt for justice and right, and his friends call practical force and sagacity, by his treatment of the complaints of the Danes of Northern Schleswig. When Prussia and Austria seized the Duchies of Schleswig-Holstein in 1864, they half acknowledged in the London Conference which that affair called forth that in taking Northern Schleswig, which contains a population of 200,000 Danes, they took more than fairly belonged to Germany; but no advantage was taken of this admission, and the district remained under their joint occupation until the war broke out in 1866, the Danish Schleswigers all the time protesting and petitioning and maintaining that the argument of tongue and race, which justified Prussia in seizing the rest of Schleswig, entitled them to reannexation to Denmark. After the war of 1866, Austria, in surrendering all her rights in Germany, being apparently ashamed of her share in the Schleswig-Holstein transaction, stipulated in the Treaty of Prague that "the people of the Northern District of Schleswig, if by free vote they express a wish to be united to Denmark, shall be ceded to Denmark accordingly." No attempt has, however, been made to carry out this article. Germany retains the Northern District as well as the others, and when the inhabitants murmur and Denmark remonstrates, Bismarck replies that as to the Treaty of Prague, as they were not parties to it, they have no right to claim the execution of it; that for plébiscites, as a French device, he has a thorough contempt, and thinks conquest a good enough foundation for authority; and that if the Schleswig Danes do not like German rule, their children will; and he is said to have informed Denmark that the best thing for her to do was to join the German Confederation. The communication of this suggestion by the Danish Government to the Czar is said to have led the latter to write his sympathetic letter to Don Carlos.

The recent journey of the Emperor of Austria to Bohemia has once more brought into relief the contending aspirations of the German or constitutional and Czech or national parties. Unlike the reception which the Emperor met with in 1868, when in the rigid abstinence of the Czechs from all festivities a national demonstration was intended, the greeting extended to Francis Joseph on his recent tour was apparently a most cordial one. In view of the decided discountenance hitherto given by the present ministry to the pretensions of the Czechs, their loyal fervor on the occasion of the Emperor's journey was rather surprising, and the suspicions of the constitutional party as to the sincerity of these ovations were not unnatural. And it is a striking illustration of the pessimism still prevailing in Austria, that a short delay in the departure of Prince Auersperg, the President of the Ministry, for the Bohemian capital, and the failure of Count Andrássy to visit it at all, sufficed to excite uneasiness in the ranks of the Liberals, and even to give currency to a rumor that important concessions to the Czechs were to be the result of the Emperor's journey. Thus far, however, the hopes of the Czechs, as well as the apprehensions of the Liberals, seem to have been alike unfounded. While the Emperor's answer to an address by Cardinal Schwarzenberg, in which the former, as the faithful son of the Holy Church, pledged himself to its protection, "as far as circumstances would permit," is being construed in the interest of the clergy, the constitutional party may claim a more substantial advantage recently gained by it. The opening of the Bohemian Diet on the 15th of September witnessed the re-entrance of seven representatives of the moderate or *Jungczechisch* faction of the Czechs, who for a number of years had practised the "policy of abstinence," and left the Bohemian Diet as well as the Reichsrath virtually without a representative of their nationality. These deputies justify their action in a manifesto, in which, while upholding the states-right doctrine, they profess their conviction that a harmonious co-operation of all liberals, irrespective of nationality, is essential to the true welfare of the monarchy. The stand taken by the *Jungczechen* causes great consternation among the *Altczechen*, headed by Rieger, but is hailed with evident satisfaction by the constitutional party, which considers this split in the camp of the Czechs a heavy if not fatal blow to the pretensions of the ultras.

The recent attempts of Turkey to bring something like order into her financial chaos, which led to Sadyk Pacha's well-known mission to the money-markets of Europe, have finally resulted in the negotiation of a new loan of $200,000,000 and the establishment of an Ottoman National Bank. The loan met with considerable outward success, the applications, according to the *Economist*, exceeding the amount at present allotted ($79,500,000). But it may be doubted whether this loan, or indeed any financial measure, will materially improve the desperate condition of the Turkish finances. Her national debt amounts to more than $700,000,000, the interest on which is $50,000,000, or more than half of her last year's revenue. Although the budget for the current year shows a deficit of $1,460,000 only, the actual sum will doubtless be largely in excess of this estimate, as in the budget the expenses were arbitrarily reduced from the figures of the previous year by nearly five millions, while the revenue was in like manner increased by nearly seventeen millions. In view of the famine in Asia Minor and other districts, the really collectable taxes will hardly be increased by one-fourth the amount anticipated. The new national bank will be pretty sure to yield a handsome profit to its founders; but its usefulness in any other sphere may be questioned.

THE BULLS AND BEARS.

THERE is always, in every time of public trial, calamity, or distress, a division of the community into two classes—the hopeful and despondent. During the late war, for instance, the line between them was very marked, and, indeed, they may be said to have formed two opposing political parties. Everybody at the North wished the Union to be preserved, but the Despondent (the Democrats) said that the thing could not be done, and that there was no use in trying; while the Hopeful (the Republicans) maintained that all was sure to come out right in the end, and that our reverses were mere flea-bites. The distinction between them seems on the surface to have had only theoretical importance; but it had in reality great practical importance. The value of a man's contribution in aid of the conduct of the war depended very greatly on the nature of his opinion as to its probable result. Those who doubted its success not only hung back themselves but discouraged those around them, and diffused languor through the whole sphere of their influence, when what was most necessary to victory was ardent and confident exertion. And this is true not only of war but of all other forms of concerted social activity. In every work in which men engage together, whether a battle, a Polar expedition, a march over the Plains, or a great commercial venture, the state of their spirits is of the utmost importance, because hopefulness is in reality a source of power, and despondency of weakness. This state, which is now commonly called "morale," receives more attention in the army than elsewhere, because the demands of military life on the nerves are more severe than those of civil life, but it deserves serious attention in both. What the prevalence of hopefulness among classes and conditions of men in the United States has done for the country, both politically and materially, is simply incalculable. In fact, it is not rash to say that it has prevented, and still prevents, and will doubtless continue to prevent, certain vices of legislation and administration from being fatal. A community endowed with less confidence in the future could not bear up under the burdens which are imposed on the country through some of the working of our political machinery. Indeed, so exuberant is this quality that it forms one great difficulty in the way of political reform, for men are so full of political exhilaration that they cannot be got to attach the necessary gravity to political abuses.

The condition of things since the late panic, as after every panic, gives these considerations more than usual weight. After every monetary convulsion there occurs the usual division between the cheerful and the gloomy. There is the class which thinks the state of affairs very terrible, and the depression sure to last a long time; and there is the other class, which thinks that it is not at all so bad as it seems and sure to pass over quickly. Now, if a financial crisis consisted simply and solely in the regret caused by the loss or destruction of a certain amount of property, it would make comparatively little difference how long this regret lasted. If robbed of his fortune, one may feel very disconsolate over it, but if he is still young and vigorous he knows well that the only thing to be done is to go to work and try and make another, and in the meantime to live frugally. The fact that it was a large fortune, or that he greatly enjoyed it, or that he was swindled out of it, would in no way blind him as to the course he ought to pursue, and would in no way diminish his energy or activity. But a financial or commercial crisis is not merely a physical phenomenon. It does not consist merely in the loss of so much capital. It is in large part a moral phenomenon, or, in other words, is, as the name "panic" indicates, a complex state of mind, composed in a small degree of regret, but in the larger degree of distrust. That is, it not only makes people sorry, but despondent. They not only mourn over their losses, but for a good while they doubt whether they can ever make them up. In fact, it may be illustrated by comparing it to the mental condition into which a man travelling with a party over the Plains would be thrown by losing his watch at night, and at the same time finding reason to believe that his companions were all robbers. Under these circumstances, the loss of the watch would seem a trifling matter, while his doubts about the character of his fellows would fill his life with terrible anxiety. Something of this sort happens in every panic. A number of people suddenly discover that they are much poorer than they supposed, that a great deal of capital of which they thought themselves possessed has been buried in unproductive enterprises, and that they cannot pay their debts. Now, this is an unpleasant and may be a very dangerous state of things, but it is only a very small portion of a panic; the rest of it is made up of widely diffused doubt whether *anybody* can pay his debts or is to be trusted, and whether *any* investment of capital is safe. The sorrow and anxiety caused by the discovery of the loss produce the wild excitement and confusion of the first week or two; but this soon passes away. An active community is not prostrated by the mere loss of a certain amount of money. The war hopelessly destroyed a far larger amount of property than has been unprofitably sunk in Western railroads, and the Chicago and Boston fires fully as much, and yet none of these events produced a panic. It is the doubt and misgiving about one's neighbors which follow this first excitement, which constitute the grave stage of the malady, and this lasts for an indefinite period; and it is only when this has been checked that recovery begins.

About the proper mode of checking it there can hardly be two opinions. For moral diseases there must be moral remedies. When an army is defeated and running away in mad confusion, probably not one man in a thousand has been hurt, or even exposed to fire at all. His imagination has been simply overpowered by seeing other men killed or wounded or running; so he runs, too, and the sound of even distant guns makes him tremble and run all the harder. Now, the way to stop him, as all good officers know, is to appeal to his understanding and pride, to impede his flight, point out the folly and disgrace of his fear, to show him that his comrades are halting and going to make a stand, that the defeat is not so bad as it seems, and that success is still possible, and to make it clear that you yourself are not afraid or discouraged. On the other hand, no reprobation would be considered too severe for an officer who should, wherever he saw a flying mass, ride up to it and inform the men that they could not run too fast or too far, that the defeat was horrible, and that those who were asking them to stand fast were hypocrites and deceivers, and that the only chance of safety lay in a good pair of legs and good wind.

The condition of the commercial public after a panic is not unlike that of an army which has been routed, and the process of rallying it has to be somewhat similar. The reason why business does not revive is not that people have lost a good deal of money—that by itself is a reason why it should revive promptly; but that each person doubts everybody else's solvency or capacity, and refuses to engage in any enterprise needing other people's co-operation. Now this is a distinctly hypochondriacal condition; and the fault to be found with "bears" or "croakers" at such times as these is that they help to protract it by maintaining that it is a healthy condition, which it is safe to cultivate. At this moment there are loud praises of the economies people are practising, and there is no doubt that after a panic economy is eminently wise; but it is folly to suppose or preach that economy alone will set the commercial world on its feet. What people are saving in food or clothing or luxuries, would at the end of the year be a trifling portion of the amount of our losses, and would not in years make them up, and it must be remembered, too, that economy on a great scale aggravates a crisis by paralyzing numerous branches of industry. What is needed to cure a panic is the combination of economy and industry—in other words, to fill our empty purses and pay our debts we must go to work again and begin to produce. A state of things in which nobody is buying anything he can avoid, and men are letting their money lie at two per cent. per annum in United States bonds sooner than engage in any productive industry, is essentially sickly, and can bring neither man nor nation out of a financial slough. What we need now is to have people begin to

buy as usual, and sell as usual, and make as usual, and trust each other as usual. Of course, the delicate machinery of credit once deranged cannot be readjusted in a day, but the process of readjustment can be greatly hastened by getting people to understand that, as usual after panics, they are more frightened than hurt; and the way to do this is not to look about every day for fresh omens and predict fresh disasters, but to present the good side of the situation as far as truth will allow.

SOME CONSIDERATIONS FOR BOTH NORTH AND SOUTH.

WE hope the white people of the South are paying attention to the use which the Republican politicians are making of "outrages" in the present canvass. If they will look at the proceedings of the New York State Republican Convention, which were managed by Mr. Conkling, now the most influential man of the party, they will see that "outrages" at the South formed the principal topic both of the speeches and the platform. They will see that both of them evaded nearly all the other important topics of the day. They will see that there is not a single other question of prominence on which the party is agreed. It is divided on the currency question, has no policy at all on the transportation question, nor on the tariff question, nor on the civil-service question, nor on the third-term question; and with regard to everything except the necessity for coercive measures towards the South, and for its own retention of power for the purpose of carrying them out, its utterances are vague, uncertain, and declamatory. They will see, too, that it has not in its last ten years of rule brought forward a single statesman in the higher sense of the term; that not one of its chiefs is associated in the public mind with any principle or policy of the smallest practical importance, or has any weight or authority on any subject of public interest. There is not amongst them a great lawyer, a great economist, a great financier, a great moralist, or a man great in any of the higher matters of human concern. The financier whom it put up at the close of the war has taken refuge in the Senate from the obloquy excited by the mischief worked by his schemes, and his successor was driven out of office by positive public indignation over his incompetency, if not worse. The one department in which it has achieved some success since the peace, that of State, is presided over by a gentleman who has but little, if any, influence in the party councils. So that if one asked any of the managers to-day why he and his followers ought to be kept in power, he would reply promptly: In order that the army and navy might be used effectively in repressing "outrages." Southern men will do well, too, to look at this circular sent by the Indiana Republican Committee to the Republican editors of that State:

"ROOMS OF THE REPUBLICAN STATE CENTRAL COMMITTEE, INDIANAPOLIS, Sept. 3, 1874.

"EDITOR OF UNION, RENSSELAER, IND.:

"DEAR SIR: I desire to call your attention to the horrible scenes of violence and bloodshed transpiring throughout the South, and suggest that you give them as great prominence as possible in your paper from this time until after the election.

"THOMAS J. BRADY, *Chairman.*"

They will thus see how large a part "the horrible scenes of violence and blood" are now playing in Northern politics, and they will have no difficulty in concluding that, when the party editors are thus stimulated to parade them, there will be no lack of slaughter for the next two months.

The moral of all this is plain enough. If the Southern whites do not wish to supply ammunition to their worst enemies, and to make the reign of their oppressors perpetual, and to paralyze the exertions of all those at the North who are trying to establish a better régime, they will do what they can to discountenance and prevent all attempts to procure redress or revenge by force. That armed assaults on political enemies are barbarous we do not need to point out. What we wish to impress on the Southern mind is that they are senseless, because fruitless. Killing people, or maiming or threatening people, for the mere purpose of gratifying one's hate, is worthy only of savages, and this is the only purpose that Southern tumults can now serve. Behind the negro, the carpet-bagger, and the scalawag there stands the United States Government, with which it is hopeless to contend, and behind the United States Government there stands the Northern people, ready to listen and ready to see that right is done, if it gets full time for consideration and information, but sure to become hard-hearted and deaf before anything which looks like armed resistance to the results of the war. We say this, though we have no doubt whatever that half the stories of "outrages" are pure fiction, the poetry of the canvass, and the other half exaggerations. In a sparsely peopled region, in which habits of lawlessness and violence have always been prevalent, and in which two different races now stand face to face with a hundred reasons for mutual distrust and dislike, there are sure to be many chance quarrels and frays, which in ordinary times would be attributed to a low stage of civilization, but which, now that the party in power has become dependent on them for existence, are sure to be worked up by a thousand pens and tongues and pencils into "new rebellions," "great outbreaks of rebel hate," and so on, and cause a thousand oaths to be taken by weeping politicians to stand by "the wards of the nation" and "make United States citizenship respected everywhere." Of course they would only hold this prominence, as the Indiana circular says, "until after the election," but we would warn Southerners, that however transparent the humbug of the matter may be, they are wretchedly mistaken if they suppose there is the least prospect that any Republican mistakes or frauds will bring about the accession of the Democrats. If this expectation prevails at the South, it is a mischievous delusion. No class of Republicans, however discontented, turns to the Democrats, for several reasons, of which the principal are that the Democrats are no more agreed on the great questions of the day than the Republicans; that they have a strong leaning towards some form of repudiation of the public debt; and that any attempts they might make towards the redressal of Southern grievances would probably result in a nullification of the Constitutional Amendments, and in complete impunity for attempts to overthrow the existing order of things at the South by violence. There is also a deep-seated feeling at the North, that however respectable the man might be whom the Democrats would put in the Presidential chair, his followers and surroundings would be such as to threaten the country with worse evils in the shape of corruption and maladministration than anything which has been witnessed under General Grant.

There is, therefore, no hope for the South in this direction. Its only chance of deliverance lies in persuading the best men of the Republican as well as of the Democratic party of the sincerity of its desire for peaceful reform, and of its resignation to the legislative results of the war. This can only be done by the patient use of the political machinery now at its disposal, no matter how certain defeat at the polls may be, and by temperate appeals to Northern opinion, such as the New Orleans Committee have been making. These tell, and they will tell more and more as time goes on. The conscience of the North is sure to be offended by the condition of the Southern States as long as its passions are not roused. Moreover, its people are not so blind as to allow the use the Attorney-General is now making of the Force Bill, to assume the whole police duty of the State governments, to be made a permanent practice of the Administration. The dangers of this become obvious the minute people have no "midnight murders" to discuss. Is it possible that sensible Southerners cannot see this? Is it possible that men, proud of their superiority in civilization, do not perceive that casual "risings" and sporadic assassinations are resorts only worthy of African or South American politics?

There is one thing, however, in which the treatment of the Southern problem by a large proportion of the Republican press is without excuse, and that is the amount of attention they bestow on the consideration of "what might have been" at the South at the close of the war. Whenever you call the attention of a large class of writers to the evils of negro rule, they tell you that it is the fault of the white men, who ought at the close of the war to have taken the negroes at once into their confidence and have bestowed equal rights on them, instead of passing black codes. There is no doubt they

ought; but if they had, it would have been an act of almost superhuman wisdom. To expect anything of the kind from a society like that of the Southern whites at the close of the war, with their training, habits, education, experience, and mental and moral condition, was ridiculous; and it was doubly ridiculous on the part of those who had been most active in depicting the evil influences of slavery. What the Southern whites tried to do with the emancipated blacks, was the logical and natural result of their situation, character, and antecedents. They acted as slaveholders beaten in battle ought to act. We got angry with them because they did not act as the members of the Anti-Slavery Societies would have acted, and we have treated them ever since as we might treat Wendell Phillips if we had caught him trading in negroes. In other words, we are furious with the South because the obvious and inevitable facts of the situation are not such as we should have liked. It is, however, with the real South—the South as slavery and the war left it—that we have to deal, and not with the South as philanthropic imaginations at the North dream of it.

Nor have the Southern whites received justice at our hands in the matter of working with negroes in politics. We talk as if all that they had to do to get the blacks to join them against the carpet-baggers was to shake hands with them and ask them for their votes. But the evidence is overwhelming that, however friendly the negroes may be with their old masters in all social relations, they profoundly distrust them politically. They will do anything for them but vote their ticket. This, too, is natural and logical, and was to have been expected. The negro would have been more than human if he had acted otherwise. We, however, have inveighed against the white man as if the negro fear of him was the result of a little misunderstanding which a few words could remove. In fact, we have made no allowance for the influence of slavery and the war on the blacks any more than on the whites, and are altogether angry that the problems given us to solve are not made up by Providence as we should like them.

There would be much to say, if we had space left us to-day, on the inherent difficulty of making up a working majority in a free State, composed of two races, in which the more gifted and highly-trained is inferior in numbers. It is a difficulty which has not as yet been overcome. We have absorbed negro minorities in our political organizations at the North, and States in which the whites are in a large majority are now successfully administered at the South; but the successful absorption of a white minority by a political organization mainly negro, will be something unprecedented. Those whites here who call for it so glibly, and look for it so confidently, would do well to consider the relations of the Irish Catholics at the North to the Republican party, from the bulk of whose members they are separated by a much fainter line of race, opinion, and traditions than that which at the South divides white and black. Thousands of Republican orators and writers have labored with them for twenty years, and have used every influence on them that eloquence, and kindness, and flattery can supply. How many converts have they made? How many Irish vote the Republican ticket? How many New England philanthropists, who are so angry over Southern failures, have a following of devoted and grateful Irishmen whom they lead to the polls, and who come to them for light on the dark questions of the day?

GUIZOT.

PARIS, September 26, 1874.

M. GUIZOT was born in Nismes, on the 4th of October, 1787. He was the son of a Protestant lawyer; and if there is a city in the world where the religious passions, even to this day, are very ardent, it is Nismes. The Protestants, till the end of the reign of Louis XVI., had no civil rights; a hideous legislation treated them like pariahs. Guizot was still a boy when the tide of reform began to swell; the Protestants recovered their civil rights, lost at the Revocation of the Edict of Nantes. But the spirit of reform soon became the spirit of revolution. When Guizot was seven years old, his father, who, though he was a zealous Huguenot, was a royalist and a conservative, ascended the scaffold at Nismes three days after the victory of Robespierre over Danton. The whole life of the man who was to take such an important part in the affairs of his country received, so to speak, its color from these early memories. The same events which made him a man, a free man, a citizen, made him an orphan. He was born to be the representative of a constitutional monarchy, which had to find a new way between the traditions of the old régime and the necessities of a democratic time. A Protestant by birth, he could not but favor the cause of religious and civil liberty; but he had in him the proud and indomitable spirit of a Calvin, and was not disposed to abandon the guidance of human affairs to the turbulent passions of the multitude. If he had been born in England, he would easily have become the leader of the Tory party; his instincts were not illiberal, but they were eminently conservative. He seemed born for power; his noble attitude, his admirable eloquence, nervous and solid, the austerity of his life, marked him for the leadership of men.

His favorite study was history. He was educated in Geneva, under the eyes of a stern mother. How often have I admired the portrait of the poor widow, who had found an asylum in Switzerland during the close of the Revolution. This portrait was the principal ornament of M. Guizot's drawing-room; it had the place of honor; and the only pictures besides were a portrait of M. Guizot himself, by Delaroche, and a small Murillo which Queen Christine had presented to him after the Spanish marriages. She offered him a Spanish dukedom, which M. Guizot refused, and on his refusal sent him this charming little picture, representing an infant Christ. (Unhappily, at the beginning of the present year this small picture was no longer to be seen in M. Guizot's room; he was obliged to sell it at public auction; and a friend of his, Count Henri de Greffulhe, bought it for the generous price of 120,000 francs.) Madame Guizot bore a great likeness to her son, and he always confessed the great debt of gratitude which he owed to her; she formed his youthful soul, gave him grave and sedate habits, and inspired him with noble ambitions. She sent him to Paris to finish his studies. The young student was very poor, and spent most of his time in the public libraries; he entered as tutor the house of M. Stapfer, who was at the time Minister of Switzerland. In the house of M. Suard, a member of the French Academy, he made the acquaintance of Mademoiselle Pauline de Meulan, who was the editor of a literary newspaper called the *Publiciste*. Mademoiselle de Meulan fell ill, and, as she supported her family, became very uneasy, when she received an anonymous letter from a gentleman who offered to edit the paper during her illness, and gratuitously. This gentleman was M. Guizot, and Mlle. de Meulan some time afterwards became his wife.

He had left the house of M. Stapfer, and for a little while he had no other means of subsistence than his literary work. He published a 'Dictionary of Synonyms,' now well-nigh forgotten, 'Lives of the French Poets,' and various translations, among which was one of the works of Gibbon. M. de Fontanes, then grand-master of the French University, named him in 1812 professor of history at the Sorbonne. The Revolution had, so to speak, broken in two the history of France; all that belonged to the past was forgotten; the Jacobins had wiped away with a bloody sponge the work of centuries. This Revolution had not yet borne all its fruits, and the old national instincts were stifled for a while. The time had not yet come when a Tocqueville could show the secret relations of the ancient régime and of the society issued from the Revolution. M. Guizot's historical work was of a different sort; he abandoned completely the field of modern history; France was unwilling to look at herself in the glass of the eighteenth, of the seventeenth, even of the sixteenth century. M. Guizot plunged into the most distant periods; he studied an epoch in which the passions of men were completely different. The Legitimists as well as the Jacobins could take some interest in the history of the Gallo-Roman period, of the invasions of the Germans into France. This was quite a new field of research, as during the monarchical period the historians were chiefly occupied with the praise of the Capetians. The long labors of M. Guizot are concentrated in his admirable 'History of Civilization in France' and in his 'Essays on the History of France,' works equal in erudition, in exactitude, to the best books of the German school, and written with a majesty and a force which often remind the reader of Bossuet and of Montesquieu.

But a man of M. Guizot's stamp could not shut himself up completely in the past; he was not a mere book-worm. He took an interest in the present, and chose his party. He enrolled himself among the men whom Napoleon called the *idéologues*, recognized Royer-Collard for his chief, became an admirer of English institutions and of constitutional monarchy. The *idéologues*, whom Napoleon consigned to the land of dreams, became the moral leaders of the country after the fall of the Empire. They had found in Louis XVIII. a man who could play the part of a constitutional king; they were distrusted and somewhat despised by the old *émigrés*, the fathers of our modern *chevaux-légers*; but they had the knowledge, the talent, which is necessary to all parliamentary leaders. It is certainly to the

credit of Louis XVIII. that he made no objection to the appointment in 1814 of a Protestant professor of history to the under-secretaryship of the Home Office; his chief was the Abbé de Montesquieu. When Napoleon came suddenly back from the island of Elba, Guizot showed his gratitude and his political honesty in following Louis XVIII. to Ghent; with this fact he was often reproached by the orators and writers of the French Republican party. But M. Guizot was anxious to resist at Ghent the influence of the ultra-Legitimists, who tried to persuade the king that he must revoke the *Charte* and govern despotically. In the Chamber of 1815, M. Guizot enrolled himself in the ranks of the constitutional and liberal minority. He was for a little while under-secretary of Justice, but he left the cabinet at the same time as the Duc Decazes, when the murder of the Duc de Berry gave the signal for a violent reaction. During this period he published a book on 'Representative Government and the State of France,' another on 'Capital Punishment for Political Crimes,' a treatise on 'The Means of Opposition in the Actual State of France.' He never wrote newspaper articles, as all his leisure hours were spent on historical works. He edited the large 'Collection of Memoirs on the English Revolution' and his books on French history.

When Charles X. made the famous *ordonnances*, M. Guizot wrote the protest of the deputies against the violation of the *Charte*. He still hoped to avert a revolution; his address was firm and defiant. The struggle, however, ended in the streets of Paris; Charles X. lost his crown, and Louis Philippe was elected king. M. Guizot was a member of his first cabinet, but this cabinet was very short-lived, and the more advanced Liberals came to power under the administration of Laffitte. From that period the life of M. Guizot may be said to belong to history. If I have dwelt somewhat on the first and obscurer part of his career, it is because I am convinced that M. Guizot's character was really formed during that period. His was not an elastic nature; he was in 1847 what he had been at the beginning of the Restoration: a theoretical lover and admirer of the English Constitution and of monarchy; a Puritan, strongly imbued with the doctrine of the perversity of man, and little inclined to flatter the popular passions; an adversary of the Empire more than an enemy, having lived in the days of Waterloo, but having also seen the splendor of the Imperial era, and well knowing what the claims of genius and of glory are on an impulsive and imaginative people. M. Guizot almost courted unpopularity; he must have been almost happy when, amid the clamors of the men who reproached him with his journey to Ghent—at bay, as it were, before a mob of deputies in the Chamber, who threatened him on all sides—he answered them all in these haughty words: "Your insults will never reach the level of my contempt." He spoke harsh, stern truths, which were unpalatable to everybody; how much was he not reproached for these simple words: *Le travail est un frein*" (Work is a brake). He meant that labor is not only a necessity for man, but that it has a good influence in restraining his bad passions. To those who protested against the electoral census, he said that everybody was free to become an elector: "*Enrichissez-vous*" (Get richer), and this truism was denounced as the coarse expression of his political system. When he was taunted with the reproach of corruption constantly addressed to his government, he asked his electors, "*Vous sentez-vous corrompus?*" (Do you feel corrupted?) and this phrase also became almost proverbial. It seems very strange at a distance to remember that the deputies of Guizot's majority were called *les corrompus* by the people.

Guizot was so poor when he fell from power that when he fled to England he had absolutely no resources, and he was obliged to use for a while a credit which a friend opened for him in the London Bank. From the revolution of 1848 to the day of his death his labor was incessant; he would not re-enter, like M. Thiers, the political arena. He had been for ten years the first minister of a constitutional monarchy; with that monarchy he had fallen; it was not for him to mix in the small intrigues of the Chambers of 1849 and 1850, in the conspiracies which prepared the Empire, or to accept some reward from Napoleon III. He led the quiet and dignified life of an academician. "Laboremus" became his motto; he did not declare war against the Empire; he stood aloof, and on some occasions he condescended to give advice to M. de Morny, to M. Thouvenel, to M. Drouyn de Lhuys, who had once been under his orders in the diplomatic service, or under his leadership in the Chamber. He had no antipathy for the Emperor himself. He considered him a dreamer, a man led by a wrong conception of his own destiny. He had been for many years himself the champion of peace in Europe, and had sacrificed his popularity to what he considered the interests of France. He well knew what were the dispositions of Prussia and of Russia towards France, and he was perhaps too openly and too candidly the advocate of the English alliance. He had nothing to say when Lord Palmerston, who had been so embittered against Louis Philippe by the Spanish marriages, contracted a close alliance with Louis Napoleon, not in the interests of peace, but for warlike purposes. Guizot remained a silent and quiet witness of the momentous events which took place under the Second Empire. He foresaw that the war-system, which was a necessity for the new Government, could not always bring fresh victories to France. He was almost astonished to find that his unpopularity had changed into popularity; the students of the Latin Quarter bowed to him when they saw the venerable old man walking towards the Institute; young children asked their mothers who was this M. Guizot who wrote the history of France for his grandchildren, and were anxious to see this remarkable professor, who had once lectured to assemblies, kings, and ministers. There is so much egotism in the world that everybody in the end was forced to love a man who was no longer working for himself; his ambition, once so proud, was like a tree which has been uprooted, and can no longer bear flowers and fruits. His affections had been sadly wounded; he had lived long enough to see France bereft of her finest province, her glory humbled, the capitulation of Paris, the horrors of the Commune; he had a right to ask those who had made the revolution of 1848: "Where have you brought France?" He said nothing; he felt even deeper wounds: he lost a beloved daughter a few months ago, one who had been his constant companion, his secretary, his assistant. Still he remained strong and firm, and the last time I saw him there was as much fire in his eyes as in the days when he faced his enemies, and poured forth his eloquent sarcasms. "An emperor must die erect." Guizot died like that Roman emperor, and he fell like a verdant tree struck by an axe.

Correspondence.

CENTRALIZATION.

To the Editor of the Nation:

Sir: In your issue of September 17, after commenting upon the manifest unconstitutionality of the proposed "Civil Rights Bill," you add in connection the following remarks:

"In other words, if the bill is constitutional, there is nothing that we can see to prevent Congress, on the ground of *protecting* the 'privileges and immunities' of citizens against invasion by the States, from passing a law bringing all common-law rights within the scope of a single statute and declaring that any one, white, black, or yellow, who suffers any wrong anywhere at the hands of any other person, white, black, or yellow, may treat it as a criminal offence against the United States, and have the offender fined and sent to jail for it."

You will note that I italicize the word "protecting" in the foregoing. Now, what I wish to call attention to here is that this proposition—which in ante-war days needed but to be stated to prove its absurdity—is not only comprehended in the proposed "civil-rights" legislation, as you have justly stated, but is also boldly advanced by the leaders of the Republican party as to-day constituted, and I believe is seriously maintained by a large proportion of the intelligent opinion in that party as a correct statement of the relations of the States to the National Government since the adoption of the Fourteenth Amendment.

To my mind, the enactment of the "Ku-klux" law and its enforcement since abundantly prove this. But the most significant expression of opinion on this subject of late is to be seen in the remarks of Speaker Blaine on the 24th ult. at Cleveland, in response to a serenade. He said:

"I beg to say that in all the disturbed and distracted Southern States there would be peace to-day if the Democratic party willed it so. Why, the Democratic party of the State of New York has just announced a *new creed* . . . and the very central figure, the Alpha and Omega, of that creed is announced in that article which claims, as they term it, home-rule—'hands off' . . . Upon that doctrine, here and now and everywhere, the *Republican party takes issue, and declares* that a citizen of the United States, of high or low degree, rich or poor, black or white, native or adopted, must be *protected by the Government of the United States* wherever and whenever the local authority is *incompetent* or unwilling *to protect* him. . . . Gentlemen, it goes to the very root and marrow of the rights of citizenship, and unless *you and I* are able to *protect* the meanest, the poorest, and the lowest citizen of the United States, your safety and mine are not guaranteed."

He proceeds further to enforce his argument by the analogy of the duty and right of the General Government to enforce the rights of its citizens abroad, thus ignoring any distinction between the relation which Americans sustain to the National Government when resident within the States and when in foreign countries.

If a more complete destruction of the original theory of our governmental system could be framed than is found in the quotation above, I should be much surprised. It only shows how utterly changed are the conceptions of the men who control public affairs in the present generation, concerning the nature and functions of our National Government, from those which obtained from the establishment of the Constitution to the days of "reconstruction."

Further comment is unnecessary, but who shall say that "Cæsarism" is but a fool's cry when the *empire* is already crystallizing around him?

A. R. C. S.

New York, October 7, 1874.

Notes.

WE are desired to state that the specially imported edition of the 'Rubáiyát' of Omar Khayyám, to which we alluded the other day, has been placed on sale with Noyes, Holmes & Co., Boston, and with C. W. Sever, Cambridge. It is the third edition (1872), and not the second (1868), as we erroneously reported it. The price at either of the above bookstores is $1 60; by mail, $1 70.——It is generally supposed that the last thing has been said on Horace, or, at any rate, that the manuscripts have been so thoroughly looked up and collated that little more can be done except in the way of interpretation or emendation. But we learn by private source from Germany that Professor Otto Keller, of the University of Freiburg, well known from his critical edition of Horace ('Opera,' recensuerunt O. Keller et A. Holder, Leipzig, 1864 and 1869), has been so fortunate lately as to discover in the Vatican a very important manuscript, of which he has made a careful collation. Since the publication of his text Professor Keller has collected a great deal of material on this author, particularly for the Odes and Epodes. It is to be hoped that he may soon publish the results of his investigations in the form of a dissertation, or, what would be better still and more accessible to American readers, in a new edition of his valuable work.——D. Appleton & Co.'s fall announcements embrace a 'History of the Conflict between Religion and Science,' by Dr. John William Draper; 'The Native Races of the Pacific States of North America,' in five volumes by H. H. Bancroft, whose unequalled library has been collected with special reference to this work; a 'School History of Germany,' by Bayard Taylor; and (published by subscription) a 'Life of Samuel F. B. Morse,' by S. Irenæus Prime, and 'Personal Reminiscences, Anecdotes, and Letters of General Robert E. Lee,' by Rev. J. Wm. Jones, D.D. The same house will reprint from foreign originals Marey's 'Animal Mechanism'; Quatrefages' 'Natural History of Man,' translated by Miss Youmans; Ribot's 'Heredity'; Paul Lacroix's 'Military and Religious Life in the Middle Ages'; Franz Keller's 'Amazon and Madeira Rivers'; 'The Theology of the English Poets,' by Rev. Stopford A. Brooke; and the 'Life and Unpublished Works of Samuel Lover,' by Boyle Bernard.——'The Stately Homes of England,' by Llewellyn Jewitt and S. C. Hall, is announced by Porter & Coates, Philadelphia.——Macmillan & Co.'s list includes, besides many others, the following works of interest: Baron Hübner's 'Ramble Round the World,' of which the American portion has been found so amusing; 'The *Challenger* Expedition, 1873–4,' by C. Wyville Thomson; 'Russia and the Central Asian Question,' by Ashton Dilke; 'History of the English People,' by Rev. J. R. Green; 'Scandinavian History,' by Elise Otté; Michelet's 'History of the Nineteenth Century,' brought down to the present time; 'History of Greece,' connecting the histories of Herodotus and Thucydides, by W. Watkyss Lloyd; 'Social Greece,' by P. J. Mahaffy; 'History of the Drama,' by Prof. A. W. Ward, of Owens College, Manchester; 'Catholic Reform,' by Father Hyacinthe, translated by his wife; 'Tales in Political Economy,' by Mrs. Fawcett; 'Chatterton, and Other Essays,' and 'The Three Devils, and Other Essays,' by Prof. Masson; 'Michael Angelo,' by C. C. Black, with illustrations; and a new edition of White of Selborne, with profuse illustrations, edited for the natural-history portion by Frank Buckland, and having a chapter added on the antiquities by Lord Selborne.——E. P. Dutton & Co. will receive subscriptions, at $5 per copy, to Dr. William Stevens Perry's republication of Bishop White's 'Memoirs of the Protestant Episcopal Church in the United States.' The original Narrative and the Additional Statements and Remarks of Bishop White will be incorporated together for the first time, and the history will be continued to the present date in a mere chronicle of facts "without the intrusion of inferences or opinions." The appendices and the notes will be full and valuable.——The Western Union Telegraph Company have issued their first Directory, which must prove of great convenience to the public. It gives all the telegraphic stations in the country owned or reached by the Company; the rate to each, calculated from New York; maps of the telegraphic network; and clear and explicit instructions about sending messages. The public may not be generally aware of the opportunity of making money payments by telegraph, at a very reasonable rate, which the Company affords. The money-order offices now number 815, and are duly indicated in this Directory.

—The *American Naturalist* for October is a weighty number, of 64 pages, filled with such excellent matter as the following: Prof. Mayer, of Hoboken, on the auditory apparatus of the mosquito, reprinted, with a few corrections, by the author, from *Silliman's Journal*. Very curious it is to know that the male mosquito hears the hum that delights him, while it torments us, through the vibration it causes in the plumes of his antennæ set in unison to this note, and recognizes the direction from which it comes by the difference in the co-vibration of the two antennæ; and most interesting are the acoustical experiments by which Prof. Mayer may be said to have demonstrated this. "The Gossamer Spider," by Dr. Lincecum, of Texas, is one of those readable articles which even a child can understand and must be delighted with, while the oldest of us may ponder these striking instances of what we are pleased to call instinct, and so rest satisfied. Here is an admirable description not only of the way in which this Texan spider contrives to throw its web across from tree to tree, just out of reach of roaming cattle, yet low enough to capture accompanying flies, but also of the building of the gossamer balloons, with their steadying bow-lines, in which sails away to parts unknown the mother spider, with a cluster of young ones on her breast, or rather *thorax*, to speak with literal as well as technical correctness. Dr. Coues's "Nesting of Certain Hawks" is plain reading. Dr. Weissman's account of the "Metamorphosis of Flies," translated from a German work, is solid science; and the same will surely be said of Prof. Lovering's Hartford address, which, although a "Section A" matter, finds place here by prescription. Then there is a review of Jevons's 'Principles of Science,' with a long extract of what a logician has to say (and says well) upon the theory of evolution. Surely here is money's worth; and we trust there are readers enough to appreciate this bountiful provision of good things. Most creditable it is to the editors. But could they not contrive to do something more than most of this for the youthful mind? There is a wide field which we long to have them occupy, which now and then they do alight upon, but oftener soar high above.

—During a year past there has been going on in Europe and in America (in silence, lest it come to the knowledge of the party most nearly concerned) a collection for a "Curtius Foundation," to commemorate the eminent services to philology of Georg Curtius, now Professor at Leipzig, on occasion of the twenty-fifth anniversary of his professorship. In their circular, the American Committee say:

"The name of Georg Curtius is well known and highly esteemed in this country; his books are in the hands of almost all American students of philology, who appreciate their value; and even those who do not use them directly derive (often, doubtless, more than they realize it) important benefit from them. No living man has done so much to work the results of comparative philology into the practical teaching and study of the classical languages, especially of Greek; to further the historical and scientific treatment of Greek and Latin grammar and lexicography. He is the clearest of expositors and the soundest of reasoners and critics: for command of facts, for their careful sifting and thorough examination, for calm and sober judgment, and for caution and close logic in the drawing of conclusions, he is equally eminent; no man's opinion carries such weight of authority with those who know him. His great moderation has led to his being looked upon among comparative philologists as a conservative; while, on the other hand, his innovations upon the old-established methods of the exclusively classical school have drawn upon him some reproach and opposition on the part of the ultra-conservatives. In the controversies in which he has been involved, he has distinguished himself not less by candor and courtesy toward his opponents than by ability. A testimonial to Georg Curtius is, therefore, at the same time an encouragement and aid to the direction of scholarship in which he labors; and it should be freely offered from every part of the great field, as wide as the world of learning, where his influence has been felt."

The income of the Foundation is to be expended in prizes and in stipends to deserving scholars in the departments of study especially represented by Curtius. There has been received from scholars in this country (representing sixteen States) something less than $400, and the Committee mean, if possible, to raise the amount to $500. Contributions may be sent to Professors Whitney, of New Haven; Van Benschoten, of Middletown, Conn.; Allen, of Cambridge, Mass.; Seymour, of Hudson, Ohio; or Garnett, of Annapolis, Md.

—The Bureau of Education has issued a circular (No. 2, 1874) containing much valuable information with regard to drawing in the public schools, and the present condition of art-education in the United States. General industrial art-education in this country may be said to have begun in 1870, by the passage of a law by the State of Massachusetts making drawing a required study in the public schools, and providing that any city or town might, and every city or town having more than ten thousand inhabitants should, "annually make provision for giving free instruction in industrial or mechanical drawing to persons over fifteen years of age, either in day or evening schools, under the direction of the School Committee"; and at the same time Mr. Walter Smith, "Art-master, London, late head-master of the Leeds School of Art and Science and Training-school for Art-teachers," was invited by the State of Massachusetts and the city of Boston to come to

this country and undertake the task of setting popular art-education in motion. The progress made in four years cannot be very great, particularly when we consider the fact stated by Mr. Smith, in a letter to the Bureau, that on his arrival the first thing he "discovered with certainty was that qualified teachers of drawing did not exist" in the United States. He therefore applied his energies in great measure to getting an act from the legislature establishing a State Normal Art-school, and this he succeeded in obtaining in 1873. He at once received over two hundred applications for admission, and he thinks that "with proper conveniences" such a school could open with five hundred. Mr. Smith adds: "I have on my desk applications from many colleges and universities in several States for accomplished teachers of art. I do not know one. It will take us four years to make one, and then we may make perhaps from ten to twenty. I wish that America could have, as every European country has, an industrial art-school, which should by its graduates affect the value and beauty of every branch of industry." As a further evidence of the popular interest in the subject, the fact is mentioned that the lessons given by Mr. Smith and his assistants in 1872 were attended by five hundred city school-teachers, and in 1873 by six hundred and twenty. The object of this movement is, of course, to give America skilled artisans. The bitter opposition of the trades-unions to the training of the young, and the complete abandonment of the old system of apprenticeship, render the public schools the only foot-hold for industrial art-reform; and, notwithstanding the difficulties, there is good reason to believe that in twenty years we may attain very valuable results. We need only refer to the history of the English experiments to prove it: At the Exhibition of 1851 England, in respect to her art-manufactures, stood almost at the bottom of the list. Of the great nations, the United States alone stood below her. The consequence was the establishment of schools of art in every large town. In 1867, at the Paris Exposition, England stood as near the top of the list as she had sixteen years before near the bottom. This was the result simply of hard work which may be imitated here; no one has ever maintained that either branch of the Anglo-Saxon race is by genius artistic.

—The *Athenæum* quotes the following verses from 'A Choice Collection of Poetry, most carefully collected from Original Manuscripts,' published at York, in 1738, by Joseph Yarrow, comedian:

> "*On* Ben Johnson's Bust, *with the Buttons on the Wrong Side.*'
> O Rare *Ben Johnson!* what a Turn-coat grown?
> Thou ne'er wore such 'till thou was clad in Stone;
> When Time thy Coat, thy only Coat impairs,
> Thou'lt find a Patron in an Hundred Years;
> Let not then this Mistake disturb thy Sp'rit,
> Another Age shall set thy Buttons right.

The *Athenæum* seems to imply that the bust referred to is in Westminster Abbey. We cannot at this moment lay our hands upon an authentic representation of it, but we presume that, whether or not it be the bust intended, the "wrong side" for the buttons in the epigrammatist's views was the *left* side. In other words, the fashion of his day, for men's garments at least, agreed with the fashion which still prevails. The question cannot easily be settled from engraved portraits, in which it is so easy to reverse the original; but the custom of having the buttons on the right side of the coat would appear to have been the rule from a very early period. In Lodge's Portraits, indeed, which date from 1502, and which number 240, we have found not a solitary exception to the rule, except in the case of Walter Scott, whose coat-buttons are on the left side, while his vest-buttons are on the right; though in Wilkie's painting of the Abbotsford Family, the novelist appears consistent with himself and with the fashion. In Woodbury's 'Gallery of Rare Portraits' (London, 1805), the rule of the right side is maintained three to one. The French fashion appears less settled. In the 'Iconographie Fran çaise' of Madame Depech, published in Louis Philippe's reign, and containing historical portraits of the sixteenth century and downwards, we have found sixteen unmistakable examples of buttons on the left side against thirty-five on the right; but the rule still holds. In the case of women, since buttons began to supersede hooks and eyes, the opposite practice has obtained. If we are not mistaken, Paris dresses have the buttons on the left side, and so have those which in this country are made in New York, Philadelphia, Cincinnati, etc. Boston ladies (or their dressmakers) alone, so far as we know, insist on buttoning from left to right like the gentlemen. We leave it for some one of our social philosophers to trace the connection between this singularity and the masculine qualities commonly ascribed to the intellectual women of the Modern Athens.

—The rather drearily accumulating volume of woman-suffrage literature has recently been enlivened by two essays on the subject by Mr. Goldwin Smith and Prof. J. E. Cairnes, the economist. Mr. Smith is a convert to the opposition, and in his articles has adduced many reasons for his change of faith on what "many Liberals regard as amongst the most important of pending reforms," which fill true believers with painful surprise. Mr. Cairnes is an acute dialectician, and often appears to get the better of Mr. Smith at a good many points; that is to say, he convicts him of a want of careful consideration of his logical grounds, and, perhaps we ought to say, of a want of care in the statement of them. We do not see, however, that Mr. Cairnes breaks down any important position taken by Mr. Smith; and there is one point, and a very important one too, in which he appears to be very confused. Mr. Smith having enumerated several well-known instances of excess and extravagance in public matters among the ladies of that class described in one of the Beecher-Tilton documents as "public women," Mr. Cairnes replies that this has nothing to do with the question; that these excesses do not show what the effect of woman suffrage would be upon woman, because suffrage is not yet permitted women in the United States, and he seems to be of the opinion that the kind of argument is itself fallacious; that we ought to ask ourselves not what is the character, intellectual and moral, of the leaders of the woman-suffrage agitation, but whether there is justice and equity and truth at the bottom of their movement. But the difficulty is that woman suffrage is not a "truth"; it is a demand for more power on the part of a particular class in the community. If woman suffrage were like some maxim in political economy, it might be discussed without any reference to persons; but being a demand for power, the first question the community to which it is addressed asks itself is this: What use would be made of the power if we gave it?—and the only way of deciding this, so far as we know, is by examining what use "public" women make of the power or influence they actually have, and what sort of people it makes of them. In a recent article by a leader of the movement in England, we find, for instance, that her study of the question has led her to the conclusion that what is now needed by man is an infusion of the maternal instinct and a greater fondness for taking care of babies. The world at large cannot help regarding with amusement the idea of people of her turn of mind undertaking to help govern them.

—We have received from B. Westermann & Co., of this city, agents for the United States, the first number of the twelfth edition of 'Brockhaus' Conversations-Lexikon.' The brochure consists of eighty pages (*A—Abhärtung*), and is sold for twenty cents. There will be 180 like it, making fifteen volumes, at a total cost of $36, or $48 75 if bound. It will be idle to look for any cheaper encyclopædia than this, if only the mere equivalent in paper and presswork is regarded. That the high reputation of this work, however, for learning and accuracy is to be fully maintained, there is no room for doubt. An imposing first-list of contributors is published, from which we select a few of the more prominent names. The United States will be entrusted to Dr. Brachvogel, of this city, and to Dr. Friedrich Kapp; the English Constitution to Prof. Gneist, of Berlin; Italy, to Prof. De Gubernatis; Hungary, to Dr. Paul Hunfalvy; Egypt, to Lepsius. Prof. Bartsch will treat not only of the Provençal Literature, but also of the German Literature of the Middle Ages; Dr. Schwabe, not only of the Topography and History of Berlin, but also of the Woman Question. Still other topics have been assigned as follows: Prisons, Dr. Von Holtzendorff; Railroads, Dr. Koch, of Leipzig; Cholera, Prof. Pettenkofer, of Munich; Photography, Prof. H. Vogel; Mineralogy, Prof. Zirkel; Anthropology, Prof. Welcker, of Halle; Zoölogic Sciences, Prof. Karl Vogt; Philology, Prof. R. von Raumer, of Erlangen; Chess, Dr. Lange, of Leipzig, etc., etc. To enumerate all the specialists engaged would require far too much space. The illustrations to this encyclopædia will be furnished separately in an atlas, in twenty parts, any or all of which may be had at the subscriber's option, of course by a payment additional to that for the text.

—The *Russische Revue* contains in its first or January number a very interesting notice by Dr. A. Harkavy of a collection of Samaritan MSS. which the Imperial Library of St. Petersburg purchased in 1870 from a Karaite traveller and antiquarian, Abraham Firkovitch. The collection had been obtained by him during a residence in Nablous and Egypt from the cellars and attics of synagogues. The several pieces are almost wholly fragments, and are more or less injured, as one would expect them to be considering the places from which they were recovered; but they are very remarkable for their number and variety, and are in some points valuable and often unique. Thus, there are in the collection fragments of twenty-seven rolls of the Samaritan Pentateuch on parchment. Rolls of this Pentateuch have hitherto been unknown in Europe, as, being designed for use in the synagogue, they were considered specially holy, and were never sold to persons not of the faith. All MSS. of the Samaritan Pentateuch previously described have been codices, in book form. Besides these, there are about 6,000 parchment and paper leaves of different fragments of these codices, several fragments of commentaries, liturgical books, calendars and astronomical works, grammatical and lexical treatises, and, strange thing to mention among the treasures of a

library, a quantity of marriage contracts. Only three of the rolls are dated, the oldest belonging to the year 1202–3, but among the codices are the oldest Samaritan MSS. that have been so far made known, the earliest of them being dated 1175–6, and some, the describer, judging them by their appearance and style, thinks may belong to the tenth and eleventh centuries, if they are not to be dated still earlier. Their proper date, however, in the uncertainty at present attending Samaritan palæography, cannot be determined with any precision; but the collection affords a richer field for the study of that palæography than can be found anywhere else. Other interesting points in the collection are that it contains several fragments of the Samaritan Targum likely to be of use in the restoration of that document, which scholars have often attempted. Other fragments are Hebrew-Arabic dictionaries, or concordances, to the Pentateuch; the only example of such a work that has been known previously is in the Paris *Bibliothèque Nationale*, and wants A and B and half of G: these omissions may now be supplied. The liturgical fragments, composed in part in Arabic, are valuable in a lexical way as adding to our knowledge of the Aramæan, and especially of the Samaritan idiom. The marriage contracts, also in Arabic, about seventy in number, have a like value, as each contains a festive hymn composed expressly for the particular occasion, and includes the names of the contracting parties—serviceable documents in forming a Semitic onomasticon. The fragments show further a large number of various readings to the Pentateuch unknown to Kennicott, de Rossi, and other critics. Dr. Harkavy thinks these may be of great interest. A few of them he has introduced into the first part of the catalogue of the collection already published; the remainder he intends to publish in a special treatise.

THE OLD REGIME IN CANADA.*

CANADA, though it is a large corner of the world, is a small corner of history; but such as it is, Mr. Parkman has made it his own province. He has just added another volume to the series of deeply-interesting chronicles in which he has been tracing, for the last ten years, the more distinctively heroic element in American history. Looking at the matter superficially, we need to make a certain effort to interest ourselves in the Canadian past. It is hard not to imagine its records to be as bleak and arid and provincial as the aspects of nature and of society in this frigid colony, and we instinctively transpose the climate into a moral key, and think of human emotion there as having been always rather numb and unproductive. Canadian history is, moreover, meagre in quantity; it deals with small enterprises, small numbers, small names, names at least which have not become household words nearly as often as they deserved to do. And then it swarms with savages, and the Iroquois and the Mohawk are essentially monotonous and unhistorical. But to Mr. Parkman belongs the credit of having perceived the capacities of all this unpromising material, and felt that if his work must be a slender chronicle of events separated from the main current of modern civilization, in the quality of its interest, at least, it would be second to none. It is the history of an heroic undertaking, and the heroism pervades the most obscure details. The men and women by whose help the settlement of Canada was effected offer an exhibition of conduct which needed nothing but a stage placed a little more in the foreground of human affairs to have become a familiar lesson in morals. It is hard to see in what element of grandeur such an incident as the resistance of Adam Daulac, with his seventeen Frenchmen and his forty Hurons, related by Mr. Parkman in his present volume, is inferior to the struggle of Leonidas and his Greeks at Thermopylæ. And yet while all the world, for two thousand years, has heard of Leonidas, who until now had heard of Adam Daulac? He made a stand for a week against a thousand Iroquois whom he had gone forth with sublime temerity to chastise, and died fighting hard and hacked to pieces, with history to close about him as duskily as the Northern forests that witnessed his struggle. Of course Greece depended on Leonidas, and only Quebec on poor Daulac, but we cannot but feel nevertheless that fame in this world is rather capriciously apportioned. In the same chapter which narrates Daulac's crusade, Mr. Parkman prints a short letter of the time, which seems to us worth quoting. It was written by a lad of eighteen, François Hertel by name, who had been captured by the Mohawks:

"My most Dear and Honored Mother: I know very well that my capture must have distressed you very much. I ask you to forgive my disobedience. It is my sins that have placed me where I am. I owe my life to your prayers and those of M. de Saint-Quentin and of my sisters. I hope to see you again before winter. I pray you to tell the good brethren of Notre Dame to pray to God and the Holy Virgin for me, my dear mother, and for you and all my sisters.—Your poor Fanchon."

With this had been sent another letter to a friend, to whom he confides that his right hand has been burned, and the thumb of the other one chopped off by the Mohawks. He begs, however, his mother may not hear of it. Poor Fanchon's sad little note seems therefore an epitome of the early Canadian character at its best. Stout endurance and orthodox Catholicism form the simple sum of it, and the note of devout manliness, as this young adventurer strikes it, is heard as distinctly through two centuries as if it had been sounded but yesterday. Whether François Hertel kept his devotion to the end we are unable to say, but he never lost his pluck. Thirty years afterwards he led a raid into New England, and indeed it is probable that the writer of the foregoing lines hated the Massachusetts colonists no less heartily as heretics than as rivals. Rugged courage, active and passive alike, is the constant savor of Mr. Parkman's subject, and it has at last very much the effect of giving his work the air (minus the dryness) of a stoical treatise on morals. It is as wholesome as Epictetus, and, as a proof of what may be achieved by the rigid human will, it is extremely inspiring. Such works make one think better of mankind, and we can imagine, in this age of cultivated sensibility, no better reading for generous boys and girls. Mr. Parkman has been himself inspired by his theme—as during much of his labor, amid the interruptions of failing eye-sight and ill-health, he has well needed to be. He treats his subject as one who knows it in a personal as well as in a literary way, and is evidently no less at home among the Northern woods and lakes than among the archives of the French Marine. His descriptive touches are never vague and rhetorical (except once, perhaps, where he speaks of the "gorgeous euthanasia of the dying season"); they make definite, characteristic pictures. His Jesuits and trappers are excellent, but his Indians are even better, and he has plainly ventured to look at the squalid savage *de près* and for himself. His style is a capital narrative style, and though abundantly vivid, resists the modern temptation to be picturesque at any cost. Material for his task is indeed apparently so plentiful that he is spared the necessity for that familiarly conjectural discourse on the unknown and unknowable which marks the latest school of historians. He is, moreover, a very sufficient philosopher, and competent at all points to read the political lesson of his story. We have been especially struck with his fairness. He is an incorruptible Protestant, dealing with an intensely Catholic theme, but he appears wholly free from any disposition to serve his personages' narrow measure, or bear more heavily on their foibles than his facts exactly warrant. He can hardly expect to have fully pleased Catholic readers, but he must have displeased them singularly little. Never, it must be added, was there a case in which Catholicism could so easily afford to be judged on its own strict merits as in this early history of Canada.

With his present volume Mr. Parkman has brought his narrative well on towards its climax, and in no portion of it has the need to read the political lesson been more urgent. We have here related the fortunes of the infant colony from the time Louis XIV. took it paternally by the hand until his decline and death left it again to do battle unaided with its native wilderness. They form a very curious and, in some aspects, an almost comical history. It would be difficult to find a more pregnant and convenient example of the vicious side of the great French virtue—the passion for administration. The example is the more striking, as Mr. Parkman forcibly points out, that we see it contrasted with an equally eminent embodiment of the great English virtue—the faculty of shifting for one's self. How extremely artificial a creation was French Canada, how it was nursed and coddled and bribed and caressed; by what innumerable devices it was enticed and encouraged into a certain prosperity, and propped and legislated into a certain stability; how everything came to it from without, and as time went on, and security was established, and the need for the more acutely heroic virtues declined, nothing from within; how it was a fancy of Colbert's and a hobby of the king's, and how it languished when they passed away—all this is unfolded by Mr. Parkman with superabundance of illustration. It was a sort of luxury of the king's conscience, and one of the trappings of his grandeur, and it offers the oddest combination of the Versailles view of things and the hard reality of things themselves. It has become the fashion to smile a good deal at the so-called greatness of Louis XIV., and there is no doubt that, when tapped by the impudent knuckle of modern criticism, much of it rings very hollow. French Canada was hollow enough, and yet it bears in a manner the stamp of a brilliant period. There was greatness in the idea of establishing a purely religious colony for the glory of God and the most Christian king—a disinterested focus of conversion for hordes of thankless savages. The way chosen was sadly erratic, but the error was of a splendid kind. The king's generosity was boundless, and Mr. Parkman says that no application for money was ever refused. Applications were incessant; the colonists never dreamed of doing anything without a premium from the home Government. Mr. Parkman gives us a minute and entertaining picture of Canadian manners and morals while the royal bounty was at its

* 'The Old Régime in Canada. By Francis Parkman.' Boston: Little, Brown & Co. 1874.

height. The most general impression we derive from it is that human nature under the old régime was made of stouter stuff than now. French society, at Quebec and Montreal, adapted itself to its new circumstances with a pliancy for which we should now look in vain, and exhibited, for a time at least, a talent for emigration which has quite passed out of its character. Life, for the poorer sort, was hard enough at home, but they could make easier terms with it than with the Canadian cold and the Indians. The poverty was horrible, and even the colonial gentry, which became extremely numerous, lived in almost abject destitution. Existence was a hand-to-hand fight with the wilderness, with the climate, with the Iroquois, and with native jealousies and treacheries. Ships arrived from France but once a year, and were usually laden with disease. They brought the king's instructions, and the primitive little machine was wound up again, and set running for another twelvemonth. There was only one industry—the traffic in beaver skins—and, as every one followed it, the market was glutted, and the furriers, who were compelled by the Government to buy the skins whether or no, became bankrupt. Over all this hovered the rigid rule of the priests, enforcing, in intention, as grim a Puritanism as that which prevailed in Massachusetts. The Jesuits were the guiding spirits of early Canadian civilization, and they had no disposition to be dislodged from the field. We noticed in these pages the really thrilling volume in which a few years since Mr. Parkman commemorated their early explorations and sufferings, and it must be confessed that they had a certain right to an authority which they had purchased with their heroism and their blood. But they governed as priests govern, irritatingly and meddlingly, and, as if ice and Indians between them might not have been trusted to impart a wholesome severity to life, they urged war against such meagre forms of luxury as had straggled across the sea, and prohibited all consolations but those of religion. The natural result was that the hardier spirits of the colony broke loose from their rule, rambled away to the woods, and, finding tipsy Indians more congenial company than super-sober Jesuits, founded the picturesque tradition of the Canadian *coureur de bois*. One of the priestly rulers of Quebec, the Vicar-General Laval, forms in Mr. Parkman's pages an impressive and interesting figure. He was an ascetic of the rigorous mediæval pattern, but, with all his personal sanctity, he relished vastly having his own way, and he held his power against all intruders. The author gives a copious account of his squabbles with the bishops (of Quebec) on one side, and the king's governors and intendants on the other. It is a report, for all who are curious, of the current politics of Quebec. Mr. Parkman justly remarks that it is singular that none of the Canadian worthies, male or female, should have been deemed worthy of canonization. There were plenty of thorough-going saints among them, and the Sisters of Charity were not less devoted and courageous than the Jesuit brothers. There was a certain Jeanne Le Ber, in especial, who as a picturesque anchorite of questionable sanity leaves nothing to be desired. She lived for twenty years in a narrow cell behind the altar of a church at Quebec, in such an odor of sanctity that, during a time of apprehension of an attack from the English, a storm which overtook and destroyed their ships was attributed to the virtue of her prayers. That such a name as this, and as many another among the missionary brothers who braved the scalping-knife and the death-torture, should be wanting on the Romish calendar of saints, is a sort of crushing proof of the predestined provincialism of Canada—of its being out of the great world, out of the current. Nearer headquarters, in bright, warm Italy, people were canonized on easier terms. In this frigid atmosphere, however, where virtue was to miss even that ultimate reward with the thought of which it consoles itself for present hardship, men and women not only assembled in numbers, but increased and multiplied and prospered and grew strong. It was a capital illustration of the law of the survival of the fittest. The weaklings perished, but the stronger grew magnificently tough. The climate, strange to say, was especially friendly to women, and the mothers of Canada had enormous families. The king set every imaginable premium upon breeding, and the most curious pages in Mr. Parkman's volume describe his ingenious attempts to stimulate it. Not only were early marriages generously rewarded, but bachelors were made thoroughly uncomfortable, and had finally either to marry in self-defence or to buy themselves off from persecution. Marriageable young women were shipped in even excessive numbers from France, and stepped off the vessel into the arms of a husband. They appreciated their market, and their alacrity had to be checked. "Not quite so many demoiselles," the governor wrote to the emigration agent at home. "Instead of the four I asked you for last year, you sent me fifteen." This odd combination of celibate priests and nuns and excessively prolific citizens gives us a rough measure of the something artificial and anomalous in the history of New France. Mr. Parkman is to trace his subject further, and although his concluding volume will lack the interest peculiar to his 'Jesuits' and to the early chapters of the present one, it will deal, in the collapse of the French power, with an abundantly dramatic episode, and, in Wolfe and Montcalm, with figures as heroic as any he has sketched.

THE "CONSERVATISM" OF BURKE.*

"IN order to gain a just idea of the opinions to which Burke adhered so tenaciously, the student is advised to set out with the idea that Burke was always what would now be called a Conservative. Party distinctions are of so perishable a nature, that unless we can fix on something belonging to our own times and 'coming home to our business and bosoms,' we are in danger of becoming the victims of words. But it must be expressly understood that there is no identification of the term with the attitude or principles of any present political party. By conservatism is meant that preference for and indulgence to what is already established, that faith in what has been tried and that distrust of what exists only in speculation, which never wholly forsakes every sound politician of whatever party." These sentences contain the gist of the ingenious though not satisfactory essay which Mr. Payne has prefixed to his meritorious and useful edition of Burke's select works. They contain a piece of true and valuable criticism, which nevertheless is likely to be misunderstood. They at once suggest the enquiry, What is the nature and the permanent worth of the sort of conservatism which can be with truth ascribed to a statesman, the greater part of whose life was spent in vehement conflict with the prejudices of what Mr. Mill would have termed the "stupid party"? The answer to such an enquiry throws light not only on the position of Burke, but on some of the problems of modern politics since Burke; for there still exists, in this country no less than in England, an influence which though often undetected is perhaps as great as the power which he exercised during his lifetime.

The conservatism of Burke cannot, it is manifest, be identified with the watchwords of any modern party. The questions with which he was concerned have been decisively settled since his death. No politician need now consider the merits or demerits of Catholic emancipation, the attitude which England ought to adopt in the face of the propagandism of a regicide Republic, or the expediency of allowing Massachusetts to escape from imperial taxation. The problems on the other hand which tax the ingenuity of English or American statesmen are puzzles the very terms of which were unknown to Burke. It is moreover specially futile to attempt to enlist the authority of his name on the side of modern conservatives or of modern liberals, for, though his works abound with general principles, it was his deliberate habit never to enunciate general propositions except with reference to existing cases. It is this peculiarity which, beyond any other characteristic, perplexes his critics. Each of them takes hold of a certain number of general propositions to be found in Burke's speeches or writings. Each of them hopes from these propositions to construct a system of politics. Their efforts end in failure, because each of them has neglected to observe that Burke's generalizations are never meant for philosophic axioms, but must be understood with reference to the matter which at the moment engaged his attention. "A modification," he says, "is the constant recourse of weak and undeciding minds." Here is a maxim inculcating the sternest adherence to fixed principles, but if the reader turns to another speech he finds a splendid defence of the system of compromise summed up in the assertion that all "government, indeed, every human benefit and enjoyment, every virtue and every prudent act, is founded on compromise and barter." The "Thoughts on the Cause of the Present Discontents" has been read by thousands as an exhaustive essay on the theory of party government. In fact, it was a party-pamphlet written for an immediate purpose, curtailed, revised, and modified to suit the exigencies of Lord Rockingham and his followers. Burke can never be understood unless he be read with a constant regard to the circumstances under which he wrote or spoke. To quote his authority in favor of measures never submitted to his consideration is utterly to ignore the nature of his genius and to lose the benefit of his teaching. His conservatism is not a mass of rules, but a spirit. His influence is due to the fact that he embodies in the most brilliant language a mode of looking at politics which will always exert deserved weight in every civilized community. Burke and men like him see how very slow is the progress made by mankind. They consider that any tolerable condition of society represents an advance made with great difficulty; that the great problem of politics is first to preserve the benefits which have been gained by the efforts of previous generations, and next, cautiously and slowly, so to improve existing institutions as to make some advance without losing any of the advantages already attained. Hence Burke, though ready to amend existing arrangements, was always intensely averse to revolutionary proceedings. No man

* 'Burke's Select Works, edited, with introduction and notes, by E. J. Payne, B.A., Fellow of University College.' Vol. I. Oxford: Clarendon Press; New York: Macmillan & Co.

"examines into the defects of his title to his paternal estate or to his established government." "The whole building stands well enough, though part Gothic, part Grecian, and part Chinese, until an attempt is made to square it into uniformity. Then, indeed, it may come down upon our heads altogether in much uniformity of ruin, and great will be the fall thereof." These are not sentiments inspired by dread of the Revolution. The one was uttered in 1777, the other in 1769. This view, as Mr. Payne points out, was a convenient theory for the Whig oligarchy and for their apologist, but it represented Burke's most fundamental convictions, for his practical view of politics was based on a distinct theory.

Politics were in his judgment an art, not a science. There were, he held, no ascertained axioms from which, as from fixed principles, you could deduce the rules of political conduct. Hence his abhorrence of political metaphysics. This hatred to all theories of abstract rights is often supposed to have arisen from his conflict with the Revolutionists' principles, but it is to be traced throughout his earliest no less than throughout his later writings. When he advocated conciliation with America, he found the course of justice and expediency constantly opposed by arguments drawn from the nature of sovereignty and from the supposed rights of the mother country. With such arguments he would hold no terms:

"I am resolved," he says, "to have nothing to do with the question of the right of taxation. . . . It is less than nothing in my consideration. . . . My consideration is narrow, confined, and wholly limited to the policy of the question. I do not examine whether the giving away a man's money be a power excepted and reserved out of the general trust of government, and how far all mankind, in all forms of polity, are entitled to an exercise of that right by the charter of nature. . . . These are deep questions, where great names militate against each other; where reason is perplexed; and an appeal to authorities only thickens the confusion. For high and reverend authorities lift up their heads on both sides; and there is no sure footing in the middle. This point is the great 'Serbonian bog, betwixt Damiata and Mount Casius old, where armies whole have sunk.' I do not intend to be overwhelmed in that bog, though in such respectable company."

But this contempt for political metaphysics is quite unlike the narrow creed of so-called practical men, which makes statesmanship nothing more than the dexterous use of dodges for the attainment of temporary objects. Politics was in Burke's mind an art of the highest dignity and utility, success in which depended on an elaborate study of history and facts under the guidance of a profound knowledge of human nature. The moral of all his speeches on the American struggle (which represent his views at their very best) is that no one can deal with the questions at issue between America and England who has not mastered the history of each country, and deeply considered the motives by which mankind are moved.

His speech on conciliation with America contains such an analysis of the circumstances which had moulded the character of the English colonists as could scarcely be improved by the most learned of modern historians. The gist of all his argument is that a statesman must rely neither on metaphysical subtleties nor on brute force, but on an appeal to human nature as it actually exists. "Man acts from adequate motives relative to his interests, and not on metaphysical speculations." It is at this point that Burke's conservatism blends with his liberalism. He, no less than Bentham, was an utilitarian. He would not have accepted Bentham's formulas, but he believed as firmly as Bentham that men were ruled by their true interests, and that government existed for the promotion of the general good. Burke, like Bentham, despised the pretentious platitudes which the conservatives no less than the democrats of the last century held to be absolute principles; he, no less than Bentham, held that government existed for the benefit of the governed; yet the two men were divided by fundamental differences. Burke's method was historical; Bentham's was logical. Burke looked with leniency on existing institutions, and felt that there was a presumption in favor of any tolerable arrangement which actually existed; Bentham, full of the belief that existing society was the product of the influence of the limited classes who actually held power, and whose sinister interest opposed the general welfare, naturally felt the mere existence of an institution no argument in its favor. Hence the fundamental conservatism of Burke, and the no less fundamental anti-conservatism of the older utilitarians. For it is on the answer which each man gives to the question whether there is or is not a strong presumption in favor of existing institutions, that his whole political attitude ultimately depends.

When the nature of Burke's conservatism is understood, it is seen to be utterly different from many beliefs or attitudes of mind which are often called conservative. Burke, for example, had little in common with the men who at the beginning of this century quoted with admiration all his anti-Revolutionary utterances. Eldon and Percival had no policy but that policy of absolute resistance to change which, in a changing world, is necessarily the cause of revolution. The disagreement between them and Burke is seen in the fact that he was prepared to grant, in the very height of the Revolutionary outbreak, the measure of Catholic emancipation which Eldon and his school refused to concede when the fury of Revolutionary fanaticism was entirely spent. Burke, again, though a conservative, was at no time a Tory. The essence of Toryism is to attach an absolute worth to monarchical institutions. In England it exists no longer, but the French or Spanish Legitimists are strictly Tories. They value the rule of the Bourbons not for the benefits which might flow from it, but because legitimate monarchy has in their eyes a divine right to rule. The politics of such men are a part of their religion. With Burke, the rules of political art could never become the dogmas of a creed. The contrast between his conservatism and the mere policy of resistance upheld by Eldon, or the policy of fanatical reaction which inspires Legitimists, shows what is the real worth of Burke's conservative doctrine. It is the only form of conservatism which may be appplied to the politics of all civilized societies. A celebrated Italian republican said to an English conservative: "If I had been born in England, I might have been a conservative. If you had been born in Italy, you would have been a republican." The Italian patriot had imbibed the very spirit of Burke. A rational conservative is, by the very nature of his conservatism, the advocate of one form of polity in one country, and of another constitution in another country. He is a republican in Switzerland or America, a friend of constitutionalism in England, and, it may even possibly be, the supporter of a strong monarchical rule in Russia. The strength of Burke's views is that they represent a spirit which may have full play under any form of government. Hence they have influenced the policy of thinking men in Italy and Germany no less than in England, and have counteracted the pernicious democratic delusion that violent means are the only mode of attaining valuable reforms.

The conservatism of Burke is, however, open to two main criticisms. The first is, that all Burke's political teaching assumes the existence of institutions which are worth preserving and enlist the good-will of his hearers. "There are some amongst us who think our constitution wants many improvements to make it a perfect system of liberty. Perhaps none who are of that opinion would think it right to aim at such improvements by disturbing his country and risking everything that is dear to him." These words apply of course to England, but they describe the state of mind which in general naturally prevails amongst the subjects of a tolerable government wherever this condition of feeling exists. Burke's doctrines have a proper field for their application. But in periods of violent revolution this sentiment of calm loyalty towards existing institutions does not as a matter of fact prevail. At such times, doctrines of rational conservatism become from the nature of things inapplicable; and the great error of Burke's speculations about the Revolution is that he failed clearly to recognize that conservatism is out of place when the mass of a nation are prepared "to risk everything that is dear to them" rather than bear a state of things which they hold to be unendurable. Burke partly concealed this from himself by the astonishing fiction that the *émigrés* were the French nation, and found himself involved in all the difficulties which torment a statesman who bases his policy not on fact but on fiction. His English followers have servilely followed his mistake, and, as any one may remember during the war of secession, quoted Burke *ad nauseam* to men on this side of the water who were prepared to risk everything rather than put up with a state of things which they deemed, rightly or wrongly, unbearable. The policy of conservatism must be inapplicable unless men of all parties are agreed that there is much in existing institutions which they wish to preserve.

A second criticism is that Burke underrated the extent to which abstract principles can be applied to politics. The triumphs of political economy—such, for example, as the complete overthrow in England of the whole scheme of protection—show that in some departments of politics, at least, there is far more room for the application of *à priori* principles than Burke would perhaps have been disposed to admit. His error in this respect can scarcely be blamed, for the then prevalent theory of natural rights has turned out to be, as he perceived, absolutely worthless, and the questions with which he was called upon to deal were not for the most part problems of the kind to which political economy applies. It must further be remembered that, as most modern political economists would admit, the rules of their science are not rigid principles, and must constantly, in practice, be tempered by that knowledge of human nature which is the basis of the conservatism of Burke.

Manual of Universal Church History. By the Rev. Dr. John Alzog, Professor of Theology at the University of Freiburg. Translated, with additions, from the ninth and last German edition, by F. J. Pabisch, Doctor of Theology, etc., and Rev. Thos. S. Byrne, Professor at Mt. St. Mary's Seminary. In 3 volumes. Vol. I. (Cincinnati: Robert Clarke & Co. 1874.)—

This is a larger work than most of the so-called German manuals. It comprises in the original not less than 1,400 large octavo pages. This volume of the translation—the first of three—has 779 pages of about the same size. Alzog is one of the very best Roman Catholic writers who have undertaken to record the history of the Church. His learning is sufficient. He has studied Protestant writers as well as those of his own church. Although influenced throughout by his dogmatic opinions, the effect of this bias is less marked and less mischievous than is usually the case with writers of his class. This work is a very valuable one, and deserves the attention of Protestant students, who would not be hurt by reading "the other side." The translation, though quite liberal—that is, quite far removed from a literal rendering—is in good English, and, as far as we have examined it, gives truly the sense of the original.

Epochs of History. Edited by Edward E. Morris, M.A., of Lincoln College, Oxford, Head-Master of the Bedfordshire Middle-Class Public School, etc. 1. The Era of the Protestant Revolution. By Frederic Seebohm, author of 'The Oxford Reformers—Colet, Erasmus, and More.' 2. The Crusades. By George W. Cox, M.A., author of 'History of Greece,' 'Mythology of the Aryan Nations,' etc. (New York: Scribner, Armstrong & Co. 1874.)—Probably the series of 'Epochs of History' was suggested by the appearance of Mr. Freeman's series, and was designed not to come into direct competition with it, but to approach the same facts from a different point of view, so as to give, as one may say, a cross-section instead of a side view of the same edifice. The titles of volumes announced as in preparation do not seem in every instance to admit of a treatment which shall make "the history of a nation subordinate to this more general idea." Nothing could be better than the subjects of the two volumes which head the list; but on the whole, England appears far more prominently than one would expect. There are fourteen titles in all, and out of these eight have English kings for their leading subject, and a ninth is "The War of American Independence"—an event of the first importance, but hardly an "epoch" in the sense of this series. Of these English sovereigns, several—as Elizabeth, the Early Plantagenets, and "The Fall of the Stuarts"—can fairly be taken as the centre of European events; so with Edward III., except that the "Conquest of France" comes in in connection with "The Houses of Lancaster and York"; but the "Norman Kings and the Feudal System" and "The Stuarts and the Puritan Revolution" hardly touch any but purely English history. However, time will show the execution of the works. "The Thirty Years' War," "The Beginning of the Middle Ages," and "Frederic the Great" are unequivocally good subjects.

The two volumes before us are certainly all that could be desired in this respect, as well in execution as in plan; these important epochs are sketched distinctly as epochs, so as to be really histories of Europe, for their time, and not of any one nation. Mr. Seebohm's "Protestant Revolution," as it is the most important, is on the whole the most satisfactory. He has perhaps loaded his introductory chapters with some unnecessary detail; but the narrative is throughout animated, and the selection and grouping of events skilful and effective. His earlier labors, upon the Oxford Reformers and the condition of the peasantry, have had their influence in the preparation of this book, which gives quite an unusual prominence to these two topics. The first strictly belongs to the Reformation, even although its heroes took no active part in the movement, and even opposed it; the second, although hardly a part of it, is yet closely connected with it, and at any rate is an important phase of its era. The volume contains numerous and excellent maps and plans, of which those illustrating the commerce and industry of Christendom, and the several outbreaks of the peasantry, are the most interesting and useful.

Mr. Cox's book is perhaps as well done in detail, although it does not contain so many features of peculiar merit, for Mr. Cox is not a specialist upon his subject as Mr. Seebohm is upon his. There is a serviceable map, in which, however, we do not understand on what grounds Lombardy is extended to the Rhone. Neither do we see why the title "Fourth Crusade" should be removed from the renowned expedition which resulted in the Latin Empire of Constantinople, and assigned to the abortive enterprise of 1196–7. The sketch of the events which caused the Crusades, as well as of the Crusades themselves, is excellent; but the book needs, for its completeness, a fuller discussion of the general character and results of the Crusades.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
A Boy's Kingdom	(Thomas Nelson & Sons)	$2 00
Alzog (Rev. J.), Manual of Universal Church History, Vol. I.	(Robert Clarke & Co.)	5 00

Fine Arts.

THE MONTPENSIER GALLERY.

BOSTON, October, 1874.

THE Montpensier Gallery is a great disappointment, and to the connoisseurs and the ignorant alike. Such high expectations had been raised concerning its character and importance that possibly a very much superior collection would have failed to justify them. Certainly there is an impassable gulf between what the gallery was supposed to be and what it actually is. A considerable part of the disappointment comes, no doubt, from the fact that very few persons in the community knew what ought to be expected from any collection of Spanish pictures; knew, indeed, anything about the character of Spanish painting, its relation to Italian art, its intrinsic worth or worthlessness. Everybody had heard of Murillo's Madonnas and beggar children; almost everybody of the portraits of Velasquez; the names of Ribera, Zurbaran, and Morales might be known to a few. But knowledge of the general characteristics of Spanish art, and of the special characteristics of the different schools, and of the qualities of the different painters, was confined to a limited number of amateurs and travellers. Among them there had been some scepticism as to the value of the collection, from the first account of its contents. But even they could not but hope that a collection which embraced one unquestioned Murillo and two or three paintings ascribed to Velasquez, would turn out to be of considerable interest.

As for the general public, it has been so entertained and allured with statements of the liberality of the royal duke in allowing his precious collection to cross the dangerous ocean, of the enormous value set upon the pictures, and for which they were insured, and of the opportunity which the exhibition of the collection would afford to those who could not visit Europe to see and become familiar with such treasures as form the chief enjoyment of more fortunate travellers abroad, of the æsthetic charm and historic interest of these works—that now upon their exhibition it finds itself either obliged to disown its own convictions, or to admit its own want of taste, or to suppose that the admirers of foreign galleries are either dupes, or ready to profess admirations which cannot have been genuine.

This conclusion is doubtless hasty and unfounded. For the truth is that the pictures exhibited at the Athenæum would not do much credit to a second-rate European gallery; that the value set upon them by the Duc de Montpensier or his agent is absurd, and has no relation to what they would bring in the open market; and that they are, with the exception of two or three, not such works as any real connoisseur is accustomed to admire, or

for which he would claim any interest but that which attaches to them as illustrations of the perverted conditions of the arts in Spain at the period at which they were painted.

It is a curious fact, but one of which the explanation is not far to seek, that since the Renaissance, as Spain has produced but one author who is to be classed with those supreme ones who belong to all ages and all lands, so she has produced but one painter of similar quality. Cervantes and Velasquez stand quite alone. They have neither rivals nor pretenders to rivalry; and in literature and art they are the only Spaniards to whom the world need and is required to pay attention. Other Spanish authors and other Spanish painters have excellent qualities, and of such independent originality as to give them a claim to the regard of students, but not one, unless we except Murillo and Morales among the painters, and Calderon and Lope de Vega among the authors, possessed such genius as to compel more than what we may call local or historical admiration.

Murillo certainly had many of the gifts of a great painter, and his best works are to be counted among the treasures of pictorial art. The single specimen which the Montpensier collection affords us is a very pleasing example of his naturalistic method of treatment of a devotional subject. It has unfortunately suffered from the injury of time, and has been clumsily restored in some subordinate parts, but it remains a picture in which we may see the simple feeling, the grace, the sense of color, and the happy composition of the genuine artist. It is undoubtedly an excellent average specimen of his least ideal representations of the Madonna and Child.

Of the three pictures in the collection which bear the name of Velasquez, one, a portrait head, shows the vigor of his characterization and of his handling. But it is not one of his best portraits. It exhibits the defects of his method in its extravagance of light and shade, and it has been so loaded with bad varnish that it no longer retains the distinction of color which it originally possessed. The two others, small reproductions of his portraits of Philip IV. and of Olivares, his Prime Minister, portraits familiar to us through photographs and the spirited engravings of Goya, may possibly be from his hand; but their very fidelity as reductions of the great pictures indicates that they are rather studio copies than sketches by the master himself. And this supposition is confirmed by the curious difference between them in technical treatment. The mode of laying on the color is very different in one from the other. But, whether from the hand of Velasquez or not, they are interesting and precious representations of his work.

Of the four great Zurbarans the authenticity is undoubted. They are good examples of this third-class master's work, and of interest as representations of the prevalent style of Spanish religious art at his time. But, compared with Italian work of a similar character, their inferiority is striking. The best parts of them consist of the figures taken direct from nature. In the "Adoration of the Shepherds," for instance, one figure of an old man kneeling with folded hands is admirable for its natural expression and truth of portraiture. But as a whole these works have little more than a purely historic interest; they can make no claim to high artistic merit. If, as has been stated, the duke or his agent valued these pictures at $25,000 apiece, it can only be said that such a valuation is in a high degree extravagant. The value in the market of such pictures is low enough. They are not wanted for any but public galleries where a full representation of the different schools is required. A large picture by Zurbaran, which, a few years since, was taken for the Louvre from the collection of Marshal Soult, a picture certainly equal to any of those in this collection, was valued at 20,000 francs.

Of the other pictures in the collection—there are but eighteen Spanish pictures in all—little need be said. The Ribera is disgusting, and should be destroyed; the Morales is one of his inferior works, and much injured. Of the other pictures one of two landscapes by Salvator Rosa is better than his usual work; there is a pleasing Van der Meulen, by which our landscape painters might profit; there is a picture said to be by Sebastian del Piombo, which he never saw, and which he would regret to have ascribed to him, and so on. The modern works, by Lehmann, Granet, and Tony Johannot, are mere rubbish.

Of course such an exhibition is a disappointment. It can do little for the culture of students of art, it can give little satisfaction to those who already know the resources of European galleries.

HENRY HOLT & CO.'S SCHOOL-BOOKS

Include among others, Freeman's Historical Course, the Class-room Taine, Sigiar's English Exercises, the Ordo Series of Classics, Whitney's German Course, Otto's French and German Courses, etc. Reference is made to the faculties of all leading institutions. Catalogues sent on application. Address

WHAT ARE ENGLISH CHANnel Shoes? Sewed shoes have the seam that unites the sole and upper sunk into a channel cut in the sole. Americans cut this channel from the edge of the sole, and the thin lip turns up in wearing. The English channel, which never turns up, is cut from the surface, leaving a dark line when closed. As it cannot be cut in thin, poor leather, it indicates a good article.

CINCINNATI BOOK AUCTION Rooms. Established 1841. The only book-auction house in the West. Consignments solicited. Libraries catalogued and sold to the best advantage. Small lots of books received and catalogued with others. Collectors of libraries can have our catalogues mailed to them upon request. N. B. Careful attention given to Works of Art.

THE CHURCH AND STATE.

BROAD—EVANGELICAL—CATHOLIC.

The following extracts are made from editorials which have lately appeared in the "CHURCH AND STATE":

THE BROAD-CHURCH MOVEMENT.

So far as there is to be a distinctive Broad-Church movement in this country, there are certain things which are essential to its success and salutary influence. It must be American in its character and in the fullest sympathy with the great essential tendencies of our American social system. Such will naturally be its character, for the great idea which pervades it is that of freedom of thought and expression. It is scarcely necessary to say that it must aim at the highest culture, for that, too, is one of the characteristic features of the school. It may be well, however, to emphasize the importance of a more tolerant spirit toward other schools and parties in the Church. There is no man more intolerant than a narrow Broad Churchman, and no one therefore who acts more inconsistently with the principles which as a Broad Churchman he avows. But that which is most of all needed is that it shall rest upon an evangelical basis and adhere unflinchingly to the historical faith of the Church. If it will hold fast to that great fact, to which the Word of God and the Christian ages bear such emphatic testimony, the sacrificial character of the death of Christ, in which a true propitiation was offered for the sins of the world, and then strive to rid the Church of the baneful influence of mere ecclesiasticism, making it bright and cheerful with the choicest results of thought and culture, it will indeed constitute the best hope, under God, of our American Church.

There is something, however, which seems to us still more to be desired, but which, perhaps, will never be realized. It has been a dream fondly cherished, but still a dream it may be, that there is a still higher school of thought and feeling possible, which may at some future time characterize the Church. It has already one representative, of whom, though living, we may fitly speak. His long life of active and beneficent labor, his venerable years and now failing health, warrant us in speaking freely of his relations to the great questions which we are considering. Dr. Muhlenberg has been known for many years as occupying what he has called an evangelical catholic position. In the midst of his wonderful activities in the practical work of the Church, he has done much to give form to the idea which underlies this position. First of all, the position is evangelical because it is at the very centre of the finished work of Christ, and it is catholic because it recognizes and accepts the accumulated wealth of the historical Church in liturgy and ritual and song and Christian experience. With perhaps a too large proportion of the merely catholic element in his system in his earlier days, and too little, it may be, in the advancing years of life, the average of his teaching and influence cannot be far from right. He may have made too much of mere ritual at one time, and in the reaction too little of sacramental grace; but few, if any, have ever more wisely recognized, in their true relation, Christ and his Body, the Church. Unconsciously perhaps to himself, he has also been a teacher in the other great school of the Church. Singularly free from dogmatism, he long since discerned how large a portion of that which had been traditionally held as essential to Christianity must give way under the searching investigation of modern enquiry, but he saw also how little such results would touch the great work of that divine Being who is the centre of the Christian system. In his generous appreciation of whatever has been done for freedom of thought and action in the Church, he has been, in the best sense, a Broad Churchman. Shall there not be, at some time, a school which shall bear the impress of his thought and spirit, and be therefore broad, evangelical, and catholic?

PROF. TYNDALL'S ADDRESS.

We take the statements of Prof. Tyndall and Mr. Spencer as illustrating the most advanced position of the scientific school of which they are leaders. They admit that the phenomenal universe in its ultimate analysis may be as properly described in terms of spirit as in terms of matter; nay, that it may be more properly described in terms of spirit. Whatever else this position may involve, it is not the vulgar materialism which we have known under that name. It leads us to the shore of the great unknown ocean, the ocean of Unconditioned Being, which is symbolized to us as object in matter and as subject in mind. There is nothing in this science which hinders the next step, which is the recognition of this Unconditioned Being as a personal Intelligence. We say nothing to hinder—we might rather say everything to impel to that step. If science has strengthened any conviction, it is that of a rational plan in nature. Are we not then impelled, by science itself, to the conclusion that there is reason (*ratio*) in the "cosmical life," as Prof. Tyndall calls it, in which nature has its roots?

Prof. Tyndall has well shown, and in this respect he has done an intelligent theism good service, that science knows nothing of a man-like artificer working intermittently in nature, supplying defects and remedying disasters by special and exceptional exercises of power. It is well that these anthropomorphic ideas of God should be dispelled. The Being up to the recognition of whom science leads us is a power residing in and pervading all nature, working in accordance with fixed and unchangeable laws, by slow and immensely protracted processes, with infinite patience, through a past and into a future, the one receding and the other proceeding into the clouds of an impenetrable mystery.

We regret that Prof. Tyndall should have stated the conclusion to which he had arrived in such a form as to imply that there is any necessary hostility in it to religious belief. He has doubtless met with much of bigotry and intolerance, but he has no right to assume that they are characteristic of religious people. When he talks about the liberty to discuss these subjects which scientific men must vindicate, it is just as absurd as it would be for theologians to protest that they must be delivered from the despotism of science. Both are perfectly free now, and it is unmanly to shrink from the blows which, from enthusiasm or perhaps prejudice, are sure on either side to be given.

CHURCH AND STATE.

The Rev. JOHN COTTON SMITH, D.D., Editor-in-Chief. The Rev. LESTER M. DORMAN, Assistant Editor.

Published every Wednesday evening, at 139 Eighth Street, New York. Terms: $3 per annum; $2 50 to Missionaries. Specimen copies sent on application. Devoted to News, Reviews, Criticisms, and to the discussion of all important questions related to Church and State.

The Church and State is conducted on the plan of the principal London weeklies, such as the *Spectator*, the *Saturday Review*, etc., etc., and contains Secular and Religious Articles by leading writers in England and America. It will aim to be Broad, Evangelical, and Catholic.

SPECIAL NOTICE.—The Church and State has just opened a Free Reading-Room for the Clergy, where they will be at all times welcome. The room will be devoted to reading, conversation, discussion, and to all matters of meeting and business in which the clergy may be interested.

Address *CHURCH AND STATE,*

No. 139 Eighth Street, New York (Opposite the Mercantile Library).

THE WEEK IN TRADE AND FINANCE.

OCTOBER 12, 1874.

BEYOND a slight flurry in Erie, and at times considerable activity in the stock market, the past week has been a quiet and uneventful one. There have been rumors of failures among mercantile houses, but up to this time there appear to be no grounds for them; those which have already taken place do not seem to have caused any serious lack of confidence, nor does the market for commercial paper seem to have been unfavorably affected, judging from the rates current in the Street, which we quote as follows: Extra choice 60-day paper, 5 to 6 per cent., and first-class 90-day paper 6 to 7 per cent.

Money on call continues very easy at 2 to 3 per cent. There was a slight hardening in the rate this afternoon, when a few loans were made as high as 3½, but this was exceptional, and can hardly be quoted, as large amounts were offered at the same moment at 3 per cent.

The continued loss of bullion by the Bank of England led to the expectation that the minimum discount rate would be advanced on Thursday; but Cable advices state that no advance was made, and the rate remains standing at 3 per cent. The amount of bullion lost by the Bank was £451,000. The Bank of France lost 5,730,000 francs in specie during the week.

The bank statement on Saturday showed a further loss in surplus reserve amounting to $1,135,725. The deposits have fallen off $3,454,700. The following is the statement in detail:

	Oct. 3.	Oct. 10.	Differences.
Loans	$281,277,000	$281,377,800	Inc... $100,800
Specie	18,374,200	16,946,700	Dec... 1,427,500
Legal tenders	63,966,100	62,394,200	Dec.. 1,571,900
Deposits	236,925,900	233,471,200	Dec... 3,454,700
Circulation	25,419,600	25,115,800	Dec.. 303,800

The following shows the relations between the total reserve and the total liabilities:

	Oct. 3.	Oct. 10.	Differences.
Specie	$18,374,200	$16,946,700	Dec.. $1,427,500
Legal tenders	63,966,100	62,394,200	Dec.. 1,571,900
Total reserve	$82,340,300	79,340,900	Dec.. $2,999,400
Reserve required against deposits	59,231,475	58,367,800	
Excess of reserve above legal requirem't,	23,108,825	21,973,100	Dec.. 1,135,725

The stock market during the week has been marked by a disposition to realize upon the part of holders, under which prices have fallen off. The leading stock of the list was Lake Shore, speculation in which hinges upon the prospect of the Company being able to pay a dividend in February next. The widest fluctuation has been in Erie, which has closely followed the London market, where the price tumbled to 26½ upon the report of the accountants who recently examined into the affairs of the Company in this city being made public at the London Stock Exchange. The extreme fluctuations in Erie in this market have been between 35¼ and 29½. Western Union fell off 3 per cent., Pacific Mail, 3½ per cent., and the balance of the list lost from 2¼ to 1 per cent. from the highest prices reached during the early part of the week. The decline in prices has encouraged short sales among the small operators in the Stock Exchange, while those already short, and who have been looking forward to trouble among the merchants as a cause for lower prices, have evidently increased their lines.

The investment stocks are dull, and in some cases lower, the demand from investors running more in favor of good railroad mortgages.

The highest and lowest prices for the week ending Saturday, October 10, 1874, have been as follows:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday	Total.
N. Y. C. & H. R...	102¼ 102¾	101¼ 102	101¾ 101¾	101⅝ 101¾	101½ 101¾	101⅝ 101¼	21,700

Harlem.....	 129	.... 127½	.... 129½	129½ 129¾	.... 129¾	 129	1,860

Government bonds continue to be in good request for home investment, very few bonds going abroad, while it is stated that 5-20's have been coming this way to be exchanged into the new 5 per cent. bonds. The supply of bonds, outside of the new 5's, is still very limited, and prices consequently are firm, especially for large amounts.

The following are the closing prices for Governments this evening:

	BID.	ASKED		BID.	ASKED
Coupon 6's, 1881	118	118¼	Coupon 6's, 5-20's, 1867	117¼	117⅜
Coupon 6's, 5-20's, 1862	112⅝	113¼	Coupon 6's, 5-20's, 1868	117¼	117⅜
Coupon 6's, 5-20's, 1864	115½	115¾	Coupon 5's, 10-40's	111⅜	112
Coupon 6's, 5-20's, 1865, M. & N.	116½	116¾	Coupon 5's, of 1881	112¾	112⅝
Coupon 6's 5-20's, 1865, J. & J.	116	116⅛	U. S. Currency 6's	117¼	117¾

Railroad bonds are active, with prices a little lower on those of a few prominent roads. Union Pacific Firsts were weak during the early part of the week, but closed on Saturday at 88¾ to 89, after having sold down to 87½.

Gold has been more active, and was strong up to Thursday upon the firmness of foreign exchange and the supposition of an advance in the Bank of England discount rate; with an easier condition of the London money market, the price fell off to 109¾ from 110¼, finally closing at 110⅛ on Saturday. The subsequent upward reaction from the lowest price on Thursday, 109¾, was due to the demand from those who were short to cover. The following shows the range of prices for every day of the past week:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Monday, Oct. 5	110⅛	110⅜	110	110⅛
Tuesday, Oct. 6	110⅜	110¼	110⅛	110⅛
Wednesday, Oct. 7	110⅛	110⅜	110	110
Thursday, Oct. 8	109¾	110	109¾	110
Friday, Oct. 9	110	110⅛	110	110⅛
Saturday, Oct. 10	110⅛	110⅜	110	110⅛

The specie shipments for the week were unimportant and consisted entirely of silver bars.

NOTICE TO THE HOLDERS
OF THE
FIRST-MORTGAGE BONDS OF THE OREGON AND CALIFORNIA RAILROAD.

The undersigned Trustees are prepared to purchase, for the Sinking Fund, a certain amount of the First Mortgage Bonds of the Oregon and California Railroad Company, and hereby invite offers of such bonds from holders.

The lowest offers will be accepted up to the amount of the available means which are derived from the sale of the Company's lands; but no proposals above par and accrued interest in gold will be considered.

Communications stating amount and price of bonds, and marked "Offer of Oregon and California Railroad Bonds," may be addressed to the undersigned, care of the London and San Francisco Bank, San Francisco, California.

FAXON D. ATHERTON, } Trustees.

SAN FRANCISCO, Sept. 1, 1874.

Prospectus for the Republication of

BISHOP WHITE'S MEMOIRS OF the Protestant Episcopal Church in the United States. Edited and Continued to the present time by William Stevens Perry, D.D., Historiographer of the American Church.

The work will be comprised in a handsome octavo of 450 to 500 pages, and will be printed and bound in the best manner. It will be put to press immediately on securing five hundred subscribers at $5 per copy. On publication, the price will be advanced to $6.

E. P. DUTTON & CO., PUBLISHERS,
713 Broadway, New York.

NEW SHOOTING BOOKS.

FIELD, COVER, AND TRAP Shooting. By Capt. A. H. Bogardus. With Steel Portrait and engraving of the "Champion Medal." 1 vol. 12mo, fancy stamped cloth, $2.

A compendium of many years of experience, giving hints for skilled marksmen and instructions for young sportsmen, describing the haunts and habits of game-birds, flight and resorts of water-fowl, breeding and breaking of dogs, and everything of interest to the sportsman. The author is "champion wing-shot of America," who knows a gun as Hiram Woodruff knew a horse. And he has the same careful and competent editor who put Woodruff's 'Trotting Horse of America' into shape —Chas. J. Foster, so many years sporting editor of Wilkes's *Spirit of the Times*.

AMERICAN WILD-FOWL SHOOT- ing. By Joseph W. Long. 1 vol. 12mo, Illustrated, fancy stamped cloth, $2.

A book of practical, specific instruction as to the different species, habits, haunts, and pursuits of wild-fowl, the building and use of blinds, boats, decoys, etc., the training of water-retrievers, and many miscellaneous hints of great value to hunters of wild game-fowl. Full of admirable descriptions, adventure, etc., etc. The only book of the kind in the English language.

The Nation.

NEW YORK, THURSDAY, OCTOBER 22, 1874.

The Week.

WHETHER the President desires a third term or not, or whether there is the smallest chance of his having one or not, enough has been said about it to induce large numbers of people to believe that his friends are scheming in favor of it, that unless they are checked in their mad career he will be nominated by the Convention, and the people be forced to re-elect him on pain of military execution. The reasons for fearing this forcible extinction of American liberties are summed up in the *Tribune*, and they are these: The appearance in "the President's kitchen organ" of "third-term leaders"; the passage of third-term resolutions in South Carolina and Florida Republican conventions; "the writing of third-term letters" by "Kemper and other Southern politicians"; third-term speeches by Pomeroy and Conkling at Utica; and a "distinct and positive third-term pronouncement" by Alexander H. Stephens. Our contemporary has forgotten one other sign of danger—the third-term productions of the leading minds of the New York *Herald*.

The defeats in Ohio and Indiana, coming so soon after the above-named alarming indications, have apparently convinced the Republican politicians that something must be done to quell the popular apprehensions, and accordingly there come rumors from Washington that General Grant is to be called on, in his character of a "simple-minded man of great sagacity and honest patriotism," as Judge Pierrepont styles him, to declare that he will under no circumstances be a candidate for re-election, in order to save the party from further disaster in November. Infantry, cavalry, and artillery are clearly not in favor with the people as instruments of popular government. There is talk also of compelling General Dix to declare himself against a third term, and, in fact, of taking every possible precaution against so marked a change in the Government as a third term would involve. The affair is curious and interesting, mainly in one way—viz., as an illustration of the existence of a belief, more or less widespread, that any man nominated for the Presidency by a party which has control of the offices would have to be elected whether the voters pleased or not, or, in other words, that we have already entered on that "transition stage" through which other republics have passed, in which the people are allowed to keep the republican forms after the power has gone from them. We do not think this belief has any foundation, but it is a belief which may do great mischief in a community which has as large a capacity for resignation as this has. The nomination of Butler, for instance, is something which already suggests to many minds no more fruitful reflection than that the ways of Providence are inscrutable, and that man is born to trouble.

The October election returns show heavy Republican losses. In Ohio, where a full vote was polled, there is said to have been a great deal of scratching, and the Irish and Germans voted solidly with the Democrats, who carried the State by some 20,000 majority. The prohibition plank in the Republican platform, and exasperation caused by the women's crusade, are supposed to be at the bottom, or pretty near the bottom, of the Conservative enthusiasm in this State. In Indiana the democratic majority is about 15,000. Nebraska, on the other hand, has gone Republican by 10,000 majority; while in Arkansas the new constitution and the Democratic-Conservative ticket have been carried by majorities so overwhelming, that the other party (*i.e.*, the supporters of Brooks) may be said to be annihilated. In Iowa the Republicans have increased their old majority. Elections were also held in West Virginia and Dakota, but these were comparatively unimportant. The effect upon the next Congress will be very marked. According to the *Times*, the elections already held in nine States this year give sixty-two Congressmen evenly divided between the two parties, whereas in the last Congress the figures for the same States were 44 Republicans to 19 Democrats. For Indiana, Iowa, Ohio, Nebraska, and West Virginia the *Times* gives 23 Republicans to 23 Democrats this year, against 33 to 13 last year. These figures are without doubt substantially correct. If New York and Pennsylvania go Democratic, there will in all probability be a Democratic majority in the next Congress. On looking over the list of Congressmen elect, one is struck as usual with the small number of names known outside the State limits; but in a few districts the struggle was of considerable importance. Mr. Garfield, notwithstanding the desperate attempt to defeat him, goes back to Washington, while with him will go Mr. Charles Foster, who will probably make the winter an unpleasant one at odd moments for General Butler. Any one who followed Mr. Foster during the last session knows what an active, intelligent, and uncompromising foe he was to all sorts of chicanery and corruption, and will probably find in his re-election a consoling proof of the soundness of popular feeling on certain questions.

It would probably require a good deal of shrewdness to make out anything distinct from these elections as to the financial complexion of the next House. Ohio, being carried by the Democratic party, is in theory pledged to "such an increase of the circulating medium as the business interests of the country may from time to time require"; to making payable in greenbacks "one-half the customs duties," the abolition of the national banks, and the introduction of a uniform legal-tender currency, and the following proposition: "That the Democracy of Ohio reiterate their declaration that the five-twenty bonds, by the letter and spirit of the law and the general understanding of the community, were payable in legal-tender notes, and the act of March, 1869, which pledged the faith of the nation to their payment in coin, was an unnecessary and wicked sacrifice of the interests of the taxpaying laborer for the non-taxpaying bondholder; that without equality of taxation there can be no equality of rights." The Republicans in Ohio went into the campaign on an anti-repudiation and gradual-resumption platform. Indiana, having gone Democratic, has constructively adopted a repudiation, inflation, and interests-of-business-regulated resumption. The Republicans in this State were non-committal. Iowa is in favor of paying the bonds in specie, and also "of such legislation as shall make national banking free to all under just and equal laws, based upon the policy of specie resumption at such time as is consistent with the material and industrial interests of the country, to the end that the volume of currency may be regulated by the natural laws of trade." It seems hardly worth while to make any more extracts from this hodge-podge of platforms. The Boston *Advertiser* says that from Ohio and Indiana there are no more inflationists than there were in the last Congress, and it cannot be too strongly insisted upon that the action of the parties, as parties, on financial questions has not reached that point of consistency and determination that any one can say exactly what they mean to do with the currency. They do not in fact know themselves.

A convention of all the more prominent thieves, carpet-baggers, and scalawags among the Southern politicians has met at Chattanooga and adjourned. Before it came together, it was supposed to intend to deal conclusively with the third-term question and the Civil-Rights Bill; but it did neither. It merely appointed a committee on "outrages" in the Southern States, which reported that the out-

rages were so numerous and so terrible that much time would be occupied in "compiling" them. The committee was therefore given leave to sit after the adjournment of the convention and compile them. The resolutions refer principally to outrages, and demand that they be prevented, and people committing them be punished. They also demand that all incompetent or dishonest office-holders at the South be removed, and fit men nominated to fill their places. The convention is treated with a good deal of ridicule in the press, but we must say that, in looking over the names of the delegates, we can hardly imagine a body of men better qualified by position and experience to discuss "outrages" than they.

There is said to be considerable apathy in the canvass in this State, owing to the absence of any exciting local issue and to the exceeding respectability of both the candidates for the governorship. There is one person, however, who is by no means apathetic, and that is Mr. Samuel J. Tilden. He is said to be carrying on a canvass which for minuteness, skill, knowledge of human nature, and of the ins and outs of politics, has never been approached by any preceding master, and which is calculated to reduce even the Custom-house patriots to despair. We should think he would be accompanied in his journeys by young politicians, and that he would give them quasi-clinical lectures over doubtful cases, explaining his method. But then it makes one tremble to think how many obligations to queer people even the greatest adept in the art must incur in a process of this kind, and it reveals the facility with which Mr. Tilden managed to work with Tweed and his crew for some years before 1870. If General Dix could be induced to plant himself on the Democratic platform, it would doubtless create a great laugh, but it would make him a candidate who would leave nothing to be desired, except that he was ten years younger. If he were, we think it would make some things clear in national politics which now to many minds seem cloudy.

Mr. Bowen acknowledges, in this week's *Independent*, that there was a "personal contract" between himself and Mr. Cooke with regard to the Northern Pacific Railroad. He says this contract "was for labor, and for the personal aid and services of several other business men associated with Mr. Bowen, and not connected with any newspapers." This is not a denial of our charges, but it is an evasion of them. We have hitherto said no more about the contract than was necessary to furnish a text for some observations about "newspaper ethics." We will now further explain, in self-justification, that the contract in question is in the hands of Mr. E. R. Robinson, the counsel for the trustee in bankruptcy in this city, who, we are informed, has been instructed to sue Mr. Bowen on it, on the ground assigned by us, namely, that it is *contra bonos mores*, and the reason why it is considered *contra bonos mores* is that it stipulates that Mr. Bowen shall give to the sale of the Northern Pacific bonds "the exclusive interest and influence of *his money and editorial columns*." The "several other business men who were associated with him"—who were to have the benefits of the arrangement—are his nephew, who is in his office, and a Mr. Kibbey, who is also in his office. The facts of the case are simply these: Mr. Bowen subscribed $56,000 for bonds and the stock of the road, but paid no money. He then entered into the contract with Jay Cooke which we have described, and under it paid for $50,000 in bonds and $460,000 in stock, by the services described in the contract; and Mr. Cooke then gave him a receipt in full, as if for cash, a short time before his failure. The trustee now maintains that Mr. Bowen has obtained the bonds and stock under an immoral agreement, and without adequate consideration, and demands them back, as Jay Cooke himself might do if he were not met by the rule *in pari delicto*. It is absurd for us, however, to carry on a controversy with Mr. Bowen about the nature of a document found among a bankrupt's papers, and now in a lawyer's hands awaiting submission to a court of law. We therefore beg to suggest that Mr. Bowen should publish the contract, with Mr. Robinson's certificate of the accuracy of the copy. There are several classes of persons who are fairly entitled to see it: (1) The creditors of Jay Cooke & Co.; (2) the bondholders of the Northern Pacific Railroad; (3) the subscribers to the *Independent*; (4) the divines and moralists who, by contributing to Mr. Bowen's paper, and lending him the use of their names, make his "money and editorial columns" worth purchasing.

The English have for some weeks been passing through one of those mild excitements which lighten the dulness of the autumn, over an article of Mr. Gladstone's in the *Contemporary Review* on ritualism. Mr. Gladstone has never lost that early and somewhat æsthetic interest in ecclesiastical questions which first brought him into public notice, and he now comes out with a sort of defence of what may be called moderate ritualism—that is, of the infusion of more pomp and ceremony, of more art in short, into English worship, as a means of kindling fervor and giving some glimpses of beauty and splendor to people who, like the mass of Englishmen, pass their lives in dull, hard, ugly prose. The papers are now all busy pointing out to him that the ritualism for which he sighs is an impossible thing, for two reasons. The first is that the great body of Englishmen, under the influence of time-honored and deeply-rooted traditions and prejudices, regard all attempts to make church ceremonies more complicated and gorgeous as signs of a tendency towards Romanism, to which they will not submit. The second is that the ritualists who are now disturbing the church, and even endangering its existence as a state institution, do not care at all, or only care in a very minor degree, about the objects Mr. Gladstone has in view. At the bottom of all their pomp and ceremony lies the doctrine of transubstantiation, or, in other words, the notion that the clergy can convert bread and wine into the real body and blood of Jesus Christ as often as they please, and their ritualistic performances, which give so much offence, are simply intended to surround this tremendous piece of "magic," as the *Pall Mall Gazette* calls it, with greater dignity and solemnity. Of course, men who fancy they are engaged in such work as this are not likely to give much consideration to the effect of their ceremonial on the worshippers; and to the youngest divine among them Mr. Gladstone's talk about the æsthetics of the matter must seem childish prattle.

The question of juries in Ireland is giving the Irish lawyers and judges and police serious trouble, and has been made the subject of an investigation by a Select Committee of the House of Commons, whose report has just appeared. Until 1872, Irish jury-lists were made up substantially at the discretion of the sheriff, who drew on such classes of the community as he thought best, and, as a matter of fact, he always drew in the main on the Protestant gentry and farmers. The result was not unnaturally a great want of confidence in the administration of justice on the part of the Catholic peasantry, which forty years of thorough impartiality on the part of officials had not been sufficient to eradicate. An effort was therefore made in 1871, by an act introduced by Lord O'Hagan, to remedy this state of things, by directing the sheriff to summon all persons indiscriminately possessing property assessed for the poor-rate at $100 a year. The result has been that the juries are largely composed of ignorant peasantry, and the failures of justice have become both alarming and ludicrous. The juries are regularly canvassed before the criminal trials and pledged to acquittals; they are accompanied often by great crowds to the court-house, who cheer them as they enter, and bid them "go in and free the boys." Convictions for crimes which in any way rouse party or class feeling—such as offences committed by a poor against a rich man, or by a tenant against a landlord, or crimes which do not violate popular morality, such as faction-fights or friendly riots—are all but impossible. In many cases the juries are so ignorant that they do not in the least understand the proceedings. In one case, in Tipperary, it was discovered that a juror was very drunk, and another had

just returned home from the penitentiary after serving a term of seven years for cattle-stealing. The committee recommend a raising of the ratepaying qualification, the summoning of a larger proportion of persons of the upper class and freeholders and leaseholders, so as to mingle all classes in the panel, and the drawing of juries by ballot instead of, as hitherto, in alphabetical order. A portion of the Irish public defends the present law, however, on the ground that it will gradually win the peasantry over to the side of the law, and will educate them in their duties as citizens, and that the worst is over; in short, "that all will come out right in the end"—and this is a view for which there is doubtless a great deal to be said.

The news from Spain is very wearisome, and has undergone no perceptible change in character. The Carlist bands who come in and surrender to the Republicans one week are the next reported to be in the field fighting as lustily as ever. The great mutinies which take place in the Carlist ranks seem to have no perceptible effect on their numbers. Don Carlos has got well of the mortal wound in his stomach, and indeed it does not seem even to have confined him to the house a single day or to have caused him the loss of a single meal. General Moriones has relieved Pampeluna, which was sore beset, but on the way back he seems to have sorely needed relief himself, for he was assailed and came near being destroyed. "Combats" of greater or less magnitude take place here and there and everywhere without apparently producing the smallest effect on the progress of the war. The Republicans appear to have barely enough men to hold their own, and though they abound in generals, are so short of regimental officers that they have had to make fifty battalions out of eighty. They cannot apparently subdue the Carlists in the mountains, and the Carlists will not, or cannot, come down on the plains and subdue them. The explanation of this deadlock is no secret. When Castelar tried to establish his federal republic, he and his friends came to the conclusion that, as it is always the army which overthrows governments in Spain, the one thing needed to make the new one last was to get rid of the army. So they broke it up, and thereupon the federal republic went to pieces, and it was with the utmost difficulty that a revolt of lunatics and criminals in one city was put down. A great many of the best officers left the service in disgust; many more joined the Carlists; and it was soon found that the creation of an army was not work that could be done in a month or a year. Troops enough were soon found to disperse the Cortes, but enough have not been found to this day to drive the Carlist pretender out of Spain. In fact, his assailants are simply battalions of badly organized, badly led militia. The whole story, which is now an old one, is a fresh illustration of the truth that the republic of a great many European radicals resembles the kingdom of God in not being of this world, however unlike it may be in other respects. In fact, it rests on the assumption that every man will do his duty, while all orderly and successful human society has hitherto rested, and, if we are to place any reliance on experience, will always rest, on the very different assumption, that men will not do their duty if they can help it, and that they have to be reminded of it and pushed into it by endless contrivances.

At Madrid complete despondency seems to prevail, and the feeling in favor of foreign intervention apparently grows. The press points out that there would be nothing new or humiliating in this, because Spain has frequently had intervention when she got into trouble. The English intervened to drive out Napoleon; the French intervened in 1823; the British sent a "legion" to intervene in the last Carlist war. Who is expected to intervene now there is no difficulty in guessing. There is only one power in Europe in the least likely to do it, and that is Germany, and German intervention, which the English papers scouted as preposterous, they now begin to set down among the probabilities. The temptation to Bismarck would be the display of German preponderance, and the chance of giving the Ultramontane party a severe castigation; of establishing German influence in the Peninsula; and, his worst enemies say, of irritating France into some act or expression that would bring her again under the millstone. On the other hand, there is a report that the Madrid Government has offered the command of the Northern army to Marshal Bazaine, on condition that he will bring with him a hundred French officers. In fact, there seems to be no scheme too humiliating for Spaniards to entertain just now. The nation is apparently without morale enough either to carry on war or stay at peace.

There is nothing new in French politics. The elections of the Councils-general of the Departments, to which a good deal of importance was attached as an expression of public opinion, have given a heavy majority to the Monarchists—divided between Legitimists and Bonapartists—and it is generally acknowledged that the Bonapartists are gaining ground. In the last three elections for the Assembly—those of Pas de Calais, Alpes Maritimes, and Seine-et-Oise—a Bonapartist has triumphed in the first and Republicans in the others. The Republicans are, in fact, slowly increasing in numbers in the Assembly as vacancies occur, and so are the Bonapartists, but not in the same degree. The Septennat is in the meantime growing much more irritable, and is laying a heavy hand on the press—suspensions of newspapers being very common for the use of "insulting expressions" towards the Government. The exceeding thin-skinnedness of the Frenchmen about "insults," however, deprives this of a great deal of its significance as regards the tendencies of Marshal MacMahon's Government, though it is none the less a bad sign for the future of France. It is hard to see how a parliamentary government can succeed in a country in which a man is driven almost crazy if any poor scamp calls him names. A man on the streets of Rouen the other day indulged in some slangy abuse of a general who was driving past in his carriage, whereupon the carriage was stopped, the general got out, came up to the man, and asked him with great agitation—"Miserable coward, why do you insult me?" And the man, who was half-drunk, had to be arrested and tried, and sent to jail for thirteen months, before the social equilibrium was restored.

The Chinese and Japanese are and have been for months on the verge of a war, brought about through the performances of the savage inhabitants of the island of Formosa, which lies off the Chinese coast, not far from Amoy; though for ages subject to China, strange to say it has not been wholly conquered by Chinese civilization, so that the natives of the eastern part remain savages and pirates, for whose outrages on foreigners the Chinese Government has declined to consider itself responsible, leaving injured nations to get redress as best they could, provided they did not occupy the soil. As the island is in the direct highway of Chinese commerce, the morals of the people have of course long proved a great hindrance and annoyance. This year a Japanese vessel was wrecked on the coast and the crew plundered as usual, whereupon the Japanese, who are rather anxious to try their new Western armament and drill, and have to find work of some kind for the discharged retainers of the great Daimios, failing to get redress from Peking, landed troops, chastised the islanders, and occupied their territory. This caused so much indignation among the Chinese on the mainland that an ultimatum was sent to the Japanese Government from Peking, calling on it to withdraw within three months or take the consequences. But the Japanese refused to stir, and sent an embassy, which insisted on going right up to Peking, offering to evacuate if China will undertake to keep the Formosans in order herself, and will acknowledge that the Japanese were in the right in landing on the island. The Chinese are in the meantime pursuing a policy of delay, it is believed, with a view of getting ready to fight, and there is a rumor that they are trying to negotiate a loan of $15,000,000 through "an influential American firm," which, if true, is perhaps the most striking proof they have yet given of readiness to adopt Western usages.

THE ELECTIONS.

THERE is the usual variety of explanations of the Democratic victories in Ohio and Indiana. It means the growing disgust of the people with Republican rule generally; it means a rebuke of poor Republican nominations; it means the division of the party on temperance and other local issues; it means the demand of the majority in these States for more paper-money; and it means horror of a third term. We find all these views of it taken with equal vehemence in Republican and Democratic papers, and there are facts which give a certain amount of plausibility to each of them. Candid lookers-on must admit, however, that the main reason of the change is a combination of growing hostility to the dominant party with growing indifference to its fate, and this is a theory which is not upset by any talk about "local issues." The national questions now pending are of such transcendent importance that few Republicans are likely to put them in the second place except those who are dissatisfied with the treatment of them by the party in power. Saying that the party is defeated because its members left it in order to take part in small State controversies, is an apology of the same character as that so often put forward by the European radicals for the failure of their republics, that the republic would succeed if it was not for the bad men. The mark of a true republic is that it succeeds in spite of the bad men; and the mark of a strong party is strength—or, in other words, the willingness of most people to vote its ticket. Nor can it be truly said that this is the lukewarm second year of the Presidential term, when people are usually careless or indifferent. With the Southern problem and the currency problem unsettled, no year can be "an off-year" in Federal politics.

We fear, too, it must be said that there is no sincere grief over the result anywhere outside official circles. We venture to assert that the feeling among ninety-nine hundredths of the better class of Republicans towards the party is very like that of the old Scotch minister who prayed for Charles I.—"Laird, shak him ower the mouth o' hell, but dinna cast him in"; that is, they are not altogether sorry to see the managers thoroughly frightened at this distance from the Presidential election, in the hope that it may awaken them during the next two years to a sense of the gravity of the situation. Public patience has been sorely tried during the last two years by the indifference of the party about the state of things at the South, by its treachery in the matter of civil-service reform, its imbecility with regard to the currency, and by the looseness of its morality; and, finally, is now troubled by the boldness of the countenance given to the third-term cackle, and the mendacity of the "outrage" uproar. The convention at Chattanooga has been a very hard thing for decent people to bear. Its principal members have been prominent for some time back in all the scandals and disorders of Southern politics. There is a deep-seated feeling among good citizens at the North that such worthies as Pinchback, McClure, Clayton, and Brooks (of Arkansas) ought, if they do not dread the penitentiary, at least to avoid obtruding themselves prominently on the public gaze. Their coming together, therefore, under the eyes of the whole country, to offer to supply "outrages" for the use of the party during the winter, was trespassing too far on popular forbearance and good temper. The state of mind of these Southern "loyalists" was well illustrated by a letter to the convention by Governor Davis of Texas, which has been since printed as a broadsheet, and circulated widely as an indictment of the Democratic party at the South. Governor Davis is one of the best of the Southern Republicans, and yet he declared that from his knowledge of Moses of South Carolina, and of Kellogg of Louisiana, he would not believe any of the charges made against them.

The probable consequences of the Democratic victories are, however, of more importance than their causes, and are likely enough to be serious. They are likely, in the first place, to produce other successes of a similar character in November by the process of stimulation applied to the wavering, which has been so often described by the newspapers. A great many indifferent, hesitating people will vote the Democratic as the winning ticket, and this result is likely to be very marked in this State, owing to the excellence of both the candidates for the governorship. Many Republicans even will feel that they cannot do local mischief by voting for Tilden, and they will seize the opportunity of emphasizing the rebuke uttered by Indiana and Ohio. Their number, too, is not at all unlikely to be increased by the sight of the chastening effect which the Western overthrow is already producing on the organs and the managers. Those who were toying with the third-term idea are already dropping it as if it were an explosive compound, and some have begun to declare that they never liked the look of it. We suspect Mr. Conkling begins to feel that it might not have been amiss to condemn it in express terms at Utica. We think, too, that the theory that the managers could arrange things so that the third term would be introduced to the Republican Convention in 1876, and voted by acclamation, while the people stood helplessly by and bowed their necks to the yoke, has received a rude shaking within the last few days. We now see clearly enough that the people have only to be satisfied that politicians are thinking gravely of a third term, to make every politician in the country swear two years before the Convention that the mere thought of it is hateful to him. We are in a bad way doubtless, but things have not come to that pass yet

There is, however, no matter how salutary the influence of Democratic victories on the Republican party may be, great reason to fear that they may work a good deal of mischief. If the Democrats were a regularly organized opposition, led by able men, provided with a body of political doctrine and a stock of well-understood and deeply cherished traditions, most thinking people would say that it was about time that the Republican party gave way to it. It would be hard to point out a single point of policy or morals that would suffer by the change. A party which has put the Attorney-General in command of the army and navy, which has Butler for one of its chief counsellors, which has acknowledged its inability to legislate on the principal questions of the day, and whose President is the intimate friend of "Boss" Shepherd, has clearly outlived its usefulness, and it would be well if a successor could be found for it. But the Democratic party is not a regularly organized opposition. It has no body of political doctrine, and no traditions and no leaders. It is a loose, incoherent mass of persons, scattered in greater or less numbers over the Union, without any common creed or common aims, and no hundred of them think alike on any topic of national interest. Nobody can say what are their views about the currency, or the tariff, or the Southern problem, or the transportation problem, or the civil-service question, or any other question. Some of them say one thing on all these topics, and some say another, the exact opposite. The *World* and some of the New Yorkers say that the Democratic creed is summed up in the phrases "hard money, free trade, home rule"; but the Indiana and Ohio brethren want paper-money and plenty of it and "virtual repudiation of the public debt"; and you probably could not find a Democrat in the country who would define for you what he meant by "home rule" and at the same time explain to you how it was to be attained or preserved. The only things by which a Democrat is distinguishable from a Republican are the name and his desire to get the Republican out of office. Now, even if we admit that a "party" can be made up in this way, such a party is clearly not an opposition—that is, an organization possessing certain definite political aims, and ready to take charge of the government if called on. There is, therefore, no successor for the Republican party ready; and until opinions and sympathies and ends have taken more definite shape and crystallized into something like organization, nothing is to be gained by turning the Republicans out of power, although doubtless much may be gained by cutting down their majority in the House of Representatives.

On the contrary, there is very great danger, of which we would warn those who are irritated or alarmed by the third-term talk, that if these Democratic triumphs go much further it may ruin our chances of a better régime in 1876. They will send into Congress a considerable force of politicians who have had no party training and are under no party discipline and have no fixed party principles, who will, we may be sure, be tolerably violent and extra-

vagant in their talk about the South and the public debt and the currency, and this talk will find plenty of echo among their followers out-of-doors, and will rouse a great deal of unreasoning expectation at the South, and spread alarm among the public creditors, and deepen the already too deep distrust and despondency of business circles, and bring the Convention of 1876 together in the midst of a feverish reaction, in which the rashest, most reckless, and unscrupulous of the Republicans would once more be in the ascendant, and the principles and practices of constitutional government be placed in greater peril than ever. This, it must be confessed, is a deplorable dilemma. There is one way out of it, and only one. We must get the Southern question settled. We must insist on the carrying-out of the original theory, and the only sound one, on which reconstruction was based, viz., that the ballot would enable the negro to take care of himself, and thus relieve the National Government of a duty which it had neither the authority nor the machinery to perform. Our firm belief is that if the negro at the South were once fully convinced that he had to rely on the ballot and on industry and conciliation for his peace and security, and that no troops were coming, and that there was no money to divide, Southern troubles would rapidly cease, and such carpet-baggers and scalawags as have not enriched themselves would return to their bars and barber-shops and let the unhappy black man alone. After this consummation had been reached, parties would grow up at the North around those great questions of administration and legislation which the war and the rapid natural development of the country have raised, and we should once more resume the path of careful and orderly progress from which the slavery agitation and its consequences have during the last generation driven us. It were better that all the blacks and whites now living south of Mason and Dixon's line were sunk in the sea than go on as we are going now, for we are forming habits and establishing precedents which can only lead to a result over which many generations would mourn and wonder. It ought not to be necessary to say again and again in this country, and at this time of day, that no problem of peace was ever yet settled by bayonets. Infantry, cavalry, and artillery have never yet proved an efficient substitute for the courts of justice, and they never will.

A CASE FOR THE DEPARTMENT OF JUSTICE.

FOR some days past we have seen scattered through the newspapers references to an important charge to a United States grand jury in Kentucky, delivered by Judge Ballard of that State. Finding it quoted with praise and admiration in the Democratic papers, we have looked into the Republican organs to see what could be said on the other side; and we have there learned that this charge was indeed important; that, in the opinion of no less a person than the official divulger of the secrets of the Attorney-General's breast, this charge of Judge Ballard was the disloyal act of a treasonable man; that it was an opinion intended and calculated to nullify and abrogate the Thirteenth and Fourteenth Amendments to the Constitution of the United States; to deprive the negro of the rights guaranteed him by the great charter of the country, and wrung for him from the humbled legislatures of eleven sovereign States; we have learned also that Judge Ballard in this charge greatly exceeded the acknowledged limits of judicial power, and undertook to lay it down to a docile (and probably Democratic) jury that the masked assassin and the midnight robber might murder or plunder the African at his will upon the highways of Kentucky, when in reality, and as a matter of law, this question was still to be decided by the Supreme Court *in banco;* more than this, we learnt from our Republican contemporaries that iniquities like these, committed by a judge of the United States, could not any longer be tolerated; that they demanded condign punishment—or, in other words, the impeachment of the criminal for high crimes and misdemeanors before the Senate of the United States.

We have now before us a copy of the charge of Judge Ballard, and are surprised to find that it differs very much from the picture of it presented to our imagination. Far from being a hot, impassioned appeal to the Kentucky Ku-klux, urging them to go on and complete their bloody work, the Judge denounces the Ku-klux, saying, in so many words, that outrages are "extremely grievous"; that they are "a disgrace to our State and to our civilization"; that "they are tarnishing the fair name of the State"; and that "it is of the highest importance that they should be repressed by swift and severe punishment." As to the negro, he is of opinion that, under the Thirteenth and Fourteenth Amendments, the colored citizen has obtained a great deal of protection and sheltering care; that, for instance, all that important part of the Ku-klux Act of April 20, 1871, providing punishment in all cases in which "two or more persons within any State or Territory of the United States shall conspire together, ... by force, intimidation, or threat, to prevent, hinder, or delay the execution of any law of the United States; . . . . or by force, intimidation, or threat, to prevent any person from accepting or holding any office of trust or place of confidence under the United States, or from discharging the duties thereof; or by force, intimidation, or threat, to induce any officer of the United States to leave any State, district, or place where his duties as such officer might lawfully be performed; or to injure him in his person or property, on account of his lawful discharge of the duties of his office, or to injure his person while engaged in the lawful discharge of the duties of his office; or to injure his property, so as to molest, interrupt, hinder, or impede him in the discharge of his official duty; or by force, intimidation, or threat, to deter any party or witness in any court of the United States from attending such court, or from testifying in any matter pending in such court, fully, freely, and truthfully; or to injure any such party or witness in his person or property on account of his having so attended or testified; or by force, intimidation, or threat, to influence the verdict, presentment, or indictment of any juror in his person or property, on account of any verdict, presentment, or indictment lawfully assented to by him, on account of his being or having been such juror"—we have not space to quote in full—is not only plainly constitutional, but "the statute might have gone further than it does," for it only punishes conspiracies of two or more persons to do particular acts, and has strangely neglected to provide punishment for the acts themselves.

All this does not seem very treasonable. What is the crime, then, which Judge Ballard has committed? In brief, it is this. The Ku-klux Act provides that "if two or more persons within any State or Territory of the United States shall conspire together, or go in disguise upon the public highway, or upon the premises of another, for the purpose, either directly or indirectly, to deprive any person or any class of persons of the equal protection of the laws, or of equal privileges or immunities under the laws, . . . such persons so offending shall be deemed guilty of a crime against the United States," and punished accordingly. This provision Judge Ballard directed his jury was unconstitutional, for the reason that the Fourteenth Amendment to the Constitution of the United States—providing that "all persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States, and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws"—is evidently directed at the State acting through its legislative, executive, or judicial department, and not at individual members of the community who may take it into their heads to rob or murder in disguise on the public highways, to commit arson or burglary, or even conspire to dress themselves up in white sheet and skull-and-bones, and, carrying a jack-o'-lanthorn, to go trespassing on negroes' premises. These offences have always been and must always be punished by the State. In other words, Judge Ballard upholds the Ku-klux Act in its main features and important part, and declines to take jurisdiction under it where its provisions are plainly unconstitutional.

We would suggest to the learned Attorney-General that instead of the cumbrous and obsolete method of impeachment there is a

shorter way of securing punishment for Judge Ballard, and that is by proceeding against him and his jury for a conspiracy, under this same Ku-klux law, to deprive the negroes of Kentucky of the equal protection of the laws and the privileges and immunities of the Fourteenth Amendment. It would be difficult to imagine a better way of proving that the United States has jurisdiction in these cases than by locking up and fining any judge who thinks it has not.

THE EXPERIENCE OF A GREAT CORPORATION.

THE London & North-Western Railway Company controls one-seventh part of all the railroad mileage of England. By construction, amalgamation, or lease, it owns and operates 1,600 miles of track, represented by £76,500,000 of capital, while its revenues in 1873 amounted to £8,767,719, and its net income for that year was not less than £4,181,664. This, we presume, now that the East India Company is extinct, is the largest and most wealthy private corporation of the Old World. It has, however, been surpassed in the New. The Pennsylvania Railroad Company now controls 6,000 miles of track, represented by $400,000,000 of securities; its annual revenues amount to $80,000,000, leaving $25,000,000 of net income in the hands of the Company.

In both cases, these colossal figures represent less than half a century of growth, for the English road was begun in 1826, and the American not until 1831. Only as recently as 1854 was the latter completed from Philadelphia to Pittsburg, and not until 1869 did the enterprise at last enter upon its latest career of startling development. Vanderbilt had then taken control of the New York Central, while Fisk and Gould were manipulating the Erie; both were stretching out to the West, and seeking to grasp and monopolize the vast commerce which flowed to and fro between the Valley of the Mississippi and the seaboard. Their projects, combinations, and threats soon awoke the Pennsylvania interest to a sense of impending danger, and under the energetic lead of its first vice-president, Colonel Scott, that interest soon made its presence and its power felt. It would have been difficult to conceive and impossible to depict a defeat more ludicrously decisive than that which then befell the Erie robbers. They were no match for their formidable competitors, who thereafter and for the time being seemed both ubiquitous and insatiable. First, the great region west of the Alleghanies, and bordered by the Lakes, the Ohio, and the Mississippi, was secured; then, control was obtained of the roads of New Jersey; next came development to the South, and the Potomac and the Ohio were both crossed, the first in the direction of Richmond, Charlotte, and Montgomery, the last with an eye to New Orleans. Here the corporation rested, but those to whom was confided the conduct of its affairs did not. They were equally active in Michigan, in Minnesota, and in Texas. They manipulated the Pacific railways, and managed construction companies; they were manifestly ubiquitous; they were apparently successful.

Here is railroading on the largest possible scale, and it is only through railroading on the largest possible scale that certain results can be accomplished. To transport either persons or merchandise at the lowest possible cost, corporations must operate thousands of miles of road, must handle millions of tons, and must deal with tens of millions of money. This the Pennsylvania corporation did, until, alarmed at the rapidity of its pace, those interested in it insisted on pausing to take, as it were, an account of stock. They did so; and the results as now made public are of great interest in their bearings on what is known as the transportation problem. A few of these results we now propose to discuss for the benefit of railroad reformers, real and professed.

First, as to the cost of railroads and the profit on capital invested in them. The Pennsylvania Railroad proper includes 365 miles of road, which represent an actual present value, including equipment and terminal facilities, of $94,000,000, though the investment stands at but $48,500,000, or $132,000 per mile. On this trunk-road, it is alleged, the net earnings are no less than 19 per cent. per annum. But the parent line has directly connected with it, east of Pittsburg, 656 miles of branches, and also leases 1,387 additional miles of railroad and 408 miles of canal; making a total of 2,816 miles of railroad and canal, representing an aggregate cost of $76,000 per mile, upon which, taken together, a net annual profit of 7.87 per cent. is realized. West of Pittsburg, the corporation controls 3,025 miles of road. By one system, of 1,707 miles, it reaches Chicago and the Lakes; by another, of 1,318 miles, it gets access to Cincinnati and St. Louis on the south and west. The first of these two systems is represented by a capital of over $51,000 per mile, upon which the annual profit is 8.42 per cent; the last by an average of $65,000, upon which the annual profit is 1.38 per cent. The average capital account of the whole 6,000 miles is close upon $67,000 per mile. This, it will be noticed, is as near as may be 50 per cent. more than the average of railroads in the United States. Probably, all allowances being made, including interest and the cost of equipment and terminal facilities, this $67,000 per mile represents, much more nearly than would generally be supposed, the actual cost of these properties; certainly, it comes much nearer to that amount than to what it would now cost to duplicate them. The net earnings of this whole system of picked roads thus amount to 6.39 per cent. per annum on the capital which they represent. The average earnings of the Massachusetts system are 6.26 per cent. per annum—a close verification of public by private statistics.

At the present value of money in this country, this is working upon a tolerably close margin of profit; it is hardly a reasonable return on the capital invested. Turning now to another matter, the next question is how much work, and at what cost, is done to earn this 6.39 per cent. The cost of the Pennsylvania road has risen in ten years from $32,000,000 to nearly $52,000,000, or 60 per cent. Here is a large amount of what the apostles of the Granger movement call "water." What this "water" really is we propose to show presently. During the same term of ten years, the tonnage moved one mile has increased from 420 millions to 1,384 millions, or 230 per cent., and the passengers moved one mile from 146 millions to 177 millions, or 20 per cent. How was this vastly increased call for transportation met? It could be met only in one way—by increase of capital—more locomotives and cars, additional tracks, larger stations. All these cost money. This money had to be invested; it was procured from some quarter, and was invested with the result that 60 per cent. of new capital brought in 69 per cent. of increased earnings to the company. But this was the least noticeable part of the operation. The real question for the consideration of those who declaim against the increase of railroad capital is—Who gets the advantage of this "water"? Let us see. What was the amount of additional work done to earn the 69 per cent. increase? The amount of freight transported increased 230 per cent., the number of passengers 20 per cent.; in other words, through carrying an increased quantity by means of an increased capital, the amount paid by those who used the road was reduced from 2.48 cents per mile for each ton of merchandise carried to 1.41 cents; and while the cost of carrying passengers, owing to the growth of luxury in travel, has actually increased from 1.92 to 2.07 cents per mile, the net earnings on that business have decreased from 7 mills to 4.7 mills per mile. In this case, the public has reaped the lion's share of the advantage which has accrued from the much-abused increase of capital. The one decisive result which has flowed from it has been the decrease of rates. In other words, the larger the scale, the cheaper the transportation. To such a degree has this been the case that, although the increase of volume in freights has enabled the Pennsylvania Company to transport at a reduction of 37 per cent. from former rates, yet at the same time every dollar of the increased investment between 1864 and 1874 returned 28 per cent. of net income in 1873. Here is a very remarkable illustration of a principle in railroad economy which has hitherto been very partially understood, even by those who have made a study of the subject. A railroad is, on the one hand, a most expensive animal to keep. Its calls for more capital to develop or accommodate new business are unceasing; a veritable daughter of the horse-leech, it is incessantly crying: More! more!! On the other

hand, it is equally true that where a certain stage of railroad development is reached, every dollar of new capital judiciously invested in it not only does a much larger proportionate work of transportation than any dollar originally invested, but it also earns a much larger percentage of profit—in other words, that increased capital, so often and with such noisy ignorance denounced as "pure water," is exactly the motor which at once secures to the transporter reduced rates of carriage, and to the investor enhanced profits. In the case of the Pennsylvania Company, where the new capital will probably be applied with excellent judgment, it is now estimated that until the business of the road shall have been increased 75 per cent. over what it now is, every million of dollars hereafter invested will yield $430,000 of net income per annum.

Upon one other point, also, the experience of the Pennsylvania Railroad has been most instructive. It clearly illustrates the very important fact that, under our present industrial conditions, the reduction of freight on cereals between the interior and the seaboard in no way permanently benefits the individual Western farmer. This is a proposition which the Granger mind seems wholly unable to grasp. It is none the less true, and has indeed been to a degree demonstrated. Every reduction of cost of carriage to the seaboard does materially extend the area of production of cereals, and does also supply them to the Eastern consumers at greatly reduced rates, but, so far as the farmers are concerned, it in no wise affects their condition. If the Granger's vision of the future could be realized in letter and in spirit—if a double-track, steel-clad, exclusively-freight railway could be built to every farmer's door and carry thence his produce at a reduction of two-thirds of the present cost—the result would still be what has just been stated. It is exactly this which, on a smaller scale, the Pennsylvania and other roads have been doing during the last ten years. The facilities for transportation have been increased, and the charges upon it reduced, until breadstuffs are now brought to the Eastern markets over distances but a few years ago regarded as insuperable, and at rates below the actual cost. What has been the result? Most admirable for the Eastern consumer, most unsatisfactory for the Western producer; the area of production has constantly extended, the price of breadstuffs has not risen. The whole system of hot-bed railroad construction has but tended to this same end: more railroads, cheaper transportation; more acres under tillage, more produce on the market; cheaper food, richer consumers and poorer farmers. The sequence is too obvious to dwell upon. Annihilate the whole cost of transportation on cereals in this country to-morrow, and an incalculable blessing would be conferred on the world at large, but no benefit at all would permanently accrue to the Western producer; his area of production would be vastly increased, and the number of farmers proportionately multiplied. This has been the case in the past, and it will surely be so in the future, just so long as the food-producing area admits of indefinite extension. When the limits of that area are reached, then and not till then will the value of cereals permanently rise much above their necessary cost of production. Until that time the cost of breadstuffs in the Eastern markets will never vary greatly from their first cost of production, plus the cost of their carriage, whatever that may be. The Grangers are wrestling bravely with the laws of political economy, somewhat to their own detriment and to that of their good allies, the railroads, but very much to the benefit of the Eastern consumers. With good reason, therefore, does the Pennsylvania Company, out of a plentiful experience, deduce these sound conclusions: "The tendency of prices for the products of the farm is downward; the cost of transportation cannot be safely reduced below existing rates. . . . The Western farmers will soon find, if they succeed in destroying the capital invested in the railways, that this will not relieve them. They must realize the truth of their position, and acknowledge the fact that *they have gone too far West.*"

"CHARGES."

WHEN the Greeley movement was on the point of expiring, and the furniture of the "headquarters" was passing into the hands of the dealers, the secretary, we believe it was, issued a species of manifesto explaining the causes of the failure of this great effort to save the nation. It contained a great many striking and just observations, among others that the "charges" made against eminent Greeleyites, and by them against their opponents, produced little or no effect—for, said the writer, "our people expect charges to be made"; meaning, we presume, that our people look on "charges" as one of the ordinary electioneering devices, like fireworks, artillery salutes, and torchlight processions, addressed rather to the imagination than to the understanding, and therefore pay little heed to them. Originally, a charge was really an accusation—that is, an allegation that A. or B. had been guilty of certain immoral and disreputable acts which ought to deprive him of the confidence and respect of honorable men, and which he was bound to repel by sufficient proof. It has, however, gradually lost this character. The chargee is of course still expected to reply, but only for the purpose of foiling the enemy. The inconclusiveness of his reply, or his failure to make one, rarely damages him much with his friends, who usually make their reception of him the more enthusiastic the worse the charge is and the more completely he has failed to meet it. This is not a point which we care to illustrate by example, but most of our readers will be able to do so for themselves. In fact, it would hardly be going too far to say, that the more serious a charge is, the more sympathy it excites among the adherents of the accused person. The great object of their consideration is, not its probability, but the degree of suffering it has caused him, and they rally round him as a wounded man, without greatly caring whether he is a slandered man or not. There are no meetings so enthusiastic as those at which a public man, whose character his enemies have been assailing, presents himself to his friends and admirers, and at which an enquiry into the truth of what was said against him would be deemed more than impertinent. Nor can we recall at this moment a single recent case in which a charge has driven an experienced politician out of public life. Indeed, the failure of charges to produce any impression in such cases proves either that the newspapers have carried the use of them too far, or that they are using them without being aware of the great though silent change which has come over popular standards since the practice of throwing mud at candidates for office was first started. It must be remembered that, to make mud-throwing effective, there must be a general demand on the part of a community that a man shall be clean. Now, while making every allowance for the enfeebling effects of excess on the part of the press, we think there is no doubt that the demands of the community as regards moral cleanliness have been sensibly lowered within the last thirty years. When we go on to explain this remark, we touch on a very large subject, but we can at present only touch on it—namely, the influence of the rapid settlement of the country, and of the enormous development of what we may call the frontier population, in proportion to that of older districts, on the morals and manners of all. Before the railroads, the frontier with its moral and physical roughness was a little fringe on the edge of a very high civilization. Reflex influence on the thickly settled districts it could not have, because its inhabitants were few and sore beset with the lowest forms of care. With the railroads and steamboats came not only a prodigious opening up of new lands, but a prodigious rush of people to take possession of them. "Going West" became the fashion. Immigration from Europe began to be encouraged, and the immigrants began to swarm over in great multitudes. Wonderful dreams of material development took possession of everybody's mind. The "setting sun" became an object of worship. The supply of quarter-sections of land to "hardy pioneers" began to seem the great object for which the Republic was founded. The hog, corn, and cattle business rose into gigantic dimensions. Then came the railroad mania. We could not, people thought, run our railways out too far or too fast, as long as we had waste lands to give away and could get men to settle on them, and we sent agents all over Europe with flaming circulars urging all the restless, discontented, and unlucky people to come over and cultivate the prairies.

We have reached the end of our tether, as regards the material results of this movement—that is, we have got to the point beyond which we cannot profitably raise any more agricultural produce in reliance on foreign markets; or, in other words, as an advocate of the Grangers ruefully put it before the Social Science Association in this city last spring, farming out West now only pays four per cent., when banking and manufacturing at the East pay twenty. Our farmers have got so far West that they cannot sell in Liverpool without making the railroads carry goods below cost, or, in other words, without cheating somebody; and their condition is not likely to change for the better for some time, owing to the recent and rapid development of the railroad systems of Eastern Europe, and particularly of Russia, which is bringing the greatest wheat and corn fields of the Old World one-half nearer the markets than those of Iowa and Minnesota.

The material side of the question is obvious enough. The moral one is

less so, but it is even more important, and we may add that it has long occupied the minds of those observers who are not dazzled by agricultural statistics, and who know that man does not live by bread alone. Civilization is the product of dense population. It is bred by the daily attrition of mind against mind, and the daily comparison of needs and capacities. It radiates from the city over the country. The more ground you try to cover with a given population, the harder work you have to keep alive the tastes and wants of civilized life. The isolated man is constantly tending towards barbarism. You may fight this tendency vigorously, as it has been fought here, by improvement in the means of communication and in the spread of ideas, and you may thus conceal its coarser manifestations, but you cannot wholly eradicate it. It works all the while in spite of you, covertly and insidiously, though it may be disguised by costume or language. In the old days before the war, you might sit down by the fire of a country tavern in many parts of the Southwest with men dressed in black broadcloth, and looking as gentle as New England ministers, who would talk to you of Shakspere and Macaulay, but who if anything went wrong would be converted on the instant into Comanches and Apaches. Slavery had something to do with this, but isolation had far more. We have, therefore, by our prodigious increase of our frontier population, sensibly lowered the average of our civilization, and we begin to feel the reflex influence of far Western standards on our morals and manners, not at Washington only, but all over the East—and by the West we mean more particularly the regions settled within the last twenty years.

Now, the most marked trait of new communities is their indifference to character, and this trait has been greatly stimulated in our new communities by the rapidity with which they were settled, and the heterogeneous composition of their population. The settlers come from the four corners of the globe, and find themselves with every possible variety of antecedents thrown together by a series of accidents. It is a necessity of their condition that these antecedents should not be curiously enquired into, and that every man should take short views of his neighbor's history, and assume that whatever his past may have been, here he means to do well. In other words, people are not expected to have a reputation, because a reputation is a thing which one cannot carry about with him to strange places. In Texas, in the early days of its history, the enquiry, "What was your name before you came here?" was not considered offensive. A new society, made up of wanderers in pursuit of a better future, has in fact to be founded on an act of amnesty and oblivion, and has to allow every man to start with a "clean record." It is an excellent arrangement, and contains the secret of Western success; but it has its inconveniences when applied to older communities, where life runs more in grooves, where mistakes are less retrievable, and where a false start makes total failure very probable, and where keener competition and closer interdependence make absolute and persistent individual integrity an almost indispensable part of the social machinery. As population gets dense, and the social organization complex and delicate, we cannot afford to let our knaves run, and thank God we are rid of them, or laugh with them over their rascalities. The wave of Western influence, therefore—which makes "charges" light matters, and character of small consequence, and expiation easy and "records" short, and elevates sympathy with unsuccessful sinners into a social virtue—from which we have no doubt we are suffering, is a serious hindrance to good government as well as to some other things.

One of the pleasantest signs we notice in the pending canvass is the growing disinclination of the leading newspapers to make charges on behalf of the party. One of the most revolting features of the canvass of 1872 was the readiness of editors to allow themselves to be used as syringes through which the managers squirted filth on their political opponents. This year there are indications of a change for the better. Opposing candidates and politicians in this State at least, perhaps under the influence of the Brooklyn Scandal, are largely carrying on their own battles by means of "statements," which are, however, a very harmless kind of weapon. A statement is so long and so minute, and appears in such very small print, that the general public never thinks of reading it, unless it deals in some manner with the sexual relation. A charge of unchastity is, in fact, the only charge you can spread over two or three columns of a newspaper with the least chance of having it perused by the community; and, luckily, charges of unchastity do not damage a male politician. If they did, each canvass would flood the country with nastiness of which the Brooklyn Scandal can give only a faint idea. Charges always assail a person at his weakest point, and a man's honesty is always his weakest point; that is, a man's mode of dealing with money is thus far accepted as the great test of his character. Consequently, when a candidate is accused of anything serious, it is of some form of pecuniary infidelity or unscrupulousness. He has stolen, or forged, or defrauded, or cheated in some form or other for purposes of gain, we are always told, and the charger's ingenuity is always expended in contriving new forms of dishonesty. If anybody will take the trouble to look through the principal charges of 1872, he will find that they are all varieties of unlawful greed for money. But of course charges of this kind are in their very nature dull reading. They bristle with figures, points of law and affidavits, and few wade through them except the editors of newspapers.

This has a bearing on the question of woman suffrage which we hardly need to point out, and which it would be impossible to describe in detail without entering on a somewhat unsavory field of sociological enquiry. The quarrel now raging between the New York and Boston societies, and which has to some extent found vent in the Beecher-Tilton case, would, however, furnish one striking illustration for anybody who saw danger to social as well as political purity from public contentions between politicians of both sexes. We shall quit the subject with the remark, that it is not with stealing or cheating that female candidates would be charged by their rivals; and we would warn those who are now deploring the spectacle which our political struggles as carried on by men so often present, that the disregard of the volcanic and all-pervading force of the sexual passion, to which so many ladies and gentlemen are treating us so airily, is but a thin crust over such a pit of humiliation and degradation as no generation of the modern world has yet had to look down into.

Correspondence.

SCHOOL INSPECTION.

TO THE EDITOR OF THE NATION:

SIR: I desire to call your attention to the fact that almost the identical measure which you recently advocated in your article on "Schools and Scholarship" has been in successful operation for some years in the State of Michigan.

Every practical educator knows that the greatest obstacle in the way of raising the colleges and universities to a higher grade of educational work is the difficulty of getting a higher grade of preparation. Nor is this difficulty obviated by the willingness of a few schools to do everything asked of them. Something approaching uniformity of preparation is an absolute necessity, and therefore it is desirable, not that a few should be raised to a grade out of all harmony and sympathy with the others, but that the whole number of schools of this class should be uniformly raised to a higher plane of general excellence. The difficulties in the way of accomplishing such a result, especially in the newer States, are far more formidable than to many they would at first appear. Something in this direction has been attempted even in our own country, however. It is to this that I desire to call the attention of your readers.

Some five years ago, the authorities of the University of Michigan, convinced that something ought to be done to secure greater uniformity of instruction in the preparatory schools, gave notice that under certain circumstances and conditions the examinations for admission to the University would be dispensed with, or, more properly speaking perhaps, would be conducted, not at the University, but at the preparatory schools themselves. The conditions then fixed upon have been somewhat modified as circumstances have seemed to demand, until, at the present time, they have taken the form of the announcement now annually published in the "University Calendar." This announcement is as follows:

"SPECIAL NOTICE TO PREPARATORY SCHOOLS.

"A committee of the Faculty will visit, once every year, any public high school in Michigan, on request of its school board, and report its condition to the Faculty.

"If the Faculty shall be satisfied from such report that the preparatory courses of study in the school thus visited embrace all the subjects required for admission to the University, and are taught by competent instructors, then the graduates from such preparatory course will be admitted to the Freshman Class of the University without examination.

"They must present to the president, within three months after their graduation, the diplomas of their School Board, certifying that they have sustained their examinations in *all* the studies prescribed for admission to one of the three courses, classical, scientific and engineering, or Latin and scientific. They will also be required to appear at once in their classes, otherwise they can be admitted only after examination.

"The privilege of admission on diploma is limited to public schools in Michigan, and their school boards must make the application annually."

The immediate result of this announcement was that some ten or fifteen of the high schools of the State very soon came under the direct and official influence of the University. I speak somewhat indefinitely of the number from the fact that, as the result of the very first visit of the University Committee, several schools were placed upon the list of those accepted, while

several others not placed upon the list were informed of their weaknesses, and of the changes that it would be necessary to make.

The method of procedure has been substantially as follows: Whenever an invitation of any school board reaches the Faculty, a committee of two or three persons is appointed to visit the school from which the invitation has come. Usually, one day is devoted to the examination, which, it should be said, is always understood to be as much an examination of teachers and of methods of teaching as of pupils desiring to enter the University. The lower classes as well as the higher are examined; and the impressions of the committee are freely communicated to the teachers and to the school board. On the report of the committee to the Faculty, the school is accepted or rejected, as the nature of the report seems to demand. In case it is necessary to reject a school, care is always taken to point out, in the final report of the Faculty to the school board, the grounds of such necessity, and to suggest such changes as may, for any reason, appear to be desirable. That the plan is energetically carried out may be inferred from the fact, that no year has passed without the rejection of one or more schools, and that in one instance such rejection was the lot of one of the largest schools in the State.

The influence of this system of examination is to be considered from two points of view: First, in reference to its effect upon the grade of scholarship in the University, and, secondly, in reference to its effect upon the preparatory schools. In regard to the former there has been, and perhaps there still is, some difference of opinion. It is not altogether certain that the grade of scholarship of those admitted on diploma, taken as a whole, is quite equal to what it would be if the same applicants had been collectively subjected to the sifting process of a rigid examination at the time of admission. It should be remarked, however, that even if it occasionally does happen that one who, under the old system, would have been rejected, or put under the burden of heavy conditions, now finds his way into the Freshman class, the disadvantage arising from such a fact is more than overbalanced by the general uniformity of scholarship that is found to have been secured. Moreover, when the student is once within the University, his diploma affords him no protection whatever; if he flags, he is liable to fall out (as indeed several have done), as the result of the term-examinations. Another advantage has been found to accrue from the fact that the grade of scholarship attained by the best high schools in Michigan affords a convenient standard to be used in the examination of applicants from other schools. That this standard is quite as high as the general condition of the schools will warrant, may be fairly inferred from the fact that, the present year, of the whole number of applicants for admission to the Freshman class on examination, about thirty-three per cent. were rejected outright, and that a considerable majority of the others were admitted under more or less heavy conditions.

But it is upon the preparatory schools that the good results of the system are most noticeable. The elevating effect of such an organic connection with the University is now, I believe, universally acknowledged. It is difficult to see how this influence can fail in the future to be very considerable. It is already felt by both teachers and pupils. I am not aware that faith in the success of the method has in a single instance been abandoned; on the contrary, it has several times occurred that prominent teachers have declared themselves thoroughly converted to the scheme after having looked upon it at first with suspicion, or even with positive and outspoken disfavor.

I feel almost like apologizing for presenting these details, but, to tell the truth, it seemed to me a little singular that a journal so thoroughly informed as the *Nation* should go to Oxford and Cambridge for illustrations in support of a method that had been substantially and successfully inaugurated in one of our own States some years before it was attempted in England. If Michigan has been faultily modest in failing to let the excellence of her school system be known, her fault, be it said, is one that is by no means universal.

C. K. A.

Ann Arbor, Mich., Oct. 10, 1874.

"SUBSOILING."

To the Editor of the Nation:

Sir: Instead of the candidates depending upon the voters, the voters lie powerless in the hands of the candidates. A nomination by a caucus or convention is considered as a draft upon the voters which has been accepted in advance, and the only thing necessary is to get a signature to the draft, and fix upon its amount. The seeker of the office is at work, using diligently and skilfully the machinery for months, while the body of voters are attending to their private business. At last, when the time for voting draws nigh, they begin to bestir themselves about a candidate, and are told, in the significant phrase of a noted electioneering agent: "Why, bless you, sir, the district has been *subsoiled* long ago." This is but an illustration of the adage that one man with a purpose is a majority; and not less of another maxim, that it is in the nature of political and social power to be always stealing from the many to the few. In old times, crowns and coronets did not steal power from the many; but power, from its nature, slipped from the many to a few, and those few put on crowns and coronets after they got the power. Power in legislation and electioneering is now stealing to the few. Those few, as to some things, and at some times, and in some places, are corporations. As to other things, they are the secret aspirants and their agents, who are specialists in the art of electioneering. As to the *selection* of a candidate, the body of the people have little else than a moral influence, as the people have under the forms of oligarchy. The final *election* at the polls is only the right of saying yea or nay to two candidates. Great masses can, in the nature of things, do no more than that. Now, who are the few that do the selecting of the candidates? Theoretically, they are agents of the voters. In fact, they are mostly agents of the claimants. The work of the claimant is not open work, before the people, based on his real or professed merits or claims, but secret work—in fact, subsoiling. The longer and the more completely the voters can be kept ignorant of the work going on, and of the person for whom it is going on, when he has not sufficient merits of his own, the better. The voters must be left to wake up to find the district subsoiled. This process of subsoiling has no reference to influencing the opinions or wishes of the body of the voters. It consists in making secret combinations and arrangements among persons who hope to get for themselves, for their friends and dependents, offices and posts of any and all descriptions, elected or appointed, legislative, executive, or judicial, State, national, or municipal, log-rolling with them, and organizing and drilling the paid workers in secret squads. After this subsoiling is sufficiently done, some action of a more public nature is allowed, in forms to which is given the look of symptoms of a public opinion.

In the Seventh Massachusetts District, it seems that Dr. Ayer, the pill-maker, has subsoiled to good effect the lands lying about Lexington and Concord. In 1872, he tried it, and the yeomanry and property-holders in the walled towns became so alarmed that they flocked to Judge Hoar as the only *numen* that could save them. This year, he declines to serve again as an antidote, and the patients are left powerless in the doctor's hands.

In the Fourth District, if the Republican voters had been asked a year ago to name, each for himself, independently, a person he would like to have represent the district in Congress, not one in a hundred would have named Mr. Frost or Mr. Hayes. After the summer heats, as the election time draws on, they arouse themselves to their duty as citizens only to find that the two claimants above named have been quietly subsoiling for months, and that it is too late. Scarce a note of this has appeared in the papers, and only a few signs on the surface, discerned by the few knowing ones. And it *is* too late. The Republican voters at their caucuses are *practically* restricted to a yea or nay on these two names. This power they have exercised, and, as a choice between names submitted to them, have taken, as the less unsatisfactory of the two, Mr. Frost's name. After this will come the election; and then the Republican voters are limited to an option between a political opponent and an unsatisfactory ally.

How is this to be cured? One remedy—a violent one—is to vote for your opponent, or not vote, and so teach the subsoilers that a nomination is not a draft accepted in advance, and that the responsibility, of its dishonor lies with those who selected the drawer. The common pulpit and platform remedy is that the body of voters shall attend primary meetings in person. Experience shows that they will not do this to the necessary extent. The reasons for this there is not time or space now to go into. Many of the reasons have become familiar. But the serious symptom is that it is not so much the educated, wealthy, and professional class that abstain from electioneering caucuses—at least in a State like Massachusetts—as it is the middle class of mechanics, tradesmen, and farmers, who are earning livings for themselves and their families. They feel themselves unfitted to understand and use the complex machinery of electioneering, and know that they have no time to learn it and keep learning it, for it is a changing art, especially after they discover, as they soon do, that to understand the work before them at a caucus, or to have a voice in it, they must attend the ante-caucus, which has been held secretly, to arrange the ticket for the caucus. These men are good citizens, and know what they wish done on great questions, but electioneering is too much for them in its present frequency and complexity. If the price of electioneering liberty is to be ceaseless vigilance, they cannot and will not pay the price. This is one of the reasons why, in this age and country, power is found to be stealing from the many to the few. So far as the power of the many is conditioned upon a ceaseless vigilance over complex electioneering machinery, so far it will steal to the few.

J. C.

Boston, October 16.

Notes.

WE have received from Scribner, Armstrong & Co. the concluding volumes (II. and III.) of Froude's 'English in Ireland,' already noticed at length in the *Nation*, Nos. 473, 474.——Another chapter in the controversy over the American art-frauds in Italy has been sent us for publication. It is a broadside containing documents of which we have heretofore given some account, plus a letter from Mr. S. W. Healy replying to Mr. Pierce Connelly's communication to the *Nation* in defence of himself, and also making specific allegations, of a very damaging nature, against the author of the Fisk monument at Brattleboro, Vt., and the Lincoln monument at Springfield, Ill. On the general question we think there is no need of taking any further testimony. As the sculptors implicated do not seem disposed to prosecute their accuser for libel, they had better come home and vindicate themselves if they can by working under the inspection of their own countrymen.——Mr. Alex. J. Sheldon, lately librarian of the Grosvenor Library, Buffalo, writes us that that institution is peculiarly rich in lists, for every one of the Northern States, of those who served in the war of the rebellion in the army or navy. He regards the Pennsylvania muster-roll as the most complete of those which have been published.——The second number of a new Southern magazine is before us. *Our Living and Our Dead* is the rather singular title of it, but, when understood, seen to be appropriate enough. It is the official organ of the North Carolina Branch of the Southern Historical Society, is published at Raleigh, and is "devoted to North Carolina—her past, her present, and her future." The historical department is entirely occupied with reminiscences and annals of the Confederate service, including Gen. Bragg's report on the battle of Chickamauga. The descriptive and statistical department treats of Edgecombe County in 1810, and of Wilmington in 1872; and the educational department gives the text of the statutes organizing the school system of the State, and some good advice to instructors and to the public. We hope the magazine will prosper. If it does, it will do much to confirm North Carolina in her present ways of order and progress.—It is announced that *Every Saturday* will be henceforth merged in the *Living Age*, a consummation which will probably give satisfaction to the reading public as well as to both the parties to the transaction.——The French Canadians in Vermont have had, and perhaps still have, a newspaper printed in their own language. Their Massachusetts brethren are now to be similarly favored. A *Courrier d'Holyoke* has been established in that flourishing manufacturing centre.

—Some years ago the *Nation* called attention to a great Hebrew library, then offered for sale by Fred Müller, of Amsterdam. We had the satisfaction of informing our readers at the proper time that this library had been brought over to the United States, it having been acquired for the Temple Emanuel Congregation of New York. To-day we again call the attention of Hebrew bibliophiles to another and perhaps still larger library, which is to be sold *en bloc*, and we do so in the hope that some American institution of learning, or some Jewish congregation in this country, may be induced to buy it. The library we refer to is the renowned Hebrew library of the late L. Rosenthal, of Hanover, now owned by Mr. G. Rosenthal, banker, of Amsterdam, son of its former possessor. As early as twenty-nine years ago, Zunz, the eminent Jewish scholar, characterized this library as one of the foremost existing ('Zur Geschichte und Literatur,' p. 244). Mr. M. Roest, a Hebrew bibliographer of well-deserved fame, has prepared a catalogue, which is now in the press. The library consists of about 6,000 numbers, and counts between 8,000 and 9,000 volumes. We believe that neither the famous Oppenheimer Library, now forming part of the Bodleian, in Oxford, nor the Heimann Michael Library, acquired for the British Museum in London, had so rich and complete collections of Hebrew books as the Rosenthal Library.

—Anybody who has been in the habit of reading the London *Practitioner* must have acquired a high regard for the editor, Dr. Francis N. Anstie, as a cautious, able, earnest, and unbigoted physician, doing honor to the profession, in which such characters are still to be called rare. In dissecting a subject who had fallen a victim to an obscure school-epidemic, the other day, he wounded himself with fatal effect, and fell a sacrifice on the altar of the humane science to which he had devoted his life. His loss will be keenly felt, and it has already called forth a substantial manifestation of sympathy and regret from leading members of the profession in London, who have taken steps to raise a memorial to him, not only by an appeal to physicians, but to the general public. Dr. Anstie's attention to sanitary matters, and particularly his services in testing the adulteration of food and of standard chemical preparations, were to the immediate advantage of the poor whose condition he sought to ameliorate, and deserve the recognition of all philanthropists. The memorial has taken the highly appropriate shape of aid to Dr. Anstie's family, whose means are slender, and it is also resolved, as an obvious duty, to secure his only son the complete education which his father had designed for him. Contributions for these good purposes may be sent to Mr. Frederick Macmillan, 21 Astor Place, in this city.

—While Dr. Anstie showed what individual example may do to raise a profession whose reputation is so much at the mercy of quacks and charlatans, we are witnessing in this State a promising attempt to rid society of these pests by legislation. In May last a law was passed making it a misdemeanor, punishable by fine and imprisonment, to practise medicine or surgery in New York unless authorized to do so by license or diploma from some chartered school, State board of examiners, or medical society, or to practise under cover of a medical diploma illegally obtained. All practitioners who are destitute of the proper papers are required to submit to examination by the censors of the State, county, or district medical society, within thirty days after being notified to that effect, or take the consequences; and they must earn a certificate which "shall set forth that said censors have found the person to whom it was issued qualified to practise all of the branches of the medical art mentioned in it." These certificates are to be recorded in a special book by the county clerk. We have before us the notification of the censors of the Medical Society of the County of New York, which calls for the name in full of the practitioner to whom the circular is addressed, his residence, the name of the college or university granting his diploma, or society granting his license, with the date of either. The good fruits of this censorship we may hope soon to see. A similar task has been undertaken, quite unofficially and without the support of law, and not, we suppose, without risk of innumerable libel suits, by the San Francisco *News-Letter*, whose peculiar gifts of personal abuse were never better employed. It publishes lists of the quacks who falsely pretend to have received diplomas, notably from European societies, takes account of their protests, prints their illiterate communications to the editor, and doubtless succeeds in making them for the time being uncomfortable and perhaps anxious, and of course thoroughly angry.

—Mr. James Parton, who has been hitherto best known to the public as the writer of entertaining legends of distinguished historical characters, seems to be playing his newly-adopted part of general reformer with considerable skill. He made a slight mistake at the outset, in a noble attempt to purge journalism of its sins by falling foul of the reporters, and accusing them of inaccuracy and a disregard of precise truth—a dangerous thing for any one, and especially for him, to do, for the reporters have been able to point out here and there in Mr. Parton's writings a weak point or two, such as the passage in the life of Aaron Burr in which it is stated that a monument was placed at midnight over the grave of Burr by unknown hands. As a matter of fact, it turns out that the stone was put up at noonday, the relatives of Burr ordered it, and there was no pretence of secresy. Mr. Parton attempted to get the better of the *Herald*, which made this discovery, by cordially thanking that journal for thus settling a doubtful point of history, and, to use his own words, "exploding that ridiculous story about the erection of the monument to Aaron Burr in the cemetery at Princeton," adding very truly that "a great number of absurd and romantic tales gather about the name of every person who is long conspicuous in the public eye," that during his stay at Princeton he conversed with so many persons that he could not remember from whom he got the story, that it was a "piece of well-established gossip which there seemed no reason to doubt, and which was not important enough to require an investigation." It is strange that what was at that time a "piece of well-established gossip" should now be so easily upset by a little investigation; but Mr. Parton cannot be expected to give much attention to trifles of this kind, for his time is occupied with the work of reform through the introduction of non-sexual suffrage, and the abolition of the post-office, as he announced the other night in a highly successful lecture. In this lecture, however, he made another little mistake; for in describing the politicians of the country he said that they were all desperate villains; that "whatever we may think of ourselves, it is by no means clear to the rest of mankind that the institutions of America have borne the test even of a single century's wear and tear"; and that "it really seems sometimes as if the politicians and the criminals of this country were one and the same body, only divided into two parts—the ins and the outs—those in prison and those out of prison." Now, unfortunately, Mr. Parton has elsewhere and within a year or so declared it to be his opinion that the institutions of this country were in very fair case, and not only so, but that far from the political leaders being degraded and corrupt, they were so pure that there was not even anybody who attempted to corrupt them—that there was, for example, no "lobby" at Washington. The Springfield *Republican* thinks this vacillation of opinion on so important a point should incline Mr. Parton to consider the advisability of his "stepping

down and out"; but this suggestion he will probably decline to take into serious consideration. This is a progressive age, and the opinions of individuals must progress, even at the risk of charges of inconsistency. No one can say that Mr. Parton, if he will discard most of his opinions and advocate with earnest enthusiasm their direct opposites, may not strike upon the certain path to a brilliant future.

—We published October 1 a general statement of the business transacted in the United States Patent Office for 1873; and the corresponding data for the British Patent Office during 1873 will probably be not without interest to our readers. There were in all 4,294 applications, of which 1,388 were only provisionally specified. Of these, 68 applicants obtained grants of letters-patent, but neglected to file final specifications, and 1,320 did not proceed after the six months' provisional protection had expired, 2,906 only completing their specifications and obtaining patents. In the preceding year there were 3,970 applications and 2,745 completed patents. The total revenue of the Office during 1873 was £144,761, of which £2,290 was derived from the sale of specifications. Against this are to be set costs and charges to the amount of £49,477, leaving a surplus paid to the treasury of £95,284. The corresponding amount during 1872 was £85,611, and the total amount since 1852 £1,198,204. The main items of charges were: printing, £17,416; salaries, £11,430; current expenses, £6,565 (including payments for preparing abridgments, £1,651); compensation to Irish law officers, Scotch lord-advocate, and their clerks, £3,413; fees to English law officers (hereafter abolished), £6,321; paper for printing specifications, etc., £2,100. The rest are rent and office charges.

—Now that we have the whole of Part II. of Gen. Walker's Statistical Atlas before us, we find it deserving of additional mention (see No. 483 of the *Nation*). The whole of the plates are now published, but some of the letterpress will be issued at the same time with Part I., and will include a memoir, by Mr. S. W. Stocking, on the Areal History of the United States; and an account, by Mr. S. A. Galpin, of the Existing Minor Political Divisions of the country. Mr. Stocking's memoir will elucidate Plate XV., which is a map showing the acquisition of territory and its distribution among political divisions (1776–1874). A ruder map of the same sort accompanied the Census, as did also the prototypes of several of the plates which we shall presently enumerate. First, of population (Plates XXI.–XXVIII.): The constitutional population of the United States having been disposed of, its various elements of colored and foreign are next exhibited in the same manner, in tints of five degrees of intensity. There is no colored population to speak of in New England north of Massachusetts, or in the country at large north of the parallel of 43°; and, except "Egypt" in Illinois and a small district in Southern Michigan, none of the Northern (Free) States has more than seven per cent. of its population colored. Somewhere in every one of the former Slave States except Delaware, Kentucky, and Missouri, the blacks number from 35 to 60 per cent. of the aggregate. South of the Potomac and the Ohio, persons of foreign parentage count for almost nothing in the population. They are most thickly settled in the triangular area bounded by lines drawn between Buffalo, Boston, and Baltimore. Their proportion to the total population is greatest (60 per cent. and upwards) in Michigan, Wisconsin, and Minnesota, and in Southwestern Texas. For the Irish, German, British-American, English and Welsh, Swedish and Norwegian, east of the 100th meridian, there are maps of absolute and relative distribution (per square mile and per cent.) Then follow maps of illiteracy—of the whole, and of the adult white male or voting, population; of the distribution of wealth; of public indebtedness per capita, contracted by State, county, or municipal authority—a map on which unhappy Louisiana appears in the deepest chrome ($34 and over), unrelieved by any blank spaces; of taxation per capita. Five maps show the range and degree of cultivation of wheat and rice, tobacco and hops, oats and cotton, hay and sugar, and corn—the collocation of crops being one of convenience in printing on the same plate. Three maps show improved land in farms; dairy products; and total agricultural production—this last making it evident that the Western farmer is not the only one worthy to bear the name or to maintain the interests of agriculture in this country. Even Maine can point to a product of $3,000 to $4,500 per square mile—the highest degree save one. Plate XXXVI.*b* is devoted to the Pacific Coast alone, and consists of eight maps on population, including the preponderating sex, and one each on illiteracy and on wheat. Besides the foregoing, so rich is this number of the Atlas, Gen. Walker gives us beautifully colored graphic charts on church accommodation, gainful occupations and attendance on school, and principal constituent elements of population in each State. These comparative representations are in the highest degree instructive, but, being meant for the eye, they cannot readily be described in words. Finally, a fiscal chart shows the annual national revenues from 1789 to 1870, in which the remarkable feature is the substitution since 1861 of income from internal taxes for that from the public lands, which, next after customs, formed the main resource after 1804, except during the war period of 1812. The same chart shows the proportionate expenditures for the same term of years, with the various divisions of army and navy, pensions, etc.; and the whole course of the public debt—a portentous-looking figure, like an inverted mushroom, in which the eye rests regretfully on the vanishing point at 1835, marked "0.0 millions."

—Besides the article on "The Granger Laws" (to which we referred last week), the October number of the *Law Review* contains a history of the remarkable Udderzook insurance-fraud and murder case, which has attracted a good deal of attention in the newspapers; an article entitled "The Law of Literature and Art in England and America: how near are we to International Copyright?" and another on some anomalies in the "Law of Adoption." Massachusetts, it seems, passed an act in 1851 to enable adopted children to inherit property in the same way as lawful issue. Texas, too, passed an act of some sort in 1850, and now twenty States or more have laws on their statute-books relating to the subject. The article contains some interesting discussion of the unsettled law of adoption, and suggests some new *apices juris*, such as those that might arise out of the adoption by a man of his wife or his aunt. The history of the Udderzook case will not tend to strengthen the value of direct evidence to identity, at any rate in trials in which large interests of life or property turn upon the possibility of a number of witnesses recognizing or not recognizing some claimant, or some claimant's remains. The article on Copyright traces the law of England and America from the time when it was decided that copyright was unknown to the common law, through its various changes, to the present day, when, in the United States, it remains substantially what it always has been, while in England we find in the requirement that a foreign author who wishes to acquire an English copyright must on the day of publication be bodily present in some part of the British dominions, the only vestige of the old international protective system to which we on this side of the water have clung so steadily.

—The Cincinnati Industrial Exposition closed on the 3d. The Sunday openings of its art gallery, though publicly deprecated by the local clergy, were a mundane success, collecting of a fine day over fifteen hundred visitors. In our own city such experiments have heretofore received a very pointed judgment in the shape of total abstention on the part of the public. The contributions to the art department included many valuable pictures. It is a little puzzling to observe that such efforts as those of the collectors for this display, or as those of the assiduous Mr. Derby for the Chicago exhibition, seem to be all that is needed to tempt out the very pick of the private galleries here in the East; galleries that have not yielded their good things in all cases to loan exhibitions only a few streets away. However that may be, we find our own collector, Mr. Blodgett, contributing not only the Gérôme ("At Prayer") and the Villegas ("Slipper Shop"), which were formerly attractions at the New York Metropolitan, but others which we should have been very glad to see there, such as the "Suicide" of Decamps and the "Justice Asleep" of Couture. The first of these, in the comparative rarity among us of Decamps's fine declamatory works, is a picture rewarding the closest technical study; unhappily, the first lesson to be learned from it is a warning against the excessive use by painters of bitumen; it has darkened in the shadows to the point of being quite opaque, forming a fatal illustration of what most owners of this artist's pictures are now complaining over, the blackening of their treasures from a too lavish employment of this fascinating glaze. The example of Couture, dated 1863, belongs to a series curious as showing the painter of the "Decadence" as little like his usual self as possible—as a satirist, namely; this picture, if Mr. Blodgett had seen fit to lend it to our Museum, would have been an acquisition there, since it belongs naturally with the curious little Couture long exhibited at the Metropolitan, in which an ardent young village lawyer is shown chasing his clients, represented as unfledged chickens. Both canvases are in the set painted for the gratification of Couture's friend, the bronze-founder Barbedienne, at a time when the latter was much harassed by some lawsuits; they are fables in paint, ridiculing the delay and perversity of law; in "Justice Asleep," the defendant is an innocent and interesting youth dressed as Pierrot, and the attorney a harlequin, who "makes the case seem of all colors," while the Court sleeps the sleep miscalled of the Just. This artist's masterly treatment of crayon is shown in a chalk head of Molière. In his caricatures, as in his crayon drawings—and in nothing more than in his well-known crayon of a realist or pre-Raphaelite at work—Decamps shows the breadth of the grand style and a certain noble inability to depict mere character as the character-painter does. It is rather pleasant to read in the Cincinnati catalogue the novel fact that "Couture has been called the French Hogarth of the nineteenth century." Who can have been the critic who thought out this little masterpiece, and have his bumps been

felt? The catalogue, however, like most experts' catalogues, is a mine of piquant novelties. Thus we learn of Meissonier, a chief favorite of American collectors, the strange statistical calculation that "it is seldom" a picture of his is to be seen in this country; and Schenck, the Ecouen animalist, is in one place said to be of Paris and in another of Düsseldorf, and one of his pictures is explained to be a "replicate." The Cincinnati collection includes Breton's grand composition of the "Potato-Gatherers," Müller's large study for the "Roll-Call," and adequate subjects by Gérôme, Cabanel, Knaus, Villegas, Boldini, and other contemporaries; American art seems to be rather imperfectly represented, while the fine historic series of engravings from Mr. Claghorn's collection is on view, with some interesting additions. Among the contributions are several alleged to be old masters, as to whose genuineness we have no opinion to give, except in the case of the New Orleans "Murillo": having long since been favored by the owner, Dr. Holcombe, with a photograph of this painting, we have some warrant for saying that the possessor's dogma of its authenticity can hardly have any such implacable enemy as the photograph in question, unless it be the picture itself. By the bye, since Cincinnati has been at the pains to include, among the examples of retrospective art, a selection from the paintings of Stuart, Trumbull, and West, why did she not take down from her own cathedral and place in this exhibition the "Christ Entering Jerusalem," by Haydon, one of the best works of a painter peculiarly interesting to both artists and readers?

—Mr. A. J. Ellis, in the *Academy* (Sept. 19), offers a substitute for the "American word scientist," whose convenience, he says, "is bringing it into use, notwithstanding its barbarity." Regarding *-ist* as an English termination, as we have a right to do, "'sciencist' would be the word, like 'physicist,' 'purist,' and so on." But in forming "scientist" a root (*scient*) has been chosen which does not exist in English. Yet why should it not exist? asks Mr. Ellis, as an exact translation of the French word *savant*, along with the substantive *student, regent, orient, patient, serpent*, etc., not to mention the compound participials cited by Mr. Ellis, which are a little beside the mark. "A 'scient,'" he continues, "would not mean one who 'possesses knowledge in general,' so much as one who rejects all but knowledge for the foundation of hypotheses, and therefore constructs only with such materials as he already 'knows.' A 'scientist' would then be an 'adherent to scients.'" This last sentence, when read over, might have reminded Mr. Ellis of one objection to his new word—its identity of sound in the plural with the abstract *science*. A short-hand reporter might easily misunderstand a clerical gentleman alluding to the "pretensions of scients." The error would not be a very grave one, perhaps, yet it is clear, for instance, that the problem is not to reconcile "science and religion," but *scients* and theology. However, not to give up "scientist" without a struggle, suppose we assume it to have been formed from *sciencist* through a euphonic change the reverse of that which took place in making "physicist" out of *physic(s)ist*. Would not then one word be about as legitimate as the other?

JOHN HOOKHAM FRERE.*

THE piety of Mr. Frere's nephews is commendable, but it is doubtful whether its results would have been acceptable to their fastidious uncle. In a letter written in 1843, referring to a review by Hallam of his translations from Theognis, he complains that the writer has spoken of him by name. "I think," he says, "it is rather cool and easy to affix my name to an anonymous work privately distributed." He had not then seen the critique; and he adds some days later, after reading it, "It is not uncivil, but my name is repeated *ad nauseam* thirty times altogether; one would imagine that I was a candidate for fame." Mr. Frere would hardly have chosen any increase in extent of reputation at the least cost of that choiceness which, like the bouquet of the best wine, disappears with too much exposure. He wrote for the elect: for those who value and know the force of reserve, who appreciate the more delicate elements in literary performance, and whose taste has been chastened by study of qualities in literary work the existence of which is hardly suspected by the common reader. And Mr. Frere was correct in the judgment of himself and of his work implied in his avoidance of publicity. His genius was not of the robust order, fit to make good a claim for the attention of the world; and his best work was not intended for popular reading. His incomparable translations from Aristophanes, with which he occupied and amused his leisure during his long residence at Malta, were in no proper sense published during his lifetime. Parts of them were printed from time to time, and sent to a few friends at home, and the little quarto sheets of bluish paper from the Government press at Malta had a quality which gave them high value in the eyes of the best readers. After some of the translations had been made for more than five-and-twenty years, Mr. Frere had a small edition of four of the plays printed, and allowed a few copies of three of them to be put on sale in London. His name did not appear in the volume, and the copies that were thus published were sold for the benefit of some person whom Mr. Frere desired to assist. Of late years it has been scarcely possible to obtain a copy of this rare volume, while the translation of 'The Frogs,' one of the most amusing and spirited of his pieces, was practically unattainable till the publication in 1872 of the first edition of the volumes before us. His excellent burlesque poem, too, 'The Monks and the Giants,' or, as it is also called, 'King Arthur and his Round Table,' had long been out of print, so that the lovers of good learning and good wit may be grateful to Sir Bartle Frere and his brother for making these writings accessible. The new matter which they have added to the previously known productions of Mr. Frere is not of much consequence, or of a sort to add essentially to his reputation.

Born in 1769, a year productive of distinguished men, Mr. Frere received his first scholastic training at Eton, where he formed an intimate friendship with Canning, which lasted through life. They were associated in taste, in wit, in political opinion and social sympathies. On leaving the University at Cambridge, to which he had gone from Eton, Mr. Frere entered public life as a subordinate in the Foreign Office under Lord Granville. In 1796 he was elected to Parliament, and in the next year joined with Mr. Canning and some others of the younger supporters of Pitt in the publication of the *Anti-Jacobin*. Canning's humor and wit were the chief support of the venture, giving it its original success and its lasting reputation. He had a competent ally in Frere, and the most noted pieces in the collection—such as the "Friend of Humanity and the Knife-Grinder," the "Loves of the Triangles," and "The Rovers, or the Double Arrangement"—were their joint production in company with their friend Mr. Ellis. In 1800, after a short term of service as Under-Secretary of State in the Foreign Office, Mr. Frere was appointed Envoy Extraordinary to Portugal; two years later he was transferred to Spain. After residing as Minister at Madrid for about two years, under conditions of great difficulty, he returned to England, where the ministry signified their approval of his conduct in a trying position by making him a privy councillor and giving him a pension. For some years he remained without public employment, but in 1808, when the people of Spain rose, with surprising unanimity and energy, to expel the French invaders, and England was preparing to assist the national insurrection with material aid, Frere was again sent as envoy to Spain. "His previous services in Spain, his warm sympathy with all the nobler traits of Spanish character, his intimate acquaintance with the Spanish language and manners, and, above all, the esteem and respect in which he was held by all the best among the leaders in the Spanish national cause, to many of whom he was personally known, pointed him out as eminently fitted to represent England in Spain at a juncture of such importance." During a few months he rendered great service to the Spanish cause, but when a scapegoat was needed to bear the reproach of the failure of the unfortunate expedition under command of Sir John Moore, it fell to Frere's lot to be selected by an angry and indiscriminating public. He had differed widely in opinion with Sir John Moore, and on some important points Sir John had reluctantly yielded to him. It was assumed that Frere was in considerable measure responsible for the defeat at Corunna, and the miserable outcome of the expedition. The ministry at home did not defend him with the spirit or support him with the cordiality he thought his due. His recall was determined upon, and, though pains were taken to prevent any appearance of censure, yet Frere felt that the treatment was such as he had not deserved. From this time he "renounced public life, and when it was proposed to send him as ambassador to St. Petersburg, and twice in after-years to raise him to the peerage, he declined both offers. It was natural he should feel that what he had deserved from the Government, if they approved his conduct, was support and approbation when he was unjustly attacked, and that no subsequent honors or promotion could compensate for his having been left a mark for public obloquy, when he had under most trying circumstances performed an important service to his country." In other words, Mr. Frere was of the race, never very numerous, of *gentlemen*, and he had the feelings of a gentleman. He made no outcry, attempted no public vindication of himself, but, conscious not only of rectitude of purpose but also of general soundness of judgment, he was content to leave his vindication, if there should be any care for his reputation, to a later generation that should be less moved by the partisanship of the hour. He was right. Competent and impartial judges have given opinions in his favor, and the attacks upon his reputation are forgotten. What diplomacy or administration lost by Frere's retirement from public life, literature gained. Books were henceforth his chief

* 'The Works of the Right Honorable John Hookham Frere, in Verse and Prose. Volume I. Memoir by the Right Hon. Sir Bartle Frere. Volume II. Original Works and Minor Translations, edited by W. E. Frere. Vol. III. Translations from Aristophanes and Theognis, edited by W. E. Frere. Second Edition with Additions. New York: A. Denham & Co. London: Basil Montagu Pickering. 1874.

resource and occupation. He was attractive in society, a capital talker, and for a time he went much into the world, but he was always a student. In 1816 he married the Dowager Countess of Erroll, and, her health shortly afterwards giving way, he took up his residence in Malta for the sake of the favorable climate, and there in elegant, scholarly ease he spent his remaining years. He died in 1846.

It is not difficult to set forth the most marked characteristics of Mr. Frere's genius. It was essentially of a literary type; not finding its source and stimulus, to any great degree, in direct relations with nature, nor conscious of any irresistible impulse of expression; not possessed by controlling imagination, nor swollen by currents of deep emotion. It was a genius of culture, full of fine appreciations and quickened by lettered associations. Such originality as his work displays lies in tone and finish more than in invention. It is the work of a gentleman of taste and various learning, with capacity for facile expression, and with a sense not only of humor but of the delicate qualities of style and literary art. Naturally enough, after the days of joint production with Canning in the *Anti-Jacobin*, all his best productions are either translations, as the 'Aristophanes,' or in imitation of a foreign style, as 'The Monks and the Giants,' in which all the ease of Berni, or Pulci, or Casti is transferred from the flowing *ottava rima* of the pliant Italian tongue into stanzas not less flowing in spite of the resistance of our stiffer language. This was a rare *tour de force*, and Frere achieved such success that not even Byron, who copied him in adopting the Italian stanza, matched him in the free play and vigor of his versification.

His translations of Aristophanes are not literal, line-for-line versions, but they aim at giving in a free rendering the spirit and life of the original, and at reproducing so far as possible its tone, in order to convey some notion to the reader of the effect of the Aristophanic drama as acted, and to illustrate the points of dramatic humor and character discoverable in it. The task was of great difficulty, and it was accomplished by Mr. Frere with a surprising measure of success. He was fitted for it by nature and by training alike. All his gifts contributed to the excellence of the work. It was a labor of love, and he took unwearied pains with it. The mere English reader not only finds Aristophanes in these translations eminently readable and intelligible, but gets from them, with the comment by which they are accompanied, a clear view of the character and effect of the old Athenian comedy, as well as the fullest illustrations of the life, manners, and turn of thought of the Athenian people. There are no other productions of Greek literature from which so much may be learned of the interior life of Athens and her democracy at the period of the Peloponnesian war. But they have more than an historic interest. For the satire of Aristophanes, however local in allusion, is directed upon universal traits of human nature, and its point is not blunted by time. The unprincipled demagogue, the ignorant voter, the hare-brained reformer, the wealthy upstart, have never been more effectively ridiculed, while what we are apt to consider the special pests of our own time—the Treasury informer, the diplomatic patron of mining swindles, the sentimentalist of the platform, the inflationist, the free-lover—all had their prototypes in the famous little city; and the lash which fell on the backs of Athenian fools and scoundrels retains power to make their modern compeers wince. No American could read the "Knights," with its broad and vigorous delineation of the military-political demagogue Cleon, that

> "Miracle of immense
> Intense impudence"

without being reminded of

> "The impudence, the politics,
> The dirty designs, the rascally tricks"

of his notorious living image.

The satire of Aristophanes, if at times too coarse for our modern taste; his wit, if too personal in its application; his humor, if occasionally degenerating into extravagance, or mere broad fun, are redeemed and elevated by the exquisite poetry with which they are associated. The imagination of Aristophanes was essentially poetical, and there are passages in his comedies which place him on a level as poet with the great tragedians. Mr. Frere possessed an equal appreciation of his various merits, and has rendered with equal spirit and fidelity the lively repartee of the dialogue and the sustained beauty and picturesque imagery of the finer choruses. His work is indeed so good in the most important respects that it is matter for real regret that he left so many of the comedies of his author untranslated. We cannot expect ever to have a version of them such as he could have made. We may have versions more literally exact and full of the acquisitions of modern scholarship, but we shall have none in which the spirit of the original will be so thoroughly conveyed. And in rendering such productions as these, sympathy and insight are of more importance than mere learning. The measure of Mr. Frere's scholarship might not reach the standard of German thoroughness, but it was sufficient for his end. There are some kinds of erudition that may be dispensed with as superfluous in a given task.

Of Mr. Frere's other productions there is no need to speak at length. His reputation will rest on those of which we have spoken. Had his achievements in literature been even less than they are, he would still deserve recognition and honorable remembrance as one of those men, always few in any given generation, who stand for the best literary tradition, and maintain the authority of cultivated judgment and refined taste in the domain of good letters. One such man, though he live retired at Malta, and though his name be not known to the public of the daily press, raises the level of literary workmanship and improves the best scholarship of his generation.

FLINT'S PHYSIOLOGY.*

THIS, the last of five volumes, treats of two wholly distinct subjects, the Special Senses and Generation. For those who possess the entire work, this incongruous association (like that of Movements with Nutrition and Secretion in the third volume) will make little difference, but in a series of which the volumes may be had separately the uniformity of size and price should have been held of far less moment than the collocation of similar subjects.

In the preface to this volume the author naturally reverts to the previous ones, and, with justifiable satisfaction, states that he "has found no reason to modify the new views enunciated therein." The author's investigations respecting the general location of the respiratory sense, the formation of cholesterine and of sugar by the liver, and the physiological effects of severe and protracted exercise, to the general reader may appear few and unimportant as compared with the whole of physiological science, and as hardly warranting the author in writing upon the latter; and we will call attention to the fact that nothing original whatever is to be found in the fourth and fifth volumes respecting the Nervous System and Generation. But it must be borne in mind that, at the present time, to add anything to human anatomy and physiology demands very careful and extended research. If one such addition is made and substantiated, the author may feel himself worthy of honorable record as an investigator. Besides the special subject of his study, the physiologist is usually called upon to teach the whole of the science. In teaching he learns the needs of students, and, if his students are numerous, he is justified in preparing a work which is likely to help them and others.

This is what Dr. Flint has undertaken to do, and has done in so far as to furnish us the best summary of human physiology in the English language. In fact, without claiming for the author the "peculiar fitness for the task" which, in the preface to the first volume, he regards as the chief of reasons for authorship, it is evident that a work embracing more than 2,500 octavo pages must, even if only moderately good in style and arrangement, furnish a greater body of information than is elsewhere attainable.

Its very size and cost must present an obstacle to the introduction of this work as a required text-book, although it cannot be doubted that such a requirement, if complied with, would greatly benefit the public; for the physician cannot know too well the normal functions of the organism whose disorders are committed to his charge. But while assigning to Dr. Flint's work the highest place among English physiologies, and while particularly commending the impartiality with which all parts of the subject are presented, we cannot avoid contrasting his statement that "iconoclasm in physiology is almost a necessity" (p. 345) with the fact that we look in vain in this the last volume for some recognition of the additions, subtractions, and alterations that must have occurred during eleven years in the subjects embraced by its predecessors. This deficiency is the more striking inasmuch as we find a copious index to the five volumes in the place where one naturally looks for an appendix of recent changes. In short, while the references throughout the text indicate that Dr. Flint has spared no pains to learn the latest results at the time each volume goes to press (although Huxley's recent summary of "spontaneous generation" is not alluded to under that head), yet a moment's reflection shows that, *as a whole*, his work cannot possibly represent the *existing* state of physiological science.

In two respects the present volume is an improvement upon its predecessors. The illustrations are more numerous than in all the others together; and there are more frequent references to German physiological literature. But there is still observable a lack of clearness in style, which in a few cases seems to arise from some obscurity as regards the subject, in others to depend upon an unwillingness or inability to state things in tabular form so as to admit of ready comparison and generalization. As an example of the lack of clearness above noted, compare the mention of Lott's experiment upon the passage of zoösperms through an animal membrane as possibly accounting for their penetration of the vitelline membrane (p. 353) with the previous con-

* 'The Physiology of Man: Designed to represent the existing state of Physiological Science as applied to the Functions of the Human Body. By Austin Flint, jr., M.D.' Vol. V. New York: D. Appleton & Co. 1874.

clusion (p. 290) that the fact of actual penetration almost of necessity presupposes the presence of orifices.

In describing the development of the brain, the anterior cerebral vesicle is said to *divide* into the thalami behind and the hemispheres in front; while, according to Huxley, the latter are formed as *protrusions* from the antero-lateral wall of the primary vesicle. The result may be the same, but the process is very unlike, according to the two accounts; and the reader is entitled to be informed as to the existence of the discrepancy. In the account of the internal ear we note the mention of the free communication of the *scala tympani* with the *scala vestibuli* (although the word *helicotrema* is not to be found in either text or index), with no reference to the opinion of recent observers that this communication does not exist.

This is not the place for a detailed presentation of the good or bad qualities of Dr. Flint's work, but we think that the "general considerations" upon the generative function should have embraced some account of the process among the lower animals, especially those lowest and simplest forms (the moners and amœbæ) which manifest all the phenomena of life, yet present no organization. We think, too, that the subjects of multiple pregnancies and of true and false hermaphroditism deserve more attention than they receive, or at least a reference to the elaborate papers in the 'Cyclopædia of Anatomy and Physiology,' in which these and other branches of the reproductive function are presented with a fulness and clearness which almost atone for their comparative antiquity. Indeed, in a work intended not for mere reading but for severe and systematic study, we think the most complete and convenient mode of reference is that now often adopted, namely, by giving a list of all works at the close of the volume, and referring to them in the text by their number on the list, with the addition of volume and page. This plan would also admit of reference to a large number of works and papers, the very existence of which is not recognized in the present work.

In this, as in previous volumes, we note with pleasure an entire absence of controversial spirit, and the personalities are invariably complimentary. The distinguished Professor of Physiology at the other, and in a certain sense rival, medical school of New York is often and largely quoted, and to all is shown the fairest and the kindliest spirit. We hope that the author will accept our criticisms as intended only to suggest the changes by which, even more than at present, his great work shall be held an honor to him and to American science, and a real boon to the student of human physiology.

The Genesis of the New England Churches. By Leonard Bacon. (New York: Harper & Brothers. 1874.)—Dr. Bacon had already given to the public, on various occasions in the past, abundant proof of his extensive knowledge of New England history. In the volume of his 'Historical Discourses,' which appeared more than thirty years ago, the planting of the New Haven Colony is described with a learning and spirit which render it one of the very best monographs in the whole catalogue of American historical literature. With his strong taste for historical enquiries, and having been identified, for more than half a century, with the New England churches, it is quite natural that he should wish to set forth, in a consecutive and complete narrative, the story of their beginnings. He has performed his task with the literary art, the clearness of arrangement, the vigor and felicity of diction, which might be expected from so experienced and accomplished a writer. A vivid yet enlightened and discriminating sympathy with the character and aims of the Pilgrim founders, is obvious on every page. Scattered along the volume are philosophical remarks indicative at once of a broad catholicity and a sagacious, penetrating observation of religious phenomena. Dr. Bacon disclaims a familiarity with "the remotest sources of history," the manuscript, black-letter documents to which the antiquary resorts. But, inasmuch as the materials relating to the Plymouth settlement (with which he mainly deals) are to be found in print, and as he is entirely conversant with these, he was amply equipped for his undertaking. Especially was he qualified by his power to interpret facts some of which are a puzzle to writers less acquainted with the various systems and the occult features of ecclesiastical polity. If this volume contains little that is absolutely new, it has the signal merit of presenting a minute, graphic, and therefore entertaining as well as instructive, narrative of the rise and early fortunes of the Separatists who landed at Plymouth, and laid the foundations of Christian civilization in New England.

In the introductory chapters, Dr. Bacon concisely sketches the primitive polity of the churches planted by the Apostles in the Roman Empire; the gradual rise and the transforming influence of the hierarchical idea and polity; the culmination of this development in the Papacy of the Middle Ages; and the effect of the Reformation on church government. The churches of the Reformation—the Church of England pre-eminently—were national churches. Dr. Bacon points out the diverse agencies which produced the Reformation in England, and narrates the rise of Puritanism, and its conflict with the more conservative Tudor type of Anglican Protestantism. Thus he reaches the beginnings of Separatism, or that advanced type of opinion which rejected the National Church altogether, and strove to substitute local churches, self-governing, and each of them united by a mutual, voluntary covenant of its members. One of the principal features of Dr. Bacon's work is the clearness with which he sets forth the distinction between the Puritans proper—the great original Puritan party, who, like their antagonists, were advocates of a national church, with its whole system of parishes and tithes—and the Separatists, or come-outers, who escaped from England to Leyden, and thence crossed the ocean to Plymouth. The settlers of Massachusetts Bay were of another stripe. They were Puritan members of the Church of England, who struggled in vain to alter its government and worship according to their ideas, but who had looked upon organized dissent with reprobation. But finding themselves in Salem, far from the bishops and from crown and parliament, they proceeded to shape their church polity to suit themselves. The result was that they found themselves at one with the Plymouth settlers, who had come over before them. The voyage across the Atlantic had extinguished their differences. Dr. Bacon's volume terminates with the establishment of the Salem Church, on the basis of a covenant—a church within the parish—and with the interchange of fraternal civilities between this new church and the brethren at Plymouth. They even, at Salem, ordained their ministers anew, as pastors of that particular flock; adopting the idea, which the Pilgrims maintained, that a minister has no being except as the officer of a particular congregation, by whom he has been elected to his place. The "new departure"—to use the modern phrase—of the Puritans of Massachusetts Bay brought them into close harmony with the followers of John Robinson. Thus the peculiar New England Church polity arose.

To Robinson, far more than to any other man, were the Pilgrims indebted for wise counsel and guidance. He was a well-educated and, for that day, most liberal-minded man. His career forms one of the most interesting portions of Dr. Bacon's history. That he was prevented from following his congregation, or the portion of it which emigrated to Plymouth, is an event which descendants of the Pilgrims have cause to regret. The persecution of the first Separatists—Penry and others—under Queen Elizabeth, is the topic of extended description. The interviews of these bold Radicals with Whitgift and Aylmer, at some of which Burleigh was present, are depicted with dramatic fidelity. On the whole, after a careful perusal of Dr. Bacon's work, we can congratulate the veteran author on having completed a contribution of permanent value to all students of American history, and especially to such as are fond of exploring its earlier period.

The Wild North Land. By Major W. F. Butler, C.B., F.R.G.S., author of 'The Great Lone Land,' etc. (Porter & Coates, Philadelphia. 1874.)—Major Butler is a professional traveller; one of that class, of which the majority are Englishmen, who are perpetually seeking some unexplored and unknown region; travelling rapidly through it with more or less hardship and adventure; returning home to write a book about it, and immediately starting off again—possibly to the very antipodes of the last journey. An apt quotation in this book describes his class: "I am become a name for always roaming with a hungry heart." Long research and the gathering of detailed and minute knowledge of a country form no part of their occupation; in fact, when once a locality has been visited by a score of white men, it loses its charm for them, witness Major Butler's depreciation of the Yosemite Valley as compared with the Peace River Pass in the Rocky Mountains. Had Major Butler been the first traveller through the wonderful gorge of the Yosemite, how differently it might have impressed him. The present book is a narrative of a journey from the Red River of the North across the Saskatchewan to Athabasca Lake and the waters flowing to the Arctic Ocean; thence west along Peace River, an almost unknown stream 1,200 miles in length, to and through the Rocky Mountains; and thence down Frazer River to the Pacific coast near Vancouver's Island. This journey of 2,500 miles was accomplished between October and the following June; 1,400 miles of it by dog-sledges, and the rest by canoe and on horseback—a journey of privation and hardship, requiring great fortitude and endurance, especially when its chief motive was the love of roaming and the knowledge gained had only a remote value. The pleasure of such a journey lies in its very hardships and novel adventures (with which this book abounds), and in the fascination of a vast desolate country, tenanted only by widely scattered Indians, buffaloes, and moose—a fascination difficult to explain to dwellers in cities, but more or less well known to every one who has travelled for days across the unending prairie.

The author's animosity to his American cousins and their ways crops out in various amusing forms; but it prompts some remarks about Northwestern

explorations and boundary lines which can hardly pass unchallenged. While granting the value of the early English explorations of Mackenzie and others, and of those still earlier explorers, the French, it must be remembered that the first white men upon the upper waters of the Missouri and the Columbia —the two great east and west rivers of the continent—were Americans, Captains Lewis and Clark, in 1804; and it may well be questioned if the information which that expedition brought back has not proved more valuable than that of all the English explorations in the Northwest up to that date. As for "American duplicity" in regard to boundary lines, a sufficient answer to Major Butler's insinuations is found in the transactions of the English concerning San Juan Island in 1856. And the Americans were certainly not to blame for being the first to discover (by an expedition in 1806), that the forty-ninth parallel passed through neither the northwest point of the Lake of the Woods nor the head-waters of the Mississippi, as described in the treaty of 1783; nor subsequently for negotiating a treaty in which the boundary was still the forty-ninth parallel, and from it by the shortest line to the northwest point of the Lake of the Woods. Major Butler speaks of this as "the unfortunate selection of an astronomical boundary line," but a little reflection and our present knowledge of the country show it to be a remarkably happy selection; for the forty-ninth parallel is the nearest astronomical line to the great watershed of the continent, between the Great Lakes and the Rocky Mountains. This watershed twice crosses the forty-ninth parallel, and is within 50 miles of it for over 500 miles of its length; leaving in British Territory all the waters of the Saskatchewan, except a few miles of its head-waters not navigable, and similarly the waters of the Missouri in our territory. West of the Rocky Mountains, it is no less happy, as it gives us nearly all the Columbia River, and to the English the whole of Frazer River.

The book, however, is chiefly filled with the narrative of the incidents of the journey, and gives a most interesting account of the daily incidents and adventures, the large animals and few men, that one meets in travelling over the great northern plains.

RECENT GOVERNMENT PUBLICATIONS.

Forty-second Congress, Third Session. House of Representatives. Miscellaneous Document, No. 107. Annual Report of the Board of Regents of the Smithsonian Institution, showing the Operations, Expenditures, and Condition of the Institution for the year 1872. 8vo, pp. 456. Washington: Government Printing Office. 1874.

This report presents an account of the work done by the Smithsonian Institution in carrying out the mission of Mr. Smithson "for the increase and diffusion of knowledge among men," giving in their order the list of officers; the report of the secretary, with the statistics of the collections, exchanges, etc.; the report of the Executive Committee, exhibiting the financial affairs of the Institution; the proceedings of the Board of Regents; and a general appendix, consisting of original and selected matter. The financial exhibit is all that can be desired, the expenditures being kept carefully within the income, which amounts to $46,916, and the expenditures to $45,420; leaving a small balance to be carried to the credit of the succeeding year. The publications of the Institution in 1872 embraced some important works, among them one upon the 'Rainfall of North America,' by Mr. Schott; on the 'Fresh-water Algæ,' by Dr. H. C. Wood; on the 'Orbit of Uranus,' by Prof. S. Newcomb (for which he received the gold medal of the Royal Astronomical Society of London and a corresponding membership of the Academy of Sciences of Paris); a 'List of the Families of Mammals,' by Prof. Gill; a 'List of the Scientific and Literary Establishments of the United States,' and other articles. Under the head of Exchanges, it is stated that nearly all the scientific institutions and individuals of America maintain their communication with correspondents in the Old World through the Smithsonian Institution; the printed list of the foreign establishments sustaining such relations embracing almost two thousand names. Returns received from abroad for other institutions are sent directly to them on arrival. Those coming to the Smithsonian Institution itself are transferred, as has been the case with the whole of its library, to the Library of Congress, in which nearly 80,000 volumes have been thus deposited. A statement is given of the amount of meteorological work accomplished by the Institution in 1872. This department, our readers may remember, has since been transferred to the Signal Service Bureau of the War Department. Under the head of the "National Museum," which is in charge of the Smithsonian Institution, many valuable additions are enumerated, with a specific list of the donations; and there is also an account of the distributions of duplicate specimens to various establishments throughout the world.

A special feature of the volume as usual consists in the many papers relating to American ethnology—in fact, one-fourth of its space is occupied with this subject. The articles include the translation of a paper by Paul Broca, on the "Troglodytes of the Valley of the Vézère"; on "Ancient Aboriginal Trade in North America" and on "North American Stone Implements," both by Dr. Charles Rau of New York. Several papers on ancient mounds, etc., all well illustrated with numerous figures, copious indexes, systematic and alphabetical, add to the value of the book. The Report of the Institution for 1873 is, we learn, to be published in the course of a few months.

HENRY HOLT & CO.'S SCHOOL-BOOKS

Include among others, Freeman's Historical Course, the Class-room Taine, Siglar's English Exercises, the Ordo Series of Classics, Whitney's German Course, Otto's French and German Courses, etc. Reference is made to the faculties of all leading institutions. Catalogues sent on application. Address

HENRY HOLT & CO.,
25 Bond Street, New York.

WHAT ARE ENGLISH CHANnel Shoes? Sewed shoes have the seam that unites the sole and upper sunk into a channel cut in the sole. Americans cut this channel from the edge of the sole, and the thin lip turns up in wearing. The English channel, which never turns up, is cut from the surface, leaving a dark line when closed. As it cannot be cut in thin, poor leather, it indicates a good article.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of ten cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

Publishers, Boston.

THE WEEK IN TRADE AND FINANCE.

OCTOBER 19, 1874.

THE week has been comparatively free from any features calculated to disturb the different markets. Rumors of failures were current nearly every day, but as they have become so frequent of late, and generally turn out to have no foundation in fact, very little attention was paid to them, and no effect whatever was produced upon the market for commercial paper, which, after all, is the best test which can be had of the confidence among business men.

The money market has been a shade firmer, and most of the call loans upon Stock Exchange collaterals have been made at 3 per cent., the lowest being at 2½ per cent. Commercial paper of the best grade has been very scarce. Prime names running three to four months are quoted at 6 to 7 per cent.

Cable advices on Thursday reported an advance in the Bank of England discount rate from 3 to 4 per cent. So large an advance was unexpected, although the continued loss of bullion led to the expectation that an advance of ½ per cent. was likely. The Bank lost £573,000 during the week.

The weekly statement of the city Clearing-house banks on Saturday shows a considerable loss in both specie and legal tenders, which, notwithstanding a reduction in liabilities, in the shape of deposits, to the amount of $3,348,500, is sufficient to cause a loss of nearly $3,000,000 in the surplus reserve.

The following is a comparison of the averages for the past two weeks:

	Oct. 10.	Oct. 17.	Differences.
Loans	$281,377,800	$282,275,200	Inc... $897,400
Specie	16,946,700	15,007,800	Dec... 1,938,900
Legal tenders	62,394,200	60,697,000	Dec.. 1,697,000
Deposits	233,471,200	230,122,700	Dec... 3,348,500
Circulation	25,115,800	25,060,500	Dec.. 55,300

The following shows the relations between the total reserve and the total liabilities:

	Oct. 10.	Oct. 17.	Differences.
Specie	$16,946,700	$15,007,800	Dec.. $1,938,900
Legal tenders	62,394,200	60,697,000	Dec.. 1,697,200
Total reserve	$79,340,900	$75,704,800	Dec.. $3,636,100
Reserve required against deposits	58,367,800	57,530,675	.....
Excess of reserve above legal requirem't	20,973,100	18,174,125	Dec.. 2,798,975

The stock market has been less active than usual, although the week's business foots up a very fair amount. The tendency of the market has been downward. Erie has been active and the fluctuations wide, the price in this market being governed by the London quotations. The extreme range in the fluctuations of the stock was between 27⅛ on Wednesday and 31¼ on Friday, the week's business amounting to 181,300 shares. Besides Erie, Western Union, Lake Shore, Union Pacific, and Pacific Mail have been the speculative favorites, while the rumors which have been indulged in as to the payment of the November interest on the bonds of the Toledo and Wabash Railroad Company led to speculation in the stock of that Company, which advanced or declined as the chances of success in procuring the money to meet the interest were reported. During the week the price of Wabash declined from 32¾ to 31, with a reaction of ⅞ per cent. on Saturday from the lowest point, the announcement then being made that the interest on the bonds would surely be paid.

The highest and lowest sales for the week ending Saturday, October 17, 1874, have been as follows:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday	Total.
N. Y. C. & H. R...	101¼ 101½	100¼ 101⅜	100⅜ 101	100⅝ 101⅜	101⅜ 101½	100½ 101⅜	5,135
Erie	29⅜ 30⅜	24⅜ 30⅛	27⅛ 28⅜	27 28⅜	29⅛ 31¼	28⅜ 31	181,300

Government bonds have been in good demand, the savings-banks and corporations and individuals, limited by law as to the investments they may make, being the principal buyers. The amount of bonds offering is extremely limited. The following are the latest quotations to-day:

	BID.	ASKED		BID.	ASKED
Coupon 6's, 1881	118⅛	118⅝	Coupon 6's, 5-20's, 1867	117¾	117⅞
Coupon 6's, 5-20's, 1862	113	113⅛	Coupon 6's, 5-20's, 1868	117¾	117⅞
Coupon 6's, 5-20's, 1864	116⅛	116⅜	Coupon 5's, 10-40's	112	112⅛
Coupon 6's, 5-20's, 1865, M. & N.	117	117⅛	Coupon 5's, of 1881	112¼	112⅜
Coupon 6's 5-20's, 1865, J. & J.	116⅜	116½	U. S. Currency 6's	118	118¼

A fair week's business was transacted in railroad mortgages. Prices of the better class of bonds, although very high, have been well maintained. Investors having no use for their money in any other way, prefer paying the seemingly high prices for undoubted security, instead of taking any chances in buying bonds about which there is the least doubt. At a recent auction sale of a large amount of undoubtedly good railroad bonds, there was a large attendance of buyers, and the prices obtained for round lots of bonds were, in some instances, as much as 2½ per cent. higher than those at which small lots of the same bonds were offered at the Stock Exchange.

The gold market requires very little comment, the sales having all been between the extreme limits of 109⅞ and 110⅛, while on Wednesday and Friday the sales were all at 110. The advance in the English bank rate and the result of the elections in some of the Western States have tended to keep the price steady. The amount of gold now in the city banks is so small—about $15,000,000—that it could be easily handled by a combination of speculators, should the short interest in the market be of sufficient importance to render a squeeze in cash gold profitable. The loaning rate during the week has been "flat"—that is, the borrower of the gold receives no interest upon the currency which he gives the owner of the gold as security. The Secretary of the Treasury has given notice that the November interest upon the public debt will be paid on and after 25th instant without rebate. This may have the effect of preventing for the present any manipulation of the market calculated to distress borrowers of gold. The larger part of this interest, however, belongs to Europe, and the Bond Syndicate have bought up a large amount of these coupons to turn into the Treasury on account of their contract in the new 5 per-cent. bonds.

NOTICE TO THE HOLDERS OF THE FIRST-MORTGAGE BONDS OF THE OREGON AND CALIFORNIA RAILROAD.

The undersigned Trustees are prepared to purchase, for the Sinking Fund, a certain amount of the First Mortgage Bonds of the Oregon and California Railroad Company, and hereby invite offers of such bonds from holders.

The lowest offers will be accepted up to the amount of the available means which are derived from the sale of the Company's lands; but no proposals above par and accrued interest in gold will be considered.

Communications stating amount and price of bonds, and marked "Offer of Oregon and California Railroad Bonds," may be addressed to the undersigned, care of the London and San Francisco Bank, San Francisco, California.

The Nation.

NEW YORK, THURSDAY, OCTOBER 29, 1874.

The Week.

THE election in this State which takes place next Tuesday will be very important for two reasons. It will decide the fate of twelve amendments to the State constitution, which we have discussed elsewhere, and will have a serious influence on the fortunes of the Republican party, both by the return of members of Congress, and by stemming or swelling the tide of discouragement set in motion by the recent Republican losses in Ohio and Indiana. But it is only honest to say that at this writing the Republican chances are small, and the Democrats are not unreasonably jubilant, and are disputing over the size of their majority, which the more sanguine put at 50,000, and the less so not very much lower. It is conceded on all hands that the only strong name on the Republican ticket is General Dix, and towards him there is a good deal of disaffection on the part of the managers. Of the Republican platform, the less said the better. The causes of this unhappy plight of the Republican party are of course numerous. The principal one is the undue confidence and elation caused by the victory of 1872. It was said by one of the chiefs that it gave the party an eight years' lease of power for certain, and it was ascribed to the burning eloquence of Mr. Roscoe Conkling. It was argued, therefore, that all that was needed when trouble again arose was to call in Mr. Conkling once more. The fact was that it was due to the ludicrous character of the opposition to General Grant, and that Mr. G. F. Train could have produced nearly as good "a line of light" as that which, according to his admirers, Mr. Conkling left across the State. The result has been the display of extraordinary recklessness in all departments of the Administration, and utter indifference on the part of the majority in Congress to the leading questions of the day. The Treasury was handed over to Mr. Richardson, the South to Attorney-General Williams, the State of Massachusetts to Ben Butler, and the party so totally neglected its principal duties that it had nothing to begin the canvass with this year but trumped-up "outrages." The gleam of hope emitted by the McEnery "rebellion" soon passed away, and the party has now little left in the way of capital but a heap of exposed falsehoods. The very most has been made of the third-term talk by the Democrats, and it has probably fatally injured General Dix. It might have been stopped by a few words at the Utica Convention, but Mr. Conkling was so occupied with "midnight assassinations" and "reigns of terror" that he actually strengthened it by his allusions.

A large and successful meeting of the Republicans was held on Monday evening at the Cooper Institute, and speeches were made by General Dix and Judge Pierrepont. The resolutions adopted view with regret the record of the Democrats in everything they have done, and with pride and satisfaction the record of the Republicans. Most unbiassed people, we suppose, in reading General Dix's straightforward speech will feel inclined to vote the Republican ticket, though how the same persons will feel after looking over Judge Pierrepont's language will be another question altogether. But even an unbiassed voter must admit that Tilden's war record is against him, and that not much could be done towards firing the popular heart with a desire to "crucify" Dix, by the production on a transparency now of the well-known Chicago resolution, "This Convention does explicitly declare, as the sense of the American people, that, after four years of failure to restore the Union by the experiment of war, during which, under the pretence of a military necessity or war power higher than the Constitution, the Constitution itself has been disregarded in every part, and public liberty and private right alike trodden down, and the material prosperity of the country essentially impaired, justice, humanity, liberty, and the public welfare demand that immediate efforts be made for a cessation of hostilities, with a view to an ultimate convention of all the States or other peaceable means, to the end that at the earliest practicable moment peace may be restored on the basis of the Federal Union of the States."

The Democrats have also held a great ratification meeting, and had speeches from Seymour, Kernan, and Governor Parker of New Jersey. The resolutions denounce with great earnestness the increase of "rag currency," Custom-house corruptions, gag-laws, "anti-revenue" tariffs, and, above all, "the significant silence of the President, whose single word might send back to their public employments the 80,000 office-holders who are plotting for his third term." Governor Parker promises that if the Democrats get control of the Government they will establish justice, make the country prosperous, stimulate thrift, bring money out of its hiding-places, protect the negro, but at the same time not protect him too much, and advance the value of real estate "so that the man of moderate means need not fear the coming of the sheriff"; and he expresses the hope that no personal feeling or local grudge may prevent the people of the State from securing these advantages. The Republicans, however, and the 80,000 office-holders will prevent it if they can.

The turn which the election will take in Louisiana will depend, apparently, very much on how much fraud Kellogg conceives himself to be in a position to commit. During the past week the Attorney-General of the State has delivered an opinion, in which he declares that several thousand citizens naturalized by the Second District Court are not legal voters, the court not having had jurisdiction. It is said, however, that these voters, who are understood to be Conservatives, will be allowed to vote separately, the question of counting their ballots to be determined afterwards. The negroes have begun to fall away from Kellogg, and with a fair election there is little doubt the Conservatives would carry the day. There is a point in fraud, too, to which it is agreed even Kellogg would not go; but where that point is, or how he is to know when he reaches it, are matters involved in obscurity. The troops are kept employed in street manœuvres, which the Conservatives maintain are designed for the purpose of intimidation, while the Radicals say that they are nothing but necessary daily exercise. One of the officers has succeeded in distinguishing himself by procuring the arrest of a large number of citizens under one of the Ku-Klux or Enforcement Acts, and the situation now looks as if Kellogg's best hope would be to arrange matters so as to leave the result of the election in doubt, in which case he, being still in office, and sustained by troops, would be able by appeals to Congress, wars of races, and Ku-klux outrages, to keep himself in for sufficient time to receive a fat mission, or a senatorship, or something of the kind. His hold upon Louisiana seems, however, to be fast relaxing.

The President is still continuing his infamous plots for the subversion of the liberties of the country. Perhaps he shows his subtlety in nothing so clearly as in this—that unlike most usurpers he is working to get himself renominated without any votes. Dix says that he will have nothing to do with a third term, and there are reasons for believing that Morton and Blaine are devoting their minds to the consideration of questions connected with a first rather than a third term; the Southern carpet-baggers are afraid to mention it, the Democrats have never advocated it, and a strong faction of the Liberal-Republicans is said to be in favor of no more than half-a-

term for any one office-holder. Nevertheless, the President is at work, and during the past week has struck another foul blow by removing some tainted office-holders in Texas. This is supposed to have been done for the sake of conciliating Senator Flanagan, who got the men their places. Seriously, however, the President seems to be awakening too late to the connection between Southern misgovernment and his own Administration. His interference against Moses in South Carolina and his present descent upon the corruptionists in Texas seem indications of this.

The question of ritualism has been receiving fuller discussion during the last week or two than it has yet met with in the official bodies of the Episcopal Church. The matter was first brought up in the case of Dr. Seymour, who had been elected Bishop of Illinois in place of the late Dr. Whitehouse, and was presented to the General Conventon for confirmation. Dr. Seymour's connection with the Episcopal Seminary in this city, and his possession in this way of considerable influence on the younger clergy, of course have made his sayings and doings sufficiently conspicuous to afford abundant materials for debate. But curiously enough, no attempt was made to defend ritualism; his friends occupied themselves in disproving that he was a Ritualist; and in fact the new movement was found to have no direct defenders in the body. Nothing we believe was made out against him, but enough small things were said or suggested to lead to his rejection. At this writing the Convention is engaged in debating a canon against ritualism, which is perhaps as necessary work as it could do, as there is little question that if the Church cannot make an end of ritualism, ritualism will make an end of the Church's strength and influence.

Judge McKean, of Utah, achieved for himself a few years ago a brilliant though momentary reputation by refusing to issue certificates of naturalization to foreigners adhering to the doctrines of polygamy, on the ground that they could not have the proper sort of character or principle for American citizenship. The judge has again come to the front—this time dragging the editor of the Salt Lake *Herald*—which journal had insinuated against him that he was in the habit of making descents of a predatory nature on mining property—before the Grand Jury, and requiring that body to indict the *Herald* if the story were false, and himself if it were true. From copies of the *Herald* still allowed to circulate, it does not appear that the judge's orders have had a chastening effect on that newspaper, for it now denounces him for gagging the press, and in no very indirect language hints that the administration of justice in McKean's court is a "put-up" affair. Meanwhile, operations for the suppression of polygamy are actively going on, proceedings of several sorts having been begun which involve Elder Ricks, Cannon (delegate to Congress), and Brigham Young. Cannon was elected to Congress by means of the female vote; he is now prosecuted for polygamy. Ricks's case is singular. According to the best accounts, being drawn on the grand jury, he swore that he was not living in polygamy, but could conscientiously find true bills against those who were. But on the following day, evidence being forthcoming to show that he had five wives, the elder replied by falling back on the great principle of the common law that he was not bound to criminate himself, but that it was the business of the Government to find out whether he had five wives or not. According to the Springfield *Republican*, he is described as being "the beau-ideal of an orthodox Mormon," with the "mountain meadow face," a man who would "divide his last biscuit with the traveller at night and cut his throat in the morning, to the glory of the church."

On the 3d of next month elections will be held in some twenty-five States and Territories, of which the result will determine the complexion of the next Congress, and also some other things. In Michigan, the election day this year, according to the *Woman's Journal*, will be "the most important day in its possibilities that has dawned upon America since the Declaration of Independence," for it will be the day on which "the men of Michigan, by their votes, will establish or defeat impartial suffrage and equal rights for women." A very stirring appeal it is that we find in the columns of the *Journal* to the nobler sympathies of the Michigan male voters, reminding one in its ringing notes of some of the best efforts of General John Cochrane in one of his proclamations issued on the eve of a Liberal-Republican victory in the State of New York: "Ignored by every party organization, embarrassed by insufficiency of means, assailed by the unscrupulous defamation of political demagogues, the suffragists of Michigan are strong in their principles. They appeal to the good men of all parties to establish a true republic upon the soil of the peninsula." There is, as the author of this appeal justly says, only one way to carry the State, and that is by persuading a sufficient number of male voters to vote affirmatively on the adoption of the suffrage amendment. The sky looks black and cloudy indeed, the wind howls in the rigging, and the ship of state is driving on a lee shore; but we infer from what the *Woman's Journal* says that a vigorous attempt will be made to keep her off the rocks.

In South Carolina, we believe, there is no active agitation for woman suffrage; indeed, in few of the Southern States since the war have there been many indications of a desire for this reform; though if, as the ladies say, one of its immediate effects would be the purification of politics, the South is just the place where they ought to be most eager to introduce it. But the minds of both Conservatives and Radicals there are occupied with other things. Governor Moses has been at last driven into guaranteeing the people of his State a fair election, by changing the election commissioners in every county. This move is hailed with great satisfaction by the Conservatives, who now have hopes, with the aid of the bolting Republicans, of carrying the State. Chamberlain does not seem to be making a successful campaign, and though he has recently published denials of most of the specific charges against him, he does not succeed in persuading any one that his reputation is in a good condition for political use—and this, after all, is a *sine quâ non* for a good reform candidate.

The *Interior*, a religious paper published in Chicago, says "the *Nation* reads the religious press a severe lecture for advertising the Northern Pacific Railroads." The *Nation* never did anything of the kind. It found fault with them for secretly taking pay for puffing railroad bonds in "their money and editorial columns." We have never said one word against the advertisements in any paper as long as they were not disguised or indecent. Nobody is deceived by an advertisement, or, if he is, a publisher is responsible for it. It is not advertising but concealed brokerage that is reprehensible. The *Interior* further says that, "if they were to believe the *Nation* and other secular papers, they knew that ministers, widows, etc., were being subjected to a gigantic system of swindling, and yet they kept quiet"—that is, in the case of the Northern Pacific. Here again the *Interior* talks like a sinful, wicked paper. The *Nation* never pretended to know anything about the prospects of the Northern Pacific Railroad, and therefore never said one word about it. It refused to take the responsibility either of advising people not to buy the bonds or to buy them. It refused an invitation to go over the road and see its enormous capabilities, because if accepted, the invitation would have entailed an obligation to express an opinion. We will now, however, tell the religious papers how to avoid trouble with widows and orphans about bad investments. They must watch the course of the *Nation* closely, and do as it does—that is, totally leave off puffing bonds, stocks, or any species of vendible commodity, or helping any commercial enterprise by editorial commendation. If they really want "to save wicked men and overthrow the power of the Devil," this is the way to begin, for we can assure them there is nothing gives the Devil more satisfaction than a "Publisher's Department" filled with lying puffs paid by the line, and put forward as the advice of a simple-minded Christian who wants his friends to get the worth of their money. Some papers have also circulated

the story that Mr. Bowen of the *Independent* has sued the *Nation*. This must amuse Mr. Bowen as much as it does us. We have said nothing in the remotest degree actionable. Mr. Bowen has the contract of which we have spoken, and knows himself that our account of it is rather under than over the truth. Why, then, should he sue us?

If there can be said to be any news from Spain, it shows the condition of the Republic to be getting worse and worse. It would appear now that the attempt to relieve Pampeluna was a failure Not only did Morioues suffer severely on the march back, as we mentioned last week, but his contribution to the stores of the garrison was small, and the place is now more closely invested than ever. There are rumors of a new and desperate movement on the part of the Republicans within a few weeks, but there is also a counter rumor that the Carlists are at last preparing to cross the Ebro in force, and one is perhaps as likely as the other. The recent article in the Government paper, the *Politica*, recommending foreign intervention, has created much excitement, and has strengthened the belief in other countries that Germany is in some manner behind Serrano. He has been remonstrating with both France and England for allowing supplies to be sent to the Carlists, and has been treated civilly and somewhat apologetically by the former, but Lord Derby has handled him very roughly on behalf of England, and, in fact, advises him to get the Spanish navy to be efficient—a task which we suspect is beyond Serrano's powers.

The great subject of interest in Germany is the arrest and imprisonment of Count Arnim. The Cologne *Gazette* has published what purports to be a full, true, and particular account of it. It appears that the Count's sympathies, and perhaps opinions, were on the side of the Legitimists during his residence in Paris under the Thiers Ministry, while Bismarck, who took a more purely German view of the matter, was satisfied that a Legitimist restoration would be dangerous to peace between the two countries. This led to a coolness and withdrawal of confidence on Bismarck's part, but the Count was still allowed to remain at his post until his unsuitableness became more clearly manifest, and then it was determined to translate him to Constantinople. In the interval between his leaving one post and taking another, however, his successor in Paris discovered the absence of certain papers relating to the Papal question, and Arnim acknowledged that they were in his possession, and surrendered them. Further search revealed the absence of many more, some of which the Count denied all knowledge of, and others he admitted to be in his possession, but refused to surrender. The judges were then appealed to, and it is under their orders that he has been arrested, and his house searched. The main question on which they will shortly pass is whether the missing papers are private and personal letters or official despatches. The affair has derived additional gravity from the fact that the purloining of despatches, and their publication by diplomatists for personal purposes, has of late been unfortunately common among European diplomatists. The Duc de Gramont was guilty of it, and so were Count Benedetti and M. Rouher; and General La Marmora used some confidential papers in defence of himself against the German Government, which led to a savage remonstrance from Bismarck. But there seems to be no good ground for believing that Count Arnim has any materials for startling revelations about Bismarck, as the Ultramontanes have been trying to flatter themselves. The original number of missing papers was one hundred, and they relate to the Count's mission both in Paris and at Rome during the Council of the Vatican.

In France there is still much disputing over the meaning of the elections to the Councils-general, and much hard struggling on the part of the Republicans, as here, to make it seem that wherever the Monarchists or Imperialists made any gains it was owing to "local issues." The fact is they have made some gains between them, and united have a majority over the Republicans. But it is plain enough that there is no very sensible change in provincial opinions on the leading questions of government. The local notables are not much more favorably regarded for being Republicans, or less favorably regarded for being Legitimists or Bonapartists, than they were a year or two years ago. That burning eagerness for a republic which is said to reign in the hearts of the French masses, and which makes some people so angry with MacMahon and the Assembly for not proclaiming it at once, has thus far in fact not been revealed by any of the ordinary channels. We hear of it from M. Gambetta, and from several English and American newspapers, but the French country people keep mum about it in the strangest way. MacMahon's dealings with the press excite more and more dissatisfaction. He suspends on ludicrously small grounds, and pretends that he can stand no criticism which does not treat the Septennat as the only needful and for the present only possible government. The press is occupying itself largely, in the present ticklish condition of home politics, with drawing fearful pictures of the way in which Germany is going to dominate England and other foolish nations which allowed her to get the better of France. But there is no more outlook in French politics than there was a year ago. The Legitimists, who are so sorely puzzled to know what to do with the Comte de Chambord, are trying as a last resource to get him to come and live in France, believing apparently that this might bring him to his senses.

But scanty particulars of the civil war in the Argentine Confederation have reached us, and these by Cable. The leader of the insurgents is General Mitre, who assumed command, by manifesto, on the 12th instant, the day of the inauguration of the new President, Dr. Nicolás Avellaneda. The elections which resulted in this choice were bitterly contested, and the frauds which were alleged to have occurred were made the pretext of revolt, which broke out about the first of the present month. The city of Buenos Ayres was speedily beset by land, and the rebels, though not allowed to remain in the port of Montevideo, have kept a small navy afloat, which has given the Argentine Government much anxiety. Numerous instances of defection from the Government ranks are reported; and the capital, in which public opinion appears to be divided, has been thrown into a state of moral and financial panic. Thus far no engagements of any importance have taken place, and there have been even rumors of compromise, in which President Avellaneda was to sacrifice his office. We count it among the encouraging signs, however, that he followed up his entrance upon his duties with a proclamation calling upon all law-abiding citizens for support; and that his predecessor, Sarmiento, has taken command of the troops defending Buenos Ayres—precisely where we should have expected to find him. What intensifies the struggle is the fact that the Presidential term is six years; and in a different sense perhaps from what he intended, Dr. Avellaneda's words at a banquet given him in August seem likely to prove true, when he said: "The power and efficacy of our institutions have not been so sorely tested by the electoral conflict as they have been by the result." Stript of personal considerations, the war is, in fact, like our own civil war, one between a national and a particularist, a legal and a revolutionary, a North-American and a South-American party. With this issue the degree of popularity of the President has no concern, and the question of fraud at the polls takes at once a subordinate place. The mixed population of a capital in which Italians outnumber every other nationality except the Spanish-Americans, and in which the foreign-born residents make a close approach to one-half the total, complicates the problem immensely, or rather is a premium on the success of revolt, since the triumph of law and order depends upon the successful maintenance of the capital. One thing is certain, that something more than six years of a wise and useful administration like that of Sarmiento's, and than such an advance in civilization as is implied by four thousand miles of telegraph, is needed to make the country of Rosas a stable, steadily progressive republic.

THE WORKING OF THE FORCE ACT.

WE think those of our readers who are inclined to the opinion that it is safe and well to hand the government of the Southern States over to the Attorney-General and the army, would do well to go back a little and examine the arguments by which negro suffrage was imposed on the South as a condition of reconstruction. We were among the number of those who advocated it, and we did so on two grounds, justice and expediency. That is to say, although we were in favor of an educational test, we thought it would be unfair to exact it of the blacks without exacting it of the whites, particularly as the blacks were at that time objects of great contempt and aversion to the whites. But the reason which seemed most powerful of all was the belief that by arming the blacks with the ballot we should furnish them with the means of protecting themselves against white aggression, and thus relieve the General Government from the necessity of interfering in Southern affairs in a way that might eventually prove dangerous to all State independence. It was urged, and with great force, by the friends of negro suffrage that it would be impossible to stand guard over the black man without an army of three or four hundred thousand men and enormous expenditure of money, and that, therefore, by far the cheapest and safest thing to do was to enable him, as a voting citizen, to obtain deferential treatment from the various political parties, and to influence the choice of judges, sheriffs, and other administrative officers. We said that though this might not secure him at the outset against violence or intimidation, it was sure to do so before long; that a million of voters must speedily become objects of adulation to politicians and office-seekers; and that this protection for the freedman would be secured in the regular American way, and we should be saved the necessity of centralizing the government, and introducing arbitrary practices into our administrative system.

After nine years' experience of the working of negro suffrage at the South, we see only one thing to regret, and that is, that the admission of the negroes to the franchise was not made gradual, and through an educational test. This probably might have been done without as much difficulty on the score of inequality as we then thought we saw, and it would have saved Southern society from the tremendous shock caused by the sudden and indiscriminate admission of the newly-emancipated slaves to a share in the Government. But we say this in the interest of the whites. As regards the security of the blacks, the fondest hopes of those who demanded the suffrage for them have certainly been realized. In those States in which there is a clear white majority, and the government is in white hands, everything has turned out much as was anticipated. The negro enjoys as much protection from the laws as the whites, and can use his vote with just as much effect as the whites, and, as far as we can learn, has nothing to complain of except inability to get office—a grievance with which it is difficult to have much sympathy. In Virginia, we believe, he is not fairly dealt with in the matter of common schools; but, as regards this, we should give him precisely the same advice we should give Irishmen who wanted a share of the school funds for their church schools, or Germans who wanted free lager, or any other class of the community suffering from any disability—"Argue and protest and vote until you get what you conceive to be your rights." On the other hand, in those States in which the blacks are in a majority, the blacks have themselves become, in the hands of white knaves, oppressors of the worst sort, and have brought society to the verge of destruction. Here, in like manner, we advise the unfortunate whites to argue and protest and appeal and vote until *they* get their rights. In short, we urge upon both blacks and whites a thorough trial of the American theory, on the ground that order and peace will somehow, sooner or later, be evoked from free discussion and free voting, and that occasional violence and outrage are not sufficient reasons for giving up the experiment of free government, and falling back on martial law.

Now, our firm belief is that this experiment would have succeeded if the Republican party had chosen after reconstruction to let the South alone. What has placed, or is placing it in peril, is the fact that after the carpet-baggers had gone down there and arrayed the blacks into a party and revealed to them the secret of their power, the chiefs in Washington took it into their heads to perpetuate, or at least prolong, the hold of the Republican party at the South, and thus supply a counterbalance for possible reverses or defections at the North, by additional legislation enormously increasing the power of Federal interference. Not only were the marshals and collectors allowed to become the confederates or supporters of the thieving carpet-baggers, but their authority was greatly enlarged, and the number of contingencies calling for Federal meddling with State affairs considerably increased by the passage of the Force Bill in 1871. We fully reviewed this legislation on the 20th of April in that year, and pointed out its tendencies and dangers. We showed, and we think conclusively, that it was an artful attempt to give the Administration at Washington complete power of police in all the States, and the United States courts jurisdiction of all classes of offences. If any reader will take the trouble to turn to our files of that date, and will then look at what is now passing at the South, he will find that all our previsions as to the use which might be made of the act are being fully realized. It is, in short, being used as an electioneering engine of extraordinary efficiency. By an ingenious and novel use of the words "conspiracy" and "rebellion," and by treating the constitutional prohibition directed against certain kinds of State legislation as if directed against certain offences committed by individuals, it hands the whole State police over to the United States marshal, if he chooses to assume it. That is—and here is the place where the dexterity of the act as a political measure most clearly appears—the Administration is not charged with the duty of keeping the peace of the State at all times, but only at such times as it chooses to interfere. A murder, for instance, is committed in the month of August—we are now citing a case of actual occurrence. In an ordinary year the State authorities would be left to hunt down the murderer; but committed this year, with the election coming on in November, the United States marshal intervenes, treats the crime as a violation of the Force Act, or "a denial of the equal protection of the laws," and himself arrests the assassins and such persons as he may deem conspirators with him, and pronounces the killing of the man in August as an attempt to hinder him from voting in November. In fact, the statute is so vague in its wording, and may be made to cover such a large variety of offences, and is so largely independent of overt acts for its taking effect, that it can be used, and is being used now at the South, in Alabama and Louisiana, as a means of spreading terror and confusion among the enemies of the Administration. We do not believe that any constitutional government has equal means of intimidation, and used by such men as now fill Federal offices at the South it may make an election a mere farce.

One of the strongest objections to this state of things, were the purposes of the Administration never so pure and its officers never so honest, would be (as we have often said) that it prevents the negro voter from receiving the educating effect of the working of real political machinery. A political system which depends wholly, as ours does, for its success and permanence on the faith of the people in the general reasonableness—or, in other words, in the possibility of creating majorities by persuasion—cannot be worked by men who have not learnt the art of persuasion; and rude, ignorant men, new to civil as well as political life, can only be taught the art through practical experience of the necessity of it. This experience we are doing all we can to prevent the negroes from acquiring in the very States in which it is most necessary that they should have it—namely, those in which they are in a majority, or are nearly equal in number to the whites. The minute they come in collision with the whites, and the necessity of forbearance and conciliation on their part arises, down we come with our Force Act, and our marshals, and our infantry and cavalry, and begin to snap up all their more troublesome opponents as "rebels" and "conspirators," and lock them up in jail. In fact, there is hardly one of the lessons in the art of government which American jurists and politicians have

been preaching to the rulers of the Old World for the last ninety years, which we are not now ourselves disregarding at the South, and hardly one of the advantages which we have claimed for our system of divided powers over the European system of centralization which we are not now repudiating.

One sees already the evil effect of the act on public sentiment at the North in the way in which it is promoting the habit of substituting loose, vague, Spanish-American phraseology for the precise and accurate description which has been the glory of Anglo-Saxon politics for ages, and which has proved the best safeguard of Anglo-Saxon freedom. The officer who telegraphed to Kellogg the other day that "intimidation reigned supreme" at Breaux Bridge, had clearly learned his lesson in the new nomenclature. Instead of charging men in the old style with having said this and done that on such a day and at such an hour, we now begin to pursue them, in the style of the French procureurs, for "exciting to hatred and contempt of the Government," as they say, or, as we phrase it, for depriving citizens of "the equal protection of the laws." Even careful and able writers are catching this most dangerous infection. Judge Ballard has most righteously ruled in Kentucky that the Force Act does not take effect under the amendment to the Constitution until a State passes an act violating the amendment. In other words, he simply says that laws in this country are always directed against specific acts of omission or commission, capable of rigid description, as the only true safeguard against despotism. A man is to be punished when he does this or that; the President is to call out the militia when certain physical phenomena, for which there is a well-known legal designation, appear; and so on. But *Harper's Weekly*, replying to Judge Ballard, maintains pleasantly that the Force Act takes effect, not when a State through its legislature does something, but when "its ruling sentiment" or "controlling public opinion practically nullifies laws which are verbally equal." This is not addressed to the public of Guatemala, be it remembered, but to that of the United States; and we may therefore ask the *Weekly* how it would describe, *in court*, "the ruling sentiment," or "controlling public opinion of a State"? How do we know when this "ruling sentiment" "practically nullifies a law"? What is "the practical nullification of a law"? In what does it consist? Is it the refusal of juries to find verdicts of guilty? If so, how many juries? Is it the refusal of police to arrest or of district-attorneys to prosecute? If so, how many such refusals amount to a "practical nullification"? Is it true that the government of a State ought to be set aside in this country whenever the President does not like its "ruling sentiment"? Are we prepared to allow him to define the phrase "controlling public opinion" for himself? If so, how does the government of Alabama differ from that of the Department of the Bouches-du-Rhône or of the Province of Barcelona? Where do we find any support for the belief that a free government can last long after public officers have been released from the necessity of basing their official proceedings on overt acts? What should we think of a law which provided that all persons wanting in candor and elevation of character, and producing an impression of selfishness and narrow-mindedness, should be imprisoned for six months with hard labor? What solid objection could you make to it? Would it not be a good thing if such persons were shut up, harassed, and generally discouraged? In short, we advise all persons who are reading ancient or mediæval history, in order to get at the nature of the subtle and slow process by which popular governments have been destroyed, to lay down their books and study the utterances of the Administration press in our own day, and the nature of our policy at the South. The work will be made all the more profitable by a perusal of what the founders of this Government thought of the dangers to which it, like all other governments of the same class, would probably be exposed.

THE CONSTITUTIONAL AMENDMENTS.

THE amendments to the Constitution of New York which are to be adopted or rejected next week are in a remarkable predicament. They have been regularly proposed by a non-partisan commission. They are supported by the press and by several private bodies of citizens who are not in any way connected with politics, and who have no conceivable motive for supporting them except the public good. Even the Bar Association, which has declined to recommend them formally, as being outside its legitimate sphere of action, has let it be seen that the private feelings of the members are in favor of rather than against them. No man of any prominence has dared to oppose their adoption, and on the day of election every polling-place will have a box to receive ballots on one side or the other. Besides this, the amendments, which mainly deal with the abuses of special legislation and the debts of municipal corporations, are not merely unobjectionable—they are what the people of this and other States have been crying for for some years. To take one glaring case: it was by a series of outrageous acts of special legislation that Tweed got hold of the treasury of this city in 1870, and there is nothing that we know of in the constitution to prevent another Tweed from repeating the same trick with the same besotted city ten years hence. There can be no question, however, that the new amendments, which relegate local affairs to local bodies, and restrict legislation at Albany to matters of general concern, would have a very decided preventive effect. As to the municipal-debt question, there is perhaps no Eastern State in which the abuses of power on this head have occasioned more trouble than in New York. If you go into the interior of the State, you will meet Grangers and the friends of Grangers by the dozen who will assure you that village after village and county after county have been bankrupted by wholesale subscriptions to stock of corporations, and it is only a few years since a vigorous attempt was made all over the country to get these subscriptions held invalid. That particular effort failed, for it was an attempt to get the law altered by irregular and unconstitutional means, but the proposed amendments contain a clause expressly adapted to secure the desired end (Art. VIII. Sec. 11): "No county, city, town, or village shall hereafter give any money or property, or loan its money or credit, to or in aid of any individual, association, or corporation, or become directly or indirectly the owner of stock in or bonds of any association or corporation; nor shall any such county, city, town, or village be allowed to incur any indebtedness except for county, city, town, or village purposes. This section shall not prevent such county, city, town, or village from making such provision for the aid or support of its poor as may be authorized by law."

This is thoroughgoing, and will effectually prevent any of those curious financial transactions between railroad corporations and counties, cities, towns, and villages which are said to result so disastrously to the farmer. But this is not all. For a long time there has been a growing feeling throughout the country that the contraction of accumulating debt by the States themselves is an evil, and, according to a carefully compiled list recently made, the constitutions of twenty-two States now prohibit the loan of State credit or money to corporations for internal improvements or any other purpose; six virtually prohibit the creation of public debt by the legislature for any purpose whatever; and nine prohibit in their fundamental law the engaging in any works of internal improvement in the name of the people. We do not need to enumerate these States by name, for the fact is notorious; and another fact that is notorious in New York is that the history of the great internal improvements of the State—the canals—has not been such as to inspire anybody with much faith in the honest supervision of the expenditure of funds raised by taxation for the purpose of benefiting private schemes. The canals are now a nursery of fraud, and the canals belong to the State. What they would produce if they were private enterprises and borrowed the credit of the State, we can faintly guess by imagining what the Erie Railroad would have become by this time were Fisk still living and in partnership with Gould, Tweed still at the head of the government of the city, and the gentlemen who make laws at Albany selected by the three.

Under all these circumstances, it would seem antecedently probable, if it be really true that we have a popular government, that the amendments would be adopted. There could not be a better illustration of the singular relation existing between the voting body in the State and the political class than in the fact that there is at the present moment an almost universal suspicion that the amendments are not to be allowed to pass. It is not that the Democratic party is opposed to them, or that the Republican party is opposed to them, but that there are a number of persons in both parties whose private interests are opposed to their adoption; "there is money" in their rejection and there is no money in their adoption. The *Tribune*, in discussing the status of the amendments, very truly says: "The canal contractors, the lobbyists, the venal men who aspire to make merchandise of their votes at Albany, and the enemies of reform because it is reform, are not few in number, not lazy, and not unacquainted with the tricks of politics"; and it pathetically asks the various reforming bodies, among others the Chamber of Commerce and the Grocers' Board of Trade, whether they have made arrangements to have ballots in favor of the amendment ready for voters in every voting district of the State. There is something painfully suggestive in the thought of the Grocers' Board of Trade and the Chamber of Commerce being obliged at their own cost to provide the voters of a State with ballots in a regular election, because the leaders of the two parties are believed to be scheming to prevent the public from expressing their opinion. Except in the newspapers, these amendments have not been openly discussed by any political organization, so far as we know. The State conventions have carefully avoided support of them; yet every one knows that they have been discussed in secret, that managers have expressed their opinions *pro* and *con.*, and that it largely depends on that expression of opinion which way the election goes. No one denies the importance of the amendments.

It is not, however, the local importance of these amendments with which we are so much concerned, as the light which their fate will throw on the condition of popular feeling throughout the country on the question of constitutional reform. We have called attention several times in these columns to the fact that we are now in the middle of what may be considered our third period of constitution-making. The first was that in which the framework of the Federal Government was devised; the second, that of the ultra-democratic constitutions, securing "responsibility to the people" by means of universal suffrage and the elective system; the third is that in which State after State, without attempting to attack the suffrage, or even generally the elective system, has sought by means of restrictions placed upon representative bodies, such as the legislatures or local municipal governments, and by means of strengthening the hands of the executive, to place checks and restraints upon those bodies whose proceedings the so-called reformers of twenty years ago made dangerous to liberty. The restraints on special legislation, and on the creation of State, county, town, and village debts, proposed now in New York, are not the devices of dreamers to effect a theoretic perfection in the machinery of government; they are the practical proposals of practical men, directed against practical abuses of the government; against that most insidious form of tyranny and oppression which springs out of corrupt license. In other States the reforms have been carried, and much good has been done. It seems, however, from the example of Ohio, and from what is now said of New York, that there is some reason for fearing that the wave of constitutional reform has spent its force. It was generally believed that the Ohio constitution was lost, not because it was not in the main a good instrument, but because of a general feeling of distrust and repugnance to any scheme of reform. In New York, notwithstanding the machinations of the politicians, the people can certainly carry the amendments, if they desire it. The question is whether they really do desire it. The Democrats are now congratulating themselves on their recent victories in the West, and with good reason. There seems no doubt that there as elsewhere a profound feeling of disgust with the Republican party has been developed. Our chance of getting something better than the Republican party into power depends, however, very much on whether this feeling is one of blind, brutal hostility to the actual possessors of the offices, or whether it comes from a rational desire for improvement. The way in which the Ohio constitution was treated makes us rather doubtful on this point, and we shall look with much interest to see what light is thrown on the question by the fate of the amendments here. If they are lost, there is one thing quite certain, that the party which carries the State will get the credit of having defeated them.

THE RITUALISTIC MOVEMENT.

THE General Convention of the Protestant Episcopal Church in this country, now sitting in this city, has just passed nearly a fortnight in trying to find out whether a candidate for a bishopric was or was not tainted with the ecclesiastical disease known as "ritualism," and, is now trying to legislate formally against it. Contemporaneously with this discussion, the late Prime Minister of England has been discussing "ritualism" in a magazine, and the whole English press, including even the *Economist*, has been commenting with great solemnity on his article. In this country there has actually been a secession from the Episcopal Church on account of ritualism; and the probability of a split in the English Church through the same agency is just now a problem which occupies the minds of English politicians almost, if not quite, as fully as the question of popular education, for a split on this ground would most likely be followed closely by the disestablishment of the English Church, which would be an event of great political as well as religious importance, and the effects of which would be felt all over the world.

Mr. Gladstone's view of the movement is, that it is simply too much of a good thing, or, in other words, that in so far as it is æsthetic it is perhaps beneficial, both by associating art more closely with public worship among a race singularly unartistic in its tastes and conceptions, and by bringing that powerful means of reaching the untutored imagination, the symbol, more prominently into use, and that what is to be complained of is that it is being pushed to an extreme. There is no doubt that it was mostly æsthetic in its origin. The Tractarian uprising at Oxford in 1832 diffused among all classes a new view of the English Church, and led indirectly to a revival in church architecture and decoration. The interiors of a vast number of the English churches were restored and beautified, and a great many new and handsome ones were built, and the defacements in the shape of pews and plaster introduced by the eighteenth-century Erastians were swept away. When the churches had been restored, the clergy began, not unnaturally, to feel that their own robes were hardly in keeping with their new surroundings, and they began to look about for a good excuse for putting on more picturesque vestments. This they found in the Rubrics of the Book of Common Prayer, which prescribe "that the ornaments of the church and of the ministers thereof, at all times of their ministrations, shall be retained and be in use as they were in this Church of England, by the authority of Parliament, in the second year of King Edward VI." There were a great many strange rites and a good many strange ornaments in use in the second year of the reign of King Edward VI., and accordingly, when the young ministers had found them out, worshippers all over England saw their churches transformed before their eyes into places which, to a great many of them, were not distinguishable from what the fiery old Reformers used to call "Popish mass-houses."

This was the ritualism of Mr. Gladstone's youth, and thus far it is comprehensible enough. Since the days when he first figured as a church enthusiast it has gone a good deal further, and has become not quite comprehensible. The early Tractarians could not quite reconcile themselves to the idea that church services were nothing more than prayer, praise, and exhortation, for this put them on a level with those of a dissenting meeting-house, and de-

prived them of what was to them the essence of religious acts—mystery. And yet prayer, praise, and exhortation were all that could be made out of them unless the minister had some special function to perform in which the people could not share. So the sacrament of the Lord's Supper was gradually changed from its evangelical eighteenth-century character of a piece of pious commemoration into the miracle known in the Catholic Church as "the sacrifice of the mass," by which the priest changes the bread and wine into the real body and blood of Christ, and offers him up once more as a propitiation for sin. This point once reached, the Ritualists had what they most needed—a great mystery, on which all the services turned, and which converted the minister into a "priest," and made the congregation witnesses rather than auditors or participants, and justified almost any amount of splendor in dress or ceremonial. Nothing is more curious in the performances of the more advanced Ritualists, however, than their struggles to get rid of the last remnant of the evangelical régime—the use of the English language. There is nothing they more envy the Catholic priests than their possession for professional purposes of an unknown tongue so as to mark distinctly the exclusion of the congregation from any mental co-operation in the proceedings, and there is something almost comic in the way in which they endeavor to make the simple Liturgy of the English Church, the noblest and most impressive English perhaps which this generation ever uses, entirely unintelligible to the laity, like the Latin of the mass, by mumbling or chanting it, in an undertone, and with an outlandish pronunciation.

The movement has been greatly stimulated in England by the entrance into the church of a body of clergymen of inferior education, both social and literary, to those who were formerly supplied by the universities. The increased demand for ministers created by the growth of population, and the diminution in the supply of university men caused by the increasing attractiveness of secular pursuits and the spread of rationalistic opinion at Oxford and Cambridge, have compelled the bishops to ordain of late years large numbers of men educated anywhere and anyhow, who are called "literates," and whose zeal is apt to outrun their discretion. Their presence in the church has not only caused a very great abatement of the sober-mindedness and the love of middle courses of which "the learned and judicious Hooker" set the example, and which used to be a marked characteristic of the English clergy, but it has produced a diseased craving for the exaltation of the clerical order from which the old clergy were entirely free. In fact, sacerdotalism was kept down in the English Church by somewhat the same influences which kept down militarism in the English army. In the latter, the officers always plumed themselves a good deal more on their social than their military position; they liked better to be considered "gentlemen"—that is, members of a certain social caste—than "officers." In like manner, the clergy always shrank from becoming a class apart, and the plainer ones liked to hunt, and shoot, and dine, and be good fellows with the squires, rather than simple ghostly advisers. The new-comers have no such weaknesses. Outside their profession, they have little that entitles them to consideration, so they labor fiercely to magnify their office, and are producing in the English Church, for the first time in its history, a spirit of fierce fanaticism, which renders its relations to the state more and more perplexing.

The spread of the contagion to this country has of course nothing very surprising in it. The predisposing conditions: the sacerdotal ambition, æsthetic tastes, and deficiency of common sense—the most valuable of the regulative faculties—are found here as well as in England, and the spirit of imitation is even stronger here than in England. But it is, it seems to us, needless to fear that the movement is now really Romanizing in its tendencies. The Ritualists love liberty as much as other people, and know very well that if they once entered the Papal domain, instead of drawing goat-carts in a pleasant park, they would be put to the rudest drudgery of the farm and the quarry. Moreover, the taste for celibacy has not yet shown itself among them, and the surrender of marriage, either actual or prospective, is a sacrifice which the great body of them are less and less disposed to make. So that the probabilities are that they will stay where they now conceive themselves to be, in a restored and purified Anglican Church, where one has all the delights of Catholicism without its restraints or discipline, and without the responsibility for the aberrations of the Italian element in the Papal Government which Catholics in all Germanic countries now find so galling.

One naturally asks, when one watches the performances of the Ritualists, how it is that this reactionary movement should achieve so much success at a moment when rationalism, under the direction of men of science, is making such serious assaults on revealed religion. But it has to be observed that the scientific men really hurt the Catholics and Ritualists less than the Evangelicals or Broad-Churchmen. It is not so much the belief in the existence of a personal God that Tyndall and Huxley shake, as the authority of the Bible, and the way they do this is by inspiring distrust of or contempt for all literary evidence as arrayed against what they call the evidence of nature. Now, Catholics and Ritualists are not seriously concerned about the authority of the Bible. They have not to do battle for the cosmogony of Moses, or the strategy of Joshua, or the morality of David and of Sisera. The Oxford Tractarians, in fact, surrendered the Bible almost at the first shot, and took their stand, as do their successors, on church tradition. They believe things because they have "always, and everywhere, and by all been believed." The Old and New Testament might go, they say, and the church still stand. It knew and taught all that needs to be taught about Christ before the New Testament existed; so that the doctors are delivered from a deal of uncomfortable warfare over the authenticity of Scriptural history and biography and geology. Then it must be remembered that scientific men, and people of a rationalistic turn generally, enormously overrate the popular thirst for pure truth, just as philosophical politicians overrate the popular desire for good government. Scientific men are very apt to suppose that people must be shocked and disabused by the failure of evidence. As a matter of fact, they are nothing of the kind. "Credo quia impossibile" describes not simply the state of mind of monks, but of a very large proportion of mankind, at least in matters pertaining to religion. As long as the faculties of wonder and awe exist, there will be a craving for a mystery to excite them. Tyndall only finds this mystery at the "boundaries of experimental evidence," but the greater portion of his fellow-men find it a long way on this side of that line, and are often even willing, in order to save them the weariness of the way, to have it, at least partially, prepared before their eyes.

THE DECORATIONS OF THE NEW PARIS OPERA.

PARIS, October 9, 1874.

AMONG the many monuments which will mark the era of the Second French Empire, none will deserve as much attention as the new Opera of Paris, which is seen on the boulevard des Italiens, opposite the rue de la Paix and the Vendôme Column. This building will have cost, when it is finished, fifty millions of francs at the lowest computation; it is the work of a M. Garnier, a young architect of very great merit. The façade of the Opera is built of stones and marbles of various colors; gold has been used in its ornamentation very profusely. To many people, it looks too gaudy; its proportions have also been much criticised; but the details are very fine, and there is much beauty and grandeur on the two sides of the Opera where common stone has been used. The conception of the whole is altogether very original, and would be judged to better advantage if unfortunately the gigantic Opera was not on too low ground, and surrounded with enormous hotels which tend to diminish its size. On a slight elevation, the Opera would, with its immense Apollo on the highest point of the rotunda, look like a temple of art.

I will not speak to-day of the architecture of the Opera, but simply of the series of pictures which are to decorate its great *foyer*. These pictures, which number as many as thirty-three, most of them of enormous size, are the work of M. Baudry, who has spent the last five years in working at them without intermission. His studio was in the Opera building itself while it

was in process of construction. I sometimes paid him a visit through the wilderness of stones and ladders; he lived almost like a monk in his convent, and often had his breakfast brought to him from a neighboring restaurant. He devoted himself completely to his gigantic task. Baudry had spent five years in Rome before his reputation began: one, I believe, of his first works when he returned to Paris was the decoration of a ceiling of the hôtel of M. Fould, who was then Minister of State. This hôtel now belongs to the Duc d'Aumale, who bought it on his return to France. The whole manner of Baudry is already to be found in this charming ceiling, where the only figures are children, with various attributes in their hands. These children are on an azure ground: they are not the fat Cupids of the Boucher school, with their folded muscles, their perpetual smiles, and their fat cheeks; they are young *ephebi*, no longer children and not yet men, admirably adapted for the expression of masculine strength and beauty. What struck me most when I saw these pictures of Baudry's for the first time, was the deep Italian feeling which pervaded them; they reminded me forcibly of the pictures of that happy era of art when Raphael made the decorations of the Farnesina. But when I visited the studio of Baudry, in the upper part of the new Opera, I saw that he had aimed at the very highest point of art. Here were on all sides magnificent copies of the Sybils of the Sistine Chapel, and of the colossal figures of that almost superhuman work of Michael Angelo. These copies were the chief work of Baudry while he was in Rome; they are studies rather than copies, and would form by themselves a collection worthy of any museum.

How was it that with a genius naturally drawn to grace and elegance, as was shown in Baudry's first pictures and portraits, he gave himself up wholly to the pensive and sombre genius of Michael Angelo? He lived in the Sistine Chapel, he studied the powerful lines, the strange coloring of the great scenes taken from the Bible. And when he felt that he had identified himself to a certain extent with the ideas and the modes of working of Michael Angelo, when the time came to create something of his own, the irony of fate had nothing better to offer him than the decoration of an Opera. Such decorations must perforce be allegories, and almost all allegories have one terrible defect: they need explanation and interpretation. The great advantage of religious subjects, besides their elevating influence on the mind, is their transparency, their simplicity. They speak to the child as well as to the old man; to the most illiterate as well as to the most cultured persons. Go to Monreale in Sicily, to St. Marc in Venice, to all the churches in the world, you will find everywhere the great and familiar images which are, so to speak, the moulds of our mind, the forms of our ideal. It is not so with allegories: most allegorical pictures are incomprehensible, and they are all the more so the more deeply the artist has gone into his subject. If he happens to be a scholar, well versed in the 'Metamorphoses' of Ovid, in the old classics, then the allegory becomes so complex and archaic that it is to most minds a mere riddle. Baudry has not completely avoided this danger; he knows too much for a painter, as the public after all wants very simple subjects, with beautiful forms and fine colors. Raphael was quite right when he made so many Madonnas; the repentance of Magdalen will always be a favorite subject. The pictures of the Stanze are already a little complex; the Dispute of the Holy Sacrament, the Miracle of Bolsena, require a word of explanation; so does the School of Athens; but as soon as the subject is understood, how very simple and easy you find all its developments. In the Sistine Chapel, all is clear. I know that some critics have tried to build extraordinary theories on the arrangement of some figures and subjects in the great work of Michael Angelo; I believe that they have, as the French say, *cherché midi à quatorze heures*. If the Sybils are mixed with the prophets, there is nothing extraordinary or new in this combination; you will find it in all the Christian churches of the Renaissance; tradition gave the old Sybils a place among the prophetic minds, and everybody knows how long the memory of Aristotle was linked with the teachings of the Church.

I will first notice two series of figures in the great work of Baudry, because in my opinion they are the best. The first consists of eight colossal Muses, which will fill eight great panels. You must not look here for the sublime expression of the Sybils, with their features as hard as destiny, their eyes looking into futurity; but the free attitudes of the Muses, and their draperies, with bold and large folds, their simplicity, are a happy reminiscence of the pictures of the Sistine Chapel. The faces, alas! are a little too modern, too fashionable, if I might use the word; but some are charming in their way. They are pretty Parisiennes, and might dress at Worth's if they left off their long tunics and their peplums. The rules of symmetry have excluded one of the nine Muses, and Baudry sacrificed the Muse of Memory, Polyhymnia, for reasons which he has not confided to me. Urania, the Muse of Astronomy, is one of the most striking—very different from the famous Astronomy of Raphael in the Stanze.

The series of the boys, if you will allow me the expression, is also very remarkable; groups of young *ephebi* personate the national music of the world. They are completely naked and in the most various attitudes. The anatomy of these fine juvenile bodies is most beautiful, and there is a delightful variety in these figures, which are all on a blue ground. Germania, for instance, represented by a young angel, plays on an organ, and is looking towards heaven; next to the young organist is another angel playing the theorbo. France is represented in this series of medallions by a martial trumpeter and a young drummer; Britain's instruments are the harp and the bagpipe; Italy has the violin, and so on. There are ten such medallions, and once in place they will form a sort of azure and heavenly zone in the system of the decoration.

I am not so enthusiastic over the huge complicated pictures which will complete this decoration. The great central ceiling represents the meeting of Harmony and of Melody, an appropriate subject for the Opera; about these two beautiful girls fly Glory with her trumpet and Poetry with her golden crown, on the winged horse Pegasus. The most beautiful part of this enormous picture is the border, formed by a painted balcony which supports a variety of young Genii, naked boys in the most diversified attitudes, surrounded with flowers and birds. I do not much like the two pictures representing Tragedy and Comedy; they are altogether too complicated. Who could recognize, without a long explanation, Melpomene on the sacred tripod with an eagle at her feet, Fear, Pity, and Fury? Baudry has varied the attitudes as much as Michael Angelo. His Fury, with torch in hand, falls head foremost. There is the same painful complication in the picture of Comedy. A faun falls down on the head of a spectator, and Thalia brandishes her rod over him; Wit throws a dart at him; and Love laughs over the whole scene.

These three pictures form the ceiling proper; on the vaults which will unite the ceiling to the wall are to be twelve large pictures; the Muses and the medallions will cover the wall. I have not spoken yet of the twelve pictures of the vaults. These have offered great difficulties to Baudry, on account of the laws of perspective. Some of these pictures are very fine. There is not much difficulty in understanding the Judgment of Paris; it is one of those happy subjects which have tempted many painters; and it is no small praise to say that Baudry has treated it in an original manner. I prefer his Paris and Mercury to the goddesses. Paris is particularly fine; he is in a meditative attitude, and the lines of his body have a wonderful nobility. There are also beautiful forms in "The Shepherds." The scene is in Sicily; young men are disputing the prize of pastoral music; a young woman is milking a sheep to make a libation to the gods. She is drawn in the best style of art. I cannot describe all the subjects. The Parnassus is an immense composition; there is another called "The Poets," with Homer in the centre. Marsyas, who defied Apollo, and played on the rustic flute better than the angry god, is on the point of being flayed. A group of soldiers, under the leadership of Bellona, are led by musicians to an assault. David plays on the harp before Saul. Saint Cecilia is asleep and dreams of heavenly concerts; angels play round her. Orpheus and Eurydice are preparing to leave the dark domains of Pluto. The Corybantes dance round the infant Jupiter with their cymbals. The Menads tear Orpheus to pieces and dance wildly round him. Salome dances before King Herod.

The impression left by this gigantic work is on the whole one of great satisfaction. There are hundreds of naked figures, and there is nothing indecent or immodest. You receive a sensation of beauty, of force, of vigor; the imagination is drawn into a noble sphere. The coloring is much criticised, but by people who are more accustomed to oil-painting than to frescoes. Baudry has tried to imitate in oil the tones of the Italian frescoes, and he has done it successfully. It requires some education of the eye to enjoy fresco-painting; but the *ton* of the fresco is much better suited to the decoration of palaces, especially of the lofty vaults, than the darker *ton* of oil-painting. I will say one word more only: Those who will not be able to admire Baudry's pictures at the Opera, will do well to look at the magnificent photographs which Goupil has taken of what must be called the greatest work of the modern French school.

Correspondence.

HOW WILL THE UNITED STATES SUPREME COURT DECIDE THE GRANGER RAILROAD CASES?

To the Editor of the Nation:

Sir: Your recent article entitled "The Right to Confiscate," strong as it is, might have been stronger by extension, as I propose to show. When Frederic the Great proposed to take away the Mill from the old miller of Potsdam, the latter told the monarch he could not take it, no matter how

much he desired it, "for," said he, "there are now judges in Berlin.' In the appeal which the railroad companies of Wisconsin have made to the United States Supreme Court against the assumption of a right on the part of a legislative body to confiscate corporate rights and corporate property at their own will and pleasure and without making compensation, the case of the old miller and Frederic the Great to a certain extent repeats itself. The matter at issue in both cases is the same—namely, an attempt on the part of sovereignty to take advantage of its power to work an act of arbitrary oppression and tyranny; and the question of present interest is, Will the attempt fail, in the latter as in the former case, because there are judges in Washington as there were in Berlin, before whom sovereignty itself, whether limited or absolute, will not be allowed to work injustice? Reviewing the case from a strictly legal standpoint, and in the light of legal decisions, which thus far, in the public prints at least, have been apparently overlooked, the question, although not passed upon specifically, would nevertheless seem to be decided in the affirmative, and in fact for the following reasons to have become in the nature of a *res adjudicata*.

Thus, in the first place, it may be considered as adjudicated *that a charter is an executed contract*, the language of the United States Supreme Court in the case of the Holyoke Company *v.* Lyman (15 Wallace, p. 511) being as follows: "Charters of private corporations duly accepted, it must be admitted, are executed contracts, but the different provisions, unless they are clear, unambiguous, and free of doubt, are subject to construction, and their true intent and meaning must be ascertained by the same rules of interpretation as other legislative grants."

Second. This point the most determined advocate of the policy of the Wisconsin Legislature may freely concede, but at the same time answer, that the fact that the constitution of the State provided, previous to the granting of the railroad charters in question, that the State might at any time alter and amend them, renders the judgment of the court above cited inapplicable. We are, therefore, brought to the next consideration, namely, How are charters in all their provisions to be interpreted which, by State constitutions, are made subject to alterations and amendments?

Charters being conceded to be executed contracts, this question would seem to have been fully answered and decided some years since by the Supreme Court of one of the Granger States (Minnesota) in the case of Goener *v.* Schroeder (8 Minn., p. 307), in which the court held that a statute giving a subsequent legislature the power to change, impair, or modify a contract *inter partes*, which is valid when made, is not law, and therefore does not enter into the contract. In this case the legislature gave a mortgager a specified time (fifteen months) to redeem mortgaged premises, or such other extended time as the legislature might thereafter designate, and a subsequent legislature did extend such period of redemption. But the court held that the extension could not be enforced in reference to a mortgage made previous to the subsequent enactment of extension. Judge Story, writing upon the same point ('Story on the Constitution,' vol. ii., p. 275), also uses language as if he had a question involved in the Wisconsin cases directly before him, for he says, "that if we adopt the principle that a State may enact laws that all subsequent contracts shall be subject to be impaired by subsequent legislative action, the constitutional provision against impairing contracts will be nugatory." This reasoning of Judge Story would, therefore, seem to be conclusive against the power of a State to alter and amend contracts which are legal and valid when made; and the Minnesota case and the reasoning of Judge Story conjointly would also seem to make it clear that Granger legislation regulating freights and fares of railroads will be only applicable to railroads or parts of railroads constructed subsequently to such enactments, and cannot apply to any roads or parts of roads previously built where rights have become vested rights and contracts have become executed contracts.

Third. Independent, however, of this reasoning, it is obvious that a conceded power to alter and amend given in one provision of a grant cannot be construed in such a manner as to destroy the entire grant or charter, or the evident intent or whole scope and purpose of such grant. It is a familiar principle of law that in a deed or grant of real estate all reservations inconsistent with this grant are null and void. A grant or conveyance of land, for example, coupled with a provision or reservation that the grantees shall not sell or lease the land, is good as a grant, but the reservation is interpreted to be inconsistent with the grant, and therefore void, for the reason that the right to sell or lease is an attribute of ownership, without which ownership cannot exist. It is a matter also, not only of law but of common sense, that a reservation in a grant or charter cannot be greater than the grant itself, or override the obvious intent of the grant. The rights of property exist irrespective of any charter. The right to collect remunerative tolls or fares is not a prerogative right, but a natural and common-law right. It is the natural right of all common carriers arising from the natural right of such persons to receive and collect remuneration for services rendered. Prerogative rights, on the other hand, granted under a charter, are rights which do not accrue to natural persons, but are such rights as are peculiarly given by legislators to corporations: as the right to a common seal, the right to sue and be sued collectively, the right of exemption from personal liability of stockholders for corporate debts, and the like. It follows, then, that the limitation or reservation of powers under a charter can only limit the prerogative rights that have been specially granted, and empower such legislation only as is not hostile to but promotive of the objects of the grant and the interests of the corporators or stockholders.

It is to be presumed that the framers of constitutions or the makers of laws, in authorizing or creating corporations, contemplate that the objects of the corporation shall be consummated. The constitution of Wisconsin authorizing railroad charters must be construed to authorize the construction and operation of railroads for remuneration; for otherwise no such corporations would have been formed or any railroads built—and this is the construction which the legislatures of Wisconsin, moreover, have always heretofore recognized, in granting to railroads charters whereby they are authorized to establish their own freights and fares. Now, can a legislature under such grants change the object and purpose of a charter? Can a legislature change a railroad, chartered for the purpose of transporting passengers and freight for remuneration, into a great private pauper Grangers' association, or charity, for gratuitous rides and transportation; and this, too, not for the benefit of the State at large or for a strictly public purpose, but for the exclusive benefit of private parties living in immediate proximity to the road—thus converting a railroad into a private or local charity, to the manifest injury of other localities in the State which do not participate in such benefits or discriminations? Was it the object of the corporation to construct a free railroad and give every man a free ride? Nearly all the churches in the country are organized under charters by special or general laws, subject to legislative alteration or amendment. Will it be assumed that a legislature, in consequence of such reservation, can regulate the pewrents of such churches and the salaries of the pastors; or change a Catholic church into a Jewish synagogue, or put a Unitarian clergyman into a Trinitarian pulpit? Can a State for public purposes use the property of chartered churches without compensation? Can benevolent institutions founded under charters (with reserved rights to alter and amend), for the benefit of particular religious sects, be changed so as to become the instrumentalities for benefiting other religious denominations not approved of by the founder? Would not the logical results of the Granger doctrine—*i.e.*, the right of a legislature to alter and amend charters to an extent capable of defeating the original object—warrant an interference with all the religious and benevolent institutions of the land at the will of legislators, in case religious bigotry and intolerance should ever reassert itself as in past ages? But the interference with the administration of a given religious denomination to the extent of changing its faith and purposes is not a more radical change than the diversion of a railroad from the purpose of remunerating its stockholders to the becoming a benevolent free railroad. Or, to take a different class of illustrations, can a legislature, under the reserved right to alter and amend (coupled, if you will, with the plea of paramount public good), regulate or establish the prices of the manufactured products of chartered manufacturing corporations? Can it regulate the advertising rates or subscription prices of the New York *Tribune*, *World*, *Times*, *Journal of Commerce*, or other like incorporated newspaper companies, on the plea that these journals are monopolies, and that their stock is unreasonably remunerative? Can it divert the waters of a chartered mill, without making due compensation for such diversion? And yet wherein is the difference between arbitrarily diverting or abating streams which have been gathered up and forced to flow in particular channels at great expense, for the purpose of propelling machinery to spin and to weave, and arbitrarily reducing the freights and fares of a railroad; for are not the latter, equally with the former, streams which propel the machinery, and which have not only got to flow, but flow in sufficient quantity to prevent the railroad and mill machinery alike from becoming useless or unprofitable?

But upon all the points here suggested the United States Supreme Court has already given unmistakable evidence of its opinion, and thus clearly indicated what is likely to be its decision in the railroad cases under consideration. The opinion thus referred to, and which thus far does not seem to have attracted public attention, will be found in the 15th of Wallace, p. 498, Miller *v.* the State; and the language embodying the opinion is as follows:

"Power to legislate, founded upon such a reservation in a charter to a private corporation, is certainly not without limit, and it may well be admitted that it cannot be exercised to take away or destroy rights acquired by virtue of such a charter, and which, by a legitimate use of the power

granted, have become vested in the corporation; but it may be safely affirmed that the reserved power may be exercised, and to almost any extent, to carry into effect the original purposes of the grant, or to secure the due administration of its affairs, so as to protect the rights of the stockholders and of creditors, and for the proper disposition of the assets.* Such a reservation, it is held, will not warrant the legislature in passing laws to change the control of an institution from one religious sect to another, or to divert the funds of the donors to any new use inconsistent with the intent and purpose of its charter, or to compel subscribers to the stock, whose subscription is conditional, to waive any of the conditions of the contract." †

This language of the Supreme Court, therefore, seems to establish the position that changing a remunerative railroad corporation into a benevolent railroad corporation, or changing a Catholic corporation into an Episcopal one or changing a church corporation into a race-course or lottery corporation, is not an alteration or amendment of a charter, but the creation of a new corporation for new purposes. There can be no objection to creating corporations to afford free rides, or free freights, or cheaper fares and freights than now prevail. But can a legislature compel persons to become corporators or participants in these new benevolent enterprises? Again, benevolent enterprises, chartered *de novo*, usually exempt the corporators from any personal liability; but corporations instituted originally for affording remuneration to stockholders, and then made benevolent institutions against the will or purpose of the corporators, may entail upon the stockholders a personal liability in addition to the loss of all their corporate property; as, for example, in Minnesota, whose constitution provides that all stockholders in corporations shall be personally liable to the amount of their stock; and, if there is no repeal of the law of imprisonment for debt in Minnesota, they might also be incarcerated for the benefit of a benevolent institution established in direct opposition to their wishes.

Fourth. It is also pertinen there to allude briefly to the application and bearing of the Fourteenth Amendment of the Constitution of the United States on this question.

The logical result of the recent Granger railroad legislation is, that the stockholders in railroads are not the owners of the roads; but, on the contrary, that the roads are the creatures of the State legislatures, and that of necessity the creator must, under all circumstances, be paramount to and capable of controlling the creature. Railroads are, however, notwithstanding this supposition, the creation of labor and capital. These have been contributed by the stockholders and not by the legislators or the public. Whoever has made these contributions, therefore, owns or ought to own the roads, and has alone the right to exercise and enjoy the attributes of ownership, one of the chief of which is the right to prescribe rates of freight and fare. An assumption of right on the part of a legislature to fix arbitrarily rates of freight and fare which are not remunerative is therefore an assumption of ownership, or the appropriation of private property, without rendering an equivalent. Furthermore, an agreement by all parties concerned to permit such property to be appropriated without consideration is null and void, inasmuch as it is not a contract in any constitutional or judicial sense, and therefore cannot be enforced by any process of law, by which alone, according to the Fourteenth Amendment, can any citizen be deprived of life, liberty, or property. And what consideration has the State of Wisconsin given for the assumed right to appropriate a railroad from the very moment that its construction has been completed?

Before the adoption of the Fourteenth Amendment there was no provision in the Constitution of the United States which could restrain any State of the Union, if it saw fit, from seizing and appropriating the property of any of its citizens without making compensation; a point which was made the subject of a decision in the Supreme Court of the United States in 1833, in the case of Baron *v.* the Mayor of Baltimore (7 Peters, 243). In this case, the city of Baltimore, in the exercise of its corporate authority over its harbor, so diverted certain streams of water that they made deposits of sand and gravel near the plaintiff's wharf, and thereby prevented the access of vessels to it. A writ of error was taken from the judgment of the Maryland Court of Appeals, refusing damages, to the Supreme Court of the United States, on the ground that this decision violated the Fifth Amendment to the Constitution of the United States, which prohibits the taking of private property for public use without just compensation; the plaintiff further contending "that this amendment, being in favor of the liberty of the citizens, ought to be so construed as to restrain the legislative power of a State as well as that of the United States." The court, however, by Chief-Justice Marshall, held that this Amendment to the Constitution "is intended solely as a limitation on the exercise of power by the Government of the United States, and is not applicable to the legislation of the States"; which was equivalent to saying, that if the several States chose arbitrarily to take or confiscate the property of any of their citizens, there was no higher sovereignty to restrain them. But since the adoption of the Fourteenth Amendment, which provides that *no State* shall deprive any person of life, liberty, or property without due process of law, a State legislature has no power arbitrarily to assume ownership or exercise the attributes of ownership over property which it does not own or possess; it having been well settled by both the United States Supreme Court and the highest State courts, that a legislative act appropriating, injuring, or destroying private property, without compensation, is not "due process of law." (Murray's Lessee *v.* Hoboken Land and Improvement Co., 18 How., 272; Taylor *v.* Porter, 4 Hill, 140.) And in the case of Bartemeyer *v.* Iowa (18 Wallace, 133), the Supreme Court of the United States seems not only to recognize the direct force and effect of this amendment in respect to the taking of property, but also the conclusion that indirectly but inevitably follows: that any arbitrary interference with the right of any person to use and enjoy property is equivalent to the arbitrary taking of the property itself—thus confirming the case of Wynehamer *v.* The People (3 Kernan, 466), in which the New York Court of Appeals, after defining property to be the rights of an owner to possess, use, enjoy, and dispose of a thing, logically added that whatever subverts such rights annihilates property to an owner, even though, as a chattel, the property has neither been seized, nor physically destroyed, nor even diverted from his possession. Therefore, the Fourteenth Amendment, as soon as adopted, became a direct prohibition against the hostile legislation recently adopted by Western States towards railroad property.

To recapitulate, therefore: A charter is an executed contract, and cannot be impaired by any legislation that is hostile to the purposes of the grant; nor can the ownership of the stockholders in a road be arbitrarily invaded by changing the clear objects and purposes of the grant, nor by any assumption of power on the part of a legislature which is tantamount to the exercise of ownership, without a violation of that clause of the Fourteenth Amendment before quoted, which is copied from the Magna Charta; and without equally violating the same principle embodied in the commandment from which Magna Charta and the Fourteenth Amendment alike derive their force, viz., "THOU SHALT NOT STEAL."

DAVID A. WELLS.

Notes.

AT the late Woman's Congress in Chicago, the discussion of improved methods of wearing the present female costume excited a great deal of genuine interest. We observe that the Ladies' Dress Reform Association of Boston has employed Mrs. A. G. Woolson to edit a work on this subject, of which Roberts Bros. will be the publishers.——Lafayette College has just received, as a gift from the Swedish Administration of the Iron Office, a complete collection of the iron ores of Sweden; a duplicate of one given some years since to the Royal School of Mines in England.——An association for the spread of free-trade doctrines has been founded in Florence, under the title of *Società Adamo Smith.* It embraces a large number of professors of political economy in the various universities of Italy, and not a few senators and deputies of the kingdom.——We have received from B. Westermann & Co. Vol. I., Part 8, and Vol. II., Parts 6 and 7, of 'Ritter's Geographisches-statistisches Lexikon'; Parts 21 and 22 of 'Stieler's Hand-Atlas,' whose contents have already been described; No. 25 of the third series of Westermann's illustrated *Monatshefte* (published at Brunswick), in which the most noticeable article is one on Carlyle by Julian Schmidt; and the first number of the *Deutsche Rundschau,* of which we shall speak presently.——A brief and authentic account of the origin of the names of the several States and Territories in this Union is to be undertaken by a committee of the American Antiquarian Society, consisting of Rev. E. E. Hale, Hon. J. Hammond Trumbull, Rev. H. M. Dexter, Rev. George E. Ellis, and Hon. P. C. Bacon.——A handsome catalogue of the Montpensier Collection and of other pictures loaned at this time to the Boston Museum of Fine Arts, has been published. A frontispiece we take to be a heliotype copy of Murillo's "Vierge aux Langes." The *Athenæum,* overlooking the ownership of these paintings, alludes to them as if they belonged to the Museum, and were the rather worthless beginning of its collections.——Harper & Bros. have just published the eighth edition of Mill's 'System of Logic.'——A timely map of Formosa is given in the October number of the *Geographical Magazine* (John Wiley & Son), together with a map of the Dominion boundary from the Lake of the Woods to 107° W., illustrating Captain Anderson's paper on the Boundary Survey read before the British Association. A sketch-map in the text shows the route and discoveries of the Payer and

Weyprecht Polar expedition. The best map of Hayti that we have yet encountered is published in Petermann's *Mittheilungen* for Aug. 26 (L. W. Schmidt).——'Epochs of American History' is announced by Estes & Lauriat, Boston. The work will be in five parts at a dollar each.——Richmond & Patten, New Haven, will publish 'Honest John Vane,' by J. W. De Forest; and 'Thoughts on School and College Education,' by President Noah Porter.——A Life of the late Rev. Dr. Ezra Gannett, by his son, Rev. William C. Gannett, is to appear in December, with the imprint of Roberts Bros.

—Mr. Charles Lanman has addressed a memorial to Congress, in which he asks compensation for Government infringement of his copyright in his well-known 'Dictionary of Congress.' The infringement is of long standing, having occurred in 1867, after three editions of the Dictionary had been issued, by order of Congress, at the public expense (for which the author received as a royalty one dollar per copy). This mode of publishing having been discontinued by Congress, and Mr. Lanman having declined an offer to dispose of his copyright to the Government for $50,000, the official *Congressional Directory* in 1867 began to adopt "almost literally" his plan of giving biographical sketches, which it had never before undertaken to do. We do not understand that Mr. Lanman's biographies were bodily appropriated, though he seems to imply that something approaching this was done. The grievance lies, of course, and it seems to be sufficient to call for redress, in borrowing the idea which constituted the chief value of the Dictionary, and alone made the copyright worth taking out. As these facts must be easily susceptible of proof, and as Mr. Lanman states that his private publishing of the Dictionary since 1867 has been unprofitable, we should expect Congress to admit his claim for damages, or to accept his alternative and at last purchase the copyright.

—A neat volume of about 150 pages, published by vote of the town of West Springfield, Mass., contains an account of the centennial celebration which took place there on March 25 of the present year. It contains the excellent historical discourse delivered on the occasion by the Rev. Thos. E. Vermilye, the poem read by Mrs. Ellen P. Champion, and the sayings and doings of various other persons in the Town Hall and at the subsequent dinner. An appendix gathers up the letters received and reminiscences contributed, together with the several acts of incorporation, lists of town officers, genealogies of the leading families, etc., etc. Four of these families are immortalized in the following doggerel, in vogue a hundred years ago:

"'What time o' dee?' says Walter Cooley;
'Eleven o'clock,' says Judah Bagg;
'Time to repent,' says Parson Lathrop;
'Time enough yet,' says Heman Day."

The Baggs still flourish in West Springfield, one of them, Mr. J. N. Bagg, being the compiler of this memorial, in which Parson Lathrop's portrait serves as a frontispiece. The two churches in which this minister officiated are figured in woodcuts, the first being a veritable architectural curiosity; and there are cuts also of the primitive school-house and the first town-hall, and, quite as worthy as the rest, the old elm in Shad Lane, which the procrastinating Heman Day shouldered and set out on his twenty-first birthday, January 27, 1776. The present girth of this noble tree, at three feet from the ground, is 24½ feet. In 1829, according to Mr. George B. Emerson, it was 18 feet, and the rate of growth which he then calculated for it was four inches in circumference per annum. Since that time the rate has been less than two inches per annum. The full age of this elm is now about 110 years. The West Springfield family which has made the most noise in the world is that of Wade, "Honest Ben Wade" being the one great man whom the town can honor as a mother her son. He was, as we learn here, the youngest child but one of James Wade, a shoemaker and common soldier, who fought in the battles of Lexington and Bunker Hill, and was a long time a prisoner at Halifax—a good pedigree. West Springfield was originally part of Springfield, and became a distinctly incorporated town in 1774—the event celebrated. In 1790, it had the largest population of any town in (old) Hampshire County, and till 1810–1820 it still surpassed Springfield in this respect. Its territory has been divided off, so that more than one-half of it has gone to Holyoke and Agawam; and the farming district which is left numbers scarcely more inhabitants than in 1790 (2,606 now, 2,367 then). Its history has been a quiet one. It was one of the centres of the Shay insurrection, "a large force of the insurgents being collected here under Luke Day, who gave," says Dr. Vermilye, "the most complete description of a demagogue I have ever heard: 'I will do as I please, and other people must do as I say.'"

—The late Dr. Nathaniel Bradstreet Shurtleff, who died in Boston on the 17th instant, and whose loss has been markedly felt in his native city, was, for his generation at least, more nearly a typical Bostonian than any public character that could be mentioned. He had certainly none of that snobbish exclusiveness which is considered by novelists not to the manner born the mint-mark of the genuine Bostonian; nor did he represent, on the other hand, that radicalism, social and political, which with equal accuracy is identified with Boston. In politics he was a conservative; in his daily intercourse with his fellow-men, in affability and accessibility, in the absence of all pretence, he was thoroughly democratic. He was born in 1810, at the "North End" of the town, and it is said that he had six paternal ancestors in the *Mayflower*, not to speak of the Puritan blood also which came to him through his mother. He graduated at Harvard College in 1831, in the same class with Wendell Phillips and John Lothrop Motley. Shortly after his entrance upon the practice of medicine, and close upon his marriage, he took up his residence on Beacon Street, where he lived for forty years, and long after the encroachments of business had made the location an undesirable one. For three years, 1868–70, he was mayor of the city. This, it must be allowed, was a fairly typical Boston career. The traits for which Dr. Shurtleff was eminent were his devotion to historical pursuits, his public spirit, and his active participation in all those institutions and measures which have secured for Boston, above any other American city, a consistent, rational, and homogeneous development. His presence (not his words, for he was an indifferent speech-maker, and preferred to be silent) was as necessary in the celebration of any local event as that of the mayor himself. His industry was untiring, and he was most generous in sharing the fruit of his studies. He was for a great many years a school-committeeman, secretary of the Board of Overseers of Harvard College, trustee of the Boston Public Library, and member of a score of learned societies. His literary works embraced a 'Topographical Description of Boston,' several genealogies, an 'Epitome of Phrenology,' a 'Perpetual Calendar for Old and New Style,' and, as editor, the 'Records of Massachusetts Bay,' in 6 vols., the 'Records of New Plymouth,' 12 vols., and the 'General-Court Records.'

—"The Question of Races in the United States" was the subject of a paper by Dr. Joseph P. Thompson, formerly of this city, now of Berlin, read before the Association for the Promotion of Social Science at Glasgow during the present month. Dr. Thompson has actively employed his time while abroad in seeking to spread just conceptions of the character of his countrymen and the real nature of the present phase of American politics. This, his latest utterance on home affairs, indulges in some well-founded speculations on the influence of our foreign population upon the future of the race and of the country, but more especially discusses the existing relations of black and white Americans at the South, and the dangers which seem to menace us on account of them. In the material condition of the South, so far as it is not affected by politics—for instance, in the increased production of cotton—he finds evidence of steady improvement, and concludes of course that "if the political element of the problem could be withdrawn, the so-called 'conflict of races' would be greatly modified, if, indeed, it would not wholly cease." Fusion through amalgamation, as in the case of the foreign immigrants, he considers quite improbable, and without precedent on a large scale in so marked a contrast of color. Regarding, therefore, the facts as they are, he offers four suggestions for relieving the pressing difficulties of the South which have grown out of the misrule and oppression attendant upon the necessary policy of enfranchising the ignorant blacks. One is that the Government stop interfering by legislation or otherwise on behalf of the negro as such, and confine itself to keeping the peace when duly invoked. Another is that the blacks be taught that they must depend on themselves. A third, that the whites, by doing justice to the negro in all their actions, remove all suspicion and apprehension from his mind. The fourth suggestion is the most novel and ingenious, but will, we fear, be deemed impracticable. It is nothing less than that "blacks and whites of competent intelligence have the courage to accept the penalty of the Fourteenth Amendment of the Constitution, and to disfranchise themselves for the National Congress for the sake of securing good government at home." This is to be done by fixing a standard of intelligence and character for the privilege of the suffrage—reversing, in other words, the almost uniform tendency of our democracy for half a century. "To show their honesty and impartiality in such an educational test, the whites should agree to elect to office a fair proportion of blacks who already meet the test, and to admit all persons to vote as fast as they reach the standard, at the same time making education compulsory. Many a white man at the South would be disfranchised by the same rule." A convention of native Southerners to consider such a reform as this, which could not fail, if carried out, to react upon the North, would form an epoch in the history of the Republic, and offer the highest possible contrast to the late wretched gathering at Chattanooga.

—The respect once entertained in this country for the quarterly reviews of Great Britain received a rude shock from their views of our civil war, it

being difficult to believe that such blunders as they made could be due to pure ignorance. But the July number of the *Edinburgh Review* contains a piece of astronomical history which, in the number and extraordinary character of its blunders, almost rivals the celebrated article on our finances which appeared in *Blackwood* some seven years ago. The writer has forgotten, if he ever knew, that gravitation acts as the inverse square of the distance, and describes it as inversely proportional to the distance itself—a statement which might pass as a single slip of the pen were it not that he enters into a calculation to prove his proposition from the motion of the moon; and, making a blunder in his calculations, brings out a result to agree with the new theory. He then proceeds to inform us that the largest "irregularity" in the moon's motion, and the first one discovered, was the "evection," that Tycho Brahe discovered the "parallactic inequality" and the "annual equation," that an inequality of two hundred and forty-three years was found by Airy, was traced by Hansen to the action of Venus, and is now received as real, while another of two hundred and seventy-three years found by Hansen is considered doubtful—propositions every one of which is incorrect, either in whole or in part. The only one which has anything in its favor is the discovery of the annual inequality by Tycho. It was indeed shown by his observations, but Flamsteed was the first to indicate its real nature.

—In the *Polybiblion* for September we find mention of a number of recent French works to which the attention of our readers also may well be directed. M. Taxile Delord's 'History of the Second Empire' has now reached its fifth volume, which opens with the year 1867 and ends with the dismissal of Rouher, the formation of the Ollivier ministry, and Napoleon's concession, delusive and short-lived, of new liberties to France. One of the most curious revelations is that concerning M. Villemessant's secret connection with Rochefort's *Lanterne*, while all the time professing in the *Figaro* to be one of the conservative supporters of the Government. 'The Relations of the Family and of Education to the State of Society in France' is the title of a work by M. Henri Baudrillart, who enumerates among the causes of the present social demoralization the novel theories about the equality of the sexes and the emancipation of woman. Count Gasparin, however, in his 'L'Ennemi de la Famille,' insists that the greatest enemy of the family is the Catholic Church; a thesis which naturally does not find favor with the *Polybiblion*. The family is also the subject of the second volume of Baron de Portal's 'Politique des lois civiles, ou Science des législations comparées,' in which it is urged that the family should be cherished as the counterpoise of the democratic tendency to foster individualism and civic egoism. A critique of 'The Old Faith and the New,' from the Hegelian standpoint, has been published in French ('Strauss: l'Ancienne et la nouvelle Foi'), by Professor Vera, of Naples. M. Gaston Feugère's 'Study of the Life and Works of Erasmus' receives high praise. The epistles of Erasmus have been most diligently used by his biographer, who styles him, not inaptly, the Voltaire of the Renaissance. In a bibliographical note the author gives a valuable chronological list of works pertaining to his subject, from 1527 to 1873. An English poet has found a discriminating admirer in M. Léon Boucher, whose 'William Cowper, sa correspondance et ses poésies' has commended itself to the Paris Faculty of Letters. A work which has been judiciously preserved from dulness by means of anecdotes, citations, etc., is Tell's 'French Grammarians,' from the beginning of grammar in France down to the latest productions. It undertakes nothing less than the careful analysis of from four to five hundred different works, dating back as far as 1520. A bibliophile who adopts the pseudonym of Louis Dangeau, and whose library he asserts to consist of but one author—Montesquieu—has used his complete collection of the works of this author, in all editions, to prepare a bibliography, of which only a hundred copies have been printed. Each edition mentioned is accompanied by a note upon its character and value. M. Dangeau announces that the descendants of Montesquieu's youngest daughter are about to give to the light his hitherto unpublished productions; and that he himself will shortly edit a complete edition of Montesquieu's works, no doubt in such a manner as to discourage any subsequent attempt in this direction. 'The Normans in Canada,' by M. Gosselin, is the result of researches among the archives of the native city of La Salle. M. Bonnange's 'Projet d'un Catalogue universel des productions intellectuelles' has been put in practice in several of the Government offices in France, and has won a warm eulogium from Littré. We judge it to be the system of card catalogues now and for many years past adopted in all our great libraries.

—The first number of the German *Revue des Deux Mondes* bears a general outward resemblance to its model, but maintains a Teutonic individuality, nevertheless, in its title—"Rundschau" being substituted for the Gallic "Revue"—and in its print, which is German and not Roman text. When we come to compare its contents with those of the French fortnightly for October 1, we must certainly award the palm of scholarship and literary excellence to the latter. It seems as if anxiety to escape the dreaded charge of too much *Gründlichkeit* in the new monthly prompted the choice of the first articles, and led to a very marked preponderance of light reading matter. To Berthold Auerbach was assigned the honor of furnishing the opening novel, and we cannot say that the choice was a happy one. His story is short and unsatisfactory; and the stiffness of its characters, as well as the court-like atmosphere in which they move, are much more suggestive of the defects of the author of 'Auf der Höhe' than of the charming simplicity of his 'Dorfgeschichten.' Anastasius Grün, who but lately in his beautiful song from the Veldesersee (in Carniola) showed himself worthy of his reputation as Austria's greatest poet, contributes an extract from a poem of his, 'Zum Concil, 1414,' which relates an incident in the journey of Pope John XXIII. through the Tyrol. The poem is labored in expression and description, and disappoints the author's admirers by an unusual ruggedness of versification, such as—

> "So an Leib's- wie Seelenspeise."
>
> "Von Geweiht' und Ungeweihten."
>
> "Was ich segn', ist nur die Zukunft."

Professor von Sybel, in a valuable essay on "Die erste Theilung Polen's," attempts the vindication of Frederic the Great from the charge of having for purposes of territorial aggrandizement planned the division of Poland. In spite of Frederic II.'s well-known memorial sent to his ambassador at St. Petersburg in 1769, Von Sybel maintains that the division was not the result of a plan preconcerted by any of the parties, but an expedient suddenly suggested by the danger of a general European war. According to Von Sybel, it was Joseph II. who by the occupation of the district of Zips precipitated the crisis. "Der Zug nach Sedan," by Colonel J. von Verdy du Vernois, adds nothing new to the literature of the Franco-Prussian war, but is interesting as the account of an eye-witness to the capitulation of Napoleon III. and the events immediately preceding it. The colonel was chief of staff of the first army-corps, and General von Moltke dictated to him the first draft of the capitulation. Kaulbach's letters to his friend, Edward Schüller, give evidence of the painter's high literary culture and even of considerable poetic talent. "Botanische Probleme," by Professor Ferd. Cohn of Breslau, is a somewhat pretentious epitome of the history of botanical science, and concludes with a plea for a more general appreciation of the value of natural sciences in public instruction, which at the present day seems a waste of words. We doubt whether two novels, however admirable, ought to appear in a single number of the *Deutsche Rundschau*, but we confess to a preference for Theodor Storm's "Waldwinkel" over Auerbach's production. It is a well-executed story of the dreamy and psychological character so much in vogue among German novelists. There are book reviews, strongly national in tone, by Friedrich Kreyssig, and no fewer than three articles on the stage, the one from Vienna being by Professor Eduard Hanslick, probably the best musical critic in Germany. The political review, which is limited to Europe, is well done; but good taste would have suppressed some harsh remarks on the political condition of France. We notice a few errata, such as Kirchhof for Kirchhoff, "chips from a *g*erman workshop," and the un-Polish ending of "y" given to Czartoryski, Poniatowski, and other Polish names in Professor von Sybel's article. E. Steiger and Stechert & Wolff are the New York agents for this monthly.

—Corssen's first delivery on the 'Language of the Etruscans' occupie more than a thousand pages. While few readers can have yet found time to master it, we find its main positions stated in the *Athenæum* and *Academy*s —more fully in the latter. As the result of thirty years' labor, the learned author holds that the Etruscan is an Aryan language and old Italian dialect, which suffered much through long phonetic decay. All the important inscriptions in it he translates, arranging them according to their nature and the linguistic forms which characterize them. His second volume will contain in detail the proofs of the theory advanced in the first, and will give a complete grammatical analysis of the language, with "a discussion of the vexed questions relating to its origin, its affinities, the period of its development, and the age of its remains." Mr. Isaac Taylor's elaborate work on 'Etruscan Inscriptions' is set aside very quietly and amusingly. Mr. Taylor, it will be remembered, constructed an elaborate argument, assigning to the Etruscan a Finno-Altaic (Turanian) origin, on the hypothesis that certain dice discovered in 1848 contained six numerals in place of figures or pips. These he interpreted as follows:

> mach=1 ci=2 zal=3 sa=4 thu=5 huth=6;

and he raked together sixteen other so-called Etruscan numerals, of which eighteen, says Corssen, "are no Etruscan words at all, but mere rags of words and letters put together at random by Mr. Taylor, who is not so far master of Etruscan epigraphy as to be able to read or divide Etruscan words

correctly. Out of the remaining four words, *huth cis sa mach*, three are pronominal forms, the last a proper name." Corssen proceeds to write and interpret the inscriptions on the dice as follows:

Mach thuzal huth cisa
Magus donarium hoc cisorio fecit;

or, Magus carved this offering. "The dice were an offering, and, like other votive offerings, never intended for practical use." Corssen gives, after Grotefend (1828), a preliminary list of twelve Etruscan numerals, and their resemblance to the Latin at once appears. We give the first six only: 1. *Eka, Un*-i; 2. *Tei*-s; 3. *Tri*-na-ch-e; 4. *Chvar*-thv; 5. *Cuin*-te; 6. *Ses*-th-s.

—Any one captivated by Mr. Boyd Dawkins's easy ethnology of the Basques, in the *Fortnightly* for September, would do well to read Herr Virchow's remarks on "The Primitive Inhabitants of Europe" (No. 193 of the series conducted by himself and Von Holtzendorff). When Mr. Dawkins argues for the extension of the Basques from Spain into Great Britain and Belgium, supporting his theory upon the discovery of skeletons of the Basque type in these countries, one sees that a chance would very likely arise for doubting whether these were skeletons belonging to the Basque race, if the observations upon them had been made by such an investigator as Herr Virchow, who is prepared to affirm after a study of skulls found in caves in Belgium, though referrible only in part to the reindeer period, that they may be divided into at least four different groups. The two writers do not have the same subjects in their essays: Virchow even does not allude to the other's theory, and does not quote his authorities; but he is led in his discussion of the ancient inhabitants of Europe, as known from the earliest historical notices, and (*e.g.*, in the case of the Aryans) as inferred from the evidence of philology, to discuss the difficulties in the way of philological and ethnological researches apart from a certain history. Thus, at the outset, while Mr. Dawkins makes Iberians and Ligurians cognate, Herr Virchow says we know nothing about the Ligurians, and it is impossible to pronounce upon their affinity. We do not speak of Herr Virchow as an authority beyond dispute. A few of his observations seem remarkably careless to meet in a scientific discourse, and his essay would be the better in clearness if he had had some one theory to discuss as Mr. Dawkins has; but for its caution, although here and there it may be excessive, the essay deserves reading. —No. 196 of the same series is an essay by Friedrich Helbig on 'The Legend of the Wandering Jew, in its Poetical Transformation and Growth,' chiefly as this has been effected on German ground. The suggestion of a writer in 1848, that the Wandering Jew would be a fine man for the Universities to struggle to enroll in the list of their professors of history, appears to have been well worked by Andersen and Heller. Heller and Hamerling are the latest exploiters of the legend. Heller's poem is a panorama of the history of the Christian ages in verse; while with Hamerling the original character of the legend, Ahasuerus, the Jewish shoemaker of Jerusalem who would not suffer Jesus to rest by his door when he sank down there as he was being led to his death, is transformed into humanity always dying and yet eternal —if one may say "ewige Menschheit" in these days of Darwinism.—Dr. H. M. Richter's 'The Piccolomini' (No. 201 of the same series) details the true history of Octavio Piccolomini's career in contrast with Schiller's free treatment of it. The poet, who has handled the general incidents of Octavio's life and times to his pleasure, has trusted almost wholly to himself in his Max Piccolomini. The latter, as a Piccolomini, is altogether the poet's creation. Count Max Waldstein, Wallenstein's brother-in-law, was entrusted with the care of Wallenstein's wife and daughter; he had the influentia position at court said in the poem to belong to Max Piccolomini; he tried to keep Wallenstein in favor at court; and he was the commander of the model regiment, the most powerful in the army and the finest. These traits which appear in Max Piccolomini are historical; but otherwise Max is a free invention. This in opposition to Baron Weybe-Eimke, who has written an essay maintaining the historic originality of Max Piccolomini, and in agreement with E. Piccolomini.—Another number (204) of the series, Franz Engel's 'The Life of the Soul and of the Senses under the Tropics,' might be commended as an exercise in reading to students of German somewhat advanced and in private classes, if one did not consider a good deal of the rhetoric stilted; but if the last quarter of the discourse were omitted, and the judicious teacher were to make the proper observations upon the author's philosophical and other speculations, we should think the aspects of tropical nature and life here generalized would prove quite interesting.

THE PROTESTANT REVOLUTION.*

LUTHER is the hero of the Reformation, but Luther is not the representative of the whole of the movement which Mr. Seebohm happily terms the Protestant Revolution. He represents the religious side of the Reformation; Erasmus represents the intellectual side of the revolt against the system of the Middle Ages. Had it been possible for these two men and their disciples to have acted in perfect union, the Revolution would have attained a success which, in fact, only partially fell to it. One of the great merits of Mr. Seebohm's most remarkable little work, which contains more that is of value than is often to be found in elaborate histories of far greater size, is that it makes clear both the points of similarity and the points of essential difference between the school of Oxford and of Wittenberg. His only fault is that, while he is just to Luther, his heart is with Erasmus. He clearly feels some regret that the Reformation did not fall under the guidance of the scholar rather than of the enthusiastic monk. The feeling is one certain to be shared by a host of modern readers, for Erasmus was the broad churchman of his day, and is naturally admired by the divines and liberals of the nineteenth century. The question why it was that the Reformation fell under the leadership, not of Erasmus and Colet, but of Luther and Calvin, has more than an historical importance, since it throws some light on problems of the present day. In spite of his almost avowed bias in favor of the Oxford Reformers, no fairer guide through the intricate paths of the Reformation can be found than Mr. Seebohm. His work, if carefully studied, makes clear both the claims of Erasmus on our gratitude and the reasons why they fall short of the still greater claims of Martin Luther. Up to a certain point, Erasmus and Luther may be fairly considered as laborers in exactly the same cause. Each of them hated priestcraft, each of them saw how great were the evils brought on mankind by the condition of the Church, each of them wished to attack what each considered the main source of these evils. Each reformer held that true religion consisted not in ceremonies, but in a return to the principles of Christianity. If it be said that Luther contemplated only religious reform, it must be remembered that a reform of religion which placed the Bible in the hands of the people virtually involved a reform of education. If, on the other hand, it be thought that the efforts of Erasmus were directed to what a later age would have called the "spread of enlightenment," it must be borne in mind that his idea of enlightenment was to lay open, to learned and simple alike, the real character of the New Testament divested of all the traditional interpretation by which scholastic theology had concealed its true meaning. Not only may it fairly be said that Erasmus went a great way on the same path as Luther, but it may also be urged that in so far as he differed from Luther he deserves, in the judgment of modern readers, to be preferred to the reformer whose fame has so completely eclipsed his own.

One of the essential points which divided Luther from Erasmus was that the German priest believed heart and soul in doctrines which, by a convenient anachronism, may be termed "Calvinistic." "It is well to remark," writes Mr. Seebohm, "that these Augustinian doctrines (of Luther's) were, in fact, part of that scholastic theology from which the Oxford reformers were trying to set men free. In not accepting them they differed from Luther, but they and Luther had one thing in common—they alike held that religion did not consist in ceremonies, but was a thing of the heart." When Luther read the edition of the New Testament by Erasmus, "he discovered that there was a great difference between Erasmus and himself; that Erasmus did not accept those Augustinian doctrines on which his own faith was built. He knew that Erasmus was doing a great work towards the needed reform, and this made it all the more painful to find that in these points they differed. He was 'moved' by it, but he wrote to a friend: 'I keep it to myself, lest I should play into the hands of his enemies. May God give him understanding in his own good time.'" "This is a fact which in justice to both should never be forgotten. Luther was conscious of it from the first, and it had this future significance, that if Protestantism, as it afterwards did, should follow Luther and adopt the Augustinian theology, Erasmus and the Oxford reformers never could become Protestants." Now, on this, the vital point of difference between the two Reformers, almost every liberal-minded man of the present day will give a verdict in favor of Erasmus. The Augustinian theology has ceased to be the power which it was during the era of the Reformation. Modern theology is for the most part grounded on the very principles for which Erasmus contended. More and more it becomes clear, even to clergymen and divines, that a whole mass of theological speculation is merely the result of scholasticism, and must fall to the ground with the system from which it springs. When Erasmus published his edition of the New Testament, "he realized a great object which Colet had long had in view—viz., not only to draw men away from scholastic theology, but to place before them, in all the freshness of the original language and a new translation, the living picture of Christ and his apostles contained in the New Testament." In other words, the aim of the Oxford reformers was exactly the same as the aim of all the liberal divines of the nineteenth century. Erasmus, moreover, though a scholar, was free from the professorial weakness of wishing only to appeal to men of education and

* 'The Era of the Protestant Revolution. By Frederic Seebohm.' London: Longmans, Green & Co.; New York: Scribner, Armstrong & Co. 1874.

culture. "I wish," he says in his preface to the New Testament, "that even the weakest woman should read the Gospels, should read the epistles of Paul, and I wish that they were translated into all languages, so that they might be read and understood not only by Scots and Irishmen but also by Turks and Saracens. I long that the husbandman should sing portions of them to himself as he follows the plough; that the weaver should hum them to the tune of his shuttle; and that the traveller should beguile with their stories the tedium of his journey." Erasmus, again, and his school, possessed a width of view far beyond that attained by most of the reformers of their age, or, indeed, of subsequent ages. At a time when princes were everything, and the people little or nothing, they maintained that governments and nations existed for the sake of the whole commonwealth. They deprecated war, they urged the necessity of general education. They caught at least a glimpse of the doctrine of complete religious toleration; thus More in his 'Utopia' "describes the Utopians as giving full toleration to all varieties of doctrines and differences of creed, and pictures all worshipping together in one united and simple mode of worship expressly so arranged as to hurt the feelings of no sect among them, so that they might join in it as an expression of their common brotherhood in the sight of God."

Luther, on the other hand, commands the admiration but hardly obtains the sympathy of modern students. His theological doctrines have ceased to exert a wide influence. He shared to the full the superstitions of his age. He did not know what toleration meant. In all his conduct you can see that he is at bottom a German peasant. His mode of teaching was effective in its time, but does not suit the taste of the present day. You never get rid of a certain boorishness and roughness of manner which offends all the canons of modern good taste. If "sweet reasonableness" could have reformed the world, Erasmus and his friends ought to have been the leaders of their time. That they were not so must be manifest even to those worshippers of good taste who look upon the Protestant reformer as a Philistine. Mr. Seebohm is too wise a man to share the prejudices of such superfine critics. But he is obviously rather perplexed, and, so to speak, somewhat aggrieved at the fact that the Reformation was guided not by the rational wisdom of Erasmus, but by the dogmatism, the enthusiasm, and boldness of a preacher whose language is occasionally so strange that a calm critic like Hallam feels that "it almost justifies the supposition that there was a vein of insanity in his very remarkable character." Yet candid enquirers will find little difficulty both in accounting for the success of Luther and in perceiving that, on the whole, he deserved more than any other teacher to be the prophet and hero of his generation. It must, in the first place, be conceded that Luther's success was in a measure due to his defects. The views of Erasmus were in some respects too far in advance of the age to exert their due influence. "The Oxford Reformers aimed at leaving people open to form their honest judgment on various points of theology and practice according to their own consciences, and urged that people with different opinions and practice might be members of the same church, have charity one towards another, and agree to differ without quarrelling." It is easy enough in the nineteenth century to perceive that such teaching embodies a great deal of important truth, but the truth it represents was not of a kind to be easily understood in the sixteenth century. Sir Thomas More himself could not in practice adhere to his own doctrines of toleration. Luther's scholastic system was far better suited for the age. Reformers called upon to combat an infallible church needed for their support the strength of a dogmatic creed and the absolute belief in an infallible book.

But though the very defects of Luther's views were in a degree a source of his strength, it is a grievous error to suppose that he succeeded where Erasmus failed simply because the Oxford Reformers were in advance of their generation. The school of Wittenberg triumphed, and deserved to triumph, because Luther was in the right on what was after all the essential question of the time. He perceived that the papal system was false, and that no reform could be permanent which did not involve a breach with the Papacy. Erasmus believed, and no one can wonder at the belief, that the Papacy might be reformed. The belief was natural enough at the time, but the experience of centuries has proved that it was erroneous. The outrageous abuses which called aloud for removal in the time of Erasmus have been mostly either kept down or done away with. Pius IX. and his cardinals are as decent and respectable a body of ecclesiastics as the world has seen. But Pius IX. and the system of which he is the head are fully as great an obstacle to the progress of truth, of liberty, of toleration as were the popes and cardinals of the sixteenth century. It may even be said with truth that the modern Papacy is far more consciously opposed to progress than were the corrupt or licentious popes who excited the indignation of Luther or the satire of Erasmus. The dogmas of the Council of the Vatican would have excited the astonishment and perhaps even the laughter of Alexander VI. or Leo X. On the other hand, Protestantism, like the Papacy, has proceeded in its course of rational development. Luther's teaching was not tolerant, but it has ultimately produced the reign of toleration. Luther was obviously too indifferent to the political rights of the people. But wherever Protestantism has flourished, liberty has flourished also. Look at the matter from whichever side you will, and the fact becomes apparent that to overthrow the power of the Papacy was to take away the corner-stone on which the whole mediæval system of religion, theology, and society depended. To attempt to reform the Papacy was to attempt to reform that which from its very nature might be destroyed but could not be ameliorated. What was needed was not reform but revolution. Erasmus was a most sagacious reformer; but Luther, in the strength of his religious enthusiasm and of his hatred of what he saw to be palpably false, dared to be a revolutionist. Such daring, in nine cases out of ten, leads simply to failure, because a man may well have the boldness to venture on revolution without the insight to perceive what is the fundamental change which the time requires. In the one case in which the revolution succeeds, the leader deservedly becomes the hero of his age.

SPENCER'S DESCRIPTIVE SOCIOLOGY.*

MR. SPENCER set out very fully in his work on the 'Study of Sociology,' published last year, what was his idea of the mode in which sociological investigations should be pursued. His theory is substantially this: Mankind, as well as the rest of the universe, is governed by law. This is impliedly acknowledged even by those who refuse to admit it in terms, in the confident predictions they constantly utter as to the manner in which individuals will, under certain circumstances, behave, or to the consequences which will flow from such-and-such lines of conduct or from such-and-such legislation. Now, if we take an individual infant, we find we cannot predict all the special facts of his career—that is, what he will be, or how long he will live, or what kind of character he will have. No reading of biographies will help us to any conclusions of the slightest value on these points. Coming down, however, to facts somewhat less special, we find we can predict with some confidence. He probably will not attain eminence in any field of activity before the age of twenty, and about that age he will probably desire to marry, and so on. Coming down to facts of physical and mental growth, structure, and function, and development, we find that we can predict them with greater or less degrees of certainty. Mr. Spencer holds that there is a strong analogy in all these particulars between individual men and those aggregates of individual men we call societies. What ordinary biography is to anthropology he thinks the ordinary history is to sociology. In other words, the ordinary history gives one no better understanding of the constitution and probable future of an aggregate of men than biography gives us of the constitution and probable future of an individual man. "The kind of relation which the sayings and doings which make up the ordinary account of a man's life bear to an account of his bodily and mental evolution, structural and functional, is like the kind of relation borne by that narrative of a nation's actions and fortunes its historian gives us to a description of its institutions, regulative and operative, and the ways in which their structures and functions have gradually established themselves." In other words, to be able to attain that amount of certainty in prediction with regard to a nation's character and career which we have accomplished with regard to individual men, we must study the facts of its growth, development, structure, and function—that is, its anatomy and physiology. Nevertheless, the morphology and physiology of society do not correspond exactly to the morphology and physiology of man, but to those of all living organisms, or to morphology and physiology in general. Society is not of one type or grade, but of several, and has to be studied in a variety of groups and classes. There are fish, and reptile, and quadrumanal as well as bimanal societies, Mr. Spencer would say, though with certain traits of structure and development running through them all.

Accordingly, he feels that, in order to study sociology to any purpose, there must be made, what does not exist, and what historians have never thought of supplying, a collection of the facts which constitute their anatomy and physiology, and the investigation of which is necessary to a knowledge of the laws of their structure and growth. It is in order to supply this want, or rather to make a beginning of supplying it, that Mr. Spencer has entered on the enormous work of which the first two parts lie before us in folios of seventy pages each. Mr. Spencer has now been engaged on it since 1867 with a corps of competent assistants. It is to consist of three great divisions, each dealing with one group of societies: 1. Uncivilized societies; 2. Civilized societies, extinct or decayed; 3. Civilized societies, recent or still

* 'Descriptive Sociology; or, Groups of Sociological Facts, classified and arranged by Herbert Spencer. Nos. I. and II. English, Ancient Mexicans, Central Americans, Chinchas, and Peruvians.' New York: D. Appleton & Co.

flourishing. The first instalment of the civilized societies recent or still flourishing, and the first of civilized societies extinct or decayed, have now appeared. The first of the uncivilized societies will appear in the course of the coming year.

Let us take, in order to give the reader some idea of the manner of execution, Table I. of Part I., dealing with the English society during the British and Roman periods. The first question to be answered is, What were the environments or surroundings of the society?—that is, under what circumstances, not of its own creation, did it live? This is answered by a summary description of the soil, geology, and climate of the island—this being the "inorganic environment"; next, by description of the flora and fauna, as the "organic environment"; and next, of the neighboring tribes or societies, as the "sociological environment." Then comes the question what kind of men composed the society at the period in question, and this is answered by giving their physical, emotional, and intellectual characteristics. The Table devoted to the structural traits is divided between the "Operative" and "Regulative." Under the former head we have some account of the kinds of production in which the society was engaged, and of the manner in which labor was organized and directed. Under the head of "Regulative" we have some account of the various customs and institutions in which the religious, moral, and political ideas of the society found expression—civil, military, and ecclesiastical. These include marriage; the government and education of children; the civil government of the tribe; its preparation for war; its worship, and the machinery for worship; its funeral rites; its rules of social intercourse, modes of dress, and other habits and customs. Passing to its functional traits,we find under the head of "Regulative" its æsthetic and moral ideas and language; under the head of "Operative," the process by which it manufactured or exchanged, or produced in any way, the products of its industry, such as land-works, houses, clothing, utensils, weapons, and ornaments. By running down the Tables, you follow the growth of the society; by running across them, you get an idea of its structural and functional condition at any given period. Looking at them as mere suggestions, it is safe to say that a student who took them as guides in a course of historical reading would find his notion of what constituted history almost reversed; that is, he would find the class of facts of which nearly all histories are now composed relegated to a position not simply subordinate but almost insignificant; and another class which historians only notice incidentally, if at all, spread over the whole field. The column of "events" which every table contains has indeed about the same bearing on the others as the short sketch of the living history of a subject in the dissecting-room—his age, calling, and cause of death, if known—might have to the examination which followed.

Of course the question which rises to the lips of every one who sees these Tables, after he has got over the first impression of surprise and admiration created by the evidences of enormous labor which they exhibit, is, how trustworthy are they? and when one asks this, one comes upon the weak points in all attempts to treat sociology as a science. The analogy borne by the morphology and physiology of society to morphology and physiology in general is plain enough; but in investigating the latter we examine the organisms themselves, either wholly or in part. They are under our eyes. We handle them, dissect them, treat them with chemicals, investigate them with the microscope. The structure and functions of animals and vegetables we learn, in short, from the physical examination of them and not through testimony about them. In informing ourselves, on the other hand, about the growth and functions of society, we are almost entirely dependent on testimony, and that, too, testimony of an exceedingly defective kind—the chronicles of credulous and hasty historians, and the narratives of ill-trained or unscrupulous travellers, or the incidental allusions of soldiers or geographers. If anybody will look, for instance, at the materials from which the Tables relating to Roman Britain have been constructed, he will find that they consist largely of extracts from histories which are themselves largely conjectures of more or less ingenuity, based on meagre inscriptions and the results of a few excavations, or on Cæsar's scanty allusions in his account of his own campaigns. This difficulty, of course, diminishes as the observers grow in number and accuracy and the volume of literature swells, or, in other words, as we approach our own time; but it must be admitted that as regards uncivilized societies, and extinct or decayed civilized societies, and the early period of civilized societies, it is very serious. There is, too, one great source of error in all attempts to analyze a society distant from our own either in time or in manners, arising out of the danger of taking incidents to be symptomatic or general which are really isolated and exceptional. Cases of this occur constantly in our own day, in the accounts given by travellers of the manners of foreign nations, in spite of the great facilities for correction afforded by the multiplicity of accounts and by the busy criticism of the periodical press. The dangers to accuracy arising from it in dealing with remote ages and stages of civilization, in which the records of any kind were so scanty that collation is hardly possible, may be readily imagined. In short, an effort to base a science on literature must necessarily be tentative and unsatisfactory. This is no reason for not making it in the present case, and Mr. Spencer is not answerable for the imperfections of his materials, nor any the less entitled to praise and encouragement because they are imperfect; but the matter deserves mention for the benefit of those ardent disciples who in every field of investigation are prone to outrun the master and be quite sure and impetuous where he hesitated and groped.

THE *NORTH AMERICAN REVIEW* FOR OCTOBER.

IF the article in the current number of the *North American* called "An Episode in Municipal Government" were not signed Charles F. Wingate, we should have inferred from internal evidence that Mr. C. F. Adams, jr., had had something to do with its composition, dealing as it does with a subject—the history of the New York Ring—which he has made his own, and having a style bewilderingly like his. Any one who wishes, at the present stage of the Reform movement, to be consoled for the apparent shortcomings of Messrs. Havemeyer and Green, or any despondent Liberal-Republican who refuses to be comforted because General Dix has or has not declared himself against the Third Term, will do well to refresh his memory by looking over this article, which will carry him back to the good old times of a few years since, when the chief-magistrate of the city was Hall, and its finances were in the hands of two gentlemen, one of whom was known as "Slippery Dick," while the other described his theory of the art of government in these words: "I keep my eyes wide open when election comes along, stick my arm down as far as it will go, and pull it out as full as it will hold"; and when at the head of the judiciary in one of the richest and most important jurisdictions in the United States were George G. Barnard, Albert Cardozo, and John H. McCunn. The story of the rise of the Ring has been often told, nowhere better, on the whole, than in this article, which is to be followed by one or two more, giving the history of some of the Ring's proceedings and their downfall. The writer of the article has evidently had opportunities of acquainting himself with the ins and outs of his subject, and his portraits of the gang are very vivid. For some reason (as we believe we have seen stated in one of the earlier articles of the *North American*), events which happen in New York lend themselves to a certain kind of narrative-writing much more readily than those which take place in New England, the Western Reserve, or the Valley of the Mississippi. Fraud and crime happen in every State and Territory, but New York fraud and crime are always the most interesting and, if not picturesque or romantic (being indeed generally too brutish to be romantic, and too vulgar to be picturesque), certainly the most sensational. The Hartford and Erie frauds, the railroad history of Vermont, the building of the Pacific railroads, or the recent financial history of South Carolina, teem with corruption and crime; but perhaps because New York is the largest city in the country, and because there is a feeling that it is really, if not nominally, the capital, there is, not precisely a subtle charm, but a rank fascination about the lives and adventures of our great men, our Fisks, Barnards, Cardozos, McCunns, Tweeds, Sweenys, Halls, and Connollys, which will not be resisted.

In an article on "Lombard and Wall Streets," Mr. Gamaliel Bradford discusses some of the questions raised in Mr. Bagehot's recent book on the money market, and indulges himself in what appears to be rather a Quixotic tilt at the latter's theory of deposits. We say Quixotic, because whatever may be the value of Mr. Bradford's speculations as to the true nature of deposits, the practical lesson which he derives from his speculations—that "the first step towards specie payments will be to place the Secretary of the Treasury in Congress"—would probably strike the ordinary reader as having no very close relation to the main question, whether deposits are the savings of the community deposited in the banks, or whether they are mere creations of currency. It is only fair to say, however, that a connection does in Mr. Bradford's mind exist.

The remaining articles are on the "Modern Type of Oppression," by Mr. D. A. Wasson; on "Exact Science in America," by Mr. Simon Newcomb; and on "Retrogressive English" (a review of Oliphant's 'Sources of Standard English'), by Mr. Fitzedward Hall. Mr. Wasson observes that—

"There are two kinds of liberty, unlike in character and often opposite in effect. The one consists in the mere absence of restraint; the other, in such an order and discipline as shall make the relations of men wings rather than fetters, salutary, serviceable, productive, rather than a means of demoralization and degeneracy. Now, it is apparent that the attention of the modern world has for some time been devoted chiefly to the first-named, that is, to the liberty which consists in being left to follow one's personal inclination. The stress of effort for a century has gone to the removal of social restraints, as, for example, in that setting aside of restrictions upon the liberty of assemblage, of speech, and of publication which, if complete

only in England and America, has more or less taken place in all civilized lands. These changes constitute an important amelioration, and it is by no means with a design to disparage them that we remark upon the peculiar and somewhat exclusive character of modern reform. The century has done well to deliver itself from many restraints, which, however appropriate to the moral conditions of an earlier age, were only hindrances or impertinences in ours. Liberty in the customary sense, that is, the free initiative of the individual, contributes greatly to impulse, energy, enterprise, zest, and thus is the proper correlative of a capable social discipline: combine the two, each at its best, and the highest productivity of civilization is provided for. Our time, however, has set its heart upon one of the two, to the temporary neglect of the other. We disestablish, displace, abolish, make room for 'the voluntary principle,' and meantime hold it for the highest merit of government, not that it should be wise, capable, steadfast, able to secure for the nation the liberation of social health, but that it should be in the nature of a weather-vane, well poised and oiled, to turn with every wind."

The object of this article is to show that as a century ago society was in danger from not having liberty enough, it is now in danger from having too much license; that we are nowadays in no likelihood of oppression at the hands of kings, priests, or nobles, but from that kind of tyranny which "exists where, in the absence of a sovereign, sanitary control, liberty becomes lawless and a canker; where egotism, unrestrained, runs riot; where private interest, abandoned to its own conduct, becomes predatory; and where, to crown all, government itself, amid the great factions of private force, resembles a weak nation between powerful and contending neighbors, forced into an alliance now with this, now with that, and strong enough to afford either a decisive reinforcement, but never strong enough to maintain its independence, still less to impose peace."

Mr. Newcomb gives some remarkable information on a subject often talked about, but little understood, the comparative condition of the higher sort of scientific study—the study of those who devote themselves to science in its purer forms without hope of profit or reward—here and in Europe. Mr. Newcomb says that in mathematics if we look for publications of original investigations we find an utter blank; that of mathematical journals designed for original investigations, such as exist in nearly every country in Europe, "we have none and never had any"; that outside of New York, the Eastern States, and the city of Baltimore, even the standard writings of the great mathematicians are inaccessible, except by private purchase; that "if the reader will visit the Royal Library at Berlin, he will find among the dictionaries and other works kept for constant reference in the public reading-room a set of Crelle's *Mathematical Journal*, the volumes of which are among the best-thumbed there; and if, as he looks at them, he will reflect that our National Library does not possess the volumes at all, he will need no further illustration of the relative state of mathematical science in the two countries." These, however, are but hints at the facts he gives; the general conclusion that "we are a generation behind the age in nearly every branch of exact science," which Mr. Newcomb thinks the average citizen will agree to, he does not believe ought to be attributed to the backwoods character of so much of American life—to the fact that we have been so busily engaged in hewing wood and drawing water, and developing our mines and railroad system—but rather to the want of effective organization and incentive. Mr. Hall's paper is, like all his writing, entertaining and instructive. In fact, what with the book-notices and articles, we have not seen for a long time so good a number of this able and valuable publication.

History of the German Emperors and their Contemporaries. Translated from the German and compiled from authentic sources. By Elizabeth Peake, author of 'Pen Pictures of Europe.' Illustrated. (Philadelphia: J. B. Lippincott & Co. 1874. 8vo, pp. 587.)—If Miss Peake had been contented with the plan which she has sketched in her preface of taking the portraits of the emperors in the Kaisersaal at Frankfort, and making their personalities the basis of a sort of biographical history of Germany, she would have made a welcome and altogether creditable book. The parts of her work which are in execution of this plan are very well done; the portraits of the emperors are well engraved, and their lives are on the whole well told. The book is worth having, if it were only for this series of portraits, which are, of course, good likenesses for modern times, and for earlier times have a certain historical value from the costumes, suits of armor, etc. Unfortunately, our authoress has been carried away by that fatal passion for completeness which has spoiled so many promising histories, and must needs crowd her pages with dry chronicles after the following fashion (p. 379): "In 1607, under James I. of England, the colony of Virginia was founded at Jamestown. In 1614, John Smith explored the coast from Penobscot to Cape Cod, and named the country New England. In 1620, the Plymouth Company landed one hundred English Puritans, etc., etc." There is an immense amount of detail like this, from the history of every country under the sun, much of it quite as irrelevant as the above. Considering the amount of detail, however, there is a very great degree of accuracy. The author has industriously used the best authorities of easy access, and has for the most part discreetly, and very properly, avoided matters of special erudition. Still we notice a few points of greater or less importance in which she is at fault. Page 21, we have the division "into hundreds, communes, and manors" ascribed to Charlemagne, just as the similar organization in England is wont to be ascribed to Alfred. Page 25, we have Louis the Pious "trusting his German more than his Frankish subjects"—an incorrect distinction in terms, although the author's meaning is easily seen. We have such use of French terms as Frisons (p. 60) for Frisians. The Salic Law is said (p. 57) to have been "first alleged against Edward III.," whereas it was at the death of Louis X. that it was put in operation. The old exploded story of St. John of Nepomuk is related (p. 171); of the three popes before the Council of Constance, one is said (p. 177) to have resided in Spain; on p. 199, we have the reign of Ladislas Posthumus and the succession of Matthias Corvinus in 1457, and then comes, as if in due order (p. 200), Ladislas III. of Poland (or Uladislaus I. of Hungary) and the battle of Varna in 1444; on p. 327, William III. is called grandson of William the Silent.

There is an index, very good as far as it goes, but it does not appear to give half the names contained in the body of the work.

Nimrod of the Sea; or, The American Whaleman. By William M. Davis. (New York: Harper & Brothers. 1874.)—It is but fair that purchasers of this book should know what time it covers. Full dates are not given in the text, nor are the clues by which they may be determined frequent, and few readers will know whether Mr. Davis's voyage is an old or a recent one. We have filled out the dates of the journal, and some of them are as follows: Mr. Davis sailed from New London for the Pacific Oct. 11, 1834, touched at the Hawaiian Islands in Jan. and March, 1836, and at Callao in May, 1837; and got home to New London in March, 1838. Readers who have an acquaintance with these places may verify, as we have done, the above dates. For the rest, the story is of an old-fashioned whaling voyage, spiced with various whalemen's adventures "in the form of yarns." The book is a readable one, but in interest and in fulness of information it is inferior to Herman Melville's 'Moby Dick,' which describes the sperm-whale fishery at a later time than that of Mr. Davis's journal, and with an accuracy not less remarkable than the poetic and imaginative faculty which has made the work a classic among sea-tales.

The Mormon Country. By John Codman. (New York: U. S. Publishing Co. 1874.) *A Woman's Life in Polygamy.* By Mrs. T. B. H. Stenhouse. (Hartford: A. D. Worthington & Co. 1874.)—Both of these books profess entire impartiality of treatment. At the ethical quality of Mr. Codman's impartiality we can make a guess by the aid of the following passage (p. 198), apropos of the Pacific Railway: "The hands of Oakes Ames were never soiled by any dirty lobby transactions. His great object was to build a railroad that has united the East and the West and made our country one and indivisible. To effect this he did not hesitate to directly approach members of Congress in the most approachable way. He knew that 'where the treasure was there would the heart be also' [*sic*]. He finished his work, and now lies beneath a simple tombstone in the churchyard of a New England village." Acrid criticism, on the other hand, is the forte of Mrs. Stenhouse, and her book may be taken as an antidote to the bane of Mr. Codman's laxness. She calls it 'The Story of a Life's Experience in Mormonism,' and it is a not wholly uninstructive record. But both of these books are a confused jumble of impressions and facts, and are nearly as devoid of the higher intelligence as the average Fourth-of-July oration.

*** Publishers will confer a favor by always marking the price of their books on the wrapper.*

JUST PUBLISHED:

ADAMS'S DEMOCRACY AND MONARCHY IN FRANCE,

From the Inception of the Great Revolution to the Overthrow of the Second Empire.

BY CHARLES KENDALL ADAMS,

Professor of History in the University of Michigan.

Large 12mo, $2 50.

Some chapters of the work have been published in periodicals and have received the following notices:

"Deserves the praise—not too commonly deserved by this sort of articles—of being, to all appearances, not only well informed, but also candid and unbiassed."—*Nation.*

"Will be instructive not only to general readers, but to publicists, politicians, and journalists."—*Christian Union.*

"Extremely interesting as well as instructive."—*New York Evening Post.*

"Mr. Adams has disentangled the tortuous and twisted skin of Bismarck's successful diplomacy with a dexterity and clear-sightedness which have been exhibited by few, if any, of the numerous writers who, upon this side of the Atlantic, have taken the same or kindred topics in hand."—*London Daily Telegraph.*

GAUTIER'S A WINTER IN RUSSIA.

From the French of Théophile Gautier.

BY M. M. RIPLEY.

12mo, cloth, $2.

"As little like the ordinary book of travel as a slender antique vase, filled with the perfumed wine of Horatian banquets, is like the fat, comfortable teacup of a modern breakfast-table He brings us pictures rich with the grace of a poet, and fine with the delicate accuracy of a painter. . . . Under that witching and wilful pen of Gautier's the fantastic fashions of the North glow with a light too real for poetry and too fairylike for prose."—*New York Tribune.*

AMERICA NOT DISCOVERED BY Columbus. An Historical Sketch of the Discovery of America by the Norsemen in the Tenth Century. By Prof. R. B. Anderson, of the University of Wisconsin, with an Appendix on the Historical, Literary, and Scientific Value of the Scandinavian Languages. $1.

"The whole history is nowhere else given so clearly and attractively as in this book."—*Interior, Chicago.*

"We find a depth of research, a cogency of argument, and an earnestness of purpose which will go far toward converting the general reader to the views and conclusions of its author. Far from the style of the work being dull and heavy, we find it bright and condensed, and our only feeling on closing the book is one of regret that its author had not given us more of the results of his investigations upon this interesting subject."—*Inter-Ocean, Chicago.*

NORWEGIAN-DANISH GRAMMAR and Reader. With a Vocabulary, designed for American Students of the Norwegian-Danish Language. By Rev. C. I. P. Peterson, Professor of Scandinavian Literature $1 25.

"I may say that I have myself read it through, and when I affirm that I find myself able to translate the reading-exercises with great readiness, it may be inferred how well the book is adapted to forward one in a knowledge of this interesting but neglected language."—*A. Winchell, late Chancellor of University of Syracuse.*

PRE-HISTORIC RACES OF THE United States. By J. W. Foster, LL.D. 415 pages, crown 8vo, illustrated, third edition, price $3 50.

"This work is eminently worthy of the study of all interested in the department of ethnology."—*Harper's Weekly.*

"The volume is an elegant one, and the reader will find it more fascinating than his last favorite novel."—*Eclectic Magazine, New York.*

THE WEEK IN TRADE AND FINANCE.

OCTOBER 26, 1874.

MONEY on call remains very easy at 3 per cent., with occasional loans made at both above and below that rate. 60-day loans, secured by stock collaterals, are quoted at 5 to 6 per cent. For prime commercial paper, running 3 to 4 months, the quotation is 6 to 7 per cent.; that having a shorter time to run, 4½ to 6 per cent., according to the date at which it matures. The Bank of England continues to lose in bullion. The amount withdrawn from the Bank during the week ending on Thursday was £610,000. No change was made in the discount rate, which remains standing at 4 per cent. Money in the open London market on Government collaterals is loaning at 2 per cent., according to to-day's cable advices.

The bank statement for the week ending October 24 was unfavorable, and reflects the shipment of currency which for some weeks has been going South. The loss of legal tenders and specie is shown by a corresponding loss in deposits. The statement analyzed shows that the surplus reserve has been reduced $2,334,325 during the past week. The following is a comparison of the averages for the past two weeks:

	Oct. 17.	Oct. 24.	Differences.
Loans	$282,275,200	$281,873,500	Dec.. $401,500
Specie	15,007,800	13,585,200	Dec.. 1,422,600
Legal tenders	60,697,000	58,830,800	Dec.. 1,866,200
Deposits	230,122,700	226,304,800	Dec.. 3,817,900
Circulation	25,060,500	25,013,500	Dec... 47,000

The following shows the relations between the total reserve and the total liabilities:

	Oct. 17.	Oct. 24.	Differences.
Specie	$15,007,800	$13,585,200	Dec.. $1,422,600
Legal tenders	60,697,000	58,830,800	Dec.. 1,866,200
Total reserve	$75,704,800	$72,416,000	Dec.. $3,288,800
Reserve required against deposits	57,530,675	56,576,200	
Excess of reserve above legal requirem't,	18,174,125	15,839,800	Dec.. 2,334,325

Government bonds have been firm, and prices at the close of the week show a slight improvement over those at the close of the week previous. Dealers report difficulty in supplying large orders which come from savings-banks, trustees of estates, and others limited by law as to the character of their investments.

The gold market has been firmer in tone, although prices have advanced but a small fraction since last Monday. The following gives the daily range of quotations for every day during the past week:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Monday, Oct. 19	110	110	110	110
Tuesday, Oct. 20	110⅛	110¼	110	110⅛
Wednesday, Oct. 21	110⅛	110¼	110⅛	110⅛
Thursday, Oct. 22	110⅛	110¼	110¼	110⅛
Friday, Oct. 23	110⅛	110¼	110	110¼
Saturday, Oct. 24	110⅛	110⅛	110	110

SAN FRANCISCO, Sept. 1, 1874.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 5, 1874.

The Week.

THE election returns show in all quarters an overwhelming Republican defeat. For magnitude and importance, there has been nothing like it since the elections of 1860. In this State, in which the Republican majority was some 55,000 in 1872, the Democrats elect Tilden by a majority of from 30,000 to 45,000; and as the vote polled this year is probably not very far from that of two years ago, the indications are that from 80,000 to 100,000 voters have, in this State alone, changed their votes from Republican to Democratic. In the city the result of the voting shows that a great deal of discrimination was exercised, and that the regular tickets were not by any means voted blindly, the votes polled for Ottendorfer, 24,000, and Wales, 37,000, showing that Wickham, the Tammany candidate for mayor, who is elected by a total vote of 70,000, might possibly have been defeated by a united opposition; the only candidate in the city on whom the opposition to Tammany was as a matter of fact united—Jones—being elected Register by about 10,000 majority. Jones's opponent was the notorious "Jimmy" Hayes, one of the men implicated in the Ring frauds, and the election of his opponent shows that Tammany, now that it has carried the day, will have to behave itself better than formerly, if it wishes to retain power. As we go to press, the returns for Congress and the Assembly are not sufficiently clear to say more than that in all human probability both sets of elections have gone Democratic, thus securing a Democratic senator from this State next winter. More remarkable, however, than the victory in New York is the Democratic success in Massachusetts, that State electing Mr. Gaston Governor by about 10,000 majority, and making it probable there also that a Democrat will replace Mr. Sumner's *locum tenens* next winter. On Butler's defeat, though it has taken place in a way which neither we nor probably any one outside his district expected, we profoundly congratulate our readers and the country, for it shows that neither money, nor influence, nor impudence, nor unblushing rascality has yet destroyed the value of the ballot as a means of self-protection in the hands of the honest and self-respecting part of the community. It should not be overlooked that his defeat has been accomplished by the Democrats on a strictly hard-currency platform, the principles of the party both in Massachusetts and New York being not merely unobjectionable but admirable. In Mr. Dawes's old district the Democratic candidate is elected, and General Banks goes back to Congress. Butler's friend, Ayer, is also probably defeated. The detailed returns from the various States are not yet complete, but the general result is that in the next Congress the House will be either decidedly Democratic, or else evenly balanced.

The Republican newspapers admit an overwhelming defeat, and the *Times* attributes it, no doubt correctly, to the indifference displayed by the party leaders to public opinion. "They have apparently believed," it says, "that the people would quietly submit to anything and everything, and that the party which they represented was indestructible. Nothing short of the events which we record this morning could have opened their eyes to the truth. If a newspaper warned them in a friendly but firm spirit against the policy of blundering which they were pursuing, it was treated with a mixture of the insolence and arrogance which they exhibited toward all opposition. . . . It will be the lot of the President to discover, in common with many great men who have gone before him, that foolish flatterers and venal newspapers cannot turn aside the current of public opinion." Should the next Congress turn out to be pretty evenly divided, it will give the President more power in the way of obstructing legislation than he has had since Johnson's time, and, on the whole, this will not be a bad thing. Of the "third term" we shall probably hear no more. Of the value of the revolution as a rebuke to corruption and recklessness there can be no sort of question; whether it will give us positive improvement depends on the use the Democrats make of their power during the next two years. They have a great opportunity, as great as any party ever had. Let us hope they will use it with more wisdom than they have of late years displayed. In the meantime, we trust that Conkling, and Butler, and Cameron, and Dawes, and the rest, will not despair of popular government; let them remember that the country is now, as it was last year, in the hands of the majority of the people.

The steady improvement of the tone of the press is beginning to have a depressing effect on campaigns in this city. In a heated canvass we always used not merely to count upon the "ball of discussion" being kept in motion, but on a pretty steady stream of language of an ingenious if not novel kind, known to the editorial world, when looked at from the point of view of amicable approval, as *persiflage;* but when regarded by the hostile and irritated victim, as "foul-mouthed billingsgate." But latterly there has been a terrible falling off. At the opening of the campaign we did observe a disposition on the part of some of our contemporaries to let us know a few of the real facts about one another, and at one time we hoped that the difficulties between the *World* and the *Mail* might lead to a general resumption of hostilities. The *Mail* had committed an offence, according to the *World*, not so much against that paper as against the truth, and the *World* felt itself obliged to take measures to prevent a repetition of the offence, by warning the editor, whom it calls "Major Bumbleby," to desist from these practices on pain of having his "ears and epaulets cut off." We have seen one or two references also to "that brutal sheet," the *Times*, in the *World*, and to the *World* in the *Times*, from which we learn that the former is still edited by a "representative of Whitechapel," that it "invents a new lie in behalf of General Dix every day," and that it supported the Tweed Ring for a long time—though it is some consolation to learn that the republication of Mr. Tilden's pamphlet, or part of it, completely answered its purpose "as a refutation of the forty daily falsehoods" which the *Times* has been "revamping or inventing," and "puts that most mendacious and brutal sheet under the pump"; while, on the other hand, we find that as "the *World* people" "never had any personal character to lose," it is not surprising that they can "afford to do without it," and also that in 1868, had it not been for money furnished by parties unknown, by whom "the sheriff was paid off," the *World* would now be in the hands of its creditors. These and similar revelations have led the *Tribune* to protest against the lies which fill the air, but that fastidious sheet, with a reserve which in the old times would not have been tolerated, keeps itself out of the *mêlée* altogether.

The Springfield *Republican* has frequently been very angry with the *Nation*, and has spoken of it with jerky unkindness because of the severe view we have occasionally taken of the character of Mr. Dawes. Indeed, it is hardly three months since it rebuked us for elevating Mr. Garfield above Mr. Dawes. Within the last week, however, it has been itself compelled to abandon the latter. It says all the severe things we have ever said of him, and many more of its own. In fact, it gives him up as a bad job, and says that he is entirely untrustworthy, and is his own worst enemy, which is perhaps the hardest thing one can say of a man, for it means that until he can get rid of himself there is no chance of his improving. The cause of this onslaught was the delivery of a speech by Mr. Dawes, which was, we admit, thoroughly repulsive, sophistical, tricky, teeming with evasion, suppression, and misrepresentation—the speech, in

short, of an unscrupulous criminal lawyer to a general-sessions jury He was as full of reliance on "outrages" as Moses or Kellogg or Pinchback. He even said that the poor colored man at the South went to bed every night trembling for the morrow. Either he did not believe this, or he did. If he did not, what are we to say of his morality? If he did, was there ever such assurance?—for he was praising the Republican party, and yet gave this as the result of ten years of Reconstruction. Since then he has gone rampant into Butler's district, and been stumping for him vigorously, in spite of his inflation, repudiation, and other enormities, saying that the main question for New England Republicans was to send an unbroken delegation to Congress—that is, a delegation including Butler. Nevertheless, we were thought to be too hard on Mr. Dawes when we accused him of going off to Berkshire "on business" solely to avoid his plain duty in the Simmons case. We are not sorry on the whole that he has thrown aside the little restraints and disguises which have so long imposed on our Springfield brethren. We sha'n't have any weeping over his "grey hairs" any longer. He now at last appears openly and plainly in his real character—that of a light-headed, unstable politician, without moral weight or tenacity, or clear moral perceptions, or any grasp of principles, or any creed but the latest party platform, or any outlook beyond the party lines.

The passage of the controlling interest in the Chicago *Tribune* out of the hands of Mr. Horace White, who has held it for some years, into those of Mr. Medill, is an event of some political importance, owing to the prominent part the *Tribune* has played for some time back in opposition to the Administration. Mr. Medill's intention is, it is announced, to bring the paper back into the regular Republican ranks, and although he announces that it is to be "independent" still, he is an editor of the old school, with somewhat different notions of the meaning of that term from those now prevalent. He is going to assail abuses, it is said, but "within the party lines." What this means one might best learn by going to see the virtuous Mr. Dawes stumping the Essex District in Massachusetts for the most notorious inflationist and corruptionist and most unprincipled politician in either the Republican or Democratic parties. In fact, "reform within the party lines" may mean prayer and praise in the church pews, but it may apparently also mean card-playing on the altar. Mr. White's management of the paper raised it to the highest rank of journalism, in the best sense of the term, as well as to the greatest commercial success; though it was marred by one serious mistake, which nothing but ability prevented from proving disastrous. The support of Mr. Greeley was the worst blow "independent journalism" could have received, both because it was a sacrifice of private judgment and of plain political principle to party rules, and because the "independence" was still a novelty which the public had hardly begun to understand. This error led to another of less consequence—the support of the Granger folly about railroads—based though it was on the grossest economical delusions and the plainest contempt for morality. Its use of fine words, such as "extortion" and "monopoly," and its disregard of the existing party organizations, led the *Tribune* as well as other Liberal Republicans into the belief that something in the nature of a healthy opposition might grow out of it. Mr. White, we fancy, became sensible very early that this was a mistake. Mr. Medill is an able and well-informed man, but he is narrow and one-sided, and has a large stock of half-truths, of which he will doubtless make the *Tribune* a vigorous exponent.

The Joint Committee of the two Houses of the Episcopal Convention adopted on Saturday a canon by which it is provided that "if any bishop have reason to believe, or if complaint be made to him in writing by two or more of his presbyters, that within his jurisdiction ceremonies or practices not ordered or authorized in the Book of Common Prayer, setting forth or symbolizing erroneous or doubtful doctrines, have been introduced by any minister during the celebration of the Holy Communion (such as the elevation of the elements in the Holy Communion in such a manner as to expose them to the view of the people as objects toward which adoration is to be made; any act of adoration of or toward the elements in the Holy Communion, such as bowings, prostrations, genuflexions, and all other like acts not authorized or allowed in the Book of Common Prayer), it shall be the duty of such bishop to summon the Standing Committee as his council of advice, and with them to investigate the matter." And that if after this investigation it appears to the bishop and the Standing Committee "that ceremonies or practices not ordained or authorized as aforesaid are setting forth or symbolizing erroneous or doubtful doctrines," the bishop shall admonish the minister of the parish, and, if he disregards this admonition, that he shall be tried for a breach of his ordination vow.

We have carefully avoided hitherto saying anything on the subject of the safe-burglary trial now going on at Washington, because of the difficulty, which still exists, of writing intelligently about it. Of all the many dark holes and corners investigated at Washington last winter, there was none darker than that of this burglary, which was said to be, on the one hand, an attempt to get rid of damaging evidence, and on the other an effort by means of a sham attempt to get up a feeling of sympathy with those against whom the crime purported to be committed. Add to this that the principal witness for the Government, Zirruth, is, on his own statement, a rogue, who has been so suspected by his fellow-rogues that they have been following him about the country, and trying to spirit him out of it, and that the court trying the case has been obliged to take public cognizance of an attempt in the local press to interfere with the course of justice (some of the papers accusing the court of an intention to prevent a fair trial), and that the court and counsel do not get on at all well together, and we have a confusion compared to which the De Golyer contract or the Crédit-Mobilier swindle are plain sailing. It ought not to be forgotten either that one or two of those deeply involved have been very careful to keep out of the way of judicial process, so that the jury have a difficult task before them.

A recent report on the revenues of the English universities, and the manner of their expenditure, shows that a very, some think a scandalously, large proportion is devoted to fellowships, each worth about $1,500 a year, awarded by competitive examination, the holders of which make no return for them whatever in the shape of labor; in fact, they are prizes for past proficiency, and nothing more. But, as the *Pall Mall Gazette* points out, even this mode of disposing of the money is a reform made in 1854. Previous to that period fellowships were given, without examination, to persons born in a particular diocese, educated at a particular school, or belonging to a particular family. But then the fellow of that period usually remained in his college until he took a church living, which he all but invariably did; each college at the two great universities having a number of livings in its gift, which always went to its fellows. Since 1854 this is all changed. Young men of ability are now reluctant to take orders and enter on ministerial duties, not only because rationalistic views have made much progress among them, but because the controversies by which the church has been agitated of late years, controversies about clothes, and genuflexions, and ornaments, and ceremony, seem contemptible or ridiculous. The question whether a priest can perform such a little miracle every day as turning bread and wine into flesh and blood, which lies at the root of church disputes, is one which men of brains will not busy themselves with. Accordingly, fellows nowadays, as soon as they get their fellowships, hurry into some of the manlier and more robust callings, and use the income to help them over the earlier and more difficult years, while they are working their way into practice and fame. In fact, there is something suicidal in the dawdling of the Episcopal Church, both here and in England, over the mode of dealing with the Ritualistic brethren, and in the affectation of respect which many people display for the absurd mediæval notion that a young "priest" can make invisible changes in physical phenomena.

The details of the elections of the Councils-General in France have come out by the last mail, and they contain the result, after the second ballotings, in 86 cases, of 1,431 elections out of a total of 1,436. Of these 1,431 members elected, 672 are Republicans, 604 Monarchists, and 155 Bonapartists. The Republicans have made a total gain of 25, though their fortune has varied in different places. But the Monarchists have a majority in 44 councils, the Republicans only in 38, and in three the two parties are equally divided. The elections are said to have been on the whole very fair, and it is difficult to avoid seeing in them a valuable means of political education. Never before have Frenchmen had an opportunity of debating and voting in this peaceful way on the form of the government. The fears of coming foreign complications still cloud French politics, and increasingly so. The relations of the country with Germany are marked still by deep suspicion on both sides, which is aggravated by the enormous addition to the numerical strength of the army which is contemplated by some pending Prussian legislation, and by the unexpected sauciness of the Spaniards with regard to the aid afforded to the Carlists across the frontier. The demand of the Duc Decazes for "a bill of particulars" on the point has been met by a long note specifying a great many cases of what Spain considers violation of neutrality, and ending with the very unusual and really menacing demand that the French officials in the Southern Departments should be removed.

The note alleges that Carlist volunteers are permitted to pass the frontier; that Don Carlos's wife is allowed to live in France, close to the frontier; that when Don Carlos came into France he was not caught when he might have been; that uniforms of the French Garde Mobile have been freely sent into Spain for Carlist use; and that French vessels lying in the Bidassoa serve as depots for Carlist supplies. Of course many of these complaints are unanswerable, as the frontier is 250 miles long, and is mountainous, and is peopled by the most expert and daring smugglers in the world, and would require a large army to watch it on the French side, when the Spaniards are able to do little or nothing on theirs. But, reasonable or unreasonable, people naturally say that such hard remonstrances would hardly come from a power which cannot keep 35,000 men in the field, if it were not sure of strong backing from some other quarter. The Duc Decazes has, however, assured the Permanent Committee of the Assembly that there is no cause for alarm, that the note is quite harmless, and that the roughness of its tone must be ascribed to a foreign writer's want of skill in the use of the French language.

Additional "statements," and particularly one made evidently by a person in Count Arnim's confidence in the *Vossische Zeitung*, make his quarrel with Bismarck more intelligible. The Count appears to have stood very high in the Prince's confidence after May, 1872. Previously to that time he had been ambassador at Rome, and while there had furnished the advice on which Bismarck's policy towards the Papacy was based. He recommended the break with the Pope, and also the appointment of Cardinal Hohenlohe as minister in his own place, in the belief, which afterwards proved to be correct, that the Pope would not receive him, and that a total cessation of intercourse, which would be very convenient for Bismarck during the subsequent complications, would thus follow. After Count Arnim went to Paris, however, a coolness sprang up between him and Bismarck, not so much owing to differences of opinion on the French question as to the effect Arnim's view apparently produced on the mind of the King. Arnim thought he perceived that the result of Thiers's coquetting with Gambetta and the Radicals would be the permanent establishment of the Republic. About the same time the flight of Amadeus made him fear the establishment of a republic in Spain also, and he apparently believed the spread of republican institutions over so large a portion of European soil would be in some measure prejudicial to monarchical institutions in Germany; and this view, communicated by him, seems to have made some impression on the King's mind. Arnim's plan of dealing with France was, therefore, to delay the payment of the indemnity and continue the military occupation as long as possible, and in order to facilitate this to encourage as many changes in the French Government as possible. Bismarck, on the other hand, was eager for the establishment of the Republic as an assistance to him in his fight with the Papacy, and though he might have forgiven difference of opinion on the part of his subordinate on this point, he would not forgive the discredit which Arnim's communications to the court seemed likely to bring on his general policy. He, therefore, began to snub him, and to write letters of disapproval, which finally became insulting, with the view of driving him from his place. These letters, at least in the beginning, Arnim seems to have registered and numbered as part of the archives of the embassy, but subsequently concluded that they were private communications, and carried them with him when he had to quit his post. The question before the criminal court is whether they were really part of the public archives or not, and the Government relies on the registry book to prove that they were. The president of the court has published a letter denying indignantly that the action of the court has been in any way influenced by the Government, and has not been in strict accordance with the law.

The Berlin *Post*, replying to the opposition on this point, makes citations from the criminal code, showing that the mutilation, falsification, and obstruction of a public paper by any official charged with its custody is an offence punishable with imprisonment, and that the courts are armed with the power of preliminary arrest in all cases where a person accused with probable cause is likely to quit the country, or, if left at liberty, to "complicate the enquiry" by the destruction or suppression of evidence, and declares that the Foreign Office has played no other part in the affair than that of a prosecutor, like any private citizen. This is all drawn out by the taunts of the Ultramontane and Austrian press that Count Arnim had been arrested under a *lettre-de-cachet*.

A report of the proceedings of the Congress of German Economists held at Crefeld in August has been published. The Congress was well attended both by economists pure and by "practical men," and the discussions were both interesting and important. One of the principal subjects was railroad charges, and after long debate the following conclusions were reached, which we commend to the attention of Wisconsin moralists: 1. Charges for transportation on railroads cannot be withdrawn from the operation of the law of supply and demand; the cost of carriage being as much influenced by the situation of the market as the situation of the market by the cost of carriage. All interference on the part of the state, therefore, to reduce the tariff to the actual outlay, simply results in giving special advantages to certain branches of trade. A proper adjustment of charges can only be reached by leaving it to the carriers, who, however, ought not to be also proprietors of the road. 2. The restrictions imposed on the roads in the matter of fixing tariffs should consist simply in rules formulated with a view to the general welfare, and should consist of (*a*) the publication of all rates a certain period before their taking effect; (*b*) the application of the same rates to all classes of forwarders, leaving the company free, however, to discriminate in favor of freight offered in large quantities, or freight forwarded at regular intervals, or freight for returning cars, provided the same advantages are offered to all under the same conditions; (*c*) the fixing of a maximum which no company should be allowed to go beyond, and which should be revised at stated intervals. 3. The legislature should draw up the rules and rates under which the road should be used by carriers. It will be seen here that the Congress calls for a division of interest between the owners of the road and those of the rolling-stock as a means of bringing competition to bear on each road, but the carrying out of any such a plan as this would be full of difficulty. It will also be perceived that theft or confiscation forms no part of the German plan of reform.

THE PRESIDENT AND THE NEWSPAPERS.

THERE is something almost amusing in the efforts of the managing men of the Republican party to extract from the President a declaration of his unwillingness to accept a third term, and in his somewhat dogged determination not to make any such declaration. It is said, and we have no doubt truly, that he believes the outcry about a third term to be the work of the newspapers, and to have been got up by them solely for the sake of making a sensation, and that if he responded to it in any way, it would look as if they had been successful in "drawing" him, as the sporting men say. His state of mind about the third term we take to be precisely what his state of mind was about the second term, though somewhat different from his state of mind about the first. When he was first put in nomination, the Republican party was harassed by great anxiety about the attitude of the South. The proceedings of Andrew Johnson had created a vague alarm lest there might be something like a "new rebellion," or at least a resistance to Republican measures of security, and the experience people had had of Johnson made them desirous of seeing a determined man, of undoubted loyalty, put in charge of the Executive Department of the Government. The kind of administration the majority at the North called for at that time might, in fact, have been described by the phrase which the Legitimists invented last year in Paris for theirs—a "gouvernement de combat." For such a government the General of the Army was undoubtedly the fittest man; and General Grant, to whom the machinery of civil administration was a good deal of a mystery, accepted it modestly and cheerfully, as he would have accepted an order to report at New Orleans and take the command of the Department of the Gulf. By the time he came to the end of his first term, however, two changes had come over him, slight in their external manifestations, but still of considerable importance. One was in his estimate of himself as a politician, which had risen greatly, partly under the influence of gross flattery and partly under that of a closer view of the exceeding simplicity of the art of government as practised by party leaders at Washington; for, during the years between 1868 and 1872, it consisted mainly in impetuous semi-military legislation directed against the South, combined with a judicious distribution of offices.

Besides this, he had been made more impervious to the influence of public opinion by the attacks of the newspapers, which had been almost unequalled in the grossness and virulence of their personality. He had begun his political life, too, with the view of the newspaper and its functions which had been from time out of memory prevalent in forts and garrisons—viz., that it was an instrument for giving currency to lies and rumors collected by "runners" of great impudence and entire venality. To newspaper discussions of public affairs military men do not as a general rule pay much attention, and have little or no appreciation of their effect on public opinion, or of their importance as an expression of public opinion. Statutes and general orders they understand, for they see their results; but what is an "editorial" but a string of words, rolled off to-day and to-morrow cast into the oven? This view was confirmed and intensified in General Grant's eyes by the treatment of himself by a portion of the press, and by the success which attended his disregard of it. His second nomination seemed to him to prove positively that the newspapers were of no consequence, and that he really was himself a necessity to the Republican party, if not to the country. His ostentatious disregard of criticism can be explained in this way, and hardly in any other. The retention of Casey and Richardson, and the renomination of "Boss" Shepherd, were the acts of a man who had supreme confidence in his own judgment, and did not believe in the authenticity of any of the usual indications of public feeling. He felt confident that his doings would be approved by the party, for it had just returned him by a tremendous majority, and he felt confident also that nobody need mind what the newspapers said, for had they not covered him with mud without producing the least effect on his reputation?

The third-term question, we have no doubt, he approaches in somewhat the same state of mind. That is, he has no intention of trying to get a re-election, and he is not trying to get it. He does not think trying is necessary. He got his other two terms without making any effort, and why should he make any effort for this? If, however, Mr. Conkling should tell him that the party needed him for a third term, he would not throw any obstacle in the way of his being nominated, and would not be shaken by "newspaper clamor" against it. About political traditions, as the example of Washington and Jefferson, or the remoter effects on the structure of the Government of the disregard of a great precedent, he knows and cares nothing. When Conkling or Butler or Morton comes to have a talk about politics, they do not say anything about traditions or precedents, or Washington and Jefferson; what they say is, that A had better be put there, and B here, and that C would be useful in such a place, and that with such and such an arrangement of a custom-house, or such and such a disposition of a post-office, they will undertake to carry this or that State by such and such a majority. This sounds businesslike; he understands it; and believes that Conkling and Butler and Morton know what they are talking about, which is more than can be said, he thinks, of the editors who are prating about the danger of a third term. How can a third term be "dangerous" any more than a second? Does not everybody know that the notion that he is going to overturn the Government or change its structure is ridiculous? Then it must be remembered that he has the feeling about Washington and Jefferson which all men of a practical turn, with feeble imaginations and no taste for or habit of reading, have about persons long dead. All periods before his own probably seem nearly equally far off. Of course he does not imagine that Washington was a contemporary of Julius Cæsar, but he has probably a vague impression that he flourished about the same time with General Monk, and does not see exactly what his sayings or doings have to do with the affairs of our own day. Still less does he look forward and trouble himself about the probable growth of political tendencies. This, too, is a kind of work which is only done by trained imaginations, and he can hardly be said to have any imagination at all.

The fact is, that he is a man who was very useful at one period and in one sphere, who has been projected into another sphere and another period, presenting a new set of problems with which he is unfamiliar and with which he is not fit to deal; and the manufacture of "outrages" at the South, and the fussy, ostentatious execution of the Enforcement Act in which the Attorney-General is engaged, are simply parts of an attempt to keep alive the belief that the combination of circumstances which made a man like General Grant useful at the head of the Government still exists. It must not be forgotten that he is exactly the kind of President that the political class like, and in trying to keep him in power they are simply upholding a tradition inherited from the Southern politicians before the war. It will be remembered that the policy of the South towards the close of the slavery régime was to let the North have the honor of furnishing a President, provided he was a man who would not meddle, and he was required to surround himself with Southern partisans, and to leave to them the working of the machinery of administration in their own way. A state of things somewhat similar has grown up since the war. The machinery of administration, including the machinery for the selection of officers, has gained enormously in bulk, weight, complexity, and momentum. As has been often pointed out, the election of candidates is becoming more and more of a mere form, the real work of filling places being done by a small set of men sitting in secret, and the whole force of the administrative organization is brought to bear to enforce their decrees; and their decrees are carried out not because the voters are compelled to do what they say, but because the difficulty of doing anything else effectively is all but insuperable. To get up a respectable opposition now to a candidate for the Presidential chair put in the field by the party in power, is an undertaking almost as vast as making a new railroad. It needs the exclusive labor of hundreds of able men, the expenditure of two or three millions of dollars, a

power of organization such as only very few possess, and knowledge of the art of electioneering which can only be acquired by long experience. Moreover, it is the great aim and end of the political class to make this art as much of a mystery as possible, and to throw contempt on the attempts of mere professional men to practise it. They have, in fact, been so far successful that "bolting movements," however respectable morally, and however truly they may be considered the voters' protection against the caucus, become every day more and more ridiculous. People laugh, when they see them, as they would laugh if they saw Denmark declaring war, in ever so righteous a cause, against Germany, or a light-built, consumptive clergyman offering to thrash John Morrissey.

The kind of President that the political class like, therefore, is a man without views or opinions on the ordinary civil problems of the day, who is not likely to embarrass them by forcing troublesome questions on their attention, who will be willing to let them run the machine in their own way, and who yet stands well with the people on some ground or other. General Grant has served their purpose admirably thus far. He has the mental and moral characteristics—the reticence, the want of interest in "questions," the liking for "practical men"—which they need; and then he has at his back a great military reputation, and is singularly successful in the part of a "plain, blunt man," or of a "simple-minded, sagacious man," or of "an honest, well-meaning man, easily led astray, but quick to discover his errors and correct them"—parts which the masses find singularly attractive, and never tire of admiring. That the immense bureaucracy which now surrounds the President, and the wily, skilful chiefs who control it, should like to keep such a man in office is not wonderful; but the inconvenience to the community of having in such an office a person whose temperament and training make him so insensible to currents of public thought and feeling, so ignorant of the weight and direction of the great social and economical forces of our time, so sceptical about the existence of any sort of power which has no material embodiment, and so unfamiliar with the conditions of political progress, has been already plainly demonstrated. One may take this view of the matter, too, without in the least degree detracting from the value of General Grant's services to the country under different circumstances, and it is a view which relieves him from all responsibility for the "third-term pronouncements" of his adherents.

THE EUROPEAN ARMAMENT.

THERE is a bill before the German Parliament which provides for the organization of the Landsturm in battalions, and its addition to the regular force available for active service. It will include all able-bodied men who are not in the army, but the first class will only contain men under the age of forty-two, and the second class, which will contain all others, will probably not be organized at present, and perhaps would only be called out in the direst extremity. If the bill passes—or when it passes, perhaps one might more correctly say—the German army will reach, it is calculated, the enormous number of 1,800,000 men available for service in the field. It is, however, said to be doubtful whether even this force will satisfy the Government. The annual conscription now brings it 132,500 men; the French annual conscription, under the new law, brings in, however, 161,000; and the Russian, 145,000—and it is France and Russia which Germany now fears. All accounts agree that the French are working with great steadiness and success at the reorganization of their army. They will not have their full numbers within reach for some years to come—we believe six or seven—but the force now under arms is going through a process of drill and discipline, the effects of which are visible to the most careless observer in the bearing of both men and officers. Long days of hard work in field manœuvres, over rough country, have taken the place of the showy parades of Imperial days in the camp at Châlons and Satory. The fanfaron has gone from the officers, and the disorderly swagger from the privates. There has been a great weeding out of the military beaux of the Empire, and, in fact, the shadow of a great fear has settled on the army no less than on the nation. The question, they see plainly, is no longer whether French influence is what it ought to be, but whether France is to have any assured future among the nations of the earth. The Germans are, of course, not the men to overlook improvement in French morale, or to underrate the addition it makes to French strength.

On the side of Russia the prospect, too, is such as to give real grounds for uneasiness, however slight. It is not that the introduction of a system of general conscription into Russia has added considerably to the sum of her available forces, which makes the situation look grave. The military power of Russia has, as far as numbers are concerned, been ever since the beginning of the century terribly formidable, and, in spite of the emancipation of the serfs and the improvements in the soldier's condition which have been introduced by the present Czar, it is very doubtful whether the material of the Russian army is likely to be for the next fifty years any more valuable than it has been in point of courage, tenacity, and discipline. In fact, it is fairly open to question whether the better education and increased independence and self-respect of the serf will for some time to come exercise the fortifying influence on the military morale which the old soldiers of 1812 and 1854 drew from habits of rigid social subordination and superstitious veneration for the Emperor and Holy Russia. There is a period which may be likened to "slack-water" in social progress, containing the transition from one régime to another when the improvement in men's condition as citizens does not add to but perhaps rather takes away from their value as soldiers. The gains for Russia in our day, in a military point of view, come mainly from the extension of her railway system, which has within the last few years been very great. In 1871 she had 7,750 miles open for traffic, and this year she has 10,368 miles. Down to 1868 she had only 3,227 miles. At the time of the Crimean war she can hardly be said to have had any railroads at all. Now, without railroads her enormous population profited little in anything like offensive warfare. The very vastness of her area was a hindrance to her. The difficulty of concentrating troops and supplies at any point on her frontier rendered her hardly a match for a second-rate power possessing a denser population and better means of transportation. It was this that made it possible for the Allies, in 1854, to bleed her to the point of utter exhaustion at Sevastopol with armies which did not number one-tenth of her own force. But the railroads have wrought and are working vast changes in her control of her own resources. They are giving her some of the advantages which a man of great size and strength gets from training. She now not only has a vast force, but she is fast acquiring the means of massing it rapidly and moving it swiftly on the enemy.

She consequently forms a cloud in the German sky which any sign of *rapprochement* between her and France enlarges seriously; and there have been some signs of this lately. The treatment of Denmark by Germany in the Schleswig-Holstein matter evidently caused a slight shock of displeasure at St. Petersburg. There have been comments on it in Russian newspapers which are not pleasant reading. The Czar's letter, too, to Don Carlos, though a little thing, a mere nod of recognition, was a sign of the times. It might mean that republican Spain was not in as good odor in St. Petersburg as at Berlin, and that possibly Bismarck might not have everything his own way about the Pyrenees. Suppose anything should go wrong in the solution of the various problems now perplexing the European mind, could Germany, with Spain and Italy, make head against France and Russia, and what part would Austria and the Scandinavian countries play in such a conflict?—are questions which the Prussian Chancellor probably often asks himself; and they are not questions over which even the most fortunate man in his position can sleep soundly. It is hardly wonderful if, under the circumstances, Germany should be straining every nerve to increase her military strength. It will not be wonderful if the Government asks Parliament to remove the legal restriction which forbids more than one per cent. of the population to be kept under arms in time of peace.

There is of course something lamentable, from the industrial point of view, in the retention of so many young men on the European Continent, during the very flower of their youth, in an occupation so very unproductive as soldiering. But there is a large and growing school of social philosophers and politicians, in both France and Germany, who do not look at the matter from the industrial point of view simply, and refuse to be concluded by the figures which show the loss caused to the national revenues by these prodigious armaments. They say that the danger which threatens every country on the Continent, and many of them include England in the same category, is social disintegration—the resolution of the nation into incoherent atoms, without common beliefs or common notions of right or duty, and with a deep-seated sense of mutual antagonism with regard to the division of the results of the national labor. In short, the influences by which modern societies were built up, and have down to our own time been held together, are perishing before our eyes, and there is as yet nothing to take their place. Science is destroying the old faith, but offers nothing in its stead that the masses can take hold of; democracy is destroying the old leadership of property or birth or education, but suggests no other sort of leadership which is as yet capable of being used, and the emancipated masses are as yet entirely unable to say what or they want or how they expect to get it. Bismarck is the first of the statesmen attached to the old régime who has distinctly framed a substitute for it, and he is busily engaged in carrying out his idea. He means that the state shall take the place of all the external influences by which human conduct has hitherto been regulated—that it shall take the child from the nurse's arms and educate him in its own way, no matter to what calling he may be destined, that he shall become its soldier as soon as he is able to bear arms, and continue its soldier until he ceases to be able. The crusade against Ultramontanism is simply a vigorous effort to get rid of the most formidable rival in the matter of influence and training with which the state has to contend. The extension of the military system is not simply an additional means of defence against foreign aggression, but a means of giving increased cohesiveness or organization to a society which the commoner tendencies of modern thought are likely, if unchecked, to break up into warring particles. The army is in fact what it proved after the French Revolution—a new state rising out of the débris of the old one, with a more robust morality, more vigorous and imperative sanctions, and a more striking and sharply-defined standard of right and wrong.

THE ST. LOUIS FAIR.

St. Louis, October, 1874.

NOTHING is so odorous to the Western nostril as comparison—as the superlative—especially in the matter of size. We have never known the Western man to boast of anything as being the smallest in the world, but he has a peculiar unction in his manner of rolling enormities under his tongue and impressing his audience with their magnitude. His great hotels, great steamboats, and great cities, however, afford him less satisfaction than his great annual fair at St. Louis, and enormous this certainly is. The beautiful and well-wooded old grounds of Benton Barracks, where, during the war, the Northwestern recruit gained his first experience of hard-tack and military rule and duties, have beaten their sword into a ploughshare, and yearly make the first week in October a delight to the thousands who are attracted by their holiday invitation. As an industrial exhibition, the St. Louis Fair has great merit, and many of its agricultural and mechanical features are well worth investigation; but that which gives it its real value is its thoroughly fair-like character. During the whole of its six days, the finest spectacle is that afforded by the people themselves. Just what it is that attracts them it would be hard to say. Ill-natured critics allege the fast horses; others, the more practical display of the mechanical hall and the cattle-grounds. It would probably be just to say that the chief attraction lies in the fair *as a fair*, and more in the crowds which gather there than in anything that they pretend to come to see.

The exhibition this year achieved in all respects its highest success. Over $66,000 was taken as gate-money, and many were admitted on members' tickets as exhibitors and attendants. On the great day (Thursday), there were estimated to be 125,000 persons present. This day is made a general holiday in the city, all places of business are closed, and all who can find transportation seem to flock to the fair grounds. Near the entrance is a huge shed for the depositing of family baskets, and during the entire day family picnic parties occupy the grass in every direction. Throughout the country, for miles around, every farm-house is left in charge of its least efficient man or woman, and the rest flock to the show, filling acres of "wagon yards" on all the approaching roads with their teams. To a stranger, the most interesting feature of the occasion is the character and behavior of the crowd. All the nations which have contributed to the building up of our Western metropolis and the settlement of our Western lands are fully represented. Northerner and Southerner, German, Irish, Dane, Norwegian—all come to the grounds, and blend so freely as to form a really homogeneous mass. During the three days of my attendance, a wordy altercation between a crier of lemonade and a disrespectful young farmer was the only disturbance that I saw, and this merely drew together a few hundred spectators, who found in it a source of amusement. To say that the crowd was orderly would give a wrong impression as to their universal jollity, but there was an entire absence of anything like disorder, and it was especially noticeable that groups of young girls wandered in every direction, in the most unrestrained manner, without meeting the slightest annoyance or impertinence. Whatever else the St. Louis Association may accomplish, it deserves its fullest recognition from the fact that it gives to the people within its reach such unalloyed recreation.

As an agricultural exhibition, the fair is good, but not perfect. There is a sad want of classification; the cattle-stalls are given out in the order of application, and Shorthorns, Devons, Dutch cattle, Jerseys, working oxen, horses, and ponies are jumbled together in the most confused way, so that one wishing to compare the representatives of any class must wander over the whole range, and have his mind confused by the mixing in of half-a-dozen other breeds. Then there is too much dependence on private enterprise for the proper labelling of articles exhibited, in default of which information must be obtained from attendants, who are often not at hand. Agricultural implements were shown in great variety, and most of them in operation, but here the same confusion prevailed—for example, the first and second premium hay-presses, both of which were remarkably good, were in different parts of the ground, and were surrounded by all manner of other machinery. In harvesting implements, for which America has so long been celebrated, this exhibition, like those at Chicago and Cincinnati, was particularly rich; and it is really wonderful to see the perfection that has been attained in the automatic processes for discharging grain from the table of the reaper in gavels ready for binding; there were several in which the gavel is carried to a higher table, to be at once bound and thrown overboard by men riding with the machine, and—a marvel of ingenuity—one where the gavel is actually bound (with wire) and thrown off the machine entirely by mechanical appliances. This machine is said to have missed but twelve sheaves in reaping a field of sixty acres of wheat, and an examination of the very simple parts made this seem quite possible.

Any one from the East must have been struck with the prominence given to apparatus for supplying water to live-stock in the dry prairie regions of the West. There were several ingenious deep-well boring machines in actual operation, and the windmills constituted one of the most conspicuous classes, as was foreshadowed by their frequency in the pastures along the prairie railroads. It is interesting to observe to what a degree the construction of these machines has been simplified during the past twenty years; there are windmills (not very good ones) which will stand any but the most exceptional storms, costing only twenty-five dollars, all complete, and able to raise water enough for the ordinary stock of a farm; and others, also comparatively inexpensive, which require oiling but once a month, which run with a light wind, which only a tornado can destroy, and which require no repairs that an ordinary mechanic cannot give them.

As is usual in Southern fair-grounds, the St. Louis Association has an enormous wooden amphitheatre, where 10,000 persons can sit in the shade and witness the examination of cattle and horses in movement, and under which are restaurant booths, where questionable food is to be had, and where the unquestionably good lager-beer of the Mississippi Valley maintains its uninterrupted flow. One of the "big" items of the exhibition is the fact that the booth-rental for the fair-week amounts to about $25,000. With the liberal aid of the cotton-brokers of the city, the Association offered $11,000 in cotton premiums, and this brought out a wonderfully fine display of bales from every cotton-producing State of the West.

As at most American industrial shows, the industry of very fast horses is prominently encouraged, but hardly in this case to an objectionable extent. There is only a half-mile track, and this is at the far end of the exhibition grounds. The racing is pretty constant, running horses and trotting horses alternating rapidly, that there may be little time lost between heats

This year nothing worthy of remark was shown in either class, and the popular interest of the crowd gathered about the course seemed to centre rather on the President and General Sherman than on the horses themselves. Especial praise was bestowed upon our Executive for the grace with which he returned his cigar to his mouth, to free his hand, that he might take off his hat to a friend on the track.

Correspondence.

THE SUBMERSION OF THE SOUTH.

To the Editor of the Nation:

Sir: About the 10th or 12th of September, I addressed you a respectful letter, requesting you to explain to me as a subscriber the position assumed by you in an editorial in your paper referred to in my letter, and I enclosed postage stamps for your reply. To this letter you have seen fit to make no reply, either by mail or through your correspondence columns, in which you are accustomed to notice similar communications from subscribers and others.

I might, perhaps, take exception to your discourteous treatment of my letter in remaining silent, since you almost weekly answer briefly in your columns notes and queries of correspondents, but I have learned to expect scant justice from any Northern source to any one living south of Mason and Dixon's line, either in matters of business or courtesy, and I waive this as a matter of taste.

I might fairly infer from your silence in regard to my letter that my construction of your editorial alluded to was the correct one, but since your issue of 22d inst. I am not left to inference on this point, for in your editorial of that date on the elections you state distinctly, "it were better that all the whites and blacks now living south of Mason and Dixon's line were sunk in the sea than go on as we are going now," etc.

This answers my question in regard to the previous article fully and clearly. It shows that you regard the North as the United States, and that you do not consider the lives and liberties of the people of the South, if such consideration conflicts with the wishes or political opinions of the North. You are free to publish such utterances, however they may brutalize popular sentiment, but individuals are as yet also free to refuse their support to the paper which prostitutes its editors to such uses; and no admiration for the ability and apparent sincerity with which it treats questions disconnected with Southern politics can justify a Southern man in giving such support.

My self-respect, at least, will not permit me to accept such a wanton and cruel insult to my State and to the whole South, nor to continue my subscription to a journal which in cold blood devotes half the country to destruction.

I request, therefore, that you will discontinue my paper after the expiration of the year's subscription, ending November 19, 1874. Respectfully,

J. A. Pearce.

Chestertown, Kent Co., Md., Oct. 26, 1874.

[We can only say, in reply to the above, that we have no recollection of ever having received or seen Mr. Pearce's first letter, but we must add that we receive a great many letters asking questions on various subjects, of which we take no notice, sometimes for want of space, at others because the questions are foolish or trifling. As regards our expression of willingness to have the Southern whites and blacks sunk in the sea sooner than have free government on this continent destroyed, which has given Mr. Pearce so much annoyance, our selection of Southerners for this fearful doom was due simply to the fact that the alterations in the structure of the government which we see and deplore are caused by Southern troubles, and not to any peculiar indifference on our part to the fate of the men, women, and children south of Mason and Dixon's line. The best proof of this we can offer is to promise that we will set apart for wholesale destruction, in the contingency aforesaid, the population of any other portion of the country Mr. Pearce or his representatives may select, not excepting the city of New York. We are willing to leave the matter entirely to his discretion; but if he would allow us to exert any influence on his choice, we would suggest Essex County, Mass., as a good Northren locality for the operation of our tidal wave. At the same time, if he will continue his paper for another year, we pledge ourselves not to let the water in on any district either North or South without giving him a full hearing, and without permitting the removal of all sick persons and young children.—Ed. Nation.]

IGNORANT VOTERS.

To the Editor of the Nation:

Sir: Believing with you that the community ought to ask of those demanding female suffrage, "What use would be made of the power if we gave it?" I wish to call the attention of your readers to some important statistics in the last census. In 1870, there were 748,976 white men unable to read or write, and 1,145,718 white women. The whole number of illiterates over twenty-one, both white and colored, was 1,551,213 men and 2,092,050 women. In New York, female suffrage would have added 121,667 ignorant voters to the 77,160 already possessed by your State, and in Pennsylvania 123,733 to the 67,110 found there in 1870, thus raising the illiterate vote in each State to nearly 200,000, and almost trebling it, while only doubling the entire number of possible voters. The percentages of illiterate to the whole number of their sex over twenty-one were in New York 7 to 10, but in Pennsylvania 7¾ to 14¼. In Florida, Georgia, Alabama, and Mississippi, a little more than half the men were illiterate, but almost three-fifths of the women. In Arizona, also, the proportion was 56 per cent. among the women, but less than 22 per cent. among the men, while in New Mexico the male percentage was but 64 and the female 90. The latter cases are extreme and crucial ones, as the advocates of the great Sixteenth Amendment proposed extending its benefits to every Territory as well as every State. So large a part of our political corruption is due to the ignorance of the voters, that it is hard to see how female suffrage, which would increase that ignorance so immensely and so disproportionately, would purify politics.

These facts are made much worse on account of the well-known difference between men and women, of equal culture otherwise, in degree of interest in politics. A striking proof of this was furnished me at the State University of Wisconsin, where I heard from the professors giving instruction about the Constitution of the United States and the History of Political Institutions, that the young men were on the average much more interested and proficient in these branches than the young ladies, though the latter were their equals in other studies. At my own visits to these recitations I was much struck with the difference between the eager faces of the young men and the jaded ones of the painfully toilsome or reprehensibly inattentive girls.

In view, however, of the plainly increasing interest of women in politics, as well as of the fact that in 1870 the number of male and female illiterates between ten and twenty-one was substantially equal, I believe that the time will come when female suffrage will be not only safe but beneficial, as I think that the franchise will never be used by men with sufficient zeal and care to secure good government until it is shared by women. But at present any decrease of the average of both special and general fitness to vote would be extremely dangerous. The fact that we have more than a million and a half of ignorant male voters is a sufficient reason for refusing to let in more than two millions more of ignorant female ones. The first duty of the reformer is not to increase the quantity of our voters, but to improve their quality.

F. M. Holland.

Baraboo, Wisconsin, October 18, 1874.

JUSTIFICATION OF "SCIENTIST."

To the Editor of the Nation:

Sir: In the *Academy* of Sept. 19, Mr. Alexander Ellis, F.R.S., has arraigned the term *scientist* as "American," and as an "American barbaric trisyllable."

If an Englishman takes a dislike to an expression of recent origin, he is pretty certain to pronounce it off-hand an Americanism. There is no surer way than this to prepossess his countrymen against it; and, indeed, to stigmatize it as transatlantic, if not the strongest argument he can bring forward for condemning it, at least powerfully assists the acceptance of any other arguments which he may have to produce. Coleridge and Southey used phrases like *is being built* as long ago as 1795; and Coleridge printed *reliable* in 1800. Both *is being built* and *reliable* have, however, been denounced, over here, as American inventions; and Archbishop Trench once unhesitatingly called the old Scotticism *starvation* "an Americanism." These are specimens of groundless assertion; and it is to be proved that *scientist* had its birth on our side of the Atlantic. Fifteen years ago I made a note of it, as occurring in an English publication, where first I saw it. If not originally English, at all events it was very soon naturalized in Great Britain. Possibly it may have come from France.

Mr. Ellis, assuming that *scientist* was based on the factitious *scient*, from

sciens, speaks of "its barbarity"; and, as the substantive *scient* should, on etymological considerations, mean "man of science," "scientific man," he allows to *scientist* no other proper sense than that of "adherent to scients." *Scientist* he would retain, with the signification just mentioned; but *scient* he proposes in place of *scientist* as used at present.

Only by insisting that it must be based on *scient*, can *scientist*, in its current acceptation, be viewed as "barbaric." But it can perfectly well be formed from *scientia* + *-ist*. In welding these elements together, the *a* of *scientia* is rejected, and the final *i* of the residual *scienti* melts into the *i* of *ist*; the result being *scientist*. Compare *deist*, from *dei* (*deus*); *eulogize* and *eulogist*, from *εὐλογία*, *eulogy*; *theorize* and *theorist*, from *θεωρία*, *theory*; and *parodist*, from *παρῳδία*, *parody*. Similarly, we have *aurist* from *auris*; *dentist*, from *dentis* (*dens*); *florist*, from *floris* (*flos*); *jurist*, from *juris* (*jus*); *oculist*, from *oculi* (*oculus*), etc., etc. The disappearance of a single final letter from the end of a leading elemental word when *-ist* is added, is seen in *diarist*, *fabulist*, *galvanist*, *mechanist*, *papist*, and often elsewhere.

As *scientist* may be educed as here stated, so, if a Romish theologian wished to coin a word signifying "advocate of indulgences," he would proceed quite legitimately in striking out *indulgentist* from *indulgentia*, to match his *indulgential*; and such terms as *experientist* and *patientist* might, if we needed them, be formed with perfect etymological propriety, from *experientia* and *patientia*; and so *omniscientist*, *prescientist*, and *nescientist*.

We have every reason, then, to rest satisfied with *scientist*, whoever its originator may have been. Your obedient servant,

FITZEDWARD HALL.

MARLESFORD, WICKHAM MARKET, Oct. 10, 1874.

CUNEIFORM INSCRIPTIONS.

TO THE EDITOR OF THE NATION:

SIR: Smith's 'Dictionary of the Bible,' under the title "Lachish," speaks of certain sculptures found at Kouyunjik which bore the inscription: "Sennacherib, the mighty king, king of the country of Assyria, sitting on the throne of judgment before (or at the entrance of) the city of Lachish (Lakhisha). I give permission for its slaughter." The American editor has the same without comment. On the walls of the Nineveh Cabinet at Amherst College, Mass., is a colossal fresco picture of Sennacherib seated on his throne, and underneath it is the Assyrian text of this inscription in immense cuneiform characters. This is not accompanied by any translation. Some of the characters are crowded, owing to the fact that the painter did not know the language, and consequently the reader has in two cases at least to separate and in one to unite them before he can translate the inscription. Layard's 'Nineveh and Babylon' gives the text of this inscription and the translation given above, and the same are to be found in several other works. That this scene and inscription belong to the history of the siege and capture of Lachish there can be no reasonable doubt, and attention is called to the matter now for the purpose of correcting the translation. The inscription reads as follows: Sin-ahi-erib sar kissati sar mat assur ina kussi ni-mi-di u-sib-va sal-la-at er la-ki-su ma-ha-ar-su i-ti-ik. And the translation is: "Sennacherib, king of nations, king of the country of Assyria, sits upon a lofty throne and receives before him the spoil of the city of Lachish." It will be seen that the words "judgment," "before or at the entrance of the city," and "I give permission for its slaughter," are no part of the original inscription at all. The study of the Assyrian cuneiform has made such progress within a few years past that scholars are able now to give rigidly literal translations of inscriptions which ten years ago could only be rendered imperfectly. Only so recently as 1869 Dr. Oppert rendered *kussu ni-mi-di* by "throne of judgment." But the word is a simple one, and the meaning clear. The word is an adjective from the root *ma-ad*, "to be much"; passive, *made great* or *lofty*. The copies of inscriptions which Mr. Layard has given need greatly to be revised, for, being ignorant of the language, he has often crowded together characters which should be separated, and separated others which should be united.

The above notes may be of service to those who use Smith's 'Dictionary of the Bible,' and who care at all for the exact statement which any given inscription may contain.

SELAH MERRILL.

ANDOVER, MASS., Oct. 12, 1874.

Notes.

A PRIVATE circular, bearing the signatures of Wm. Lloyd Garrison, Wendell Phillips, Samuel May, and Gerrit Smith, calls attention to the "May Collection" of books and pamphlets relating to slavery and the anti-slavery movement in this country in the library of Cornell University. Though the original collection has received important accessions, and is already the best and largest of its kind in the United States, it still lacks many of the rarer publications, long since out of print. "It is especially deficient in the anti-slavery publications which emanated from Philadelphia, and it also lacks a file of the *Liberator* and other anti-slavery journals, the early volumes of which are now very difficult to obtain."——An edition of Macaulay's Essays in one volume, paper covers and uncut, is announced by Albert Mason, of this city. It will be sold at the low price of $1 50.——A recent Parliamentary Return on the South Kensington Museum shows the total cost of that institution to have been six millions of dollars (£1,191,709 17*s.* 4*d.*) Four millions and a half have been expended for building, administration, etc., and a million and a half (nearly) in the purchase of the collections.——Mr. F. B. Patterson, 32 Cedar Street, has reproduced the photograph of a mask of Milton, taken from life, which is prefixed to Sotheby's 'Ramblings in the Elucidation of the Autograph of Milton' (London, 1861). The original cast is preserved in Trinity College Library, Cambridge, and is thought to have been made about the year 1654, at which date the poet had become almost or wholly sightless. This lends additional interest to the mask and to the photograph. Mr. Patterson's copy, being once removed from the plaster, naturally loses something in delicacy of detail, yet not much. The face and head are striking beyond those of any portrait we have ever seen of Milton, and forcible in the extreme.——G. P. Putnam's Sons announce, what should be good news to many readers, that they have in preparation a handy series of 'German Classics for American Students.' The size will be 16mo. Mr. James Morgan Hart is to edit the series, with notes critical and philological.——Henry Holt & Co. are preparing to issue this month Mill's 'Posthumous Essays on Religion.'——That admirable publication, 'Die Gesetzgebung des Deutschen Reiches,' deals in its last two issues with the laws regulating the German mint (subject concluded) and the Imperial press-law of May 7, 1874. We may remind our readers that this work reproduces the text of every important law of the Empire (since 1873), with a commentary connecting it with previous legislation of the same order, and giving as further aids to the understanding of it the contemporaneous construction in the debates upon it, the amendments offered, etc., etc. Better employment than this for jurists like Dr. Ernst Bezold, Dr. von Holtzendorff, and their associates it would be hard to discover, and we commend the example, first set in Bavaria, to the heads of the legal profession in the United States and in the several States.——Trübner & Co.'s 'Catalogue of Choice, Rare, and Curious Books,' No. 8, is of especial interest to students of the aboriginal languages of America.——The Orange (N. J.) *Journal* thinks the *Nation* "ought not to withhold just praise" from President Grant for his recent appointment of Mr. J. M. Thacher as Commissioner of Patents, in which "the spirit of the civil-service reform was fully conformed to." Mr. Thacher has been assistant examiner, principal examiner, judge of appeals, and assistant commissioner. His decisions, says the *Journal*, "have shown earnest, painstaking enquiry into the merits of the cases before him and a close knowledge of law."——We regret to record the death, on October 28, of Mr. William A. Wheeler, Assistant Superintendent of the Boston Public Library, and well-known for his lexicographical labors. He was formerly employed in the preparation and revision of our two rival dictionaries, passing from Worcester to Webster; edited an American edition of Hole's 'Brief Biographical Dictionary,' a 'Dickens Dictionary,' and other works; and was engaged, when attacked by his last illness, upon a 'Dictionary of Shaksperian Reference.' In compiling the catalogues of the library, his services were constant and of great value. He had not completed his thirty-ninth year.

—The 'American Educational Annual,' of which we have received the first volume, for 1875, from J. W. Schermerhorn & Co., is well planned and sufficiently well executed to deserve commendation, even if it falls a little short of the promise of its sub-title: "A cyclopædia or reference book for all matters pertaining to education." Taking "education" in the restricted sense in which it was here intended to be used, we find, indeed, in this volume a large amount of valuable information. We cannot indicate all the contents; what is freshest of them is an account of the national land-grants for educational purposes, and brief sketches of the history and present organization of the school systems of the several States—very convenient for comparison. The Peabody Educational Fund, the National Bureau of Education, the educational bearing of the Civil-Rights Bill, educational gatherings during 1874, are some of the other topics, and there is much statistical matter derived from the best sources. As "pertaining to education" in the broad sense we must, we suppose, reckon the summary review of geographical and scientific discoveries during 1873 and 1874 inserted between Territorial School Systems and the Peabody Fund; and the pedagogic lore tucked away in the blank spaces at the end of the longer articles,

much of which could better have been dispensed with. The editor does not pronounce in favor of a national university, but he has very decided views as to the grant by which the so-called agricultural colleges were called into being: "It is safe to say, not merely that this is the most profitable disposition that the United States has ever yet made of any equal portion of its public lands, but that no government in the world can point to an educational trust that has been, on the whole, administered with more wisdom and fidelity, or with larger results, than this." The 'Annual' concludes with lists of educational journals and leading college periodicals in the United States; of eminent educators deceased during 1873 and 1874, arranged chronologically; and of American school-books published during 1874, classified, and with prices annexed.

—The late convention of college presidents at Hanover, N. H., agreed, it is said, that the evils of inter-collegiate boat-racing were more than balanced by the good that came of it, and that it had better not be interfered with. This conclusion will appear all the sounder if we consider the gradual enlargement of the college contests, so that they promise shortly to cover the whole field of athletic encounter, and to make of each occasion a genuine Olympic. Beginning with a simple regatta, the next stage witnessed the introduction of base-ball and foot-ball; Mr. Bennett's prize for running added still another element; and now there is no predicting how many forms of muscular rivalry will not start up at succeeding Saratoga meetings. The last Harvard *Advocate* reports the first field-meeting of the new Athletic Association of that university, the preparation for which is thus described: "A quarter-mile track, quite smooth but rather soft, had been laid out, surrounded by a rope; while a stouter rope, stretched around the entire field, with the aid of six policemen kept the *populus* (muckers) at a proper distance. Directly opposite the spectators' seats, a judges' stand was placed, while in the centre of the field were the hurdles and jumping-poles, with a hundred-yard track marked out between them." The exercises which followed were a hundred-yard dash, by eleven contestants, very nearly matched; a running high jump—highest, 4 ft. 8 in.; a running long jump—furthest, 15 ft. 8½ in.; a one-mile running race, won in 5.41¾; a hurdle-race of 100 yards, over eight 3 ft. 6 in. hurdles, won in 13½ seconds; a two-mile run, in which much science was displayed, won in 12.4½; a three-mile walk, in 29¾; a half-mile run, in 2.52½; besides a three-legged race, so-called. Base-ball also had a place in the programme, the winner throwing it 306 feet. We observe that these performances have already excited the emulation of Amherst, and we cannot doubt that Harvard's example will be promptly imitated by most of the colleges.

—Prof. von Holst, whose 'Verfassung und Demokratie der Vereinigten Staaten' we reviewed a few months ago, has published in pamphlet form his address delivered upon assuming the chair of Professor of History at Freiburg; the subject of this, too, is taken from American history, being the administration of Andrew Jackson in its relation to the development of democracy in this country. He has recognized with clear insight the importance of this administration, and its character as a turning-point in our history. The essay is indeed an expansion and illustration of this sentence in the opening paragraph: "With John Quincy Adams the last statesman for a long time departed from the White House, and the great masses and the professional politicians took possession of it." Andrew Jackson, as he shows, was not the cause of this revolution; he furnished but the will and the hand to accomplish a work that was all ready to be accomplished—"he merely raised the dam, against which the flood had long beaten." The analysis of the character of Jackson, and the series of acts by which he carried through this disastrous change in the spirit of the government, is masterly. No less clearly, however, than the arrogance and stubbornness of the President, are depicted the fatuity, narrow-mindedness, and lack of insight of the opposition. And while we are told in plain words that we have ever since this time been upon "a down-hill road, on which turning is ever hard, and in the best of cases can be only very gradual," we are also encouraged by the judgment of this sagacious observer, that the most fatal disease of a free state—contempt for politics and politicians—is far less developed among us than those "superficially informed commonly believe." In the introductory remarks Dr. von Holst takes occasion to disclaim the unfavorable view which he finds has been attributed to him, and to regret that the present work will, from the nature of its subject, be likely to confirm this erroneous impression. The pamphlet is published by Julius Buddeus of Düsseldorf, and is to be had of Mr. E. Steiger, in this city.

We were right, it appears, in our conjecture last week as to the nature of the catalogue that M. Bonnange proposes as the best for growing collections. It is the card catalogue already adopted by many excellent libraries. But M. Bonnange's invention is peculiar. His cards are in two parts; the upper, containing the inscription, is connected with the base by a cloth joint. A hole in the foot of the base of the card admits an endless screw, on which is a nut of the size of the compartment in which the base of the card rests; as the screw revolves, the cards fall apart or are pressed together. In M. Bonnange's plan, the cards may be shut up in drawers, or, as in the diagram which he publishes with his pamphlet, be arranged on an inclined plane of the height of a standing desk, and in this position, besides being more likely to have a sufficiency of light, which is sometimes not the case with cards in drawers, they may, by reason of their joint, be turned from right to left or the reverse, like the pages of a book, and so, very economically, be written on both sides. By a different disposition of them, they might be made to move up and down. This, the joint arrangement, is the distinctive point of M. Bonnange's plan. M. Littré praises highly the system of card catalogues in general, and calls M. Bonnange's invention ingenious.

—In the *Art Journal* for October Mr. J. Beavington Atkinson gives an interesting account of the preparations at Florence for the coming centenary of Michael Angelo. The proper date should be March, 1875, but the Italian weather at that season is apt to be stormy, and the middle of May has accordingly been selected for the festival. The painter's house (Casa Buonarotti), with its personal relics and its more or less authentic art remains, will furnish a sort of pivot to the celebration. Mr. Atkinson is disposed to discredit the pictorial drawings there preserved as Michael Angelo's, but he had the privilege of examining a portfolio of unquestionable architectural drawings, which as curiosities might be thought entitled to take precedence of the more familiar designs. They consist of plans for the never-finished façade of the Church of San Lorenzo; designs for fortifications, and for river embankments, and for various building details, such as windows, cornices, columns, capitals, etc. They are, "for the most part, the reverse of thorough; they are seldom made to scale; a workman could with difficulty carry them out"; they have, in short, the appearance of hasty memoranda. Mr. Atkinson surmises that the detailed drawings necessary for the construction of St. Peter's may still exist among the archives of the Vatican; but is it at all known how far the practice of that age approached our own in the use of such drawings? The literary remains in the Casa Buonarotti are to be published for the centenary. They consist of poems, which have already seen the light, and of two quarto volumes of letters, some two hundred in number, to which access has hitherto been denied to all the biographers of Michael Angelo. His correspondence with Vittoria Colonna is embraced in them. "By the aid of these and other like autographic data, we shall now, it is said, be made acquainted with every month of the life of Michael Angelo, from the hour when he first could write, down to the year of his death." Together with them will be printed the series of letters in the possession of the British Museum. A new life of Buonarotti, by Signor Aurelio Gotti, Director of the Uffizii Gallery, which is already under way, is to be translated into English, as we learn from the *Academy*, by Mr. Charles Heath Wilson.

—The same number of the *Art Journal* has another article—the third or fourth—by Mr. G. A. Simcox, on "The Transformation of the British Face." The writer gets considerably nearer to his subject than he has yet done, and attempts a characterization of the British face during the Tudor period. It is a rudimentary modern face, he says, offering many points of resemblance to the face of to-day, but the unlikeness is equally real and obvious, if not so palpable. If at a fancy ball everybody should appear in a Tudor costume, the illusion would not be so great but that we should feel the contrast at once—more quickly in the case of the women, perhaps, than in that of the men: "there would be a type, without even an Elizabethan parallel, the familiar type of a cultivated mediocrity, which has inherited enough refinement to compensate the lack of personal distinction; and this not only would be found to assert itself separately, but to leaven the types which strike us by their resemblance to the past." Coming down to particulars, Mr. Simcox defines the distinction between the two faces in these terms: "Perhaps the most general description that can be given is, that what tells in the Tudor face is the modelling of masses, and what tells in the modern face is the modelling of details. The number of planes is much greater, and the angles are softened away in proportion." Holbein placed his sitters in broad, unshadowed daylight, the distribution of the features being the fact to be brought out in his portraits. Modern painters since Vandyke have affected half-lights to reveal the shades of the more delicately moulded face. More definitely still: "There are scarcely any faces of Henry VIII.'s reign where the modelling of the eye-socket is individual; there are not many in which the cheeks are not a characteristic; there are many in which no feature is so characteristic as the cheek. In the modern face all these conditions are reversed." It is a general trait of the former period "that we usually find the fold of the lower eyelid more strongly marked than the fold of the upper, whereas in our own days the fold of the lower eyelid is hardly ever marked

in health, except among hard drinkers"—and our ancestors of the sixteenth century might be classed as such, seeing that they had to use ale and wine not only as men do nowadays but where we use tea, coffee, and tobacco in their stead. Mr. Simcox says that for the distinction just cited dependence must not be placed on engravings, especially on late ones. His only illustration, however, is a wood-cut, a facsimile of an older one. It is a pity he does not give more illustrations, and that he does not use the autotype process for reproducing original portraits from the canvas.

—In the *Lancet* for October 10, Dr. J. Henry Bennet has some observations on sea-sickness which are likely to interest unprofessional readers. The nervous theory of this disease—which refers it to the general unsettledness of things—is in very many cases, he remarks, inapplicable. He maintains that the presence of food in the stomach, the perturbations acting as an irritant, is often the main cause of difficulty. He recommends a course which he says has very often, though not always, prevented illness in a short passage or proved a good preparation for an extended voyage. A hearty meal should be eaten four or five hours before embarking. An hour or two before sailing, one may take some very strong coffee or tea, or spirits and water, but no milk or other food. On board, repose should be enjoined, the recumbent position being the best; and nothing solid or fluid should be taken for twelve hours, and then only a little. The taking of food should be gradual, according to desire, that the stomach may become familiar with its instability. This remedy has all the advantages of simplicity. We may add that Dr. Bennet has crossed the Channel some thirty or forty times, and made scores of trips on the Mediterranean, and, though having no fear of the sea, succumbs himself in very bad weather. He has, at all events, the right to be heard.

—A good illustration of the influence on modes of investigation of natural phenomena exerted by the Darwinian theory, is to be found in *Nature* (issue of October 8). In the entertaining department of "Letters to the Editor," the subject of the migration of birds had been broached, but not much progress had been made in discussing it, nor was any hint given of a systematic enquiry which might lead to a discovery of the causes of it. Mr. Alfred Russel Wallace now comes forward, and, bringing the doctrine of the "survival of the fittest" to bear upon the subject, lights it up, it must be confessed, a good deal. He first supposes a limited area within which only can breeding be safely accomplished by any given species of migratory bird, and which for the greater part of the rest of the year does not furnish sufficient food. Neglect to leave this area at the proper time, or to leave the area of abundant food at the proper time, tends, of course, to the extinction of the species. The habit of migration which we find so difficult of explanation as to end by calling it an instinct, Mr. Wallace regards as hereditary, and as having arisen in consequence of a gradual divergence from one another of the breeding and feeding areas, which in the beginning, and for some remote ancestor of the existing species, were coincident. Geologic and climatic changes readily account for such a divergence. Mr. Wallace thinks that somewhere on the globe every gradation still exists, and that "when the natural history of a sufficient number of species in all parts of the world is thoroughly worked out, we may find every link between species which never leave a restricted area in which they breed and live the whole year round, and those other cases in which the two areas are absolutely separated." This holds out a prospect of no little labor, but with the advantage of a perfectly definite view; and the European investigator must already, Mr. Wallace remarks, have ample materials for an instructive work on the subject. In regard to the means which birds have of determining the exact time at which to migrate year by year, he makes the acute suggestion that they may be found in "those climatal changes which most affect the particular species"—*e.g.*, the change of color or the fall of certain leaves; the change to the pupa state of certain insects; prevalent winds or rains; or even the decreased temperature of the earth or water.

—Mr. Merrill is right, in his letter on "Cuneiform Inscriptions" which we print on another page, in saying that Layard's volume of inscriptions needs to be revised. The Lachish inscription, however, is not found in that volume, but is excellently given in fac-simile on one of the plates of Layard's 'Monuments of Nineveh.' In his 'Babylon and Nineveh' it is given with an error or two; and we presume it is from this popular and accessible volume that the artist of Amherst College painted the fresco which Mr. Merrill has discovered. This inscription is also correctly given in Rawlinson's 'Historical Inscriptions of Western Asia,' so that a corrected form is not needed. Our correspondent, who has adopted Schrader's version of two years ago, has certainly given an approximately correct translation. It is substantially the same as that of Norris or of Oppert, and the retention of so incorrect a translation of not "ten" but over twenty years ago in Smith's 'Dictionary' is not creditable. We think Mr. Merrill considerably overrates the minute accuracy with which we can now translate the cuneiform Assyrian. It is by no means sure that in this inscription *itik* has the sense of "receives." A more natural translation than that of Schrader is that of Norris, "The spoil of the city of Lachish *passes* before him." Then the word *nimidi* (or *nimedi*) is by no means clear. Schrader, who has probably led our correspondent astray, suggests the derivation from *ma'ad*, to be great, but this root in Assyrian as in Hebrew never refers to size, height, but to quantity, strong, much, exceedingly, and could hardly produce a derivative meaning high, for which we have the familiar Assyrian word *illu*. Besides, the prefix *n* by no means generally gives the "passive" sense, nor could it from the intransitive *ma'ad* give a passitive *nimedi*, any more than *nimegi*, mysterious, can be passive from a root *emiq*, to be deep. The connection in this and other passages makes it quite as likely that its root is *mót* or *ma'ad*, to move, to shake, and that it indicates the *movable* throne or sedan carried by the kings on their journeys. Oppert, by the way, does not translate the word "judgment" but "justice," as if from *amat*, truth. We have dwelt on this matter only to remind our enthusiastic correspondent that while the grammatical principles of Assyrian are reasonably assured, and the general sense of any connected passage certain, verbal accuracy is by no means yet attainable.

LIVES OF CHIEF-JUSTICE CHASE.*

IT has been frequently observed among those who were interested in the war for the suppression of the rebellion, that the actual time elapsed since the year 1865 measures very poorly the immense gulf which seems to separate us from the end of the war. No doubt the chief reason for this is the number of important social and political events which have occurred in the last ten years, and among these changes none are more significant than the complete substitution in all the more prominent public stations of one set of men for another. When we reflect that Lincoln, Seward, Sumner, Chase, Stanton, and Fessenden are all dead, that the leaders who have succeeded them in the management of their party are men who ten years ago were unknown outside of small local political circles; and that the old Democratic leaders are almost as dead as if they were in their graves, so completely have they given way to new men, we do not need even to call to our aid the recollection of the destruction of slavery or the rise of the Grangers to make real the hiatus between the United States of 1865 and of 1874. There is nothing which so preserves the continuity of social affairs as the possibility of connecting the past with the present by the aid of the prominent political characters which belong to two periods, and end by wisely administering what they began by reforming. But on our present canvas we look in vain for these figures. In reading these lives of Chief-Justice Chase, the subject seems one belonging to a time so far past that we can hardly bring ourselves to believe that it is less than two years since he died.

During the life of Chase, views widely different were taken of his character and aims; to some persons he appeared as a cold, ambitious, selfish man, bent on obtaining power for himself at whatever cost, and using the great issues in which he became involved for this object. To the old Abolitionists he seemed cold, because he belonged to that school of politicians who, while anti-slavery leaders, made it their first principle to do nothing outside the law and the Constitution—who believed that slavery might be restricted to the existing slave territory; that it might be kept out of the Territories; that the slave-owners could not rightfully require the free States to assist them in catching runaways; and that a new party ought to and must be formed for the furtherance of these ideas, but who would not hear a word against the Constitution or against the Union of the States. It is clear enough now that both abolitionists and anti-slavery politicians of Chase's school had their part to play in the struggle which ended in the Emancipation Proclamation; that if the abolitionists had not supplied a motive power by exhortation, and denunciation, and self-sacrifice, and martyrdom, the anti-slavery party, if formed at all, would have been much slower in forming; while, if we can suppose the abolitionists, instead of encouraging the faint-hearted and driving up the timid, to have got possession of the Government and undertaken to get rid of slavery extra-constitutionally, they would have developed against themselves the very same Union feeling which, as matters turned out, proved their most substantial means of support. Not that Chase himself needed to be either frightened or encouraged. He occupied from the beginning of his career a position entirely independent, and pursued the plan marked out for himself with consistency. Springing as he did from a New

* 'An Account of the Private Life and Public Services of Salmon Portland Chase. By Robert B. Warden.' Cincinnati: Wilstach, Baldwin & Co. 1874.
'The Life and Public Services of Salmon Portland Chase, United States Senator and Governor of Ohio, Secretary of the Treasury, and Chief Justice of the United States. By J. W. Shuckers. To which is added the Eulogy on Mr. Chase delivered by William M. Evarts before the Alumni of Dartmouth College, June 24, 1874.' New York: D. Appleton & Co. 1874.

England family, he was brought up with a detestation of slavery, and the first political act of his life of which we find any mention in these volumes, is that of his signing a petition to Congress praying for the abolition of slavery and the slave-trade in the District of Columbia, and his first important appearance in court was in the case of a fugitive slave. From that day slavery had no more dangerous and skilful enemy than he.

Mr. Chase's character has been considered in some quarters very subtle and incomprehensible, and Mr. Warden throws an air of great mystery over it by promising the public, in the course of his narrative of the life of the Chief-Justice, what he calls "revelations" of extraordinary interest. We must say, however, that after examining these disclosures with some care we cannot find anything very new or startling in them. There were three turning-points in Mr. Chase's life—the first, when he was elected senator from Ohio; the second, during his administration of the Treasury; and the third, when the legal-tender cases came before him for decision—on some one of which we should have expected new light to be thrown if Mr. Chase's character really was the enigma it is asserted to have been. As to the first of these, Mr. Warden himself seems almost oppressed with the magnitude of the event and the importance of correctly understanding the causes which led to it; for he says (p. 325): "It must be evident enough that very close attention should be given to the question whether he, whose life we study, made his way to the Senate by a crime only less appalling than the crime of John Wilkes Booth when he made his way to the 'box of state' in Ford's Theatre, and slew the unsuspecting President of the United States." From Mr. Warden's confused account of what took place, it may be gathered that in his opinion there is not room for an historical parallel between the late Chief-Justice and the assassin of Lincoln. In Mr. Shuckers's volume we find a connected history of the election. Before stating it here, however, let us say that Mr. Warden's twenty-second chapter, concerning this senatorial campaign, is an admirable specimen of his confused manner; containing as it does some sixteen pages, and relating to one of the most interesting and much-disputed points in Chase's life, it was certainly not too much to expect it to be intelligible. But we defy any one to make out, without reference to Mr. Shuckers's book, even what charges against Chase were founded on his election. The whole chapter is a tangled mass of names, the reader being allowed to infer the succession of events and the relations of the persons for himself.

There were as a matter of fact two separate questions involved, one the action of Chase as to the gerrymandering of Hamilton County by the Whigs, and the other the bargain by which the Free-soilers and Democrats united their forces to obtain control of the Ohio Legislature. For a long period, Hamilton County had constituted a single election district, entitled to two senators and five representatives, and the Democrats controlled the election of all. At the session of the Ohio Legislature of 1847–8, however, the Whigs gerrymandered the county, so as to secure the election of one Whig senator and two Whig representatives in a fraction of the county. Against this division the Democrats protested as being unconstitutional, and "Mr. Chase, immediately upon the passage of the act—and long before his election to the United States Senate was possible or even thought of—stated his emphatic conviction that it was unconstitutional." In 1848, two representatives were to be elected from Hamilton County, and in December of that year there appeared before the legislature two contesting delegations: Messrs. Pugh and Pierce, Democrats, and Messrs. Spencer and Runyon, Whigs. The Democrats were admitted, and their admission had nothing whatever, as we understand the matter, to do with the coalition afterwards formed, for the admission of Messrs. Pugh and Pierce was determined upon before the coalition took place. The legislature at this time was peculiarly constituted. Two independent Free-soilers, Morse and Townsend, refused to consider themselves bound by the action of the Free-soil caucus held on the meeting of the Legislature. This they apparently had a perfect right to do, as they had been elected on independent tickets, in opposition to the candidates of both Whigs and Democrats. The rest of the Free-soilers were Whigs, and had been elected by Whig votes. The legislature was evenly divided between Old-line Democrats on the one side, and Old-line Whigs united with the Whig Free-soilers on the other. Between the two Messrs. Morse and Townsend held the balance of power. The only political measures they cared to carry, or had been elected to carry, were the repeal of the Ohio "black laws" and the election of a Free-soil senator. They therefore made overtures to the Whigs and Democrats, promising substantially to act in certain matters of minor importance which were likely to arise (and on which there does not seem to have been any division of principle) with either of the two old parties which would accept their terms. The Whigs declined; the Democrats accepted. The "black laws" were repealed and Chase went to the Senate. Now, this arrangement—something, by the way, like that which procured Mr. Sumner his seat—may or may not reflect credit on the parties concerned; but a great deal of what is nowadays said about vote-bartering, and many of the denunciations levelled against vote-barterers, do not apply to such coalitions as this. When a new party rises into power, holding an evenly divided balance between two old ones, it must be by arrangements and compromises of this sort that the machinery of the Government is kept working. What we should have liked to see discussed in these two volumes would have been the way in which Mr. Chase behaved through it all. All the evidence that we have points to an honorable attitude throughout, and as the facts stand now any one who accuses Chase of underhanded or corrupt behavior for the purpose of securing his election, will probably have to include in his denunciation almost all the Free-soilers of the day, who, by the evenly balanced division of the old Democrats and Whigs, secured for themselves and their party a political opening.

On Mr. Chase's administration of the Treasury, and his connection with the legal-tender cases, we get nothing very new from Mr. Shuckers or Mr. Warden. That he should, as Chief-Justice, have reversed his own action as Secretary of the Treasury, or rather that as Secretary of the Treasury he should have permitted an act which as Chief-Justice he was compelled to pronounce unconstitutional, will always remain the great blemish on his career. That he agreed to the manufacture of legal-tender by the Government with great reluctance, and against his better judgment, is no secret. In considering this part of his life, however, scanty notice has been taken of the difficulties which beset his path. Thrust into the Treasury as he was by circumstances over which he had little control (a purely political bureau would have been by far the most natural one for him to have held), he was obliged to administer the finances of the country at a time which would have taxed the intellect of the greatest finance minister severely. Mr. Chase knew nothing about finance, taxation, or economics, beyond the knowledge possessed by any well-read man of his day, and in reading over again now the mere dry statistics of what he did, the system he created and organized, and the vast sums of money which, from month to month and from year to year, he managed to extract from his always exhausted coffers, the reader stands aghast at the gigantic nature of the task he undertook and executed, and feels less inclined to ask whether this or that means selected was right, than to wonder how it was done at all. Even the appearance on the scene of Mr. Jay Cooke, as a sort of *deus ex machinâ*, does not explain it.

It is very noticeable that neither Mr. Shuckers nor Mr. Warden succeeds in presenting to the mind of the reader any distinct view of the private life of Mr. Chase. The former, indeed, does not try. His book is little more than a skeleton narrative of the public career of his subject. But with Mr. Warden the case is different. He seems throughout to have been impressed with the necessity of clearing up all unsettled points about Mr. Chase, and, as may be inferred from the reference to the Senatorial election just quoted, he had no desire to shield the memory of Mr. Chase, or spare the feelings of any of his surviving relatives or friends. He seems, indeed, to have been seized with a fury of revelation long ago, and to have made up his mind that, come what might, he would let the public know whatever evil he might discover. Biography, in Mr. Warden's opinion, has chiefly suffered from the eagerness of biographers to exalt their subject, and to avoid this he seems to have determined to degrade his; so that generally throughout his book we get the impression that the writer has spent some time in getting together materials for an indictment rather than to produce a correct picture of the life of his subject. Nothing, we should infer from Mr. Warden's continually repeated disclaimer of all desire to fall into *nil nisi bonum*, would have given him so much delight as to obtain a few facts tending to show that at the age of ten Mr. Chase robbed an orchard, or that on some college occasion, mistaking a pitcher containing arrack-punch for the water-pitcher, he incautiously drank a tumbler of strong drink. Had he been fortunate enough to discover anything of this sort, we should probably have been introduced to it in some such way as this: "We now approach an event in the life of Salmon Portland Chase to which we must direct the reader's closest attention, for on a correct estimation of it hinges the momentous question whether the future Chief-Justice of the United States did at this early age commit a grievous error or deadly sin, and in the determination of this question no consideration of friendship, or blood, or false view of the duty of biographer will induce the writer to extenuate or set down aught in malice." Then we should have had a chapter which would have left us as wise as we were before. But Mr. Warden is almost as bare of any facts of personal history as Mr. Shuckers himself, his investigations having apparently led him to the conclusion that Mr. Chase had no private or human feelings at all. One solitary trait of interest we find recorded in these volumes is, that people rarely "felt at ease" with Mr. Chase, and, indeed, as to his biographers, there were some reasons why they, at least, knowing what they were undertaking, should not feel so.

ANTONY BRADE.*

THE hero of 'Antony Brade' is a school-boy, Antony himself, and perhaps a good third of the volume is taken up with the direct concerns of the pupils of his school, St. Bart's, or St. Bartholomew's; but, as Mr. Lowell says, the story lies as much among grown people as among youth. For besides the view he is to give us of the ways of St. Bart's, Mr. Lowell finds that he has to satirize the social life of the town of Eastham; he has to pay his respects at length to the character of the ordinary variety of endowed-school trustee; and in particular there is one bad trustee whose appreciation of the relative position of the layman and the cleric is evidently not what the rector of St. Bart's thinks it should be, and who for this and some other reasons comes up in due season for a full measure of discipline.

To speak first of these adult parts of the book, as apparently having had most of the writer's interest and care, we may say that their satire is often clever and amusing, but that as often, or oftener, it is very clumsy and infelicitous. For example, much of the ambitious work expended on Mrs. Wadham, while singularly absurd, is very heavy. So many wonderfully sharp and sympathetic social observers, male and female, have been busy for years in New England, as well as elsewhere, that the great crudity of scenes like the Wadham party, with its tableaux and its real Russian count, is a sort of thing long obsolete, and not to be revived without the certainty of exciting the reader's displeasure. It is with a lighter and truer hand that Mr. Lowell makes the picture of his board of trustees. The gregarious carelessness and laziness of these gentlemen, and the individual fussiness and officiousness of some of them, are given with not a little graphic force. And upon the committee-man to whom we have made reference as especially obnoxious, not a little but a great deal of the artist's force has been expended. This has not preserved him from making his subject a deal of a bore a good while before we get done with him; and, what is no better, we seem to see that the artist has sacrificed to force certain superior qualities, and has made a very queer portrait in gratifying his desire to limn Mr. Parmenter for future reference. In fact the picture shows animus, as they say; and to illustrate the intensity and *semper-paratus* character of this, we will make here a brief quotation.

We must premise that Mr. Parmenter, the obnoxious trustee and benefactor, making a call on the school-rector, suggests in course of conversation one or two points for notice, and ends by animadverting gently on a habit which one of his boys has adopted of keeping his eyes shut in Morning Prayers at points of the service where other people usually have to keep their eyes open and fixed on the printed page. This eye-shutting, by the bye, of course happens not because the boy in question is a bad boy, but, on the contrary, because he is an extraordinarily good boy, and knows his prayer-book much better than his young companions do—or, in fact, ever expect to do. For his hint as regards this lad, Mr. Parmenter at once receives from the rector a very good-sized snub; but, says our author, he seemed to take no offence at all at the rebuke, and it was "with only a slight change of countenance that he accepted the difference of opinion." And now, as for why he was so quiet about it, this the author thus explains instanter: "It had not been without moral benefit that he had had the practice for many years of managing his temper and manners in dealing with his customers from behind a counter." Thus, we see, is Parmenter civil and well-mannered on occasion? it is because not so long ago he was compelled to be habitually almost servile. This passage, which reveals amusingly yet disagreeably the assailant's constant feeling towards one of St. Bart's chief Fundators, is an incidental passage, but it not only answers the purpose for which we have used it, but also it indicates the main charge specifically brought against Parmenter, and much insisted on: he is a seller of mercantile wares; he has himself sold his goods at retail, standing in his store; he is strong in the belief that it is good for the public that his manufactures should be sold, and, so believing, he advertises them, and does so with the most modern freedom. This is the badness, and, as Mr. Sumner would have said, the ridiculosity of Parmenter, and he can never be sufficiently pointed at and glared at for it. He adds to it what seem to be regarded as other ridiculosities—that of making an attempt at purchasing good pictures; of following the dim pursuits of "the collector" with less than the luck of some of the fraternity; of putting on more dignity of manner than is common among Americans who have newly made their money. On the whole, before the author is done, it is the mercantile art-student rather than the rector who has the reader's good-will, and one does not see why Mr. Parmenter, so far as concerns any deep offence against even the most fastidious of rectorial souls, may not be confidently left by his friends to the communings of both his official and his private conscience.

Of the school-boy part of 'Antony Brade' we are not qualified to speak —so far unqualified at all events as to have no knowledge of the peculiar conduct of schools such as St. Bart's. But we may say, we suppose, that these chapters, with the young fellows in them, seem to us to be almost all labored and faithful rather than successful in hitting off the reality. We missed finding anywhere what we think we have a right to look for amid so much observation—that touch which should make us say, Here now, be it St. Bart's, or wherever else, is the genuine boy-nature; thus it would act and talk anywhere, and that this is the true ring no evidence from the outside is needed. One of the chapters, however, is most excellently spirited, and indeed probably supplies the critic with a severe standard by which to try the rest. This contains the description of the gathering for the hockey-match on the frozen lake, and of the tragical drowning, despite desperate exertions, of one of the boys who had leaped through the thin ice to save his drowning friend. All this is extremely good.

As for the mystery of young Antony Brade's name and parentage, it seems rather a useless piece of the story. But the fact is, one is prejudiced against it at the start by its rather too early apparition, and the rather silly violence of the conjectures to which it is supposed to give rise alike in the male and female Eastham mind, and the folly—greater surely than the folly of the New England woman in well-railroaded New England towns—with which these conjectures are acted upon. We would say, in conclusion, that while in point of pages, and as regards his own apparent interest in his work, Mr. Lowell has made a book dealing as much with adults as with boys, it is nevertheless, so far as regards substantial interest and value, a boy's book after all which he has made. The corridors and lesson-rooms and dormitories of St. Bart's, the trapping-ground, the foot-ball games—these are the durable parts of the story, and its real public are boys—never tired of the record of school adventure. Of this we should think there is enough in 'Antony Brade' to make it welcome for some time, though not enough to make it a permanent favorite.

* 'Antony Brade. By Robert Lowell.' Boston: Roberts Brothers. 1874.

GOLDSMID'S 'TELEGRAPH AND TRAVEL.'*

COLONEL GOLDSMID'S work is divided into two separate parts, the first embracing about two-thirds of the book, and containing the official history of the construction and operation of what are known as the Overland Lines from England to India, while the second gives an account of some of his journeys through Asia and Europe, while acting as Chief Director of the Indo-European Telegraph. It is worth noting, that the tales of a traveller and the official history and reports of a government department should be included in the same book, and that the latter should be published in popular form with engravings of scenery and extracts from newspapers by the direction of an English Secretary of State. Even in the hands of royalty the telegraph is the democrat of our time.

Those familiar with the progress of telegraphic communication will remember how wretched was the service from England to India prior to the year 1870. What is known as the Indo-Ottoman Overland Line extends from Constantinople through Asiatic Turkey to the head of the Persian Gulf, where it connects by a series of short cables with Karachi or Currachee, the western outpost of the British Indian telegraph system. This line, with an alternate wire from Bagdad through Persia to Bushire on the Persian Gulf, was completed early in 1865, but for five years subsequently the average time for transmitting messages from England to Karachi was between five and six days. When the line first went into operation, it was something of a feat for a telegram to get to Constantinople in five days from Karachi; a delay of fourteen days was not uncommon; and no man could say whether the mails from Constantinople to London would not prove more expeditious as well as more trustworthy than the miserable lines connecting Turkey with Western Europe. The delays of the service were matched by its inaccuracy, and a high Indian telegraph official gave utterance to a feeling prevalent in all quarters when, in 1867, he expressed his surprise that a message should ever reach England from India without mistakes. The public complaints and criticisms became so loud and pungent that the work before us is in some sort an official vindication. Colonel Goldsmid dwells at length upon the difficulties experienced in the construction of the lines. But so far as we can judge from his account, the physical obstacles were less than those confronted in the establishment of the first overland line of telegraph to California. Difficulties in procuring poles and labor, bad roads, lack of water, and uninhabited wastes, were common to both routes, and trouble was also anticipated in the one case from wander-

* 'Telegraph and Travel. A Narrative of the Formation and Development of Telegraphic Communication between England and India, under the orders of her Majesty's Government, with Incidental Notices of the Countries Traversed by the Lines. By Colonel Sir Frederic John Goldsmid, C.B., K.C.S.I., late Chief Director of the Government Indo-European Telegraph, British Commissioner for Settlement of the Perso-Baluch Frontier (1870-71), and Arbitrator in the Perso-Afghan Boundary Question (1872-73).' London and New York: Macmillan & Co. 1874.

ing Indians, and in the other from lawless Arabs. But beyond the propensity to use insulators as targets, little annoyance from the natives was experienced in either case. The political complications, however, which surrounded the English engineers were great, and must have seemed sometimes well-nigh hopeless. All action had to be taken under the supervision or with the concurrence of Oriental authorities, and was hampered by their jealousy, corruption, ignorance, and eternal procrastination. Still these stumbling-blocks could be removed by patience and diplomacy, and a thorough-going assistance was sometimes given in true Asiatic fashion. Colonel Goldsmid relates that on one occasion when considerable damage was done to the wires by villagers and nomads, the Shah ordered Mirza Jiafar Khan to set out at once for Shiraz, with an executioner, to cut off any heads the English telegraph officer might indicate, with further instructions to send Ali Khan Beg, the head marauder, in chains to Teheran, and to levy a fine of a thousand tomans from the chief of the nomad tribes. This programme was carried out with an approach to completeness. The Persian officer posted down to Shiraz, found and seized Ali Khan Beg, whose existence was at first positively denied by the Governor of Shiraz, squeezed out the prescribed fine, plus a second thousand for his chief in Teheran, and five hundred tomans for himself, and gave up a village where he had been insulted to wholesale plunder.

When the lines were completed and in working order, the English Government found, in the first place, that prompt and uniform work could not be obtained from Turkish officials, or from wires under their control; and, secondly, that if it could, the miserable service between Constantinople and England over the wires of half-a-dozen European governments was enough to make the new line, telegraphically speaking, a failure. To remedy such difficulties was no easy matter, but it seems astonishing that they were not foreseen and appreciated at the outset. We think Colonel Goldsmid fairly shows that, after the line was built, the English telegraph authorities made the best of a bad situation, and did all they could by patience, perseverance, and almost interminable negotiations to improve communication. But the obstacles to successful working via Constantinople were so great that they were finally driven to negotiate for a new connection running from Teheran north of the Black Sea, via Odessa, Warsaw, and Berlin, to the German Ocean, where connection could be made by cable with England. Under concessions from Russia, Prussia, and Persia granted the firm of Messrs. Siemens Brothers, a private company contracted to supply the English Government with two through wires for Indo-European business exclusively, reaching from the landing of the cables at the German Ocean to the city of Teheran. The line from Teheran to the Persian Gulf, and the cables to India, were under the control of the English telegraph administration, so that when the Siemens line was opened on the 31st of January, 1870, a new era began in Indian telegraphing. Meantime, however, the complaints of the public and the progress in the manufacture of cables had been such that an English private company had undertaken to lay a cable to India via the Red Sea, and commenced working their line in the spring of 1870. With the opening of the Siemens line, and, we may add, under the spur of private competition, the Government service has steadily improved, until in 1873 the average time per message from England to India has been reduced to three hours and nine minutes. But it is well worth noting that, though perhaps matched in efficiency, the private company's cables via Suez have been able to take from the Government the lion's share of the traffic. The Turkish line gets 4 per cent. of the business, the Government line via Teheran 32 per cent., the Red Sea line the remainder, or 64 per cent.

The statement of the capital and revenue account of the Indo-European telegraph department shows that the investment of the British Government has been nearly six millions of dollars in gold, while the receipts for nine years have been £37,000 less than the expenses, without including any interest on capital. The estimated earnings for 1873–4 are £61,000; estimated expenditure, £68,000. Whatever it may be politically, it is plain that in a financial and business aspect the Government line to India has been a failure.

We have left ourselves little space to speak of Colonel Goldsmid's travels, which are decidedly the best portion of the work, and cover journeys seldom made, through Persia, Beloochistan, Russia, and Asia Minor. The 'Telegraph' portion is dry and tedious, and contains little of interest to the general public, or of value to the professional reader. It is indeed singularly free from the evidence of professional skill on the part of the author. There is also a lack of clearness in arrangement and statement, and an exhausting abundance of unimportant details. As a traveller, the Colonel is less prolix, and the extracts from his journal on the way from Bagdad to Constantinople, and from St. Petersburg via Astrakhan to Teheran, afford some relief from the dulness of the greater part of the book.

THE MAGAZINES FOR NOVEMBER.

MR. RICHARD GRANT WHITE'S paper, called a "Musical Monster," in the *Galaxy*, turns out to be composed mainly of some reminiscences and stories of prima-donnas, of whom Mr. White converses knowingly and entertainingly. The fuming and petulancy with which the article begins, and which does not seem too respectful either to Mr. White's audience or to himself, appears to be all about the lyric stage and the opera, and the argument with which our perturbed writer first presents the reader is of a kind to merit the same commendation that we have given to the article's tone. It is not an argument to be seriously presented. It is that mouldy piece of ratiocination familiar to the pulpit in its war upon the dance, which goes to show that could an inhabitant of another sphere come to ours and witness on our stage the performance of an opera, hear people singing their dying confessions, asking for a valet in a baritone recitative, and so on, he would think himself in an unaccountable world, or that the performance before him was a performance of lunatics. So Master Stultus probably might think; but little as we have esteemed him ever since we first heard of him from the sacred desk, now many years ago, we doubt not he would speedily learn the fact that art is one thing and nature another; that always we have to make concessions—to some forms of art more, to some less; that the true principle once admitted, operatic plays are justified precisely as painted portraits are—and so forth, and so forth, as Mr. White ought to be ashamed to make anybody go after him and say. Apparently, Mr. White would be but a poor guide for the new-comer, or else he might teach him that in the land where the operatic drama had its birth it had excellently good reason for coming into existence, as being to the impressible people who were its spectators dramatic in the same way (we suppose we may say) in which "Othello" is dramatic to our colder natures. And he might be taught, furthermore, instead of looking on our operatic drama as the great musical monster, to look on it as a performance in which, no matter how much is lost to the spectators born in our colder clime, they get for their money some dramatic effects and (what they have chosen to care for) some beautiful singing in a setting that pleases them better than a less elaborate one.

If Mr. White sometimes takes a tone with his audience with which they can hardly be pleased, we have another writer in the month's magazines who deserves to be brought before the bar of the public. This offender is Dr. Holland, of *Scribner's*, who each month seems to button his coat higher towards his chin and assume more and more of a military brusqueness of manner towards his fellows. A couple of months ago he came out, and casting to the winds the various theories and counter-theories in regard to the Brooklyn scandal—and, as we know, they were numerous, and some of them the work of persons whom Dr. Holland has not established his right to treat with impertinence—he told us in one word that as it was simply physically impossible that so laborious a man as the accused should be guilty, whoever believed him to be so was—we forget what bad thing; evil in the suppositions of his heart, we believe, as well as stupid; and closing up the "Topics of the Time," he left us with the matter settled, and further discussion both useless and silly. This month we have him again on the same general subject, "The Relations of Clergymen to Women," and he is as absolute as ever. It seems that there are in the congregations only two classes of women with whom the minister is liable to have dangerous intimacies. The first consists of discontented wives. ". . . A woman finds herself married to a brute. She suffers long in silence; her heart is broken or weary, and she wants counsel, and is dying for sympathy. She tells her story to the one man who is—to her—guide, teacher, inspirer, and friend. He gives her the best counsel of which he is capable, comforts her if he can, sympathizes with her, treats her with kindness and consideration. That a woman should in many instances look upon such a man as little less than a god, and come to regard him as almost her only solace amid the daily accumulating trials of her life, is as natural as it is for water to run down-hill. That she should respect him more than she can respect a brutal husband—that half-an-hour of his society should be worth more to her heart and her self-respect than the miserable years of her bondage to a cruel master, is also entirely natural. He cannot help it, nor can he find temptation in it, unless he chooses to do so. Women, under these circumstances, do not go to their pastors either to tempt or to be tempted." One class, then, of dangerous women is cleared out of the way. The women are not dangerous, and the minister, so far from being tempted, obviously is not tempted by his enquiring friend—which disposes of him and of the only real possibility of clerical unchastity in the churches. The cool assumption of all this the reader may not perceive at first, but by-and-by it becomes evident on what a manufactured basis the reasoner has grounded the generalizations which he so freely flings down for our acceptance. Of these we must quote one, because expressed in that striking way which Dr. Holland has recently adopted. This is the lan-

guage: h ministers of the country] average better than the apostles did at first. Jesus in his little company of twelve found one that was a devil. The world has improved, until we believe there is not more than one devil in a hundred." With this sample of forcible expression we give another, also taken from the discourse on the second kind of women who are dangerous to ministers. These, by the way, are "a very harmless set—gushing maiden ladies, aged and discreet widows with nice houses, sentimental married women who, with no brains to lend, are fond of borrowing them for the ornamentation of all possible social occasions." "Now," says Dr. Holland, by way of ending controversies, "to suppose that a pastor sufficiently putty-headed to be pleased with this sort of worship is in a field of temptation to unchastity is simply absurd."

In the list of its articles, the November *Scribner's* has Mr. King's "Great South" as usual, the statistical, historical, social, political hodge-podge to which he seems entirely unable to bring order of any kind that shall make easy reading of his sketches. Florida, with its orange-groves, its delightful climate, and all the rest, is the portion excerpted this month. Miss Saxe Holm begins one of her well-known stories. It is thus that they go: Two youths, seventeen or eighteen years of age, on a winter's day, go down by stage to a small town in Maine, where they are to "rusticate" under the charge of an elderly clergyman. On the way, a place is taken in the coach by a man nearly dead drunk, who has with him his little daughter, aged perhaps ten. The youth who rides inside with the child sees that she is poorly clad, and probably is ill-used in all ways. Arrived at the village, the drunken man is lifted out and carried into a chamber, and the child continues to be the temporary charge of our friend Jim, the sophomore. He, at notice so short as must have been surprising to his co-mate, becomes the most sentimental of all possible persons: he has often lain awake and wept because he had no sister; this and similar states of feeling on his part he had never mentioned to his chum; he feels that in Ally (the little girl) he might find what he wishes, etc. One obstacle is at once cleanly removed, for the drunken father, when it is attempted to awaken him, thinking himself involved in a fight, draws a revolver and, shooting wildly, kills himself. He is an Englishman, by the bye, and only a few days in the country, and this same revolver is doubtless a free gift of Miss Holm's. The way now seems clear for Jim Ordway's adoption of the child. He announces such to be his intention to the people of the house, who are disposed to grin. To tell the truth, they know him as a young gentleman under rustication, and of apparent irresponsibility, regarded from a pecuniary point of view. Mr. Ordway sees this, and stepping forward makes a little speech, to the effect that he means what he says, and with a "will this be enough do you think, to get what she needs at present?" Jim quietly puts a hundred dollar bill in Mr. Bunker's hands. This last is much in Saxe Holm's way. There is plenty of sentiment. Everything is sweet and strong, and most of it on a level with what we have quoted, which is pretty much on a level with the talk children have after they have gone to bed: when Jack is rich Fred is to have a hundred thousand million two hundred hundred dollars; when Fred keeps store Jack is to have all the nuts he can carry.

The rest of the *Galaxy*, besides Mr. White's article, is made up of a paper on the present condition of the English Church by Mr. Justin McCarthy, always readable except in his novels; the beginning of "Leah, a Woman of Fashion," by Mrs. Annie Edwards, author of "Ought We to Visit Her?" and of other stories well known to *Galaxy* readers, and an article which looks learned and proper on "The Jewish Dietary System."

The most notable article in all the magazines is Dr. Holmes's tribute to the late Jeffries Wyman which appears in the *Atlantic*—the only magazine which can now and again, recalling old times, give to the public a contributor's essayfar beyond any magazine line of excellence. This essay is full of a sincerity of affection for the man, and of admiration for the scientific scholar and student, which make it nothing less than admirable and captivating. The *Atlantic* contains, besides, some chapters of Mr. Howells's story which would seem to show that the end is close at hand. Indeed the tragedy of the end seems to have already culminated and subsided in the mischance of poor Don Ippolito. The portion of the story here given is very dramatic in feeling and in situation. Mr. Fiske's comparison of our culture and conditions of culture with those of the Greeks of the great days gives us remote hopes of a time when, the world having been subdued by means of the material forces which man has made subservient to him, and machinery being made to do the work of men, we shall again have a period of individual culture and repose. Mr. Robert Dale Owen writes garrulously of some stale chapters in the lore of spiritualism as early manifested.

Lippincott's, apart from its general readableness, is noticeable this month for a ponderous essay by the late Lord Lytton on "The Genius of Conservatism."

In *Harper's* we have an article by a practised shot, and seemingly something of a martinet in his profession of shooting, which doubtless all sportsmen will be glad to look at. "Among the Waterfowl of the West" is the title of it. "The Bahamas" (with illustrations) is an article to add new horrors to the thought of the Northern winter. It is pleasantly written.

The Hunter and the Trapper in North America; or, Romantic Adventures in Field and Forest. From the French of Benedict Révoil. By W. H. Davenport Adams. (London and New York: T. Nelson & Sons.)—The success which has attended the translation into English of the fictions of Jules Verne has probably led to the composition of this volume, which purports to be a recital of facts, and is recommended in the preface as an "introduction to the study of natural history, or a companion and supplement to formal scientific treatises." The general style of the book indicates that it was written for a young class of readers, to whom tales of sport and adventure naturally appeal most strongly. Nobody can deny the usefulness of books of this kind, when, with a sufficient tinge of romance to render them interesting, they convey accurate information about the habits of wild animals, the peculiarities of the countries they inhabit, and the people who live there. In this field Captain Mayne Reid's services are to be spoken of with respect, and his descriptions of the far West, where many of his scenes are laid, are generally true to nature. As evidence, on the other hand, of the profound knowledge of the geography and natural history of the United States possessed by M. Révoil, we give the following specimens: On p. 14 he speaks of being "on Eagle Lake in Adirondack County at the foot of the Catskill Mountains." In this region he had been "traversing hills and valleys in the pursuit of widgeons and quails." In the wilderness of the Adirondacks there are no quails (which live exclusively about clearings), and as for widgeons, we fancy it would be rather difficult to find any either in the hills and valleys of the Adirondacks or Catskills. After a recital of trout-fishing in February (which is out of season) M. Révoil, on pp. 22 and 23, speaks "about discovering an island about a mile in length and breadth, and situated at the extreme point of Staten Island," one of the number "which cluster about this spot from New York to Key West." "In this wild solitude, remote from all civilization and having no contact with the rest of the world," M. Révoil found a young woman "of an aspect severe yet gentle," whose voice reminded him of the babbling of the American thrush when watching over her brood, and whose principal subsistence was fish and "*stags*, which she caught in snares." Whether the stags were captured on the small island, on Staten Island, or on Key West, is left to the conjecture of the reader, and as they are equally plentiful in all of these places, it does not make much difference. Further on he speaks of the Pawnee Indians inhabiting the "Plains of Arkansas" (this tribe has never lived in Arkansas), and on p. 53 tells us of what he calls a "successful sporting expedition after wild turkeys, in which a large flock of these birds was run down by Indians on foot, who first caught the turkeys and then wrung their necks." The Indians must have been pretty thoroughly tired after this feat.

Chapter IV. is devoted to the wolf, and here M. Révoil confounds the coyote, or prairie-wolf, a comparatively harmless animal, with the large gray wolf, which partially bears out his statement of being "among the most rapacious and dangerous animals of North America." After several very apocryphal narratives concerning this animal, he tells us about the opossum, and treats us to a French version of the well-known story of David Crockett and the coon. He assures us that in 1845 he became acquainted with the "celebrated original," who resided in Philadelphia, cherished the notion that he was a second Robin Hood, and "whom his compatriots had raised to the rank of commander of the National Guard of that city." With Crockett M. Révoil started hunting opossums from Philadelphia, driving with him in a light wagon to "Macomb's Dam, about ten miles distant," which was in 1845 a favorite resort for the animals of which they were in quest. The raccoon next engages the author's attention, and to this animal he gives, with a very few of its own attributes, the principal ones of the fox and bear, His last raccoon chase, which he pursued with a pack of "five bloodhounds," was "in a cedar wood on the bank of the Crow-Nest River, not far from the famous military school of West Point, New York County." In Chap. VII. he hunts with the "Ioway" Indians at the confluence of the Mississippi and Ohio Rivers. There, in the depths of a winter which he describes as frightfully cold, he shoots "snipe and moor-hens," the Indians kill "bisons and elands"—the only time, we venture to say, the latter animal has been seen on this continent; and informs his readers that the art of falconry, now almost obsolete in Europe, is thoroughly understood and practised by the Blackfeet Indians, who inhabit the region above-named.

The panther is treated of at length, its size being given as that of a large

fox or small wolf. M. Révoil kills numbers of these animals, and describes a conflict between one of them and the "celebrated Billy Bowlegs, chief of the Carib Indians," which took place on a "cold frosty morning" on the banks of the river St. John, near St. Augustine, Florida. Billy attacked the panther in a tree, and after punching him up with a stick killed him with a knife. After hunting "stags," which he confounds with the Virginia deer, and which properly do not exist in the United States, "on the borders of Big Wolf Lake, thirty miles from the great sheets of water named the Paranacs," and killing scores of them, M. Révoil tells us about the elk. This animal, which he confounds with the moose, is not found in Lower Canada, where he lays the scene of its exploits, neither do lianas hang festooned from the trees in that part of the world. His descriptions of moose and cariboo hunting are not only very highly colored but absolutely untrue to the nature and habits of the animals and those who successfully pursue them. With the grizzly bear, however, our author is at his strongest. He has the greatest contempt for the prowess of this formidable animal. In one method the Indians have for his destruction a number of them squat on the ground when the bear is seen, and with taunts and missiles provoke him to the attack. When sufficiently enraged, the bear pounces on one of them, who is not always fatally injured thereby, and while thus occupied the remainder of them seize him by the hind legs, turn him over, and despatch him with their knives. This reminds us of Dr. Johnson's saying to Boswell that he had so little fear of dogs that if attacked by one or two large ones, nothing would be easier for him than to seize them by the hind legs and dash their brains out against a wall. A single Indian, armed with a bowie-knife, attacks and kills, in the trunk of a large maple, a grizzly bear weighing nearly 2,000 pounds. Bears of this kind, we are told, contrary to the well-known fact, "clamber large trees as nimbly as squirrels." Bear stories occupy several chapters, and the book concludes with bison-hunting and chapters descriptive of the habits, customs, and virtues of the Western Indians, all of which abound in displays of ignorance of the country, its inhabitants and animals.

The illustrations are good for a book on hunting, if not appropriate to this one. Wild turkeys are represented as being *chased* by pointers, which look like Newfoundlands, over a plain bordered by palm-trees; a fox heads the chapter on raccoons; the wild-cat is represented as having a tail as long and nearly as large as its body, whereas it is about as nearly tailless as any animal of our forests; the picture of the "stag" is evidently a copy of that of Doré's in Baron Munchausen, which has a cherry-tree growing out of his head; a very fair representation of the moose stands for the elk, which is an entirely different animal; the caribeo and bison are evidently creatures of the artist's imagination; and for the Western antelope he has given us the picture of some South African animal with a hump on his back. The style of the narrative is agreeable and interesting, the stories generally well told, and as a sample of what may be written on subjects to which the author naturally and by experience is utterly incapable of doing any justice, we would recommend the book to our readers.

Elementary History of Art: an Introduction to Ancient and Modern Architecture, Sculpture, Painting, Music. By N. D'Anvers. With a Preface by T. Roger Smith, F.R.I.B.A. Illustrated with one hundred and twenty woodcuts. (New York: Scribner, Welford & Armstrong. 1875. Crown 8vo, pp. xxiv.-646.)—The attempt to produce concise universal histories of art should be given up. Architecture, sculpture, and painting are, next to literature, the chief records of civilization. For long tracts of time, and for numerous races, their monuments are more important than those of literature itself. They cannot be properly treated except in connection with the history of the society to whose character and emotions they gave expression, or whose deeds they recorded. A brief account of the progress of the arts might indeed be given by a thorough and thoughtful historian, capable of discriminating their essential qualities, and acquainted with the steps of their development and their decline. Such a manual, filled out with tables of comparative chronology and with lists of artists, is a book much to be desired. Stendhal's 'Histoire de la Peinture en Italie,' fragmentary and imperfect as it is, is worth more than a whole armful of common guides and handbooks of Italian art. It was the work of a man of superior quality, who knew the history of Italy and the nature of her people.

Such an 'Elementary History' as that of M. D'Anvers is good for nobody. It can only supply the ignorant with a mass of ill-assorted facts, and enable them to smatter about what it does not help them to understand. A book of the sort might have a certain secondary value if its statements were carefully made, its definitions exactly considered, and its characterizations sharply marked. In each of these respects this volume is defective. One example of each of these faults is all we have space for. They may be taken as specimens of the mass. On page 236 we are told that "Giovanni Pisano introduced a new style in sculpture, which may be characterized as realistic; the first employment of it was in the sculptures of the west front of Orvieto cathedral, on which all the chief artists of Tuscany were employed." Now, the facts are that Giovanni Pisano, far from introducing a new style of realistic sculpture, developed in a romantic spirit the more realistic style of his father Niccolò; and that, as to the artists employed on the sculptures of the front of the cathedral at Orvieto, nothing whatsoever is known, or, as Luzi, the historian of the cathedral, says: "It hardly seems credible that the documents are silent concerning the sculptor or sculptors who wrought them." So much for careful statement. On page 293 is the following definition of painting: "Painting is the art of representing on a flat surface, by means of line and color, objects as they appear in nature—that is to say, in such a manner that the picture produced shall within certain limits affect the eye in the same way as do the objects themselves." It would be hard to crowd a greater number of errors into a definition, or to miss more completely the essential significance of the word defined. Of Sandro Botticelli —misnamed by M. D'Anvers Botticello—we have on page 344 the following account: "The pupil of Filippo Lippi, famed for the introduction of ancient mythology into sacred subjects, and for being the first of the great series of painters in the famous Sistine Chapel of the Vatican, three of whose works are in the National Gallery." And this is all that is said of a painter of the highest gifts of imagination and fancy, of deep solemnity of purpose, abundant in conception, and intense in completion—one of the most consummate artists of Italy.

A minor defect of the book, as regards general use, is that it is calculated for the meridian of London. The references to works in the National Gallery and the British Museum occupy a disproportionate space.

HENRY HOLT & CO.'S SCHOOL-BOOKS

Include among others, Freeman's Historical Course, the Class-room Taine, Siglar's English Exercises, the Ord. Series of Classics, Whitney's German Course, Otto's French and German Courses, etc. Reference is made to the faculties of all leading institutions. Catalogues sent on application. Address

THE WEEK IN TRADE AND FINANCE.

NOVEMBER 2, 1874.

THE money market remains easy at 2 to 3 per cent. on call, and money-lenders have had great difficulty in using their surplus funds, even at the low rates prevailing. Money on time has been offered for thirty days at 3 per cent. during the past week, and at 4 per cent. for sixty days. Commercial paper finds ready sale at 5 to 6 per cent., and the demand for prime names exceeds the supply. There are no signs of any increased demand for money. Business of all kinds remains dull, and business men are not inclined, during the present uncertain state of affairs, to take large ventures. Stagnation prevails at the Stock Exchange, and the amount of money required there to carry the different securities dealt in is very much less than it was before the panic of last year, owing to the shrinkage in values which has been going on in those stocks of a purely speculative nature.

Cable advices report a loss of £115,000 in the bullion of the Bank of England for the week ending on Thursday last. The minimum rate of discount remains standing at 4 per cent.

The weekly statement of the New York Clearing-house banks on Saturday showed a further falling-off in the surplus reserve, amounting to $660,275. The surplus reserve is $15,179,525 over the amount required by law, and is not likely to fall much below that figure. The following is a comparison of the averages for the past two weeks:

	Oct. 24.	Oct. 31.	Differences.	
Loans	$281,873,500	$281,958,500	Inc..	$85,000
Specie	13,585,200	12,021,100	Dec..	1,564,100
Legal tenders	58,830,800	59,621,600	Inc..	790,800
Deposits	226 304,800	225,852,700	Dec..	452,100
Circulation	25,013,500	25,057,500	Inc..	44,000

The following shows the relations between the total reserve and the total liabilities:

	Oct. 24.	Oct. 31.	Differences.	
Specie	$13,585.200	$12,021,100	Dec..	$1,564,100
Legal tenders	58,830,800	59,621,600	Inc....	790,800
Total reserve	$72,416.000	$71,642,700	Dec..	$773,300
Reserve required against deposits	56,576,200	56 463,175		
Excess of reserve above legal requirem't	15,839,800	15,179,525	Dec..	660,275

The stock market has been devoid of interest, if we except a movement to advance the price of Lake Shore, which so far has amounted to very little. The market, with the exception of Lake Shore, is singularly free from combinations either to advance or depress prices. Parties who have undertaken to move stocks up have met with little encouragement from operators on the Street or from outside people. The dividend-paying stocks have all been strong, and prices at the close of the week show a considerable improvement over those at the close of the week previous, the improvement being greatest in New York Central and Rock Island. Delaware, Lackawanna and Western and New Jersey Central are both strong, with a constant demand and a limited amount of stock offering.

The following shows the extremes of the leading stocks during the week:

	Highest.	Lowest.		Highest	Lowest
New York Central	102⅜	100⅝	Illinois Central	92¼	91½
Harlem	130	128⅝	Union Pacific	34½	33¾
Erie	30⅛	27¾	C., C. and I. C.	10⅜	8¾
Lake Shore	80⅝	79⅜	Hannibal and St. Joseph	24⅝	23⅞
Wabash	30¾	29	Hannibal and St. Joseph preferred	28¾	28¾
Northwestern	37⅞	36¼	Ohio and Mississippi	28¼	27⅜
Northwestern preferred	53⅜	52	Boston, Hartford and Erie	⅝	⅝
Rock Island	98¼	96⅜	Panama	114¼	113¼
St. Paul	33	31⅞	Western Union Telegraph	80¾	78⅞
St. Paul preferred	50⅜	50	Pacific Mail	46⅜	44⅜
Pittsburg	87⅝	87⅛	Quicksilver	30¾	30
Delaware, Lackawanna and Western	108⅛	107¼	Quicksilver preferred	37¼	37
New Jersey Central	106⅛	104⅛	Adams Express	116	113
Michigan Central	74	73½	Atlantic & Pacific Telegraph	19	15¾

Government securities have been steady, prices having undergone no important changes since last week.

The gold market has been more active than usual, and a trifling advance has taken place in the quotations, caused by the demand for cash gold, which on Wednesday loaned as high as ⅛ for its use. The market closed strong on Saturday at 110⅛. The following shows the range of fluctuations for every day during the past week:

	Opening.	Highest.	Lowest.	Closing.
Monday, Oct. 26	110	110	110	110
Tuesday, Oct. 27	110	110	110	110
Wednesday, Oct. 28	110	110¼	110	110¼
Thursday, Oct. 29	110⅛	110⅛	110⅛	110⅛
Friday, Oct. 30	110⅛	110⅛	110⅛	110⅛
Saturday, Oct. 31	110⅛	110⅛	110⅛	110⅛

Library Books.

The time spent in reading most Novels is utterly wasted. Buy, then, good books, which will both interest and instruct you, and your children after you.

THE INTELLECTUAL LIFE. 8th Edition. $2.

THOUGHTS ABOUT ART. 3d Edition. $2.

A PAINTER'S CAMP. 3d Edition. $1 50.

CHAPTERS ON ANIMALS. 20 plates. $2.

These works are by Philip Gilbert Hamerton, a writer who is very widely admired.

MRS. SOMERVILLE'S PERSONAL Recollections. 6th Edition. $2 50.

MARGARET FULLER'S WORKS. 6 vols. $9.

THORWALDSEN'S LIFE AND Works. $4.

SARAH TYTLER'S THE OLD MASters. $1 50.

SARAH TYTLER'S MODERN PAINters. $1 50.

Sold everywhere. Mailed, post-paid, by the publishers,

ROBERTS BROS., BOSTON.

BOOKS.—Catalogue of Books relating to America, Indians, etc. Just published and sent on application. E. W. NASH, Successor to W. Gowans, 120 Nassau Street, New York.

NOTICE TO THE HOLDERS OF THE FIRST-MORTGAGE BONDS OF THE OREGON AND CALIFORNIA RAILROAD.

The undersigned Trustees are prepared to purchase, for the Sinking Fund, a certain amount of the First Mortgage Bonds of the Oregon and California Railroad Company, and hereby invite offers of such bonds from holders.

The lowest offers will be accepted up to the amount of the available means which are derived from the sale of the Company's lands; but no proposals above par and accrued interest in gold will be considered.

Communications stating amount and price of bonds, and marked "Offer of Oregon and California Railroad Bonds," may be addressed to the undersigned, care of the London and San Francisco Bank, San Francisco, California.

MILTON S. LATHAM,
WILLIAM MORRIS,
FAXON D. ATHERTON, } Trustees.

SAN FRANCISCO Sept. 1, 1874.

THE TWELVE APOSTLES.

Twelve separate, full-length figures, designed and engraved by Hans Sebald Beham. This distinguished artist was born at Nuremberg, A.D. 1500, and belonged to the school of Albert Dürer. He possessed genius and a ready invention. His drawing is correct, and the expression of his heads admirable. His copper-plates are executed entirely with the graver, in an uncommonly correct and delicate manner.

One set of the above beautiful prints will be sent to any address on receipt of two dollars. One impression will be sent on receipt of twenty-five cents.

Also, by the same artist, a full-length figure of Christ ascending—sent on receipt of twenty-five cents.

It should be distinctly understood that the above impressions are printed from the original plates.

Address GEORGE GOODWIN & CO., Box 1,984, Boston, Mass.

All orders should be distinctly written—including Name, Town, County, and State.

NOTICE.

THE NEW YORK DAILY BULLETIN

will hereafter contain the Auction Advertisements and FULL REPORTS OF AUCTION SALES, and will be known as the *NEW YORK DAILY BULLETIN* AND *AUCTION RECORD.*

Subscription price $10 per year, $5 50 for six months.

NEW YORK DAILY BULLETIN,

Offices: 5 and 7 South William Street, New York.

IN PRESS.

LORD MACAULAY'S ESSAYS.

In one volume, in clear and elegant typography, paper covers uncut, at the unprecedentedly low price of $1 50. Also bound in cloth, uniform with the elegant style of his former editions. Price $2 50.

Has just published a new edition of

*MACAULAY'S CRITICAL, HISTORI*cal, and Miscellaneous Essays. With handsome new back and side stamps, complete in three volumes, $6.

*MACAULAY'S HISTORY OF ENG*land. Uniform in style and binding with the above, four volumes, $8.

LORD MACAULAY'S ESSAYS. Riverside edition, large, clear type, crown 8vo, cloth, complete in six volumes, $12.

HISTORY OF ENGLAND. By the same author, and uniform with the essays. Riverside edition, eight volumes crown 8vo, cloth, $16.

ALBERT MASON, Publisher,
129 Grand St., New York.

NEW LAW BOOKS.

LITTLE, BROWN & CO.

Have Just Published:

I.

STORY ON CONTRACTS. Fifth Edition. 2 vols. 8vo, $15.

Important additions are embodied in this edition, including two entirely new chapters—one on Bills of Exchange and Promissory Notes, and one on Telegraph Companies. Several sub-chapters have been rewritten, and about fifty new sections added. The Table of Cases has been reconstructed, and about three thousand cases added.

II.

A TREATISE ON THE LAW OF Trusts and Trustees. By Jairus Ware Perry. Second Edition. 2 vols. 8vo, $15.

III.

CLARK & FENNELLY'S REPORTS. Vol. 12, completing the series. 8vo, $6.

LITTLE, BROWN & CO., PUBLISHERS,
BOSTON.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 12, 1874.

The Week.

THERE may be people outside office-holding circles who are dissatisfied with the result of the elections, but we confess that thus far we have been unable to see or hear of them. As far as our observation goes, everybody rejoices over the result, and believes it will do good. The nearest approach we have perceived to any sign of regret about it on the part of Republicans is a broad but silent grin. Tilden's majority in this State reaches, it appears, the highest estimate—50,000, which makes clearer than ever the mistake of not having got Mr. Conkling to stump the State. Five speeches at 10,000 votes a speech would have turned the tide, and given Dix the victory won by Tilden. Ten speeches at 5,000 votes a speech would have produced the same result; and so on. How glad Mr. Boutwell must feel at having got under cover before this gale began to blow! If it had caught him "moving the crops," or "easing the market," how it would have rolled him over, mangled him, and scattered his "reserve"! How sorry he must feel for poor Dawes and dear old Ben. Butler, who helped him into the Senate! The great drawback on what has happened—many will say the only one—is the defeat of General Dix, who was the best governor the State has had for many a day, but who unfortunately was overwhelmed by other people's sins. It would be in good taste, to say the least, for the Democratic chiefs, even in their wildest rejoicing, to speak of him more respectfully. There is one sobering question, however, suggested by the elections, and that is, whether the election of a Democratic majority in the House of Representatives and the defeat of Butler does not constitute a violation of the Enforcement Act—or, in other words, a conspiracy to deprive the colored voter of "the equal protection of the laws"? It certainly looks very like it. The "ruling sentiment" in a majority of the Northern States may now be fairly considered likely to discourage the black man from voting the Republican ticket. Does not this call for Mr. Williams's interference? Ought he not to send troops into Massachusetts? If, as some of the Washington jurists seemed to think lately, Judge Ballard of Kentucky might be impeached, if not indicted, for charging the grand jury that the Ku-klux Act was in part unconstitutional, it certainly seems as if a few thousand warrants might be properly executed, say, in the Essex District.

There are, indeed, besides Dix's defeat, some other matters for serious regret. The election of a Democratic legislature in Missouri probably loses Mr. Schurz his seat in the Senate, which will be a great misfortune both for Missouri and for the nation. Few things the Democrats could do to inspire confidence in themselves and in their policy, and make the way easy for them in 1876, would be more effective than sending him back again. The sacrifice would be small, the gain great. The defeat of Mr. W. W. Phelps in New Jersey, though by only five votes, is a very great loss to the country. Nobody in the House had promised or accomplished more in the time than he did last year. He owes his defeat to his plucky and self-respecting course in voting against the Civil-Rights Bill, which gave the 600 negro votes in his county to the Democratic candidate, threw Mr. Phelps out, and left the Civil-Rights Bill in a worse position than ever. Among the more conspicuous compensations for these misfortunes are the election of Mr. Payne, a hard-money Democrat of high character and attainments, in Ohio; of Professor Seelye in Massachusetts, perhaps the most remarkable and encouraging incident in the struggle; of Mr. A. S. Hewitt in this city; of General Kershaw in South Carolina; and the defeat of Butler, Ayer, Gooch, and Williams in Massachusetts, the imperilling of Senators Chandler and Carpenter, and the overthrow of Senators Morton, Logan, Tipton, Gilbert, and Brownlow. Nor must we fail to congratulate the Philadelphians on having taken the first step to rid themselves of their "Ring" by defeating Col. Wm. B. Mann, the present District-Attorney. For upwards of twenty years, with a short interval, this unscrupulous character has occupied the office as subordinate and as chief, and he has used it as Barnard and Cardozo used theirs, for the protection of the criminal classes and of their political leaders in the city government. It seemed almost hopeless to attempt to dislodge him, and in fact he was beaten by only about a thousand votes; but he now retires to the rear along with Tweed and Butler, and the reformers begin to take heart again.

Butler's defeat has of course caused great rejoicing, not in Massachusetts only, but among decent men everywhere, and has led to much reflection on the career of that person. The *Evening Post* of this city instituted the other day a not inapt comparison between him and James Fisk, jr., showing the striking resemblance of their characters and achievements; but it did injustice to Fisk. Fisk attained eminence by his own unaided exertions, and by manful war with society, while Butler became the nuisance that he was down to Tuesday week by the strenuous and long-continued support of the Republican party of Massachusetts. It is perhaps ungenerous to refer to this fact at this moment, but it is only by keeping it in mind that any useful lesson can be extracted from Butler's history. The Republican party found him a middle-aged, disreputable, pro-slavery criminal lawyer. Upon his offering to join the winning side, they put a suit of uniform on him, and tried to pass him off on the Government as a "general," and rejoiced over his administration of New Orleans as if there was not a single honest gentleman in the United States army who could have been trusted to hold a conquered city with a stern hand, under the guns of a powerful fleet and in command of a large garrison. After four years of ridiculous masquerading as a soldier he came home, and they then dressed him up in black broadcloth, and gave out that he was a "statesman," and sent him to Washington as an important aid in Reconstructive legislation, where he almost immediately made himself conspicuous as the champion of a scheme for defrauding the public creditor. He then turned philanthropist, and there was nothing more ludicrous during the seven years following the war than to see him weeping with the Massachusetts Radicals over the wrongs of the colored man. Latterly, too, in order to connect his philanthropic with his military career, and account for his late-born affection for the colored man, he got up a story of his having been so moved in some hard-fought field, of which he concealed the name, by seeing a considerable number of dead colored soldiers lying within a certain superficial area, that he swore some oath, which he says he considers binding, that he would stand by the colored man through weal and woe; and, finding that this story was rather effective, he gradually increased the number of bodies, and diminished the size of the piece of ground on which they lay, until this year he had them piled up very high. The man's whole career has been, in short, disgraceful to American civilization.

In Massachusetts the State Legislature and the Governor's Council turn out to be Republican, and so we have the State remaining Republican but at the same time giving its favorite party a terrible blow in the face by voting a Democrat into the most conspicuous local office, to say nothing about the Congressional districts—a result rather noticeable as indicating the moral character of the "tidal wave." In Louisiana the process is now going on which we took the liberty of predicting a week or two since. Kellogg and his friends are considering the amount of fraud they can safely commit to give the State to the Republicans. The Conservatives claim an entire success, and the majority of the legislature on a joint ballot, and the Committee of Seventy have addressed a petition to the

President requesting him to withdraw the troops; pointing out that the Returning Board is to meet on the 11th for the purpose of canvassing and compiling the votes; that it will assemble in the State-house; and that it seems extremely improper that the "important civil work with which that board is charged should be executed in the midst of the bayonets of the Federal Government." The President, however, declines to withdraw the troops, on the ground that there is no sufficient evidence that the peace will be preserved in their absence, and perhaps also thinking the maxim cited by the committee—*inter arma silent leges*—is intended as an insult. He is very sensitive on such points as these. In Pennsylvania the Democrats have carried the State, and gained some twelve Congressmen. In South Carolina the Reformers have been defeated, Chamberlain carrying the State by about 5,500 majority. Scott's majority in 1870 was over 33,000, so that it does not seem as if Chamberlain had made a very good run.

In Alabama the Conservatives have carried the State by a majority of nearly 16,000. In 1872, the majority of the Republican candidate for Governor was 8,497, and Grant's was 10,828. This result was generally expected, and as the Republicans in the State did everything that was possible in the way of concession, by deprecating in their platform the Civil-Rights Bill agitation, the election is more likely than not to close for ever, so far as Alabama is concerned, the career of the Republican organization. Kansas is still numbered among the faithful States, the Republican majority being from ten to fifteen thousand. New Jersey, by going Democratic, seems to have got at least a very good governor. Last week we fell into the arithmetical error of making the number of votes which have changed sides in New York since 1872 twice too large. In Massachusetts there is no doubt that both Butler's and Ayer's defeat was effected by the defection not only of many Republican voters, but even of Republican leaders, and General Grant now probably understands better than he did a year ago how much meaning there may be in a very few words from men like Messrs. Gray and Forbes of Boston. A glance at a few Massachusetts statistics, given in round numbers, shows how independent was the voting in that State. The legislature stands nearly two to one Republican, and all the Republican State officers are elected, except the Governor; while, for Governor, Gaston has a majority of 7,000 over Talbot. In the two Boston districts, the Republican candidates for Congress had an aggregate majority of 3,200, while Gaston, for Governor, had 6,300 majority. In the Sixth district, Butler is 1,000 behind Thompson, while Talbot is 2,200 ahead of Gaston; and Essex County, from which the Sixth district is taken, sends to the legislature 28 Republicans and 2 Democrats. In the First district (Cape Cod and the Old Colony), Buffinton has 4,400 majority for Congress, while Talbot has only 900 majority. In the Second district, Peirce (Republican) has 3,000 majority for Congress, while Gaston has 3,000 majority for Governor. In the Fifth district, Banks has 6,000 majority, while Gaston has about 900 majority. The old town of Concord, in which the Democratic party is small, gave Tarbox (Democrat) 289 to Ayer (Republican) 13; and Amherst gave Seelye 452 and Stevens (Regular Republican) 62. The Tenth district votes—Seelye 7,804, Stevens (Regular Republican) 7,264, and Hill (Democrat) 2,782, while for Governor it gives Gaston (Democrat) a majority of 400.

The *World*, in discussing the results of the election, sets down as follows the facts of which the practical Democratic politician will have to take notice as the "metes and bounds" of the victory. The President retains his veto power, and the Senate remains Republican certainly till March, 1877. No strictly Democratic legislation can be carried through till after that date. Secondly, until the th of March, 1875, when the Forty-third Congress ceases to exist, the Republican majority remains intact, and with the President may do whatever it pleases. This fact is the explanation, no doubt, of the startling despatch recently sent over the wires to the effect that the Republican leaders' plan of a winter's campaign was, first, the passage of a stringent civil-rights bill; and, second, the adoption of a rigid and inflexible reform of the civil service, which will maintain the Republican subordinates in office for life. This joke, if it is a joke—for we confess to being often unable to discriminate between the serious and the comic in political matters—serves to show what the Republicans might do; what they will actually do is another matter. From this prolongation of complete Republican power, and this further perpetuation for two years of a Republican veto on Democratic power, the *World* deduces the inference that it is extremely unlikely that the Democratic victory will be abused; that "affirmative legislation tending to fiscal reform" will not probably be reached till 1877; that no great changes in the tariff need be looked for, nor contraction; but that we may fairly expect usurpation and misrule at the South to be stopped, and that the short session this winter is likely to be dangerous in two ways—first, from jobs and corruption; second, from legislation in the direction of internal improvements and inflation, contrived by the Republican politicians for the purpose of helping them defeat the Democrats in the election of 1876. We may observe, by the way, that the new Congress does not meet till next December, the act of January 22, 1867, providing for a meeting on the 4th of March, having been repealed. The effect of the elections on the next Congress is to give the Democrats a very large majority, now estimated all the way from 35 to 75.

During the past campaign the Republicans made a great deal of what they described as something very like a Ku-klux outrage perpetrated by Judge Ballard in the United States Circuit Court in Kentucky. This outrage consisted in the charge to a grand jury, directing them in what cases they might find indictments against intimidators of the negro, and in what cases they might not, and this was represented an outrageous act for any United States judge to commit, especially when he had not been asked to say anything on the subject, but directed the grand jury of his own motion. This, like a good deal of current Attorney-General's law, was incorrect; but it is amusing to find that even the facts on which the denunciation of Judge Ballard was founded were wrong also. We have a copy of his charge before us, from which it appears that the jury addressed a series of questions to him with regard to Ku-klux, which he was obliged to answer. For answering them as any respectable judge would, according to his view of the law, he was for several weeks held up to public execration as a malefactor and a "rebel," and possibly a Ku-klux disguised in judicial robes.

The case of Mr. Isaac H. Bailey, one of the defeated Republican candidates for Congress from this city, deserves a word of mention. Mr. Bailey is a respectable merchant, and in many ways a useful man, but rather fond of being "inside politics," and proud of being hand-and-glove with the Custom-house managers. Moreover, having a considerable flow of Custom-house English, he sent occasional letters to a Portland paper, giving an account of what was going on in New York. One of these, written in February of this year in the middle of the moiety discussion, proved his political ruin; for in it he stoutly defended the moiety-men and informers, severely castigated under a thin disguise the *Tribune* as a "savagely virtuous liberal organ," and the *Nation* as a "neutral hebdomadal" "with whom dyspepsia was a synonym for virtue," for having assailed the moiety system, and he then brazenly insinuated that the Dodges, who had just paid a large sum to the Custom-house, must "have had very cogent reasons for declining to meet the issue before the Secretary of the Treasury." The *Tribune* dug the letter out somehow a few days before the election and republished it, and of course, in the present condition of public opinion about the moiety-men, it promised to prove fatal to Mr. Bailey at the polls. To avert his doom, he then was craven enough to allow Mr. Jackson S. Schultz to come forward in the *Evening Post* and declare that, after having written this letter, in which he abused the newspapers so roundly for their ignorance and falsehood about the Custom-house, he had made further enquiries, and found out that his Custom-house pro-

tégés were really bad men, and that he was mistaken about them, and that then he had worked hard for the reform. This was, however, too thin to save him. He ran heavily behind his ticket, people naturally concluding that an active business man or newspaper correspondent who did not in February, 1874, know that there was anything wrong about Jayne and the other moiety-men, and thought Mr. William E. Dodge and his partners capable of petty fraud, was too simple-minded to be sent to Congress in these days. He ought to have presumed that a system was bad and liable to abuse under which a penalty of millions could be levied for a fraud of five dollars, and which placed merchants like Mr. Dodge at the mercy of any of their clerks who chose to steal or falsify their papers, and enabled scamps like Jayne to make in five years as detectives a fortune such as not one honest person in a hundred thousand can make by a lifetime of honest industry in trade or manufacture, law or medicine or teaching; and this presumption ought to have put him on the enquiry before he took the subject up in his Portland letter.

The fate of the Constitutional Amendments in this State is still in a little doubt, but the general belief is that they have been all adopted. The legality of the mode of their submission is, however, unfortunately still open to question, and is now before the Supreme Court—the point being whether alterations made by either of the two legislatures which have to approve of amendments before their submission to the popular vote, work a failure in the process prescribed by the existing constitution. Let us hope not; because it cannot be borne in mind too rigidly that if it be established that trifling changes by the legislature can make an amendment unsubmittable, the class of men who now make laws at Albany are not likely ever to allow any change to be made which promises to remove abuses in which they have an interest. We commented a fortnight ago on the dead silence observed about the pending amendments by the conventions of both parties. The Tammany politicians in this city did not, however, confine themselves to silence; they issued ballots on which nine of the twelve amendments were cancelled. They allowed nothing to stand except the section prohibiting private legislation, and otherwise reforming legislative procedure—a very important one certainly; that dealing with the canals and the sinking fund; and that fixing the time at which adopted amendments take effect. They cancelled the provisions framed against bribery; those redistricting the State; those increasing the Governor's and Lieutenant-Governor's terms and increasing their salaries; those relating to corporations, local liabilities, and appropriations, State appropriations, salaries of State officials, the oath of office, and the punishment of official corruption. The most noteworthy thing in this too is that these ballots were prepared and served out, and they were the only ones emanating from this quarter, without one word of public discussion. In fact, no such barefacedly blind voting was ever exacted of "the people," even in France.

The elections in France, which occur every now and then to fill vacancies in the Assembly, continue to turn slightly in favor of the Republicans. There has been one stand-up fight between the Bonapartists, in Corsica, where Prince Napoleon, as the representative of the Bonapartist democracy, contested the district for a place in the Council-General with Prince Charles Bonaparte (we presume of the Italian branch) as the representative of the Prince Imperial, who sent out his secretary to take part in the canvass and make the people acquainted with his "pensées." Prince Charles carried the day, but the contest had many of the features of a family quarrel. The most noticeable thing in French politics, however, is the increasing tendency to triviality. The Government has kept a man-of-war at Civita Vecchia since 1870, with the view of affording the Pope a refuge in case the dry land was made too hot for him. The keeping of the ship there since Italy passed wholly into the hands of the Italians has of course been an impertinence as far as the Italian Government was concerned, and a mere empty compliment to the Pope, and Marshal MacMahon did a very sensible thing the other day in withdrawing it. Thereupon the French public was thrown into a state of great excitement, and a discussion raged over it for several weeks as the "Orénoque incident," in which the weaknesses of all the French political parties came out pretty clearly. The Republicans were torn by conflicting emotions in the matter, because, while they were glad to have the old relations with the Papacy broken up, they did not like to have France retreat from a position which had a pleasant look of defiance to somebody; and the Legitimists were furious that the Holy Father should have been left without French protection. All parties have, however, been quieted by the assurance that he can have any number of frigates sent him from Toulon whenever he wants to leave Italy. The Spanish note is undergoing rigorous examination, and its charges are to be met seriatim, but there is talk of the removal of two of the prefects on the frontier who are accused of Carlist sympathies. The direct taxes for the past year have exceeded the estimates, but the indirect have fallen short—a sign not unhealthy, as it probably means increase of economy, without any diminution in ability to bear burdens.

The elections to the Italian Parliament occurred on Tuesday last, and the Ministry went to the country, if the small electoral body in Italy can fairly claim that name, under the most favorable auspices. It recently received an important accession of strength in the appointment of Signor Bonghi, of Milan, as Minister of Public Instruction. The news of the result comes in slowly by telegraph, but the ministers are reported all elected, and two hundred and thirteen Moderate and eighty Opposition deputies. A second ballot is however necessary in two hundred districts, under the very inconvenient rule, which the Italians have borrowed from the French, making a majority of all votes cast necessary to a choice. Everything looks serene enough in Italian politics except the deficit in the revenue, which is not a trifling matter, and the condition of the southern provinces and Sicily, in which organized brigandage and assassinations have brought society to the verge of dissolution. The most curious difficulty of this latter problem is, that while all competent observers admit that capital punishment inflicted remorselessly and surely on notorious and confirmed murderers is essential to real reform, such is the horror of the Italian public for judicial executions that the Government does not dare to inflict the penalty, and the jails are full of jolly robbers and assassins, who have killed from one to twenty persons. Great tenderness for the lives of criminals is, however, a by no means infrequent accompaniment of great disregard of the lives of decent people; indeed, they might almost be said to go generally together. The opponents of capital punishment for murder seem to forget that their system was tried very fully by the barbarians who overthrew the Roman Empire, who allowed a man to "settle" for a murder by a fixed pecuniary payment. For the effect of this in softening manners and inspiring respect for human life, see Gregory of Tours.

Germany is still occupied with the Arnim difficulty, on which there is, however, no new light, nor will there be any probably until after the trial in court. The Ultramontane and foreign press is greatly scandalized that a man of Count Arnim's official and social rank should be treated with this extreme harshness, and thrust into jail like a felon, even if he has been guilty of a violation of official duty; to which the Government papers reply that it has been the Prussian practice for a century to punish breaches of discipline even more severely among the highest class of officials than among any of the others, and to let none escape. In other words, there is no favor shown to German Schencks, Richardsons, Shepherds, Caseys, and the like. When they are accused of gross offences, they are not treated as comrades "under fire," and either kept in office in defiance of decency or furnished with other snug berths when forced to retire. The "effete despot" at Berlin is, in other words, a true republican.

THE DEMOCRATIC PARTY.

THE Democrats have achieved a great victory. This must be admitted; but it must also be admitted that it is in no way due to themselves. The Republican party has been overthrown because it was bad and corrupt, and not because there stood ready to take its place another organization possessing superior claims to public confidence. This has to be remembered by everybody who wishes to judge the political situation aright, and by none more carefully than by the Democrats themselves. We are glad to see that most of their leading men do seem to bear this in mind, and do seem fully conscious that the party has still to make a reputation in order to get the government of the country entirely into its hands. Their speeches at the rejoicing at the Manhattan Club the other night were, for the most part, sober and thoughtful, and recognized the share which patriotic Republicans had in giving them the recent triumph and must have in giving them a new lease of power. They will have in December, 1875, a majority in the House of Representatives. This, as one of the speakers at the Manhattan Club remarked, will give them the control of the appropriations, and give them unlimited power of investigation; but it will not give them the complete power of legislation. The public will therefore have to judge them rather by what they attempt than by what they achieve—that is, by their speeches, and resolutions, and reports, rather than by the acts they pass, for the acts must have the concurrence of the President and Senate. If the speeches are wild and violent, full of reactionary threats with regard to the South and dishonest threats with regard to the currency and the public creditor; if the resolutions are visionary or alarming, and the investigations are factious or malignant or frivolous, or the voting on the appropriations shows a tendency to disorder or extravagance, the Republican party will be once more vigorous and united in 1876, and all hope of a Democratic restoration is at an end.

If, on the contrary, the majority in the House shows itself well-disciplined and self-restrained; if it brings its ablest men to the front and allows them to speak for it; if its talk and action are sober and reassuring and conservative and sound touching the finances and the South and the proper limits of Federal authority, it is hard to see what is to prevent the party from seating its candidate in the White House at the next election. For it must not be forgotten that the Republican party has for the present lost its chance of recovery. There is now no time left for repentance. "Reform within the party lines" is no longer possible, because it cannot be carried out in one session by a discredited majority in a moribund Congress. Nearly all the Republican chiefs will stand before the country this winter in the position of convicted culprits, whose efforts to amend will only excite contempt and amusement. If the party is to be reinstated in popular confidence any time within five or ten years, it must be through the instrumentality of Democratic follies and shortcomings.

Now, in judging the Democrats, we are willing to make all possible allowances for them, but we trust that men like Messrs. Tilden and Thurman and Bayard see what and how great these allowances have to be, and how heavy is the task before them. For instance, we do not think it quite fair to condemn them irretrievably for what passes in the Democratic ranks in this city, as the Republican press usually does. Undoubtedly, the alliance of its chiefs with men like Morrissey and O'Brien, and the appearance of men like "Jimmy" Hayes on its tickets, are great scandals; but they are inevitable scandals as long as the voting population of New York remains what it is. John Kelly had to take Hayes in order to prevent his whole organization from going to pieces, and probably took him after getting rid of half-a-dozen others just as bad. Any party which gets the vote of this city must do these things. Our esteemed friends, Murphy, Bliss, and Davenport, would do exactly these things if they could gain anything by them. In fact, they had all but agreed to nominate "Jimmy" O'Brien for the mayoralty in 1872, and the difference between O'Brien and Hayes is one not visible to human eye. "The people" in New York, in short, is largely led by criminals and roughs, and any political party to which it gives its support must give the criminals and roughs a share of the patronage. We are not defending this. We are merely showing that the Democratic party is no worse in this respect than the Republican. Probably no men are more amused by the indignation of Republican moralists over Democratic laxity in this city than Murphy and Bliss.

But then, when Mr. Tilden or any one else pretends that the Democratic party is in possession of a great store of traditions and principles which it will now bring into play and use for our salvation, he makes too heavy a demand on our faith. The fact is that the war has left the Democratic party no better off in this respect than the Republican; indeed, one may say, it has left it worse off. The great Democratic chiefs of bygone days, from Jefferson down, whose names the party orators nowadays are so fond of citing, were the authors and promoters of the very things which are now universally recognized as most dangerous to free government on this continent—(1) the removability at pleasure of the civil servants of the Federal Government, or, in other words, the system which makes the Administration so formidable at elections and makes Mr. Tilden afraid that General Grant may re-elect himself or name his successor; (2) the multiplication of elective State offices, which has degraded the judiciary and converted politics into a trade or mystery which nobody can understand or follow without giving his whole time to it—thus depriving the industrious and self-respecting classes of their legitimate political influence; (3) the loss in the popular mind of the sense of necessary connection between the suffrage and intelligence, and the growth of a belief in the mystic virtue of the ballot by whomsoever cast, which were the most powerful promoters of the experiment of negro suffrage at the South, so much deplored by Mr. Tilden and his friends. It is through these things mainly that the Democratic party has made its influence on the political system of the country felt. They constituted the principal features in its gospel down to the outbreak of the war, and they are now recognized as the principal causes of existing difficulties. In which of its archives or traditions the Democratic party can find an antidote for them, it would be hard to say.

There were two other articles, nevertheless, in the Democratic creed, the value of which time has clearly proved—free-trade and hard-money. These, however, the party has of late years thrown into the background or repudiated. About free-trade its platforms and speeches have of late years shown little sign of care or attention, and a large proportion of its members are frantic supporters of paper-money in conjunction with and as part of a scheme for a disgraceful fraud on the public creditor. For this, however, as for some other follies and aberrations, we are not disposed to be very hard upon it. The Republican party is on this point no better, and for both an adequate excuse was furnished by Mr. Tilden when he spoke of the curiously defective political training of the generation which has come on the stage of affairs during the last twenty years. Political education is received and political habits formed in a free country, not in schools or colleges, but in the daily discussions of the press and the platform; and the range of these discussions could hardly have been narrower than it has been since 1854. Most men in the United States under forty-five have practical acquaintance with only two political subjects: the evils of negro slavery, and the relations of the Constitution to negro slavery; and these were presented under circumstances of such tremendous interest, that a great mass of the population came to regard them as almost the only problems of government worth attention, and a man's opinion on them as final tests of his morality and sagacity. The effect of this on the Democratic party has been as marked as its effect on the Republican party. The Democratic "statesman" of the last quarter of a century has been a man who thought we should not concern ourselves about Southern "niggers," and could give various worthy reasons, constitutional, theological, and craniological, why we should not. The Republican statesman, on the other hand, has been a man who burned with interest in "the colored man," and was willing to make any sacrifice for his elevation and protection. Both statesmen have been about equally ignorant or indiffer-

ent with regard to most other matters of national concern. On the Republican side, the result has been the elevation into the rank of political guides and prophets of a large number of persons with comically slender political equipment. In fact, almost anybody who, between 1850 and 1860, made speeches showing that black men ought not to be enslaved, has since 1860 held himself competent to take charge of the Treasury, revise the tariff, draw up a code of laws, command the army or navy, or rule a conquered province. The Democrats have been saved from these displays of folly by their powerlessness; but interest in the higher and more complex questions of government, in commerce, taxation, jurisprudence, the distribution of powers and modes of appointment, prisons, schools, public health, has well-nigh died out among them. No Republican quack has indulged in any piece of folly without finding a Democrat to back him or emulate him, and many of the absurdities hatched in the brains of old anti-slavery agitators have found a ready acceptance in Democratic circles. Does the election which has just occurred indicate that we have reached the end of this perhaps necessary suppression of the higher political intelligence, and that we are now to witness a renewal between parties of the old rivalry in the art of uniting liberty with order and progress? Let us hope that it does.

"THE LIGHT OF SUBSEQUENT EVENTS."

THE Republican papers have since the election furnished excellent reading. We doubt if so much sound and elevated politics and pure morality was ever before found in so small a space. The flood of light that seems to have been let in on them about the President, about Casey, about Butler, about Dawes, and about "outrages," is something very remarkable. One thinks that the friend and companion of "Boss" Shepherd need not have been so careful of his "dignity" as to refuse to repudiate third-term aspirations. Another admits that Casey might very well have been dismissed when he used the United States revenue-cutter to hide members of a State legislature from the sergeant-at-arms. Another declares that he now sees that it was a great mistake to make Mr. Williams Attorney-General, and a greater still to nominate him for the greatest judicial office in the world. Another wishes the Federal patronage of the great State of Massachusetts had not been handed over to Ben Butler. Another still wishes somebody had not lied so consumedly about Southern "outrages." If "our foresight," as Henry Ward Beecher says, "were only equal to our hindsight," what a well-managed world it would be!

It ought not to be forgotten, and we at least owe it to ourselves to recall it, that all the evil tendencies in the Administration and in the party in power which have brought about the recent disasters, were as plain to be seen in 1872 as they are to-day. The grosser faults since committed—the surrender of the Treasury to Richardson; the renomination of "Boss" Shepherd; the delivery of the South to Williams; the shameful treatment of the currency question; and the transfer of the State of Massachusetts to Ben. Butler, all flowed naturally from a state of things which was fully established before Grant's renomination. Vigorous criticism from the party press, and from prominent Republicans throughout the country, might then have checked these evil tendencies and prevented the recent catastrophe, but it was not attempted. In fact, the idea of the friends of the Administration seemed to be that there was no need to enter on a new policy until it became evident that the people would not stand the old one any longer, and they relied on the popular dread of the Democratic party to induce the people to stand it indefinitely. The taunt hurled at those who, at the outset, advocated the Cincinnati movement, was not that the charges they made were not well founded, but that they were mistaken in supposing that the public was troubled by them; and the plan adopted for preventing the public from becoming troubled by them was to make all reforms "inside the party lines," or, in other words, convert the party into a church. The reforms "inside the party lines" afterwards attempted, consisted in the removal of some shocking abuses created by the party itself, which had roused dangerous public indignation. For reform for its own sake none of the chiefs exhibited the slightest inclination. This "church" theory, which Mr. Henry Wilson, who is now telling the reporters that he foresaw all that has happened, defended against us in the *Independent*, has lasted just two years. Mr. Conkling's great Republican majority of 50,000 in this State in 1872 has been converted into a Democratic majority of 50,000. We owe it to ourselves, we repeat, to recall these things, because our reiterated comments on them have brought on us in many quarters the reproach of censoriousness and croaking. One paper—the Baltimore *American*—wonders how we can preach the value of hopefulness in trade and finance when we have been saying so little to encourage it in politics. Our answer is, that in trade and finance people manage their own business in their own way, while in politics they commit it to a professional class, who have the strongest interest in persuading them that things are going well no matter how they are going. Moreover, in trade and finance hopefulness is sobered and kept within reasonable bounds by arithmetic. Every man has in his own experience or in his own account-books the data by which to gauge and test his expectations. Every man knows, too, in his own heart, what the conditions of success are.

In politics, on the other hand, we have created a body of persons who are interested in deceiving us, and who actually make our gullibility the measure of our patriotism. Rational hopefulness, whether in business or politics or war, is based on the assumption that all reasonable precautions to prevent failure have been taken. In politics, we have to assume, before we begin to rub our hands and chuckle, that the best men we can get are in charge of our affairs; that our own experience and that of other nations is used in legislation and administration; that public opinion supports the government under healthy and legitimate influences; just as, in war, we look for victory when the ranks are full, the troops well-fed and well-disciplined and well-handled. What our Washington leaders and their adherents in the press are always trying to spread, and what we are always trying to combat, is the notion that "all will come out right in the end," through some invisible and mysterious and entirely unmerited protection extended to the party in power by Providence. They, in fact, would address an army somewhat in this fashion:

"Soldiers! there are sour and ill-visaged persons among us who try to discourage you by pretending that you ought to be drilled, and have experienced officers, and a good general and commissariat; they make a great parade of fusty military histories and works on what they call strategy, and show you how this general was defeated because his troops were raw, and that one because he allowed himself to be surprised, and the other one because he let his flank be turned. But there is one thing they forget to point out to you, soldiers, and that is, that all these dreadful things which they have to relate occurred in the Old World among the armies of despotic monarchs. Strategy was, in fact, first invented, and so was drill, and so was discipline, by nations which have long since passed into well-deserved decay. Greece and Rome had disciplined armies, as they are called, and great generals, and where are Greece and Rome now? Germany and France and England have them to-day, and where are Germany and France and England going to? Do they mean to tell us that the citizens of a republic need discipline, or that a republican army has to have a flank, or a rear, or any other monarchical contrivance? No, soldiers, our army is all front; and the day will come when our plan of having nothing but a front in the army will spread over the whole earth. In a republic, and on this virgin soil, only one thing is required of a soldier, and that is that his heart should be in the right place. This, believe us, is the great condition of success. Love your neighbor as yourself, and help the poor and lowly, and you may dispense with the costly and vexatious apparatus of sentinels, and outposts, and rear-guards. You may dispense, too, with that cumbrous humbug, a commander-in-chief, with his train of minions called a staff, and that still more nefarious

humbug, the quartermaster-general. We are going to make an art of war of our own, which will be free from the inconveniences and sufferings of the system by which kings carry on their dreadful game, under which the humblest soldier will be able to enjoy his natural rest, and to march and fight at convenient hours and in fine weather, and under which the common-schools will turn out as many generals as we need, and save us from those nurseries of oligarchy, military colleges."

CHARLOTTE CUSHMAN.

IT is announced that Miss Cushman has taken a final leave of the stage, and the ceremonies with which her very successful engagement closed on Saturday evening last were of such a pronounced, not to say imposing, character that, having her consent, they must be regarded as her theatrical apotheosis. Hereafter she takes her place among the eminent histrionic artists whose fame lives in tradition.

Charlotte Cushman has for many years enjoyed the almost solitary distinction of being an actress who, born and bred in America, and attaining here the maturity of her powers and the height of her reputation, took in Europe, and held without dispute, a position not inferior to that which she had attained at home. She is in fact the only histrionic artist of truly American birth and breeding who has acquired European distinction in the higher walks of the drama. And this among other things is remarkable about her: that not only is she American, but she comes from that part of America and from out those people in America to which even we ourselves do not look for the production of histrionic genius. Miss Cushman is a Yankee of the old Puritan stock, and was born not only in Massachusetts but in that city around whose pivotal virtues the universe revolves. It was surely not a little astonishing that a great tragic and melodramatic actress should come out of Boston. Her artistic life began there, although the greater part of it has been passed in that iniquitous atmosphere and under those dissipating influences which cause the true Bostonian to shudder when he thinks of New York. Here, however, she labored, and here she learned; and here she rose gradually to that eminence from which she has stepped with dignity amid the acclamations of a public who delight to do her honor.

Miss Cushman's artistic life has been one of severe discipline and was, in its earlier years, one of sore trial; and among her claims to the respect which is universally awarded her, not the least are steadiness of purpose and patient endurance joined to high and honorable ambition. She has known the bitterness of failure; she more than once suffered the anguish of seeing her hopes not only disappointed but crushed. But although cast down, she was not destroyed; and after the "blanket of the dark" fell upon her youthful aspirations, she gathered her energies together and set herself with unabated purpose and unflagging resolution to the painful toil with which she worked out single-handed her own great triumph. She appeared first as a singer, and a great success was expected for her; but her voice failed, and her operatic career ended almost before it had been well begun. Nothing daunted, she went again upon the stage in the drama pure and simple; and stepping at once into the higher walks of the profession, and making the mistake so common with young and enthusiastic aspirants to histrionic honors, she undertook the leading parts in tragedy before her knowledge of her art fitted her to portray them or her experience of life to understand them. She has just played Lady Macbeth, which is one of the parts in which she has won the world's applause. But more than thirty years ago she played Lady Macbeth at the Bowery Theatre under the management of Thomas Hamblin. She failed—how could she then do otherwise?—and after a brief struggle with parts of like grade she had the rare good sense to see her own deficiencies and to submit herself to the only discipline by which they could be remedied. Taking an engagement as a stock actress at the old Park Theatre, she remained there for years, playing minor parts, walking-ladies, pages—doing, in fact, whatever the manager called upon her to do, earning her bread by steady work and learning the rudiments of her profession. The middle-aged men of the day have seen in their boyhood the great Charlotte Cushman, after her two failures, occupying a place among the undistinguished crowd of satellites that revolved around the great actors of the past generation. But while she worked she also studied, and she was in a good school.

The old Park Theatre, which stood in Park Row just opposite where is now the lower end of the new Post-office, was then the fashionable theatre of the town. Its company was composed almost entirely of thoroughly-trained actors of English birth; and there appeared, as a matter of course, all the great actors who came from Europe in search of American dollars. These she watched, studying carefully their methods and the peculiar powers of each, catching from them those great principles and those minor methods of art the possession of which, except in the case of great original genius, comes only through example and tradition; studying at the same time at home, giving to the rich soil of her natural intelligence all the culture that comes from the constant influences of literature and art; and the result was the accomplished Charlotte Cushman who, with fame and fortune, has just retired from the profession of which for years she has been the acknowledged and honored head.

The part in which she first produced a great impression upon the public was as unlike as possible to that in which, in her salad days, she had hoped to take success by storm. It was Nancy Sykes. It was not in one of Shakspere's tragedies but in a dramatization of Dickens's 'Oliver Twist' that she found that she had not mistaken her vocation, and that she had by natural gifts and painfully-acquired art the power of delighting and thrilling an audience. And although she has done higher things, she has done little better, nothing which those who have been familiar with all her performances will remember more vividly, than her impersonation of that devoted woman, noble in heart, although a lowly castaway, and grand in her humble ruin—the only one of Dickens's creations which has a true touch of tragic pathos. No impersonation more complete, no performance sadder or more terrible, has been seen upon the stage for a generation. Since then she has known little as an actress but prosperity. Success always waits upon the successful, particularly upon those who advance step by step along the path of thorough discipline. She has played, like all actors, many parts, and among them Romeo, her lovely sister Susan playing Juliet—a performance in which the one was so ardently masculine and the other so tenderly feminine as to give Sidney Smith the opportunity of saying that when the engagement was over the least Charlotte could do was to marry her sister. But of later years she has limited the range of her performances, and has confined herself chiefly to three parts, Queen Katherine, Lady Macbeth, and Meg Merrilies, in which she stood confessed without a living rival.

In seeking the elements of Miss Cushman's power, we find them in a rare and highly cultivated intelligence and in thorough training. Without some of the qualifications which are regarded as almost essential to a great actress, she has attained a fame and a popularity greater in degree and higher in quality than has fallen to the lot of any but a few of the most celebrated women who have adorned the stage. This she has done by mental superiority and hard study. A more purely intellectual success than hers was never achieved. She had naturally not even any remarkable powers of voice; her tones were not rich or sweet; and she lacked those delicate inflections which give to feminine speech its grace and tenderness. She struggled with her own voice like Demosthenes with his, and, like Demosthenes, she conquered. In all her great parts there was not a sentence, not a word, hardly a syllable, which she did not school herself to deliver with just the meaning, just the delicate weight and proportion of significance, which she had awarded to it in her careful ponderings. She was one of the very few actresses, actors—yes, one of the very few human beings—who could read a passage of Shakspere and make all who heard her feel that she, and they, knew just what Shakspere meant. And she had withal that first qualification and absolute condition of a great success in anything—a clear and fixed perception of what she meant to do. Her understanding of a character, her purpose in any scene or in any speech, was never left uncertain. Her conceptions were clear and always grand and strongly marked in outline. She will live in the memories of those who have had the good-fortune to see her impersonations, intellectually as well as physically imposing.

We have been led to speak of her as if she were in the past, and for us and for the world at large to-day she is so. May it be long ere we say of Charlotte Cushman, the woman, *vixit;* but even now of Charlotte Cushman, the actress, we must say *fuit*. She is no more to sweep away, a proud and injured queen, from the court where king and cardinals have summoned her to assist at her own deposition; no more to lure Duncan to his death and drive Macbeth to his destruction; no more to stir our hearts as she croons over Harry Bertram's hand, and gives her life in the cause of the boy she bore upon her bosom. She has passed from our eyes, trailing her tragic garments, a grand and memorable figure. As we bid her farewell, we reflect with pride upon her honorable career, and take our place among the multitude that does homage to the artist and the woman.

SPANISH COMPLAINTS AND FRENCH NEUTRALITY.

PARIS, October 23.

THE foreign policy adopted by France since the fatal war of 1870 has been exactly that which was adopted by Russia after the Crimean War: *la Russie se recueille*, said Prince Gortchakoff in a celebrated despatch. But France is not allowed to do quietly what Russia did after her disasters. She would like to shut the door on all external questions, and she cannot

even enjoy in peace the bitter pleasure of isolation and solitude. There is a feeling which pervades the whole German press, and which finds its expression even in the speeches of many of her statesmen, that France has not been humbled enough; she must be fined, mulcted, and punished again. This sentiment of hostility cannot easily find a direct satisfaction; but Prince Bismarck holds in his hands the threads of all European affairs, and when he cannot attack us in front, he can do so in the rear. It is quite certain that in the spring of this year he tried to entangle us in some difficulties with Italy. The Italian Government would not consent to become the instrument of Prince Bismarck's hostile designs. Much has been said about the selfishness and the ingratitude of Italy; it is only just to acknowledge that Italy showed in her dealings with France that she had no desire to inflict new wounds on the nation which helped her to reconquer independence and unity. The Italians are not quite as forgetful as some would have them, and they have hitherto shown themselves much more disposed to make other powers subservient to their own interests than to be sacrificed to the ambition of any foreign potentate. The last pretext for a quarrel with France disappeared when the *Orénoque* was recalled to Toulon; and the Italian Government was very careful that the dignity of the French Government should not suffer in this last circumstance. The Pope, on his side, showed more wisdom and generosity than is often found in the Clerical party; he wrote himself to Marshal MacMahon that he had no need of the *Orénoque*, that he was determined to remain in the Vatican, and that if the presence of a French man-of-war in Italian waters could become the pretext of any complication, he would be happy to see her removed.

All danger, therefore, is averted on the Italian side, but not so on the Spanish frontier. In Spain, Prince Bismarck did not find, as in Italy, a national government, careful of the real interests of the people, but the government of a faction, I might almost say of a man, without any support, any legal character, struggling in vain against a formidable insurrection. Such a government was more manageable, and could not well reject the imperious alliance of a powerful monarchy. King Victor Emanuel is the leader of a united people; Serrano has been thrown into power by a succession of conspiracies and of *coups d'état*. Italy is obliged to husband her resources, so as to establish an equilibrium in her budget; there can be no thought of an equilibrium in Spain, which is completely bankrupt. A penniless government, with a small and discontented army, which has lost all authority in three provinces, was just the instrument which Prince Bismarck could have wished to find. I do not myself think that the German Chancellor has any desire to place a German prince on the throne of Charles V.; he merely wishes to inflict new humiliation on France, by placing her, as it were, at the mercy of the weakest power of Europe. The Carlist war offered him a pretext, which was not ill chosen, as Germany appears in her indirect interference as the champion of the law of nations. I do not hesitate to touch this unpleasant subject, as I am afraid that many minds in America may be deceived by the memorandum which has been placed before our Government by the new Spanish ambassador. The *Alabama* case and the discussions which preceded the Arbitration of Geneva must be still in the minds of all men in the United States, and many may be inclined to believe that Spain has been injured by France in the same manner as the North has been by England. But let us look a little closer into this Spanish question; and you will see that no comparison can be established between the two cases.

First of all, we must make a fundamental distinction between the materials and the elements of war. The American Government never raised any formal objection to the trade in what I call the elements of war—shoes, cloth, coal, powder, etc.; the blockade was specially instituted in order to place as many difficulties as possible in the trade of contraband of war, but no government was ever held responsible for this trade. In the case of the materials of war, the responsibility remains merely personal. The merchant who sends a cargo of guns or of powder runs the risk of losing his ship and his cargo; his government runs no risk whatever. The responsibility of the government begins when the materials of war assume the form of what I call the elements of war; and what are the elements of war? They are very easily defined. Men, clothes, guns, shoes, do not separately constitute an army; the army results from the union and the organization of these materials. If a troop of men is uniformed, and drilled, and placed in such a condition that it becomes fit for warlike purposes, a government which allows this formation on neutral ground is guilty of the grossest violation of the law of nations. Next to the army, or *corps d'armée*, the only other element of war is the ship-of-war; this also is easily defined, as ships-of-war are constructed on particular principles and are very easily recognized. While the *Alabama* was being built and fitted, there could be no doubt as to her real character. I do not hesitate to say that, whatever be its municipal law, any government which allows the construction and fitting-out of a man-of-war in neutral waters destined to help a belligerent power against another, is guilty of a violation of the law of nations. This principle was adopted by the arbitrators at Geneva, but it did not need their approbation; it is as old as the law of nations. In times like ours, when trade has become so free, it is necessary to adopt an exact definition of the elements of war. Trade ought to be left quite free (subject of course to the risks of a blockade), when it is only concerned with the materials of war. The national responsibility should only begin when a neutral power has wantonly allowed the organization of an armed force for land service or the fitting-out of war-ships for naval service.

Let us now examine the case of France with regard to Spain. This last unfortunate country still has many fine colonies and a large commerce. Don Carlos, who has assumed all the prerogative of royalty, is perfectly willing to issue letters-of-marque to be given to privateers which would operate against Spanish ships; and I believe that some of his agents have been trying at Bayonne, at Bordeaux, and at Nantes to procure ships. No Carlist *Alabama*, with the flag of Don Carlos, has yet left the French ports and been seen on the high seas. If we come to land operations, the question becomes a little more involved. The Pyrenees with their many passes form the frontier line between France and the insurgent Carlist provinces. The Spanish Government cannot complain that any large Carlist force has been allowed to organize on French territory; that it has met in arms in a French Department and crossed the frontiers. But M. Vega-Armijo, the Spanish Ambassador, brings a series of small accusations against us: here some powder has been sold to a Carlist agent, and here some guns; here Carlists fleeing before the Republican troops crossed the frontier, and were set free by the French authorities; here some insurgent chief spent a month, and then recrossed the frontier at some other point. It is idle to deny that there is a feeling of good neighborhood between the populations which inhabit all the Basque provinces; this feeling arises partly from a community of race, partly from a community of avocations. On both sides of the mountains, during the long period of protective tariffs, there have been smugglers in very great numbers. Owing to these circumstances, it is quite certain that the Carlists fighting in the northern districts of Spain have found some facilities in the fact that they had the Pyrenees and their intricate valleys as a *place de retraite* and a basis of operations. Bayonne, Pau, Oléron, and Perpignan have been centres to which the Carlist chiefs could retire and make new plans of operations. But it is not true that any large number of arms has been introduced by the land frontier. It is quite certain that, owing to the inefficacy of the blockade, there have been many arms introduced in the ports of the Bay of Biscay by English and even by German ships. The artillery which Don Carlos possesses came from England by sea.

What is the remedy for the dangers which arise for the Spanish Government from the continuation of the Carlist war? The Spanish Ambassador suggests that considerable French military forces—in fact, that a French army—should be concentrated all along our frontier; that all the Carlists who cross the Pyrenees should be disarmed and sent to the northern districts of France. The refugees who come in arms have always been disarmed. The Government has given the strictest orders for the *internement* of all refugees at a good distance from the Pyrenees; the Spanish Government is not satisfied with this, and insists upon the removal of certain French functionaries suspected of having sympathies with the Carlist cause. This is touching very delicate ground. The Spanish Government has chosen for the scapegoat of the rebellion M. de Nadaillac, the Prefect of Pau; if he is not removed, all will go wrong for ever. M. de Nadaillac could be removed to some other post very easily if the Madrilene official press did not ask for it so loudly. Many people begin to suspect that, after all, all these demands of the Serrano Government are mere *querelles d'Allemand;* that, whatever we do, Serrano will never be satisfied. After a long negotiation, in which Prussia took the lead, the Government of Marshal MacMahon—this Government denounced every day in the Berlin papers as the friend of absolutism and clericalism—declared itself quite ready to recognize the *de-facto* Government of Marshal Serrano. A Spanish grandee was sent here for the occasion with so many titles that nobody in the diplomatic world here has yet been able to pronounce his names correctly; he comes with a title of ambassador, not as a mere *chargé d'affaires*. We ourselves send an ambassador to Madrid. The Spanish Ambassador is received by Marshal MacMahon with much pomp and circumstance; and a few weeks after we have given this great advantage to Spain of a formal and solemn recognition of its Government, this very advantage is turned against us; a long indictment is sent in, and we are charged with all sorts of crimes. We owed little or nothing to the Serrano Government before the recognition; now this recognized Serrano treats us with all the pride of an old and traditional government. This conduct cannot be explained merely by the innate haughtiness and the singularity of character of the Spanish race. It is quite true that you can never anticipate what Spaniards

will do; but their conduct in this instance is probably not inspired by merely national considerations.

Time will show if in this affair Serrano will continue to act in a spirit of hostility to the French Government and will throw new difficulties in our way. For the present the duty of the French Government is quite clear: the Duke Decazes must obtain from all his colleagues the most stringent observance of the international laws. Serrano has many a time been plotting quietly in Pau or Bayonne against the established Government of Spain; but if the wife of Don Carlos, who lives quietly at Biarritz, seems dangerous to him now, we will respectfully ask her to choose a more distant residence. We will do with Spain what we did with Italy—remove all our *Orénoques*. France cannot be humbled any more; what is the kick of a Serrano after Sedan and Metz? When we have fulfilled our duties and more than our duties to all governments, we shall wait quietly for the development of the projects of our enemies.

Correspondence.

A CORRECTION.

To the Editor of the Nation:

Sir: In your issue of the *Nation* of the 22d inst., under the head of "The Elections," you say, in regard to my letter to the Chattanooga Convention: "Governor Davis is one of the best of the Southern Republicans, and yet he declared that from his knowledge of Moses of South Carolina and of Kellogg of Louisiana, he would not believe any of the charges made against them."

I think that if you will again read what I wrote on that subject, you will find that your usually accurate and dispassionate journal is in error as to the effect of my declaration. I wrote, in reference to the indiscriminate vilification of Southern Republicans by our Democratic press and politicians: "Governor Moses of South Carolina and Governor Kellogg of Louisiana may be corrupt, as those people vociferously assert, but I must, knowing them as I do, take their assertion as inferential proof of the contrary."

The pronoun "them" in this quotation relates to the words "those people" (the Southern Democracy) preceding it in the sentence. I am not acquainted personally with either of those governors, and have no personal knowledge of their respective characters.

I might send you a hundred proofs of the correctness of this part of that Chattanooga letter, in extracts from our Democratic press showing the torrent of bad names they have heaped upon me since its publication. But what they say and how they say it would not furnish pleasant literature either for your readers or yourself.—Very respectfully,

Edm'd J. Davis.

Austin, Texas, October 29, 1854.

THE PUBLIC SCHOOLS IN VIRGINIA.

To the Editor of the Nation:

Sir: In your issue of October 29, you have an article on the Force Act, which is so broad in its scope that I dislike to criticise any part of it; but there is in it an unjust allusion to Virginia, which ought not to remain uncorrected. Whilst admitting that in the Southern States the negro is fairly dealt with, even in those States where he is in the minority, you make an exception in these words:

"*In Virginia*, we believe, he is *not fairly* dealt with in the matter of *common schools*."

May I not reasonably ask, Mr. Editor, that, having gone so far, you go further, and give to the public the facts or reasons on which you base a declared belief so seriously reflecting on the fair dealing of this State?

You cannot, in that remark, have referred to our *law*, which makes the same provision for the two races in every particular, and which, whilst requiring them to be taught in separate schools, requires also that the schools for white and colored children shall be "*under the same general regulations as to management, usefulness, and efficiency.*"

If unfairness exists anywhere, it must be in the *administration* of the school system. If I, the chief executive of the system, have been guilty of it, I deserve to be exposed. If any one of our four hundred and fifty local school-boards, or of our ninety-four superintendents, has been guilty of a single act of unfairness to the negro, and you have information thereof, I beg that you will name the offender in your paper, or to me privately, and I will immediately investigate the case; and I guaranty that if the fact be ascertained, the guilty party or parties shall be expelled from office instantly. I do not call upon you to prove anything. I will call for evidence on the trial. I only ask you, or any other responsible party, to name the school-board or the school-officer in Virginia whom you *believe* to have been guilty of unfairness as between the races, and I will do the rest. If you do not like to mention the names of men or of boards, only indicate the locality—the city, county, district, or village—where the unfairness has been perpetrated, and I will follow that clue until the truth is ascertained. Moreover, all the procedings taken, and all the persons and papers in the case, shall be open to the public, and everybody be allowed to examine and cross-examine to his heart's content.

Mr. Editor, if anything of this sort is going on, I do not know it, but I *want* to know it; and for the sake of the negroes, and more particularly for the sake of the *truth*, I again beg that you will help me to ferret out these oppressors; and then we will tell the world all about it.

To some this may seem to be making a great deal of a small matter; but this is the very gist of the argument in favor of the Civil-Rights Bill. The advocates of that destructive measure have pressed their cause chiefly on the ground that the Southern whites do not, and will not, treat the negroes impartially in the matter of education. I know the aspersion to be unjust so far as Virginia is concerned. Our officers may not be free from every fault. Our schools may not be as numerous or as good as might be justly desired; but the schools are in respect to the races as nearly equal in number and privileges as circumstances admit of, and all will confess that what we have are a great deal better *than none*.

W. H. Ruffner,
Superintendent of Public Instruction.

Richmond, Va., Nov. 5.

[We are very glad for various reasons that Mr. Ruffner has thought proper to ask us for our authority for the imputation on the State of Virginia to which he refers, because, whether it be well or ill founded, investigation such as he promises cannot but do good. We are at liberty to say that the charge of unfairness towards the colored people in the matter of education comes from Miss C. F. Putnam, a well-known and much-respected Northern lady, who has been for some years and is now laboring in the most self-sacrificing way as a teacher of a colored school at Lottsburgh, Northumberland County. What she says, in a letter dated July 26, 1874, is this:

"While the State professes to provide schools (separate schools) for black and white children alike, our observation proves that it is not done. The county superintendent and Mr. Claughton, school trustee, exerted themselves greatly to induce our people to give up their school-house for a public school, and pledged their word that the colored children should have equal justice and share the public money with the white children. We were present and heard the promise. Heathsville, the county-seat and residence of the county superintendent, four miles from us, had that same year an appropriation of public money—$500. The number of colored and white children was about the same. The white children received $450 for their schools, and only $50 was used for the colored children. There are four towns in this county. Through our friends, the Bureau had aided to establish two other schools besides ours—that is, in three of the four towns there were schools. The crying want of the fourth town, which had a larger proportion of colored children than the others, had not received one cent for its colored children at the last account I had, while hundreds of dollars (for which the colored men were taxed) were used to maintain the white schools in that town—Wicomico Church. The colored schools are not heartily supported, and are purposely of as little real benefit as possible. All our hundred Lottsburgh colored voters are taxed every year $1 50 each for the support of schools, and pay it. To show how determined the school officers have ever been to break up our schools, let me remind you that all our colored voters but two signed a petition three years ago to have me made the public-school teacher, that they might have the benefit of the school-money for which they were taxed. Their petition was denied solely because ours is a Republican school."

It is but right to add that the above extracts are made from a private letter, addressed by Miss Putnam to a lady in New York, who with others has aided her with money and otherwise in carrying on her work, and was not written with a view to publication, or with any idea of affecting public opinion in any way. It will be seen, too, that our quotations contain little or nothing in the way of inference or vague imputation, but relate to matters of fact which Mr. Ruffner can have no difficulty in examining.—Ed. Nation.]

THE APPROACHING CATASTROPHE AT THE SOUTH.

To the Editor of the Nation:

Sir: Your correspondent, Mr. J. A. Pearce, of Chestertown, Kent Co., Md., proposed, I regret to see, to deprive himself of the *Nation* after the

nineteenth of this month, when his subscription expires, out of "self-respect," which will not permit him to help to support a journal "which, in cold blood, devotes half the country to destruction." He says, moreover, that he expects little courtesy "from any Northern source." But he seems to have valued your paper, and to think highly of it in other respects than that of its policy respecting the submerging of the South. Now, if the South is to be submerged, it ought to be done soon, and as I wish that Mr. Pearce, should he unfortunately perish in the deluge, should die with more kindly feeling toward the North, I beg, as an act of courtesy to him, to enclose to you a year's subscription to the *Nation*, that he may continue to receive it up to the date of submergence. Should the submersion, as I presume you desire and would endeavor to effect, take place before the meeting of Congress, I request that the unexpended balance of my subscription for Mr. Pearce may be applied for the support of the "sick persons and children" who are to be allowed to flee previous to the anticipated catastrophe.

Your old friend and subscriber,

———

Luxville, Mass., November 6, 1874.

[We had credited Mr. Pearce with the above, and he would accordingly have received the *Nation* for one year longer, or until the submersion, in any case; but we have since received a letter from him, in which he declares himself so well satisfied with our state of mind that he continues his subscription, and waives his right to have any portion of the North laid under water. We had, however, previously determined, owing to the result of the election, to withdraw our offer as regards Essex Co., Mass.—Ed. Nation.]

HOW BUTLER WAS DEFEATED.

To the Editor of the Nation:

Sir: Thinking it probable that you will have something further to say concerning the defeat of Butler in this "benighted district," as you recently styled it—not without provocation, I admit—I submit to your consideration the following statement concerning the manner of his "taking off":

Immediately after your endorsement of General Cogswell as a person entitled to the support of anti-Butler Republicans at the Convention, I wrote you the reasons why your advice would not be followed—reasons which evidently commanded your attention, but not your approval. With us, however, they were potent in keeping almost the entire element opposed to Butler away from the caucuses preliminary to the Convention. Indeed, if the Republicans had elected General Cogswell to Congress by way of "reform," they would have made a mistake similar in character and results to that of the Cincinnati Convention. Do you ask, then, why we did not put forward some other candidate? The reply is that the ill-timed support given to Cogswell by respectable papers having a large circulation in the district gave him such a fictitious prominence as a candidate that his "friends" were warranted in urging others, who were thought of as candidates, to content themselves with standing by and holding his coat while he "whipped" the "General." Then, too, such was the terror inspired by Butler's first victory in this district, for which he was indebted to his New Orleans record, that the prominent party-leaders attached themselves to him, and were content to wait for the time when he should drop his official mantle among them. Such men, and General Cogswell was among them, were not looked upon with any degree of toleration by those who have defeated Butler.

Mr. Phillips had consistently opposed Butler, but he was not well known through the district, was not very aggressive, and was kept out of the field by the means I have indicated above. If you add to these reasons a third, almost if not quite as powerful as either, namely, the general unwillingness to take part in caucuses and a convention which Butler was almost certain to control, whether by fair means or foul, you will, I think, have little difficulty in understanding why we decided not to attempt a contest within the party lines. At first we, or many of us, wished to nominate Judge Otis P. Lord as an "independent" candidate, but, not being trained politicians, we were, luckily as I now think, too slow about it.

Those of us who were members of the bar, however, had the utmost confidence in Mr. Thompson from the first, but doubted the possibility of inducing any considerable number of Republicans to vote for a man who bore the Democratic label. And you must admit that we fought at a great disadvantage. Butler's warning to outsiders not to interfere was, after the Convention, regarded in almost every instance, the Boston *Advertiser* being a notable exception. The Democratic victories at the West, with the Louisiana troubles at the South, threatened to neutralize all our efforts. Toward the close of the campaign Butler allowed his rule to be broken in his own favor, and, as you have stated, had here in his behalf, of all men in the world' Henry L. Dawes, who, I am happy to think, is also "numbered with the [politically] slain." So we claim some credit for the victory, and claim it as a victory against "Butlerism"; for even Talbot, who was badly defeated in the State at large, received a majority of more than two thousand in this district.

Charles P. Thompson, the representative-elect, we confidently expect will do something to restore our good name. He is an able lawyer, and has received the support of nearly every member of the bar in the district. He was left to make his own platform by the convention which nominated him, and inserted a "hard-money" plank of the soundest kind. Judged by the *Nation's* standard, he is also sound on the Southern question. But above all, he is *honest* in the broad sense of that word, and it was the general conviction that such was the fact which won for him the Republican votes to which, as he acknowledges, he owes his election. In view of all the circumstances, I hope you will reconsider your determination to select this as the county to be devastated by your "tidal wave." A.

Haverhill, Mass., Nov. 6, 1874.

"SUBSOILING" IN NEW YORK CITY.

To the Editor of the Nation:

Sir: Your Boston correspondent reminds us that the common pulpit and platform remedy for political "subsoiling" is, that "the body of voters shall attend primary meetings in person." Let me cite a recent case in this city, and ask if even this remedy is left us here.

Some four weeks ago, and before any of the candidates had been put in nomination, I became suddenly moved with a sense of my dereliction in attending to my political duties, and resolved that this year, for the first time in my life, I *would* attend the primaries in my ward, and lift up my voice in favor of the purity of republican institutions in what I supposed to be their fountain-head. Having during the past few years become weaned from my Republicanism, I turned naturally to the Democratic papers for information, and presently discovered in the New York *World* an advertisement calling upon the Democratic electors of my neighborhood to meet at a certain place on such an evening to select delegates to the nominating conventions soon thereafter to be held. Full of patriotism, I sallied forth on the evening in question, resolved that it should be no fault of mine if the nominations were not good ones this time, and wondering how many of my reputable neighbors would be patriotic enough to leave their homes and business, as I was doing, on such a mission. On the way I actually persuaded one excellent gentleman, a man of means and character, who, like myself, had come almost to despair of the Republic, to accompany me. We expected of course to find a motley crowd, and my friend had half a mind to go home first and change his clothes; but we went on, hoping by the powers of reasoning and persuasion to prevail even over a caucus of pot-house managers.

But arriving at our destination, what did we find? Our Massachusetts friend will probably answer: A noisy, riotous crowd of ragged and idle persons eagerly suggesting such names as Barney and Tim and Jerry, as fellows who would take care of the "b'hoys." But we found nothing of the kind. There was no assembly, no crowd, no caucus, not even so much as a trio of politic-worms! Approaching a low shanty that might have been a shoemaker's shop, we saw over a narrow window a sign, "Democratic Primary." Hard by stood a man dealing out slips of paper, on which were printed a number of names evidently selected long beforehand as delegates, these to the convention to nominate assemblymen, those to the convention to nominate aldermen, and so on, and all of them men as utterly unknown to the taxpayers and reputable citizens of the ward as the man in the moon.

Looking through the window into a dimly-lighted room, we saw a man ready to receive these slips as we should hand them in, and put them into a box resembling a ballot-box. And this was a primary election!

Comment is unnecessary. My friend and I are in despair. We want to know what to do! Doubtless "honest John Kelly" could tell us, but he don't know us. Perhaps our Massachusetts friend can, or will the *Nation*? —Yours truly, A Despondent.

New York, November 2, 1874.

Notes.

THE translation of the Comte de Paris's history of our late civil war has been undertaken by Mr. Tasistro, of Washington, and the first volume will be published in the latter part of December by Porter & Coates, Philadelphia. The same house has in press 'The Stately Homes of England,'

by Llewellynn Jewitt and S. C. Hall; 'Stonehenge's Rural Sports,' first American edition, adapted to the sports of this country; 'The Paths of Life,' a tale by the Princess Alice of England; and 'South Meadows,' by Miss E. T. Disosway, a new writer of fiction.——J. B. Lippincott & Co. announce 'Schiller's Æsthetical Essays,' and a history of the United States for intermediate schools by a Southerner, Prof. Joseph T. Derry, of Augusta, Georgia.——'A Rebel's Recollections,' by George Cary Eggleston; 'His Two Wives,' by Mrs. Mary Clemmer Ames; and 'Public Health,' by Dr. Elisha Harris, will shortly be published by Hurd & Houghton.——George Routledge & Sons's announcements include 'Days near Rome,' by Augustus J. C. Hare; 'Life in the Outer Hebrides,' by G. Anderson Smith; 'English Portraits,' from Sainte-Beuve's *Lundis*, selected and translated by W. F. Rae; 'The History of Ceramic Art,' by Llewellynn Jewitt; 'River Legends; or, Father Thames and Father Rhine,' by Mr. Knatchbull-Hugessen; and 'Man and Beast, Here and Hereafter,' by Rev. J. G. Wood.——Bulletin No. 31 of the Boston Public Library states that the number of persons who consult the British patents in that institution has risen to nearly or quite 1,500 per annum. The specifications now number 2,400 large volumes. Monthly bibliographical notes on the early quarto issues of Shakspere's plays before the first folio of 1623 will be sent by the Superintendent of the Library to persons whose studies lie in the same direction. They are printed for the purpose of testing their accuracy, and will finally appear in the catalogue of the Barton Library.——American students of medicine wishing to obtain an English degree will find in the "Educational Number" of the London *Medical Record* (Sept. 16, 1874) a convenient résumé of the requirements of the principal British schools. Similar and somewhat fuller information is contained in the so-called "students' numbers" of the *Lancet* and the *Medical Times and Gazette* (London) for Sept. 12. Later numbers of these publications give some account of the courses at several German universities, but only for this winter.——The publication of the photographs of the Dresden Gallery is announced. They were taken by the Berlin Photographic Company, and have not hitherto been offered for sale. The first volume, in quarto form, contains 30 photographs, principally from the Italian and Spanish schools, and costs 30 thalers, about $22.——The appearance of a people's edition (Volks-Ausgabe) of the Niebelungenlied, without note, comment, or glossary, furnishes an occasion for *Trübner's Record* to remark that the popularity of this poem dates from "Germany's subjection to the iron rule of Napoleon," and that its patriotic breathings led to the publication, during the campaign of Waterloo, of a "field and tent edition," without a copy of which the German soldier's knapsack was considered incomplete.

—We are accustomed to regard New York as the city *par excellence* in which all foreign elements commingle. Now and again the *Herald* startles us with a German despatch by Cable, and with bi-lingual admonitions to keep off the grass we have long been familiar in our parks. It seems, however, as if we must yield the palm to Chicago in this respect. In the Sunday issue of the *Illinois Staats-Zeitung* just prior to the last election appeared "Ein Wort für Jeden . . . You pays your money and you takes your choice . . . An die fremdgeborenen Wähler aller Nationalitäten." This was followed by appeals in their several tongues to the American, Scandinavian, Swedish, French, German, Hebrew, Italian, Bohemian, Dutch, and Polish voter, in most astonishing polyglot array. Each appeal was distinct, and aptly designed for the nationality addressed—not a mere translation of a set formula. Thus the Franco-American could be told: "Un homme de votre race est candidat pour le Congrès des Etats-Unis. Votez pour J. V. Le Moyne contre C. B. Farwell." The Puritan bugaboo is made much of by the *Staats-Zeitung's* Mezzofanti. He reminds the French that "vous avez combattu le Puritanisme et le Knownothingisme qui voulaient attenter à votre liberté personnelle"; and in like manner the Italians are asked: "E chi volete inviare a Springfield se non uomini che ci proteggano contro le leggi Puritane, partidarie, inique, che ci obbligano ad osservare leggi che la nostra religione non ci impone, che ci obbligano a chiudere i nostri negozi le Domeniche, et chi ci probisce [*sic*] qualunque onesto divertimento in tal giorno?" The Dutch are instructed that a Republican party led by Lincoln and Sumner is a very different party from one in which Mr. C. B. Farwell comes to the surface; and much practical advice, we doubt not, is conveyed in tolerable newspaper Slavic to those whom it concerns. There is a general agreement among politicians that the lesson of the 3d of November is as plain to understand as if behind the ballots there had been no such confusion of speech as Mr. Hesing's clever *tour de force* indicates that there was in his locality.

—The meeting of the Oriental Society held in this city at the end of October was a very successful one, being largely attended and rich in valuable papers. It was particularly noticeable for the leading share taken in it by New York scholars. This is one among many gratifying signs of a marked improvement of late in the scholarly activity of the city, which has been effectively fostered by the Greek Club, the Semitic Club, the Metropolitan Museum, and other similar agencies. One of the most elaborate and interesting of the papers presented was directly drawn out by the Museum. It was a review and criticism of the progress of decipherment of the Cypriote inscriptions, with original additions, by Mr. J. H. Hall. The latest and best German investigator in this field, Moritz Schmidt, laments that he has not in trustworthy form the material from the Di Cesnola collections; this Mr. Hall has undertaken to furnish him. Professor Short of Columbia College, while praising highly Roby's 'Latin Grammar,' thought it weaker in syntax than elsewhere, and criticised and amended certain syntactical points, with full citation of passages from his own collections. Mr. Tyler of the Astor Library called attention to phrases in the Thebaic dialect of Egyptian which have hitherto escaped notice. Dr. Ward exhibited an Assyrian seal-cylinder and gave a brief exposition of it. Mr. Merrill of Andover sent a long and full article on the Assyrian monuments in this country, with detailed information as to their number, character, and value; how they were obtained, where they are deposited, and what they represent and say. It appears that there are fifty-four slabs in thirteen museums in this country—enough to panel a hall seventy feet square. They all come from the reign of Assur-nazir-pal (B.C. 883–859), and contain one and the same inscription, of which a translation was furnished. There are also twenty-two bricks, one of them Babylonian, and all but three bearing inscriptions. The new and attractive subject of Japanese was represented by two papers, one by Professor Griffis, recently returned from a residence of some years in Japan, and one by Mr. Van Name of the Yale College library. Mr. Griffis discussed the recent revolutions in Japan and the causes for them to be found in the modern literature of the country. Mr. Van Name treated of the distinction of noun and verb in the Japanese language, showing that, as in other languages of a low order of structure, it was hardly if at all recognizable. Professor Adler of Ithaca lectured the Society on the importance of Talmudic study to the early history of Christianity, and pointed out references which he thought he had discovered in the Talmud to the Christian sect and its doctrines. Professor Whitney of Yale, returning to a subject already once discussed before the Society, defended the ordinarily-accepted views of Sanskrit accent against the objections brought up by Dr. Haug of Munich in a recent elaborate paper. Professor Haldeman of Philadelphia had a brief note upon the occurrence of certain Semitic sounds in American languages. The closing communication, by Mr. J. Hammond Trumbull of Hartford, was on recent German discussions of the evidence of Phœnician colonization in America, and led to a lively and amusing debate. It appears that Schlottmann, the principal German defender of the authenticity of Shapira's collections (which are generally regarded as spurious by the scholars of other countries), has been giving to the German Oriental Society evidence of the quality of his archæological acumen by accepting as genuine that exploded humbug, the "Cardiff Giant," with its alleged Phœnician inscription, pronouncing it a statue of Adonis! A writer in the last *Archiv für Anthropologie* also does the same; and the editor of the *Archiv* supports him, adding that *if* this monument turns out a cheat, certainly nothing that comes from America can ever ask to be believed hereafter. Much astonishment was expressed by members of the Society at this late and credulous acceptance of a false antique which was completely exposed years ago, and of which the true character is known to all well-informed persons in this country. There happened to be those present who were personally cognizant of the main facts in its history, who had seen it and pronounced it spurious before it was lifted out of the ground, who had seen and talked with the workmen in the Chicago shops where it was produced, who had examined the dim lines asserted to be an inscription, and found them mere chance scratches or water-marks—and so on. If German scholars have been incautious enough to be taken in by so gross a cheat, they have no one but themselves to blame for it. Schlottmann also indicates his willingness to accept the Phœnician inscription found a year ago in Brazil, and which Dr. Ward exposed to the Society last spring as doubtless a forgery.

—Tuesday week was the eightieth birthday of Mr. William Cullen Bryant, our oldest poet if priority of publication in verse may give him precedence over the still more venerable Richard Henry Dana. The occasion was well remembered by his friends. A number of prominent citizens, headed by Mr. Jonathan Sturges, called upon him quite informally at his residence, and presented him with a brief address of congratulation, signed by the poet's admirers in all parts of the country. They stated it to be their intention "to embody in a commemorative vase, of original design and choice workmanship, the lesson of Mr. Bryant's literary and civic career in its relations with our country, whose nature, history, liberty, law, and conscience he had so illustrated"; or, as Mr. Sturges afterwards described it, a vase sculptured with ideas and images from the poems of the recipient of this honor. The

material is to be silver, and the work when completed will be deposited with the Metropolitan Museum of Art as a "permanent treasure." Mr. Bryant responded to Mr. Sturges's remarks in a few words of grateful acknowledgment, and, passing hastily in review the great events of the past fourscore years, singled out the downfall of Bonaparte, the abolition of slavery in America, and the decadence of priestcraft as shown by the restoration of Italian unity; and closed with the hope that the time was coming when standing armies could be safely abolished, and the reign of universal peace begin. On Saturday Mr. Bryant took a prominent part in the ceremonies which followed Miss Cushman's last appearance on the stage, at Booth's Theatre. He delivered the farewell address, presenting the actress, on behalf of the Arcadian Club, with a crown of laurel "as a token both of their profound admiration for her genius and their high esteem for her personal character."

—One of the most remarkable displays in the art section of the Mechanics' Fair at Boston last month consisted of specimens of the heliotype productions of J. R. Osgood & Co. The process to which this name has been applied is substantially the same as the Albert-type—so-called from its inventor, Herr Joseph Albert, the court-photographer of Munich. We doubt if, in its application in this country, it has yet produced anything comparable in an artistic sense to what has been accomplished with it in Herr Albert's atelier; and we say this having in mind some of the earlier specimens only of that consummate artist's work. These were from nature, including a portrait of Albert himself, and while they were not without their shortcomings, they surpassed the best efforts in the same line of all his American imitators. Of Mr. Bierstadt's natural studies we have seen too few to speak positively. Messrs. Osgood's, to judge by their book-illustrations (*e.g.*, in Flagg's 'By-ways of New England' and Higginson's 'Oldport Days'), would be pronounced coarse and uneven and much inferior to the German examples. But their exhibition at the Fair was far stronger on this side than we had anticipated, and we have before us at this writing a heliotype landscape which is hardly distinguishable from a silver print in the quality of its shadows. The only rival work of this sort that we are familiar with has come from Mr. G. G. Rockwood of this city, who styles his a photo-engraving process. He has produced not only some very delicate landscapes, but the best portraits from life that we have seen. In black-and-white work, too, his process and the heliotype seem to be very much on a par, with a range of usefulness that is surprising to one who has never examined the results. A random selection of heliotypes on our table embraces reproductions, which leave nothing to be desired, of line-engravings, lithographs, pen-and-ink drawings (*e.g.*, an architectural elevation, a locomotive, a patent specification, a coast-survey tracing); of autographic work on glass with a needle, like Hoppin's etchings 'On the Nile'; and, in reduced facsimile, of a page of the *Boston Journal*, in the middle of which is a heliotype, from the building itself, of the *Journal* office. So wide is this range that it is surprising the Albert-type—to use the generic name—is not much more widely employed than it is in the illustration of books and magazines. Messrs. Osgood & Co., to be sure, are busy with publications of their own in which heliotypes play a prominent part, and they are now regularly assisting the Patent-Office and many of the Government bureaus in their official publications. The prints from nature stand in need of further development before they can become fully popular, and at present indicate not only that much depends on the character of the negative—*i.e.*, on the skill of the photographer in the first instance—but also upon the skill and attentiveness of the printer. However, the public is doubtless not aware of the proficiency already attained, and a visit to the two establishments we have named will be sure to excite pleasure and surprise.

—A month ago the third-term movement had assumed such consistency in English eyes that the *Daily News* had an article on the subject, which reminded a correspondent of that paper "of some remarkable words of the celebrated Dr. Franklin." Franklin had said in 1787 that mankind had a natural inclination towards kingly government, as an escape from aristocratic domination, and as giving a greater appearance of equality among citizens, and he added: "I am apprehensive—perhaps too apprehensive—that the Government of these States may in future times end in a Monarchy." This language the correspondent, discounting the re-election of General Grant in 1876, and assuming a Presidential third term to be the equivalent of an hereditary monarchy, thought "so prophetic that the words are worth recording." The *Daily News*, however, had another reader ready to turn correspondent, who showed that the history of the United States—which was not fully constituted until two years after Franklin's forebodings were uttered—justifies his caution in admitting that he might be "too apprehensive"; and that, "the experiment having now been tried for within two years of a century, the Americans have long passed from distrust in the practicability of republicanism to entire confidence in it."

"I have just returned," continues this correspondent, "from a visit of several months to the United States, and I can testify that its people as little desire to be ruled by a king as by a mob. . . . In an American the aversion, traditional and reasoned, to hereditary political privilege has all the strength of an instinct. From his earliest years he is taught to regard this aversion as one of the primary laws of philanthropy; and observation only corroborates his conviction that he has not therein been taught amiss. And he is further instructed, by all that he sees and reads, to look nowhere but in a republic for the general development of true manliness. Why, therefore, should he hanker after monarchy, with its inherent denial to humanity of its natural rights and of its complete ethical expansion?"

The correctness of these views was abundantly proved at the polls last week. Our British prophet, who by this time must be thoroughly puzzled by American politics, and perhaps has gone so far as to imagine that the revolution we have just witnessed hinged upon the question of the constitutional duration of the Presidency, deserves to be disabused of this idea also. The third-term talk doubtless served a purpose in bringing odium upon the Republican party, but the popular verdict at last was as direct a censure of the current term—not half run out—as any President or Administration probably ever had.

—England sends out in books, says the *Publishers' Circular*, six times the value she receives; and it is rather surprising to find that the United States absorbs nearly 35 per cent. of the four and a half million dollars' worth exported. In the Continental exchange, England, as the land of dear books, gives less than she receives from France and Germany. From Holland she imports but a half of what she imports from Germany, yet a third more than from the United States (£13,560); from France most of all (£46,958). Such at least were the custom-house returns for 1872. Among the works which this country may be expected to import during the coming season, we select the following from the latest publishers' announcements on the other side: Col. Egerton Warburton's remarkable 'Journey across Australia'; 'Assyrian Explorations and Discoveries,' by George Smith, of the British Museum; 'Turkistan,' by Eugene Schuyler, American Secretary of Legation at St. Petersburg, being an account of his journey in the Russian Provinces of Central Asia; 'The Straits of Malacca, Indo-China, and China,' by J. Thomson; 'Saskatchewan and the Rocky Mountains,' a diary of travel, sport, and adventure by the Earl of Southesk. Reading not so light is Sir Henry Maine's 'Early History of Institutions'; Gardiner's 'History of England under the Duke of Buckingham and Charles I., 1624'; and Darwin's 'Selection in Relation to Sex.' Mr. Murray, who is the publisher for Maine and Darwin, also admits to his list 'Beauties of Lord Byron's Poetry and Prose,' selected by a clergyman, and therefore presumably safe reading. In biography, we note a 'Life of John Locke,' by Mr. Fox Bourne, not yet assigned to any publisher, and the same may be said of Prof. Seeley's 'Life of Stein,' which, according to the *Academy*, is "expanding into a general view of the changes which took place in Germany in the Napoleonic age, and an introduction to the history of the Germany of our own age." Strauss's 'Ulrich von Hutten, his Life and Times' is to appear in an English dress. Mr. Sayce's 'Principles of Comparative Philology' (Trübner & Co.) must be already obtainable. We have almost a right to mention among English publications an 'Early English Chrestomathy,' of which the first part covers A.D. 1250–1350. The editor is Dr. Richard Paul Wülcker, of Leipzig, who at Wörth was engaged in capturing a mitrailleuse and winning the iron cross. He adds notes and a complete glossary. Part II. will come down to 1500 A.D.

—We are informed by a correspondent who has had an opportunity of examining the manuscripts of Michael Angelo preserved in the Casa Buonarroti at Florence, and now possessed by the city, that for some years past they have been accessible to students. All the original copies of Michael Angelo's poems have been carefully collated, and the results of the collation given in Guasti's excellent edition (Florence, 1863) of 'Le Rime di Michel Angelo Buonarroti,' in which, for the first time, we have the genuine text, free from the modernizations, softenings, and other changes in the taste of the seventeenth century, made by the original editor, the poet's pedant nephew. The letters have been published but in part. They are not so important a collection as that possessed by the British Museum, of which Herman Grimm has printed a selection in the Appendix to his overrated 'Life of Michael Angelo.' The two collections are supplementary one of the other. Published in full, together with the numerous scattered letters of the great artist to be found in various collections, printed and unprinted, we shall have a body of exact information respecting many passages of his life which has hitherto been wanting to his biographers; but there is great extravagance in Mr. Beavington Atkinson's assertion that we shall now be made acquainted with every month of the life of Michael Angelo, from the hour when he first could write down to the year of his death.

CAIRNES'S POLITICAL ECONOMY.*

IN this his latest work, Prof. Cairnes has undertaken "to recast some considerable portion of political economy" (preface). When it is said that his discussions cover the whole theory of value, the relations of labor and capital, and the laws of international trade, it will be seen that the portion of political economy thus to be recast is indeed very considerable. We shall obtain our best view of the scope of the present work of Prof. Cairnes, as well as connect that work most clearly with his previous contributions to political economy, if we go back to the commanding position taken by this author in his treatise published in 1857 ('Dublin Lectures')—a treatise which remains the ablest and most authoritative exposition of 'The Character and Logical Method of Political Economy.'

In that work, Prof. Cairnes, through some very effective criticism of Mr. Senior's 'Oxford Lectures,' showed, as we think, conclusively, that political economy is to be regarded as a science *positive* with reference to the character of its premises, which are laid in existing facts, whether mental or physical; but *hypothetical* in respect to its conclusions, inasmuch as "the desires, passions, and propensities which influence mankind in the pursuit of wealth are almost infinite" (p. 33); and as the economist can never hope to embrace within his reasoning all of these, each in its own proper strength, his conclusions, based on less than the whole of human nature, must remain hypothetical, *i.e.*, true only in the absence of disturbing causes; the results he reaches will inevitably exhibit discrepancies when compared with the actual facts of human life and industry.

It is at this point that Prof. Cairnes corrects Mr. Senior, who had certainly appeared, in his zealous denunciations of the epithet hypothetical, to assume that the conclusions of political economy might be made positive ('Oxford Lectures,' p. 61–66). But in the act of correcting Mr. Senior, and demonstrating the necessarily hypothetical character of political economy, which to many minds would seem the very despair of the science, Prof. Cairnes advanced to a position more promising for true progress in the science than any before or since taken by any one of the orthodox economists—a position from which we can best trace the scope of his own subsequent work and comprehend the significance of the volume before us.

We have cited Prof. Cairnes's reason for holding that while the premises of political economy are, so far as they extend, positive, being laid in the facts of human nature and the conditions of the external world, the conclusions derived must necessarily remain hypothetical, because those premises can never be made to extend far enough, *i.e.*, to embrace all of those facts and conditions. But while the economist may not in any event hope to compass all the motives of human action respecting wealth, it is his duty to seek constantly to make his conclusions approach nearer to the facts of society and industry by embracing more and more, from time to time, of those "subordinate influences" which "intervene to disturb and occasionally to reverse the operation of the more powerful principles, and thus to modify the resulting phenomena" (p. 34). These subordinate influences may affect either the motives of human action respecting wealth, or, secondly, the principles of population, as derived from the physiological character of man and his mental propensities, or, thirdly, the physical qualities of the natural agents, more especially land, on which human industry is exercised (p. 50). These subordinate influences are more and more to be included as they are more and more disclosed, identified, and determined, in their direction and degree, through the divergencies detected between the results anticipated by the economic philosopher and the facts observed by the economic statistician (p. 57). Each such influence thus disclosed "will be like the discovery to an astronomer of a new planet, the attraction of which, operating on all the heavenly bodies within the sphere of its influence, will cause them more or less to deviate from the path which had been previously calculated for them" (p. 35).

We might cite many passages from this admirable though much-neglected treatise, in which the author effectively enforces the duty of the economist to extend his premises continually to include more and more of the facts of society and industry, and more and more of the motives of human action regarding wealth. This obligation no other writer in the science has recognized theoretically with anything like the fulness of Prof. Cairnes; no other writer has respected in his own conduct of economic investigation with equal conscientiousness or with comparable success.

Mr. Mill started out (in his 'Essays on Some Unsettled Questions,' etc.) with the expressed determination to exclude as much of human nature as possible from his reasonings in political economy:

"Political economy (he says) is concerned with man solely as a being who desires to possess wealth, and who is capable of judging of the comparative efficacy of means for obtaining that end. It predicts only such of the phenomena of the social state as take place in consequence of the pursuit of wealth. It makes entire abstraction of every other human passion or motive, except those which may be regarded as perpetually antagonizing principles to the desire of wealth, namely, aversion to labor, and desire of the present enjoyment of costly indulgences. These it takes, to a certain extent, into its calculations, because these do not merely, like other desires, occasionally conflict with the pursuit of wealth, but accompany it always as a drag or impediment, and are therefore inseparably mixed up in the consideration of it. Political economy considers mankind as occupied solely in acquiring and consuming wealth."

Now, without attempting to exhaust the list of "desires, passions, and propensities which influence mankind in the pursuit of wealth," which are, as Prof. Cairnes has said, "almost infinite" in number, we shall best set forth the difference between the two methods of political economy, by briefly indicating a few of those which Mr. Mill would "abstract" and reject from human nature, taken for the purposes of this science. There is the love of country, which comes into play in international dealings, and so far "modifies the force of the other principles, desire for wealth and aversion to labor," that "international values do not follow simply the cost of production" (Cairnes, 'Log. Meth., 68–69). There is the force of ignorance (opposed to what we understand Mr. Mill to mean by the "capability of judging of the comparative efficacy of means to that end," *i.e.*, wealth), with its attendant superstitions and fears, found to be sufficient to maintain prices and wages in one county permanently lower by one-third or one-half than in another, perhaps an adjoining, county of the same kingdom. Canon Girdlestone's reports of his charitable efforts in removing laborers from the South to the North of England bear striking testimony to the effect of this cause. There is the force of public opinion, which is so influential in human action that, according to Prof. Rogers, rents in England have always been kept by it considerably below the point to which competition would have carried them; while, according to Sismondi, the same influence has so far modified "the desire for wealth and aversion to labor" in many sections of Italy, that landowners do not so much as contemplate the raising of rents even in changing their tenants. Then there is the force of custom, which, in conspicuous instances, covering, indeed, rents, prices, and wages, one or all, throughout nations that comprise one-half the human race, has practically extinguished competition, which is the unmodified operation of "the desire of wealth." It is true that Mr. Mill does not in his later writings abide by his own definition of the economic man, but generally assumes other "motives and passions" than those with which alone, he says, political economy is concerned; but this is done unsystematically; there is no more reason for doing it in those instances than in instances where it is left undone; and in general it may be said that the cases in which Mr. Mill argues as if men were utterly selfish (*i.e.*, "occupied solely in acquiring and consuming wealth") and perfectly wise (*i.e.*, "capable of judging of the comparative efficacy of means to that end") are far more numerous and no less important that those in which he takes account of love of country, love of home, ignorance, superstition, the force of custom, the force of public opinion, and other modifying causes. Mr. Ricardo made even less of human nature. His economic man answers exactly to a once favorite theological description of the arch-enemy of souls, a being composed of equal parts of selfishness and intelligence. Adam Smith, on the other hand, actually came to teach political economy as a professor of moral philosophy, and he always taught it as a branch of moral philosophy.

We have thought we could not too strongly emphasize the distinction in method between Prof. Cairnes and Mr. Mill, on account both of the intrinsic importance of this distinction and of the light it affords respecting Prof. Cairnes's subsequent contributions to political economy. The present volume contains the results of many years of careful investigation conducted in the spirit of the extracts we have cited from the Dublin lectures. Previously Prof. Cairnes had published a series of essays upon the 'Gold Question,' in which he subjected the effects of the Californian and Australian discoveries to a masterly analysis, with the result of completely exploding the opinion that a depreciation of the currency could only show itself in a uniform action upon all prices; an opinion which was, not long ago, well-nigh universal, representing the common assumption of the orthodox economists that an economical impulse administered anywhere will be propagated uniformly in every direction, through media all of absolute mobility and elasticity. Prof. Cairnes shows, on the contrary, that the subjects of an economical impulse may be very differently affected by it; and as the result of a large induction he establishes, at least provisionally, the order of movement among the several principal classes of commodities, *e.g.*, as between crude products and manufactured goods; among the several classes of crude products, *e.g.*, as between those of animal and those of vegetable origin; and among the several classes of animal products, *e.g.*, as between mutton and wool. It need not be said that such results become of vast

* 'Leading Principles of Political Economy Newly Expounded. By J. E. Cairnes.' New York: Harper & Bros. 1874.

significance in the general theory of value, and in special theories of rents and wages.

In the work now before us we have the premises of political economy widely extended as the result of many similar investigations by the author. We have space for but a single instance, and will select Prof. Cairnes's discussion of the limitations of competition. According to the doctrine current among economists, the body of laborers, at least within the same country, are taken as constituting a homogeneous body of competitors:

"That law" (the cost of production), says Prof. Cairnes, "is ordinarily regarded as a principle governing value *universally*, wherever it affects value at all: governing, that is to say, the value of certain classes of commodities *in all exchanges*; so that, the conditions of their production being known, the law of their value is supposed to be known" (pp. 78, 79).

Such *would* be the result as the assumption of general competition. Prof. Cairnes, however, sharply traverses this assumption:

"What we find, in effect, is not a whole population competing indiscriminately for all occupations, but a series of industrial layers superimposed on one another, within each of which the various candidates for employment possess a real and effective power of selection, while those occupying the several strata are, for all purposes of effective competition, practically isolated from each other" (p. 72).

This doctrine of "non-competing industrial groups" Prof. Cairnes makes cardinal in his theory of value. He repeatedly (pp. 98–106) assigns to these "non-competing domestic groups" precisely the same practical isolation which had been previously shown to exist between independent nations. From this restriction of competition Prof. Cairnes concludes that

"The exchange of all commodities provided by laborers belonging to the same industrial group or competing circle will be governed by the principle of cost; this results necessarily from the fact that competition *is* effective within such groups or circles; but the exchange of commodities produced by laborers belonging to different groups or competing circles will, for the opposite reason, not be governed by this principle" (p. 74).

What, then, does govern what we may call group values—that is, primarily, the prices of the products of each group by turns, and, secondly, the wages obtained by the laborers within each such group? Prof. Cairnes answers: Reciprocal demand. The doctrine may be thus stated: Group-values are governed by the demand of each group for the productions of all other groups, as against the demand of all other groups for what itself produces; the result of this play of forces being, that what may be called the exports of each group (the amount of products sold outside itself) discharge its liabilities to all other groups.

"Whatever increases the demand of a given group for the products of outside, that is to say, non-competing industries, or (what comes to the same thing) whatever increases the supply of its products available for the purchase of the products of such industries, will, other things being the same, depress the prices of its products in relation to the prices of the products of the industries against which they are exchanged, and *vice versa*. While whatever increases the demand of the outside industries for the products of a given group will have the contrary effect, and will raise the level of its prices in relation to those of the non-competing groups with which it trades, and *vice versa*" (pp. 101, 102).

We have contrived these quotations in order to show the boldness and thoroughness with which Prof. Cairnes carries out his doctrine of non-competing groups into the laws of prices and of wages. His precise classification of labor in this respect may not remain. A better survey may find more or other classes than Prof. Cairnes provisionally enumerates, but the principle of the practical isolation, not of nations only but of classes of producers, is, we think, destined to be fully approved, and to become of great importance in "recasting," not "some considerable portion" only, but the whole of political economy.

GAUTIER'S WINTER IN RUSSIA.*

WE have observed for some time past an increasing mania for translations. It is a very good fashion, but even the best things may be overdone. Of course, dull books should never be translated, but it by no means follows that because a book is clever it should be interpreted into another tongue. A book may be very clever in French or in German and very dull in English, and translation, intended as a compliment, may become in fact an unpardonable injury. There are certain cases, indeed, in which it seems to us really immoral; when it deliberately encumbers a foreign language, namely, with books of a light and trivial order. Natives have a certain property in their language, and though we may regret their using it for frivolous purposes, one can hardly pretend to legislate against them. As a general thing, a people may be trusted to produce its own padding, and there is no good reason why our groaning English idiom should be weighted with exotic commonplaces. A great many things are said in society which it is very well to hear once, if you happen to be sitting near the speaker; but he would be a very officious master of ceremonies who should insist on repeating and propagating them. In so far as we may lay down a general rule in the case we should say that the books translatable were books of *matter*, and books untranslatable books of *manner*. If the substance of a book is light and its chief attraction is in the way things are said, it had certainly better be left in the closely-fitting garment of the original. This, of course, limits very much the translation of merely entertaining and amusing books, but the restriction in such cases is especially wholesome. If a writer has nothing but sweetened froth to offer the public, it is well that he should at least have been at pains to beat his froth into the finest possible consistency; and just so it is well that readers who have an appetite for the compound should be forced to take such exercise as is involved in a walk to the confectioner's. To read such a writer as Théophile Gautier, for instance, is pure diversion, and a healthy-minded reader ought to pay for his pastime by making the very moderate effort required for reading him in the original. It is true that readers are becoming such abandoned Sybarites, and the aversion of the public at large to anything which compels attention to pause for an instant and touch her feet to the earth is so strikingly on the increase, that the "healthy mind" in question can be but rarely postulated. Gautier is precisely one of the writers who are everything in their own tongue, and nothing, or almost nothing, out of it. He is what the French call a *fantaisiste*, and his fantasies are four-fifths verbal to one-fifth intellectual. Half the charm of his writing is in the mere curl and flutter of his phrase, as he unreels it in long bright-colored ribands; but in an English version the air of spontaneity soon disappears, and this ceaseless play of style becomes rigid and awkward. Moreover, Gautier chose his words with an extraordinary fineness of instinct, and in his pictures, as they stand, every hair-stroke tells. A translator rarely chooses the foreign equivalent with the care with which such an artist as Gautier selects the original term, so that the phrase must often be at best but a rough approximation to the author's. In each case the deflection is slight, but the difference in the whole is enormous. The house when it is finished is found to stand crooked. The translation before us is executed with commendable skill; its only fault is that it *is* a translation. It will have rendered a service, however, if it sends a few readers to its untranslated companions.

The 'Voyage en Russie' is one of Gautier's later works and not one of his best. It is not as full and compact as the 'Voyage en Espagne' or 'Italia,' the former of which has become in its way a sort of classic. Most of the writing is spread rather thin, and the art of the bookmaker is a trifle obvious. But the book is a charming one, and nothing approaching it in merit has been written on the outward face of things in Russia. Gautier was so true an artist that everything he wrote has a singular unity, and one may trust it from beginning to end to contain no false notes. And then the true notes are struck with such a masterly hand! As you close the 'Voyage en Russie' you seem to have before your eyes a sort of symbolic physical image composed of the white of glittering snows and the steely blue of northern air. The book is a verbal symphony on the theme *frost*. Gautier's winter in Russia was apparently one of the happiest seasons of his life, and the reader feels the contagion of his deep good-humor—of his luxurious enjoyment of his holiday, his fine friends and their dusky hot-house drawing-rooms, and his sleigh-rides beside pretty "Hyperborean" countesses, muffled in twenty thousand francs' worth of fur. He is the prince of travellers, taking the word in its simplest sense. He neither enquires nor investigates, nor dissents nor theorizes; he doesn't care a straw for politics, and if you had no notions of your own on the subject, you would never learn from his pages whether the Muscovite Empire is an absolute monarchy or a radical republic. He simply travels—that is, he looks and enjoys. His business is only with what comes within the jurisdiction of the eyes; but never were a pair of eyes so vigilant. One feels that from the moment he takes his seat in the railway carriage, facing the engine and next to a window, it behooves Mother Nature to be on her good behavior: Burns's "chiel" taking notes was nothing to this. He sees pictures where most people find mere dead surfaces, and where common eyes find the hint of a picture he constructs a complete work of art. His fancy is always on the alert. If he goes into an old crypt in the Kremlin at Moscow, he reflects that "here it was that, in an atmosphere heated to excess, the women, crouched in Oriental fashion upon piles of cushions, used to pass the long hours of the Russian winter looking out through the little windows to see the snow sparkle upon the gilded cupolas, and the ravens describe wild spirals around the belfries." He was an admirable descriptive poet, but we lately heard it truly, although somewhat uncivilly said, that his powers of reflection were about equivalent to those of an intelligent poodle. There is something characteristic in the way he here brings his journey and his book to a close—the way that, the

* 'A Winter in Russia. From the French of Théophile Gautier. By M. M. Ripley.' New York: Henry Holt & Co. 1874.

play being over and the curtain dropped, the writer's mind feels no impulse towards a moment's musing—towards pointing any other moral than that "a coupé awaited me at the (Paris) station, and a quarter of an hour later I found myself surrounded by old friends and pretty women, before a table brilliant with lights, on which a fine supper was smoking, and my return was celebrated gaily until the morning." But if Gautier was not a moralist he was an incomparable painter, and there is no such good picture as this of St. Petersburg and Moscow.

SECOND SERIES OF

Oriental and Linguistic Studies.

By WILLIAM DWIGHT WHITNEY,

Professor of Sanscrit and Comparative Philology in Yale College, author of 'Lectures on the Science of Language.'

1 vol. crown 8vo, with an index, cloth, $2 50.

This series of Prof. Whitney's 'Oriental and Linguistic Studies' is devoted to a class of subjects somewhat different from, but quite as interesting as, those included in the first series. We have here three papers on the relation of the East and the West, then there are two bearing especially on the Science of Religion, five on the English Language, its orthography and phonetics and general phraseology, and finally an exhaustive discussion of the Astronomy of the Ancients, which is illustrated by a chart.

A RAMBLE ROUND THE WORLD, 1871.

BY M. LE BARON DE HUBNER,

Formerly Ambassador, Minister, and author of 'Sixte Quint.'

Translated by LADY HERBERT.

1 vol. 12mo, pp. 658, cloth extra, gilt, $2 50.

CONTENTS:

PART I.—AMERICA.

CHAP. I. Departure—Sabbath day's rest at Queenstown—The Emigrants on board the *China*—Inconvenience of the Navigation to the North of the 41st Parallel—Disembarkation at New York.
CHAP. II. Broadway—Wall Street—Fifth Avenue—Influence of New York on the destinies of America.
CHAP. III. The Dead Season in the Official Capital—The *Alabama* Treaty from the American point of View—Transformation of Ideas and Habits since the Civil War—Conflicting Opinions on the Emancipation Question—Growing Preponderance of the colored Races in the Southern States.
CHAP. IV. Travellers in the Far West—The Miseries of a single Man—Aristocratic Longings in the Country of Equality—The Susquehanna—The Juniata—Arrival at Chicago.
CHAP. V. Appearance of Chicago—Growing Importance of the German Element—The Great Caravanserais—Economy of Human Strength—The superiority in the United States of the lower strata of Society—Chicago the great Emporium of the West—Michigan Avenue—A House on Wheels—General Sheridan—Manner and Character of European Travel—The Position of Woman in the Family.
CHAP. VI. Mr. Pullman and his Cars—The Mississippi—Race between two Trains—Omaha—Prairies—The Valley of La Plata—The Indians—A Stationmaster Scalped—Stations on the Pacific Railway—Cheyenne—The Roughs—The Life of U. S. Officers in the Far West—Passage of the Rocky Mountains—Fearful Descent of Mount Wahsach—Brigham Young at Ogden—Arrival in the Capital of the Mormons.
CHAP. VII. Appearance of the Town—The Modern Crusaders—The Mormon Theatre and Tabernacle—Townsend Hotel—The Indians and the Indian Agents—Douglas Camp—The Cañons—Brigham Young—Mormonism.
CHAP. VIII. Corinne, the type of a Cosmopolitan Town—A *Pow-Wow* on the Bear River—Excursion on the Mountains—Copenhagen—Definition of the word *Rowdy*.
CHAP. IX. The Great American Desert—The Silver Palace Cars—Ascent of the Sierra Nevada—Cape Horn—Arrival at San Francisco.
CHAP. X. San Francisco, its Origin—The Pioneers—The Reign of Pikes—The Vigilance Committee—Commerce and Trade—Wells & Fargo—Growing Reaction against the Gold-diggers—Position, Climate, and Appearance of San Francisco—Its Inhabitants—Its Cosmopolitan Character—A German Home—The Chinese Quarter—Cruel Treatment of Chinese Emigrants—Jesuit Colleges—Cliff House.
CHAP. XI. Way of Travelling—Modesto—Mariposa—The Virgin Forest—The Big Trees—The Valley of the Yosemite—The Falls—Coulterville.
CHAP. XII. Departure from the Golden Gate—Dismal Appearance of San Francisco from the Sea—The Pacific Mail Company—The *China*—Monotony of the Passage—Reflections on the United States—Landing at Yokohama.

PART II.—JAPAN.

CHAP. I. First Impressions of a New Arrival—The Look of the Town—Commercial Movements—Europeans at Yokohama.
CHAP. II. Japan, saving the Trade Ports and the Towns of Yedo and Osaka, always Closed to Strangers—Way of Travelling in the Interior—Passage of the Odewara River—The Baths of Miyanôshita—The Pilgrims of Fujiyama—The Temple of Yoshida—The Defile of Torisawa—Return to Yokahama.
CHAP. III. The Celebrated Tea-House of Hata—A Bad Night—The Lake of Hakoné—The Love of Nature and Taste for Art Spread among the People—Spirits Travelling—The Hot Springs of Atami, the Holy Island of Enoshima—Daibutsu—The Old Residence of the Sioguns—Buddha in Disgrace—A Great Japanese Lady.
CHAP. IV. Yedo—The Neighborhood—The Shiba and its Art Treasures—Silks and Curiosities—Feast at Sawa's—The Palace of Hamogotén—Dinner at Iwakura's—Dramatic Art—A Japanese Vaudeville—Yedo at Night—Audience of the Mikado.
CHAP. V. Kobe and Hiogo—The Bar of Yodogawa—Osaka—Its Commercial Importance, etc., etc.
CHAP. VI. Kiyoto—Fujimi—The Capital of the West—The Palace of the Mikado—The Castle of the Siogun, etc.
CHAP. VII. The Lake of Biva—Return to Osaka—The Arts in Japan.
CHAP. VIII. Nagasaki—Papenberg—Detsima—Native Christians—Political Position of Japan.

PART III.—CHINA.

CHAP. I. Shanghai—The Different Appearance of the "Concessions"—The Chinese Town—A Symphony of Haydn Performed by the Chinese—The Sisters' Orphanage—Fluctuations in the Present State of Trade.
CHAP. II. The Weariness and Length of the Voyage to Pekin—General Aspect of the Town—Scenes in the Streets—Shops and Chinese Curiosities—The Jesuits' Observatory—The Portuguese Cemetery—The Great Wall—The Summer Palace—The Climate of Pekin—Position of the Diplomatic Corps—The Question of Audiences—Visit to Prince Kung.
CHAP. III. Tien-Tsin—The Settlement—The Serpent God—The Club of Celebrities of Shiansi—The Massacres.
CHAP. IV. The Amenities of the Yellow River—Appearance of Hong-Kong—Its Commerce—Its Political and Military Importance.
CHAP. V. The Villages of Si-Kung, San-ting-say, and Jing-kok—History of the Christian Settlements of the District of Se-non.
CHAP. VI. The Canton River—Shamien—Elegant Shops—A Bonze's Head—The Temple and Convent of the Ocean Banner—Eng and his House—Procession of the God of War—The Great Prison—The Pretorium—Visit to the Viceroy—Fati—The City of the Dead—The Place of Executions.
CHAP. VII. Macao—The Decay—Question of Coolies—Progress of the Chinese Element.
CHAP. VIII. Departure from Hong-Kong—The Missionary Question—State of China as Regards its Relations with European Powers—Arrival at Marseilles.
APPENDIX.

CAVE HUNTING: RESEARCHES ON THE EVIDENCE of Caves respecting the Early Inhabitants of Europe. By W. Boyd Dawkins, M.A., F.R.S., etc., Curator of the Museum, and Lecturer in Geology in the Owens College, Manchester. With colored Plate and Woodcuts. 8vo, $7.

PHARMACOGRAPHIA. A History of the Principal Drugs of Vegetable Origin found in commerce in Great Britain and British India. By F. A. Flückiger and D. Hanbury, F.R.S. 8vo, $6.

"It has been the author's aim to investigate anew the field of vegetable materia medica, in order as far as possible to clear up doubtful points, and to remove some at least of the uncertainties by which the subject is surrounded. In furtherance of this plan they have availed themselves of the resources offered by ancient and modern history; nor have they hesitated to lay under contribution either the teaching of men eminent in science or the labors of those who follow the paths of general literature."—*Extract from Preface.*

MENDELSSOHN. LETTERS AND RECOLLECTIONS. By Ferdinand Hiller. Translated by M. E. von Glehn. With Portrait. Extra crown 8vo, cloth, elegant, $2 25.

"Dr. Hiller's book cannot fail to be read with deep interest by all lovers of musical art. It abounds with anecdote and reminiscence strongly appealing to their favorite tastes."—*N. Y. Tribune.*

UNDER THE LIMES. A New Novel. By E. Archer, author of 'Christina North.' 12mo, paper, $1 25.

"The author of 'Christina North' comes before us again with a book which shows the same qualities and which deserves, therefore, to be distinguished from the ordinary throng. . . . The book shows considerable talent. It is not perhaps very thrilling or dramatic, but the scenery is harmonious and delicately described."—*London Saturday Review.*

THE TRANSIT OF VENUS. By George Forbes, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. With numerous illustrations. Crown 8vo, $1. (Nature Series.)

"It gives an interesting account of the general subject, first, in its historical aspect; second, the scientific conditions of the problem; third, the preparations for solving it by the different nations. The volume is copiously illustrated, and will meet the wants of general readers who wish to know something about the great scientific event that is to happen in December."—*Popular Science Monthly.*

THE COMMON FROG. By St. George Mivart, F.R.S., etc., Lecturer on Comparative Anatomy at St. Mary's Hospital. With numerous illustrations. Crown 8vo, $1. (Nature Series.)

WORDSWORTH, SHELLEY, KEATS, and Other Essays. By David Masson, Professor of English Literature in the University of Edinburgh. Crown 8vo, cloth, $1 75.

"This volume is one of the most enjoyable of its class in print. It is entertaining throughout, and some parts of it are very instructive."—*Literary World.*

ESSAYS ON SHAKESPEARE. By Karl Elze, Ph.D. Translated, with permission of the Author, by L. Dora Schmitz. 8vo, $4.

HOLLAND HOUSE. By Princess Marie Liechtenstein. With 5 Steel Engravings by C. H. Jeens, after Paintings by Watts and other celebrated Artists, and numerous Illustrations drawn by Professor Delamotte, and engraved on Wood by J. D. Cooper and others. Third and Cheaper Edition. In 1 vol. medium 8vo, extra gilt, $7 50.

A THEORY ABOUT SIN IN RELATION TO SOME Facts of Daily Life. Lent Lectures on the Seven Deadly Sins. By the Rev. Orby Shipley, M.A. Crown 8vo, $3.

CATHOLIC REFORM. By Father Hyacinthe. Letters, Fragments, and Discourses. Translated by Mme. Hyacinthe Loyson. With a Preface by the Very Rev. A. P. Stanley, D.D., Dean of Westminster. Cr. 8vo.

THE IMITATION OF CHRIST. By Thomas à Kempis. Translated, with Preface, by W. Benham, D.D., Vicar of Margate. Printed with Borders in the Ancient Style after Holbein, Dürer, and other Old Masters, containing Dances of Death, Acts of Mercy, Emblems, etc., and a variety of curious Ornamentation. Crown 8vo, $3.

BIRDS, THEIR CAGES AND THEIR KEEP. Being a Practical Manual of Bird-Keeping and Bird-Rearing. By K. A. Buist, with Colored Frontispiece and other Illustrations. Crown 8vo, cloth extra, $1 75.

"The book is delightfully written, and the directions for the management and rearing of the birds and for their treatment in disease and illness, are so clear, sensible, and humane that the whole race of cage-birds ought to find a marked amelioration in their condition, especially in the articles of food and cleanliness."—*Athenæum, London.*

THE VICTORY OF FAITH. By Julius Charles Hare, M.A., Archdeacon of Lewes. Edited by Professor Plumptre, with Introductory Notices by the late Professor Maurice and Dean Stanley. Third edition, crown 8vo, $2 25.

HISTORY OF ANCIENT PHILOSOPHY. By the Rev. W. Archer Butler, late Professor of Moral Philosophy in the University of Dublin. Edited by W. Hepworth Thompson, D.D., Master of Trinity College, Cambridge. (Revised by the Editor.) New and cheaper edition, in 1 vol. 8vo, price $5.

A GRAMMAR OF THE LATIN LANGUAGE from Plautus to Suetonius. By H. J. Roby, M.A. Part I., containing Sounds, Inflexions, Word Formation, etc., crown 8vo, $2 50; Part II., containing Syntax, Prepositions, etc. (just published), crown 8vo, $3 50.

A COMPENDIOUS DICTIONARY OF THE FRENCH Language (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By Gustave Masson, Assistant Master at Harrow School. Square 12mo, half-morocco, $2 50.

ELEMENTARY LESSONS IN HISTORICAL ENGLISH Grammar. By the Rev. R. Morris, LL.D., President of the Philological Society of London. 18mo, $1 25.

*** Macmillan's Complete Classified Catalogue sent by post on receipt of 6 cents.

MACMILLAN & CO., 21 Astor Place, New York.

THE WEEK IN TRADE AND FINANCE.

NOVEMBER 9, 1874.

THE bank statement on Saturday showed no important changes beyond an increase in loans of $3,108,000. The banks have made a gain of $158,500 in their surplus reserve. The following shows the changes in the averages for the past two weeks:

	Oct. 31.	Nov. 7.	Differences.
Loans	$281,958,500	$285,066,500 Inc..	$3,108,000
Specie	12,021,100	12,574,800 Inc..	553,700
Legal tenders	59,621,600	59,451,700 Dec..	169,800
Deposits	225,852,700	226,753,900 Inc..	901,200
Circulation	25,057,000	25,082,400 Inc...	25,400

The following shows the relations between the total reserve and the total liabilities:

	Oct. 31.	Nov. 7.	Differences.
Specie	$12,021,100	$12,574,800 Inc..	$553,700
Legal tenders	59,621,600	59,451,700 Dec..	169,900
Total reserve	$71,642,700	$72,026,500 Inc..	$383,800
Reserve required against deposits	56 463,175	56 688,475	.....
Excess of reserve above legal requirem't,	15,179,525	15,388,025 Inc..	158,500

The stock market, as soon as the result of the different State elections was known, commenced to improve, and on Saturday the quotations indicated a recovery of from 1 to 2⅝ per cent. on the entire list of stocks, the market closing at the highest point of the week. To-day a further advance took place, carrying prices from ¼ to 1 per cent. above those of Saturday, with every indication of a further advance. We have not ascertained that there is any combination or "clique" engaged in moving the market. The professional speculators appear to be active buyers, but entirely on their individual accounts. We notice an improvement to-day in some of the investment stocks, such as Illinois Central and Chicago, Burlington and Quincy, which have sold at 97 and 102¾ respectively. Adams Express has advanced to 119 bid. There is a report in circulation that the cash surplus of the Company, estimated at nearly 50 per cent. upon its capital, will be divided among the stockholders.

The following shows the extreme range of fluctuations in the principal stocks during the past week:

	Highest.	Lowest.		Highest.	Lowest.
New York Central	102⅞	101¾	New Jersey Central	106¾	106
Harlem	130	129¾	Michigan Central	74⅛	73¾
Erie	28⅞	28⅛	Union Pacific	36⅛	33⅞
Lake Shore	81⅝	80⅛	C., C. and I. C.	10	9⅝
Wabash	30¾	29	Hannibal and St. Joseph	26⅛	24⅛
Northwestern	39¼	36⅞	Hannibal and St. Joseph preferred	32	29¼
Northwestern preferred	54	52¼	Ohio and Mississippi	30⅝	27⅞
Rock Island	98¾	96⅞	Panama	115	114⅜
Fort Wayne	92⅞	92	Western Union Te'egraph	79¾	78
St. Paul	34⅝	32⅛	Atlantic & Pacific Telegraph	20	17¾
St. Paul preferred	54	50⅜	Pacific Mail	45⅞	43¼
Pittsburg	88¼	87¾	Adams Express	118	115⅝
Delaware, Lackawanna and Western	109⅛	108⅜			

Government bonds have been active since Tuesday, but as the bulk of business is transacted in the offices of the large dealers the amount of business is by no means shown by the daily printed list of sales. Prices have been well maintained in spite of the changes in investments which have been going on, such changes being the result of the new turn in political affairs.

State bonds during last week were quiet and dull, but to-day there was more activity in those of the Southern States, these being in demand by investors, who look for a better management of the finances of those States which have lately passed into the hands of the taxpayers. At present prices there are apparently few bonds for sale, holders, of course, being influenced in holding on by the same reasons which encourage purchases. In railroad mortgages Union Pacifics have been the leading feature—the firsts advancing to 90. We have only to repeat that good railroad bonds are in demand, and that prices continue to hold firm. Sales of New York Central firsts were made at 110½ and 118⅞, with apparently no limit to the amount that would be taken at 110 and over.

The gold market has been quiet, with the quotations confined between 110 and 110⅛. A small premium has been paid for the use of cash gold, but nothing higher than at the rate of 2½ per cent. per annum. The Treasury will sell during the present month $500,000 gold each week.

NOTICE TO THE HOLDERS
OF THE
FIRST-MORTGAGE BONDS OF THE OREGON AND CALIFORNIA RAILROAD.

The undersigned Trustees are prepared to purchase, for the Sinking Fund, a certain amount of the First Mortgage Bonds of the Oregon and California Railroad Company, and hereby invite offers of such bonds from holders.

The lowest offers will be accepted up to the amount of the available means which are derived from the sale of the Company's lands; but no proposals above par and accrued interest in gold will be considered.

Communications stating amount and price of bonds, and marked "Offer of Oregon and California Railroad Bonds," may be addressed to the undersigned, care of the London and San Francisco Bank, San Francisco, California.

MILTON S. LATHAM,
WILLIAM MORRIS,
FAXON D. ATHERTON, } Trustees.

SAN FRANCISCO Sept. 1, 1874.

THE TWELVE APOSTLES.

Twelve separate, full-length figures, designed and engraved by Hans Sebald Beham. This distinguished artist was born at Nuremberg, A.D. 1500, and belonged to the school of Albert Dürer. He possessed genius and a ready invention. His drawing is correct, and the expression of his heads admirable. His copperplates are executed entirely with the graver, in an uncommonly correct and delicate manner.

One set of the above beautiful prints will be sent to any address on receipt of two dollars. One impression will be sent on receipt of twenty-five cents.

Also, by the same artist, a full-length figure of Christ ascending—sent on receipt of twenty-five cents.

It should be distinctly understood that the above impressions are printed from the original plates.

Address GEORGE GOODWIN & CO., Box 1,984, Boston, Mass.

All orders should be distinctly written—including Name, Town, County, and State.

THIRD THOUSAND.

HOLDEN WITH THE CORDS.

By the author of 'Shiloh.' 12mo. 517 pp. $2.

"A good story and well worth perusal. The plot is exceedingly clever, and the characters are well conceived."—*N. Y. Evening Post.*

"Mrs. Jay is a writer of a great deal of natural power, and of a good deal of originality; and her forte lies in her management of the development of her plot, which she succeeds in keeping interesting with all its intricacy."—*The Nation.*

E. P. DUTTON & CO., PUBLISHERS,
713 Broadway, New York.

SPECIAL NOTICES.

TERMS: In advance, one insertion, four cents per word; five insertions, three cents per word, each. The enclosure of a stamped and addressed envelope will secure a numbered box, to which communications may be addressed.

PROFESSIONAL.

A Yale Graduate of experience will Instruct private pupils in the Classics or in Mathematics. Address YALE, 43 Lexington Avenue.

A German Gentleman, Doctor of Philosophy, who has studied modern languages at the Universities of Breslau and Berlin, and then spent several years in England and France, desires to give instruction in German and French language and literature. His professional experience, certificates, and references will be found satisfactory. Address E. S., P. O. Box 4807.

A Physician of Several Years' Experience wishes to travel with an invalid. Speaks German and French, and can give good reference. Address Box P., *Nation* Office.

An Experienced Teacher, practical and familiar with the best German methods, will give lessons in English branches, French, and German. The lady is well recommended by prominent citizens. Address MUSICAL, Box M., *Nation* Office.

Water-Color Lessons, by Miss Susan HALE. Studio, 64 Boylston Street, Boston.

EDUCATIONAL.

Colleges, Academies, Schools, Amateurs, supplied with Minerals, Fossils, and Shells. E. SEYMOUR, 52 Beekman Street, New York. Reference: Professor Dana, Yale.

School of Mines, Columbia College.—Courses in Mining and Civil Engineering, Geology, Mineralogy, Chemistry, Assaying, etc., etc. Send for catalogue. C. F. CHANDLER, Dean of Faculty, East Forty-ninth Street, New York.

Collegiate Academy, No. 729 Sixth Avenue, opposite Reservoir Park. S. A. Farrand and D. S. Everson, Principals. Reopens September 23. Great pains are taken to teach boys how to study. The Principals devote their whole time to giving personal instruction.

SPECIAL NOTICES.

EDUCATIONAL.

A Home, with suitable care and instruction, for six boys. Rev. J. TUFTS, Monson, Mass.

Meadville Theological School.—The next academic year begins September 15, and continues forty weeks. Candidates are required to have a good English education. Students who devote themselves to the Christian ministry are by the charter of the school entitled to the same privileges without regard to religious creeds. Beneficiary aid is given to worthy students who are in need. Application may be made to Rev. A. A. LIVERMORE, Meadville, Pa.

School for Boys.—Opens September 21, 530, 541, and 543 Fifth Avenue. E. A. GIBBENS and D. BEACH, jr., Principals.

FOR SALE.

The Deluge.—A Pamphlet showing that the earth once had an Aqueous Ring, sent to any one for 25 cents. Address J. N. VAIL, Westtour School, Chester Co., Pa.

A Reputable, agreeable, and lucrative in-door business, of permanent and increasing interest, already in successful operation in several cities, where it is endorsed and patronized by many of the most prominent residents, may be established with a moderate capital in any city or town. It is especially adapted to Physicians, or those having Medical knowledge or taste, or to those interested in Physical Culture, but may be conducted by any one. For detailed information, address "HEALTH-LIFT COMPANY," 46 East Fourteenth Street, New York.

Anstie Memorial Fund.—Subscriptions to the Fund for the benefit of the family of the late Dr. F. E. Anstie will be received by MACMILLAN & Co., No. 21 Astor Place, New York.

METROPOLITAN MUSEUM OF Art, No. 123 West Fourteenth Street, New York. The Museum will be open daily, Sundays excepted, from 10 A.M. to 5 P.M. Gallery of pictures by old masters; Loan collection of pictures and other art objects; Cesnola collection of Cypriote antiquities. Admission 25 cents. MONDAYS FREE. Catalogues can be had at the Museum.

BOOKS.—Catalogue of Books relating to America, Indians, etc. Just published and sent on application. E. W. NASH, Successor to W Gowans, 120 Nassau Street, New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 19, 1874.

The Week.

TWO very remarkable feats in journalism have been performed within a few days by the *Herald* and the *Republic*—the *Herald* publishing a long account with sensation "head-lines" of an escape of wild beasts from the cages in the Central Park; the *Republic* bringing out an apparently "authorized" statement of the President's views with regard to the effect of the recent elections on his financial policy. According to the *Republic*, the President considered the elections to have furnished so striking a proof of the general inflationist sentiment of the country that he felt himself relieved of any further responsibility in urging specie payments upon Congress. Last winter, it seemed, he had been imposed upon by some of the Boston demagogues, headed by Mr. William Gray, who persuaded him that the interests of the country demanded hard money; but he had since been convinced of his error, and hereafter would allow himself to be guided by men who were really statesmen, who lived among the people, and knew what the people wanted. The *Herald* succeeded, with its story, in frightening some women, who, having sent their children to the Park, were terrified out of their wits on learning that the lions and tigers were loose, and did not stop to look closely into the foundation on which the story rested. The *Republic* made a much greater momentary success, for the editorial was telegraphed all over the country, used in Wall Street to affect the price of gold, sent without doubt to all the financial centres in Europe, and exercised a depressing influence on the minds of everybody who heard the story. The next day it was flatly contradicted from Washington, and the *Republic* has since been obliged to come out and admit that the article was not authorized or inspired by the President, but was a strictly professional product.

General Hawley, as he must now himself feel, assumed a heavy burden of responsibility when he vouched for the veracity and respectability of Mr. Charles Hays of Alabama, and printed in his paper, as true history, that gentleman's catalogue of "outrages." The outrages were very soon after exposed by a special correspondent of the *Tribune*, and it is proper to add that his reports as to the general condition of things at the South have been fully corroborated by the correspondent of the *Times*, though, of course, the two papers approached the question from different standpoints. In fact, some of the *Times's* reports from Alabama put the morals and manners of the "Southern Republicans" in a worse light even than do the reports of the *Tribune*. There came in, too, from the districts in which Mr. Hays laid the scene of his tragedies, so many denials fortified by proof, that there was nothing left Mr. Hays but to take refuge in "dignified silence," and nothing left for his friends and patrons at the North but to abandon him to popular indignation, which they did with somewhat unseemly alacrity. He, however, is apparently not anxious for the seclusion which the public thinks would under the circumstances be becoming, and is so enamored of "outrages" that, failing the discovery of any in Alabama, he resolved to commit one himself. He accordingly waited for the correspondent of the *Tribune*, Mr. White, at the railroad station in Washington, and as soon as he saw him descend from the train encumbered with his bags and bundles, committed a Ku-klux assault on him. He was handed over to the police, and we hope will be proceeded against under the Enforcement Act, as his object doubtless was to prevent Mr. White from voting the Democratic ticket in 1876.

The new Arkansas quarrel is a burlesque of recent Southern politics. In 1868, a constitution was adopted in Arkansas, which remained in force till just before the recent Congressional election, when the Conservatives succeeded in having a new instrument adopted, under which A. H. Garland has been elected Governor. The old Baxter-Brooks feud is still smouldering, however; and, before the election held under the new constitution, it occurred to the mind of Smith, the old lieutenant-governor, that by the aid of a little constitutional law and an opinion of counsel he might work up a case to lay before the Attorney-General at Washington, get possession of the State, and turn over as much of the sovereign power as he did not need for himself to his friends the Brooksites. He therefore wrote a letter to the Hon. T. W. D. Yonley, attorney-at-law, on the 1st of October, some days before the new constitution was voted on, asking him for an opinion in the case of "V. V. Smith, Lieutenant-Governor of Arkansas, *v.* A. H. Garland." The case was this. Smith had been elected lieutenant-governor for a number of years under the constitution of 1868, and now, supposing the new constitution to be adopted and to be invalid for certain reasons, which we need not go into, and Baxter, the governor, to hand over his office to Garland, the Conservative candidate, after the election, would not this be such a resignation of Baxter's office as would entitle Smith, whose term is not expired, to take possession? And the opinion of Mr. Yonley was that it decidedly would, and the correspondence was printed in Chicago as a pamphlet. Then the elections took place; and first the new constitution was adopted by an overwhelming majority, and then Garland was elected by an overwhelming majority, and Baxter handed the State over to him. Smith's opportunity having now arrived, he at once announced himself to be the real governor, and issued a proclamation to that effect, winding up with a demand upon the President for troops. Having done this, he ran away and hid himself, and cannot now be found, and the Attorney-General is now reported to be engaged in considering the law of the case. There seems to be no doubt, however, that the attempt to get up an excitement at Washington in the matter has completely failed, and that the President will not be foolish enough to interfere.

The inflationists appear to have founded what they call a "National Currency League," with a seal containing an anvil, a sickle, an anchor, and an iron safe—we presume to hold "currency." The object of the League appears to be to push the measure known in the last Congress as "Judge Kelley's Inconvertible Currency Bill," or, more irreverently, "Kelley's issue of three sixty-five bonds." It publishes a mournful list of members who voted against this scheme in the last Congress, and a "roll of honor" containing the names of the eminent men who voted for it, and declares that "they ought to be engraved in Letters of Gold on Tablets of Silver, and held in honorable memory through all time," because, had Kelley's bill become a law, "it would have conferred greater benefits on the American people than any other law ever enacted by Congress." The result of not passing Kelley's bill is, on the other hand, "unemployed industry, stagnation in business, hard times, demoralization, and poverty," and the League advises the people to instruct their representatives to support Kelley's bill in the next Congress. We ought to add that the principle of the bill received the warm support of Mr. Wendell Phillips, in a letter to the Hon. B. F. Butler, in which he recommended unlimited loans by the Government of new paper-money, at four per cent. if we remember rightly, to all citizens applying for it on the security of mortgage on real estate. We confess our preference for Mr. Phillips's plan, though we say this without meaning to depreciate Judge Kelley's. Our firm belief is that the former would make money plentier in the United States than it ever was in any country in the world, and possesses the grand merit of extreme simplicity. In one month from the issue of the greenbacks, or as soon thereafter as "the papers" could be made out, every foot of land on this vast continent would, in fact, be mortgaged to the United States, and the

money lent in this way would be a sheer addition to the wealth of the country—or, in other words, all land would increase in value by one-half; and the farmer would immediately get the advantage of the rise; and the beauty of the arrangement would be that the Administration would never venture, and in fact would never need, to foreclose. So the people could keep all the money. To describe Mr. Phillips's plan is to prove its superiority to Judge Kelley's. We shall, therefore, support Mr. Phillips's and oppose Judge Kelley's as clumsy and complicated. The want of the country is more greenbacks, and, if they are to be issued, the simpler and more direct the process for getting them into the hands of the people, the better.

A Massachusetts correspondent complains, not without a show of justice, of our classing Mr. Gooch with Messrs. Butler and Ayer in enumerating last week "the more conspicuous compensations" for certain losses in the recent elections. In fact, we had no intention of making any comparison between these three candidates except as they were involved in a common Administration defeat. We can quite agree with our correspondent when he says: "Mr. Gooch is not just the man I should like to send to Congress, but I know of no charge against his integrity, and I think he is preferable to Banks, whom I believe to be a thorough humbug." Mr. Banks is not only all that, but in point of selfishness and want of fixed principle, to say nothing about his personal habits, he belongs in the same category with Butler; and his triumphant return from the district adjoining that in which Butler was so decisively defeated, shows that independence in politics does not mean the same thing in every part of Massachusetts. The new independence, by the way, which Mr. Medill is bestowing upon the Chicago *Tribune*, finds a curious illustration in the serious recommendation by that paper that the next House should choose Mr. Banks for its Speaker—a proposal only equalled by that of the Charleston *News and Courier*, an anti-Chamberlain paper, which would have the Democrats repeat the characteristic folly of putting Fernando Wood in nomination for the same office, as "a tried and an ever-faithful friend of the Southern people." To return, however, to Mr. Gooch. While we never pretended to consider Banks's election as "a conspicuous compensation" for anything, we had reasons for regarding the defeat of his Republican rival as a good thing, both in itself and as a part of the general overthrow of a demoralized party. Our correspondent himself says that "Mr. Gooch owes his defeat largely to the stupid and indecent defence set up for him by his friends, which was the same as that set up for Bill Tweed. We were told Mr. Gooch was never known to go back on his friends, and if he promised a poor man a chance in the Navy Yard, he was sure to get it. The unblushing way in which the Administration used Charlestown Navy Yard for Gooch gained many votes for Banks"; and the regular Republican stump-speakers gained him many more.

The Prohibitionists in New York nominated a governor during the last canvass, and succeeded in polling some eleven thousand votes; but at present the rage and fury over the traffic in intoxicating liquors seem to be centred in another quarter. Just before the election a good deal of attention was attracted to the number of persons connected with the liquor business in one way or another who were running for the Legislature. Just before this again, a meeting of the "Liquor Dealers' Protective Union" was held at Albany, and various laudable objects were announced with regard to reform in taxation. Examination into the *personnel* of this convention, however, showed that it embraced four hundred keepers of saloons who had been refused licenses by the Board of Excise between May 1, 1873, and May 1, 1874, while the president, first-president, second vice-president, recording secretary, corresponding secretary, and financial secretary all turned out to be keepers of low drinking dens scattered over the city, some of them under indictment for non-compliance with the law. The respectable liquor-dealers have, therefore, declined to support the reformatory movement of the union, it being their interest, as it is that of the community, to have a stringent license law; and it now looks as if a fierce warfare would be waged in the next legislature between the "reformers" who demand "home rule" and the opening of all the dens possible, and who have apparently a strong delegation at Albany, and the conservatives, who would like to see some stringent measures taken to prevent unrestricted sale.

On the day of election in this city, an affray took place in one of the election districts between "Jimmy" O'Brien and some of his followers, on one side, and a coroner, named Croker, and some of his partisans, on the other. It was one of the old-fashioned faction-fights, once so common in New York, beginning with much foul language on both sides and ending in promiscuous shooting. During the firing a man named McKenna was killed, shot, as it was supposed at the time, by Croker, a protégé of John Kelly's, who, it may be remembered by those who followed the course of the Kelly-Havemeyer quarrel, was one of the subjects of dispute between those two chieftains. The coroner's inquest, however, resulted in a verdict that McKenna was killed by "some person or persons unknown," and as, during the proceedings, Kelly himself appeared on the scene with a number of other politicians, and was seen "colloguing" with Croker and assisting him in his defence, he has brought down upon his head a good deal of editorial writing and denunciation as the "new Boss," "the successor of Tweed," and so on. He is not, so far as we can make out, accused of any overt act, but of bringing to bear the weight of his personal influence to interfere with the course of justice. We do not see, however, how this can be prevented, unless a disabling act is to be passed forbidding Kelly, when any court is in session, from expressing his opinion as to the merits of the case. Luckily, coroners have not final jurisdiction in cases of this sort, and Croker and one or two others have since been indicted for murder by the Grand Jury.

Mayor Havemeyer has again distinguished himself by suddenly removing from office two Commissioners of Accounts, refusing to give them or the public any explanation of his action, and appointing in their place two men of whom nothing seems to be known except that they are respectable persons, said not to be accountants. The Commissioners of Accounts hold an important office, as it is their duty to examine into the accounts of all branches of the City Government, and though Messrs. Howe and Bowlend, the removed officers, may not have been the best men for their place, they certainly did a good service in keeping an investigation hanging continually over the heads of all the various boards charged with the expenditure of public money. It has been in great measure the fear of being exposed by them that has kept a good many men straight for the last year or two. The Mayor's action, too, is all the more peculiar from the fact that while he has allowed them to examine the accounts of some of the departments, he has turned them out of office just as they were proceeding to the investigation of some others, and thus has given the decapitation the effect of a determined attempt to obstruct investigation in cases in which it might not be convenient to his friends.

For many years it has been the custom of the great trunk-lines to the West to agree upon a uniform freight tariff, and for many years also it has been usual, after the uniform tariff has been in operation for a little while, for some one of the lines to violate the agreement, "break rates," and offer to carry freight for less than its rivals. The New York Central, the Erie, and the Pennsylvania roads have recently entered into one of these combinations, and are now trying to induce the Baltimore and Ohio to unite with them. The latter road, which is extremely rich, always has its coffers full of money, and controls a through-line to Chicago, has not yet exhibited any willingness to enter into the agreement, and probably it has very good reasons for doing so; but it is singular to observe, from the way the combination is discussed at the West, how easy it is for the grinding monopolist to become a public benefactor, and also what

curious notions of the railroad business are prevalent in that part of the country. The Baltimore and Ohio would seem to the dispassionate observer to have the essential features of what is known in the slang of the day as a monopoly. It has complete control of its business, and besides that, in cases of difficulty, is in the possession of a reserve fund which places it in a position to defy competition. On the other hand, according to the Chicago *Tribune*, Vanderbilt has watered the New York Central till the stock is a mere bubble, the Erie has been so plundered that it is another, while "Tom Scott and his associates of the Pennsylvania roads have leased so many unproductive—some of them worthless—lines" that they are on the verge of ruin. Under these circumstances, to which of the four lines does the Chicago *Tribune* look for aid and succor—for cheap transportation of the products of the West to tide-water? To none other than the Baltimore and Ohio—the extortionists who have wrung millions out of the toiling farmer, and not merely have not returned it to him, but keep it locked up, and thereby increase the value of their stock to fabulous proportions; and it promises that line "the moral and material sympathy and support of the entire Northwest." To a hardened railroad president there must be something rather confusing in finding himself denounced by the Grangers in one year and threatened with the confiscation of his property, and the next promised the sympathy of "the entire Nothwest"—all for doing the same thing; *i.e.*, making all the money possible for his road.

The Beecher case has again appeared in court during the past week, the counsel making a long argument on the question whether Mr. Beecher was entitled to a "bill of particulars," or, in other words, a specification of the particular acts laid to Mr. Beecher's charge, with dates, and, we believe, the specification of damages in each case. This would seem to involve knotty legal questions; but the "human element" in the case is so much stronger than any other that Mr. Beach and Mr. Shearman were soon involved in a dispute as to each other's "candor," and the thought of the bill of particulars so moved Mr. Shearman that at one point in his argument his voice was choked with emotion, and tears were seen to roll down his cheeks. It is to be observed, by the way, that the ground on which Mr. Beecher desires the bill of particulars is that he may not be surprised with evidence suddenly sprung upon him. There is something delightful in the notion that in all the statements, interviews, and letters of Tilton and Moulton, and in all the accusations levelled at Beecher, a material part of the charges have been kept back, and are still to be made public. We trust that Tilton will not allow Beecher's lawyers to persuade him to "disclose his case." Surely some means may still be found to allay all this strife and contention.

The unsatisfactory and heterogeneous character of the government of London has for some years been attracting a good deal of attention in England. The population of nearly 4,000,000 are governed in a variety of ways, a small part only having a municipal government strictly so called, with a mayor and corporation. What with the constantly increasing size of the city, and the continual creation of new interests, etc., with temporary bodies for managing and controlling them, and with boards, vestries, and Acts of Parliament, and conflicting jurisdictions of all kinds, there is a good deal of dissatisfaction. A deputation has recently called upon the Home Secretary, Mr. Cross, to urge upon him the necessity of action in the matter looking to the creation of a single municipality with full powers. One of the memorialists, Mr. Henry Cole, submitted to the Home Secretary a list of "some of his personal wants," which, he added, were the wants of three millions besides himself, among which were healthy and sweet air, pure water, good gas, roads free from dust, snow, and mud, and "clean pathways across the road to the South Kensington Museum," which the local vestry, he declares, will not give him, because it would "wear the road," and they think they cannot afford paved crossings. The two great municipal bodies, the City Corporation and the Metropolitan Board of Works, seem to be agreed that something must be done, and the press is generally in favor of action of some kind.

Since Professor Tyndall's discourse at Belfast, a great many attempts have been made, both in England and in this country, to "reconcile science and religion." Beginning with Dr. Watts's, the subject has been taken up in numerous sermons and lectures and addresses, and has figured more or less prominently in the discussions of all the recent church conventions, synods, and conferences. The effect of these discussions has, however, been thus far rather bewildering than enlightening, owing to the singular confusion about the meaning of the term "religion" which pervades them all. Science has a well-established and well-known signification, and when used everybody knows what is meant by it. But almost every man who uses the word "religion" uses it in a different sense, so that nearly everybody who is engaged in the attempt to "reconcile science and religion" has a different object in view. By "religion" one means simply the belief which Mr. Tyndall is said to entertain that "there is an Intelligence at the heart of things"; another, the belief that there is "a personal First Cause"; another the belief that the world is governed by a single personal Deity, who actually supervises its concerns; another, the belief that this God is a Trinity, composed of three persons, one of whom was incarnate and founded Christianity, and that Christianity offers a sufficient explanation of the mystery of the universe and complete consolation for the miseries of this life. Then, to increase this confusion, while Christianity is used by many as a synonym for religion, there are half-a-dozen different definitions of Christianity. Some people use it as a description of conservative Unitarianism; others, of Protestant orthodoxy, founded on the acceptance of the Bible as true history and sound doctrine; and others, again, as solely applicable to the Catholic faith, as handed down by tradition and settled by the decrees of councils. Now, it will be seen at a glance that while it may be easy to reconcile science with some of these forms of religious belief, it must be very difficult to reconcile it with others—or, in other words, that what might seem a mere trifle to a Boston Deist would prove a terribly tough job to a Dublin Catholic. How, in short, can Ralph Waldo Emerson and Cardinal Cullen work together in the matter of reconciliation? We would suggest, therefore, that before this controversy goes any further, the leading theologians agree upon some definition of what it is they propose to reconcile with science, or agree upon the sense in which they use the term "religion" in their fight with scientific men. Failing this, we would suggest the abandonment of the discussion, as likely to bring religion into contempt, by revealing the exceeding diversity of views which prevail about its central facts among its foremost professors and champions.

Cardinal Cullen, in a recent pastoral in Dublin, has offered a basis for the "reconciliation" which is exceedingly ingenious, but we fear will be satisfactory neither to the scientific men nor to the religious people, and gives Protestants no help at all. It is in substance this: When any scientific discovery conflicts with the dogmas taught by the church, the conflict is apparent only, not real. It will invariably be found on further enquiry, and after a due lapse of time, either that the discovery was not a true discovery but "an ephemeral theory," or that the dogma was not a real dogma but only a "theological opinion." This sounds very well, but, at best, it is simply an armed truce and not a peace. For the scientific men will of course go on waiting for the dogma to turn out a theological opinion, and the religious men will go on waiting for the discovery to prove "an ephemeral theory." Mr. Emerson might be allowed to content himself with a temporary arrangement of this kind, but it will not do for the Cardinal. When the church tells us what to believe about the universe, it must be by way of final judgment, and not of interlocutory order. In fact, it would be hard to imagine a better plan than this for making the present doubting of religious men permanent.

THE COMING ACCOUNTABILITY OF THE DEMOCRATIC PARTY.

THERE are several theories of political responsibility which have more or less prevailed in this country. These now have attached to them a peculiar temporary interest, growing out of the fact that the Democratic party, which all along, and particularly as an opposition party, has stoutly maintained one of them, is unexpectedly awarded a brief period of trial, in which most men expect it to be judged according to the doctrine of accountability which it has itself maintained. The reason of this expectation does not rest upon the logician's pleasure of judging men out of their own mouths, but upon a growing alarm which has forced a considerable proportion of the voting public to adopt, for the time at least, what is to them a new system of party accountability. Most thinking men recognize the fact that, philosophically considered, a party is a mere co-operation of citizens to give effect to certain principles of government by electing persons to office who will direct the government accordingly. Most unthinking men recognize what is also a fact, that a party is a something which has leaders, followers, organization, power, patronage, and money. Hence it is that the former class is very loosely bound by party ties, and is over-apt to despise a political party too much to perceive that it is a practical means for attaining a desirable end. Hence it is that the latter class apparently cares more for the success of a party than for all of the principles which underlie it. These imperfect, one-sided views of a party also explain why it is that in extraordinary times, as during the years immediately before the rebellion, the philosopher suddenly becomes a politician, and the ordinary party follower a patriot; for the one perceives that his political views, which he ordinarily treats as a desirable abstraction, have become a vital necessity, and that he must work for them in earnest with the best means at hand—that is, with the party that comes the nearest to asserting them; while the other perceives the same thing, viz.: that a party is a means and not an end, and that behind it lies the public welfare, which is much more to him, when he perceives it, than any tie of party allegiance. In ordinary times it is this latter class which expects the most from a party as well as renders the most to it; which is natural—for when men have given the zeal and attachment and fealty that belong to a personality, they inevitably expect in return some of the care and foresight and responsibility that also belong to a personality.

During the last six years, as we have repeatedly had occasion to show in these columns, the Republican managers have been quite ready to maintain the personality of their party, but at the same time quite careful to strip from that artificial theory the one element that renders it a useful theory, viz., that the imaginary personality is to be held accountable for what its agents do and fail to do. Their theory, as every one knows, has been that the Republican party is a something to which all loyal Americans are bound to be grateful and faithful, and that the party, reposing on this gratitude and fidelity, may continue to do as little or as much as its leaders happen to choose until slavery and rebellion become strictly matters of history. To teach intelligent men to say to each other, "Inasmuch as we form the Republican party, we must continue to unite in doing nothing, out of gratitude to ourselves for having once united to do something," seems now a piece of nonsense which could not long delude, however ingeniously it might have been paraphrased. Nevertheless, our readers know that it did delude, and that not the least effort of the *Nation* for several years has been to expose the fallacy that a people, or a portion of the people united in the form of a party, can be grateful to themselves for what they themselves have done. Coupled with this gratitude theory, the Republican managers advanced a second reason for standing by the party, however bad it might become, which was that the other party or personality was worse. In proof of this they were able to point to the times when the Democratic party was in power as under Buchanan, to the places where it was a power as under Tweed, and to the action of its representatives when their votes might really do the country some good, as against the "salary grab." But the chief and most remarkable ground assumed by the Republican managers was that when members of Congress, or members of the Cabinet, or Presidents, or Vice-Presidents, were guilty of crimes or blunders, or incapacity, or gross carelessness, then they as individuals were to be blamed, but the party was not to be held accountable. Further than, this it was laid down that if these delinquents could get themselves reappointed by a Republican President, or reconfirmed by a Republican Senate, or renominated by a Republican convention, then the wickedness of keeping them in power should be ascribed to the politicians and the "wire-pullers" and the "office-holders," but the party must be judged only by its platforms and its patriotic record and the personal-purity of its respectable members. Two years ago, the strongest reasons existed why a score or two of Republican candidates for Congress should be defeated, and why the Republican majority in the House should be subjected to the scrutiny and opposition of a strong minority. The more intelligent portion of the party comprehended the reasons and believed the facts as completely as they did at the beginning of the present month; but no result followed their innate convictions, and they actually made the majority stronger than it was before, even permitting men like Cessna to be renominated and re-elected. It is not a matter for wonder that the party in power held the public in absolute contempt, and that members fresh from such an election were audacious enough to project and pass the Salary Act.

Not a little ingenuity has been displayed by the press in endeavoring to ascertain what particular straw it was that broke our patient camel's back. But the fact is, that the public patience did not break under the accumulation of public wrongs so much as it was undermined by the conviction that the old theory of non-accountability is a false one. The reckless conduct of our public men has been the natural product of a system which practically held nobody responsible for what was done; and the recent elections have been the natural process of a return to the only system of political accountability with which the public is familiar. The change, though unexpected, has not been sudden, and the wonder, indeed, should be that the final decision was of such tardy and silent growth. When districts so far apart as those of Ohio and Vermont revolted, the one at the nomination of Mr. Parsons, and the other at the nomination of Mr. Poland, it was so plain that a widespread storm was gathering that no political managers would have neglected the warning save those who had been nursed in the agreeable pastime of doing what they pleased with nominations and appointments. Yet, notwithstanding the portents, our managing men kept on, for the most part, as recklessly as before. Mr. Conkling proceeded to enunciate the law by telling the people, in his Brooklyn speech, that when a man belongs to a party he ought to belong to it all the time and with all his might, sustaining its nominations and overlooking the faults of its delinquent leaders; and Mr. Dawes proceeded to give a practical illustration of its application by himself going to work for Butler. Is there any cause for wonder that a large proportion of the Republican party determined to read their leaders a lesson that could not be misunderstood?

But the most notable and perhaps the most hopeful fact of the uprising is that the Democratic leaders seem to comprehend the reality of the situation, and to understand that their party is really placed in a situation more critical than that which it occupied before. Hitherto, with every trifling success they have lost their heads. Now, with a very great and almost unlooked-for triumph, they have kept the balance of their judgment. They have carried the three great States esteemed decisive in Presidential elections, yet have remained calm enough to recognize the fact that their party is not invested with power, but is merely awarded a trial. In other words, they comprehend the tempo of those Republicans who have given them the victory, and understand that there is a decisive balance of power among the people which is determined to have responsibility somewhere. A party which has never possessed moderation of speech heretofore, and whose managers have repelled moderate Republicans by the extravagance of their blatant utterances, now seems imbued

with the very spirit of moderation from New Orleans to New York. It is a notable fact, too, that at this particular juncture of events race prejudice, which has always been a characteristic of the Democratic party, and a cause of distrust to those who were inclined to join it, has so far yielded to liberality and moderation that colored men in Louisiana have been co-operating with Democrats, and Democrats have been voting for a senator of "African descent." But the general acknowledgment of political accountability on the part of the leaders, since this new responsibility has fallen upon them, is the augury that most strongly bodes danger to the Republican party. And accountability, in the judgment of all watchful people, now means a great deal. It cannot longer be discharged by paying an empty honor to a man so generally despised as Mr. Fernando Wood; nor by allowing the majority to get money out of the Treasury with the aid of minority votes; nor by covertly defeating reform in government, and dictating to an ignorant following how they must vote on non-party questions like the New York Constitutional Amendments; nor (when the next House organizes) by putting their old professionals at the head of important committees; nor (when the new legislatures convene) by sending their second-rate men to the United States Senate. A very few of these old and too familiar mistakes will speedily bring back the men who have just turned the scale to their former opinion that "the Democratic party is as bad as the other, and is not to be trusted."

THE PERSONAL-PROPERTY TAX.

A COMMITTEE of the Legislature of this State is engaged in a much-needed investigation into the tax system of New York, and we infer from the way in which the investigation is proceeding that there is some hope of reform. At any rate, after the present exposure there will be no excuse for any one who hopes for anything good from the existing system. The able report of Mr. D. A. Wells, made to Governor Hoffman three or four years ago, was received on its appearance with less public attention than it deserved, partly because at that time, the country being in a comparatively prosperous condition, it was difficult to get people to consider any project of reform seriously; partly because Mr. Wells was supposed to be a theorist, who did not understand practical questions, and was not a practical man. But now these reasons have ceased to exist. It is confessed on all hands that the system of taxation in New York is a failure; that the valuation of property is unequal; that vast masses of it escape taxation altogether; that the city is overtaxed, while the country is undertaxed; and, more than all this, these complaints are made by the practical men themselves, who are now endeavoring to persuade the Legislature to undertake a thorough and radical reform. When a witness who is known to be the greatest landlord in the lower part of the city, and who owns no personal property, goes before a committee to urge upon them the importance of taking off *all* taxes on personal property and laying them all on real estate, we may be sure that there are good reasons for action of some sort.

The beauty of the system in vogue in New York and other States has been supposed to be its simplicity and its equality. It seems obvious enough that the fair way to raise a sum of money for public purposes is, first, to fix upon the sum to be raised; then, determine the value of all the property, real and personal, lands, houses, furniture, stock in trade, funds in bank, choses in action, and everything, and make each dollar contribute its proportion of the whole. As a matter of fact, it is not an essentially democratic system, except in its theoretical equality; for raising taxes by assessing on all property on which hands can be laid, has been practised time out of mind by Asiatic rulers; and in practice, even this theoretic advantage of equality disappears, for in New York, as in Asia, the effort to get taxes out of everything results in some property escaping taxation altogether, and the rest suffering doubly on that account. Mr. George H. Andrews, one of the tax commissioners of this city, has been making a collection of interesting facts, showing the results of the attempt to assess everything, and they are these: In the first place, with regard to personal property, the assessor has no means of knowing or of finding out what any one's personal property is, and so he guesses at it. We say guesses, Mr. Andrews says "estimates," the law says "ascertain." The process, as Mr. Andrews describes it, is this: "The Commissioners of Taxes use their best discretion and judgment. They reason from the nature of a man's business, the style and dimensions of his place of business, and the location and character of his residence, as to the probable sum of his personal property, and assess him accordingly." There is some appearance of rational method in this, but Mr. Andrews himself admits that in a multitude of cases it is not pursued; he gives, in fact, a very *naïf* and entertaining account of an attempt to collect taxes of the "club-men." Finding, he says, that the volume of the uncollected personal taxes of the city was swelling to frightful dimensions, and casting about him for means to reduce the deficit, a "party" furnished him with a list of all the members of leading clubs, such as the Manhattan, the Union League, and the Union, as fit subjects for assessment, and this list was revised, and appeared to contain four hundred and thirty-five names the bearers of which were not already taxed, or for some reason exempt. And what does the thoughtful reader suppose the commissioners did with these four hundred and thirty-five persons? No doubt they enquired into their business, the "style and dimensions" of their stores and offices, the "location and character" of their residences, and proceeded to assess them "accordingly." They did nothing of the sort. They assessed every one of the four hundred and thirty-five for $10,000 apiece, not even varying the amount, and making a total valuation of $4,350,000. The result was that of these four hundred and thirty-five exactly three club-men admitted their liability for $10,000 in all, and the city collected a tax of $280.

To take another case illustrating the difficulty of "estimating" the value of personal property, and tracing it in all the forms it may assume, for purposes of taxation: United States bonds, every one knows, are exempt from taxation, and last year, Mr. Andrews says, when the tax-books were opened, a citizen presented himself, asking that the assessment of $25,000 against him, which he had paid the previous year, should be cancelled. With much candor, he made, under oath, the following statements: that he had converted his entire personal property into Government bonds; that he had done so within a week; that he had bought the bonds for the purpose of being able to make this statement; that he intended to sell them as soon as he could make anything by it; and that he should consider it a satisfactory profit that the bonds had served to relieve him from this assessment; and his assessment was accordingly cancelled. At another session of the committee, Mr. Andrews submitted a statement showing the injustice of the inequalities that existed. Take, for instance, he said, a block of stores right opposite the place where the committee were sitting, on Broadway. At No. 321 A has a stock of imported goods worth $100,000, and is exempt from taxation. His next-door neighbor B has a stock of miscellaneous goods worth $100,000, and he is taxed; C has the same amount of goods consigned to him, and he is exempted; D has $100,000 in stock which he owns, and he is taxed; E has $100,000 worth of goods manufactured in New Jersey, and he is exempted; F has the same amount manufactured in the city, and he is taxed; G has $100,000 for which he borrowed capital on United States bonds, and he is exempt; H has the same amount of goods which he sold United States bonds to pay for, and he is taxed; I has a similar amount of property in ships plying from this port but registered in Boston, and he is exempt; J has $100,000 in ships plying in the Pacific but registered here, and he is taxed; K has mortgages on New Jersey property, interest paid in Jersey City, and mortgages deposited there, and he is exempt; L has $100,000 in mortgages on city property, and he is taxed; M has $100,000 in money in his pocket, and he is exempt; N has $100,000 in bank, and he is taxed; O has certificates of deposit in the Sub-Treasury for the same amount, and he is exempt; P has $100,000 in certificates of deposit in bank, and he is taxed. Again, Q has $100,000 in specie in the Assay Office, and he is exempt, while R

has $100,000 in specie in his safe, and he is taxed; S has a check on the United States Treasury for $100,000, and he is exempt; T has a check for the same amount on a bank, and he is taxed; U has $100,000 in Treasury notes, and he is exempt, while V has a similar amount in promissory notes, and he is taxed; W has $100,000 in United States bonds, and he is exempt; X has the same amount in State or city bonds, and he is taxed; Y has certificates of indebtedness to the United States Treasury, and he is exempt from taxation, while Z has $100,000 in certificates of indebtedness of a corporation, and he is taxed.

The upshot of the whole matter is that, from the uncertainty of the law, from the ease with which personal property may be made to change its form, from the facility with which it may be concealed and enquiry as to its whereabouts baffled, and the great readiness of persons to avoid inquisitorial proceeding either by the *suppressio veri*, the *suggestio falsi*, or downright perjury, the personal-property tax in New York is a failure; and within twenty years, from 1852 to 1873, the uncollected tax of the city has swelled to the enormous figure of nine and a half million dollars.

This is the practical result of the simple, democratic system of taxing everything equally. It has been long obvious to most persons who have looked into the subject that the first step towards reform must be the acknowledgment of the fact that the present method is a failure; and we believe that Mr. Wells's substitute of taxing a few things—tangible property and fixed signs of property, as he puts it—leaving the taxes to diffuse themselves, as they must, over all property, is gradually recommending itself more and more as the most promising way out of the present chaos. But the first thing is to convince the powerful interests centred in this city that it is a chaos we are living in, and the speeches of Mr. Andrews before the legislative committee seem to furnish some proof that this is being gradually done.

ENGLAND.

LONDON, October 29, 1874.

DURING the recess several elections have occurred, but they have shown no revival of Liberalism in the country; on the contrary, the result, so far, has been the gain of another seat to the Conservatives. Neither is there much prospect of a new leader being found for the guidance, failing Mr. Gladstone, nor a policy for the union, of the Liberal party. There are many candidates for the leadership, but grave objections rise at the thought of any one of them. Mr. Lowe is unquestionably the ablest; but it is scarcely possible to imagine Mr. Lowe with any following. Some elements, peculiar in their character, are essential for the position of leader in the English House of Commons. Personal popularity, such as Lord Palmerston possessed; exalted genius, like that of Mr. Gladstone; great prestige, like that of the Duke of Wellington; or some occult quality which strikes, you know not why, the national imagination, such as Mr. Disraeli possesses, and such as perhaps Mr. Forster might develop—any of these will do. But Mr. Lowe has none of them. He has many gifts, but he has not the gift of popularity. Neither has he exalted genius nor great prestige. He may have the fourth quality, but it has not come to the surface yet. Mr. Forster, Mr. Göschen, the Marquis of Hartington, Mr. Childers, and Sir William Harcourt are all spoken of as possible future leaders. Another session may bring out capacities which have hitherto lain dormant. When a policy has been developed upon which the different sections of the Liberal party can unite, the leader destined to carry out that policy will doubtless arise. Resting in that faith, the party has temporarily gone to sleep—a troubled and a fitful sleep, no doubt, disturbed by nightmares of past and dreams of future greatness.

A partial awakening there may be shortly. If the mistakes or internal dissensions of the present administration should render a temporary change of government necessary while the country is in its present conservative mood, it is not impossible that the Marquis of Hartington and Sir William Harcourt might be called upon together to preside over the destinies of the kingdom. They could form an administration differing but little in complexion from the more moderate section of the present Government—an administration that could count on a strong contingent of able men from the House of Lords, and which would command the confidence of the landed aristocracy, of the old Whigs (and there is some life in these old dogs yet), and of the well-to-do people in the country. The Radicals and the crotchet-mongers—those troublesome busy-bodies of modern English politics—would keep aloof from such an administration. Neither the one body nor the other could expect much from the straightforward, common-sense son of one of the most influential of the landed aristocracy, nor from his aide-de-camp, who, though astute enough to coquet both with licensed victuallers and Radicals when he sat below the gangway, can never throw aside the oligarchic sentiments which he inherits through his boasted kinship with the ruling families of the land, and who has too much real vigor of intellect to feel, or even to affect to feel, any sympathy with sentimental agitations about woman's rights or the repeal of acts of Parliament passed in the hygienic interests of the soldiers and sailors of England.

But such an administration would be necessarily of the nature of a make-shift, and could be possible only during the prevalence of the Conservatism in which the country is wrapped up at present. Just for the moment all the country wants is rest. It will not go backwards, not one step, and if the present Government should be so foolhardy as to attempt another retrograde movement, it will be all over with them. But there is no desire to move forward. We are all (politically) "marking time." We are not gaining ground, nor do we wish to do so; neither are we losing ground; and it is possible that this process of "marking time" may go on for some years to come. There may be, as we have suggested, a change of front, and Lord Hartington or Lord Granville, and an administration of Liberal-Conservatives, may be called upon to set the time instead of Mr. Disraeli or Lord Derby and an administration of Conservative-Liberals. But this sort of Whig revival cannot last for ever. Less prosperous times may come, or some European crisis may rouse us from our languor, or it may be that ecclesiastical questions, of which already we hear the distant mutterings, may come prominently to the front.

And there are not a few indications that the real awakening of the Liberal party will be produced by a great ecclesiastico-political struggle, in which the Church and the High Tory party, and many of the Moderates, both Tory and Whig, will be arrayed, on one side, against the Dissenters, the Radicals, perhaps the Ritualists and the Roman Catholics, the Materialists, and the educated Gallios who care little for party politics, but who abhor the priests. In estimating the value of the various indications of such a struggle, I do not attach much importance to the smart electioneering manifesto published in the last *Fortnightly Review* by Mr. Chamberlain, in which he lays down the definite programme of disestablishment and disendowment of the Church, in favor of a system of universal free education after the American model. As leader of the Young Radical school, he offers his vote and that of his faction to any leader who will buy them at this price. Mr. Chamberlain is a young man of some activity and considerable audacity of mind, which promise with experience to mellow into better qualities, but like most young Radicals he takes but a one-sided view of the political forces in this old country. He forgets the overwhelming dead-weight which the prejudices and traditions of centuries have heaped up. Disestablishment and disendowment of the Church of England may, and probably will, come sooner than many of us anticipate, but clever squibs like this *Fortnightly* article will not precipitate the crisis. Neither do I dwell with any emphasis upon the eagerness, almost the fanaticism, with which the House of Commons rushed into the crusade to "put down Ritualism" at the close of the session, because there always is a large stock of bottled Protestantism, so to speak, in that assembly (especially when as now it contains a majority of Conservatives), ready to explode with violence at any suggestion of "the church in danger." But what I do attach importance to, and would wish to dwell on for a moment, is the fact that so many eminent and really able laymen, uninfluenced by political or other considerations, but simply from the love of the thing, are turning their attention to theological questions at the present time, and are freely handling subjects hitherto relegated to the very different handling of the clergy. Not to mention Mr. Gladstone's recent articles on Ritualism and the Ritualists, which are in everybody's mouth, we have had important announcements from Mr. Fitzjames Stephen, Mr. Matthew Arnold, Mr. Rathbone Greg, Mr. Freeman, and Professor Tyndall, and, lastly, we have had a Lord Chief-justice, whom no one could have accused of Evangelical proclivities, urging arguments against the "sacerdotal principle" which would have done credit to a Presbyterian divine. There seems to me to be no small significance in these announcements. When the intellect of England is stirred within itself by matters ecclesiastical, and from its fulness is pouring out floods of reasoning and of speculation upon all the bearings of the different questions which surround the most interesting, to many minds, of all subjects, it does not require the gifts of prophecy to foretell that that subject will shortly become one of practical politics. Two years ago an old political observer and a thoroughgoing Liberal remarked to me that "you might as well attempt to scratch down Westminster Abbey with your nails as to disestablish the church." He would not say that now. Great changes

come rapidly upon us even in this old country nowadays. There is no basis for the union of the Liberal party so likely to command support as an attack upon the Church establishment. Many old Liberals would of course desert and throw in their lot with the other side. But in the course of a few years the Centre and Left of the party might advance, if not to victory, at least a good way on the road, and stragglers from the Right-wing would flock in as the main body were getting nearer to the goal. The watchword, "Abolition of purchase in the church," has already been passed along the line. A few years hence, and even more than the watch-word may become an accomplished fact.

Correspondence.

ORIGIN AND SIGNIFICATION OF "SCIENTIST."

To the Editor of The Nation:

Sir: Your correspondent Mr. Hall is in doubt as to the originator of this word, and thinks it yet to be proved that it "had its birth on our side of the Atlantic."

In Webster's unabridged edition of 1864 it thus appears: "Scientist, n. One learned in science; a savant. *Gould.*" And from the published proceedings of the American Association for the Advancement of Science, at their eighteenth meeting, in August, 1869, we quote the following paragraph from the address of ex-president of the association B. A. Gould, now Director of the National Observatory of the Argentine Republic at Cordoba:

"By an unhappy, though perhaps, natural mischance the English language has had no name for the scientific investigator, nor word to denote his calling. There is no nobler word than philosopher—lover of knowledge; yet in the score of centuries since this grand old word has been in use, its meaning, if not perverted, has been at least narrowed and distorted. The French expression, *savant*, has sometimes been pressed into service by those who have felt the want of some appropriate term; but without undertaking to criticise the aptness of this word, it is most certain that the time has come when our own language demands some name for the class of men who give their lives to scientific study. Therefore it was that twenty years ago I ventured to propose one which has been slowly finding its way to general adoption; and the word *scientist*, though scarcely euphonious, has gradually assumed its place in our vocabulary."

It will be seen that the significance intended for the word by its originator differs widely from the dictionary definition above cited. The French *savant* and the German *Gelehrter* undoubtedly signify "one learned in science," but Professor Gould sought for himself and brethren a title of more modest pretensions, and which should indicate a seeker for knowledge rather than its possessor. Whatever may be its present meaning, the purpose of the word's coining was simply to designate the class who give their lives to science.

S. M. Quincy.

Boston, Nov. 9, 1874.

A MUSH OF CONCESSION.

To the Editor of the Nation:

Sir: The times are out of joint. What is the good of hitting out when nothing will stand to be hit? You remember the picture in *Punch*—a good while ago—in which the little boy with the face of Lord John Russell is seen running away, after chalking "No Popery" on the door. Now, here is Tyndall, who chalked up on the Temple of Science at Belfast something which was thought to read "No God." But now he says he does not mean that at all, leastwise when in his best mood of mind. All honor to his frank Irish soul for his candor and the pains he takes to make himself rightly understood. We thought he was dragging his coat through the Belfast Fair, and asking any Christian gentleman if he would be so kind as just to put his foot upon it. But now he tells us in his Manchester lecture that all that he meant was to give in a dubious assent to the doctrine of evolution, which is quite another matter.

Then here is Mill's legacy. We were sure of a good fight over that, and of a doughty opponent. But, if what we hear is true, even Mill has his doubts whether there is not a creator and moral governor of the universe and a future life, and appears to have no doubts that it is, on the whole, best to favor and cultivate a belief which he concedes must be beneficial, and may possibly be well founded. What is to be done in such a state of things? The sword of Richard, wielded by a sturdy arm, may be relied on to cleave the tough, resisting helmet; but only the keen blade of Saladin can divide the down cushion tossed in air. And this is not a weapon for the handling of your greatly disappointed correspondent,

Philomachus.

Notes.

Nash & Rogers, Petersburg, Va., are printing 'Outlines of Lectures delivered by Prof. W. E. Peters to the Senior Latin Class at the University of Virginia,' in 31 numbers of 4 pages each, large 4to.——Under the head of "Bibliography of Science," *Nature* for Oct. 22 occupies two and a half pages with classified lists of scientific works, of every kind and degree, to be published in England during the present season. "Geography and Travels" is one of the divisions.——Patrons of the dime-novel literature may now find a more profitable investment for their money. Mr. K. Tompkins, of 16 Cedar street, this city, is issuing in really handsome style poetical and prose selections—the latter under the title of 'Worth Reading'—at ten cents each. They are drawn from the stores of household and classic English, and are all worth preserving after they have been once read. One of the poetical numbers includes Tennyson's "Charge of the Light Brigade," Montgomery's "Make Way for Liberty," Cowper's "Loss of the Royal George,' and Drake's "The Flag." The prose series begins with Lamb's "Dissertation upon Roast Pig."——This is certainly a year of catalogues. The last one we have received is that of the English prose fiction in the Baltimore Mercantile Library, which is brought down to October, 1874. Peculiar features are: referring the several anonymous works by one author to the title on which the writer's reputation chiefly depends, and then grouping all his works under that title; and certain somewhat arbitrary classifications—*e.g.*, translations from the French, German, Swedish, Danish, and Norwegian; fairy tales; and musical stories. Typographically, this catalogue is less attractive than the excellent one published a year ago by Mr. Noyes, of the Mercantile Library, Brooklyn, and it is difficult to estimate the comparative number of volumes in the two collections. They are by no means identical, however, and will be found complementary to each other by fiction-hunters.——T. Whittaker has in press for the holidays a work with the somewhat fanciful title, 'Myndeful of Hym, or Our Heavenly Father and his Children.' The text is by Rev. Dr. Kramer, and has been written to accompany twenty-six full-page steel engravings on Scriptural subjects, mostly by Doré.——The merits of the *Railroad Gazette* are such as to have made it the vehicle of the best writing on the subject to which it devotes itself, and as a weekly publication it is likely to maintain its position as the leading though independent exponent of the railway interest in this country. A quarterly *Journal of the Railway Association of America* has just come to us from St. Louis (No. 1, October). It is designed to be rather eclectic than original, and to reprint in a form suitable for preservation the most important contributions to railway literature. The first number is almost wholly made up in this way, quoting liberally from the several reports of the Massachusetts Commissioners, and copying the admirable paper by Mr. O. Chanute on the "Elements of Cost of Railway Traffic."——A lecture for the benefit of the Burns monument in the Central Park will be delivered at Steinway Hall, on Tuesday evening, Nov. 24, by Mr. Wallace Bruce.

—We owe an apology to our readers as well as to Professor Lowell for a typographical error marring the fine sonnet on Jeffries Wyman printed in our issue of Oct. 8 (No. 484), and for the delay which has ensued in making this correction. The fourth line,

"Nothing to court in Wor'd, or Church, or State,"

should read, "Nothing to *count*, etc."

—A valued correspondent, whose experience in the matter of which he writes entitles his opinion to great weight, sends us the following: "A catalogue made on the Bonnange system (recently described in Nos. 487 and 488 of the *Nation*) must be much more bulky than those now in use in American libraries. Our last form of card is 2 by 5 inches, and probably no one uses cards larger than 4 by 6 inches. M. Bonnange's cards have of course the flap in addition. His method of placing them also is less compact than drawers. He gives a lithograph of a stand containing 16,000 cards. A stand of similar size in the library of Harvard College will contain 225,000 of the cards used in Prof. Abbot's system. The library now has three such cases, and will need three more to contain its complete catalogue, covering 168 square feet. With M. Bonnange's cards it would require eighty-four such cases, covering 2,352 square feet, which is more space than most libraries have at their command. The catalogue of the 'Bibliothèque nationale,' made with equal thoroughness, which, however, is hardly to be expected, would cover 46,000 square feet. The 'Catalogue universel national,' that is, a catalogue of all the French books and manuscripts in all the public and larger private libraries in France, which the author urges his countrymen to undertake, would require a small village to hold it. It should be said, however, that M. Bonnange does not propose a full analytical catalogue, and that an ordinary alphabetical list of authors would occupy

much less room. The cost, as given by the author, is nearly five times that of the Abbot cards ($11 instead of $2 25 a thousand). Nevertheless, it must be allowed that the Système Bonnange has some great advantages. It is easier to read the pages of a book than cards placed in a drawer; and some method of fastening the cards, though unnecessary as experience has shown in our college libraries, will probably be required by the insubordination and carelessness of the public admitted to city and town libraries."

—The late Charles Knight, it appears, left a sketch of an historical novel which has since been worked up and is just published in England as a 'Romance of Acadia.' It is one which ought to repay reprinting here, inasmuch as the scene is laid on this continent, and the principal characters, though French, had curious relations with the confederated New England provinces. The heroine is Madame de la Tour, wife of Charles the son of Claude de la Tour, two adventurers of remarkable versatility, who were, as has been said, "always French or English according to circumstances." No writer of fiction ever conceived a more truly romantic story than that which Charlevoix was the first to tell concerning the founder of Fort La Tour at the mouth of the River St. John, the stronghold which his intrepid wife twice defended successfully against Charles de Menou d'Aulnay-Charnisé. Haliburton, in his 'History of Nova Scotia,' says that after the surrender which followed the second defence (1647), D'Aulnay made Madame La Tour witness, with a rope around her neck, the execution of her little garrison, and so hastened her death, which occurred shortly afterwards. Palfrey ('History of New England') suggests that Haliburton misread the older authorities, and that no such brutality was enacted. As La Tour, a few years later, married the widow of D'Aulnay, it is charitable to suppose that his grudges against his former rival were mainly political, though his nice sense of honor, displayed towards his father when the latter in 1630 urged him to an act of disloyalty, soon oozed away under the necessity of holding his own in Acadia; and already before his second nuptials he had "turned pirate," as Winthrop says, with a Massachusetts vessel entrusted to him. D'Aulnay's character, on the other hand, has been upheld in 'Preuves de l'Histoire de la Maison de Menou' (Paris, 1852, translated in the 'Massachusetts Historical Society's Collections,' Vol. IV., fourth series, p. 462); and still more recently in M. Moreau's 'History of French Acadia,' from 1518 to 1755 (Paris, 1873). M. Moreau dwells particularly on the administration of D'Aulnay, deriving his facts from some unpublished family documents entrusted to him by a descendant.

—Guizot's 'History of France,' it seems, was left in a completed form only as far as the end of the reign of Louis XIV. The author left no other manuscript intended for publication; nor is this surprising when one reviews the published works of this most industrious and prolific writer. A list of them, purporting to be nearly or quite complete, is given in the *Polybiblion* for October. M. Guizot's 'Dictionary of Synonyms,' not yet in its last edition, was put forth in two volumes in 1809, and marks the beginning of his literary activity. It was followed in 1811 by his 'Study on the Fine Arts in France,' in two volumes, and by a translation from the German of a recent work on Spain, again in two volumes. In the same year, he became the conductor of a monthly journal called the *Annals of Education*, which was suspended in 1816. In 1812, he began the publication of his critical translation of Gibbon in thirteen volumes. From that time scarcely a year elapsed that did not witness some fresh writing of his—book, pamphlet, article in magazine or encyclopædia, public address, political letter. His 'Mémoires pour servir' appeared in eight volumes in 1858–67. The attraction which English institutions had for Guizot is well known. In 1826, he gave to the world the first part of his 'History of the English Revolution' from the Accession of Charles I. to the Restoration,' which was followed by 'Pourquoi la révolution d'Angleterre a-t-elle réussi?' (1850); 'Monk, chute de la République et rétablissement de la Monarchie en Angleterre, en 1660' (1837 and 1851); 'Etudes biographiques sur la révolution d'Angleterre' (1851); 'Cromwell sera-t-il roi?' (1852); and 'Histoire du protectorat de Richard Cromwell et du rétablissement des Stuart' (1856)—the third part of the original work. A translation of Hallam, revised by M. Guizot, and preceded by a preface, was published in 1828–29. Besides his services rendered to this author and to Gibbon, Guizot assisted in 1821 in revising Letourneur's translation of Shakspere's complete works, and prefixed to it a biographical and literary notice of the dramatist, whom he again made the subject of a literary study in 1852 ('Shakespeare et son temps'). The United States, as the lesser Britain, also received some of his attention. He edited a French edition of Sparks's 'Life of Washington' (1839–40), to which he contributed an introductory essay on the life and character of Washington in the Revolution; he also revised Lorain's 'Origin and Foundation of the United States' (1853). A notice of Madame de Rumford (1841) had an indirect relation to this country, and on that account may be mentioned here.

—The *Revue des Deux Mondes* for October 15 contains a very interesting article, by M. Alfred Maury, on a new branch of historical science, in which despite its recent origin, the French have won honorable distinction. *Sigillographie* or *sphragistique* is the study of seals and the impression of seals on public documents and other records of the past. The system of classification adopted by M. Douët d'Arcq in his 'Collection de Sceaux' has been found most convenient in the pursuit of this study. He distinguishes between the types majestic, equestrian, and armorial; the female, ecclesiastic, legendary, topographical, and arbitrary types; and the examples selected by M. Maury from each of these categories strikingly illustrate the value of sigillographic monuments to archæology and chronology, to the history of religion and art, of manners, modes of dress, and domestic pursuits of past generations. While in some cases allowance must be made for the ignorance and crude taste of bygone ages, the authority of seals in general must be considered as final. We quote, as a specimen of real and we may say French ingenuity, M. Maury's argument in defence of the faithfulness of the female costumes as engraved on the seals of the Middle Ages:

"The modifications of the female dress can be much more satisfactorily traced on seals than those of the male attire, for all the women of the Middle Ages were not Joans of Arc or Joan Hachettes, girding on their armor when occasion required it; they generally preferred to appear on their seals in the costume prescribed by the fashions of the day. We may safely regard the details of such seals as true to nature. The *coquetterie* of the fair sex, which detects at a single glance the slightest derangement of attire, would not have allowed the engraver to deviate from the requirements of fashion, imperative at all times, and always more willingly obeyed than those of law."

The practice of attaching the impression of a seal to important documents originated in early antiquity, and, although at first confined to the governing classes, attained universal prevalence in the dark days of the Middle Ages, when ignorance of the art of writing, and insecurity of property, called for some guaranty in the transaction of business. Such a guaranty was no longer necessary in the more enlightened days of the sixteenth and seventeenth centuries, and with the disappearance of the feudal world the use of the seal, except for official purposes, may be said to have become extinct.

—Professor Ludwig's *Jubiläum*, or the celebration of the twenty-fifth year of his professorship, took place at Leipzig, Oct. 15. This eminent teacher, founder of the Saxon Physiologische Anstalt, has in the past quarter of a century had more than a hundred and fifty private students, whom he has trained in special investigations, and of whom many have since become distinguished professors. There was a large assemblage of friends and pupils to take part in the ceremonies, including Professors Ernst Heinrich Weber, the Nestor of physiology; Helmholz, Du Bois Reymond, and others of less fame from Upsala, Moscow, Edinburgh, Brussels, Vienna, etc. The oldest scholar proved to be Professor Fick, of Zürich, and on him devolved the congratulatory address, at the conclusion of which a curtain fell, uncovering a bust of Professor Ludwig which had been made by Professor Schilling of Dresden. Professor Cyon, of St. Petersburg, spoke in behalf of Ludwig's Russian students, and the curtain fell again, displaying an exquisite silver clock. Professor Müller presented an album with photographs of all his pupils. But the finest of possible gifts was the superb volume of sixteen memoirs on anatomy and physiology which had been prepared as a lasting commemoration of the day. Then followed addresses from former colleagues in Zürich and Vienna, and presentations of memoirs dedicated to Ludwig and sent by various learned societies. In the afternoon the company assembled again in the Hôtel Hauffe for a dinner given to the Professor, at which there was more speech-making. "I am an old man," said Weber in private conversation, "but I have never seen or heard of so much honor being done to any professor. It has never happened (*Es ist nie dagewesen*)." In the evening, at Professor Ludwig's own house, the guests found fifty congratulatory telegrams spread upon the table, which had been sent from the principal towns of every part of Europe.

—The study of Dante, which has received so powerful an impulse from the political events of the past few years, has naturally resulted in directing attention to early Italian literature and history, which were previously much neglected, even in Italy. The most valuable materials were to be found in the old Florentine historians, Malespini, Compagni, and Villani, and they have consequently been carefully studied and published in popular editions. It was reserved for a German to call in question the authenticity of the two first-named chroniclers, and to prove quite conclusively that the history of Malespini at least is a clumsy forgery. Paul Scheffer-Boichorst first announced this theory in Von Sybel's *Historische Zeitschrift* in 1870, and has now republished this article in a work entitled 'Florentiner Studien' (Leipzig, 1874), which contains in addition an article on Dino Compagni and one on the 'Gesta Florentinorum.' It had previously been supposed that Villani had borrowed, without any acknowledgment, large portions of his materials from the older Malespini. The above work proves quite conclu-

sively that the reverse was the case, and that the object of the forgery was to magnify the Bonaguisi family. One is more reluctant to see Dino Compagni, with his strong love for his city and his bold invective against party-spirit, disappear from the list of Italian historians; and we hope the Italians will attempt to answer these doubts as soon as possible, by publishing critical texts based on the various manuscripts and whatever else may throw fresh light on the relation of the above historians to each other and to any common source. It may be well, in passing, to remind our readers that it is only a few years since another German (Wilhelm Bernhardi) proved beyond question that the 'Diurnali' of Matteo di Giovenazzo, more generally known as Matteo Spinelli, previously considered the oldest historical work in the Italian language, was a forgery of the XVIth century.

CURTIUS'S HISTORY OF GREECE.*

It is natural in taking up this new history of Greece, the English translation of which is now complete in five volumes, to compare it in general with the last great work in the same field. Yet such a comparison ought not to be made with the idea that the two are rival works in the sense that the new one must supersede the old in order to justify its own existence. Grote's 'History of Greece' is not likely to be superseded in this century, unless a new revival of learning as marked as that of the fifteenth century should occur. It is much to say of this new history, and yet it may be said with truth, that it is worthy of being compared with Grote's work and of taking a place by its side as an authority. The special student will of course consult both; the general reader may choose either without fear of being led into serious error or imposed upon by superficial semblance of knowledge. To the latter class this new history will probably commend itself in preference to the other, because it is shorter, and because it presents results with less interruption in the form of argument; and yet it does not deserve to be condemned by the investigator on that account. Every writer of history must choose for himself what place he will take along the line that joins the two extremes of unmixed narrative and of abundant citation and discussion, and his readers cannot complain of the choice, though they may regret it. Grote chose to fill both text and notes with discussion and criticism, but it was almost a necessity for him to do so, because on so many points his views differed from those generally current before him. The historic value of the myths, the land-distribution of Lycurgus, the claim of the Athenian democracy to a reputation for sanity and common decency as a government, the character of the Sophists and the relation of Socrates to them—these are some of the more important topics on which the independence of Grote's opinions and his arguments in support of them are well known. It is impossible to declare upon such points a view widely different from the prevalent one without full statement of the reasons for it. Grote's work was that of a pioneer. He was alone, for his investigations were in a field and on a method in which no one, at least of his countrymen, had preceded him. He had to win almost every step of his way by clearing away obstacles of prejudice and inherited opinion. He had to take and hold his positions by his own judgment and his own resources. Such work needs to be done only once for all. The ground is cleared for everybody, and even if others differ in minor points from him who cleared it, they do not have to go back to the point from which he started.

Thus it is to be expected that Curtius's work will be widely different. He has been trained as a scholar in a country where scholarship is a profession with organized division of labor, and where men learn what others have done before they do their own work, so that each new worker can advance the sum of knowledge. So coming some fifteen years after Grote, with command of the contributions to knowledge made during that period, some of which were suggested by the appearance of Grote's work, he is able to view the whole subject from a somewhat different standpoint, to supplement deficiencies, and correct what seem to him errors—in a word, to write the history in a form which before Grote would hardly have been acceptable, if it had been possible. Thus we may understand why Curtius goes almost to the other extreme from Grote in the matter of discussion, excluding it from his pages almost entirely. In regard to the citation of authorities there is a noticeable and welcome change in the course of the work. The first volume (of the German original), published in 1857, contains only six notes; the second (1865) and third (1867) contain two hundred and nine and two hundred and fifty-five notes respectively. These are a very valuable part of the work, for they contain frequent references to recent monographs and essays in periodicals, as well as to the latest discoveries in archæology, of which students in other countries might not be informed. But the presence of these notes in the later volumes makes us the more regret their absence from the first one, for it is just there where the materials for history are so scarce and so heterogeneous that we most desire to know the precise ground for the author's views.

In the treatment of the mythical period in this first volume appears the most important divergence of method from Grote. Curtius regards the myths, so far as he can use them for his purpose, as personified history, if we may so term it, in that they describe real events, the movements and relations of bodies of men, under the form of the actions of individuals. In order to determine what to accept and what to reject of the mass of material, and how to shape his explanations, he avails himself of inferences from the subsequent relations of tribes and cities, of arguments drawn from Oriental inscriptions and from the prehistoric remains of Greece, and of his remarkable knowledge of the distribution of geographical names. His method is in fact a modern scientific Euhemerism, differing only in the tools it uses from that ancient system of interpreting mythology. We think Grote would have said of it, It is very ingenious and possibly true, but it is not history. It is evident to any one how much scope this method gives to personal opinion, and how great a demand it makes upon the reader's confidence in his author. We admit readily the justice of such a demand in the present case, but we dread the effect of this as an example, and regret that Curtius has so cast the weight of his name into the scale against the science of Comparative Mythology.

The points in which this history supplements deficiencies in Grote's work belong mainly to the departments of literature and art; and, on the whole, its distinctive merit, the most valuable special contribution made by it to our knowledge, seems to be in showing the connection between the life of the people as manifested in these arts and their other more organized activities which belong to the old idea of history. Nearly a quarter of the space is devoted to sketches of the development, at different epochs, of philosophy, oratory, the various branches of poetry and prose literature, painting, sculpture, architecture, and the arts of government. Thus one chapter ("The Years of Peace"), covering 180 pages in the second volume of the translation, presents a most complete and interesting picture of the age of Pericles, in which the many-sided activity of that wonderful central figure binds all parts together, and in the combination and correlation of so many triumphs of genius the reader grasps the peculiarly Athenian idea of harmonious development. The fulness of detail, in which, however, the excellent arrangement prevents any sense of weariness, makes the life of the people seem that of a real community, and goes far to overcome the distance of time and difference of civilization by showing the little things in which all civilized communities are alike. Thus Curtius does for the more private life what Grote had done for the political history of the Athenians. In the life of Pericles particularly there are many new points of view and suggestive combinations full of interest. We recognize gratefully the fruit of Curtius's long study and familiar knowledge of ancient art in each of these chapters where the narrative of events makes no progress, particularly in the analysis of the temple architecture in the first chapter of the second volume, in the description of the temples and statues on the Acropolis in the same volume, in the criticisms upon the later poetry and art of the period after the Peloponnesian war in the second chapter of the fourth and also of the fifth volume. Especially in the former of these last two chapters will be found an interesting and valuable estimate of the place of Euripides in the history of tragic poetry. We confess that we never have admired Euripides any more than Aristophanes did, nor do we find that Curtius overlooks his faults or places him more nearly on a level with Æschylus and Sophocles than seems just. But he explains his relation to his age, and vindicates for him a position in the development of literature, so that at least we understand better than we could before the admiration that others have felt, and are less disposed to quarrel with the popularity that his works had after his death.

The account in the same chapter of the life and character of Socrates suggests comparison with Grote's famous chapter, but does not bear it so well as other parts of the history. The analysis of the teaching of Socrates, and of the relation to him of Xenophon and Plato, is less thoroughly and less clearly given by Curtius. Also the fatal result of the trial he ascribes to hostility on the part of the court and to the plausibility of the charges; whereas Grote shows clearly, quoting also Xenophon, Cicero, and Epictetus in support of his opinion, that it was almost a necessary consequence of the remarkable course of Socrates in the conduct of his case. But on the other hand Curtius points out what Grote does not, that the coming on of the case at this time was only an incident of the "dark time of hostile insinuation and mutual recrimination" which followed soon after the overthrow of the Thirty. And after all we are thankful to him for this sketch of Socrates, as well as for the vivid delineation (in Vol. III.) of the character of Alcibiades and his relation to Socrates.

The translation is, on the whole, so good that we cannot help hesitating

* 'The History of Greece. By Prof. Dr. Ernst Curtius. Translated by A. W. Ward, M.A., Professor of History in Owens College, Manchester.' New York: Scribner, Armstrong & Co. 1874.

to complain of it. But we find in every volume misprints, or instances of careless revision, where a form of expression is changed in the middle of a sentence without the erasure of the first form, or of needless loss of the point of the German sentence. Such expressions, too, as "stapling-p'ace" (Stapelplatz) and "helmbush" (Helmbusch) ought not to disfigure an English page. The book needs careful revision and correction once more before an English reader can rely upon it and quote it as giving always surely the author's meaning.

SIR AMIAS POULET.*

THIS is another and an important contribution to the secret history of a story of which the interest seems only to grow with time and debate. The chivalrous glamour with which Walter Scott has invested the unhappy fate of Mary Stuart, the intrinsic elements of romance abounding in her career, and the polemic acerbities which render her life and death a battle-ground between two great religious beliefs, give a perennial attraction to the minutest details concerning her, and with each fresh instalment of new facts brought to light the contest over her memory waxes more bitter and the final verdict seems further postponed. Father Morris has done well in publishing some hitherto unpublished letters of Sir Amias Poulet, her jailer during the last two sombre years of her captivity, and in supplying from other sources the correspondence requisite to afford a partial glimpse into the intricate plots with which his prisoner was environed. A very interesting preface is prefixed, by another hand, which sheds light upon the character of Sir Amias as developed in his despatches while ambassador at Paris, some ten years earlier, in 1577 and 1578. The editor, however, would have better fulfilled his duty had he abstained from giving a polemical cast to the running commentary which accompanies and explains the documents, while the perpetual pointing out of inaccuracies in Mr. Froude's narrative is not only superfluous, but tends to give the reader a feeling of distrust in the work, as being not a colorless collection of historical material, but a book with a purpose, for which the historical material is, to some extent, merely a vehicle. It is bad enough when a professed historian like Mr. Froude writes with an animus which leads him, consciously or unconsciously, to distort the facts of history; but when an editor of documents betrays an evident leaning to one side of a vexed question, the student who is not thoroughly familiar with all that exists in print and MS. on the subject can hardly help feeling that possibly some other motive than a judicial one has prompted the selection of the special papers set before him. In the present case the prepossessions of the editor are undisguised, and the result is unfortunate, for the facts so clearly established by the documents themselves are quite sufficient.

Yet granting that the Babington conspiracy was really set on foot by the subtle Walsingham, through his miserable tools, for the purpose of entangling Queen Mary in its meshes and forcing Elizabeth to put an end to her rival; granting, what is by no means so clear, that forged interpolations were made in Mary's famous letter, by which she was rendered an accomplice in a pretended attempt to take Elizabeth's life, it will not do for us to judge the actors in the wretched business by the standards of to-day. It was an age of force and fraud, when the world was filled with the Titanic conflict between a new and an old civilization, when every man who took part in public affairs staked his head on the success of his cause, and was not apt to be more nice in the means by which he overcame an antagonist than a commander in the field would be in deceiving an enemy or setting an ambush. When Philip II. was completing the preparations for that Armada which was to precipitate upon England all the strength of Spain, of France, and of the Low Countries, stimulated by the gold of the New World, Elizabeth and the men who stood around her knew that their religion and their lives were on the hazard of the die, and if they loaded those they played with they were only doing what their antagonists did. As long as Mary lived she was a perpetual source of agonizing care, a centre around which the hopes of the disaffected clung, and a mainspring in all the plots which were to restore the old church on foundations cemented by the blood of those who had destroyed it. That the danger was not contemptible, and that these fears were not childish, is shown by the perpetual anxiety of a stout old soldier like Sir Amias lest his charge should be rescued from him by force in spite of his soldiers and the fortified houses in which she was kept. To have awaited the shock of the Armada with such a source of internal trouble to paralyze resistance would have been madness, and the impartial student will consider it rather a tribute to the inborn sense of justice in the English race that Walsingham and Burghley should have wasted such infinite subtlety in making and proving Mary to be a traitor in the eyes of the nation. The admiration of Sixtus V. for Elizabeth's queenly qualities as manifested in sending her rival to the block, sufficiently shows how lax was the morality of statecraft; and in an age of political assassination which witnessed the deaths of Jeanne d'Albret, of Coligny, of the two Guises, of Henry III. and IV., of Montiguy and Berghen, of William the Silent, of Don Carlos, men would rather condemn the employment of such tools as Gilbert Gifford, Poley, Phelippes, and the Brewer of Burton as over-nice than as immoral. Let us not judge too harshly the players on either side of that tremendous game, but let us hope that when, some centuries hence, the secret correspondence of De Morny and Persigny, of Bismarck and of Cavour, may be laid before the eyes of the curious historian, they may reveal higher standards of motive and conduct than are afforded by the archives of the Record Office and of Simancas.

Apart from all these questions, however, the letters of Sir Amias will abundantly repay the reader by the numerous glimpses they afford of the history and manners of the time. Queen Mary's character receives a fresh illustration in the indignation which she felt at the removal of her "cloth of estate" or dais from her dining-room after her sentence—the insult was almost as keenly felt as the condemnation to death. Elizabeth's penuriousness is vividly represented to us, not so much by Sir Amias's constant complaints of the lack of money for the support of his troublesome household as by his seriously urging upon the Queen the expense of Mary's support as a reason for hastening the execution, which was postponed until he began to despair of ever seeing it. The character of the sturdy Puritan soldier, Sir Amias himself, as unconsciously portrayed in his correspondence, is a delicious study. Prompt, careful, and vigilant in the discharge of his most unwelcome task, he was not over-tender of the feelings of his captive when following orders "from above," and yet, when duty was not at stake, there are symptoms of kindliness which show that a human heart was hidden under a stern and rugged exterior. If he eagerly desired the death of his unfortunate charge, it was not from his ill-repressed impatience to be released from his irksome and responsible position, but because he believed that the cause of Gospel truth required her sacrifice. In his most confidential and unreserved letters he speaks of the toils which treachery was winding around the victim as "the merciful providence of God towards her Highness and this State"; and when the plot succeeds, he exclaims: "God make us thankful for these singular mercies." So after Mary's sentence, when urging on her execution, it is with evident conviction of the holiness of the cause that he says: "And to that hope I beseech God give full perfection."—"Now I trust the next messenger will bring your last resolution, which God grant."—"I thank God I have conceived a most steadfast hope of a happy resolution."—"If the execution of this lady be delayed, it may be repented as well in policy as in Christianity."—"Beseeching God so to direct the sequel thereof as the same may redound to his glory and her Majesty's safety, whereof there were no doubt if we were as willing to take the advantage of great and urgent occasions to further this expected sacrifice, acceptable to God and man, as we are easily diverted from it upon every sinister suggestion."—"The delay is fearful; God send it a good and happy issue."—"It is some satisfaction to hear somewhat, and that God hath decreed a day which can neither be prevented nor disappointed."

Yet the fanaticism which thus led him to long for the sight of Mary's head on the block as a sacrifice acceptable to God and man, did not blind him to the foul dishonor of the proposal made to him when Elizabeth, anxious to put the sentence into execution, yet shrinking from the responsibility of signing the fatal warrant, asked him to compass the death of the victim by secret means. In days when the prince's lightest wish was the courtier's absolute law, it required no little uprightness and manliness for Sir Amias to reply in these noble words, written within an hour after the receipt of the request:

"My answer . . . shall deliver unto you with great grief and bitterness of mind, in that I am so unhappy to have liven to see this unhappy day, in the which I am required by direction from my most gracious sovereign to do an act which God and the law forbiddeth. My good livings and life are at her Majesty's disposition, and am ready to so lose them this next morrow if it shall so please her, acknowledging that I hold them as of her mere and most gracious favor, and do not desire them to enjoy them, but with her Highness's good liking. But God forbid that I should make so foul a shipwreck of my conscience, or leave so great a blot to my poor posterity, to shed blood without law or warrant."

So bold a reproof was not the act of a courtier or a time-server, and shows that Sir Amias, in the discharge of his ungentle duties, while obeying the commands of his superiors, was no mere jailer, but a soldier and a gentleman, acting under the fear of God and according to the dictates of a conscience more delicate than was common among the soldiers and gentlemen of his day.

* 'The Letter-Books of Sir Amias Poulet, Keeper of Mary, Queen of Scots. Edited by John Morris, Priest of the Society of Jesus.' 1 vol. 8vo. London: Burns & Oates. 1874.

CHILDREN'S HOLIDAY BOOKS.*

MRS. HALLOWELL'S stories so well deserve to be read by more boys and girls than those among the *Christian Union's* subscribers that we give them a cordial welcome in their more permanent book-form. Their most obviously good point is the vigorousness and soundness of their minor morals; and that is observed not more—nor perhaps so much—where the instruction is intentional, as in the healthy and sweet spirit pervading the volume. There are even some places where the "lesson" is hardly pointed so sharply as it might be, considering the immaturity of the audience, as in the case of San.'s meddling with the cuckoo clock, or of the "thoughtlessness" of Cephas's drinking whiskey and leaving Polly alone in the boat all night. But the tone of the writer makes itself felt, as does the atmosphere of some Quaker houses, where a stranger is affected by the purity and peacefulness, the innocence and cheerfulness, without any one of those virtues being mentioned by the inmates—an atmosphere which is the result of the habits of generations, and not to be at once acquired by admirers of it. Another merit of the book, and one which may have a natural relation to that just commented on, is the thorough Philadelphia flavor it preserves throughout. Now, Boston is just as good as Philadelphia, and New England is full of excellent and worthy States not inferior to Pennsylvania; but New England and Boston have given us a great many stories. That "section" has been endlessly and profusely and minutely admired by its sons and daughters. We have had "parin' bees," "huskin's," and evening singing-schools, and pork and beans, and squashes and doughnuts, and Mayflower relics and Puritan manners and Yankee dialect served up so often—and it ought to be said so well—that most of us have come to accept them as the chief national characteristics, and the more docile of those born out of New England probably fancy by this time that such things really were familiar to them in some stage of their existence, or, if they were not, they ought to have been. This modest little book of Mrs. Hallowell's, which portrays Philadelphia so well as far as it goes, was probably never intended to make a stand against the flood of New England juveniles. It only shows what might be done in that direction, and how refreshing it would be for a change—grateful to Philadelphians, and instructive to the world beyond the Delaware and Schuylkill. "The Little Crippens" is a Christmas story of the Dickens charitable variety. It is as well told as any, and probably no harm will be done by the rather sentimental character of its philanthropy. "Cinderella" is an exceedingly well-conceived parody on the old story. The two letters to boys from Italy which are included under the title of "Enchanted Land," are noteworthy for their vividness and their excellent adaptation to children. Nothing in the book is better to our mind than the story of "Dumb Bec." It is so good as to seem true, and is told in Mrs. Hallowell's quietest—which is her happiest—manner.

There is hardly a boy of any age who would not take delight in the stories contained in the good-sized, well-printed volume on 'Dog-Life.' They are collected chiefly from well-known Scotch and English sources, and have been seen in print before, most of them probably many times. But this does not prevent the collection from being a good one, nor the subject from being one of the most absorbing and charming that can be set before the young. A boy that has grown up without having ever seen a book about dogs has missed a portion of his education and of his proper and deserved recreation.

It is perhaps a little difficult to conceive of even the 21st of June being stretched out into a tale of 236 pages, but the ingenious historian of little Archie Dundas's fourth birthday has contrived to accomplish that feat. A more innocuous feast for the evening hour before retiring could scarcely be laid before little children by a careful parent than readings from this book. It will no more excite their minds and prevent them from sleeping than the clear, large type will inflame their eyes. From the early morning when Archie wakes and is hushed to sleep again by his nurse till the proper time for rising comes—the hours, like everything else in the Dundas family, are elegant—until he goes to bed at night, there is a gentle flow of innocent incidents, told with all that fulness of detail in which children delight, about gathering wild-flowers, going to see the chickens, receiving the birthday presents, eating the birthday dinner, etc., etc. In gentility and quality of church doctrine (the latter not too often nor ever offensively introduced), the book is most British and unimpeachable. Each of the multitude of serving men and women knows his place, and takes pride in the bearing or accomplishments of his young masters and mistresses. And all of the little gentry know their places, too, and are most gracious and affable towards their honest dependents. It is all so comfortable, even to read about, that it is no wonder Mrs. Dundas, who possessed it all, went up into the children's rooms after the head-nurse and the under-nurses had got them to bed and asleep, and thanked God for her abundant mercies, her "strong, healthy children," and "plenty of money." The accent of the Scotch hinds on the estate is as powerful as any we remember to have read. The French illustrations differ characteristically from those of the same class of subjects by Pletsch and Frölich. The childish peculiarities and the realism of the little scenes are all exaggerated in a sentimental direction, as shown by an excess of short skirts and bare legs, an excess of dumpiness and babyishness in children performing actions which show them to be older than mere toddlers. The women, too, are similarly absurd; as, for instance, the young girl standing on the round of a ladder in bare feet, picking cherries in an attitude inspired by the ballet.

'Roundabout Rambles' was so very well-told a collection of stories that it was natural to suspect Mr. Stockton's heaven-born mission to be writing for children. That suspicion becomes a fixed belief after reading his volume for this year. It is one of the funniest, most entertaining, and otherwise best-considered little books we have seen for a long time. The scene is laid in a country place in Virginia after the war. Kate and Harry London are a bright, enterprising, and generous brother and sister who, rather than see their favorite and now very aged "Aunt Matilda" go to the almshouse, undertake to support her in her cabin. They first raise the trifle of money necessary for this by picking sumac-leaves to sell for tanning, and the boy by disposing of the wild turkeys or other small game he occasionally shoots. All these devices producing only a precarious income, they are led to take hold of a singular chance which fortune has brought in their way. A mica mine has been opened in the neighborhood by a company whose many telegrams and letters are often intercepted by the sudden rise of Crooked Creek. Harry's intimacy with the telegraph operator at Hetertown having brought him a fair knowledge of telegraphy, he considers, and finally, with the aid of his father, carries out a plan for placing a wire across Crooked Creek, and with himself in Aunt Judy's cabin on one side, and another boy whom he has taught, in "one-eyed Lewston's" cabin on the other side, telegraphing the company's messages across during the short periods when the Creek is high. The Mica Company are sharp and forethoughtful, and render the boys' company great assistance, with the view of ultimately buying them out, which they do. It will be seen from this brief sketch that the plan of the story includes some events which verge on the improbable. If this be a fault, it does not perhaps remedy it much to say it is not a tenth part so bad as the faults of the popular Trowbridge in the same direction; but much as we deprecate the too common tendency to sensationalism in juvenile literature, it is hardly worth while to condemn the slight stretches of imagination in the present instance—first, because they are slight, and next, because the carrying out of the details is so meritorious. It is a pleasant change to read an American story at once truly boylike, spirited, humorous, and distinctively *American*, that is neither slangy, nor underbred, nor full of impertinent young folks. The "local color" is well laid on, though not violently. The negroes are plentiful and deliciously "cullud," but the book is not overburdened with negro talk. There are some particularly good scenes; one describing Aunt Matilda's "Christmas," that obstinate old child having persisted in her one wish of having a "Christmas Tree." The negroes about enter into the spirit of the preparation for this event, and get a tree so big that it can barely be contained in the cabin. This is ornamented by Kate's cast-off Christmas-tree baubles, and the gifts—a shoulder of bacon, jug of molasses, sweet potatoes—strung along the branches, etc. When the tree is lighted, it is a scene of splendor, attended by a crowd of colored folks. Aunt Matilda is spell-bound, and at last exclaims:

"Laws-a-massy! It's wuth while being good for ninety-five years to git such a tree at last!"

The disasters of the mule and horse team make a funny chapter, as does the opening of the boxes containing the telegraph apparatus; but both are too long to transcribe here.

Mrs. Phelps's Life of Washington is not the first that has been written for children, but it will, we apprehend, share the fate of its predecessors. Though the author asserts (p. iii.) that "the framework and arrangement is (*sic*) entirely our own," the narrative is devoid of method; and although she remarks on p. 182 that "we have said General Washington was born on the 22d February, 1732," she really omitted to mention the year in due course on p. 13, and is generally lax in regard to her dates; and when she says on p. 101, "if my young friends will look at the map," she does not

give them any map to look at, though we do not blame her but a faulty custom for that. No one ought to try to teach history to the young who has such notions of evidence as are implied in the following note to the story of Pocahontas (p. 22):

"Some historians now affect to disbelieve the story of the interposition of the Indian maiden to save Smith. *The elements of probability in this incident challenge our belief.* Some persons are unbelievers in all heroism. 'When a man is infected,' says Dr. Arnold, 'with anti-romance, he has lost the finest part of his nature.'"

By the same reasoning we suppose we ought to pass over the statement (p. 13) that "the family of our Washington has been traced back by Mr. Irving to the time of William the Conqueror." Mr. Irving, however, did nothing of the kind, and any one who may have pretended to go further back than John Washington, the first emigrant to America, has been led astray. Mrs. Phelps says (p. 15) she "remembers to have seen in her childhood aged ladies who, although they had not studied the *rules* of grammar, yet were perfectly familiar and appreciative of the writings of Addison, Johnson, Shakespeare, etc.," and "spoke as pure and elegant English as the ladies of the present generation." Mrs. Phelps's own English may be better when spoken than as here written, and more in accordance with the rules of grammar, though we suspect her of a propensity for coupling a plural subject with a verb in the singular. Her etymology, too, is sometimes defective, as when (p. 11) she tells her past and present pupils that "this war is called the Revolutionary War because an entire change was wrought by this war in our country." Of our author's original reflections a fair sample is the following:

"He [Washington] was sent to a council of Indian chiefs on the Ohio, and to meet French officers near Lake Erie. A poet speaks of a man in solitude or on a desolate island as being denied the greatest of human pleasures, 'the sweet music of speech.' It must have been a great embarrassment to Washington to be compelled to transact business with men when both the savage and the civilized man must speak to him in an unknown tongue."

We have been unable to discover the principle on which Mrs. Phelps has divided her work into chapters. Each one is prefaced by a poetical extract of greater or less relevancy, and more or less astonishing considered as an appetizer for the youthful reader. Not even here, we are sorry to repeat, do we find any qualification for the task she has undertaken.

Homes, and How to Make Them. By E. C. Gardner. Illustrated. (Boston: J. R. Osgood & Co. 1874.)—These "hints on locating and building a house," contained "in letters between an architect and a family man seeking a home," first appeared, if we are not mistaken, in the columns of the Springfield *Republican*. They were well worth reprinting, and we can but wish for them the widest possible circulation. Mr. Gardner belongs to the school of architects who are, we are happy to think, rapidly taking the lead of their profession—giving it its tone, at least—and whose work may, perhaps, in its intention be characterized as original in its fitness, and as the strictly natural outgrowth of the conditions on which each building is undertaken. Mr. Gardner states his own creed in this way (p. 223):

"This, too, I hope you will insist upon. Every man who would build himself a house shall first sit down and—not count the cost, that comes into my department, but—ask himself solemnly what the house is for. To live in, of course. But living is a complex affair; it is constant growth or gradual death; there can be no standing still. Is the house to be an end, or a means; a help to make the life-work larger and better, or an added burden? Shall it lift or crush him? When this solemn questioning is honestly done, we shall have a new order of domestic architecture. It may not be classic, neither Grecian nor Roman, Gothic nor French, but the best of all that has gone before and the last best thing thrown in. We shall have more cheap houses, more small ones, I think; more comfort and less show, more content and fewer mortgages."

Our author, it is plain to see, is something of a moralizer. Elsewhere he says, and says truly, that "a well-ordered home, though it consist of but two members, is a tremendous missionary society." But his preaching is not all solemn. He manages to develop all his points by assuming in turn half-a-dozen different characters and carrying on a love-story, much as has been done in the 'Autocrat of the Breakfast Table,' and with no little of the Yankee humor. To quote all of his doctrine which we heartily approve would require too much of our space; but here are a few passages we had marked:

"A chimney is most useful and honorable, and you are on no account to be ashamed of it. Don't try to crowd it into some out-of-the-way corner, or lean it off to one side to clear a cupola,—better burn up the cupola,—or perch it daintily on a slender ridge like a brick martin-box; let it go up strong, straight, and solid, asserting its right to be wherever it is needed" (p. 103).

"Let your doors and windows be wide, and your roof be high. A wide door is far more convenient than a narrow one, usually much better in appearance; and for the windows, when shall we learn the unspeakable worth of the bountiful light of heaven? . . . Practically, the larger opening is scarcely more expensive than the small one" (p. 138).

"You do, however, give one reason for your preference [for a French roof]—the complete chambers—which is merely another way of saying you like three stories better than two—a good argument, by the way, for the basement, which is surely more convenient than an attic" (p. 234).

"Do you suppose the bravest artist that ever swung a brush would dare put an ordinary two-story house of modern style on the front seat in a New England landscape? It would ruin his reputation if he did—even without the French roof. Can you tell why?" (p. 120).

While we cordially recommend this clever attempt to popularize the principles of sensible construction, and know of nothing better adapted to make friends between an architect and his client, there is, as we ought to point out, one disappointing omission. Mr. Gardner has modestly refrained from saying it outright, but the moral of his book is the opposite of "every man his own architect." "By-and-by," he promises, p. 33, "you shall have a chapter on the whole duty of architects, as I understand it." This chapter does not occur in the present work, being perhaps reserved for separate treatment. It will be interesting to have Mr. Gardner explain why it is that one hesitates more to employ an architect than a doctor, a lawyer, or any other professional man. The reason, we take it, is to be found in the complexity of the service rendered, and the comparative irretrievability of failure on the part of the architect. We can change lawyers and ministers and (in most cases) doctors until we are suited, with a chance of repairing the mischief already done by the original bungler; but the man who builds, or can afford to build, more than one home for himself is of course the exception. The house when finished may "crush" him by being unsatisfactory in its plan or in its external design, and the latter in two ways—in the mass or in the details. To bring an example home: Mr. Gardner's talk disposes us to esteem him highly for his views, and so far to consider him a most desirable architect. Yet the sketchy illustrations interspersed with the letters do not show artistic ability commensurate with his soundness of doctrine. More specifically, we will say that we could not live comfortable in a house adorned with the "square heads with brick caps" figured on p. 77.

The Original Lists of Persons of Quality, Emigrants, Religious Exiles, Political Rebels, Serving Men Sold for a Term of Years, Apprentices, Children Stolen, Maidens Pressed, and others who went from Great Britain to the American Plantations, 1600–1700. With their Ages, the Localities where they formerly Lived in the Mother Country, the Names of the Ships in which they Embarked, and other Interesting Particulars. From MSS. preserved in the State-Paper Department of Her Majesty's Public Record Office, England. Edited by John Camden Hotten. (New York: J. W. Bouton. 1874. 1 vol. crown 4to, pp. 580.)—This work, though possessing a certain value, is by no means of the importance attributed to it in the publisher's circular. The valuable parts have already been printed before, and this publication is chiefly of interest as a new collation of a well-known text. It may be stated briefly that few official lists have been preserved of the early emigrants from England. One volume, covering the period from Christmas 1634 to Christmas 1635, was found over thirty years ago, and is still preserved in the State-Paper Office, London. In 1843, the late James Savage examined the original and made extracts from it, published in the Massachusetts Historical Society's Collections, Third Series, Vol. VIII. In 1860, Mr. Samuel G. Drake made a re-examination of the manuscript, and published his copy with other documents in a book called 'Result of Researches among the British Archives, etc.,' still probably to be obtained of the booksellers. Both the gentlemen deliberately omitted the lists, to be found in the original, of passengers to Virginia, or to Barbadoes and other islands in the West Indies. There were various smaller lists also known to exist, which were printed by Mr. Drake. The late Mr. Hotten's book is largely made up of a third issue of this information, adding for the first time the lists for Virginia and the islands. These additions are of very little value to any citizen of the United States, for very few of our settlers ever reached these shores by way of the West Indies. As to Virginia, the total lack of genealogical enquirers there renders the collection of such materials useless. The convicted rebels are those who were partisans of Monmouth in 1685, and they seem to have been despatched to Jamaica and Barbadoes. The section of "Tickets granted in 1678–9" affords us but a few names of emigrants to the mainland. "The Parish Registers of Barbadoes for 1678–79"; "The Lists of the Living and Dead in Virginia in 1624"; and "The Musters of Inhabitants in Virginia in 1625," complete the volume.

It is to be remembered that the mortality among the early settlers of the Southern States, and especially among the unfortunate white bondsmen of the West Indies, was terribly great. Even had the records been preserved, we should undoubtedly find that but few of those whose names are herein inscribed have living descendants. When we further consider the lack of the necessary records connecting the emigrants of the seventeenth century with our

own times, we may well doubt if these lists are of more value than the roll of some regiment stationed here before the Revolution would possess. The volume is well printed and carefully indexed, and it may do service by renewing public interest in such matters; but certainly the previous editions have destroyed all claim to novelty in this, except so far as it adds lists of names which former editors thought to be not worthy the space they require. So far as we have been able to compare the text with those of Savage and Drake, we judge that Mr. Hotten's copy has been made carefully; but in all doubtful cases of discrepancies we still prefer the authority of the American decipherers.

It is to be hoped that among the unassorted papers in the British archives similar lists of emigrants may yet be found. A few very short records have been discovered since the first great prize was drawn, and there is no improbability in the expectation of future gains. In the meantime, the genealogist who has easily traced his pedigree to the first settler of his race in America, has either to search all the county records in England, or, at best, to get such faint hints as he may from the associations and friendships of his ancestor here.

Causeries avec mes Elèves. Par Lambert Sauveur, Docteur ès Lettres et en Droit. Fit fabricando faber. (Boston: Schoenhof & Moeller; New York: F. W. Christern.)—Dr. Sauveur has been well known for some years in New Haven and Boston as a highly successful teacher of French in the School of Modern Languages, of which he and Professor Heness are the conductors. The method pursued in the school with such excellent results differs from that usually followed, in that the pupil learns the language which he undertakes to acquire without the aid of grammar or dictionary, purely as a spoken language, and much in the same way that a child would learn it. English is banished from the class-room; the time is used in conversation, beginning with such simple elements as the familiar objects in the room may afford, and the vocabulary is formed by degrees, every day fixing in the memory the words already learned and adding others, until, in a surprisingly short time, the learner finds himself carrying on some animated discussion, of limited range to be sure at first, but with a sufficient command of his new language for the purpose. Pronunciation is acquired and the ear formed at the same time, without the confusion which the written form of French or German is apt to create at first.

The risk in following this system doubtless is, that in the hands of an incompetent teacher, or of one only moderately interested in his work, it may degenerate into Ollendorffism. It is no part of Dr. Sauveur's theory, however, that the learner should spend his time in ringing the changes upon "the handsome waistcoat of the bad carpenter" and the like. So far as the pupil's vocabulary goes, he contends that it should be made the vehicle of thoughts, that other mental faculties besides the memory should be stimulated, and that the easy use of language should be gained by exciting interest in the actual exchange of ideas, as well as by practising the mere mechanical glibness at which other *vive-voce* systems aim. How this important end is to be secured is shown by the little book which he has just published, made up of such conversations as he holds with his pupils in his every-day classes. These "causeries avec mes élèves" open with a chapter, sufficiently simple, on "The Fingers," in which the teacher—qui "montre sans cesse," as a note informs us—begins: Voilà le doigt. Regardez. Voilà l'index, voilà le doigt du milieu," and so on. Naturally enough the pupil learns to count; one finger being longer or stronger than another introduces the simpler comparisons of adjectives; distinctions of gender are noted; and, in short, many of the elements of speech are placed at his command by variations on the original theme. In succeeding chapters "The Hands," "The Arms," "The Shoulders," "The Class-Room," "To-day, Yesterday, and To-morrow," are in the same way made to serve each as the text for a discussion—one may fairly say "a talk," so easy is its flow—in which new words and new constructions are given to the pupil, in a natural order and in rapid succession. The book itself, however, is only a part, and not the most important one, of the system:

"It must be borne in mind that I always suppose the pupil to be led by an attentive and intelligent teacher. No book can quite take the place of oral instruction. Besides, my work is only a portion of the lesson to be given; it can guide the teacher, suggest to him ten questions where I give one, and also inspire the pupil, excite him to ask questions, and awaken his curiosity. This is the whole system of Socrates. If the teacher spend eight days on one of my lessons he will have employed the time well. They ask me also if the pupil is to read my book with his teacher. . . . If you wish to have my advice on this point, do as follows at the commencement: give your pupils the book to read at home, as a preparation for your teaching, but forbid them to open it in the class. Their ear alone must be occupied there. When they are before you, put to them a hundred questions on the lesson of the book, and, if you wish, read to them yourself a page from the book, and make them understand everything without ever pronouncing a word of English. There is the secret and the condition of success."

As before, "un maître qui montre sans cesse," who can invent such questions on simple objects as shall fix the attention and quicken the faculties, is indispensable. It is a part of Dr. Sauveur's system, however, that the master should do even more than this, and that he should give a living interest to his lessons by making literature, history, and criticism the subjects of his conversations, as soon as the pupil is advanced enough for such discussion. Thus, for many of his chapters he takes some fable from La Fontaine as his theme, recites and comments upon it, illustrates it by historical reference or digresses to some inviting collateral topic—all, be it understood, in question and answer, skilfully and sometimes even artistically managed. Molière, Pascal, a humorous passage or two from Töpffer, in the same way supply the texts for chapters which give variety and freshness to what is usually a monotonous and dry road.

The result of all this is a book of an entirely different order from the familiar book of exercises. It must be said, also, that for its successful use it requires a teacher of a different class from the ordinary teacher of French. The book gives the heads for a series of spirited conversations, but they are to be conversations between eager and curious pupils and a cultivated master, who is able to give to their questions answers which shall instruct and satisfy the mind as well as meet grammatical requirements. It is only here and there that we find the teacher of French who, like Dr. Sauveur, can make his exercise a *conférence* on the masterpieces of poetry and the drama. For this reason we are less confident than Dr. Sauveur as to the immediate practicability of the revolution which his enthusiasm foresees in the method of learning modern languages, though not less persuaded of its desirableness. As for the dead languages, the instruction in which he would also reform in the same manner, his efforts will at any rate help, we trust, to strengthen the movement for freeing the path of the student from the mass of grammatical pedantry which has long obstructed it, and for opening to him the literature of those tongues, while he still has the time and spirit for its full enjoyment.

The French Humorists, from the Twelfth to the Nineteenth Century. By Walter Besant, M.A., Christ College, Cambridge, author of 'Studies in Early French Poetry,' etc. (London: Bentley. 1873. 8vo. Boston: Roberts Brothers. 1874.)—This work is made up in a great measure of articles that appeared in various magazines. It is pleasant, light reading, and on the whole more satisfactory than Mr. Besant's 'Studies in Early French Poetry,' in which the many untranslated quotations in the original must have been provoking to those not familiar with Old French. In this instance the author has in general avoided what must be to many of his readers merely a useless display. The book will in fact be read principally by those who are unfamiliar with French literature, the chief merit of these sketchy essays being that they give an adequate idea of the lives and times of the French satirists in a simple, clever way. They are full of little anecdotes of men of letters that have been current in the French *anas*, which were so pleasantly used by the elder Disraeli in his 'Curiosities' and 'Amenities of Literature.' There is some absence of critical discrimination, the anecdotes being accepted without a word of comment in many cases, if they read well. Mr. Besant has an off-hand way of talking of men and things which might puzzle even special students of the periods he treats of: he alludes to obscure points as if every one knew all about them. Sainte-Beuve and the best French critics, who must be looked upon as models in writing of this sort, do not introduce in this vague, unsatisfactory manner allusions to things not generally known. Yet they write for Frenchmen who are as a rule somewhat familiar with their own literary history. It seems as if the readers of Mr. Besant's magazine articles would be better served if it were not taken for granted that they knew so much.

Outlines of the World's History, Ancient, Mediæval, and Modern, with Special Relation to the History of Civilization in the Progress of Mankind. For use in the Higher Classes of Public Schools and in High Schools, Academies, Seminaries, etc. By William Swinton, author of 'Condensed History of the United States,' etc. (New York and Chicago: Ivison, Blakeman, Taylor & Co. 1874. 16mo, pp. 498.)—It is only necessary to compare Mr. Swinton's compendium of history with the works of the same class published in this country a generation ago to satisfy one's self that there has been great progress in historical studies in this interval. It is in every respect a creditable book, and we should think would do excellent service in the class-room. The feature that most pleases us is the method of arrangement, which aims to present with considerable fulness the most important epochs and series of events, passing over the others very slightly. In this respect, in the art of giving due prominence to leading events, Mr. Swinton seems to us more successful than Mr. Freeman, whose 'Outlines' is otherwise superior. Mr. Swinton is, of course, not an historical scholar in the sense in

which Mr. Freeman is; he is a skilful compiler, who has in his eye the practical needs of the class-room, and who knows how to use the results of the labors of others. This Mr. Swinton has done faithfully and skilfully, and his book is in general free from errors, except those misprints which the most careful proof-reading will rarely escape altogether—such as A.D. 1093 for 1073 (p. 249), and B.C. 223 for 233 (p. 147), and 33 tribes for 35 (p. 146). As might be expected, on subjects like the Roman Constitution and the Feudal System we miss the precision of view of special students in these fields. The Exodus of the Israelites is assigned (p. 19) to the reign of Thothmes III., while the general consent of Egyptologists (assented to, we notice, by Prof. Owen at the recent Congress of Orientalists) places it under that of Menephthah. Odoacer is called (p. 211) a Goth, chief of the Herulians; we suppose he was not a Goth at all, nor *the* chief of the Herulians, although he may possibly be called *an* Herulian chief. In the statement (p. 277, note) that "at the commencement of the eleventh century Henry V. conceded certain privileges to the free cities," we are unable to determine whether is meant Henry I. or the twelfth century. There were not three descendants of Otho I. who sat on the throne (p. 286), for Henry II. was descended from a brother of Otho. On p. 320 the Augustinian friars are called Augustan. Wallenstein's guilt is said (p. 367) to have been "established by undoubted proof"; it ought not to be overlooked that the first living authority, Ranke, has recently come forward as a defender of Wallenstein.

An excellent feature is the notes, in small type, connecting the periods of the main text; also the brief lives of distinguished men. There are numerous good (but small) maps—an impossible feature a generation ago—and other serviceable illustrations; also an index.

JOHN STUART MILL'S THREE Essays on Religion. 8vo, $2 50.

Published this day. A new edition.

TAINE'S PYRENEES. Illustrated by Doré. Cloth, $10; Levant morocco, $20.

"It is rarely that a book is printed in so perfect a combination of the book-making trinity, author, artist, and publisher, as is this superb work."—*N. Y. Even. Mail.*

Recently published.

ADAMS'S DEMOCRACY AND Monarchy in France. 8vo, $2 50.

"A valuable contribution to the philosophy of French history."—*Boston Globe.*

"A political history of the period which for comprehensiveness of plan and thoroughness of execution has nothing like it in our literature."—*Providence Journal.*

GAUTIER'S A WINTER IN RUSSIA. By Théophile Gautier. Translated by M. M. Ripley. 12mo, $2.

"As little like the ordinary book of travel as a slender antique vase, filled with the perfumed wine of Horatian banquets, is like the fat, comfortable teacup of a modern breakfast-table."—*New York Tribune.*

"The book is a charming one, and nothing approaching it in merit has been written on the outward face of things in Russia. . . . He sees pictures where most people find mere dead surfaces, and where common eyes find the tint of a picture, he constructs a complete work of art."—*Nation.*

"We do not remember when we have taken up a more fascinating book."—*Boston Gazette.*

HENRY HOLT & CO.,
Publishers, New York.

JUST READY.
New Volume of Bampton Lectures.

THE RELIGION OF THE CHRIST. Its Historic and Literary Development Considered as an Evidence of its Origin. By the Rev. Stanley Leathes, M.A. 8vo, cloth, $4.

Contents: Anticipation of the Christ in Heathen nations—The Christ of Jewish History—The Christ of the Psalms—The Christ of Prophecy—The Christ of the Gospels—The Christ of the Acts—The Christ of the Pauline Epistles—The Christ of the other Books.

Dr. Seabury's Discourses.

WARREN'S NEW DESCRIPTIVE GEOMETRY.

JOHN WILEY & SON,

15 Astor Place, New York,

PUBLISH

DESCRIPTIVE GEOMETRY.

Adapted to Colleges and purposes of liberal education, as well as Technical Schools and Technical Education. Part I. Surfaces of Revolution. The Point, Line and Plane, Developable Surfaces, Cylinders and Cones and the Conic Sections, Warped Surfaces, the Hyperboloid, Double-curved Surfaces, the Sphere, Ellipsoid, Torus, etc., etc. 1 vol. 8vo, 24 folding plates and woodcuts, cloth, $4.

"Professor Warren's books are recognized throughout the country as the highest authorities on all branches of practical geometry. His method of classifying the problems by which the whole science is elucidated is excellent, and shows the hand of a master in the difficult art of imparting instruction. Such books are needed now more than ever, when there is a world-wide awakening as to the importance of technical instruction as a branch of common-school education. The book is admirably illustrated with numerous folding plates."—*Scientific American.*

*** Copies supplied to teachers for examination at two-thirds the price.

MACMILLAN & CO.'S NEW BOOKS.

CAVE HUNTING: RESEARCHES ON THE EVIDENCE of Caves respecting the Early Inhabitants of Europe. By W. Boyd Dawkins, M.A., F.R.S., etc., Curator of the Museum, and Lecturer in Geology in the Owens College, Manchester. With colored Plate and Woodcuts. 8vo, $7.

PHARMACOGRAPHIA. A History of the Principal Drugs of Vegetable Origin found in commerce in Great Britain and British India. By F. A. Flückiger and D. Hanbury, F.R.S. 8vo, $6.

"It has been the authors' aim to investigate anew the field of vegetable materia medica, in order as far as possible to clear up doubtful points, and to remove some at least of the uncertainties by which the subject is surrounded. In furtherance of this plan they have availed themselves of the resources offered by ancient and modern history; nor have they hesitated to lay under contribution either the teaching of men eminent in science or the labors of those who follow the paths of general literature."—*Extract from Preface.*

MENDELSSOHN. LETTERS AND RECOLLECTIONS. By Ferdinand Hiller. Translated by M. E. von Glehn. With Portrait. Extra crown 8vo, cloth, elegant, $2 25.

"Dr. Hiller's book cannot fail to be read with deep interest by all lovers of musical art. It abounds with anecdote and reminiscence strongly appealing to their favorite tastes."—*N. Y. Tribune.*

UNDER THE LIMES. A New Novel. By E. Archer, author of 'Christina North.' 12mo, paper, $1 25.

"The author of 'Christina North' comes before us again with a book which shows the same qualities and which deserves, therefore, to be distinguished from the ordinary throng. . . . The book shows considerable talent. It is not perhaps very thrilling or dramatic, but the scenery is harmonious and delicately described."—*London Saturday Review.*

THE TRANSIT OF VENUS. By George Forbes, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. With numerous illustrations. Crown 8vo, $1. (Nature Series.)

"It gives an interesting account of the general subject, first, in its historical aspect; second, the scientific conditions of the problem; third, the preparations for solving it by the different nations. The volume is copiously illustrated, and will meet the wants of general readers who wish to know something about the great scientific event that is to happen in December."—*Popular Science Monthly.*

THE COMMON FROG. By St. George Mivart, F.R.S., etc., Lecturer on Comparative Anatomy at St. Mary's Hospital. With numerous illustrations. Crown 8vo, $1. (Nature Series.)

WORDSWORTH, SHELLEY, KEATS, and Other Essays. By David Masson, Professor of English Literature in the University of Edinburgh. Crown 8vo, cloth, $1 75.

"This volume is one of the most enjoyable of its class in print. It is entertaining throughout, and some parts of it are very instructive."—*Literary World.*

ESSAYS ON SHAKESPEARE. By Karl Elze, Ph.D. Translated, with permission of the Author, by L. Dora Schmitz. 8vo, $4.

HOLLAND HOUSE. By Princess Marie Liechtenstein. With 5 Steel Engravings by C. H. Jeens, after Paintings by Watts and other celebrated Artists, and numerous Illustrations drawn by Professor Delamotte, and engraved on Wood by J. D. Cooper and others. Third and Cheaper Edition. In 1 vol. medium 8vo, extra gilt, $7 50.

A THEORY ABOUT SIN IN RELATION TO SOME Facts of Daily Life. Lent Lectures on the Seven Deadly Sins. By the Rev. Orby Shipley, M.A. Crown 8vo, $3.

CATHOLIC REFORM. By Father Hyacinthe. Letters, Fragments and Discourses. Translated by Mme. Hyacinthe Loyson. With a Preface by the Very Rev. A. P. Stanley, D.D., Dean of Westminster. Cr. 8vo.

THE IMITATION OF CHRIST. By Thomas à Kempis. Translated, with Preface, by W. Benham, D.D., Vicar of Margate. Printed with Borders in the Ancient Style after Holbein, Dürer, and other Old Masters, containing Dances of Death, Acts of Mercy, Emblems, etc., and a variety of curious Ornamentation. Crown 8vo, $3.

BIRDS, THEIR CAGES AND THEIR KEEP. Being a Practical Manual of Bird-Keeping and Bird-Rearing. By K. A. Buist, with Colored Frontispiece and other Illustrations. Crown 8vo, cloth extra, $1 75.

"The book is delightfully written, and the directions for the management and rearing of the birds and for their treatment in disease and illness, are so clear, sensible, and humane that the whole race of cage-birds ought to find a marked amelioration in their condition, especially in the articles of food and cleanliness."—*Athenæum, London.*

THE VICTORY OF FAITH. By Julius Charles Hare, M.A., Archdeacon of Lewes. Edited by Professor Plumptre, with Introductory Notices by the late Professor Maurice and Dean Stanley. Third edition, crown 8vo, $2 25.

HISTORY OF ANCIENT PHILOSOPHY. By the Rev. W. Archer Butler, late Professor of Moral Philosophy in the University of Dublin. Edited by W. Hepworth Thompson, D.D., Master of Trinity College, Cambridge. (Revised by the Editor.) New and cheaper edition, in 1 vol 8vo, price $5.

A GRAMMAR OF THE LATIN LANGUAGE from Plautus to Suetonius. By H. J. Roby, M.A. Part I., containing Sounds, Inflexions, Word Formation, etc., crown 8vo, $2 50; Part II., containing Syntax, Prepositions, etc. (just published). crown 8vo, $3 50.

A COMPENDIOUS DICTIONARY OF THE FRENCH Language (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By Gustave Masson, Assistant Master at Harrow School. Square 12mo, half-morocco, $2 50.

ELEMENTARY LESSONS IN HISTORICAL ENGLISH Grammar. By the Rev. R. Morris, LL.D., President of the Philological Society of London. 18mo, $1 25.

NOW READY.

A RAMBLE ROUND THE WORLD, 1871.

BY M. LE BARON DE HUBNER.

Translated by LADY HERBERT.

1 vol. 12mo, cloth extra, $2 50.

PART I.—AMERICA.
PART II.—JAPAN.
PART III.—CHINA.

EXTRACT FROM PREFACE.

"To behold, beyond the Rocky Mountains, in the Virgin forests of the Sierra Nevada, civilization in its struggle with savage nature; to behold in the empire of the Rising Sun the efforts of certain remarkable men to launch their country abruptly in the path of progress; to behold in the Celestial Empire, the silent, constant, and generally passive—but always obstinate—resistance which the spirit of the Chinese opposes to the moral, political, and commercial invasions of Europe; these are the objects of the journey, or rather, of the wanderings which I purpose making round the globe."

New York Evening Post.

"Baron Hübner is an Austrian diplomatist and author. His book is always entertaining, often truthful, often acute. Americans will naturally peruse with especial zest the amusing pages in which he has embodied his impressions of themselves. We do not know how the Chinese, Japanese, and other people with whom he has fallen in on his travels have fared at his hands; but, if he has written of them as well as he has of us, 'A Ramble Round the World' is, on the whole, a truthful and instructive book."

Sunday Times and Noah's Messenger.

"The author is one of those travellers who view the world from a comprehensive standpoint, and seems willing to take the world as it is, and write of it as it exists. The events noted are of a recent date, the Baron having made his ramble in 1871, and it is a literary luxury to read the late ambassador's book of over six hundred pages, and read of our land as an attentive foreigner saw it. . . . The second part of the book is devoted to Japan, the third to China, and the close of the 'Ramble' in September, 1872, finds the writer in possession of a valuable diary from which is framed the volume, which is handsomely printed, neatly bound, and as pleasant a book of travel as any of the latest issues."

NOW READY.

MACMILLAN'S MAGAZINE.

No. 181 (NOVEMBER).

CONTENTS:

I. *SIR ROBERT PEEL AND THE COUNT DE JARNAC.* By A. C. Stapleton, Esq.
II. *CASTLE DALY:* The Story of an Irish Home Thirty Years Ago. Chapters XXV.–XXVII.
III. *WORKHOUSE SCHOOLS FOR GIRLS.* By Miss Smedley.
IV. *A SACRAMENTAL HYMN.* By the Dean of Westminster.
V. *THE OLDEST FAIRY TALE IN THE WORLD.* With a Preface by Viscountess Strangford.
VI. *AN UNNAMED HABIT OF LANGUAGE.* By the Rev. John Earle.
VII. *NOTES ON ROME.* By Captain Richard F. Burton. I The Seven Hills.
VIII. *OLD LABELS.* By C. B.
IX. *PRUSSIA AND THE VATICAN.* III. From 1850 to the Vatican Council.
X. *LETTER FROM THE ARCHBISHOP OF WESTMINSTER ON PRUSSIA AND THE VATICAN.* No. II.

Mr. A. G. Stapleton criticises the Political Life and Character of Sir Robert Peel, taking for his text the Comte de Jarnac's recent article on that statesman in the *Revue des Deux Mondes.*

The interesting Irish Story, "CASTLE DALY," is continued.

In an article on "Workhouse Schools for Girls," Miss Smedley discusses the important subject of Pauper Education, particularly with regard to some points raised by Mrs. Nassau Senior in her recent 'Report on the Condition and Results of Pauper School Training.'

Dean Stanley contributes "A Sacramental Hymn."

Lady Strangford introduces to the English-reading public "The Oldest Fairy Tale in the World," which is believed to have been written by a Pharaonic Scribe for the edification of the young Prince Seti Manephta, son of Pharaoh Rameses Mi-anum, who ruled at Thebes, B.C. 1400, and at whose court Moses was educated.

The Rev. John Earle, the well-known Philologist, writes of "An Unnamed Habit of Speech."

Captain Richard F. Burton initiates a series of articles on Rome, by a description of the far-famed "Seven Hills."

"Old Labels," by C. B., will be found a bright and amusing paper.

The third article on "Prussia and the Vatican" comes next, and is followed by A Letter from Archbishop Manning, called forth by the article published in the previous number.

FOR SALE BY ALL NEWSDEALERS.

THE WEEK IN TRADE AND FINANCE.

NOVEMBER 16, 1874.

MONEY on call has remained easy at 2½ to 4 per cent. upon the usual Stock Exchange collaterals, but with a tendency towards greater firmness, caused in part by the revival of speculation and the consequent shifting of loans. Cable advices to-day report an advance in the Bank of England discount rate from 4 to 5 per cent. The continued withdrawal of bullion from the Bank has been the cause of the change. The amount withdrawn during the week ending on Thursday last was £274,000. The Bank of France gained during the same time 5,556,000 francs in specie.

The statement of the Clearing-house banks of this city for the week ending on Saturday was favorable, owing to the large gain in specie, which was sufficient to bring the surplus reserve of the banks up to $18,914,750—an increase of $3,576,725 over that of last week.

The stock market, after having been irregular during the week, closed strong on Saturday with a general improvement in prices. There has been a greater desire upon the part of the professional operators in stocks to take an interest in the market, while considerable outside buying has been going on, influenced by the more favorable reports of railroad earnings as compared with those of last year. The different investment stocks have been strong, especially Illinois Central, Chicago, Burlington and Quincy, and New Jersey Central. The increased enquiry for dividend-paying stocks is traceable to the fact that first-class railroad mortgage bonds have advanced so much in price that the income to be derived from investing in them has been reduced from what buyers have been accustomed to look for heretofore, and investors who may have to sell at a future time run a great risk of having to make a considerable concession from present prices.

The following table shows the course of the stock market during the past week:

	Highest.	Lowest.
New York Central	102¾	102
Harlem	130⅜	130
Erie	29¾	28⅜
Lake Shore	82⅜	81½
Wabash	32⅜	30⅝
Northwestern	40⅞	38¾
Northwestern preferred	57⅝	54¼
Rock Island	100¼	98⅝
St. Paul	35⅝	34⅜
St. Paul preferred	55¼	54
Pittsburg	* 87⅛	87¼
Del., Lack. and Western	109¾	109
New Jersey Central	107⅛	106¼
Michigan Central	77¾	75

* Extra dividend.

	Highest.	Lowest.
Illinois Central	99¼	96¾
Union Pacific	36⅝	35
C., C. and I. C.	11⅞	9¾
Hannibal and St. Joseph	27¼	25⅝
Hannibal and St. Joseph preferred	35⅝	32¾
Ohio and Mississippi	31⅛	30⅜
Panama	115	115
Western Union Telegraph	80⅝	79⅛
Atlantic & Pacific Telegraph	19¾	19¼
Pacific Mail	45⅞	44¼
Quicksilver	32⅛	31
Quicksilver preferred	39	37
Adams Express	120	116¾

In Southern State bonds, Tennessees and North Carolinas show a further improvement, while the old bonds of South Carolina were in good request at higher prices than those existing before the election. The improvement in the prices of Southern State bonds for the week has been from 1 to 3 per cent. Railroad bonds continue strong. There has been a fair amount of transactions in Governments, especially in the 5-20's of 1862. The principal buyers of Governments have been the savings-banks and other financial institutions, while the foreign bankers have been the sellers.

There was a marked firmness in the gold premium all the week, which was due to the firmer tone of the market for foreign exchange. The advance in the Bank of England discount rate to-day further strengthened the exchange market, advancing the price to a point at which it paid a profit to ship gold to the other side against bills drawn here. The price of gold advanced to 110⅞ at the opening this morning, and afterwards to 111⅛, at which it closed.

PUBLISHERS AND IMPORTERS,
17 MURRAY STREET, NEW YORK,
Have Just Published:

THE WORKS IN PROSE AND Verse of the Rt. Hon. John Hookham Frere. With Memoir by Sir Bartle Frere. Second edition, with Additions. 3 vols. crown 8vo. Handsomely printed, with numerous Head and Tail Pieces and Initial Letters, and two Portraits on steel by Jeens. Price $7 50.

Contains Frere's Translations of Aristophanes, from Theognis, the Poem of the Cid, Homer, Catullus, Lope de Vega, etc., etc. The Monks and the Giants, a Poem by Robert and William Whistlecraft; Contributions to the Anti-Jacobin (The Loves of the Triangles, The Rover, etc.), etc., etc. Minor Poems.

"They are works of the best literary art. They reproduce the essential characteristics of the Aristophanic comedy in such a manner that from their perusal the English reader not only may obtain a truer conception of the genius of the Athenian playwright than any but the most intelligent and thorough students of the original derive from the Greek itself, but also finds himself charmed with the plays as pieces of English composition, and contributions to English comedy."—*C. E Norton in North American Review.*

"One of the most accomplished scholars England has produced, and one whom Sir James Mackintosh has pronounced the first of English translators."—*Ticknor's History of Spanish Literature.*

*THE BOY JOINER AND MO-*del-Maker. By Ellis A. Davidson. Containing practical directions for making numerous articles for use and ornament. With descriptions of various tools, and the methods of using them. 200 illustrations. Fcp. 4to, cloth, $2 50.

THE POPULAR RECREATOR. A complete Compendium of all sorts of Games, Recreations, Amusements, and Holiday Pursuits. Fully illustrated. Handsome cloth, 768 pp., $5.

CASSELL, PETTER & GALPIN, 596 Broadway, N.Y.
Send for our fall list of new books. Free by mail.

THE TWELVE APOSTLES. Twelve separate, full-length figures, designed and engraved by Hans Sebald Beham. This distinguished artist was born at Nuremberg, A.D. 1500, and belonged to the school of Albert Dürer. He possessed genius and a ready invention. His drawing is correct, and the expression of his heads admirable. His copperplates are executed entirely with the graver, in an uncommonly correct and delicate manner.

One set of the above beautiful prints will be sent to any address on receipt of two dollars. One impression will be sent on receipt of twenty-five cents.

Also, by the same artist, a full-length figure of Christ ascending—sent on receipt of twenty-five cents.

It should be distinctly understood that the above impressions are printed from the original plates.

Address GEORGE GOODWIN & CO., Box 1,984, Boston, Mass.

All orders should be distinctly written—including Name, Town, County, and State.

NOW READY.

FOR BETTER OR WORSE. A Book for some Men and all Women. By Mrs. J. Cunningham Croly (Jennie June). Cloth, 12mo, $1 50.

In her papers on Marriage, Mrs. Croly gives some practical and sensible ideas and suggestions regarding the subject. Apart from exceptional evils and false or mistaken ideas, marriage as it exists is open to criticism, because it places men and woman in false positions; and what these positions are, wherein they are false, and how they may be improved, it is the object of the writer to show.

THE PUDDLEFORD PAPERS; or, Humors of the West. By H. H. Riley. New Edition. Cloth, 12mo, illustrated, $1 50.

This book deals with the humors of the West, though there is something besides fun within its covers. The reader will discover an undercurrent of seriousness pervading its pages, and will gain an insight into the manners, customs, and hardships incident to life in a new country.

THE CHILD OF THE TIDE. By Mrs. E. D. Cheney, author of 'The Mountain Girl.' Cloth, 16mo illustrated, $1 50.

The scene of the present story is laid in the vicinity of St. John, N.B., and is founded on some facts in the experience of a gentleman occupying a prominent social position in that city. It thus possesses the charm of being to some extent, at least, a record of actual events, and the book is consequently pervaded with lively appeals to the sympathetic interest of the reader.

☞ For sale by all Booksellers. Sent, post-paid, on receipt of the price.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 26, 1874.

The Week.

THERE is no part of the country in which the effect of the election has so immediately made itself felt as in the South. The evident disinclination of the Attorney-General to interfere in Louisiana now, compared with his ferocious attitude toward this State in time past, and the refusal of the President to see the necessity of recognizing anybody in Arkansas, are encouraging indications of the improvement of the relations between the Southern States and the General Government. These States, speaking generally, have been rescued from their carpet-bag governments, and though there are, and for a long time will be likely to be, a horde of needy adventurers scattered through the South, hungry to get possession of any part of the government that any number of ignorant and credulous voters can be induced to put under their charge, there will be no longer a despotism at Washington exercising its unlimited powers to keep these rascals in power for life. Whatever misfortunes happen to the South now, will happen through its own fault; and we are glad to see that a vigorous effort is being made to effect a just and reasonable composition between the various States and their creditors, as a first step to reform. The plan, as given roughly by the newspapers, consists of a general funding scheme entered into by each State and its creditors, the latter agreeing to take new bonds at less than the par value of the old bonds, and in return the State agrees to incorporate this funded debt in its general scheme of taxation and government, in such manner that legislatures will hereafter have no power over it. There is no doubt that some such scheme as this is not merely advisable, but necessary. With this done, with the carpet-bag régime at an end, with the production of cotton at the same level as before the war, it will only need immigration to make the South far more prosperous than it was before the war.

The Indian Commissioner has made his annual report, and, like most reports on this branch of the service, it is in its way a curiosity. He begins at the beginning, and divides the Indians scientifically into three or four groups, as the wild tribes, the civilized and semi-civilized Indians, and vagrants, estimates their respective numbers, and shows that "a general Indian war" is impossible; then discusses the subject of their treatment, declares that the President's so-called policy is a good one, that feeding the Sioux has been gradually taking the fight out of them, that the Indian treaty system is a failure; and finally recommends the adoption of a sort of Indian code by Congress, which, among other things, would bring Indians within the domain of the criminal law in several respects. There is, we suppose, little hope that Congress will attempt to deal with the Indian question this winter in an intelligent way, or even that, if it desired to do so, it would know how. The resignation of the Indian Commission last summer, after being rendered powerless by the Indian Ring, did not look as if the President had a very serious intention of carrying out his policy, and besides this there are other circumstances connected with Indian administration at Washington which point in the same direction. Mr. E. P. Smith, the present commissioner—formerly a Congregational minister, and an army chaplain, who was once believed to be so excellent a man that Secretary Delano, at some public meeting, said, "If there is a man living whom not having seen I love, that man is Edward P. Smith," and who, as agent of the Minnesota Chippewas, made a good reputation for himself—has now fallen from grace, has lost his character of a truly good man who might be loved, even without a personal acquaintance, and is now much suspected and doubted by the real friends of the Indians, who believe him to be the tool of the Indian Ring.

In addition to this, it would require a good deal of astuteness to discover what the present policy of General Grant with regard to the Indians actually is. On the 3d of March, 1871, Congress declared that "hereafter no Indian nation or tribe within the territory of the United States shall be acknowledged or recognized as an independent nation, tribe, or power, with whom the United States may contract by treaty." In this there certainly seemed at the time to be the germs of a new policy, and a rather remarkable policy too, considering that it was aimed at a method of dealing with the Indians which had been used for a couple of centuries, and under which some three or four hundred treaties had been made. But one thing was evident—that if the old treaty system was to be broken up, something else must be substituted; but, so far as we know, Congress has never provided any substitute; and the consequence is that, as a matter of fact, the Indian Bureau has been compelled to go on as before in spite of the law. The calling in of the Quakers and other religious bodies to supervise the distribution of supplies is not a policy, particularly when the Government does not sustain them in their supervision.

The policy really pursued by the Government for many years has been this: A treaty has been made with a tribe, giving us the greater part of their lands, and giving them in exchange a diminished reservation, with a provision that there shall be maintained upon the reservation for a term of years a dozen or so of "educators," consisting of a superintendent of teaching and two teachers, a superintendent of farming and two farmers, two millers, two blacksmiths, a tinsmith, a gunsmith, a carpenter, and a wagon and plough maker, with shops and material—the whole civilizing machine being contrived with little or no regard to the peculiarities of the tribe to be dealt with, or their condition (for the tribes are of every possible variety, from self-supporting communities to wild savages). The Government proceeds to carry out its part of the bargain, and the Indian, enthusiastic for civilization, comes in and harnesses his hunting-pony to a plough, and makes an heroic attempt, perhaps for a whole afternoon, perhaps for a week, or for a month even, to civilize himself. A very short experience, however, satisfies both the Indian and his horse that they have not arrived at the agricultural stage, and both betake themselves to the chase. After that, he only comes back to the Government shops to have his gun repaired. This goes on for the number of years specified by the treaty, then all supplies cease; population has closed round the reservation, the animals of the chase have disappeared, and one more Indian tribe has entered on its last stage of existence—vagabondage. These, by the way, are not discoveries of our own, but have been all set down in black and white by General Walker; so that the Government cannot pretend even not to know what has been going on. Such is our present Indian policy, and we doubt whether the Democrats will be able to find a better field for investigation than this branch of the Government.

After looking into Indian affairs, perhaps in the way of a "side speculation" it would be a good thing for the Democrats to make a few enquiries into the working of the Bureau of Agriculture, presided over by the Hon. Frederick Watts. The principal operations of this Bureau during the past year, it seems from the report of Mr. Watts, have been the distribution of one million two hundred and eighty-six thousand packages of seeds. Besides this, the usual predictions as to the cotton crop have been published—perhaps the most worthless statistics collected by any government on earth. A careful comparison, recently made in England, of the actual crops for the last half-dozen years with the Bureau's estimates, shows not merely that the estimates are worthless for any practical purpose (and the only practical use to which the figures are ever put is to

affect the price of cotton), but that they are almost invariably wrong *one way*—in almost every case they are ridiculously below what the crop turns out to be. The Bureau ought to be abolished as a public scandal. It is our firm conviction that the people of this country have now reached that point in civilization at which they can get their own seeds without the aid of paternal information from such a department of Government as is presided over by Mr. Watts.

Of all the reports which have yet appeared, that of the Internal Revenue is the most encouraging. While the customs revenue during the past year has fallen off some millions, the internal revenue shows an excess in domestic receipts over the estimates of $2,600,000. The Commissioner suggests that if Congress wishes to abolish the remnant of stamp duties still in force, it might be done by an increase of the tax on spirits, and he refers to the subject of spies and informers in a cursory way, saying that since the Sanborn business was put an end to, the Department has kept its own officers at work looking into cases of alleged fraud. The report on the whole makes a good showing for the business of the country. The internal taxes are now almost entirely collected from spirits and tobacco, and arguing from this alone, it might be perhaps fallaciously inferred that the condition of the Department has little or nothing to do with general business interests, or that, as we have seen suggested in one newspaper, the continued production of spirits may be accounted for by the increased consumption caused by the unwonted rejoicings over the Democratic victories this autumn. But taken in connection with the fact that the railroad returns show no such falling off in gross earnings as was expected, it seems doubtful whether we have after all had such a terrible year since the panic as we thought we were having.

One of the most remarkable of the plans just now thought of for reviving the fortunes of the Republican party is a gigantic scheme of "public improvements," carried out at the expense and under the superintendence of the Government. This scheme has actually been produced and recommended to the present Congress by the Organ in Washington as a good piece of work for the coming winter. It shows how both the First and Third Napoleons kept the people at work in "developing resources" and "transforming" cities, and then asks whether this Government of ours has nothing to do but to "collect taxes to pay salaries and the interest on the public debt." This question it answers in the negative, and says that one of the great objects of the Government is "to enable the people in their collective capacity to undertake enterprises which are too gigantic for private capital." Therefore, we are to let the reduction of the debt alone, or apply all our surplus revenue "to improvements which will tend to revive business, and give labor and food to the laborer." In other words, we are to set up a great "national workshop," to convert the laborer into a proletary, and the Government into an almshouse. Such schemes, produced in a paper of the intelligence of the Washington *Republican*, would, of course, be hardly worth notice by rational men if it were not for two things: the first is, that we have a President who makes the *Republican* his organ, and has "public improvers" like "Boss" Shepherd for his friends and companions, and who invites a man on trial for a criminal offence of a grave character to a reception at his official residence while the court is sitting and the case pending. The second is, that the leaders of the Republican party are men who, as was shown in the inflation debates, are not likely to be deterred by its economical or political monstrosity from taking up any scheme which is likely to keep them in power. Therefore, it is not uncharitable to predict that we shall witness between now and March the introduction of a great many wild plans for reviving industry, beginning with the "three sixty-five" craze, and ending with canals, railroads, cuttings, excavations, tunnels, and other undertakings likely to attract voters and furnish offices.

Mr. Beecher's attorney has thought proper to appeal against the order of the Brooklyn courts refusing to compel Tilton to furnish him with a "bill of particulars" in the civil suit brought by the latter. The first result of this will be of course delay in this particular case, but as it does not affect the criminal cases it will not ward off investigation, though it may bring it on under conditions more favorable to Beecher than to Tilton. But the public impression is, nevertheless, that the object of the appeal is to get time and wear out the public curiosity, which, however ill-founded, is a very unfortunate impression to get abroad in a matter touching character. Now, we do not mean to say that Beecher is, guilty or innocent, not entitled to all the benefits of all rules of legal procedure, but we do mean to say that the public looks for some better reason for believing that he is acting in good faith, and not resorting to chicane, than the authority of his present lawyer, Mr. Shearman, can furnish. It is most unfortunate for Mr. Beecher that the gentleman who has charge of the proceedings should be a person who has won all his legal fame as a sharp and adroit practitioner in the service of Fisk and Gould. Indeed, it is one of the incidents of this unhappy affair which make many people believe that the gods are really bent on Mr. Beecher's destruction.

It is semi-officially announced that the new plan of taxation decided upon by the Assembly Committee, which has been holding meetings in this city, is that presented by Mr. Andrews of the Tax Commission. This is, in brief, to tax real estate, corporations in bulk on the value of their stock, exempt all manufacturing corporations carrying on business within the State, and repeal all other laws for assessing personal property. This may not be an ideally perfect plan, but will be an improvement on the existing system. For one thing, it would get rid of the monstrous tax on mortgages, about as glaring an instance of double taxation as has come down to us from barbarous times, which is still upheld even in commercial States like New York and Massachusetts, both by the legislature and the courts.

The main topic of interest in English politics is Mr. Gladstone's pamphlet on the Vatican Decrees and Civil Allegiance, which he publishes in the form of an expostulation addressed to English Catholics. He declares that these decrees are at war with modern thought and ancient history; that the Papacy has refurbished and again brought into use all the old weapons which it was not many years ago thought to have for ever laid aside, (and he quotes in support of this the anathemas of the Syllabus); and that "no one can now become a convert to Rome without forfeiting his moral and mental freedom, and placing his civil loyalty and duty at the mercy of another." He recalls the complete and solemn repudiation of the doctrines now promulgated by the church, by the English and Irish Catholic clergy before Catholic Emancipation in 1829; exposes the fatuity of the distinction which confines the Pope's infallibility to matters of faith and morals, as if morals did not include the whole field of human activity; and maintains that, be he fallible or infallible, the Council exacts "absolute and entire obedience to him," and points out that under this claim a large number of matters of the utmost civil importance have in every Catholic country been declared to be of ecclesiastical concern. He demands, consequently, from English Catholics a demonstration that the Pope is, under no pretence, able to make any claim on those who adhere to his communion that will in any way "impair the integrity of their civil allegiance," and that if any such claim were made, it would be energetically repudiated. By way of showing that these fears are not chimerical, he points to the struggle in Germany, and the one impending in Austria, and asserts that the Papacy would not engage in conflicts of this kind in the physical arena, if it had not in view the promotion of an attempt to recover, through bloodshed and violence, the temporal power in Italy. He says the position he has occupied in the Liberal party during the last thirty years, and the part he has taken in making the concessions to Catholics which have placed them on a footing of

equality with their fellow-citizens, render it proper for him to make these enquiries.

The pamphlet has, as might have been expected, made a great sensation, but the press is divided as to its expediency—the weightier opinion being that Gladstone has been guilty of an indiscretion which will cause him a world of trouble. Archbishop Manning has briefly replied, in a characteristic letter, in which he declares:

"1. That the Vatican decrees have in no jot or tittle changed either the obligations or the conditions of civil allegiance.

"2. That the civil allegiance of Catholics is as undivided as that of all Christians, and of all men who recognize a divine or natural moral law.

"3. That the civil allegiance of no man is unlimited; and therefore the civil allegiance of all men who believe in God, or are governed by conscience, is in that sense divided."

He also declares that he and his flock are as loyal as Mr. Gladstone, and deprecates the stirring up of the strife which, he says, is going to bring down great public and private calamities on Germany. The key to the above declaration, however, is to be found in the fact that the Pope is the exponent of the "divine or natural moral law," and that a Catholic may say that his allegiance is limited only by the divine or moral law, when he means that it is limited only by the decisions of the head of the church. Anybody who flatters himself that he can get Archbishop Manning into an "impasse," or, as they say on the Stock Exchange, "corner" him, will find himself greatly mistaken.

The fears that most candid persons entertained as to the probable result of Professor Tyndall's excursion across the "boundary of experimental science," have been fully realized. As was pointed out by many after the delivery of his now famous address at Belfast, a scientific man had no place beyond that boundary, and could be no better off there than a theologian, and could there discern "neither the promise and potency of all terrestrial life," nor anything else, any more clearly than the Pope. Professor Tyndall speedily found all this out for himself, for in the preface to the reprint of his address, dated September 15, 1874, he met the charges of "material atheism," which the address had very naturally brought down on him, by declaring that that doctrine "did not commend itself to his mind in hours of clearness and vigor," and that "in the presence of stronger and healthier thoughts it even dissolved and disappeared." More recently, in an address delivered at Manchester, he announced that he "did not profess that creed of atheism which had been so lightly attributed to him." It is difficult, but perhaps not impossible, to reconcile this disavowal with the declaration made at Belfast, that "he discerned in matter the promise and potency of every form of life," for he may say, and we believe does now say, that what he means is that organic life may have been produced from matter without special creation; but the fact is very clear that he took up a position at Belfast, about the origin of life, which a scientific man was not called upon to take up, and which was in no way scientific, and that he has since found cause to regret having done so and to back out of it. In other words, he has been found wandering about beyond the limits of experimental science by the theologians, and not being able to give any satisfactory account of himself, has been taken into custody by them and passed back again over the line, to the mortification and embarrassment both of himself and of his friends.

The explanation of this unfortunate occurrence we take to be, that the gradual conversion of scientific associations into popular audiences, with no scientific knowledge to speak of, has had the usual effect upon the scientists who, like Professors Huxley and Tyndall, happen to have remarkable powers of expression. It tempts them into making telling and effective addresses, full of sensational hints and inuendoes, and of little digs at the theologians, and covert challenges to the intuitionists—or, in plain English, into highly unscientific performances. Both these gentlemen have now had so many encounters with the clergy on scientific ground, and have so often come off victorious, that they have got to like fighting, and have at last been carried by their bellicose zeal into the one region which ought to be closed to all true scientists. That much injury has been done to the cause of science by this last affair there is no denying. Scientific men have as such nothing to do with the origin of things or the existence of a God, and their meddling with these things, while it lends no help to philosophic speculation, brings discredit on other things. But it will do good in the end if it teaches scientific men to mind their own business.

Bismarck, nothing daunted by rebuffs, is pushing on the war vigorously against the church. One or two incidents in the struggle have led the authorities to the belief that instructions had been received from Rome calculated to force on a crisis. One was the production by the Bishop of Hildesheim of a deed assigning all his property to his sister when the police called on him to levy a fine of two hundred thalers incurred for violation of the Ecclesiastical Laws. Another was the return of priests who had been expelled from their parishes, to celebrate mass in their churches. After winking at this for a while, the Government determined to stop it, and as, in one case at Trèves, the priest escaped when mass was over by a side door, it was determined to put the police in full view of the altar during the service, and arrest him there as soon as it was at an end. This was accordingly done, three officers making the arrest in the presence of the congregation, which was a good deal excited, but there was no disorder. Of course there is something painful about all this, but it is hard to see what else the Government can do. The clergy are setting the law at defiance under orders from a foreign potentate, and in such a contest the state must perish or triumph. Moreover, there is nothing whatever in the Falk laws which in the smallest degree interferes with the discharge by the clergy of their really spiritual functions in the sense in which that term is understood by everybody but the extreme Ultramontanists. They interfere neither with the celebration of the mass, with the administration of the sacraments, nor with preaching. They do interfere, however, with the exercise of episcopal authority, as the Ultramontanes assert it, and with the secular education of the clergy, but the state, which pays the clergy, could not avoid, since the Council of the Vatican, taking these or similar precautions against the abuse of the newfangled Papal authority.

The French Assembly is to meet on the 30th inst.—that is, next Monday, and the principal topics of speculation in the French press are whether Marshal MacMahon will in his message recommend any definitive organization of the government; and, if so, what? The result of the elections so far has not thrown much light on the situation. The Republicans have made slight gains, but the Bonapartists have made relatively greater ones, though at the expense of the Monarchists; but these will now hold the balance of power, and may help to hinder the passage of constitutional laws as heretofore in any sense they please. There seems to be little doubt that the Marshal will again insist upon the establishment of a permanent form of government by the creation of a Second Chamber and of an executive office, of which he himself will be treated during his present term as the first incumbent, or, in other words, by the establishment of a political system which cannot be any day overturned by a majority of one Chamber. The country is again becoming prosperous. The vintage this year is good almost beyond example, and Dr. Holland will be shocked to hear that the whole nation is made happy and hopeful by the prospect of a magnificent yield of wine. Specie payments, too, are coming back, the foreign demand for French goods is markedly returning, and there is, in fact, little now beyond the debt and the vacant places by the firesides, and the loss of the provinces, to remind the country of the war, except the absence of an established government. The Marshal tells every one that the Septennat will last seven years, but then the Marshal may die or the Assembly may vote him out of office. In the meantime, a strong effort is being made to have the state of siege raised which is still maintained in forty of the departments.

"GOOD MEN IN OFFICE."

THE Democrats in the present Congress nominated Mr. Fernando Wood for the Speakership. Their enemies have been saying recently that they will probably do the same thing next December, and many of their friends have thought it necessary to warn them against it very solemnly, as calculated to bring them once more into deep discredit and deprive them before 1876 of the Republican support which gave them their recent victory. To this some of the Democrats have replied, by hinting that they will probably select Mr. N. P. Banks for the vacancy, and seem to be under the impression that if they do this they will satisfy all reasonable expectations and silence all cavillers. Now, the career of the two persons above-mentioned is sufficiently notorious to make it needless to say one word as to their unfitness for the Speakership, or as to the oddity of nominating them for any such position, as the first step in a reform movement. We may add that, considering that a year has to elapse before the Democrats will be called on to elect a Speaker, and that this period will probably be passed by them in reflection and consultation, it is more than likely that neither Wood nor Banks has any chance of such an honor. Moreover, absurd as it may seem to those who think the Democratic party wholly given over to evil and incapable of regeneration, we venture to predict that the Democratic party, with a fair chance of restoration to power before it, will be found, if not a wise body, a very much wiser and shrewder one than it has been during the last ten years. Defeat and hopelessness had since the war deprived the organization of discipline and even vitality, and made the leaders somewhat indifferent to its fate. They had nothing to gain by caution or exertion, and little to lose by rashness or negligence. But now there is really a tolerable prospect of their getting hold once more of the Government, and of getting hold along with it of an amount of "spoils" of which the old Democrats of the period before the war never dreamed. To ask us to believe that under these circumstances the leaders will perpetrate any of the grosser follies of their recent history, is to make a very large demand on our credulity. We believe that if the truth were known at this moment, it would be found that they are as fully alive as Mr. Conkling himself to the perils of their position, and as familiar with the things they have to do and to avoid in order not to spoil their game. In other words, for the first time in fourteen years they feel the weight of responsibility, and perceive that they are contending for a great prize with a reasonable chance of success. It is fair to suppose that this will have a steadying and illuminating effect upon them.

When we mention the talk of Wood and Banks as candidates for the Speakership, it is not because we believe that either of them has much chance of nomination or election, but because even the talk of them shows how great the difficulty is of hammering into the heads of average politicians an adequate idea of what the term "reform" just now means, and what it is in our politics that is exciting the discontent of decent people. We think we are correct in saying that "reform," as the word is now used by people outside politics, means chiefly improvement in the personal character of public men. Of course the personal character of politicians is not the only cause of this discontent. Failures on the part of the Republican party, as a party, in the matters of legislation, such as its dealing with the Southern problem and the currency question, have had a great deal to do with producing it. But when a voter at this moment says he wants "reform," he means in ninety-nine cases out of a hundred that he wants to see "good men," as he calls them, put in office, and "bad men" turned out; and by "good men" he means men who will not lie, or cheat, or steal, or get drunk, or take bribes, or vote for their own personal interest, and who understand their business—that is, the work of governing a civilized commercial people—not profoundly, but fairly and reasonably. We shall find this view strikingly confirmed if we take up any bundle of newspapers coming in from various parts of the country, or talk with any discontented Republicans, and analyze the reasons given by them for the Republican overthrow. We shall find that most prominent among these are the Crédit-Mobilier affair, or in other words the corruption, real or supposed, of leading members of Congress by a railroad company, followed by falsehood or tergiversation on the part of such members; the Salary Grab, or in other words the putting of large sums of money, wholly disproportionate to the sums paid by the Government to its servants in other than the legislative department, by Members of Congress into their own pockets as payment for their own services; the Sanborn affair, or the connivance of officers of the Treasury at the appropriation of large sums, by an adventurer of low character, for performing duties which it was the duty of the regular collectors of the revenue to perform; the Simmons affair, or the appointment of an almost unknown and by no means respected politician to an important office against both the new civil-service rules and the old party usages, in order to please a disreputable politician. The Casey and Packard affairs, the Kellogg affair, the "Boss" Shepherd affair, and various others which have brought the party to grief, might be described in the same way, *i.e.*, as examples of the influence on politics of "bad men"—in the plain, everyday acceptation of the term. So, also, if we examine the causes of the popular dissatisfaction with the leading men of the Republican party, we shall find that it is rather their personal shortcomings than their professional mistakes which trouble people. Butler, Morton, Carpenter, Cameron, and the like are decried and distrusted not because people suppose them to be wanting in ability, but because they are believed to be insincere, corrupt, or self-seeking. As long as the "main question" was uppermost in the mind of the country, these personal defects made comparatively little impression, but with its decline in importance the character of individuals has become a matter of serious national concern; and when people denounce "corruption," they do not mean an abstract vice passing by that name, but certain men who practise it, or connive at it, or take no pains to prevent it. The great aim of politicians is, of course, to get the public to think of and look at corruption as an abstraction. When they personify it at all they do not call it Butler, or Casey, or Carpenter, or Murphy, or Shepherd, but a "foul bird," or an "unclean beast," or "a upas-tree," or "a black tide," or "mire." In short, they are willing to call it anything you please or denounce it with any degree of severity, as long as you do not seek to bring it home to anybody in particular of their own party.

The difficulty of bringing about a change for the better, as regards the character of public men, has been increased somewhat by the doctrine which a good many persons who ought to have known better, have of late years allowed themselves to preach or accept, viz., that as long as a legislator or other high officer of the Government represented the average intelligence and morality of his constituents, there was no reason to complain of him. Now, it is of course very difficult, if not impossible, to say what the average intelligence and morality of any community is; it is still more difficult of course to say whether any man represents it. But suppose it to be possible to strike this average, what it means is a standard obtained by mixing up the bad and good there is in the community, and then taking the resulting compound not only as the actual state of things, but as the only state of things to be desired or looked for, and an average man as the fittest man to speak for it. There is of course a constant tendency in politics to this state of things, but the business of people who want to purify politics and make the world any better than it is, is to fight against this tendency, or at all events not to resign themselves to it. The true doctrine of representation is, that the proper man to represent any constituency is the very best man they can be got to elect, and that no community is fairly represented which is not represented by its best men. Its bad elements are entitled to representation, or to enter into the average, as a matter of legal right or of expediency, no doubt. But they have no moral right to any representation at all, or if they have, it is to that of the very best men only. The wag who declined to go West and clear a farm for himself on the ground that "the highest civilization was not a bit too good for him," grazed a very important political truth. George Washington

would not be a whit too good to represent John Morrissey's district, if he could be got for the purpose. It is from this great rule, that every man is entitled to the best if he can get it honestly, that political progress has in our day to flow, and it is only by preaching it faithfully and striving for it zealously that the future of democracy can be assured.

The application of all this to the efforts of the Democratic party to set our affairs to rights is obvious enough. If it proposes to confine its reformatory efforts to setting a lot of old political hacks of its own to undo the work, even the bad work, done by Republicans, it may rest assured that its reign will be short-lived. If, on the other hand, it can bring a larger proportion of the talent and intelligence of the country to bear on its legislation and administration, or, in other words, introduce a fresh element into our political life, it may be assured of a long reign. We want our governmental affairs conducted in a manner more closely resembling that on which our great corporations are conducted. Nobody ever thinks, when looking out for a railroad or bank president, of trying to find a man for the office who will closely resemble the shrewdest and most foolish of the stockholders rolled into one. They try to find a man who will be the equal of the very best stockholder, no matter how good he may be; and if they do not always get him, they never pretend that "the average man" is the right one for the place, and, above all, they never put up, if they can help it, with a man who steals the securities and uses the bank funds for his personal advantage, and laughs when they ask him for an account.

THE "BLOATED BONDHOLDER."

It is not so very many years since a large body of eminent public teachers and statesmen, so-called, perambulated our country loudly enunciating a political faith, not unpopular at the time, which was tersely expressed in the dogma that "black men had no rights which white men were bound to respect." If we remember correctly, this code of political ethics was in vogue about the year 1858; at which period it received its fullest development in the State of Illinois at the lips of the late Stephen A. Douglas. That black men have a great many rights which white men are bound to respect is now quite generally conceded; but the pleasing doctrine, as old as history and as widespread as creation, that the rights of certain persons or things are matters which rest entirely in the pleasure of certain other persons or things—this familiar old doctrine is always giving some evidence of a brisk and hearty old age. For the apostles of this creed also, Illinois seems to be quite a favorite "stamping-ground"; for just as it was the black and white man in 1858 whose relative rights were so very questionable in that State, so in these latter years it is the bondholder and the Granger. The black man, however, in his time enjoyed one decided advantage over the bondholder now—though he may have been despised, he was not ridiculous. This aspect of the present controversy raging in the Granger States has hardly received its full share of consideration, and we now propose to try to do scant justice to it. That we may properly do so, let us first for a moment try to conceive what the bondholder is in the imaginings of the uncontaminated Granger. He is something of a very hideous mien; his purse is swollen with ill-gotten gains; his face is hard; his eye is cold and clear; his heart is as a flint; he goeth forth throughout all the broad West and reapeth where he hath not sown. Whoever loses, he wins. He is a usurer, almost a robber; he toils not, neither does he spin; his life is spent to no useful purpose, but his greatest pleasure as well as sole occupation is the raking of the hard-earned pittance of the children of the prairie into coffers already overflowing.

Such, or somewhat of this kind, is the Granger ideal of the bondholder. As an offset to the picture, we do not hesitate to say that a more ridiculous attitude is not easily to be conceived than that now occupied by these same "bloated bondholders." Not only are they belabored and berated and abused, but they have lost their money; and not only have they lost their money, but they have lost it to those by whom they are thus abused, berated, and belabored. It is really lamentable that the Granger should not at least be gifted with a more acute sense of the ludicrous.

A few weeks ago there appeared in the columns of the *Commercial and Financial Chronicle* a long array of figures showing the amount of railroad bonds upon which no interest was now paid. The result was absolutely startling, amounting as it did to five hundred millions of dollars, or one-quarter part of the entire amount of our railroad indebtedness, and equal to more than a quarter part of our whole interest-bearing national debt. In the light of such figures as these, the late financial crisis is no matter for wonderment. With that, however, we do not now propose to deal; our immediate object is simply to call attention to the true significance of these figures in a single point of view. In plain English, they mean this—simply this, and nothing more:—Certain regions of the United States, and more especially of the West, were thought to stand in pressing need of perfected means of communication with other regions of the country. Certain persons dwelling in those other parts of the country had capital, the accumulation of years of industry, which they desired to invest profitably. Tempted by the prospect of large gains, they invested that capital in supplying their neighbors with the means of communication which they so greatly coveted. In its immediate results the investment proved far from judicious; the simple fact was that one neighbor had bought a new farm "too far West," and the other had spent his money building a road to it; and when he got there he found no business in sufficient quantity to justify his investment. The farms were undeniably improved, and equally undeniably the roads became bankrupt. Notwithstanding this, however, neither roads nor the capital in them could be removed from the region in which they had been placed, and it only remained for those who had built the one and invested the other to make the best of a bad bargain and hope for better times. The position of affairs was exactly the same as if the bondholder had loaned the farmer so many millions of dollars with which to improve his farm; the farmer had then proved unable to pay his interest, and had stopped doing so, and the bondholder thereupon, having no mortgage, found himself compelled to wait as best he might until such time as the other could pay, letting him have the use of his capital, meanwhile, for nothing. At first blush, such an arrangement certainly does not seem one at which the farmer at any rate ought to complain. He has got his means of communication, he has got his improved farm, and he has got his borrowed capital without the necessity of paying any interest upon it. What more could he ask for? With the bondholder the case is very different; he asks for his interest, and he gets—the roundest of abuse. Now, that the farmer should laugh and chuckle every time that he looks at the railroad and thinks of the terms on which he got it, would seem natural enough; that he should wink and jeer and gibe and thrust his tongue into his cheek whenever he speaks of a railroad bondholder, would be thoroughly in accordance with the natural fitness of things. But, on the contrary, that he should, whenever he has occasion to refer to the poor, greedy dupes who had thus readily parted with their means, load them with abuse, is, to say the least, unkind. Such, however, is the melancholy fact. The "bloated bondholder," staggering along under his load of five hundred millions of defaulting securities, is the tyrant of our day, and loud is the cry his neighbor raises against him, because he has, to his own great loss, developed that neighbor's farm.

Now, let us see which of the neighbors it is who have secured for themselves the largest portion of this unremunerated wealth. The result is rather singular, for we uniformly find that those States in which the abuse of the "bloated bondholder" is the loudest—in which the largest portions of the $500,000,000 have been secured—are those in which the least interest is paid. Take Illinois, for instance. That prosperous and wealthy State is the creation of railroads, all built by foreign capital. The "bloated bondholder" has certainly played a very considerable part in the wonderful history of that community. He now, as nearly as can be ascertained,

holds something over $45,000,000 of their dishonored railroad securities. At the lowest conceivable estimate, these represent at least $30,000,000 of real wealth, for the full enjoyment of which the people of Illinois at present pay no consideration whatever. To those who contributed that wealth it may perhaps seem a little hard that they should throughout Illinois be popularly denounced as miscreants in whom are happily combined the worst qualities of the tyrant and the thief. That the Illinois railroad bondholder is *prima facie* an ass we think that very few will be disposed to deny, and least of all the members themselves of that unfortunate class; that just now he is in a condition rather of depletion than of unseemly "bloat" would seem fairly inferable; that every engine of legislation should be directed against him to aggravate the unpleasantness of his situation seems somewhat unnecessary; but that he should be abused like a pickpocket, and so made ridiculous in his own eyes as well as in those of his neighbors, is positively cruel. It is insult piled upon injury.

But let us proceed with our investigations. If Illinois gets forty-two per cent. of its railroad indebtedness for nothing, Iowa would seem to do still better, the percentage there rising as high as forty-seven. The aggregate of "free" capital in that State is, it is true, less than in Illinois, but it still amounts to the comfortable sum of $23,000,000—a matter in these days not to be despised. Next on the list to Iowa, however, comes the champion State; there is none other like her. Kansas stands alone, in that she has secured a very remarkable railroad system without apparently paying anything for it at all; it is, of course, almost unnecessary to add that nowhere is the "bloated bondholder" an object of more hatred or persecution. Kansas boasts of a trifle less than seventy-one millions of railroad indebtedness, and her soil is believed not to be polluted by a single railroad corporation which pays the interest on its bonds. It is sincerely to be hoped that the holders of the securities in question fully appreciate the humorous features of the situation, for there is little enough else in it to make it attractive. Leaving Kansas and going north, we find Minnesota not far behind her Granger sisters. Omitting the Northern Pacific from consideration, she boasts of $35,000,000 of "free" capital out of a total of $55,000,000; Nebraska has $7,000,000; Wisconsin has $5,000,000. Here, now, are six States—the six great Granger States—the six States in which the war against the bondholder is most fiercely waged—most incredibly waged, we may say, when these returns and tables reveal the curious fact that these States represent through their railroad systems one hundred and eighty-three millions of dollars in securities on which no interest at all is now paid. Including the Northern Pacific Railway, it would appear that these communities are for the present enjoying the free use of what represents $200,000,000 of wealth, which cannot be withdrawn from them. That the bondholder must once have been "bloated" would, in view of such tremendous losses, seem highly probable; just as it seems scarcely possible that he now exists outside of a poor-house. To him the mania which has swept over the country has brought only a lesson of bitter experience, in that his own folly and over-eagerness for gain have left him depleted, denounced, and ludicrous. It is, however, some comfort to reflect that in this case what one man loses another man gains, and the time will surely come when even the Grangers will realize that the man who ties up his money in improving at his own risk another man's farm may be very foolish, but he is, after all, neither a bad tyrant nor a good usurer.

WAITERS AND WAITRESSES.

I.

MR. GOLDWIN SMITH has just written an article in the *Canadian Monthly* on American socialism, in which he gives as one of the reasons why so many of the socialistic communities have succeeded, the insufferable and growing dulness of family life as it exists among people of average means and intelligence, not on farms only nor in country towns, but even in cities; and this dulness he ascribes in large part to the absence of social intercourse. The days follow and resemble each other in most homes, at least in Anglo-Saxon countries, with almost killing regularity; the husband comes back after a hard day's work to a poorly cooked and poorly served dinner or tea, which he eats in silence in company with his wife, whose stock of ideas he has long ago exhausted, as indeed she has his. Social relations between the household and the outer world can, indeed, hardly be said to exist. He sees business men on business matters; she at most exchanges a dry and barren "call" at long intervals with other women of her acquaintance. Except perhaps the affairs of the church to which they belong, the couple have no external object of interest. No current of thought or feeling from the outer world ever reaches them except through the newspaper or magazine. In fact, it might be said without much exaggeration that the only time they take any formal notice of their neighbors' existence or their neighbors' affairs is when somebody happens to fall sick. A man may live next door to them for twenty years in good health, with many estimable and engaging qualities, and perhaps with considerable capacity for supplying social entertainment, and they will never notice his existence or display the slightest interest in his welfare beyond bowing to him in the street. Let him be confined to his bed, however, by an influenza or a broken leg, and although they may know perfectly well that he has the best of medical attendance and is supplied with every necessary comfort, they will send him, without the slightest knowledge of his tastes or wants, plates of jelly or pudding or fruit, which, in nine cases out of ten, is eaten by his children or servants, though the dish or basket is sent home with as much expression of thankfulness as if the indifference of years could be atoned for by a small occasional contribution to his larder, or as if the dull monotonous days of health and work were not the periods of a man's life when he most needed expressions of sympathetic regard.

Now, there can be little doubt that at the bottom of this social failure of the Anglo-Saxon race there lies its culinary failure. There is nothing more striking in its civilization, as has been often remarked, than its inability to make any progress worth mention in the preparation of food. The modern American or English family of the middle class—that is, of the class which is neither rich nor very poor—sits down every day to substantially the same fare as Hengst and Horsa when those two chiefs landed in Britain. Some additions have, of course, since then been made to the list of our edibles, particularly in the matter of vegetables, and there is more refinement in table appointments and in table manners; but we still prepare a meal, as the early Saxons did, by killing an animal and roasting or boiling the whole of it, or a piece of it, at a strong fire, and serving it in its own juice; and among the larger proportion of us, the savage dislike or distrust of the disguises caused by the more elaborate preparations and combinations of the French and other nations still survives with curious vigor. What is, however, a still more remarkable feature of our civilization, is the production, as the result of increased literary and moral culture and of the growth of wealth, among some of a certain contempt for eating and drinking as a low form of animal indulgence; among others of a strong determination to sacrifice the table to books and clothes and other more permanent and ostentatious forms of enjoyment; and among others, again, of a sort of shyness about eating with strangers, or admitting them to the family board, unless the meal possesses the variety and richness of a feast. The general consequence has been the degradation of the table among all but the very rich from an instrument or adjunct of social pleasure and of cheerful intercourse with one's fellows into a mere means of sustaining life, and the assimilation, in form as well as in fact, of the process of putting food into the human stomach to that of supplying coal to the furnaces of a steamboat. Apropos of this, there are few things in literature more melancholy or yet more droll than the efforts of many of our Sentimentalist friends—who, as might be expected, look on food with a certain amount of spiritual aversion—to persuade people through their papers and magazines that eating and drinking are by no means necessary to social enjoyment, and than the tales they tell of "a Boston lady of high culture," or of "a well-known philanthropist no less famed for his ripe scholarship than for his powers as a conversationalist," who used to have Attic evenings at her or his house over a meal composed of twelve stalks of celery and a bowl of lemonade, or of a dish of potato salad, or "some exquisite blanc-mange prepared by a bright young magazinist, whose last tale had made a genuine sensation in literary circles."

If there be a race in the world, however, which needs to have its social instincts stimulated by all possible external aids, it is that which has made its home, and supplied the basis for the social fabric, in England and the United States; and there is probably no other race on which the effects of a lonely feeding are so bad. For it is neither gregarious nor loquacious. It is solitary in its tastes and habits, moody, self-reliant, unsympathetic. The love of company, of saying something to somebody for the mere sake of say-

ing it, and even though it were the same thing that was said yesterday and a thousand other days before, which will enable a Frenchman to get genuine enjoyment from going to the same house and seeing the same people four evenings in the week for ten years in succession, is unknown among us. We take our pleasure sadly still, and take it with a secret sense of its vanity and sinfulness. The final result of our intellectual and moral culture inclines us to look on our fellow-man not as another human being to be loved, consoled, welcomed, or entertained, and allowed to go on his way rejoicing, but as a reprobate for whose salvation we are in a measure responsible, and whom we are bound to "save" or "elevate," or in some manner stir up and keep moving at any cost. As soon as any one of us begins to look at life at all seriously, he charges himself with the cure of souls, and enters on his duty with a solemnity which makes social intercourse seem a form of light-mindedness and profanity. Now, this morbid tendency, so full of danger to character, and so likely to form a crust under which greed and cunning hypocrisy may work their will unheeded and unchecked, derives much and unfortunate confirmation from all hindrances to social intercourse, and among these there is none more powerful than our dislike of allowing strangers to eat with us, and the false and unscientific notion which makes the supplying of the body with food the discharge of a coarse function, which wise men ought to keep private. This hallucination, too, has been fed and strengthened both by the growing luxury with which the rich surround their repasts, and by the extreme badness of the servants. The average man, in other words, dislikes bringing a friend home to his everyday dinner, both because he has acquired the notion that a dinner to which you ask a stranger ought to be something in the nature of a feast or "a banquet," as the reporters say, and because he foresees that the servants by whom his table is served will work so badly under a foreign eye as to distress his wife, distract his own thoughts, and embarrass his guest. For the first of these hindrances there is but one remedy, and that is the preaching of sound doctrine by those who find preaching their vocation, and the carrying out by those who have homes of "the great truth"—as the Sentimentalists say—that the eating of a meal in common by a family, in a decent and orderly manner, is, be the fare never so plain, a respectable and dignified act, and is as worthy of reverence and attention as the sacrifices by which the Roman husband consecrated and preserved his home, and cannot be too much cultivated and beautified; furthermore, that it furnishes the fittest, most fruitful and human occasion for seeing and talking with a friend; and that, in short, the position it holds in popular estimation is an indication by no means vague or inaccurate of the degree of civilization to which any given community has attained. The notion, not yet extinct among us, that dinner is simply feeding-time, and that you should not ask a person to it unless you have very attractive fare to give him, is essentially a barbarous notion, and, in fact, is a survival of the period when food was literally prey, and the man retired into the jungle to consume it from motives of prudence, just as the dog goes apart to gnaw his bone. The civilized view of the "mealtime" is that it is a period when conversation can be most readily enlivened, and the sympathies quickened by the aid of the process of physical reparation performed under the most favorable conditions.

In treating of the second hindrance, we touch on the cookery question of course, which is a very large one, which has been already very fully and very frequently discussed, and on which we have nothing either novel or useful to say. But as regards the service of the table, there is a great deal to be said besides what is usually said—which consists in somewhat unreasoning abuse of the Irish peasant-girls who, for the most part, do the duty of performing it in American families. With their faults everybody is familiar; but as they are the only kind of waiters now attainable or likely to be attainable, there is something childish in continually wailing over their badness. In all the lamentations about them, it is taken for granted that they cannot possibly be improved, and this assumption there are some very good reasons for believing ill founded. Neither the Irish girl nor any other girl can be converted into a good waiter unless her employers have a proper ideal of waiting in their minds, and desire to realize it. Waiting at table is an art in which there are various degrees of excellence, but in which, like other arts, no degree of excellence is to be attained without training. It is an art, too, in which, doubtless, proficiency is more often found in countries in which there is a class which has always made waiting its chief business and highest ambition, and in which there is another class which makes being waited upon a hereditary right. But the existence of neither is necessary to good waiting, if people who are training waiters know exactly what they want, and their ideal be a correct one. When we say that silence, and what we may, for want of a better name, call imperceptibility, are among the chief requisites of waiting, or, in other words, that waiting should be so done as to attract the least possible amount of the diner's attention and conceal from him as effectually as possible that his wants are being supplied by any physical agency, we pass the severest condemnation on the kind of waiting which some years ago was common in American hotels, and which thousands of simple folk, who never saw any other, were accustomed to look on as a fine and indeed awe-inspiring manner of serving food—we mean that in which a large force of negroes or Irishmen took their places, with a loud racket, in lines behind the guests' chairs, each with two dishes poised aloft in his hands, and, at a signal given by the head waiter, brought them down on the table with what a drill-sergeant would call "a smart rattle," the diners all the while sitting in somewhat uneasy and watchful suspense.

This was a thoroughly barbarous ceremony, but it was in all respects worthy of meals to which people were summoned by a gong, an instrument which should never be used to call men or women to any repast not composed of human flesh. Its sound should be always and properly reserved for cannibal feasts, and should be answered only at the double-quick and with cries of savage joy. It has, we are glad to say, gone out of use everywhere, except on steamboats and in the remoter regions of the West, where the hotel guests wait for their dinners in a compact mass at the locked door, and, as soon as it is opened, cast themselves on their food in a rush, like a pack of hounds. Even hotel waiting has now had generally a fair amount of silence infused into it. The evolutions of the waiters are not made a prominent feature of the dinner, and the guests are left to inform themselves of its readiness, as civilized men and women in our day should be, by their watches. Watches and punctuality are the civilized substitutes for gongs, bells, horns, tom-toms, and other ancient or barbarous modes of bringing people together. Even church bells are an anachronism, which association has hallowed; and when a bell *has* to be rung to announce a meal in a private house, it ought to be barely loud enough to attract attention. No row or uproar of any kind should precede a modern meal; if we are to herald it by artificial noise, it ought to be music. Moreover, no servant coming to announce dinner ought to halloo at the mistress of the house, or speak louder than is absolutely required, or speak at all, if any other signal will suffice. Nothing, in short, should as a general rule be allowed to interfere with conversation before or after a repast. And this will apply, *mutatis mutandis*, to all excessive or odd ornamentation of the table or its surroundings which is calculated to distract the mind of the guests, or interrupt their view of each other, or in any manner exalt the material side of the occasion unduly, at the expense of the moral and intellectual side. All this may be called the philosophy of the table service. About the details, as the china, the glass, the linen, the cutlery, the order of courses, any more than about the cookery, we have no message to deliver. The reader will find all that is known or thought of on these subjects in the voluminous literature of gastronomy and "household art." But we shall reserve until next week some other things which we think, if not new, are worth repeating, about the method of getting decent table-service out of the kind of persons who in this country are willing to make it a profession.

LAMARTINE.

I.

PARIS, November 5.

I HAVE spent many an evening at Monsieur de Lamartine's house in the Rue de la Ville l'Evêque. Two ladies used to do the honors of his *salon*, which was open every evening; one was Madame de Lamartine, and the other Mademoiselle Valentine de Cessiot, the niece of the great poet, who has assumed his name since his death, and is now called Mademoiselle de Lamartine. The name indeed belonged to her; she had completely identified herself with her uncle, her fortune became his fortune, she nursed him in his malady, she lived for nobody but him. If any man has the right to inspire such a devotion—a devotion which sometimes is almost suicidal—it is the poet; for he hardly belongs to himself: he is inspired, the living instrument of high and divine thoughts. Mademoiselle Valentine (I may be excused for calling her by the simple name she bore in her uncle's house) has already published four volumes of the correspondence of Lamartine. Volumes III. and IV. have only just appeared. You will perhaps be surprised if I say that, in a literary sense, nothing can be more commonplace than this correspondence. Lamartine had evidently not the slightest pretension to epistolary eminence; he never made, in reality, an effort in his life; and the beauty of his poetry is owing in a great part to the ease and, if I may say so, to the liquidity of his style. The poetical form, the necessities of the rhyme, gave of course a rhythmical and condensed form to his ideas; the ideas themselves are always of the most simple sort. Lamartine dwells on the eternal subjects of love and death, on the beauties of nature, and so on; his muse is lazy, like an Oriental sultana. In his prose works, and even more in

this newly-published correspondence, we see quite *au nu* this innate laziness, this nonchalance full of grace. His verses always make one think of the easy draperies of Greek art, falling in such rich and long folds. His letters cannot be read with *ennui*, because they are his letters; but there is nothing in them which could be cited, like so many passages in Madame de Sévigné or Madame Du Deffant, Paul Louis Courier, and some others. The correspondence has, however, one great interest: it is the real biography of Lamartine—a biography which has never been written, and which deserves considerable attention. The 'Confidences,' written by himself, are not a real biography; the actual life of Lamartine cannot be found in it any more than in 'Graziella,' 'Raphaël,' and the short commentaries which have been added to the 'Meditations' in their last editions.

Lamartine entered, so to speak, into glory out of complete obscurity. The 'Meditations' appeared in 1820, and, if I am not mistaken, thirty-two editions of them were published the same year. Here was something new—so different from the light poetry of the eighteenth century; such a noble and perfect form, such a sublime serenity! The cold-hearted Talleyrand read the 'Meditations,' and said: "There is a man!" But who was the man? Lamartine had for his mother Alix des Roys, who was born in the palace of St. Cloud, as she was the daughter of a member of the household of the Duke of Orleans. The Duke made her a *chanoinesse*, when she was fifteen years old, in the Chapter of Salles (the *chanoinesses* did not make any vows). The Chevalier de Lamartine, a cavalry officer, sometimes paid visits to Salles; he fell in love with Mlle. des Roys; he had large estates and she had no fortune; he married her and took her to Milly. Alphonse de Lamartine was born at Mâcon the 21st October, 1790. His father had gone back to Paris to offer his services to the king; he was wounded in an *émeute* in the Tuileries and escaped to Mâcon. All his relations were thrown in prison. The Chevalier was kept a prisoner in his own home. Madame de Lamartine implored the deputies of the Convention, and saved the life of her husband till the 9th Thermidor put an end to the Terror. The Chevalier returned to Milly; Lamartine has told the history of their journey in his 'Mémoires'; the roads were so bad that Madame de Lamartine, her three children (for she had had two children since the birth of Alphonse), an old friend of the family, the servants, the furniture, were drawn by oxen; as for the Chevalier he followed the caravan on foot, with his gun under his arm.

Lamartine has often described Milly; there his young mind was formed, imbued with all the tenderness of his mother and the quiet beauty of nature. He entered in 1803 the College of Belley, kept by Jesuits, and formed an early intimacy with Aymon de Virieu, who became afterwards his most constant correspondent. He began to write verses at the age of fifteen. He was very handsome—tall, thin, with an innate elegance; pious, lazy, of delicate health. He embraced no profession, contented, after leaving school, to live with his family, with his uncles, his aunts, reading all sorts of books. He had some desire to study the law, but his uncle, whose large fortune he was to inherit, would not hear of a Lamartine being a lawyer; nor any more would his family see him enter the armies of a Bonaparte. He spent a few months in 1810 at Lyons; his letters of that time contain no allusion to political events; he is much more occupied with the small debts which he has contracted in Lyons. He writes about them in verse to his friend Guichard:

> "A dix neuf ans mon front sera couvert,
> Des ennuis d'une vie à peine commencée,
> Et d'un vieux créancier la main sèche et glacée
> Le couvrira bientôt d'un honteux bonnet vert."

The *bonnet vert* means bankruptcy. We must of course expect him to fall in love, and to swear that his love will be eternal. "Yes, my friend," he writes to Guichard, "pity me, cry over me. I love for life. I no longer belong to myself, and I have no hope of being happy. Everything separates us, though everything unites us." In common language, the family of Mlle. P——, with whom he was in love, wished him to take a profession, and he had a strong dislike to any occupation. He consoles himself with a journey to Italy. "Je traine, je promène, je berce par toute l'Italie mes ennuis déchirants." Does not this prose read almost like verse? In Naples he was detained a long time by his love of the beautiful and, it is almost cruel to add, by his debts. He remains, for want of a few ducats, and falls in love with Graziella. The correspondence gives no precise indications about this poetical person; we only learn that she came from Procida, and was under the care of a young Neapolitan girl twenty-six years old, who was the *surveillante* of the girls employed in the manufacture of cigars. Graziella became afterwards a heroine, but she does not seem to have played a great part in Lamartine's real existence. The girl of Procida, whom the poet worshipped all his life, whom he sang in most admirable verses, was the image of his own youth.

On his return to Milly, he becomes morose; he runs away to Paris; he begins to gamble—a taste which he probably acquired at Naples; he runs into debt again. His mother goes after him, pays his debts, and brings him back to Burgundy. This was a short time before the invasion of France and the restoration of the Bourbons. The Chevalier went at once to do his homage to his king, and asked him to give his son a place among the Gardes de Corps. The young guardsman accompanied Louis XVIII. to the frontier of Belgium, after the return of Napoleon, and himself retired to Mâcon and to Switzerland. When Louis XVIII. returned after Waterloo, Lamartine was already disgusted with the duties of military service. His friend Virieu had just been made a secretary of legation; Lamartine wished also to enter into diplomacy, but he had not enough influence to be accepted by the Foreign Office. He got sick, went to Aix-en-Savoie, and there fell in love with Madame Charles, a young creole, who was married to an old member of the Academy of Science; he afterwards told the history of this platonic affection in 'Raphaël,' of course with many details drawn from his imagination. He returned to Paris, and offered some verses to the famous publisher Didot, who refused to publish them, as they were too little in accordance with the taste of the day. Madame Charles, who was consumptive, died in 1817; and Lamartine wrote after her death the meditation on the 'Crucifixe.' About that time also he wrote the 'Lake,' which may be considered as his *chef-d'œuvre*. His genius was at the very highest point of its development; and he was thoroughly unhappy. He was disappointed in every way. His lyric poems had been refused by Didot. He had sent, through his friend Virieu, a tragedy to the Theâtre Français. Talma, the famous Talma, heard the verses of 'Saul'; he declared that they had merit, but the piece could not be played. Immediately after this new misfortune, Lamartine writes the splendid piece called 'Désespoir.' Why cannot every soul echo misfortune with such a voice?

Lamartine was now twenty-eight years old, and in debt. "When any one," he writes, "has put his foot in this mire, he can never draw it out." He forms the wildest schemes; he thinks at times of cultivating a desert island near the coast of Tuscany. His fame, however, was slowly beginning to spread. The Duke of Orleans, who afterwards became Louis Philippe, invited him to read his 'Saul' in his *salon*. Some noblemen of the Faubourg St. Germain, hearing of a young nobleman who wrote religious verses, a thing unknown since the time of Corneille, made advances to him. His mother, who always treated him with the greatest tenderness, and who consoled him in all his troubles, was anxious to settle him in life, if it could not be by the choice of a career, by a happy marriage. Miss Birch was in 1818 living at Chambéry; she heard of a young poet whom enthusiastic friends compared to Lord Byron. She was not handsome. Madame de Lamartine, the mother of the poet, writes that she had "much *agrément*, much grace, a fine waist, superb hair, a remarkable education, much talent, and a superior mind." Lamartine was tired of his inactivity, of his restless life; but Miss Birch was a Protestant, and he was not only a Catholic—he was a Catholic poet. For a time this union seemed impossible, and Lamartine left Chambéry, where he had paid his court to Miss Birch. He wrote, on his return to Mâcon, the Ode to Byron, with whom the young English lady had made him better acquainted.

Meanwhile his friends in Paris used their influence in his favor, and when M. Pasquier entered the Foreign Office Lamartine was encouraged to return to Paris. He took with him the manuscript of the 'Meditations.' Everything now smiled on him; he entered into the best French society; he found an editor in the person of Charles Gosselin. It is interesting to know how much he received for his great work—one which will last as long as the French language: six hundred francs. The 'Meditations' took France and the world by surprise; Lamartine became at once more than a favorite—a sort of demigod; his extraordinary beauty added to this general impression; he was, as it were, a living Apollo. The oldest statesmen, such as Talleyrand, considered his acquaintance an honor; Decazes, Molé, Mathieu de Montmorency treated him like a friend. It is needless to say that in the female part of the community admiration became a kind of worship. Lamartine, however, was so little practical, he had such a disdain of money, that he sold the second edition of the 'Meditations' for the wretched sum of twelve hundred francs. Miss Birch accepted his hand. She felt for him that intense enthusiasm which is, perhaps, only found among the ladies of the Anglo-Saxon race; and this enthusiasm was as strong and vivid in her when she became an old woman as when she was still a girl. The Catholic marriage took place at Chambéry the 6th June, 1820, and the Protestant marriage a few days afterwards at Geneva. Lamartine and his wife then made their wedding-tour in Italy. He had been named Secretary of Legation almost immediately after the publication of the 'Meditations.' His wife had brought him what was then considered a splendid fortune. Edition after edition of the 'Meditations' spread his fame all over the world. He became a classic in his own lifetime.

Correspondence.

PHILOLOGY LAWFUL AND LAWLESS.

To the Editor of the Nation:

Sir: A short time ago I took occasion to criticise Mr. Alexander J. Ellis's rejection of *scientist* for 'man of science' on the alleged ground of its "barbarity," *barbarism* being of course intended. I showed that *scientist* may legitimately be founded on *scienti-*, the base of *scientia;* just as *dentist, jurist,* and *oculist* are referable to the bases *denti-, juri-,* and *oculi-*.

In matters of philology, "barbarity," Mr. Ellis tells us, "should . . . merely mean a foreigner's application of his own habits of speech to roots taken from other languages," and should not mean, he further tells us, "savage and uncivilized life."

Scientist, which he peremptorily analyzes into *scient* + *-ist,* and declares to be an Americanism, he writes about exactly as if he took it to be a typical specimen of American word-coinage.

In our asserted combination, as aforesaid, of *scient* and *-ist,* we have, it seems, exemplified "our application of our own habits of speech," etc. If, however, it be our wont, any more than it is the wont of the English, to amalgamate elements of words in this crude fashion, at least a fair sample of the resulting monsters should have been exhibited.

Yet not a single one is pointed out, while, on the other hand, Mr. Ellis specifies, with approval, "the Americanism" *pharmacal,* which also should owe its origin to "our application of our own habits of speech," and the rest. *Pharmacist,* too, is not objected to by Mr. Ellis, who may require to be told that the word is of everyday occurrence in the United States, and even is the name of a periodical published there. It should console barbarians to discover that, thanks to mere untutored instinct, they may every now and then stumble into a tenable position.

From φάρμακον we may as regularly make *pharmacal,* as *phenomena* from φαινόμενον or *noumenal* from νοούμενον. As to *pharmacist,* that the Greeks would have owned φαρμακιστὴς to be regular, is plain from the recognition of φαρμακίστρια, presupposing φαρμακιστὴρ, the duplicate of which would be φαρμακιστὴς, from the factitious φαρμακίζω. We have, as actual words, θεραπεύτρια and its antecedents θεραπευτὴρ and θεραπευτὴς.

Mr. Ellis, as I judge from the letter of his to which I am referring, would doubtless accept this as sound etymologizing of the old school. Yet more than such an acceptance I can hardly expect from him. In the letter in question I find some statements which look very strange, considering that they come from the late President of the English Philological Society. He says, for instance: "I have long doubted, for reasons far too many to unfold," whether "there is such a thing as legitimacy in word-formation." He writes of "that very rough and rude system of compounding words which we have inherited from our Aryan ancestors." Again: "All our present word-system is a field inherited from the uncivilized, and traditionally tilled without a scrap of scientific cultivation." Once more: "I feel that root-formation must have a new start, and that root-treatment by derivations through affixes and internal changes, and by compositions of half-words or letters, . . . must undergo a 'conscious development' to supplement its former unconscious development."

Acting on his convictions thus announced, Mr. Ellis proceeds to propose *uty* for what he calls "that fearful word," *utilitarianism,* and *utians* for "another awful word," *utilitarians. Philologists* and *philology* he likewise wishes to cut down to *phillogs* and *phillogy.*

"Words are the garment of thought; as thought grows, it must have fresh suits." Such is his parting dictum, and its truth is not to be gainsaid. It may, however, safely be submitted whether thought, when it takes to growing so outrageously awry as to require *utians* and *phillogs* to cover the nakedness which *utilitarians* and *philologists* have so long been able to conceal satisfactorily, had not better be stifled with all convenient speed, and put out of a world either too good or too bad to lend accommodation to its abnormal development. The sum of Mr. Ellis's teaching appears to be that something other than established analogies should govern us in our conscious efforts to enlarge or improve the domains of our current vocabulary. I need not dwell on the incongruousness of the mixture which would result from associating words formed on the new plan with those already formed on the old, for the latter would, no question, go on satisfying as before all but transcendental philosophers. It is enough to insist that words still wanted should in general follow the models of those we possess at present; and utility, euphony, and every other consideration, rational or æsthetic, must count as lawless that pseudo-philology which would amplify our language or modify it on principles such as have been operative in no ages but those of very partial enlightenment. The verbal irregularities which have been handed down to us are quite numerous enough; and we shall do well to study to diminish this class of anomalies rather than take it as exemplary.

—Your obedient servant, Fitzedward Hall.

Marlesford, Wickham Market, Oct. 25, 1874.

"SUBSOILING" AND ITS ANTIDOTE.

To the Editor of the Nation:

Sir: "J. C.'s" account of "subsoiling" will sound familiar in every voting district of the State, if not of the country; and his conclusions hardly less so that the remedy is not to be found in the attendance of voters at the primary meetings. Experience has demonstrated, *ad nauseam,* that independent voters will not expose themselves to the insult and humiliation they must undergo at the hands of professional politicians. The sooner, therefore, we recognize this fact, the sooner we shall begin to make progress in another direction.

Judge Hoar sacrificed himself to his constituents during one term. The reason why he refused to do so again, and why all men of character and ability draw back from it, lies in the position of a member of Congress and the manner of doing business there. Individual talent and character count comparatively for nothing. A seat in Congress is not a stepping-stone to win honor by public service. All the advantage which can honestly be derived from it is in the possession of the place and the receipt of the salary. It tends inevitably to fall, therefore, into the hands of men who can win no other honor or no greater income, or, on the other hand, into those of knaves who pursue the hope of greater but dishonest gain.

Without pursuing further this comprehensive subject, however, there is one concrete and definite arrangement which is the foundation and basis of the caucus system—the absurd restriction as to the residence of a member of the Legislature or of Congress in his own district. The logic and the effect of it are about equivalent to saying that no man should employ a lawyer or a doctor who does not live in his own town. The pretext for it is that a resident knows the wants of his district better than a stranger; but it is far less important that a representative should *know* those wants than that he should endeavor to satisfy them, and if we use the word in any elevated sense, there could hardly be a greater failure than under our present system. Even if the restriction were removed, there is nothing to prevent the people from electing a resident. Their freedom of choice would simply be enlarged. The fact is, that this provision, like so many other of our political arrangements, while nominally in the interest of the people, is really in that of individuals who wish to make use of the people for their own purposes.

A similar restriction was proposed in a recent plan for a French constitution, upon which the London *Spectator* commented as follows:

"It binds the highest statesmen to conciliate their own departments at any cost, or terminate their careers at each election, and disables any man popular with the country, but unpopular with his neighborhood, from standing at all. It gives to local jealousies the force of national feelings, and often compels electors to choose a fool because he is a neighbor, in preference to a statesman from just over the border. The professed object of the proviso is that the candidate may be known by his electors, but the real one is to prevent stupid landholders [we should say caucus politicians] from being opposed in their own districts by more popular or able men."

It is admitted that Dr. Ayer could have been beaten by Judge Hoar, but the refusal of the latter disabled the electors. If the malcontents could have invited a distinguished candidate from another part of the State, they would have had even a better chance, because a man of ability often excites personal jealousies in his district, which, on the principle of *omne ignotum pro magnifico,* a stranger would avoid.

In like manner, a man who wishes to promote a measure of public importance has no chance unless he can persuade his district; whereas, if he could canvass the State himself or by his friends, he might find a constituency to appreciate him. In England, for these very reasons, no such thing as a caucus is known.

But this leads to a point of still wider and deeper significance. Last winter I argued this question before the Judiciary Committee of our Legislature. They expressed themselves as quite satisfied, and reported in favor of a constitutional amendment. The House suppressed it instantly without debate, and it was even said that the Chairman of the Committee lost influence in a sensible degree. The members saw at once that it struck at the principle to which they owed their seats. The received idea is that reforms must be accomplished *by and through* the legislature; whereas they will need to be carried *against* the legislature. Nearly all our political abuses are bound up with the interest of the legislative bodies as at present constituted. Not only at Washington but in the States, and even the cities, this branch has absorbed or annihilated the powers both of the executive and the judiciary. The two latter have no power o appeal to or communi-

cation with, the people, except through the legislature, which strains out in the passage all that does not suit its interests, and colors the remainder. The first step to reform must be to give the executive an independent position, so that in its conflicts with the legislature each may act as a real check upon the other, public opinion standing by as umpire. This may not be easy of accomplishment, but it is a *sine quâ non*. G. B.

BOSTON, Oct. 25, 1874.

HOW BUTLER WAS DEFEATED.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "A." writing from Haverhill, under date of November 6, on the defeat of Butler, grossly misrepresents the facts in the case. I see no reason which he can have for so doing save the same which he gave to Gen. Cogswell for not supporting the General in his campaign against Butler, namely: because he was not consulted before Cogswell's name was put before the people. Now to answer some of the statements of "A." He says that almost the entire element opposed to Butler was kept away from the caucus because Cogswell was a Butler man. Nothing is further from the truth. Hitherto Cogswell supported Butler only as the regular nominee of the party, while on all great questions of the day he held different views from Butler. The people who stayed away from the caucuses stayed away simply and solely because there was no union of the Anti-Butler element. The Phillips part of that element, though greatly in the minority, would not give way to the Cogswell party, which composed two-thirds of the Anti-Butler strength, and had the support of the leading Republican papers in the district, as well as the Boston *Journal*, Boston *Herald*, Boston *Advertiser*, and New York *Tribune*.

Your correspondent further states that Willard P. Phillips consistently opposed Butler, but kept out of the fight. Does "A." know that Mr. Phillips met Gen. Cogswell and Col. Stone at Salem one Saturday, and told them he would "make any personal sacrifice to defeat Butler," read a letter withdrawing his name from the field, and promised to publish it in the Salem *Gazette* the following Tuesday, and yet did not publish it until some two weeks later? Does "A." know that the Phillips element in Salem and many other places voted in the caucuses for Butler? Such are the facts.

There is much more that I might write regarding this great contest and the glorious victory, and I only wish to defend Gen. Cogswell for his courage in daring to fight the "Essex Statesman." No result could have pleased us, who fought against Butler all the fall, more than the election of Charles P. Thompson.

W. S. N.

THE PROPOSED SUBMERSION OF THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: As you published in your issue of the 12th instant the letter of your correspondent at Luxville, Massachusetts, would it not have been fairer and more magnanimous to publish also my letter of the 7th instant, renewing my subscription to the *Nation*, instead of stating the fact of renewal simply, with the coloring given it by your remarks? Your readers could then judge fairly and fully of my motives in renewing my subscription, and of my consistency in doing so. Why not publish it yet, unless you wish to monopolize all the pleasantry the subject admits, and to direct attention from the true issue raised in my first letter by attempted ridicule too flippant to be approved even by your own sober judgment as journalists in the front rank?

But your correspondent calls attention to one point in my first letter which I wish to notice, as I hope I shall never be ashamed to acknowledge an error committed or to modify anything stated too strongly. In saying that I expected "scant justice from any Northern source to any one living south of Mason and Dixon's line," I said more than I meant. If I had said, as I really meant, "in political matters," I should have been compelled to adhere to my opinion, and could point, in justification of it, to your suppression of my letter of the 7th instant—while publishing the letter from Massachusetts on the subject, together with *your version* of mine.

But I have too many valued friends in the North, and too grateful a recollection of courtesies and kindnesses received at their hands, to permit the words referred to to stand unexplained, and this explanation, I trust, will be a sufficient reason why I may request the publication of this letter. I have no desire or ambition whatever for a newspaper correspondence; I had no thought of the publication of my first letter, and I assume no capacity to cope with you in such a contest; but neither legitimate argument nor attempted ridicule will deter me from expressing my convictions upon proper occasions. With regard to your correspondent from Luxville, Massachusetts, I may properly add that I decline to receive lessons in courtesy from him, as both the school in which I was educated and my own sense of propriety teach me that in presuming to subscribe to the *Nation* in my behalf, he was clearly guilty of impertinent interference with my private affairs. This letter closes all I shall say upon the subject.

Very respectfully and truly yours,

J. A. PEARCE.

CHESTER TOWN, MD., November 14, 1874.

[We subjoin Mr. Pearce's letter of the 7th inst. It will be readily perceived that we could have had no motive for withholding it, if it had reached us in time. It came to hand on our day of publication, and as it seemed likely to lose all interest under a week's delay, we inserted what we thought a fair though brief summary of its contents. Our great aim all through this painful business has been to satisfy Mr. Pearce, and it is really melancholy to see how completely we have failed. For the behavior of our Luxville correspondent we do not hold ourselves responsible. We deem it our duty, as a matter of business, on receipt of five dollars, to forward the *Nation* for one year to any person who may be pointed out to us, without any regard to his feelings or antecedents.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: Good-humor is catching, I believe, and the good-humor of your comments in your issue of the 5th instant on my letter to you dated October 26 1874, has infected me.

Moreover, in pondering the playful language of your reply to ascertain its true meaning, I can resolve it into nothing but confession of the construction I placed upon your article, with a dexterous and humorous plea in avoidance; and confession without attempt at justification has always been permitted to condone many faults. I propose, therefore, with your consent, to continue my subscription to the *Nation*, and for this purpose I enclose postal order for five dollars in payment for the year commencing November 20, 1874.

Nor will I hold you to your promise to dedicate to destruction any portion of the North in order to appease my anger; not even the Essex district of Massachusetts. The "tidal wave" which swept over the North on the 3d of November and submerged Essex County has amply revenged the offence I received; and coming, as it did, without notice and without time to remove the sick persons and young children, I feel it would be cruel in me to ask that the water should be let in any further.

But, jesting aside, I regret that you do not recollect my first letter, for it would assure you of my genuine and settled respect for the high ability and general fairness which characterize your discussion of public men and public measures.

I know no journal which, in my judgment, is so sound in its views of constitutional questions, or so forcible and clear in their exposition, as the *Nation*, and the independent, impartial tone in which you have criticised the errors or vices of the Republican leaders has been in striking contrast with the blind support or feeble defence of these same leaders by the Republican press generally.

Such a sentiment as I understand to be expressed in the article referred to in my letter of October 26, coming from such a source, did shock me and rouse my resentment, but from your reply I believed you did not mean to convey the idea which it seems to me your language naturally expressed, and, believing so, I shall not spite myself by refusing to continue a paper which I generally read with unqualified pleasure.

Yours respectfully, J. A. PEARCE.

CHESTER TOWN, KENT COUNTY, MD., November 7, 1874.

Notes.

MR. F. LEYPOLDT'S second 'Trade-List Annual' has made its appearance, and bears the marks of the same industry and intelligence that produced last year, under much greater difficulties, the first edition. It has slightly increased in bulk, contains more catalogues than it did in 1873, and, in addition to the Index of Contributors and Advertisers, and Index of Specialties Represented in the Annual, is enriched by an Alphabetical Reference List (of works published from Jan. 16, 1873 to June 27, 1874), and an American Educational Catalogue for 1874 (classified). Mr. Leypoldt, with a view to the Centennial, announces that he shall leave no stone unturned to realize his plan of a complete "Finding List" within two years. It will be a remarkable achievement if completed in five years.——Prof. William E. Griffis, who spent four or five years in Japan (1870–74) as one of the instructors in the Imperial College at Tokio, and who since his return has been lecturing on "Japan of To-Day," is preparing a work upon much the same subject, in which he will explain fully the origin and causes of the recent political changes in that interesting country. Prof. Griffis's oppor-

tunities as an observer of Japanese life, character, and customs have been exceptionally good. His address is No. 137 West Fifteenth Street, New York City.——An excellent and really impressive map of the Russian Empire is given in Part 23 of 'Stieler's Hand-Atlas' (New York: L. W. Schmidt). A provisional, incomplete color-boundary leaves Khiva and Bokhara a show of independence, with an open door towards the invader. Particularly noticeable in Russia proper is the network of railroads protecting the heart and southern and southwestern flanks of the country.——In justice to the Rev. Isaac Taylor, since we lately quoted Corssen's summary disposal of his Etruscan dice interpretation, we ought to say that in the *Athenæum* for Nov. 7 he makes a strong *prima-facie* defence of his so-called numerals, as numerals and as words.——'A Dictionary of Religious Knowledge, for Popular and Professional Use,' is announced by Harper & Bros., the editors being Rev. Lyman Abbott and Rev. T. J. Conant, D.D.——The Rev. John Weiss, who one or two winters ago, as many of our readers will remember, delivered a course of lectures in this city on the "Characters of Shakspere," will begin another series on Thursday evening next, Dec. 3, at the theatre of the Union League Club, on the "Women of Shakspere."

—The *Nation* mail for Boston and Cambridge, deliverable in those cities on Friday last, was actually not distributed till Monday. Postmaster Burt assures us that it reached Boston *via* Albany—an irregularity which we have been unable to trace to its source. We need not say how much we regret the annoyance and expense thus caused to our Eastern subscribers; for the present, we must ask them to share our belief that the fault was not with our own mailing department, but with the New York Post-office, which has hitherto served us extremely well.

—Early next month will be published in New York by Messrs. Appleton, and in London by Messrs. Longman, Vol. I. of Mr. Hubert H. Bancroft's "Native Races of the Pacific States." This work will be complete in five volumes octavo, treating respectively of the following subjects: I. Wild Tribes, their Manners and Customs; II. Civilized Nations of Mexico and Central America; III. Mythology and Languages of both Savage and Civilized Nations; IV. Antiquities and Architectural Remains; V. Aboriginal History and Migrations; index to the entire work. For so ambitious an undertaking five times five volumes would hardly be thought sufficient. It is, however, judging from the prospectus and from other accounts which have been furnished the public, a digest and conspectus of all that has previously been written on the Pacific populations from Darien to Alaska, and not strictly an original contribution to our knowledge of them; invaluable as a key to the literature of that part of America, referring at every step to the authorities; but whether critical in its use of them—that remains to be seen. Whatever the product may be (and the aggregation and comparison of hitherto scattered facts, with maps and illustrations in the best style, cannot fail to be of the highest value), the collection and preparation of materials have been remarkable enough. Mr. Bancroft has in the course of fifteen years amassed a library of some 16,000 volumes devoted to his specialty, including the bulk of the Mexican library of the late Emperor Maximilian, the Vallejo, Bandini, and Hayes collections, etc. By the aid of several assistants, and at an expense of $12,000, the contents of these volumes have been indexed as if one book. With such a clue in his hands, and having extracts made at his pleasure, Mr. Bancroft addressed himself to his task, meriting very high praise for what he had accomplished before he had touched pen to paper. We hope that he may some day compass the publication of this combination of the index and of the *catalogue raisonné*, after it has served his purpose as a working tool.

—Some of our readers will be glad to know that Mr. John G. Shea has revived his 'Library of American Linguistics.' He begins the new series by a 'Grammar and Dictionary of the Language of the Hidatsa' (or "Grosventres of the Missouri"), by Washington Matthews, Assistant-Surgeon U.S.A. The Hidatsa, the Mandans, and the Arikaras or "Rees," now live together near Fort Berthold, D.T. "To the philologist," says Dr. Matthews, "it is an interesting fact that this trio of savage clans, though now living in the same village, and having been next-door neighbors to each other for more than a hundred years, on terms of peace and intimacy, and to a great extent intermarried, speak nevertheless totally distinct languages, which show no perceptible inclination to coalesce." The Hidatsa language is of the Dakota stock, nearly related to that of the Crows (Aubsaroke) and less nearly to the Mandan. The Arikaras speak a Pawnee dialect. *Minitari* ("Minnitarees") is the Mandan name for the Hidatsa, whom the French call "Grosventres," the same name having also been given to another tribe, the Falls Indians of the Saskatchewan, distinct from the Hidatsa in language and origin. Partial vocabularies of the Hidatsa or Minnitare dialect have been published by Say and by the Prince of Neuwied; a larger one, by Dr. F. V. Hayden, in his 'Contributions to the Ethnology and Philology of Indian Tribes' (1862). Dr. Matthews, while stationed at Fort Berthold, had excellent opportunities, which he knew how to improve, to acquire a knowledge of this language, and his grammar and dictionary are among the most valuable of recent contributions to American philology. Printed by Munsell, in the best style of the "Cramoisy Press," on thick and fine paper, they make a volume of nearly 200 pages in royal octavo. We have but one thing to find fault with. The edition is of only 100 copies. To some collectors, doubtless, a limited edition and a high price are additional inducements to purchase; but it is not for mere book-collectors that men like Dr. Matthews work. Scholars who buy books to *use* are not, generally, disinclined to buy *cheap*, and a grammar or dictionary which is worth printing at all deserves to be printed in a larger edition than of a hundred copies—seven-eighths of which will be speedily locked-up in private libraries.

—The apprehensions of great and unusual distress among the poorer classes last winter, in consequence of the panic, were, as is well known, unfounded. They led to extraordinary exertions and organizations for relief, and in this city to the formation of a Bureau of Charities, which happily promises to become permanent. Their first annual report is signed by Messrs. W. Butler Duncan, John Hall, D.D., Abram S. Hewitt, Prof. Charles A. Joy, Ezra M. Kingsley, Henry E. Pellew, Theodore Roosevelt, and Joseph Seligman—names which command universal respect in this community. Their labors in the past twelve months have demonstrated the need of the most intimate understanding and co-operation between our various charitable societies, which number, according to a directory prepared by the Bureau, 194, "without including 92 branch establishments in connection with the public institutions, and such societies as the Children's Aid Society, and the Society of St. Vincent de Paul." "Almost every known agency for meeting and supplying the material wants of a vast mixed population like that of New York is represented," and nearly $7,000,000 is expended annually in charities by instrumentalities of every description. The number of the worthy and suffering poor is not so great, the Bureau thinks, but that this vast sum of money, if rightly expended, would suffice. As it is, the smallness of the relief afforded is often in ludicrous contrast with the cost of the machinery by which it is dispensed, and there is no efficient means of detecting impostors. There are fraudulent societies, too, as well as beggars, but, however much they may be exposed and denounced, when once they have got their charters there is no one authorized to discontinue them. The tendency of the present system, or want of system, is to draw paupers to New York, and it happened last winter that the floating population thus brought in "continued for many months after the revival of business to enjoy the benefits intended to meet the distress of the moment." The Bureau has succeeded in obtaining precise information about the objects and resources of most of the benevolent societies in the city, though it encountered much reticence and some resistance in certain quarters; and it has devised and carried into effect a mode of registration which has furnished a list of 14,000 persons receiving direct relief, and which shows at the same time their place of residence and the number of societies from which each obtains relief—one person being found on the lists of nine societies, though receiving but $8 a month in all. A central office of investigation and relief, which shall be a sort of neutral ground for the various societies, is recommended, and that it be kept open all the year round. "At present it is the practice either absolutely to cut off all relief during the summer months, or to reduce it to such an extent that it may be truly said the poor suffer more then than in winter."

—We have received from Messrs. Chambers, Edinburgh, an "editorial statement," which has been prefixed to the revised edition of their Encyclopædia, "in the interests of literature and in defence of their rights as authors" against the publishers and editor of the American edition. Our readers will not be slow to guess the nature of this complaint, inasmuch as in No. 462 of the *Nation* (May 7, 1874) we were the first to point out the perversion—by wholesale substitution—of the article on *free-trade*. We remarked at the time on "the awkward plight in which the Messrs. Chambers are placed, when the American edition of a work bearing their name accuses them in their Edinburgh edition of falsely representing as 'an important truth' 'a dogma of modern growth,' and of 'putting forth sophistries to lull the suspicions of the deluded purveyors to the wealth of England,' with the 'end and aim of keeping every agricultural community chained hand and foot to the car of Imperial Britain.'" We also felt justified in saying that "the liberty which the American publishers have taken in exchanging their views for those of the British editors was doubtless the result of agreement with the Messrs. Chambers." It is precisely this, however, that the latter deny in the statement before us. The "extensive alterations in the articles . . . had not been contemplated in the agreement," though they would have been passed over if they had really been an improvement in point of accuracy and freshness; whereas "statements and opinions are introduced which are repudiated by, and hateful to, the original proprietors,

their name all the while appearing on the title-page." Messrs. Chambers then proceed to cite the two articles on *free-trade* referred to above, with two others, exhibiting the same perversion, on *protection*. So much we might have expected of the Philadelphia editor; but it seems that he could not keep his hands off the *slavery* article either. So he strikes out a passage contrasting the glittering generalities of the Declaration of Independence with the fact that they were put forth by slaveholding colonies, which afterwards in their Constitution expressly recognized the condition of slavery; and in place of it he inserts a specious apology for slavery, on the ground that the colonists had petitioned the king in 1770 to restrict the slave-trade. Finally, in the article on *Victoria I.*, his pseudo-republicanism leads him to make an alteration as indecent, to say the least, as that of the *free-trade* article, and rather more intolerable to the loyal subjects of the Queen. "Perhaps during no reign," reads the Edinburgh edition, "has a greater measure of political contentment been enjoyed." "But a growing discontent under her unequal institutions, and a progress towards republicanism, are plainly apparent" to the American editor, who shortly utters "a slanderous imputation concerning his Royal Highness the Prince of Wales," which the Messrs. Chambers would be ashamed to copy. "Was there ever," they ask, in taking leave of the subject, "so flagrant an abuse in the reprinting of an English work in the United States?" It would be hard to affirm or deny. When the Messrs. Lippincott are heard from, we hope they will be able to confess surprise that their editor so far exceeded his instructions, and will show themselves fully sensible of the gross indelicacy which he has caused them to appear to be guilty of towards their associates, the Messrs. Chambers.

—Mr. George Long has brought his twelve years' labors to a conclusion, by the publication of the fifth and closing volume of his 'History of the Decline of the Roman Republic' (London: Bell & Daldy). We have twice expressed our judgment as to the merits of this work (*Nation*, Nos. 97 and 274), and would now only draw attention to its completion. With all its shortcomings, it is a work of which English scholarship may well be proud, and which students may use to very good advantage. Whoever reads it should bear in mind that Mr. Long is an old-fashioned English scholar, of strong prejudices and dislikes, and that there are three things in particular to which he has an intense aversion—the philosophy of history, the German school of scholarship, and any attempt on the part of the interpreter to go one step beyond the record. Bearing this in mind, he will be found an admirable commentator, full of sagacity and humor, and thoroughly acquainted with his subject. We should say that he was at his best when upon military operations, although he would probably himself prefer the legal chapters. But there is a certain hard and unimaginative quality of his mind which interferes with a clear presentation of the legal and constitutional aspects of a distant period; and at any rate, in this last volume he has passed over the political side of Cæsar's career quite superficially. It is, we think, as a running commentary upon authors that this work will have its lasting reputation; and of these there is none who receives more thorough and satisfactory treatment than Cæsar.

—While Ferdinand Gregorovius, the historian of Rome during the Middle Ages, was engaged on the portion of his work relating to Pope Alexander (Borgia) VI., he discovered in the various archives of Italy a number of interesting and important documents relating to that infamous Pontiff and his equally infamous children, Cæsar and Lucrezia. It was impossible to use all these new materials in his history, and he consequently determined to employ them in a monograph of either Cæsar or Lucrezia Borgia. While hesitating between these, the discovery in 1872, in the Notarial Archives of the Capitol at Rome, of a large number of important papers mostly relating to Lucrezia, determined him to devote his work to her. This we have now before us with the title: 'Lucrezia Borgia. Nach Urkunden und Correspondenzen ihrer eigenen Zeit' (two vols. Stuttgart: Cotta. 1874). Of the value of this work in regard to inedited material it is only necessary to state that the second volume is an appendix containing sixty-two unpublished documents, among them the various marriage contracts of Lucrezia, letters from and to her, including a very touching one written by her two days before her death to Leo X., and many other interesting papers. Facsimiles are given of a letter from Alexander VI. to his daughter, one from Cæsar Borgia to Isabella Gonzaga, and one from Lucrezia to the same; and there is a portrait of her from a rare medallion struck in her honor. This is an age of rehabilitation of historical characters, and, as regards Lucrezia, it is to be remembered that no one has ever been more differently judged. While Guicciardini, Pontanus, Victor Hugo, and Donizetti have represented her as "a Mænad with a vial of poison in one hand and a dagger in the other," Aldus Manutius, Ariosto, and others have declared her a model of every virtue. Nearly seventy years ago, Roscoe, in his 'Leo X.,' attempted a defence of her as a much-slandered woman; and it was an Englishman, William Gilbert, who published in 1869 the first detailed biography of her, which, however, is badly arranged and superficial. The result of Gregorovius's investigations may be summed up in a few words: Lucrezia was a fickle, amiable, unfortunate woman, more sinned against than sinning. There is no proof of her participation in any of the crimes which stain her family's memory. She left Rome and her father's guidance when she was only twenty-one as the wife of Alfonso of Ferrara, and from that time to her death, in 1519 (Gregorovius has first discovered the precise date of her birth, April 18, 1480), she was a model wife and mother. Indeed, in this new biography, she loses all the romance with which she has hitherto been invested.

GARDINER'S THIRTY YEARS' WAR.*

THE great conflict of the seventeenth century ended as a drawn battle. Neither Protestants nor Catholics could look with satisfaction on its results. Protestantism had lost territories which it possessed at the beginning of the war. Catholicism had failed to destroy the new belief. Germany, the birthplace of the Reformation, lay prostrate, divided, and enfeebled. Spain, the stronghold of the old faith, had begun her course of decline. Later ages may see that the agonies of the Thirty Years' War were not endured for nothing. Though the battle was a drawn one, Protestantism reaped the fruits of victory. The successes of Gustavus Adolphus put a final check on the advance of the Catholic reaction. The Papacy lived on, but from the date of the Peace of Westphalia the Pope, however great his claims, has never been in fact more than the head of one of the sects of Christians. But to an observer of the time, the most patent and obvious fact must have been that the war had certainly produced endless misery, and had very probably produced no result sufficient to compensate for the misery which it had caused one generation and had possibly handed on to their descendants.

"What a peace," writes Mr. Gardiner, "it was when it really came at last! Whatever life there was under that deadly blast of war had been attracted to the camps. The strong man who had lost his all turned soldier, that he might be able to rob others in turn. The young girl . . . had turned aside, for very starvation, to a life of shame in the train of one or other of the armies by which her home had been made desolate. In the later years of the war it was known that a body of 40,000 fighting men drew along with it a loathsome following of no less than 140,000 men, women, and children, contributing nothing to the efficiency of the army, and all of them living at the expense of the miserable peasants who still contrived to hold on to their ruined fields. If these were to live, they must steal what yet remained to be stolen; . . . and then, if sickness came, or wounds, . . . what remained but misery or death? Nor was it much better with the soldiers themselves. No careful surgeons passed over the battle-field to save life or limb. . . . Recruits were to be bought cheaply, and it cost less to enroll a new soldier than to cure an old one. The losses of the civil population were almost incredible. In a certain district of Thuringia, which was probably better off than the greater part of Germany, there were, before the war-cloud burst, 1,717 houses standing in nineteen villages. In 1649, only 627 houses were left, and even of the houses which remained many were untenanted. The 1,717 houses had been inhabited by 1,773 families. Only 316 families could be found to occupy the 627 houses. Property fared still worse. In the same district, 244 oxen alone remained of 1,402. Of 4,616 sheep, not one was left. Two centuries later, the losses thus suffered were scarcely recovered."

This striking passage is written by a calm and almost frigid historian, who is thoroughly master of his subject. No one who considers this, and weighs the full meaning of the facts stated by Mr. Gardiner, can fail to perceive at least some portion of the load of misery laid upon Germany and, indeed, on the whole Continent of Europe, by the Thirty Years' War. The inevitable enquiry is: How could it have happened that a conflict so desperate, so long, and so fertile in suffering should yet have been so sterile in satisfactory results? That Protestantism ultimately gained much from the mere fact that the progress of the Catholic reaction was checked, is true. But the question still remains: How was it that Protestantism, which can now be seen to have had on its side the strongest forces of European civilization, should yet have come forth from the struggle, if not vanquished, yet certainly not a conqueror?

The external and, so to speak, accidental causes of the failure of the German Protestants, at any rate, to gain anything like a complete victory, are very well set forth by Mr. Gardiner. He shows, for example, clearly enough, that even at the beginning of the contest the party of Protestantism was far weaker than might be conjectured from the large number of its adherents. If the result of the contest could have been decided by the votes of the German people, it appears probable that the Protestants would have obtained the upper hand. They were strong in numbers, not only in what are now the Protestant states of Germany, but also in Bohemia and in Austria proper.

* 'The Thirty Years' War: 1618-1648. By Samuel Rawson Gardiner.' London Longmans, Green & Co.; New York: Scribner, Armstrong & Co. 1874.

But the matter was not one to be decided by counting heads. The national institutions of Germany were singularly defective. There was no means by which the wish of the nation could make itself legally felt. A far greater difficulty was that in Germany there was no chance that the head of the Government should become the leader in the path of religious reform. It is at all times extremely difficult for a people to effect a revolution except under the guidance and with at least the co-operation of its ruler. This difficulty has been heavily enough felt in the nineteenth century. It was felt with tenfold greater force in the seventeenth century. If the Emperor could have performed the part of Henry VIII., German Protestantism might have triumphed over its foes with even greater ease than the Protestantism of England. But it was impossible that the head of the Holy Roman Empire should lead a reform which at bottom was hostile to the very system of which the Empire no less than the Papacy was a part. Both Mr. Gardiner and Mr. Seebohm occasionally wonder that the German Emperors did not become the leaders of the German people. To expect them to have performed such a part seems on calm reflection as wild an expectation as the hopes which visionaries have entertained of seeing a Pope place himself at the head of the modern democracy.

In default of guidance from the Emperor, German Protestants were naturally thrown back on such leaders as they could obtain among German princes and nobles, and the second great cause of Protestant failure is that, with the one exception of Gustavus Adolphus, no leader worthy of the name came to the front throughout the whole of the Thirty Years' War. Nothing is more strange than the fact that the Germans seem at this period to have been utterly deficient in great men.

"The German people in the beginning of the seventeenth century was plainly inferior to the German people in the beginning of the sixteenth century. During the whole course of the war, Maximilian of Bavaria was the only man of German birth who rose to eminence, and even he did not attain the first rank. The destinies of the land of Luther and Goethe, of Frederic II. and Stein, were decided by a few men of foreign birth. Wallenstein was a Slavonian; Tilly a Walloon; Gustavus a Swede; Richelieu a Frenchman."

What a German hero might have achieved may be conjectured from the achievements of Gustavus, who, foreigner though he was, might but for his death have changed the whole result of the contest. Whether it be possible to account for fluctuations in the moral and intellectual vigor of nations may be doubtful. It is, however, impossible not to conjecture that the savage suppression of the revolt of the peasants worked deeper injury to the country than was apparent to the nobles who re-enslaved their serfs. Mr. Seebohm asserts that tenfold as many men perished in the war of the peasants as were executed in Paris during the whole Reign of Terror. A country does not thus lose 50,000 of its cultivators without suffering both physical and moral damage. The suppression, at any rate, of the revolt points to one of the more general causes which hindered the progress of Protestantism. The cause of religious freedom is indeed, in the long run, bound up with the cause of political liberty. But when Luther refused all sympathy to the peasants, he inevitably deprived Protestantism of the strength which it derived from democratic enthusiasm. In Germany the cause of religious reform did not enlist the strenuous sympathy of the mass of the population. It seems to have been the creed of the nobles and the burghers rather than that of the peasantry. In another respect, Protestantism ultimately suffered from characteristics which it derived from its author. The Reformation has conduced to the spread of freedom of thought and liberty of opinion. But the division between Luther and Erasmus represented the hostility entertained by the Reformers to the movement in favor of mere intellectual freedom and enlightenment. Hence by degrees arose a state of feeling which, if opposed to the bigotry of Rome, was equally opposed to the intolerance of Geneva. Nothing is more marked than the general tendency, during the seventeenth century, of great statesmen in every country to struggle with more or less consistency and success for the establishment of toleration. Barneveld in Holland, Cromwell in England, Richelieu in France, Gustavus and even, strangely enough, Wallenstein in Germany, one and all wished to pursue a policy of toleration. In other words, the sentiment of the age was gradually undergoing a change. When the war began each party fought, and fought honestly, for the establishment of what each deemed to be the truth. As the war came to an end, men of all classes, in part from a feeling of despair, in part from perception of the fact that religious conviction is not to be spread by force of arms, began to ask not for the spread of the truth but for mutual toleration. The prevalence of this sentiment suggested the rough and unsatisfactory system of compromise by which the conflict was closed. It also naturally left the guidance of Europe in the hands of France, since the France of 1648 seemed prepared to follow out the policy of sceptical toleration which had been inaugurated by Henry IV. when he sacrificed his creed to gain his crown.

ADMIRAL FOOTE.*

At the beginning of the Rebellion there was much discussion at Washington as to the possibility of the employment of a flotilla of iron-clads on the Western rivers. The Southerners, who had begun the war with much greater energy than was displayed by the North, had succeeded already in dividing the country territorially into two nearly equal parts. The so-called neutrality of Kentucky had made the Ohio the northern rebel line; and, indeed, from the Mississippi at Cairo, where the Ohio empties itself, to the mouth of the Potomac, the Secessionists had an almost unbroken line of fortified posts. Below Columbus, the Mississippi was completely closed; the Tennessee and Cumberland rivers were strongly fortified; and between Nashville (on the Cumberland) and the Mississippi were massed large bodies of troops, easily disposed to resist attack from any quarter. A glance at the map of the Western and Border States will show what sort of a position the Southern troops held, and how difficult the enterprise of opening the way into Kentucky and Tennessee, to say nothing of obtaining possession of the Mississippi, seemed in 1861. That much of it could be done by gunboats was regarded by military officers at the time, as Mr. Welles, in a letter to Professor Hoppin, declares, nearly impossible; and, allowing for the jealousy always existing between the army and the navy, the belief that "shore batteries would riddle and destroy vessels faster than they could be brought into service, unless protected by the army," seemed well founded. It was, however, at length decided to make the experiment, and on May 16, 1861, Commander John Rodgers was directed to report to the War Department for this service; but before active operations commenced he was succeeded by Captain A. H. Foote.

From Mr. Hoppin's narrative it is not difficult to make out the character of this officer. Born in 1806, he was now about fifty-five years of age, and, though not much known outside the navy, he had already gained a well-won reputation in it. He had seen hard and very disagreeable service, requiring a peculiar combination of professional and unprofessional qualities, off the slave-coast of Africa, and he had on one occasion distinguished himself in China in the affair, in 1866, of the "Barrier Forts" near Canton, when, receiving an order from his superior officer to "prevent" the Chinese (their forts having opened fire, for no apparent reason, on one of the boats of the *Portsmouth*) from "increasing" their "means of defence or assault"—even though he should "be led to the capture of the forts"—he gave the order so liberal a construction that at 6.30 the next morning the *Levant* and *Portsmouth* opened fire on the forts, at 7.45 a storming party of two hundred and eighty-seven persons all told, with four howitzers, under command of Foote, left the ships, and, after passing through a hostile village under fire, in the face of an army estimated by Foote at 3,000, took the first of the four forts; the other three were taken in the course of the succeeding forty-eight hours, with a hundred and seventy-six guns, many of them of the largest calibre, the forts razed to the ground, and the enemy thus effectually "prevented from increasing his means of defence or assault." Fond of fighting as Foote was, he seems to have endeared himself to those under his command by many other qualities. He was a genuinely religious man; his heart and soul were in his profession; he was amiable, a man of the world, and withal, by the common consent of those who knew him, he had foibles (among which may perhaps be considered his fancy that he was an orator) that endeared him to his friends. He had, above all, that quality which is so essential to the completion of all the other qualities of a good officer—sincere determination to sacrifice his own interests to those of the service. He was fond of praise—according to Mr. Hoppin, over-fond of it—but throughout his entire campaign, notwithstanding the irritating relations existing between the gunboats and the army, there is no trace of even a momentary desire to do anything but obey orders and carry out the general plan of operations agreed upon. His mental qualities can best be judged by what he accomplished as an officer; outside of his profession he does not seem to have had a very wide range of interests; indeed, when off duty, religion and morality still had so strong a hold upon him that he occupied himself in lecturing on temperance, Christian missions, and writing about the African slave-trade. The abolition of the grog ration in the navy was due to his unremitting and persistent efforts. To understand his character still more thoroughly, we must remember that his grandfather and great-grandfather were New England ministers, that his father was the mover of "Foote's Resolutions," and that he himself came from the "land of steady habits" when they were a good deal steadier than they have been since the introduction of railroads and Sound steamers.

Foote's campaign in the West was brilliant and rapid. On the 6th of September, 1861, he took command, with the anomalous title of Flag-officer,

* 'Life of Andrew Hull Foote, Rear-Admiral United States Navy. By James Mason Hoppin, Professor in Yale College. With a portrait and illustrations.' New York: Harper & Bros. 1874.

of a fleet consisting of three wooden vessels in commission, nine unfinished iron-clad gunboats, and thirty-eight mortar-boats. The service was novel and peculiar, and to a seaman disagreeable. The fleet was attached to and under the orders of the army, and at the same time its duties were independent, and more naval than military. Foote received orders from Halleck, but Halleck, from the nature of his training and profession, was unable to know whether his orders could be carried out except through information derived from Foote. Already a great opportunity of seizing the Mississippi, Cumberland, and Tennessee before they could be fortified had, through the non-completion of the gun and mortar boats within the time specified by contract, been lost, and the only expedient that remained was a combined attack of land and naval forces on Forts Henry and Donelson. Foote's plan of attack was characteristic of the man. He determined to make his boats as impenetrable to shot and shell as possible, and then engage Fort Henry at close quarters, pouring into the fortification an unendurable fire. Fort Henry was a strong earthwork, constructed with great skill on the right bank of the Tennessee, commanding the river below for about two miles; the fortifications covered ten acres and mounted seventeen heavy guns, and were defended by about three thousand troops. On the 6th of February, 1862, Foote attacked the fort with four gunboats, at a mile range, steaming slowly up the river till within about six hundred yards, the fire on both sides of course increasing in its deadly accuracy and effect. The gunboats were supported at a distance by additional, weaker vessels, but the number of guns actually used in the hand-to-hand conflict between Foote and the forts seems to have been much the same, as the boats used only their bow guns. We must refer the reader to Mr. Hoppin's book for a description of the fight. After a bombardment of an hour and fifteen minutes, during which one of the gunboats was disabled and floated off, the fort had neither guns left to fire nor gunners to fire them, and General Tilghman surrendered. We are glad to see, by the way, that the contemporaneous newspaper account of the interview between the two commanders after the surrender is apocryphal, and must, like the celebrated "millions for defence, not one cent for tribute," be relegated to the limbo of mythical anecdote. The story was that Tilghman said to Foote, "I am glad to surrender to so gallant an officer," upon which Foote replied, "You do perfectly right, sir, in surrendering; but you should have blown my boat out of the water before I would have surrendered to you." The account of the interview, given by Foote to a friend, was this:

"General Tilghman came on board my boat, evidently in deep distress, wringing his hands and exclaiming, 'I am in despair; my reputation is gone for ever.' I replied, 'General, there is no reason why you should feel thus. More than two-thirds of your battery is disabled, while I have lost less than one-third of mine. To continue the action would only invite a useless sacrifice of life, and, under the circumstances, you have done right in surrendering. Moreover, I shall always be ready to testify that you have defended your post like a brave man.' I then added, 'Come, General, you have lost your dinner, and the steward has just told me mine is ready,' and taking him by the arm, we walked together into the cabin. This is all that passed between us."

This brilliant victory settled the question of the value of the gunboats. Followed as it was by the capture of Fort Donelson (which, though actually taken by the army, was probably rendered untenable by the bombardment of the fleet), the States of Kentucky and Tennessee were lost to the South. The evacuation of Columbus and the capture of Island No. 10 opened the Mississippi to Fort Pillow, and so rapidly were the operations conducted that by the middle of April (two months after the fall of Fort Henry) the struggle for the river defences of the South was virtually over, and it only remained a matter of generous rivalry between Foote and Farragut which should be the first to open the Mississippi to its mouth. On the 24th of April Farragut passed the forts below New Orleans, and the following telegram was sent to Foote: "To Flag-Officer Foote: Farragut has passed the forts below New Orleans, and appeared off the city at 1 P.M. of the 24th instant. His orders from the Department are to push up the river until he meets you. G. V. Fox, As't Sec." But it was too late. In the attack on Fort Donelson, in which the fighting, at four hundred yards, was hotter than at Fort Henry, Foote had been severely wounded, and the remainder of his life is the painful record of the struggle of a high-spirited officer to return to duty, for which he was never destined again to be fit. He made a fight, indeed, with death and disease quite as gallant as any of his naval encounters; indeed, it is probable that he fought too hard. He could not bear to be inactive, and, as his end drew near, his essentially religious temperament took more and more firm possession of him; his indomitable spirit made him undertake tasks which his declining health ought to have forbidden. On the 22d of July we find him taking charge of the "Bureau of Equipment and Recruiting," at Washington; in June of the next year he was ordered to take Dupont's place at Charleston, though at this time he was barely able to walk. The effort to take this command was fatal, and, while the country as well as the Administration was congratulating itself on his appointment, suddenly, on the 26th of June, 1863, his exhausted body gave out, and he died.

We are accustomed to hear it said, sometimes cynically, sometimes sadly, that the age of great men is past, and that the materialism of the day has made heroism and martyrdom obsolete. We doubt, however, if it would be easy to find in the history of any profession or country the story of a purer and finer life than that of Foote. Few people remember now how much he did to bring order and victory out of the anarchy which prevailed at the beginning of the war; no one knew during his life the difficulties he had to struggle with and overcome.

HARDY'S FAR FROM THE MADDING CROWD.

In reviewing the opening chapters of this novel, which appeared anonymously in the *Cornhill Magazine*, the London *Spectator* said:

"If 'Far from the Madding Crowd' is not written by George Eliot, then there is a new light among novelists. . . . It is a high intellectual feast. . . . It goes beyond the high and sanguine hopes with which the previous works of its author, Mr. Hardy, 'Under the Greenwood Tree' and 'A Pair of Blue Eyes,' inspired us."

The London *Examiner* says:

"The novel is one of the most remarkable that has appeared in any magazine for years."

MILL'S THREE ESSAYS ON RELIGION. 8vo, $2 50.

A NEW EDITION OF TAINE'S PYRENEES. ILLUSTRATED BY DORE.

Cloth, $10; Levant morocco, $20.

"It is rarely that a book is printed in so perfect a combination of the book-making trinity, author, artist, and publisher, as is this superb work."—*N. Y. Even. Mail.*

ADAMS'S DEMOCRACY AND Monarchy in France. 8vo, $2 50.

"A political history of the period which for comprehensiveness of plan and thoroughness of execution has nothing like it in our literature."—*Providence Journal.*

GAUTIER'S A WINTER IN RUSSIA.

By Théophile Gautier. Translated by M. M. Ripley. 12mo, $2.

HENRY HOLT & CO., NEW YORK.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of ten cents.

Address HARPER & BROTHERS,

MACMILLAN & CO.'S NEW BOOKS.

THE POETICAL WORKS OF JOHN MILTON. Edited, with Introductions, Notes, and an Essay on Milton's English, by David Masson, M.A., LL.D., Professor of Rhetoric and English Literature in the University of Edinburgh. With three Portraits, engraved by Jeens and Radclyffe. Three handsome vols. 8vo, cloth, $15.

The best idea of the aim and construction of the present edition of Milton is given in the following extract from the Editor's Preface: "The text of the Poems has been prepared, with the utmost study of accuracy, from the original and other authoritative editions. Accounts of these, and of the surviving manuscripts of some of the poems, with other relative bibliographical information, are given in the Introductions; where also the endeavor has been made to elucidate, as fully and exactly as possible, with the due amount of accompanying criticism, the circumstances, motives, and intention of each individual poem. If read in their chronological order, indeed, these introductions will be found to constitute a continuous and rather minute literary biography. The Notes are partly expository, partly philological, and partly critical. In the prefixed General Essay on Milton's English, what may be called the philology of the poems is presented, for the first time, in a systematic form. The publishers confidently expect that this edition of 'Milton's Poems,' the result of so much labor and thought, will take the place it deserves as in every way the best and most complete that has yet appeared. It is printed uniformly with the 'Cambridge Shakspeare,' and will, it is hoped, be found both convenient as a book of reference, and, by the aid of fine paper, clear type, and handsome binding, an ornament to the library. Cheaper Edition in One Volume.

HOLLAND HOUSE. By Princess Marie Liechtenstein. With 5 Steel Engravings by C. H. Jeens, after Paintings by Watts and other celebrated Artists, and numerous Illustrations drawn by Professor Delamotte, and engraved on Wood by J. D. Cooper and others. Third and Cheaper Edition. In 1 vol. medium 8vo, extra gilt, $7 50.

ESSAYS ON SHAKESPEARE. By Karl Elze, Ph.D. Translated, with permission of the Author, by L. Dora Schmitz. 8vo, $4.

The author's wide reputation in Germany as a student of English language and literature, and more especially of Shakspeare, should make this volume of 'Essays,' contributed to the *Jahrbücher* of the German Shakspeare Society, of which Dr. Elze is editor, both valuable and interesting to all Englishmen, as a proof of the high esteem in which their greatest poet is held in Germany.

PHARMACOGRAPHIA. A History of the Principal Drugs of Vegetable Origin found in commerce in Great Britain and British India. By F. A. Flückiger and D. Hanbury, F.R.S. 8vo, $6.

"It has been the authors' aim to investigate anew the field of vegetable materia medica, in order as far as possible to clear up doubtful points, and to remove some at least of the uncertainties by which the subject is surrounded. In furtherance of this plan they have availed themselves of the resources offered by ancient and modern history; nor have they hesitated to lay under contribution either the teaching of men eminent in science or the labors of those who follow the paths of general literature."—*Extract from Preface.*

MENDELSSOHN. LETTERS AND RECOLLECTIONS. By Ferdinand Hiller. Translated by M. E. von Glehn. With Portrait. Extra crown 8vo, cloth, elegant, $2 25.

"Dr. Hiller's book cannot fail to be read with deep interest by all lovers of musical art. It abounds with anecdote and reminiscence strongly appealing to their favorite tastes."—*N. Y. Tribune.*

UNDER THE LIMES. A New Novel. By E. Archer, author of 'Christina North.' 12mo, paper, $1 25.

"The author of 'Christina North' comes before us again with a book which shows the same qualities and which deserves, therefore, to be distinguished from the ordinary throng. . . . The book shows considerable talent. It is not perhaps very thrilling or dramatic, but the scenery is harmonious and delicately described."—*London Saturday Review.*

THE PRINCESS OF SILVERLAND. By Elsie Strioelyne. With a Frontispiece, by Sir Noel Paton. Globe 8vo, cloth, extra, $1 50.

SYBIL'S BOOK. By Lady Barker, author of 'Station Life in New Zealand.' Illustrated. Globe 8vo, cloth, extra, $1 50.

BIRDS, THEIR CAGES AND THEIR KEEP. Being a Practical Manual of Bird-Keeping and Bird-Rearing. By K. A. Buist, with Colored Frontispiece and other Illustrations. Crown 8vo, cloth extra, $1 75.

"The book is delightfully written, and the directions for the management and rearing of the birds and for their treatment in disease and illness, are so clear, sensible, and humane that the whole race of cage-birds ought to find a marked amelioration in their condition, especially in the articles of food and cleanliness."—*Athenæum, London.*

CATHOLIC REFORM. By Father Hyacinthe. Letters, Fragments, and Discourses. Translated by Mme. Hyacinthe Loyson. With a Preface by the Very Rev. A. P. Stanley, D.D., Dean of Westminster. Cr. 8vo.

THE IMITATION OF CHRIST. By Thomas à Kempis. Translated, with Preface, by W. Benham, D.D., Vicar of Margate. Printed with Borders in the Ancient Style after Holbein, Dürer, and other Old Masters, containing Dances of Death, Acts of Mercy, Emblems, etc., and a variety of curious Ornamentation. Crown 8vo, $3.

THE VICTORY OF FAITH. By Julius Charles Hare, M.A., Archdeacon of Lewes. Edited by Professor Plumptre, with Introductory Notices by the late Professor Maurice and Dean Stanley. Third edition, crown 8vo, $2 25.

HISTORY OF ANCIENT PHILOSOPHY. By the Rev. W. Archer Butler, late Professor of Moral Philosophy in the University of Dublin. Edited by W. Hepworth Thompson, D.D., Master of Trinity College, Cambridge. (Revised by the Editor.) New and cheaper edition, in 1 vol. 8vo, price $5.

A GRAMMAR OF THE LATIN LANGUAGE from Plautus to Suetonius. By H. J. Roby, M.A. Part I., containing Sounds, Inflexions, Word Formation, etc., crown 8vo, $2 50; Part II., containing Syntax, Prepositions, etc. (just published). crown 8vo, $3 50.

A COMPENDIOUS DICTIONARY OF THE FRENCH Language (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By Gustave Masson, Assistant Master at Harrow School. Square 12mo, half-morocco, $2 50.

ELEMENTARY LESSONS IN HISTORICAL ENGLISH Grammar. By the Rev. R. Morris, LL.D., President of the Philological Society of London. 18mo, $1 25.

NOW READY.

A RAMBLE ROUND THE WORLD, 1871.

BY M. LE BARON DE HUBNER.

Translated by LADY HERBERT.

1 vol. 12mo, pp. 658, cloth extra, $2 50.

PART I.—AMERICA.

PART II.—JAPAN.

PART III.—CHINA.

The Boston Transcript.

"He was a quick-witted and candid observer, with a lively and entertaining way of telling his story; and his remarks on what he saw and heard well repay reading, both for their positive information and for the very readable way in which they are presented. . . There is scarcely a dull page in the book."

The Commonwealth.

"He describes all he saw in lively and piquant terms, and gives us generally cheerful pictures of the world as he saw it. There is a large portion of the work that is invaluable information."

The London Globe.

"There is a great deal of humor, clear observation, pleasant narrative; and Lady Herbert's translation is so smooth and forcible that we quite lose sight of the fact that it is a translation."

The London Morning Post.

"It is difficult to do ample justice to this pleasant narrative of travel. . . The translator has admirably preserved the vivid style of the foreign original, especially in the racy, minute manner in which grotesque little details—evincing the keen observer—are rendered into excellent English. . . The work does not contain a single dull paragraph."

NEW VOLUMES OF "THE NATURE SERIES."

THE POLARIZATION OF LIGHT. By W. Spottiswoode, LL.D., F.R.S. With numerous illustrations. Crown 8vo, cloth, $1.

THE COMMON FROG. By St. George Mivart, F.R.S., etc., Lecturer on Comparative Anatomy at St. Mary's Hospital. With numerous illustrations. Crown 8vo, $1.

"A good example of what popular science ought to be—within the comprehension of a wide circle of readers, and yet thoroughly abreast of the best investigation of the time."—*N. Y. Independent.*

THE TRANSIT OF VENUS. By George Forbes, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. With numerous illustrations. Crown 8vo, $1.

"We have nothing but commendation for the excellent little work before us."—*Athenæum.*

"It is a compact little sketch of the whole matter in all its aspects—historical, scientific, and practical."—*Saturday Review.*

CAVE HUNTING: RESEARCHES ON THE EVIDENCE of Caves respecting the Early Inhabitants of Europe. By W. Boyd Dawkins, M.A., F.R.S., etc., Curator of the Museum, and Lecturer in Geology in the Owens College, Manchester. With colored Plate and Woodcuts. 8vo, $7.

"The work before us traces the rise and progress of cave exploration; considers the physical history of caves—that is, their formation, whether by sea or volcanic action; enumerates the most remarkable caves, with the objects they have yielded; treats of the character of the early inhabitants of Europe, and of the fauna of the same period, as indicated by the remains discovered, and finally of the climatal and geographical changes that have occurred since those deposits were made. The style is clear and vigorous, and the text is interspersed with numerous illustrations. The work will commend itself to all who have a desire to know something of what humanity was in that hazy period which stretches backward of the earliest records."—*Popular Science Monthly.*

MACMILLAN & CO., 21 Astor Place, New York.

THE WEEK IN TRADE AND FINANCE.

NOVEMBER 23, 1874.

THE leading feature of the week has been the free movement of currency from this city to the South and Southwest. The total amount of currency shipped during the past week is estimated to have amounted to about $9,000,000, and it is probable that still further shipments will be made. The Bank statement on Saturday reflects in part the shipments of currency in the loss of legal tenders to the amount of $2,020,700; but while the statement shows that the reserve of the banks has been weakened to the extent of $1,528,000, this loss is really encouraging, indicating, as it does, the revival of business and the prospect of greater activity in trade for the future. The following is the statement in full:

	Nov. 14.	Nov. 21.	Differences.
Loans	$283,787,900	$283,319,300 Dec..	$468,600
Specie	16,888,200	17,380,900 Inc..	492,700
Legal tenders	59,525,100	57,504,400 Dec..	2,020,700
Deposits	229,994 200	227,352,700 Dec..	2,641,500
Circulation	24,832,000	24,967,500 Inc...	135,500

The following shows the relations between the total reserve and the total liabilities:

	Nov. 14.	Nov. 21.	Differences.
Specie	$16,888.200	$17.380,900 Inc..	$492,700
Legal tenders	59,525,100	57 504,400 Dec..	2,020,700
Total reserve	$76,413,300	$74.885,300 Dec..	$1,528,000
Reserve required against deposits	57,498,550	56,838,175	
Excess of reserve above legal requirem't,	18,914,750	18,047,125 Dec...	867,625

The money market shows no change on call loans, which we quote 2½ to 3½ per cent. Commercial paper of the best grade is in sharp demand, the choicest names passing as low as 5 per cent.

The stock market early in the week was strong, the principal features being Ohio and Mississippi, Northwestern common, Wabash, St. Paul, and Union Pacific. As the week advanced, prices receded, and the market finally closed on Saturday at a fraction over the lowest prices of the week. Among the low-priced stocks there was considerable activity. The decision of the United States Supreme Court confirming the sale of the Pacific Railroad of Missouri to the Company by the State of Missouri had a very favorable effect upon the price of the stock, as well as upon the preferred stock of the Atlantic and Pacific Railroad Co., by which the Missouri Pacific is leased, the latter advancing in one day from 40 to 48.

The following table shows the extreme range in quotations of the active stocks during the entire week:

	Highest.	Lowest.
New York Central	102¾	101⅜
Harlem	131	130
Erie	29⅝	28⅜
Lake Shore	82½	80
Wabash	32⅞	30⅜
Northwestern	42¾	40¾
Northwestern preferred	61	58¼
Rock Island	101¼	99⅜
St. Paul	37⅞	35½
St. Paul preferred	57¼	55½
Pittsburg	88⅛	87⅛
Del., Lack. and Western	109¾	109¾
New Jersey Central	107¼	107¼
Michigan Central	76¾	76¼
Union Pacific	36⅝	35⅛
C., C. and I. C	10¾	9⅛
Hannibal and St. Joseph	27¼	25½
Hannibal and St. Joseph preferred	34¾	34
Ohio and Mississippi	32⅛	31⅛
Panama	115	114½
Western Union Telegraph	81	79¾
Atlantic & Pacific Telegraph	20	19¾
Pacific Mail	45⅞	43⅞
Quicksilver	32⅞	32⅛
Quicksilver preferred	39½	39
Adams Express	120	119
Wells-Fargo Express	81¼	80¼
American Merchants Union Express	65	64½
United States Express	65	64½
Missouri Pacific	48¾	40
Atlantic and Pacific Tel. preferred	16¾	14

Renewed activity has taken place in the bonds of the Southern States, principally in Virginias, Tennessees, and North Carolinas. The reports which have come to hand relative to the financial prospects of the State in connection with the prompt and continued payment of interest upon Tennessee bonds, are very favorable.

Railroad bonds continue strong and buoyant, though prices have undergone no important changes.

Gold advanced from 110⅞ on Monday to 111⅜, and closed strong at 111¼ on Saturday. The specie shipments of the week were $1,608,000.

Foreign exchange has been firm, and bankers have been reluctant in selling their bills, owing to the uncertain condition of the European money markets. The Bank of England rate of discount, although left standing on Thursday at 5 per cent., is very likely to be advanced at any time to 5½ or even 6 per cent., the Bank having continued to lose in bullion from day to day since the rate was last raised.

OFFICE OF THE

ATLANTIC MUTUAL INSURANCE CO.

NEW YORK, January 28, 1874.

The Trustees, in conformity to the Charter of the Company, submit the following Statement of its affairs on the 31st December, 1873:

Premiums received on Marine Risks, from 1st January, 1873, to 31st December, 1873,	$6,511,114 22
Premiums on Policies not marked off 1st January, 1873,	2,212,160 70
Total amount of Marine Premiums,	$8,723,274 92
No Policies have been issued upon Life Risks, nor upon Fire Risks disconnected with Marine Risks.	
Premiums marked off from 1st January, 1873, to 31st December, 1873,	$6,290,016 78
Losses paid during the same period,	$2,960,882 49
Returns of Premiums and Expenses,	$1,258,319 26

The Company has the following Assets, viz.:

United States and State of New York Stock, City, Bank, and other Stocks,	$8,567,105 00
Loans, secured by Stocks and otherwise,	2,802,000 00
Real Estate and Bonds and Mortgages,	467,000 00
Interest, and sundry Notes and Claims due the Company, estimated at	422,894 66
Premium Notes and Bills receivable,	2,833,302 27
Cash in Bank,	521,340 59
Total Amount of Assets,	$15.613.642 52

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof, or their legal representatives, on and after Tuesday, the Third of February next.

The outstanding certificates of the issue of 1870 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the Third of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment are cancelled. Upon certificates which were issued for gold premiums the payment of interest and redemption will be in gold.

By order of the Board. J. H. CHAPMAN, Secretary.

P. O. Box 235. New York.

A CHOICE GIFT-BOOK.

LONGFELLOW'S NEW POEM,

THE HANGING OF THE CRANE.

Superbly illustrated from Designs by Miss Hallock and Thomas Moran. Engraved by A. V. S. Anthony and W. J. Linton. Tastefully bound in cloth, $5; Morocco antique, $9.

In every respect—in theme, poetic beauty, artistic excellence, and mechanical execution—'The Hanging of the Crane' is a volume of rare superiority, and as a Gift-Book for Weddings, Birthdays, Golden Weddings, or Christmas Holidays, nothing could be more appropriate or more beautiful.

☞ *For sale by Booksellers. Sent post-paid on receipt of price by the Publishers,*

JAMES R. OSGOOD & CO., BOSTON.

"Thomas Brassey's Life possesses an interest difficult to overestimate. To his labors no little of the advancement of the world during the last fifty years is due; to him civilization and comfort owe a grand tribute, and to him and his faithfulness the world—half consciously, half unconsciously—pays the tribute. . . . A most interesting biography and chronicle of the works of a great man of the people."—*Traveller.*

The Nation.

NEW YORK, THURSDAY, DECEMBER 3, 1874.

The Week.

THE *Evening Post* has recently been making one of those journalistic suggestions which give rise to an amount of discussion inversely proportionate to the probability of their practical adoption. The *Post* thinks that the next Congress ought to be called together immediately after the close of the present session, on the ground that otherwise there will be no means of knowing what the Democrats intend to do with the country till a year from now. In the early days of the Republic, the *Post* says, when travelling was difficult and communication between distant parts of the United States was slow, there was some reason why, on the election of a new Congress, a considerable interval should have been given to the newly-elected Congressmen to wind up their affairs, put their houses in order, and make plans for the approaching campaign at Washington. Now all this is changed. Even the Californian can get to Washington in a week; it is so easy to travel and telegraph back and forth that he need not wind up his business or put his house in order at all; while, if we may add a suggestion of our own, the statesmen of our generation do not require any time for mental preparation for the winter's campaign, for their mental calibre and acquirements are so different from those of their earlier predecessors that they are about as well fitted for debate and legislation at one time as another. Nevertheless, we suppose no one seriously believes that the Republicans will pass an act this winter calling the Democrats together in March, and on the whole we are inclined to think that the delay between the end of the present Congress and the meeting of the next will prove a salutary obstacle to much needless and partisan activity.

Indeed, evidence continues to accumulate from week to week that it is a fortunate thing, not only for the Democrats, but for the public too, that the machinery of the Government does not allow them to make an immediate use of their majority in the House of Representatives. Almost every paper that we see contains some new speech of some Democratic chieftain, warning his followers that they must not consider the recent victories as conclusive; that they are themselves in almost as much danger as the Republicans; and that if they expect to grasp the prize of the Presidency in 1876, they will only be able to do it by the display of much political virtue. Besides this, we believe that the conservative restrictions on the tremendous force of public opinion, reinforced as it now is in this country by universal suffrage, are almost in every case good. We should be sorry to see the Government so arranged that every change of public opinion should be at once reflected at Washington, because every step taken in this direction is one more step in the downward path which we began thirty years ago in most of the States, by making officers universally elective, at Washington by introducing rotation in office, and which, if continued, can only end in transforming a conservative representative government into a highly-organized popular tyranny. It is a noticeable fact that the only occasion on which Congress ever has fixed the time for the meeting of a new body of Representatives at the 4th of March was during Johnson's Administration—a revolutionary period, when half the country was in a state of siege, and the President was suspected of treason. The Congressional performances of that day are not a good subject for imitation now.

The only Department Report of much importance which has been given to the public during the past week has been that of the Post-office, the figures of which we shall not attempt to go into or discuss in detail, as they seem to be, like most Washington statistics, involved in obscurity. Immediately after the appearance of the report, a correction was telegraphed to this city, which made a difference, one way or the other, of some ten millions. Generally speaking, the report resembles other reports. During the year everything has been on the increase. There are more post-offices, more postmasters, more miles of transportation done, and more letters delivered than ever before. There is also a larger deficit. The difficulties with the railroads have been apparently settled (as it was obvious they must be to those who had read the wonderful report of Mr. Hipple-Mitchell on the subject, in which that distinguished statesman learnedly maintained that if the railroads would not come to terms the Government always had the remedy of appropriating the roads and running them itself), not by Mr. Jewell's confiscating Mr. Tom Scott's and Mr. Cornelius Vanderbilt's properties, and locking up Scott and Vanderbilt in the Old Capitol prison, but by paying the roads a little more money. The number of officials, including contractors, employed by the Post-office has swollen to nearly 50,000.

Those people who are still infatuated with a belief in General Grant's consistency of purpose as a reformer must have some difficulty in reconciling with this theory of his character such acts of his as inviting Harrington to a private reception and appointing his brother, Orville Grant, to the fattest Indian trading post in the West. We pointed out last week that Grant's Indian policy is a humbug, but such appointments as this look like something worse. We have never accused General Grant of corruption in office, and shall not do so now; but we are compelled to say that when an Indian reform movement which for five years has been implicitly confided to General Grant's charge ends in the resignation of all the President's chosen commissioners on the ground that they are not supported by him in their efforts for reform, and when we are informed that this Indian post is handed over to Orville Grant, people cannot be expected to judge the head and front of the whole very leniently. Indeed, if General Grant were not General Grant, and had not saved the Union, it would probably now be difficult to convince people that he was entitled to anything short of impeachment for "mal and corrupt" administration. He is evidently made of such coarse material as to be impervious to public opinion, and incapable of discrimination between a popular demand for pure government and what his friend Shepherd calls "the howl and clamor of the mob."

The Civil-Rights Bill, which made such a noise last winter, is probably dead. The President has almost given official notice that he will veto it if it passes Congress; and as no one, even among the negroes, seems to be clamoring for its passage, there is very little chance of its being revived. There is in fact no reason why it should be. It is grossly unconstitutional, as we have pointed out in these columns—so unconstitutional that probably not ten respectable lawyers in the country could be found who would be willing to father it—and, as a remedial measure, it is open to the objection that the class for whose benefit it was intended is the very class which seems to be most terrified at the prospect of its passage—whether by this class we mean the negroes or the Southern white Republican politicians in those States in which the loss of a few negro votes hands the State machinery over to the Democrats.

The Safe Burglary trial has ended in a disagreement of the jury, and this has led to a very thorough re-examination of the case in the press. The best account of the matter we have seen is that published editorially in the *Post*, which is apparently done by some one familiar with the law and with courts of justice. The charge for which Harrington and the others have been tried is not burglary, as

might be supposed from the title which the case has popularly acquired, but a conspiracy to impute a burglary to Columbus Alexander, of Washington. Mr. Alexander, curiously enough, has turned out to be a gentleman of a nice sense of honor, who, far from being so likely to commit a burglary that a burglary might easily be "put upon him," was last winter the leading man among the memorialists who petitioned Congress for an investigation of the District Ring. In the course of the investigation which took place, books were produced purporting to be those of John O. Evans & Co., contractors. There was some doubt as to their genuineness, and it was for the interest of Mr. Alexander and the other petitioners to get possession of the real books, they being then in the District Attorney's safe. Alexander was approached, and the books were offered to him if he would pay for them. He declined to buy evidence, but said that he was willing to pay for necessary expenses. Perhaps the most remarkable thing in connection with the case is that the chief men indicted for this conspiracy are officials connected with the administration of justice, Harrington being Assistant United States District Attorney, Whitley having been Chief of "the Secret Service" of the Treasury Department, Nettleship his assistant, and Cunz a clerk in the office. Without going into the details of the evidence, there is little or no doubt of the guilt of the accused.

The sudden termination of Mayor Havemeyer's career has obtained for him at the hands of the press a kindlier estimate of his merits than he would have earned had he lived till January. He was not a good mayor, and there was no excuse for the petty chicane he practised, and which he seemed to consider the essence of the act of government. He made very bad appointments, and what made them worse was that they were in some cases appointments of his friends and cronies. He belonged to a past generation, and was little in sympathy with the very classes in the community who elected him to office, and on whom it was necessary for him to depend in order to govern successfully. It was impossible at times in his obstinate and queer career not to be reminded of some of the burlesque heroes of Diedrich Knickerbocker's history of a still earlier period; and his obstinacy could not have been more Dutch had New York been still New Amsterdam. Had he remained in a private station, however, he would have been remembered only with regret.

The Grangers are coming to grief in every direction. Their Grange treasurers are getting into the way of defaulting, just as political treasurers do; their California shipping-agents have failed; and, worse than all, the crops are in a flourishing condition, and the agricultural population of the Granger States is more prosperous than it has been for a long time. We do not make this statement on our own authority, but on that of the Chicago *Tribune*, which ought to be considered a pretty good witness, inasmuch as a year ago it had a strong inclination to believe the Granger movement against the railroads founded in justice. We quote the *Tribune* of the 18th of last month:

"A year ago, a terrible panic paralyzed the business of the country. Jay Cooke & Co. and many other large houses failed; the banks in New York and St. Louis, and most other cities, stopped payment, and financial ruin stared in the face everybody who had any considerable indebtedness afloat. Some of our own banks bowed before the storm, but more of them braved it, it is believed, than in any other city in the country. From this disaster the West began to recover sooner than any other section of the Union. The improvement has been slowly but steadily going forward, till now but little remains to remind us of the dangers and trials through which we were passing only a year ago. The causes which have promoted this early return to comparative prosperity can be found largely in the remunerative prices our farmers have received for their products; the fact that they had last year an abundance of them to sell; that their Eastern and European customers were forced to have them; and that the freight-charges for the year have been on an average less than usual."

When we take into account, also, the fact that the recent elections have not all turned on the Granger question, and that the public discussion of the farmers' wrongs has quite ceased, we may safely infer that the bottom of that agitation has fallen out.

Lord Acton's letter to Mr. Gladstone, in answer to his "expostulation" with the English Catholics touching the effect of the Vatican Decrees on their civil allegiance, had not reached our hands when we summed up Mr. Gladstone's pamphlet and Archbishop Manning's reply last week. Lord Acton's position among English Catholics has always been a very high one, and he acted at Rome, during the sitting of the Council, as a sort of unaccredited representative of more than one Catholic Government, as well as of his own, but was so well known to be in close sympathy with the opposition that he was in constant danger of a "descent" on his papers by the Roman police. Since the Council, though he has, we believe, shown no disposition to join the Old Catholic movement, he has been in close relations with Dr. Döllinger and others of its chiefs. What he says in reply to Mr. Gladstone is substantially a plea of confession and avoidance—viz., that the Popes have from very early times claimed the outrageous powers which the Vatican Council has finally accorded them, and have, besides, been guilty of shocking offences against humanity and decency, such as deciding that it is no murder to kill an excommunicated person—a rule which actually has for centuries stood and stands to-day unchanged in the "Corpus Juris"; that the murder of a Protestant is so good a deed that it atones for the murder of a Catholic; that faith need not be kept with heretic princes; declaring Queen Elizabeth dethroned, and commissioning an assassin to kill her; glorifying the massacre of St. Bartholomew, and urging the king to do it again. The Popes, says Lord Acton, did all these things among others without securing the approval and obedience of English Catholics, and they had done them before the emancipation of Catholics in 1829. Why, then, he asks, should English Protestants be alarmed now? and he declares that the Court of Rome is not able to carry English Catholics with it in all the follies and absurdities to which it may choose to commit itself now any more than heretofore. The reply of the Catholic press to this is that Lord Acton is a bad fellow. Lord Camoys, another English Catholic peer of high standing, has also written a letter somewhat in the same sense as Lord Acton, but he takes a much more serious view of the effect of the Vatican Decrees. He says "it is not likely that the present Pope will adopt against Queen Victoria the course pursued by the then Pope against Queen Elizabeth, but that there is no telling what edict might be issued by the author of the Syllabus." He says also that if an edict were now issued tending to destroy a Catholic's allegiance to his government he would be placed in a very painful dilemma, inasmuch as the Pope is now dogmatically infallible, which he formerly was not, and obedience to him is compulsory, which it formerly was not. The Catholic citizen would, therefore, be compelled in the above contingency to rebel or run the risk of eternal damnation, and Lord Camoys plainly intimates that he, for his part, would take the risk of damnation.

Sir George Bowyer, who passes for the best Catholic canon lawyer in England, has also written a letter, intended to confirm Archbishop Manning's position, in which he naïvely declares that the only difference between Protestants and Catholics in deciding where the line lies which separates the law of the land from "the higher law" is, that "the rule of faith of Protestants is private judgment, and that of Roman Catholics is the infallible voice of spiritual authority, which they [we] believe to be under Divine guidance." The Pope has also addressed a deputation of English Catholics about the Gladstone letter, and, being nearly as fond of mixed metaphor as Mr. Conkling, says that the ex-Minister has "suddenly come forward like a viper assailing the bark of St. Peter," and that he has not read the pamphlet, because he does not like to read "blasphemies," and hints pretty broadly that Mr. Gladstone is a liar. Archbishop Manning has also addressed a meeting of English

Catholics at his house on the politics of St. Peter, in which he proposed the Pope as a great international arbitrator, in lieu of such bodies as the Geneva Tribunal, and the Church as the proper person to decide in what manner the various sects of Christendom could be reunited, in place of the Bonn Conference or the Evangelical Alliance, and recommended the Pope's infallibility as a most soothing and salutary doctrine for all the nations of the earth, and he warned Catholics against any backing down about it.

The French Assembly has doubtless met at this writing, and has perhaps received Marshal MacMahon's message, but if so we are obliged to go to press in ignorance of its contents. The near approach of the opening of the session was, at the latest dates, a source of genuine regret throughout France, most people believing that the effect on business would be bad, and that the winter's debates and attempts at legislation would hinder the country from prospering as it might do under an abundant harvest—a state of mind about the national legislature by no means unknown on this side of the water. The great subject of popular speculation for some weeks back has been the nature of the attempt which it was thought the Marshal would make to bring about what is called "the organization of the Septennat"—that is, the provision of some sort of a constitutional fabric at its back which would enable the Assembly to dissolve. The difficulty in the way of this is the feeling of both the Bonapartists and Monarchists that anything of the kind might, and probably would, prove the foundation of the Republic, but it has been thought the Marshal may be able to carry his point through a coalition *ad hoc* of the Orleanists and Republicans, who, by threatening the Legitimists with a dissolution, might induce them to consent to a temporary arrangement. This would suit the Republicans as a possible beginning of the Republic, and the Orleanists as opening a way for the Duc d'Aumale to the executive chair. The relations of the Government with Germany have in the meantime visibly improved, the latter having semi-officially disavowed all connection with the recent somewhat insolent Spanish note, and officially expressed satisfaction with the arrangements made by the French authorities for the maintenance of neutrality on the Spanish frontier.

The Italian election returns are now all in, and show a majority of from fifty to one hundred for the Government out of about five hundred members. The electors are divided into as many "colleges" as there are members, and the successful candidate has to get at least half the votes cast, and two-thirds of those which might have been cast—that is, of the registered electors. The victory of the Government, which is essentially the victory of moderation, economy, order, and respect for established institutions, has furnished the English press with materials for some comparisons between the way in which the Italians have been managing their affairs, under the most terrible difficulties, and that in which the French have, with everything in their favor, been managing theirs, greatly and deservedly to the advantage of the Italians. But then it ought to be borne in mind that the Italians have not had to contend, as the French and Spaniards have, with the evils of ignorant suffrage. The Italian voters—what the French call "le pays légal"—do not number over 500,000, and they belong mostly to the class of larger taxpayers. This restriction of the suffrage, while it will undoubtedly weaken the Government in the long run and for general purposes, has probably helped it in its late conflict with the Papacy, and in dealing with such delicate questions as the army and the finances during the last fifteen eventful years. With universal suffrage, it is probable that many of the problems which vex the French and Spaniards would have arisen, but it is also a fair deduction from Italian character and recent Italian history that they would have been met with vastly greater ability and good sense.

At certain intervals, the "Eastern question" receives its share of the attention of European diplomatists, and its revival at the present moment is due to the attitude recently assumed by the Principality of Roumania. When, at the meeting of the Emperors of Germany, Russia, and Austria, in September, 1872, the Eastern question was mooted, it was thought desirable to preserve the *status quo*, and the Porte was confirmed in its rights of sovereignty over Roumania, Servia, and Montenegro. In consequence, commercial treaties between these and other countries have continued to be subject to the approval of the Sultan. Nevertheless, Roumania claims the right of independently concluding a commercial convention with Austria, for the purpose of settling minor details of tariff, and she is sustained in her course by Austria, Germany, and Russia, who addressed an identical note to this effect to the Turkish Minister of Foreign Affairs. Turkey replied through her ambassadors at Vienna, Berlin, and St. Petersburg, expressing her willingness to accede to the wishes of the three powers, and proposing that Roumania be induced to address herself to the Porte. She, however, insists on the rights of sovereignty guaranteed to her by the Treaty of Paris, and asks whether a continued violation of the articles of that Treaty would not tend to swell a current which one day the powers might find themselves unable to resist. There is, of course, more than a mere haggling about conventionalities at the bottom of this dispute. Roumania has all along shown an ill-disguised desire to magnify the conclusion of her commercial convention with Austria into a European question, and there are indications of an estrangement in the relations of Austria and Turkey which might serve to explain Count Andrássy's position. Russia has very good reasons for favoring the autonomy of the Turkish dependencies, and the co-operation of Prussia may either be a disinterested service of friendship to all parties, as the Vienna correspondent of the London *Times* believes, or, more probably, a manifestation of good-will towards Roumania, whose sovereign is a prince of the house of Hohenzollern. France and England, who were likewise appealed to, have thus far preserved an attitude of silent watchfulness, while Italy alone has remained unconcerned, and refused to take any action in this matter.

King David Kalakaua of the Sandwich Islands has landed at San Francisco on a visit to the United States of peace and goodwill. Negotiations of an interesting character have been going on for some time between the United States and the Islands, looking to a reciprocity treaty, or the acquisition of a harbor on Pearl River, or both, while there is a party always at work for annexation. For many reasons, however, both domestic and foreign, annexation is not a question likely to be much discussed between Kalakaua and the Great Father at Washington, while there is reason to believe that a treaty of some sort advantageous to this country, and at the same time not likely to do the natives of the Islands any more harm than intercourse with foreigners is already accomplishing, may be negotiated. The internal condition of the Sandwich Islands is peculiar. The native population, formerly cannibals, are now mild and inoffensive, and constantly declining in numbers, fifty or sixty thousand being all that is now left of them. They have a little sham government of their own, with a conservative monarch, one or two houses of parliament, and a body of judicial and administrative officials who come from England, Massachusetts, and other places, and, with the usual kind, obliging disposition of Anglo-Saxons when they find themselves among inferior races, have undertaken to govern the islanders, decide their quarrels, establish justice, and promote a general reign of order and harmony, on condition that they may make their fortune out of taxes by the way. The great crop is sugar, and the Chinese are now imported to cultivate it. A few years, and there will be no more Sandwich Islanders, but only a number of rich foreigners with their Chinese proletariat, and then or before then the Islands must fall into the hands of some foreign government. The United States, however, will do well to confine itself to commercial relations with this distant part of the world. The Fiji Islands, according to a popular rumor, were offered before their cession to Great Britain to the United States, and Mr. Fish wisely declined them. We have no machinery for the proper and efficient government of remote colonies, and the only safe course for us now is "home rule" in every sense of the word.

THE NATIONAL ARCHITECT.

THE New York *Tribune* has been at the ungracious pains of looking up the expenditures made by the British Government for its royal parks and palaces, the British Museum, and all other public buildings, and of instituting some unpleasant comparisons between that oppressive and extravagant monarchy and our own simple and economical republic. It appears from the researches of the *Tribune* that the entire expenditure of the British Government in 1873 for what we call "public buildings," and for a great many things besides, such as the British Museum, harbors of refuge, ambassadors' houses abroad, and a national thanksgiving at St. Paul's, was only about $8,000,000, while Congress appropriated for the last fiscal year (ending June 30, 1874) over $12,000,000 for our public buildings, without having a royal park or palace, or a British Museum, or a harbor of refuge, or a foreign minister's residence abroad, or even a national thanksgiving to pay for. What the expenditures may amount to for the current fiscal year—the year of rigorous economy—the *Tribune* avers no ordinary investigator can ascertain, for Congress appropriated over $8,000,000 in definite amounts which the public can read or learn about, and then took a cross cut to the unknown and indefinite by adding in general terms the unexpended balances of the preceding year. In the "Finance Accounts of the United Kingdom of Great Britain" these unexpended balances are always fully set forth, but in the reports of the Treasury Department they do not appear. Undoubtedly, they are known to somebody, and can be ascertained by anybody with sufficient trouble and diligence, but for the public at large, and even for a powerful and painstaking newspaper like the *Tribune*, they are practically suppressed.

A comprehensive and at the same time rigorous comparison of the expenditures which these two governments, so old and so new, are making in the form of permanent investments in public buildings, might furnish some very instructive material. But a mere comparison of gross expenditures can be of very little service to anybody. The conditions that surrounded each case are too distinct to admit of strict numerical comparison. On the one hand, we have a much larger territory to provide for, and for the most part a territory that has never been provided for before; on the other hand, we have a dual form of government, and public buildings may be erected by the State governments which in Great Britain are paid for by Parliament. It must also be a matter of enquiry whether buildings which in the one country are a county or city charge, do not in the other fall upon the national treasury. So far as the *Tribune's* investigation has gone, it unquestionably shows by comparison an extraordinary outlay on the part of a people deeply in debt, and professing to practise rigorous retrenchment, and yet the comparison really understates the case. The British expenditures cited take in, as has been said, the parks and palaces, the British Museum, and houses for English ambassadors at foreign courts; they also take in the furniture and expenses of the Parliament House. The American expenditures which the *Tribune* cites do not embrace those made for the Executive mansion, nor for the Capitol, nor for Congressional furniture, nor for the public grounds at the seat of Government. In short, it is a comparison where everything may not be included in the statement of British expenditures, but where a great deal has certainly been left out of the American. In other words, it is a comparison which, when looked at from the economic point of view, is much too favorable to us.

The American expenditures which have thus been used as the basis of the comparison are those grouped in the appropriation acts under the title of "Public Buildings under the Supervising Architect of the Treasury." For the present fiscal year, these number upwards of forty distinct appropriations, varying in amounts from $5,000 to $1,344,207, and footing up in the aggregate (apart from the unexpended balance of last year) a little over $8,606,000. The objects of these outlays (thus placed apparently under the exclusive control of one man) are, for the most part, public buildings, which are scattered over the country from Boston in Massachusetts to Portland in Oregon. They also vary in every possible detail, one being the new State Department in Washington; another, the new Post-office in New York; a third, a mint in Carson; a fourth, a court-house in Raleigh. Some of the appropriations, though made for minor and incidental matters, nevertheless appear of colossal proportions. Thus, to recur to illustration by comparison, we find that Parliament appropriates for royal palaces £41,552, and Congress an almost precisely equal amount, viz., $225,000, "for fuel, light, and water, and miscellaneous items required by janitors and firemen in the proper care of the public buildings under the control of the Treasury." The common American idea that the palaces of England are a grievous burden upon an overtaxed people is thus exploded by our own Congress; for who shall say that they are a burden upon a much wealthier community than ours if it does not cost as much to keep them up as to keep our Treasury janitors and firemen supplied with "fuel, light, water, and miscellaneous items"?

But notwithstanding such items as this, it is evident that the bulk of this annual outlay of $8,000,000 is devoted to the erection of public buildings. Substantially, all of these buildings are of an expensive and some are of an exceedingly ambitious type. Every one of them is expected to outlast the generations who erect them, and a few to go down the ages and become historic monuments. None is of the temporary type—the type that betokens that a person or a people is waiting to grow rich—such as the old Post-office building which has so long served this city, or the plain brick "War and Navy Departments" in Washington. The latter, indeed, are about to be torn down to make way for one of the new type—an Ionic marble pile with a French or Mansard roof, known as the "New State Department." This transition from the plain and cheap utilitarian to costly art betokens a stage in the national progress where a people believe that they are not bound to the necessities of to-day, but may build for posterity.

When a nation thus takes to working for present fame or future admiration, and designs to give an element of perpetuity to its public buildings, every one knows that it necessarily builds in with its money its mistakes, and perpetuates them in marble or lasting granite. It is such buildings as these that we are now building (or trying to build) which require care and skill, the highest order of talent at least, and, when it can be procured, the most exalted architectural genius. If some of our growing structures do not fall down in the next century for want of skill in their construction, or are not pulled down as being unpardonably inconvenient or useless or grotesque, if, in short, they have the luck to live a hundred years, the question will naturally be, what care and foresight, what conscientious effort and faithful common-sense, did the people who built them give toward securing edifices at all commensurate with their great cost, or at all deserving of going down into history? Until the last week it is probable that there are not a thousand Americans out of Washington who would not have answered, if thus questioned, that they knew nothing at all about the matter. "Great structures," they would have added, "are going up at great cost, which appear certainly larger and probably better to the native eye than anything it has seen before, but what foreigners will think of them, accustomed as they are to world-renowned works of art erected by men who struggled with their whole might to make them perfect, is a question as to which most of us must confess some curiosity at least." During the past week, however, the accident of a personal quarrel has disclosed to the country the fact that these ambitious schemes and this great outlay have been confided to a single individual holding a position which is not even an office, *i.e.*, which does not involve the responsibility of appointment by the President and confirmation by the Senate. This person, by that adroitness which of late years forms so prominent a part of our public misfortunes, has worked up this entire business of public building to its present dimensions. From what we can learn, the craving for new public buildings in every part of the country has enabled him to form combinations in Congress which carry or defeat almost anything. Coming to Washington without any professional reputation, he has speedily become the final judge and arbiter of all our public archi-

tecture in every part of the country, with the solitary exception, we believe, of the Capitol. Furthermore, while Mr. Mullett has been the official architect, not only of great buildings in progress of erection at the same time with those in Washington, New York, and Boston, and of custom-houses, mints, post-offices, and court-houses in every part of the country, he has also been the superintendent, the manager, the contracting agent, and the disbursing officer of the entire business, and has even carried his unrestrained and undefined power so far as to set up an official furniture manufactory for the Government, and, indeed, to do what he pleased with the funds entrusted to him not by law, but by the appropriation bills of successive Congresses. For all this really vast responsibility, and for this labor, which, if really performed, would task a score of able men, he has been paid a paltry salary of $4,000 a year. In the matter of disbursements there may have been—there probably have been—the ordinary formal checks of the Treasury which apply to all disbursing officers, but beyond this there has been no Board of Control, no real supervising authority, and his official life apparently has been largely passed in managing committees of Congress, in cajoling "watch-dogs of the Treasury," and in riding over his only official superiors, the former Secretaries of the Department. For a former Secretary to have quarrelled with Mr. Mullett would have been as dangerous as to have quarrelled with Mr. Sanborn or Mr. Jayne. Mr. Mullett, indeed, has been one of our rulers, ruling Congress, and through Congress the Treasury and country. The part which he has played has been a part which many rulers before him have selected, that of adorning his realm with costly architectural works which he esteemed fine. The straightforward course of Mr. Bristow seems a part of the decree of fate which has given us the disclosures of the last two years. Whether there is anything worse behind the rupture than insubordination may be a matter for investigation by the next House of Representatives.

THE CIVIL ALLEGIANCE OF CATHOLICS.

THE controversy excited by the Decrees of the Council of the Vatican and by the Pope's list of damnable errors, is fast settling down on the only point which possesses much practical interest—namely, the extent to which they are likely to affect the relations of Catholic citizens to the civil government under which they live. The other point by which many people were in the beginning most disturbed—namely, the extent to which the Decrees and the Syllabus would probably affect men's relations to literature and science, has rapidly declined in interest under the influence of more mature consideration. For it needs only a very slight acquaintance with the state of the public mind in all Western countries to see that no part, or, at all events, only a very small part, of the class which allows itself to engage in the moral and scientific specula tion by which the world is now agitated, is likely to retreat from the arena on receiving a signal from Rome. In other words, the mental and moral conditions which lead a man to indulge in free enquiry on fundamental questions, may be fully relied on to prevent his being troubled by anything which either the Pope or the Council may say by way of prohibition. If a Catholic likes to hear Huxley and Tyndall, and has been in the habit of reading what books he pleases, the temperament, or bent, or influences which lead him into these ways are certain to make him indifferent to ecclesiastical directions for the regulation of his lines of thought; therefore, all warnings addressed to him by Protestants are apt to seem either useless or impertinent, or both.

On the other hand, the class of Catholics whose orthodoxy the Decrees and the Encyclical were likely to confirm or protect, were very unlikely ever to put their orthodoxy in danger. They were likely to be persons, in short, without any turn for speculation of any kind, and without the capacity, even if they had the desire, to construct a new theory of the universe. Of course, we do not mean to say that the solemn declarations of the government of the church would in no case lead educated and inquisitive Catholics to greater carefulness in their external conduct. Nonconformity or open external disobedience to the church might often prove a matter of great social or political inconvenience, and, for domestic reasons, a cause of real suffering, and would therefore be avoided by thousands who in private allowed their understanding to rove in forbidden fields. That this is the state of mind of a large majority of Catholic men of the middle and upper classes in France, Spain, and Italy, there is no denying. One of the most fruitful causes of error, in calculating the power of the church in modern society, is forgetfulness of the fact that there is a vast amount of concealed free-thinking or indifference within the church, or, in other words, that faith among those who are called the faithful differs very widely in clearness and intensity. There are Catholics, as there are Protestants, who believe most fervently and devoutly all that the most orthodox doctors of their church have ever taught; others who do not know exactly what they believe, and who, for social convenience' sake, or through mental indolence, do not care to examine their own belief at all; and others, again, who are as sceptical as Voltaire, but think the church a useful institution. All these pass outwardly as Christians. Upon Catholics of these three classes the recent deliverances of the Vatican have, as far as their creed is concerned, probably produced no effect worth mention. The devout man remains devout, but he would have been as devout as he is now if the last Council had never met. The indifferent man remains indifferent, the sceptical sceptical, but all keep silent as mice. It is not the fashion of our time to "come out," or secede, or found new sects, or go to the stake for points of doctrine, and in fact it is very difficult to elicit strong, vigorous opposition to any religious proposition, however wild. People having seen many centuries of fruitless controversy over doctrine, have lost their ardor about it.

Now, this state of mind has been one of the greatest difficulties of the Ultramontane party in the Catholic Church. It has seemed impossible of late years to bring about a revival, or, in other words, to rouse people into even decent attention to religious matters. The promulgation of new articles of faith touching things with purely spiritual or abstract did no good, because the laity looked on in indifference or swallowed languidly anything that was offered them in the way of signs or wonders. The Pope might adopt any system of astronomy or any theory of the origin of the universe or of the future life he pleased, and put it in a Bull, and nobody would make much fuss over it. It has been found necessary for him, therefore, to come down on the solid earth as a mundane power, and put forward more vehemently than ever before a string of propositions of the most startling character touching men's duties and relations, not in the life to come but in this life. Accordingly, he offers to damn anybody who says the press ought to be free, or that the church may not employ physical force against its enemies when it can, or that the ecclesiastical power ought not to be superior to the civil power, or that the Pope ought not to be temporal sovereign of the Papal States, or that any state has a right to regulate the education of its children, or that any form of worship but the Catholic ought to be tolerated. Now, when these things are said with a great flourish of trumpets they do startle people. When men are told they must believe in the Immaculate Conception, or in the Miracle of Lourdes or of La Salette, or that an old man in Rome speaking *ex cathedra* is "infallible," they are not roused by it; but when they are told that the foregoing definitions of the duty of citizens are promulgated as of divine authority, they naturally begin to ask how many of their neighbors believe them or are likely to act on them; whether any attempt is likely to be made to carry them into effect, and whether they are likely to be seriously taught to children.

Accordingly, the controversy between Protestantism and Catholicism, which, long after the Reformation on the Continent and during the early part of the present century in England, turned on faith and works, and penance, and purgatory, and confession, and transubstantiation, is now recurring with considerable violence to the questions with which it was occupied in England in the reign of Elizabeth, namely, the extent of the Pope's political power and

the capacity of Catholic citizens for civil allegiance. This is a burning question, as we see. It accounts for the passage of the Falk laws in Germany, and for the stir created by Gladstone's pamphlet in England. Protestants in both countries begin frankly to declare that though they do not particularly care what a man thinks about purgatory or the age of the world, they care a great deal what he thinks about the comparative claims of the Emperor William and the Pope on his obedience at serious crises. Bismarck has characteristically chosen to bring the matter to an issue by legislation intended first of all to repudiate the formal limitations recently put on the authority of the state by the church—in which we hold, he is, "humanly speaking," perfectly justified; and, secondly, to prevent the ecclesiastical view of the relations between church and state from being taught to the common people—and this he does by insisting that the priest shall, before receiving his ecclesiastical education, receive a sound secular one.

No collision of this kind can be brought about in England, because the Catholic clergy is not, and has not been for over three centuries, in the pay of the state, or in any formal or official relation to the state, and because the state in England exercises no such supervision over the higher education as it exercises in Prussia. Accordingly, in England, when the public gets alarmed, the politicians, instead of bringing bills into Parliament, write pamphlets and letters to the newspapers. Mr. Gladstone's pamphlet,* "expostulating" with his Catholic countrymen for not making some active demonstration against the Vatican Decrees, which has made a great sensation, is open to nearly all the criticism which has been directed against it. The Catholics cannot, as Lord Acton points out, show now that if the Pope were to make any such claim on their obedience as Mr. Gladstone thinks under church law he might make, they would resist him. It may be, too, as Lord Acton asserts, that the Pope is no better armed with authority than he was a century ago, and is much worse armed with power. And it may be, as the *Pall Mall Gazette* points out, that Mr. Gladstone's appeal is from first to last clumsy, and irritating to the very class which the author professes to be trying to persuade. But it none the less furnishes expression to a desire which has, since 1870, been spreading in all Protestant countries with a large Catholic population, and which the language of the Catholic clergy has helped to intensify, viz., the desire to know how the Vatican Decrees have affected the actions of their Catholic fellow-citizens in their duties to the state; or, in other words, how Catholics would act if their own Government and the Court of Rome should ever come into collision about a piece of domestic legislation? That there is any way of getting a formal answer to this question we do not well see. Indeed, it is in its nature a question to which no formal answer can be given, and which we cannot hope to have much light upon until such a collision actually takes place. But the discussion of the matter now is none the less necessary. There is a cloud over it which may be at least in a measure removed by pushing the Catholic prelates a little more closely to the wall. This discussion seems to be rendered all the more necessary by Archbishop Manning's reply to Mr. Gladstone, of which we gave a summing up last week, and which was eminently characteristic of that subtle but by no means ingenuous divine, who says in it that "the civil allegiance of Catholics is as undivided as that of all Christians, and of all men who recognize a divine and natural moral law," and that the civil allegiance of Catholics is limited only, like that of other Christians, "by conscience and the law of God." The question which this statement of Catholic doctrine leaves in the dark happens to be the only question in the controversy which possesses any importance, and that is, to whom does a good Catholic go since 1870 when he wants to know what the law of God is? If "his conscience" said one thing about an act of the legislature, and the Pope said another, to which would he listen? In short, where does a good Catholic find his "natural moral law" when he gets into a dispute with the state? If he finds it at the Vatican, what is the difference between having one's allegiance limited by "the natural moral law" and having it limited by the Syllabus? Every good citizen will see the desirableness of having Catholic divines express themselves freely and without fencing and equivocation on such points as these. They go to the root of civil polity.

* An edition in large type, with Archbishop Manning's and Lord Acton's replies, has been published by the Appletons.

JOHN RICHARD DENNETT.

BOTH the *Nation* and its readers have during the past week suffered a loss which it is hardly an exaggeration to call irreparable, in the death of Mr. John R. Dennett, who has been one of the editorial staff of this journal from its foundation, and whose contributions to its columns have from the very first furnished one of its strongest claims to public approbation. That a writer of whose services we speak thus warmly should not be known even by name to the great majority of our subscribers, and still less known to the public at large, is not in his case wholly, or even in large part, a result of anonymous journalism. It has not been our fortune to meet with any one who could so easily, and by so small a change in his relations to the world without, have won a fair share of the fame which is in our day divided so lavishly among literary aspirants of all kinds and conditions, and who was so completely and unreservedly indifferent to it. It might truly be said of him that if he toiled at all he preferred to toil obscurely, and that though far from heedless of the praise and sympathy of the small circle of friends with whom he lived, the satisfaction he derived from his literary work was due almost wholly to the fact that it furnished the means of expression to a mind of remarkable power and acuteness. He became connected with the *Nation* in 1865, when he was only in his twenty-seventh year, and while studying law at Harvard, and with the exception of a year passed at the South as our special correspondent, continued regularly to contribute literary reviews and other matter of a similar character to our columns down to the last month of his life; and we believe that after nine years' experience of his work none of those who were familiar with it can now recall a single case on which more mature consideration would lead them to pronounce his judgment fundamentally erroneous. It would indeed be very hard to find anybody whose literary sense was so acute, whose perception of fitness was so quick, and whose standards exercised so constant and powerful an influence on his conclusions. To say he did not sometimes seem captious and even harsh would be a tribute which his memory does not need, for all those who knew him well knew also that there has rarely been a critic whose criticisms were less colored by personal feelings or relations. His likes and dislikes, however strong, were purely literary, and indeed their very strength was to his friends an illustration, which often had its comic side, not of the sharpness of his temper, but of the fervor of his devotion to his own ideal of excellence. His faults as a critic, trifling as they were, were those of a man "qui avait trop tôt vu la beauté parfaite." Whether better health and wider social relations, with their constant demands on his charity and forbearance, might not have made him more patient with feebleness, and pretence, and affectation, and vulgarity, and the rest of the vices which the swelling tide of popular literature carries daily under the eyes of those who bring high aims and clear perceptions to the critic's calling, it is unhappily useless now to speculate. It is no part of our present purpose to defend him or apologize for him; we are only trying to make him better understood of some of those who were troubled by his judgments, without always knowing who had uttered them.

The mention of his health is necessary to explain his failure to produce as well as to criticise. That he was capable of creation of a very high order nobody who knew him well ever doubted. His early promise was very great. He graduated at Harvard in 1862, and was the class poet, and his poem was one which, in the judgment of all who heard it, and James Russell Lowell was among them, was not only probably the best class poem ever produced, but would have well borne comparison with the best poems of any kind. He went to the South immediately afterwards, and for a year or two had charge of a cotton plantation in South Carolina, an experience which gave him a curious and useful familiarity with the negroes and negro life, and with most of the leading features of what we have still unhappily to call "the Southern question." In the winter of 1865–6 he travelled through the Cotton States as the correspondent of the *Nation*, and our subscribers of that period will remember the remarkable descriptive power and keen sense of humor displayed in his letters, published under the general heading of "The South as It Is" in our first two volumes. That more than this cannot be said of them was due to the restrictions imposed on him, for he was specially directed to confine himself to depicting what he saw; but more remarkable writing in this field, we think, is not often met with in periodical literature. After his return he never left the office of the *Nation* except to pass two years at Harvard—1869–72—as Assistant-Professor

of Rhetoric, a position for which, however, though he filled it well, his temperament unfitted him, as its duties involved a considerable amount of drudgery. But through the whole of these slight changes in his short career the shadow of the disease which had carried off nearly all his family, and to which he has at last fallen a victim, was upon him, and most certainly damped his ardor, weakened his power of persistence, and shortened his views of the future. Of what he might have accomplished with a constitution better adapted to his surroundings, one got an idea, however faint, from his extraordinary powers of apprehension, which we have rarely seen equalled and never surpassed. He had only to turn his mind to any subject, however foreign to his tastes and habits, to master it with singular rapidity, and hold its leading features with singular tenacity. As a trifling, and to his friends somewhat grotesque, illustration of this, we may mention that his knowledge of that very odious subject, Southern State politics since the war, was accurate and minute to a remarkable degree. His plantation life and his journey as our correspondent had given him an interest in the South which he never lost, and which was cultivated by tolerably regular reading of the Southern papers, and the result was that he became a perfectly trustworthy authority on recent Southern history. He was familiar with the career of all the leading carpet-baggers and scalawags, knew the details of their principal frauds and thefts and migrations, and of the various processes, savory and unsavory, by which the existing State governments were built up and maintained.

The oddity of this lore was of course only visible to those who knew his great proficiency in widely different fields, and how far away from scenes of vulgar political profligacy his own tastes carried him. Indeed, he had no natural liking for politics at all, and his studying law was probably a mistake. His mind was a great deal too subtle, his love of perfection too strong, and his perception of the allowances and reservations called for by strict accuracy in the presentation of any subject outside the realm of pure science was too keen, to permit of his ever being a successful lawyer or political writer. In fact, his writing on all subjects was somewhat marred by excessive watchfulness over his own statements. He had the hatred of exaggeration, of looseness, of reckless generalization, of flashy coloring, and indeed of all gross disproportion between means and results, which comes of the highest literary culture, but which nevertheless often reminds one that literary culture, like other culture in special fields, may be too high for much of the inevitable work of the world. But one of its curious results in Mr. Dennett's case was that it gave him what we might almost call an eager eye for the humorous and picturesque side of politics. He watched a political rascal or charlatan with much the same kind of interest with which a painter watches a Spanish or Italian beggar, and remembered him as a sort of literary study. He consequently liked attending political conventions, but bestowed his interest rather on the acting of the managers than on the conflict of passions and interests, or the working of the machinery, and usually brought away from them a large store of humorous reminiscence. The peculiarity of this taste, however, could, as we have said, hardly be appreciated by anybody who had not heard him talk in his best mood and in his own walks. We do not think we do him more than justice when we say that this was often an entertainment of the highest order. His knowledge of English literature, and of whatever was needed of history or mental or moral or social philosophy to light it up, was both wide and deep; and when in his best vein, and in society in which he felt at ease, he was capable of discoursing by the hour on almost any of the topics on which conversation is usual or possible, with extraordinary fulness of information and command of language, and this not as a well-read man simply, like so many of the smaller littérateurs of our day, who seem overwhelmed by their own stores, but as a man who had thought much and long of whatever he discussed, and who had examined it under various lights and from various points of view, and to whom what our friends of the daily press call "the ball of discussion" was really a ball, and not an anvil or a barrel of flour. Here, too, unhappily, the display of his great powers was checked by his temperament; for he was very shy, and the animation which was needed to loose his tongue only came in very few circles. The maudlin element in literature and oratory, and the growing practice of public weeping in print and on the platform, had no bitterer enemy; but, probably, few men ever had a tenderer heart. The very last words he wrote for the *Nation* were praise of Dr. Holmes's *Atlantic* article on Jeffries Wyman, for Wyman was a man for whose character Mr. Dennett, without in the least sharing his scientific ardor, had the keenest sympathy and admiration. The only communication which came from him after this was an announcement—written with the tremor of growing weakness—that the end was near, and that his old haunts would see him no more.

Mr. Dennett's family were originally from Nova Scotia, where he himself was born, at Chatham on the Miramichi River, and moved to Woburn, Mass., when he was only five or six years old. His father was killed by an accident when the son was quite young, and the narrow circumstances in which he had to struggle for education so affected a sensitive and somewhat morbid temperament as to produce a reserve from which he only released himself in the company of a very few intimate and loved friends. How strong was the attachment they felt for him, and how much more attachment they could have displayed than he ever permitted, those of them who may read these lines know well. He died at the house of one of them, a clergyman who had been his classmate, on a quiet New England farm, at Westborough, Mass., after having been tenderly nursed through a tedious illness. None of his kindred were able to stand at his bedside in his last hours. In paying this feeble tribute to his memory on the part of those with whom he labored during the last nine years, and who had learned to know and love him as he deserved, one is inevitably restrained by the reflection that, such was his inbred modesty, even the coldest and most guarded praise would, could it now reach his ear, only surprise and perplex him. Our regret, too, over the early termination of a career in which all his friends saw possibilities so splendid, is softened—and it is the only thing that can soften it—by the reflection that the limitations which his health had placed on the display of his powers, were such as would have made life only a prolonged and anxious struggle with cares which a proud and sensitive man finds it hard to bear, because he has to bear them alone.

LAMARTINE.

II.

PARIS, Nov. 13.

WE left Lamartine on the road to Italy with his young wife, Marian Birch; he had been named Secretary of Legation at Naples. His 'Meditations' were in every one's hand in France—thirty-six editions were published in a single year; in Italy he could still enjoy the pleasures of obscurity. He travelled leisurely, stopping on his way at Turin, at Florence, at Rome; he arrived at Nola at the very moment when the revolution of the 6th of July took place—a very small and mild revolution, which simply forced the king to swear to a constitution which he afterwards obeyed only when he liked. Lamartine at that time was still a royalist, of what may be called the sentimental school; he did not look on monarchy as an instrument in political machinery; he looked upon it with the eye of a poet; he did not care for constitutions; he was ready to obey the king as a knight of old times obeyed his lord. He cared little for what is called politics, and retired with his wife to the island of Ischia. His correspondence with Virieu, in the autumn of 1820, reads like poetry translated into prose. He wrote in that period the elegy of 'Ischia,' which is one of the most melodious poems ever written in the French language:

> "L'Océan amoureux de ces rives tranquilles
> Calme, en baisant leurs pieds, ses orageux transports,
> Et pressant dans ses bras ces golfes et ces îles,
> De son humide haleine en rafraîchit les bords.
> Du flot qui tour à tour s'avance et se retire
> L'œil aime à suivre au loin le flexible contour. . ."

This is musical poetry; the language becomes quite plastic in Lamartine's hands, and acquires a sort of fluidity which was unknown before him. The 'Chant d'Amour' was also composed at this time; it has all the beauty of an antique epithalamium.

In the middle of January, 1821, he went to Rome, where a son was born to him. He did not take any active part in the diplomatic service, probably thinking that the functions of a secretary were not important enough for him. He had a sort of permanent *congé;* went to Paris, to Mâcon, to London. He published from 1823 to 1829 the 'New Meditations,' which are, with the first 'Meditations,' his chief title to glory, the 'Death of Socrates,' and the 'Last Canto of Childe Harold's Pilgrimage.' Some of the 'New Meditations' have an incomparable charm. The 'Adieux à la mer,' for instance, are as fine as Shelley's best productions, and Lamartine's muse has a placidity, a supreme serenity, which is more soothing to the mind than the troubled inspiration of the great English poet. Can anything be more touching, more eternally true, more in accordance with the deepest instincts of humanity, than the verses of the "Préludes,"

> "O vallons paternels! doux champs, humble chaumière"?

It is no small praise to say that in a French anthology such pieces must necessarily have a place, as well as the "Lake," "L'Isolement," the "Gulf of Baia," which belong to the first 'Meditations.' The 'New Meditations' were sold for 15,000 francs, the 'Death of Socrates' for 6,000, and 'Childe Harold's Pilgrimage' for 9,000 francs. Such prices were very large for the time, and would be considered so now, though Victor Hugo can command almost any price he chooses for his works.

Lamartine lost his first-born in 1822, and Madame de Lamartine became very ill. He lost two sisters, Madame de Vignet and Madame de Montherot. He had besides these misfortunes a small disappointment: he offered himself as a candidate to the French Academy—and whom did the Academy prefer to him? M. Droz. It is difficult to imagine by what principles the Academy was guided on this occasion. Lamartine was young, to be sure (he was thirty-four years of age), and M. Droz was an old man. If you should ask any cultivated man now if he ever read anything of M. Droz's, he would almost treat the question as an insult. M. Droz had his public in his time; do not let us be too hard on his public or on him. There are Drozes in every period: we have ours, and our children will have theirs.

Lamartine published a poem on the 'Coronation of Charles X.' It is a very loose production, somewhat in the style of an official cantata. It gave rise to a difficulty with the Duc d'Orléans, who became afterwards Louis Philippe. Lamartine, speaking of him, said in the fire of poetic inspiration that he had expiated the crimes of his father. Louis Philippe objected to the word crime, and Lamartine altered the word in a new edition. The original edition with the word crime has now become a bibliographical curiosity. Lamartine made the change in obedience to the distinct wish of Charles X., which to him was an order; but he made it very unwillingly, and the verse, altered as it is now, has no sense whatever. In 1825, Lamartine settled in Florence, with his wife, a little girl, now his only child, and his friend, M. de Virieu. Poets have unknown friends, but have also unknown enemies. In his Byronic poem, 'The Last Canto of Childe Harold's Pilgrimage,' he had exclaimed against Italy:

"Je vais chercher ailleurs (pardonne, ombre romaine!)
Des hommes et non pas de la poussière humaine."

He certainly had forgotten these lines when Colonel Pepe, a Neapolitan exile who lived in Florence, denounced them in a very offensive pamphlet. A duel followed this attack on Lamartine. The poet had received a kick from a horse, and was confined to his bed, but he wrote to Pepe, who insisted upon waiting till he was quite well, that he would not wait, and would meet him the next day. The duel took place in the neighborhood of Florence. Virieu was Lamartine's second. The fight lasted only a few minutes; Lamartine was wounded in the arm, but soon recovered. He became a lion in Florence, notwithstanding the verses which had irritated Pepe. Lamartine still held the post of Secretary of Legation under the Marquis de la Maisonfort. He spent most of his time riding on the beautiful slopes of the Apennines or writing poetry. He tried his hand at a great epic poem, and it is fortunate that he did not persist in his project of celebrating the virtues and the victories of King Clovis in twenty cantos. This poem, according to the plans set forth in the correspondence, was to be longer than the poems of Homer, Dante, and Milton put together. He abandoned this project, and wrote the 'Poetic and Religious Harmonies,' which are wonderfully fine—as beautiful as the 'Meditations,' but not so well condensed. The 'Harmonies' have no limitation; they offer to the mind the vision of an endless sea of images, of metaphors, of thoughts. This want of precision was the capital defect of Lamartine's mind. He was essentially a lyric poet, and the caprice of his imagination drew him in every direction. His sentimental overflow becomes at times wearisome; beauty lies in measure, whether we express it in architecture, in the fine arts, or in poetry; and Lamartine had no measure—he was a spendthrift in every sense of the word.

He became tired of remaining in a subordinate position in the Foreign Office, and as he inherited the large fortune of two of his uncles, he left Florence in 1828 and returned to France. He found the political world convulsed with the change of cabinet; the liberal Martignac was replaced by Polignac; and Lamartine wrote to his friend Virieu: "I believe now in the possibility of a revolution which will sweep away the dynasty; I did not believe it yesterday." He asked, however, the post of First Secretary at London, or of Minister to Athens. He was refused, but found consolation for his pride in his nomination to the French Academy in November, 1829.

Very soon afterwards he lost his mother, who burned herself frightfully in a bath, as she allowed the hot water to flow too rapidly and could not stop it. She died after the most painful illness, and Lamartine buried her at Saint Point. She was the great, perhaps the only profound, passion of his life; he writes about her to Virieu letters which have a tone of sincerity and of depth which is not often found in his effusions. He returned to Paris for the ceremony of his reception in the Academy. He was received by Cuvier, who had been elected a member of the French Academy, though his claims to celebrity were chiefly scientific. Lamartine had to make the eulogy of his predecessor, Count Daru, who had been a high functionary of the First Empire: he improved the opportunity to express his political sentiments. He felt already drawn from the quiet field of politics to the stormy atmosphere of party conflicts. "From this century," he said, "will date our double restoration: restoration of liberty by the throne, and of the throne by liberty. The century will bear the name either of the legislator-king who has consecrated the progress of our time in the *charte*, or of the gentleman-king whose word is a *charte*, and who will preserve for his posterity this perpetual gift of his family." These words will be better understood if we remember that they were pronounced almost on the eve of the Revolution of 1830; Lamartine was a Royalist, but a Constitutionalist at the same time. His advice was thought too haughty, and the Court party became very angry with the new Academician.

He left Paris in great uneasiness of mind, after having published the 'Harmonies,' which were received by the public with as much enthusiasm as the 'Meditations.' He was at Aix when he heard the fatal news of Polignac's *ordonnances*. The revolution which he had almost prophesied took place. "There it is," he writes to Virieu; "if it crosses our frontiers, all is over in Europe; it will be like the universal deluge, without an ark. Happily, between the revolution and ourselves there is an improvised government, fortified with all the wishes of the middle classes, with good institutions. This shows the way for all honest men. Anything rather than anarchy, than a stupid and hideous complicity with enemies who would devour themselves after having devoured us. My conscience tells me that as long as one can fight for one's country, for the principles saved in the wreck of a crown, one must do it, and not enquire whether the flag has one color or three colors, whether whatever remains of monarchy, of liberty, of religion, of stability, is called Peter or Paul. I shall consequently accept any function which well-thinking men may give me in the Parliament or anywhere else." He sent in his resignation, however, but in his letter confessed himself ready to take the oath to the new government. Such was the conduct of an intelligent Royalist of 1830; why was it not the conduct of all Legitimists; and why, even now, is a great fraction of the Legitimist party not inspired by these noble sentiments? There are many who deplore the suicidal conduct of the Comte de Chambord, but there are none who dare to speak in favor of a Liberal monarchy, like the monarchy of 1830. They will follow Chambord, even though he ruins their cause and the cause of the country.

Lamartine was very severe in 1830 on the Republicans. It is true that the Republicans were then few in number; that they had no means of controlling the Government but barricades or the threat of rebellion. His friend Virieu was a Royalist of the *chevau-léger* type. He would not accept any part of the principles of 1798. Lamartine thought that these principles were not incompatible with monarchical institutions, and expressed this view in his 'Politique rationelle.' His letters to Virieu at that time are very interesting. He kept aloof, and was somewhat shy of accepting office; he did not give complete satisfaction to any party; he was not *advanced* enough for the men who were in power immediately after the Revolution; he seemed much too advanced to his old friends. He offered himself for election at Bergues, but he was not returned, and started for the East in 1832 on a ship which he had chartered for himself. His journey has been written by himself, and I will say nothing about his 'Voyage en Orient.' To me, Lamartine is always unsatisfactory as a prose writer.

He returned to France in 1833, was elected Deputy, and then his political career really began. It is perhaps a pity that he ever embarked his graceful muse in the sea of politics and did not remain a poet to the end. Posterity will always remember the 'Meditations,' while he could not save the Republic of 1848 from a speedy destruction.

Correspondence.

DISTRICT REPRESENTATION.

To the Editor of the Nation:

Sir: In a well-written communication in the last number of the *Nation*, I was surprised to see the following passage: "If the malcontents could have invited a distinguished candidate *from another part of the State*, they would have had even a better chance, because a man of ability only excites jealousies in his district which, on the principle of *omne ignotum pro magnifico*, a stranger would avoid. In like manner, a man who wishes to promote a measure of public importance has no chance unless he can persuade his district; whereas, if he could canvass the State himself or by his friends, *he might find a constituency to appreciate him*. In England, for these reasons, no such thing as a caucus is known."

The Constitution of the United States, Article I., Section 1, clause 2, declares, "No person shall be a representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not when elected be an inhabitant of the State in which he shall be chosen," etc. Can there be any doubt that every consti-

tuency and State has the right already to do what your correspondent deems so desirable? Judge Story says the States can add nothing to the qualifications prescribed by the Constitution. Besides the weight of his authority, his argument is, I think, unanswerable. ('Story on the Constitution,' sections 624 to 629 inclusive.)

In 1790, the celebrated Wm. Pinkney of Maryland was elected to Congress from a district other than that in which he lived. His election was contested upon the ground of his non-residence. A law of the State required such residence. He appeared in the House of Representatives, and argued the question. The House decided in his favor. He thereupon resigned, that he might give all his time to his profession. (Wheaton's 'Life of Pinkney,' 7.)

Want of time forbids my pursuing the subject further. I agree with your correspondent as to the importance of the principle. It is earnestly to be hoped that ere long the experiment will be tried in more than one district. If successful, it cannot fail to exert a purifying effect upon our national politics, and to promote the well-working of our national polity. A. B.

AN INCONVERTIBLE CURRENCY.

To the Editor of the Nation:

Sir: In your criticism on Mr. Kelley's "Inconvertible Currency Bill," last week, you say:

"We ought to add that the principle of Kelley's bill received the warm support of Mr. Wendell Phillips, in a letter to the Hon. B. F. Butler, in which he recommended unlimited loans to the Government of new paper-money, at four per cent. if we remember rightly, to all citizens applying for it on the security of mortgage on real estate. We confess our preference for Mr. Phillips's plan, though we say this without meaning to depreciate Judge Kelley's. Our firm belief is that the former would make money plentier in the United States than it ever was in any country in the world, and possesses the grand merit of extreme simplicity. In one month from the issue of the greenbacks, or as soon thereafter as 'the papers' could be made out, every foot of this vast continent would, in fact, be mortgaged to the United States."

We have no wish to depreciate the plan of Mr. Phillips, but we cannot share your belief that it "would make money plentier in the United States than it ever was in any country in the world." His plan is defective, in the fact that the Government is to exact mortgage security for its issues, so that the currency, being convertible into land, would still have too great a purchasing power, and would still be inconveniently scarce.

It has been reserved for the unassisted genius of the African race, in its tropical exuberance, to develop a truly inconvertible currency before our eyes, in the model Republic of Hayti. On our way home from Santo Domingo, with the United States Commission, some three years ago, we visited Port-au-Prince, and found the system of inflation in full operation there. On landing we were told that specie was no longer in use [except among the importers], and that it would be necessary to exchange our gold and silver for "the money of the Republic."

Accordingly, we repaired to the store of Mr. Hepburn, an enterprising colored American, and requested the equivalent of a gold dollar. To our amazement the clerk presented us with a huge pile of notes, the Haytian greenbacks, quite too voluminous for convenient transportation in so warm a climate. This pile contained $390, the rate of exchange that day being 390 for 1. We promptly reconsidered our request, and substituted for our gold dollar a silver half-dollar, and for this we received $195 in "the Republican currency."

Feeling naturally elated by our unexpected opulence, we invited several of our American friends to accompany us to the market-place, and there treated them, with reckless generosity, to many luscious varieties of tropical fruits. We afterwards spent two days in rambling about the ruinous old city, indulging our fancy by purchases of palm-leaf baskets, melon-seed necklaces and bracelets, walking-sticks, etc. Yet, would you believe it, Mr. Editor, after paying for all these I still retain in my possession $120, the unspent remainder of my silver half-dollar, and am tempted to make another visit to that genial clime ere long, for the purpose of revelling in luxury with the ample means at my command.

Of course this pleasant picture has its sombre shades, upon which our unprincipled hard-money monopolists might dwell. For instance, all imported goods, clothing, flour, salt-fish, domestics, etc., have to be paid for in gold. How these products of civilization can ever be paid for at all by the poor women who throng the market-place with their heavy loads of fruit, and vegetables, and coffee, carried upon their heads in wooden bowls or baskets, over mountain paths, often twenty miles or more, is a mystery explained perhaps by their half-naked and wholly barbarous condition. Strange to say, they do not fully appreciate their blessings, for every new issue of paper-money, putting up gold to a still more exorbitant premium, is followed by a political revolution. Nor does the system of inflation stimulate domestic manufactures, for there are none. It does not develop public improvements, for everything is falling into decay. Probably the system has not yet had time to operate, since it has only been in existence about seventy-five years. Moreover, the currency, having still a little purchasing power left, may not yet be sufficiently abundant in Hayti.

The advantages of the Haytian system over that of our timid American inflationists consists simply in this—it is the logical application of the same principle. The "national credit" of Hayti is pledged to the eventual repayment of its currency, which was originally at par with gold. Every acre of land, every pound of coffee and sugar, are pledged "in a certain fine sense" for its redemption. But the Haytian Government are too enlightened to embarrass their citizens by taking mortgages upon individual estates, as the half-way plan of Mr. Phillips proposes, or by levying taxes, which the citizens would find it inconvenient to pay. When the rulers of Hayti need money they simply issue more paper, and leave the gold market to take care of itself.

Let us adopt this financial system, so admirable in its "simplicity." When interest-coupons mature upon our national debt, let them be paid in "the people's money." Surely, a currency which is good enough for Americans ought to satisfy the "Jew bankers" and "bloated capitalists" of Europe. Away, then, with gold and silver. These noxious metals should no longer be permitted to cramp the elastic energies of a free people.

Respectfully, Henry B. Blackwell.

Boston, Nov. 24, 1874.

Notes.

Messrs. Estes & Lauriat, Boston, have sent us the title-page of their forthcoming English edition of Guizot's 'History of France,' on which the year 1789 is set down as the actual conclusion of the work. They do this by way of taking exception to the announcement, which we borrowed from the *Athenæum*, that the history as left by Guizot was complete only to the end of the reign of Louis XIV. We have at present no means of settling this difference between Prof. Gustave Masson, who made the announcement in question, and the Boston publishers.——We have received from B. Westermann & Co. Part 12 of 'Spruner's Historical Atlas.' It is exceptionally rich in maps, the large ones being of Germany from the Peace of Westphalia to the year 1742; France from 1461 to 1610; the British Possessions since 1783, with the date of acquisition of each; and the Eastern Roman Empire from 895 to 1019. The side maps are of Strassburg in 1681; Vienna, 1683; Berlin, 1650; Paris at the end of the sixteenth century; the British Possessions in North America down to 1783, and as many more that we have not space to enumerate.——'Memoirs: A Story of German Love,' translated by George B. Upton; 'Poems of the Farm and Fireside,' by Eugene J. Hall; and a volume of poems called 'Across the Sea,' are announced by Jansen, McClurg & Co., Chicago.——The Paris *Polybiblion* will hereafter be issued in such a way that its bibliographical and literary departments will be entirely distinct, and may be subscribed for separately.——A special number of Trübner's *American and Oriental Literary Record* is devoted to a full report of the International Congress of Orientalists held in London in September.——Mr. E. C. Gardner, the sprightly author of 'Homes, and How to Make Them,' which we lately reviewed, has begun in the Springfield *Republican* a new series of papers on 'Country Houses.' They will be illustrated with plans, and will furnish estimates of cost. The first paper is about "The House the Judge Built."

—The most noticeable article in the *Historical and Genealogical Register* for October is the Hon. George Sheldon's examination of the tradition about the attack on Hadley, Mass., and the appearance of Gen. Goffe, Sept. 1, 1675. Almost everybody must be familiar with this cherished New England legend in its fully developed form. The people of Hadley, it is related, were assembled in church on the above date (or, according to one version, in the following June) when they were suddenly beset by Indians and thrown into the greatest consternation. They were saved by the timely appearance among them of a venerable man, of commanding presence, who gave directions like one versed in military tactics, and led them against the Indians, who were completely routed. When the engagement was over it was found that the unknown captain had vanished as mysteriously as he had come upon the scene, and the belief prevailed that he was an angel in disguise, providentially sent for the salvation of the town. Years afterward it transpired that he was no other than Gen. Goffe, one of the regicide judges, who, with his colleague William Whalley, was at that time concealed in the house of the Rev. John Russell, of Hadley. Mr. Sheldon traces this interesting story back to Increase Mather, who first, in 1677, in narrating the events of King Philip's war, alluded to a violent *alarm* at Hadley lasting two days. Hutch-

inson, in 1764, converted the alarm into an attack, and added "an anecdote handed down through Gov. Leverett's family," which is the Goffe legend minus the embellishments of subsequent historians. President Stiles, of Yale College, thirty years later, supplied the drama with the "angel" property, and topographical and other details of the fighting were by-and-by invented to give local color to the scene. Hutchinson thus appears as the sole authority for this striking incident in the life of Goffe; but though he had access to Goffe's diary, giving a full account of the wanderings, escapes, and concealments of the judges, he had to resort to the Leverett anecdote not only to prove Goffe's participation in the fight, but that there was any attack on Hadley at all in 1675. The silence of contemporary historians (including the officially commissioned Hubbard) and letter-writers is shown by Mr. Sheldon to deprive the alleged attack of every vestige of plausibility; and the recorded movements of troops in and about Hadley two days after the supposed fight confirm the writer in his conclusion that the town may have been alarmed, as Mather wrote, but not molested by the Indians.

—The same number of the *Register* contains a suggestion, by Mr. William H. Whitmore, of a new system of denoting relationship. The present method of designating ascending and descending generations by reduplication of the word "great" is so clumsy and indefinite as to be incapable of defence, and has only maintained itself because, as a rule, in our daily speech we seldom have occasion to refer to a degree so distant that the mind cannot grasp it by means of two or three "greats" and a "grand." The genealogist, however, or any one to whom precision is an object in stating a pedigree, is really in need of something more scientific than this. Mr. Whitmore offers him as a base-word in the ascending scale the old law-French term *ayle* (*aïeuil*), meaning a grandfather, which was developed as far as *besayle*, great-grandfather, and *tresayle*, great-great-grandfather (Blackstone, vol. iii. chap. x.). This may readily be carried out to any degree—*e.g.*, *quatrayle*, *quintayle*, *sesayle*, *septayle*, *octayle* (great-great-great-great-great-great-great-grandfather). The last example shows the saving in space and in breath which the new system would effect, and also that the Roman numeral exactly corresponds with the number of reduplications, if we consider "grand" as only another form of "great," which of course it is. The help thus afforded by English-French in one direction is furnished in the descending series by the Scotch-English, where, says Mr. Whitmore, we find the word *oye*, meaning a grandchild, and equally capable with *ayle* of taking on the numerical prefixes. The corresponding degrees will then be thus ingeniously expressed:

	1	2	3	4	5	6
Father:	ayle—	besayle—	tresayle—	quatrayle—	quintayle—	sesayle, etc.
Son:	oye—	besoye—	tresoye—	quatroye—	quintoye—	sesoye, etc.

That these new compounds should ever replace the old in popular usage is, of course, not to be anticipated; but they might easily obtain a literary vogue, especially in New England.

—In the death of Dr. Abraham Geiger, the distinguished Biblical critic and Oriental scholar, progressive Judaism loses one of its foremost champions. Among the many tributes paid to his memory, the most noticeable is that in the Berlin *Gegenwart* by Berthold Auerbach, a lifelong friend and admirer of the deceased. Zunz and Geiger may be regarded as the most eminent representatives of the new epoch in the history of Judaism which commenced with Moses Mendelssohn; and Geiger received his stimulus from the standard works of Zunz, who survives him. Auerbach passes but lightly over the numerous works of Geiger, the most important of which are: 'Lehr- und Lesebuch zur Sprache der Mischna,' 'Urschrift und Uebersetzungen der Bibel in ihrer Abhängigkeit von der innern Entwickelung des Judenthums,' and 'Das Judenthum und seine Geschichte,' and lays particular stress on the merits of Geiger as a reformer and a rabbi. He does not, however, do justice to the important services rendered by Geiger at the rabbinical conferences at Brunswick, Frankfort, and Breslau, which were brought about mainly by his exertions. Geiger was born on the 24th of May, 1810, at Frankfort-on-the-Main. He studied at the universities of Heidelberg and Bonn, and early attracted attention by a prize-essay on the 'Hebrew Element in the Mohammedan Religion.' In 1835 he founded the learned *Zeitschrift für jüdische Theologie*, which he successfully published at Breslau, Frankfort, and Berlin. His fame as a Biblical critic rests chiefly on his 'Urschrift und Uebersetzungen der Bibel,' but he embodied the fruits of his critical researches in various monographs and essays, the merits of which were universally acknowledged, among others by Renan in his 'Vie de Jésus.' In 1838 he became a rabbi at Breslau, and filled that position for twenty-five years, carrying into practice his reformatory efforts, in spite of strong opposition. After having been several years at the head of the Jewish congregation in Frankfort, he accepted, in 1869, a call as rabbi at Berlin, and held this office until his death, on the 25th of October. In the last year of his life, a long-cherished hope—the establishment of a faculty for the science of Judaism—was realized, and he was acting as professor in the new *Hochschule* at the time of his death.

—The *Revue des Deux Mondes* for August 1 contains the second of the series of papers by M. Fustel de Coulanges upon the "Origin of Feudality" (see the *Nation*, No. 440). The first treated of the tenure of land, this takes up the other of the two fundamental elements of the feudal system—the personal relation, especially as exemplified in the usage of "commendation." This, like Prof. Roth, he traces to the Roman "patronage," as developed in the later Empire, especially in relation to the freedmen, so that here his views are not so much at variance with those of this distinguished German as upon the subject of land. M. de Coulanges is well-known as a violent hater of the Germans, and we suppose that this is the reason that he takes no notice of Roth's views, which is a pity, for on several points he differs from him, and we should have liked to see his reasons. Perhaps the most striking single point in the article is the classification, at the beginning, of the various forms of government. "These can all be referred," he says, "to three groups: first, those derived from the family—the clan, the tribe; second, those which are founded upon the principles of political association—the state, as we understand it; third, those in which the bond is that of a perpetual and voluntary relation of obedience—of this the feudal system is the most striking and complete example." Probably nothing will show more forcibly than this analysis the mistake of those who apply loosely the name "feudal" to every ruling aristocracy—the Highland clans, for example, and the Russian and Polish nobility; both of these belong to the first class, and are totally devoid of the genuine feudal principle.

—The savages who more or less unwittingly have brought about the existing state of tension between China and Japan, have suddenly become interesting subjects of ethnological enquiry. They inhabit the precipitous eastern slopes of Formosa, the land of the camphor-tree, which the Chinese colonists, in their encroachments, steadily cut down without restocking. In the northeast the aboriginal Pepos, or, as they call themselves, Kabaran, have become semi-civilized, and live in close contact with the Chinese, though frequently imposed upon and ill-treated. They are a fine-looking race, with eyes much fuller and larger than those of the Chinese, and live mostly by fishing and hunting. They cultivate the soil a little, and make their own cloth and other articles in a primitive fashion, and act as intermediaries in the traffic between their wilder brethren and the Chinese, who carry on besides a desultory but unsparing warfare. The savages proper are much less intelligent and open in appearance, and in fact have "a suspicious, sinister, dogged look." Their natural want of comeliness is heightened by tattooing, which in the case of the women serves to mark the successive ages of their development—a custom not without obvious advantages. At six or eight years of age every child must have its eye-teeth knocked out, as a means of ensuring speed and wind in hunting, the effect of this upon the whole tribe being anything but agreeable. They are more easily propitiated by the present of a pig than in any other way; they roast the animal in his bristles, and hardly allow him to be warmed through before cutting him up for division. They are so fond of cayenne peppers that for the sake of them they make frequent raids on the Chinese gardens. Tobacco they cultivate, under a name (*ta-ba-ku*) derived either from the Dutch or Spanish colonists, and smoke incessantly, even to the women and children. In pledging friendship, "each man puts his arm around the other's neck, and then, placing their heads and mouths close together, they both drink wine at the same time from one cup." Of the fleas with which this country is infested, it has been said that "were the hasty Japanese only willing to abide the course of time, they might safely leave to the operation of natural selection, or the 'survival of the fittest,' the extermination of the savages who seem to be giving them so much trouble." Such is the humorous view entertained by Mr. Edward C. Taintor, of the Chinese Customs Service, in a paper read last June before the Royal Asiatic Society at Shanghai, from which we have taken the foregoing account of the aborigines. In an appendix he gives a considerable vocabulary of the Kabaran (Pepo) and Yukan (savage) dialects of northeastern Formosa, in comparison with corresponding words in Malay and other languages of the Archipelago. A similar but less extended comparison has been published in the *China Review* for July.

SHEPHERD'S HISTORY OF THE ENGLISH LANGUAGE.*

TEACHERS have been some time asking for a manageable manual history of the English language, and a good many of them will find Professor Shepherd's book to be just about what they want. It has 227 pages, in large type, and it gives a good general account of the whole subject. The author

* 'The History of the English Language from the Teutonic Invasion of Britain to the close of the Georgian Era. By Henry E. Shepherd, Professor of the English Language and English Literature, Baltimore City College.' New York: E. J. Hale & Son. 1874.

is familiar with the latest English works, and he has been over the ground with his own classes.

A language has its physiological side, and its biographical. The growth of the grammatical forms, and words, and idioms, and permanent rhetorical and poetical powers is a sort of physiological matter; the actual use of these powers in the works of particular authors is biographical. Professor Shepherd tries to present both of these sides of the English language: the growth mainly in the early times, the literary achievements mainly in the later periods. In this his book differs from the histories of Professor Hadley and Dr. Morris. They are mainly physiological histories of the structure of the language. Professor Shepherd is thus able to give a much more accurate general outline than Dr. Morris. A view of the English inflections alone shows the language going through an unbroken succession of losses of form from the earliest Anglo-Saxon to the present, and Dr. Morris presents this continuous decay as the essential history of the English language. The more comprehensive method of Professor Shepherd enables him to use the distinction between mere dialectic talk and classic language with its standard ideals and literary use, and to show us first Anglo-Saxon growing to be a classic speech, and then degenerating and disintegrating into dialects, and afterwards classic English growing up from one of these dialects. This general presentation is truthful and vigorous, and is the main thing that is needed in such an outline. It is filled up with interesting and important details, and the book invites and deserves the widest use. And it is worth improving when it comes to new editions. It is perhaps in the nature of such a book that it needs a history of literature to go with it or before it; it must take for granted more or less general knowledge of the authors whose language is discussed; but still enough ought to be said about the leading authors to make all clear which is said about their speech, and sometimes a little more; the authors who are most important in the history of language sometimes escape the notice of those who make manuals of literature. Robert of Brunne, for example, is a great name for the linguist, and drops in like an old acquaintance who needs no introduction in Professor Shepherd's eleventh chapter, but it might puzzle all the learned in many a learned neighborhood to find out who he was. Piers Plowman is talked about for a whole chapter, but a definite statement of the subject and contents of the work is to be sought elsewhere. Attention to this matter throughout by footnotes or otherwise would improve the book.

The greatest danger of such an outline is the fatal facility of glittering generalities. It seems as though these must be said, and they crowd out facts and illustrations. Professor Shepherd has not been seduced by glitter, but sometimes he lets generalities stand too much alone. Euphuism, for example, has a formal discussion as a characteristic feature of Elizabethan English, but all is general description. The citation of a passage or two is needed to give it definiteness and vividness. In the grammatical part a similar defect appears. Thus on page 23: "With respect to its (Anglo-Saxon) grammar, it is sufficient to say that it had five cases; that the article, noun, adjective, and pronoun were declinable, having different forms for three genders and two numbers," etc., etc. There are no paradigms, or even tables of endings, and all explanations of changes in these endings in the after parts of the book are apt to be defective for want of precise knowledge of the original endings. Indeed, the grammatical part of the book, though altogether above comparison with the scraps from the feast of languages which our common school-books parade as English philology, is not its strong point. Too much reliance has been placed on English editors and critics who are literary men rather than scientific grammarians. There are no "six declensions," for example, in Anglo-Saxon. That was a fancy of Rask, which would have been forgotten for a generation if the amateurs had not kept repeating it. The future in *shall* does not first occur in Layamon; there are examples enough of it in ancient Anglo-Saxon. So of other auxiliaries; so of the articles. It is odd how long-lived negative statements about such words are. That there are only two tenses in Anglo-Saxon, no proper auxiliaries, no passive voice, no articles, is repeated over and over by good scholars. With many it is merely a logical conundrum. They define tenses to be variations of one word; and so count out all forms of expressing time which are printed as two or more words. This has its odd side, since all tenses are made by putting separate words together, and it would seem to make no very great difference whether an expression be printed as one word or two. If the French *chanterai* is a future tense, printing it *chanter ai* ought not to curtail the fair proportions of the French verb, nor does there seem to be any very profound reason for saying that the Latin verb has no perfect passive because the combination of the passive stem with *fui* is printed in two words, *amatus fui*, and that it has a perfect active because the combination of the active stem with *fui* is printed as one word, *amavi*; that it has a present passive because the compound *amo-r* is made one word, and has no perfect passive because the compound is there printed as two words. A Japanese phonographic reporter who should take down as English *aivluvd, aimaitavluvd, aimluvd*, would do all that is needed to fill out our paradigm with modes and tenses and voices of the right sort. Professor Shepherd, in common with many other good scholars, has this way of speaking of there being only two tenses in English, and though we do not like it, we should hardly think of asking him to change it.

He should, however, enumerate and define the auxiliaries. And now, as to auxiliaries, they all were originally independent words, and became auxiliaries by acquiring some secondary dependent use, followed by the gradual loss of their former meaning. A grammarian may refuse to recognize a word as an auxiliary as long as it retains any of its original meaning. It must be on some such ground that well-informed persons deny the use of *shall* as a future sign in Anglo-Saxon. It meant *owe, must, ought*, and something of this meaning may be found or fancied in almost any sentence in which it occurs. This is no good reason for denying it to be a future sign; it makes it that and something more. But pure enough futures are to be found in Anglo-Saxon. Take those in the Gospels where a Latin future is rendered in one translation by a simple future, in another by *shall*, or *will*. Matthew i. 23 reads in Latin, *Virgo in utero habebit*, a virgin will conceive; in Anglo-Saxon the future *habebit* is rendered in one version *sceal habba*, in others *haefth*. So, in Matthew v. 46, *quam mercedem habebitis* is rendered by *sciolun habba* and *habbaet*; while a first person, *Quid manducabimus*, what shall we eat, has *walla ue eatta*, will we eat, interchanging with the simple *ete wē*, Matthew vi. 31, and so on through the Gospels. The glossaries and late Anglo-Saxon grammars refer to pages of these auxiliaries in Beowulf, Cædmon, and the old literature, which he who runs may read, and question if he can.

Something similar may be said of the article *an*, which Professor Shepherd ascribes to a later age. It means *one*, with weakened emphasis, and definiteness of various degrees; but where it is added in translating an indefinite Latin word, and must be translated into English as *an* and not *one*, it ought to pass for an article. In Luke iii. 22, for instance (the Holy Ghost descended *like a dove*), the Latin is *sicut columba*; the Greek has no article; the Anglo-Saxon has in one version *suelce culfra*, in another *swa ân culfre*.

Professor Shepherd not only gives a history of our grammatical forms, but also of the accumulation of our words, an interesting and valuable account, with lists of words from each source, and with dates. Here, too, he sometimes gives undue weight to general considerations as compared with linguistic evidence. He accepts a long list of Anglo-Saxon words as derivatives from Latin of the first Roman occupation of Britain, and he gives a couple of interesting pages of argument for them in the form of a description of the thoroughness with which the Roman colonies were pervaded by Roman influences and the extent to which they were affected by Roman speech. It is all true in a general way, and we know that the Celts, whom Professor Shepherd prefers to call Kelts, as many other good scholars do, received many words from the Romans; the doubt is whether the Celts transmitted them to the Anglo-Saxons. The linguist would examine the words one by one to find evidence of their history in their forms. The Anglo-Saxons had been in immediate contact with Romans and the Latin language long before the Anglo-Saxon was written in which these words are found. To show that they were received from the Celts the proper linguistic proof would be a change of their form according to some peculiar law of the Celtic speech. It would be enough to say of many of the words that there is no trace of any such modification. As to others like *acre, yoke*, they are common words in the earliest forms we know of all the Northern languages, Low German, High German, Scandinavian; the letters obey the laws of indigenous words in their relations to the Latin, Greek, and Sanskrit, and they are in full use in the Gothic centuries before the Anglo-Saxons landed in Britain. General considerations such as Professor Shepherd urges do not weigh a feather against facts like these, at least to a mere linguist, not a Celtomaniac.

Professor Shepherd should not say that "little can be ascertained with regard to the pronunciation of Anglo-Saxon." It is quite well known to a reasonable degree of minuteness. Not to carry our fault-finding further, there are the common oversights of a first edition, slightly varying statements, misprints, and the like, of which the worst is the use of a sort of *p* for the Anglo-Saxon *th*. And the book needs and deserves an index.

CHILDREN'S HOLIDAY BOOKS.*

II.

THE preface to 'Happy-Day Stories' announces that the thirty large illustrations have appeared once before, accompanied by poems from the pens of well-known writers, and that they were so well received by the pub-

* 'Happy-Day Stories for the Young. By H. W. Dulcken, Ph.D. With thirty full-page pictures by A. B. Houghton. Engraved by the Brothers Dalziel.' London and New York: Geo. Routledge & Sons.

lic as to induce the publishers to offer them to it a second time, and on this occasion explained by stories instead of poems. The result is one of those handsome books for children in which the English excel all others, and which make the parents of the present generation inclined to sigh over the barrenness of their own youthful privileges. When doctors of philosophy write stories for little folks under ten years, as in the present instance, and the first artists and engravers make pictures for them, and all three parties perform their task with that knowledge of juvenile needs and desires and sympathy with them that belong to the enlightenment of the present age, it leaves nothing to be desired except that their work be widespread. The only drawback to the enjoyment of the pictures is the costuming of the women and little girls, which, as some homely subject said of his excellent photograph, "is horrid like." Now that big hoops have passed out of fashion, it shows the pity of copying them, except in the interest of history, in work good enough to earn some permanence. But the big hoops are scarcely worse than the hideous hairdressing and cut and trimming of the dresses, which are all faithfully true to the female fashions of Albion.

'Paws and Claws' is the happy title of another handsome English book, containing large and mostly well-drawn pictures of the "clever creatures" whose histories, in the form of facts and anecdotes, are woven together in a humorous and well-told story. The print and paper in this, as in 'Happy-Day Stories,' are noticeably good. Children will get both pleasure and information out of a book like this.

The contents of 'Talks with Girls' are tolerably well foreshadowed in the preface, in which the author says that it has been her "aim to avoid moralizing in a way that excludes sympathy. We can all be loved into a better mind and sweeter temper when dry, cold counsel is of little avail. . . . It is impossible for me to tell you how tenderly my heart goes out toward struggling, aspiring girls through difficulties their strong, broad-shouldered brothers are not called on to meet. I have tried to look on all sides of girl-life, and not let one set of sympathies stifle the rest." The essays are "About Giving Up," "About Making the Best of Things," "About Teasing," "About Romping," "About Helping," "About Hindering," and about thirty-five other equally well-chosen subjects, making in all 349 compact pages, mostly of advice, lightened by an occasional anecdote. A set of sensible and conscientious essays like these, if a trifle heavy, and containing but little not equally well and better said elsewhere, is such a vast improvement on the Sunday-school literature ordinarily offered to the young, that we ought to feel thankful for them, and wish them to drop as seed in uncultivated places, where, if there be any soil at all, they must surely take root and produce good fruit. All motherless, friendless, poor, and untaught girls would be the better for the volume. For the more fortunate classes, it suggests certain objections. In the first place, there is too much of it. To read unlimitedly in a book of good advice is almost as bad as to do the same by a book of jokes: the impression soon becomes weak; capacity for assimilating the one or for laughing at the other departs. Therefore, they who have wise friends who can give them a little at a time will do better to get their instruction orally. Then there are the dangers of so much special preaching as girls, or boys, or young men, or young women, or workingmen, or the rich, or the poor are subject to nowadays. Miss Tytler, Gail Hamilton, and many others have written pages of counsel for girls, all of which is very well as far as its being true in itself goes, but which forces upon the always lively self-consciousness of girls the notion that they are a separate and peculiar class; that truthfulness, honesty, good-breeding, thoughtfulness, or any other of the virtues, is not the same for one and all, but has a special meaning for them, or a different application. Gay and thoughtless girls are not to be caught by a book of sage lecturing, full of truisms; and the other kind, who are always probing themselves—either in the line of self-condemnation or self-laudation—do not need it. To keep self out of the minds of our precocious youth of both sexes is, in fact, the greatest of all desiderata. And finally, we would beg to ask a number of very good people if there is not danger of the "law of love" being overdone? We say nothing with a desire to strengthen the hands of the old spare-the-rod-and-spoil-the-child school; but among those of advanced education, who have "seen their way out of" the force system, there is certainly too great a tendency to "encourage" or "love into the right path" all young people indiscriminately. It is assumed that growing Americans will not give ear to any masculine, hardy, vigorous, or stern assaults on their weaknesses. You must, if you want to be heard, first "sympathize" with them to the degree of reducing yourself to their level, assuming their faults and adopting their temptations, admitting the hardness of their case and pitying them for the struggle that awaits them. To show them that you are of a just and impartial spirit, and do not bear down on them out of mere fondness for criticism, you must point out how thoroughly you disapprove of many of their elders, parents or teachers, who have erred in being "repressive" and habitually inconsiderate of the "natural feelings" of the young—beings who have actually *compelled* obedience without first persuading the subject why it was exacted of him. Miss Larned says, for instance: "Intelligent children are very quick to discover the weaknesses of grown people." "Parents and teachers and all others in authority should be very careful about refusing, and *never do it* without good and sufficient reason." "There is an admirable old story . . . which deserves to be written in letters of gold," that, namely, of the two monks who did penance by putting dried peas in their shoes. "When the one who limped asked the other who walked with ease how he could do so, 'Oh!' said he, 'it is simple enough; I boiled my peas.' Now, dear girls, learn to boil your peas and then you will not feel them." This, strange as it may appear, is intended to illustrate the meeting of the "little evils" of life by "patience and good-nature"; whereas the "pious" monk did what over-refined and excessive tenderness actually does also, whips the devil around the stump, and takes all the fibre out of self-denial, and all the education out of hardship.

'Risen from the Ranks' is the first story of Mr. Horatio Alger's we remember to have read. It is so plainly a "specimen brick" that going through it seems to make one familiar with the whole "series" of 'Brave and Bold,' 'Luck and Pluck,' which, we learn from the publisher have found a ready sale. The advertisement says further that such "stories exert a healthy influence, and are of immense service to ambitious boys anxious to make their mark in the world." Such a claim for 'Risen from the Ranks' and its popularity make considering it worth while. Briefly, the story is this: Harry Walton is the son of a New Hampshire farmer, who from laudable motives (he never has any other kind) goes out into the wide world. Benjamin Franklin is his hero; he determines to be a printer, and goes into the service of the Centreville *Gazette*. His conduct here is of the highest order; he is under all circumstances cheerful, industrious, stainless. His amusements are innocent. Shunning the evil courses of the other apprentices, he spends one evening with an excellent fellow popping corn. This young gentleman belongs to the "first circles of Boston," and teaches Harry French between whiles. Another evening he spends with a worthy family who teach him how to play checkers—"a game which requires a certain degree of thought and foresight"—and whose conversation is of this sort:

"How do you like your new business?" asked Mrs. Ferguson, as she handed Harry a cup of tea. "I like all but the name" [Printer's Devil], said our hero smiling. "I wonder how the name came to be applied to a printer's apprentice any more than to any other apprentice," said Mrs. Ferguson. "I never heard," said her husband. "It seems to me to be a libel upon our trade. But there is one comfort. If you stick to the business, you'll outgrow the name." "That is lucky; I shouldn't like to be called the wife of a—I won't pronounce the word lest the children should catch it." "What is it, mother?" asked Willie with his mouth full. "It isn't necessary for you to know, my boy."

We may save ourselves the trouble of epitomizing the apprentice's subsequent career, as it is very well done in the advertisement, which reads as follows:

"Ambitious to become an editor, he tried his hand at writing 'essays' and 'sketches' for a Boston weekly, which were accepted and widely copied. As local reporter to the Weekly Journal of their office he made a great hit. Sickness called the editor away, and he filled his chair successfully. A chance to buy an interest in the paper was secured by the financial aid of his old friend the showman, and he became the editor, realizing his fondest dreams. *He* and the *newspaper* became a power in the district. He consented to run for Congress, and was elected. Still higher honors in time came to him."

It is to be conceded that naturally clever boys, if they are only young enough or ignorant enough—and of the latter there are countless numbers in country districts—do and will absorb this sort of pabulum; and it goes, if they have nothing to counteract it, an appalling way towards forming mental habits. Country newspapers would therefore do themselves and Congress, if both are to be reinforced from "ranks" having such discipline, a real service by satirizing the ambition which only longs for conspicuousness, the love of equality which is for ever considering the difference in "rank" of "merchant princes" in Boston and "retail merchants on Washington Street," the discontent for farming, and the fever to get into the newspapers and "before the people," the ignorance that sets itself up to teach, and the puling virtue which keeps vice at a distance by pop-corn and checkers and vainglorious spouting at a "debating society."

'Paws and Claws. Being True Stories of Clever Creatures, Tame and Wild. By one of the authors of 'Poems Written for a Child.'' London, Paris, and New York: Cassell, Petter & Galpin.

'Talks with Girls. By Augusta Larned.' New York: Nelson & Phillips; Cincinnati: Hitchcock & Walden.

'Risen from the Ranks; or, Harry Walton's Success. By Horatio Alger, jr., author of 'Ragged Dick,' 'Tattered Tom,' 'Luck and Pluck,' 'Brave and Bold' Series.' Boston: Loring.

Parents will have only to read a short way into 'Rymes and Jingles' to want it, and to read it all through to determine to keep it as a volume of unequalled entertainment for small fry if scarcely less for themselves. It is full of comical wise nonsense and the most felicitous absurdities of language. It can speak best for itself in the following extracts taken at random; for almost everything is good, and only a few out of the 270 pages really inferior or commonplace.

"Baby Nell had ten little toes,
Baby Nell had two little hose,
She always stared when the hose went on,
And thought her ten little toes were gone."

The verses to a picture of a very new duckling looking at a broken egg-shell, though a trifle disrespectful, will also bear quoting:

"Well, I'm out after all!
And I'll say, on my word,
That's a pretty mean house
For a duck of a bird!
Why, I couldn't stand up,
And I couldn't sit down,
But I lay in a cramp
From my toes to my crown.
My good mammy and dad
May have thought me a spoon,
But they'll not get me back
In that thing very soon."

Our lads must still seek instruction in carpenter work from English teachers, and one of the best of these appears to be Mr. Davidson. 'The Boy Joiner' invites the ambitious young artisan by its clear and simple advice, by its encouraging tone, and by the number of really serviceable articles whose manufacture it describes in detail. In all these respects it has advantages for young beginners over the excellent 'Young Mechanic' reprinted a few years ago by Messrs. Putnam. If the grammar is sometimes a little faulty, and the definitions not always as precise as they might be, on the other hand the language used is not above the pupil's apprehension. 'The Young Mechanic' is much more technical in its style, is addressed, indeed, to older boys, and it holds up a standard of excellence which might make many a poor little fellow despair of success. Mr. Davidson cheers him up at the outset by discrediting the adage that "a good workman can work with bad tools," or, as it is expressed in a more fallacious formula, "it's a poor workman who quarrels with his tools." The best workman, he says, can do best with good tools; and the boy joiner should have the importance of them impressed upon him. We observe but few instances of the use of English terms not current among our mechanics, or not intelligible in themselves. The "American cloth" referred to now and again would probably fail to be recognized by the boys whom we shall recommend to get this book.

Mr. Wood's 'Trespassers' we perhaps err in placing among the books for children. But the writings of this voluminous popularizer of science are generally, so far as our experience goes, while designed for adults, quite accessible to the youthful explorer. In the present case, it may seem doubtful if Mr. Wood's labored though readable introduction could pass muster with anybody out of his teens. It is an apology for the sensational title of the book, or, in other words, for making a new class, of "Trespassers," in the animal kingdom. If our author insists upon this division, he ought to pursue it with works on parasites, on mimicry, etc. What he deals with here is whales, dolphins, seals, the beaver, the hippopotamus, the flying-fish, etc., etc., describing the peculiar structure and functions of each, and indulging plentifully in anecdotes such as every well-ordered boy or girl will find interesting. The pictures are numerous enough to satisfy curiosity, and fairly good as wood-cuts.

Travels in South America. By Paul Marcoy. 2 vols. (New York: Scribner, Armstrong & Co. 1874.)—Among the illustrated gift-books of the season, these sumptuous volumes will certainly take high rank. The maps, the five hundred and twenty-five illustrations (from designs by the author himself), the paper, print, and binding, are irreproachable; the narrative, a skilful specimen of light literature, which would not at first be suspected of being a contribution to science, so much has it the air of having been written for the pure amusement of the reader who is fond of travellers' tales. This illusion is produced in part by M. Marcoy's supreme indifference to dates, so that it is not easy, if it is possible, to discover the year in which he left Ilay, on the Pacific coast, or that in which, a twelvemonth and fourteen days later, having crossed the continent of South America, he arrived at Pará. The journey itself is described as the result of a wager with a ship-captain that our lively Frenchman would reach Pará by land sooner than the latter by sea; and this beginning, which Jules Verne might have adopted for one of his peculiar fictions, prepares one to regard the subsequent narration almost as a realistic invention, finding a proper finale in the loss of the wager, which is Frenchily told, and, one feels inclined to add, Frenchily conceived. M. Marcoy was in South America from 1848 to 1860—at the same time with another explorer of the tributaries of the Amazon, Mr. Bates—and the journey here described took place "many years" after the earlier date. The original account of it first appeared in the *Tour du Monde* (August, September, 1866), and afterwards in book-form in 1868 (Paris: Hachette); and those who may be tempted to follow the author in still other adventures, in Lower Peru, may consult the above-named periodical for 1872. For holiday purposes we need not dwell on the philosophical and other strictly scientific matter of the work before us. M. Marcoy's style has been described as "joyeusement humoristique," and it is also the style of one who is on all occasions and at all hazards an artist. Both characteristics are manifest in the single quotation which we can permit ourselves. The author is sailing along the narrow channel of Brèves:

"This morning, as we passed one of those houses built on piles, I saw through the open window a woman, gaunt and yellow, with unkempt hair and scarcely anything in the shape of clothing, spreading a kind of varnish, with a woollen rag, over a new mahogany console. The woman left off her work, and looked at me with an astonished air, to which, perhaps, I replied with a grimace. In fact, there could have been no impropriety or wrong in doing so. What was there in the Strait of Brèves, in the midst of one of the most splendid landscapes nature had ever created, to harmonize with that mummy of a housewife and her bit of mahogany furniture, which she rubbed as assiduously as a soldier polishes his knapsack?"

A History of Germany, from the Earliest Times. Founded on Dr. David Müller's 'History of the German People.' By Charlton T. Lewis. (New York: Harper & Brothers. 1874. 8vo, pp. 799.)—It is hard to say how much of the credit of this book belongs to Mr. Lewis, for in his preface he refers to other authorities besides David Müller, and would appear to have done a good deal upon it besides mere compiler's work. In any case he deserves high commendation. In so far as the book is a translation, it possesses the great merit that nobody would recognize it to be such; we have not noticed a single case of the bald idiotisms which are so common in translations. In so far as it is a compilation, it shows no signs of patching, but has a plan of its own and a style of its own. And, regarded as an original work, it is scholarly, judicious, and well written. The only fault we have to find with it is that it is a little old-fashioned—that is to say, it does not appear to embody the results of the latest investigations in German history. Mr. Lewis names Ranke among his authorities, and Ranke is no doubt the first living historian; but we doubt whether he has used Ranke's latest works, and of other recent first-class authorities—such as Giesebrecht, Schäffer, Häusser, and Sybel—we find no mention.

It follows that the treatment, although always careful and almost always scholarly, is not always equally good. On page 19 the account of the early organization of the Gau and Hundred is confused and inaccurate; there was never a *count* at the head of each hundred. On page 65 it is made to appear that the feudal system was introduced full-blown, name and all, by Clovis. The title John XXII. is given not merely to the Pope who contended against Lewis IV., but also to the one deposed by the Council of Constance (pp. 278 and 280). This appears to be not a misprint, but a confusion of authorities, as there is a mythical John XVI. in the tenth century who is reckoned in some chronologies but not in others. The electoral dignity is said (p. 436) to have been restored to the Count Palatine by the Peace of Westphalia, from which it would seem that it was taken away from the Duke of Bavaria. In reality a new electorate was created for him. There are some excellent genealogical tables, especially of the houses of Charles the Great and of Hapsburg; it would be well if there were also one showing the connection of the Saxon, Franconian, and Swabian lines of emperors. There are two maps, well drawn, but not easy to use. It is impossible to represent distinctly the divisions of so complicated a country as Germany except by using colors. We can heartily recommend this book to whoever wishes a compendious history of Germany. The criticism which we have made applies only to certain small portions; all the rest is unequivocally good.

Essays on the Languages, Literature, and Religion of Nepál and Tibet: together with further papers on the Geography, Ethnology, and Commerce of those countries. By B. H. Hodgson, Esq., late British Minister of the Court of Nepál, etc., etc. (London: Trübner & Co. New York: John Wiley & Son. Roy. 8vo, pp. xi., 145 and 124.)—Mr. Hodgson will be famous for ever in the history of European knowledge of Buddhism as the diplomatist and scholar who first brought to light the records of the northern

'Rhymes and Jingles. By Mary Mapes Dodge, author of 'Hans Brinker,' etc.' New York: Scribner, Armstrong & Co.

'The Boy Joiner and Model-Maker. By Ellis S. Davidson.' With nearly 200 illustrations. New York: Cassell, Petter & Galpin.

'Trespassers: Showing how the Inhabitants of Earth, Air, and Water are enabled to trespass on domains not their own. By Rev. J. G. Wood.' With numerous illustrations. New York: Thomas Nelson & Sons.

forms of that religion, and forwarded to Europe those extensive collections which in the hands of Burnouf became so fruitful of valuable results. But he has also himself made contributions of great worth and originality to the literature of the same subject; and it is in order to rescue these from that inaccessibility which is virtual oblivion, that they are here collected in a volume and republished. Their original dates ranging from 1827 to 1857, it will be seen that we have in them no startling novelties; but they are an important point of the *acta* of their great subject, and it is much to be desired that they meet with that favorable reception which, as promised at the end of the preface, will lead to the publication, in another volume or two, of the venerable author's remaining works. Especially in the ethnology and philology of the Himalayan tribes, Mr. Hodgson has been thus far not only pioneer, but almost sole original investigator; and his opinions on these subjects are, as he lets us know, by no means in accordance with those which other more superficial scholars have drawn from his collected materials. The second part (separately paged) of the present volume deals with the Himalaya and its inhabitants. There is an index to the volume, but we wish that it had been made exhaustive, at the cost of two or three times as much space.

CONTENTS: Strange Discoveries respecting the Aurora and recent Solar Researches, by R. A. Proctor.—The Cranial Affinities of Man and the Ape, by Prof. Rud. Virchow.—Spectrum Analysis explained from the works of Schellen, Young, Roscoe, Lockyer, Huggins, and others.—Nebulæ, Meteoric Showers, and Comets.—The Circulation of the Waters on the Surface of the Earth, by Prof. H. W. Dove.—The Stone Age, by E. B. Tylor.—Unconscious Action of the Brain and Epidemic Delusions, by Dr. Carpenter.—On Yeast Protoplasm and the Germ Theory, by Prof. Huxley.—The Geology of the Stars by Prof. A. Winchell.—Origin of Metalliferous Deposits, by Prof. T. Sterry Hunt.—Phenomena of Sleep, by Dr. Richardson.—Coal as a Reservoir of Power, by R. Hunt.—Atoms, by Prof. Clifford.

MACMILLAN & CO.'S NEW BOOKS.

THE POETICAL WORKS OF JOHN MILTON. Edited, with Introductions, Notes, and an Essay on Milton's English, by David Masson, M.A., LL.D., Professor of Rhetoric and English Literature in the University of Edinburgh. With three Portraits, engraved by Jeens and Radclyffe. Three handsome vols. 8vo, cloth, $15.

The best idea of the aim and construction of the present edition of Milton is given in the following extract from the Editor's Preface: "The text of the Poems has been prepared, with the utmost study of accuracy, from the original and other authoritative editions. Accounts of these, and of the surviving manuscripts of some of the poems, with other relative bibliographical information, are given in the Introductions; where also the endeavor has been made to elucidate, as fully and exactly as possible, with the due amount of accompanying criticism, the circumstances, motives, and intention of each individual poem. If read in their chronological order, indeed, these introductions will be found to constitute a continuous and rather minute literary biography. The Notes are partly expository, partly philological, and partly critical. In the prefixed General Essay on Milton's English, what may be called the philology of the poems is presented, for the first time, in a systematic form. The publishers confidently expect that this edition of 'Milton's Poems,' the result of so much labor and thought, will take the place it deserves as in every way the best and most complete that has yet appeared. It is printed uniformly with the 'Cambridge Shakspeare,' and will, it is hoped, be found both convenient as a book of reference, and, by the aid of fine paper, clear type, and handsome binding, an ornament to the library.

HOLLAND HOUSE. By Princess Marie Liechtenstein. With 5 Steel Engravings by C. H. Jeens, after Paintings by Watts and other celebrated Artists, and numerous Illustrations drawn by Professor Delamotte, and engraved on Wood by J. D. Cooper and others. Third and Cheaper Edition. In 1 vol. medium 8vo, extra gilt, $7 50.

ESSAYS ON SHAKESPEARE. By Karl Elze, Ph.D. Translated, with permission of the Author, by L. Dora Schmitz. 8vo, $4.

The author's wide reputation in Germany as a student of English language and literature, and more especially of Shakspeare, should make this volume of 'Essays,' contributed to the *Jahrbücher* of the German Shakspeare Society, of which Dr. Elze is editor, both valuable and interesting to all Englishmen, as a proof of the high esteem in which their greatest poet is held in Germany.

PHARMACOGRAPHIA. A History of the Principal Drugs of Vegetable Origin found in commerce in Great Britain and British India. By F. A. Flückiger and D. Hanbury, F.R.S. 8vo, $6.

"It has been the authors' aim to investigate anew the field of vegetable materia medica, in order as far as possible to clear up doubtful points, and to remove some at least of the uncertainties by which the subject is surrounded. In furtherance of this plan they have availed themselves of the resources offered by ancient and modern history; nor have they hesitated to lay under contribution either the teaching of men eminent in science or the labors of those who follow the paths of general literature."—*Extract from Preface.*

MENDELSSOHN. LETTERS AND RECOLLECTIONS. By Ferdinand Hiller. Translated by M. E. von Glehn. With Portrait. Extra crown 8vo, cloth, elegant, $2 25.

"Dr. Hiller's book cannot fail to be read with deep interest by all lovers of musical art. It abounds with anecdote and reminiscence strongly appealing to their favorite tastes."—*N. Y. Tribune.*

UNDER THE LIMES. A New Novel. By E. Archer, author of 'Christina North.' 12mo, paper, $1 25.

"The author of 'Christina North' comes before us again with a book which shows the same qualities and which deserves, therefore, to be distinguished from the ordinary throng. . . . The book shows considerable talent. It is not perhaps very thrilling or dramatic, but the scenery is harmonious and delicately described."—*London Saturday Review.*

THE PRINCESS OF SILVERLAND. By Elsie Strivelyne. With a Frontispiece, by Sir Noel Paton. Globe 8vo, cloth, extra, $1 50.

SYBIL'S BOOK. By Lady Barker, author of 'Station Life in New Zealand.' Illustrated. Globe 8vo, cloth, extra, $1 50.

BIRDS, THEIR CAGES AND THEIR KEEP. Being a Practical Manual of Bird-Keeping and Bird-Rearing. By K. A. Buist, with Colored Frontispiece and other Illustrations. Crown 8vo, cloth extra, $1 75.

"The book is delightfully written, and the directions for the management and rearing of the birds and for their treatment in disease and illness, are so clear, sensible, and humane that the whole race of cage-birds ought to find a marked amelioration in their condition, especially in the articles of food and cleanliness."—*Athenæum, London.*

THE IMITATION OF CHRIST. Four Books. Translated, with Preface, by W. Benham, D.D., Vicar of Margate. Printed with Borders in the Ancient Style after Holbein, Dürer, and other Old Masters, containing Dances of Death, Acts of Mercy, Emblems, etc., and a variety of curious Ornamentation. Crown 8vo, $3.

THE VICTORY OF FAITH. By Julius Charles Hare, M.A., Archdeacon of Lewes. Edited by Professor Plumptre, with Introductory Notices by the late Professor Maurice and Dean Stanley. Third edition, crown 8vo, $2 25.

HISTORY OF ANCIENT PHILOSOPHY. By the Rev. W. Archer Butler, late Professor of Moral Philosophy in the University of Dublin. Edited by W. Hepworth Thompson, D.D., Master of Trinity College, Cambridge. (Revised by the Editor.) New and cheaper edition, in 1 vol. 8vo, price $5.

A GRAMMAR OF THE LATIN LANGUAGE from Plautus to Suetonius. By H. J. Roby, M.A. Part I., containing Sounds, Inflexions, Word Formation, etc., crown 8vo, $2 50; Part II., containing Syntax, Prepositions, etc. (just published), crown 8vo, $3 50.

A COMPENDIOUS DICTIONARY OF THE FRENCH Language (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By Gustave Masson, Assistant Master at Harrow School. Square 12mo, half-morocco, $2 50.

ELEMENTARY LESSONS IN HISTORICAL ENGLISH Grammar. By the Rev. R. Morris, LL.D., President of the Philological Society of London. 18mo, $1 25.

NOW READY.

A RAMBLE ROUND THE WORLD, 1871.

BY M. LE BARON DE HUBNER.

Translated by LADY HERBERT.

1 vol. 12mo, pp. 658, cloth extra, $2 50.

PART I.—AMERICA.

PART II.—JAPAN.

PART III.—CHINA.

The Boston Transcript.

"He was a quick-witted and candid observer, with a lively and entertaining way of telling his story; and his remarks on what he saw and heard well repay reading, both for their positive information and for the very readable way in which they are presented. . . . There is scarcely a dull page in the book."

The Commonwealth.

"He describes all he saw in lively and piquant terms, and gives us generally cheerful pictures of the world as he saw it. There is a large portion of the work that is invaluable information."

The London Globe.

"There is a great deal of humor, clear observation, pleasant narrative; and Lady Herbert's translation is so smooth and forcible that we quite lose sight of the fact that it is a translation."

The London Morning Post.

"It is difficult to do ample justice to this pleasant narrative of travel. . . . The translator has admirably preserved the vivid style of the foreign original, especially in the racy, minute manner in which grotesque little details—evincing the keen observer—are rendered into excellent English. . . . The work does not contain a single dull paragraph."

NEW VOLUMES OF "THE NATURE SERIES."

POLARIZATION OF LIGHT. By W. Spottiswoode, LL.D., F.R.S. With numerous illustrations. Crown 8vo, cloth, $1.

THE COMMON FROG. By St. George Mivart, F.R.S., etc., Lecturer on Comparative Anatomy at St. Mary's Hospital. With numerous illustrations. Crown 8vo, $1.

"A good example of what popular science ought to be—within the comprehension of a wide circle of readers, and yet thoroughly abreast of the best investigation of the time."—*N. Y. Independent.*

THE TRANSIT OF VENUS. By George Forbes, B.A., Professor of Natural Philosophy in the Andersonian University, Glasgow. With numerous illustrations. Crown 8vo, $1.

"We have nothing but commendation for the excellent little work before us."—*Athenæum.*

"It is a compact little sketch of the whole matter in all its aspects—historical, scientific, and practical."—*Saturday Review.*

CAVE HUNTING: RESEARCHES ON THE EVIDENCE of Caves respecting the Early Inhabitants of Europe. By W. Boyd Dawkins, M.A., F.R.S., etc., Curator of the Museum, and Lecturer in Geology in the Owens College, Manchester. With colored Plate and Woodcuts. 8vo, $7.

"The work before us traces the rise and progress of cave exploration; considers the physical history of caves—that is, their formation, whether by sea or volcanic action; enumerates the most remarkable caves, with the objects they have yielded; treats of the character of the early inhabitants of Europe, and of the fauna of the same period, as indicated by the remains discovered, and finally of the climatal and geographical changes that have occurred since those deposits were made. The style is clear and vigorous, and the text is interspersed with numerous illustrations. The work will commend itself to all who have a desire to know something of what humanity was in that hazy period which stretches backward of the earliest records."—*Popular Science Monthly.*

THE ELEMENTS OF THE PSYCHOLOGY OF COGNITION. By Robert Jardine, B.D., D.S.C., Principal of the General Assembly's College, Calcutta, and Fellow of the University of Calcutta. Crown 8vo, $2.

TALES IN POLITICAL ECONOMY. By Millicent Garrett Fawcett, Author of 'Political Economy for Beginners.' Globe 8vo.

[*On Saturday.*

A SHORT HISTORY OF THE ENGLISH PEOPLE. By J. R. Green, M.A., Examiner in the School of Modern History at Oxford. Crown 8vo, with Colored Maps and Genealogical Tables. [*On Saturday.*

CHATTERTON: A Story of the Year 1770. By Professor Masson. Crown 8vo, $1 75.

*** Macmillan & Co.'s Complete Classified Catalogue by mail for 6 cents.

MACMILLAN & CO., 21 Astor Place, New York.

THE WEEK IN TRADE AND FINANCE.

NOVEMBER 30, 1874.

THE money-market has been easy, with the rates on call loans, secured by stock collaterals, ranging from 2½ to 3½ per cent. The demand for commercial paper was brisk throughout the week, with a very moderate supply offering; the best names passing readily at 5 to 6½ per cent., while for paper of a lower grade the demand has been fair at from 7 to 10 per cent., according to the standing of the makers.

Cable advices to-day report that the minimum rate of discount of the Bank of England was raised this morning from 5 to 6 per cent. It would seem that the recent advances made in the Bank rate have been insufficient to prevent the flow of bullion from London to Paris. The amount of bullion withdrawn from the Bank of England during the week ending on Thursday last was £78,000, while the Bank of France gained 8,632,000 francs in specie. On Saturday £207,000 in bullion were drawn from the Bank of England, and to-day the action of the directors was probably precipitated by the prospect of further withdrawals.

The stock market shows strong signs of revival in business. Prices have taken a fresh start, in which, at last, the "Granger stocks" share. Northwestern common was the leading feature during the last two days of the week, advancing to 45⅜ on Saturday from 41½ on Monday. St. Paul common also advanced 2⅝ per cent. The rest of the market shared more or less in the advance led by the "Grangers," but that in the latter was by far the most important. To-day the market opened strong, and prices continued to rise; Northwestern going to 46¾, Rock Island to 101⅛, Lake Shore to 81, St. Paul to 39⅞, Wabash to 32, and Western Union to 81¾. Union Pacific was exceptionally dull, the quotations remaining materially unchanged all day.

Government bonds have been active, the advance in gold creating a foreign demand for the former for shipment to the other side, under which prices have advanced from ¼ to 1 per cent., the greatest rise having been in the 6 per cent. 5-20's of 1867—the popular issue in Europe. The market closed this evening at the following quotations:

Coupon 6's, 1881	120⅜	120½	Coupon 6's, 5-20's, 1867	120	120⅛
Coupon 6's, 5-20's, 1862	112⅝	113¼	Coupon 6's, 5-20's, 1868	119¾	120
Coupon 6's, 5-20's, 1864	114¾	115	Coupon 5's, 10-40's	114⅛	114⅜
Coupon 6's, 5-20's, 1865, M. & N.	116¾	116¾	Coupon 5's, 1881	112⅞	113
Coupon 6's, 5-30's, 1865, J. & J.	119	119⅛	U. S. Currency 6's	119⅛	119¼

Railroad bonds continue strong, and it is probable that a still further advance in prices will take place when the usual demand sets in about the first of the new year.

The Treasury programme for the month of December provides for the sale of $2,500,000 gold. During the past week the recent rise in gold has been well maintained; to-day the quotation went up to 112⅜ upon the change in the English bank rate. Further shipments will be made during the coming week, $400,000 having been prepared for shipment to-day by to-morrow's steamer. The total specie shipment last week was $2,188,000.

FISK & HATCH, Bankers,
No. 5 NASSAU ST.

U. S. Government Bonds, coupon and registered, all denominations, bought and sold; also gold coupons, and American and foreign gold and silver coin. Mercantile collections made, and approved accounts received from Banks, Savings Banks, Corporations, and individuals; also U. S. registered interest, coupons, and dividends collected for correspondents and others out of town, and promptly remitted for or placed to credit subject to draft. All marketable stocks and bonds bought and sold on commission. Every branch of our business has our personal attention, and any desired information will always be cheerfully given.

FISK & HATCH,
P. O. Box 235. New York.

J. W. BOUTON'S
NEW PRICED CATALOGUE (No. 42) of Selections from several Private Libraries, embracing Rare and Valuable Books in various departments of Literature, recently purchased and now offered at the reasonable prices annexed. Now ready, and will be sent to any address upon receipt of a stamp to pay postage.
J. W. BOUTON, Importer of Rare and Standard Books,
706 Broadway.

THE TWELVE APOSTLES. Twelve separate, full-length figures, designed and engraved by Hans Sebald Beham. This distinguished artist was born at Nuremberg, A.D. 1500, and belonged to the school of Albert Dürer. He possessed genius and a ready invention. His drawing is correct, and the expression of his heads admirable. His copper-plates are executed entirely with the graver, in an uncommonly correct and delicate manner.

One set of the above beautiful prints will be sent to any address on receipt of two dollars. One impression will be sent on receipt of twenty-five cents.

Also, by the same artist, a full-length figure of Christ ascending—sent on receipt of twenty-five cents.

It should be distinctly understood that the above impressions are printed from the original plates.

Address GEORGE GOODWIN & CO., Box 1,984, Boston, Mass.

All orders should be distinctly written—including Name, Town, County, and State.

JUST PUBLISHED.

The Stately Homes of England.

By LLEWELLYN JEWITT, F.S.A.,
AND
S. C. HALL, F.S.A.

An Account of the most Historic Private Residences of England. Illustrated with 210 engravings on wood. Fcap. 4to, cloth, ornate, black and gold, gilt edges, $7 50; tree calf, $15; full Turkey mor. ant., gilt edges, $15.

"Mr. Jewitt's volume is not only an ornament to any table, but is good reading to boot, and in this double quality is entitled to rank as a gift-book of the first order."—*London Times.*

South Meadows.

A TALE OF LONG AGO.

BY E. T. DISOSWAY.

12mo, cloth, black and gold, $1 50.

This story deals with the days of witchcraft in New England, and is remarkable for its vividness and the delicacy of its characterization. It gives a very realistic picture of the religious society of the time.

Bec's Bedtime,

And Other Stories.

BY MRS. S. C. HALLOWELL.

Illustrated. 12mo, cloth, black and gold, $1 25.

"So well deserve to be read that we give them a cordial welcome in their more permanent book form."—*The Nation.*

PORTER & COATES, PUBLISHERS,
PHILADELPHIA.

CINCINNATI BOOK AUCTION Rooms. Established 1841. The only book-auction house in the West. Consignments solicited. Libraries catalogued and sold to the best advantage Small lots of books received and catalogued with others. Collectors of libraries can have our catalogues mailed to them upon request. N. B. Careful attention given to Works of Art.
W. O. DAVIE & CO., 16 East Fourth Street.

AN UNPREJUDICED WITNESS

To the value of the Unabridged, Enlarged, and Corrected Edition of

DR. WILLIAM SMITH'S

DICTIONARY OF THE BIBLE, comprising its Antiquities, Biography, Geography, and Natural History.

EDITED BY
PROF. HORATIO B. HACKETT AND EZRA ABBOT, LL.D.

The *Bookseller*, of London, writing of this edition, says: "In short, it seems that we have to thank America for the most complete work of the kind in the English, or, indeed, in any other language."

The grounds of its superiority to the English edition of the same work are these:

500 more pages and 100 more engravings in the American edition than in the original English.

26 American scholars represented.

More than 1,000 errors of reference corrected.

An Index of Scripture illustrated, 56 columns, in the American edition only.

4 vols. 3,667 pages. 596 illustrations.

PRICES AND STYLES.

In cloth, bevelled edges, strongly bound,	$26 00		
In full sheep,	$30 00	In half calf, extra,	36 00
In half morocco,	35 00	In full calf,	45 00

HURD & HOUGHTON, NEW YORK.

NELSON & PHILLIPS.
No. 805 BROADWAY, NEW YORK,

ISSUE:

TALKS WITH GIRLS. By Augusta Larned. $1 50.

"A pleasant fireside book, which treats of many every-day subjects in a strong and healthy manner. We hear of several girls who are reading the book aloud to their parents, and they like it. This is the highest praise the book could receive."—*Home Journal.*

SUNDAY AFTERNOONS. A Book for Little People. By E. F. Burr, D.D., author of 'Ecce Cœlum,' etc. 16mo, pp. 160, 75 cents.

"Six sermons preached to children, on The Soul, The Angels, God, The Empire, Laws and Word of God, are gathered in this little volume. They are great topics, but treated in a very simple style, but with pure English, and are pleasantly free from the lowness of expression and the triviality with which it is sometimes thought necessary to address children. It is a good and excellent book, and we should suppose that any child of good sense would find it a pleasant book to read, and a useful one as well."—*Christian Advocate.*

FELT CARPETINGS, 35 cts. per yd. Felt Ceiling for rooms in place of plaster. Felt Roofing and Siding. For Circular and Sample, address C. J. Fay, Camden, New Jersey.

The Nation.

NEW YORK, THURSDAY, DECEMBER 10, 1874.

The Week.

SOME of the leading Republicans seem to find it very difficult to let the Southern States alone, and apparently still have a hankering for interference in Arkansas. The last legislature of that State provided for the meeting of a constitutional convention, which was fairly elected, met, and drew up a good State constitution, which was adopted by an overwhelming majority. The first election held under it has, however, returned a Democratic governor and legislature, which is a thing not to be lightly submitted to. After cudgelling their brains over the problem, some Republicans have come to the conclusion that inasmuch as the Arkansas legislature was only empowered by the former State constitution to submit constitutional amendments to the people, and was not empowered to call a constitutional convention to prepare a wholly new constitution, the new constitution lately adopted is null and void, and the Federal Government may be called on to interfere. They say the case reminds them sadly of the Dorr rebellion in Rhode Island; and Chief-Justice McClure, more familiarly known as "Poker Jack," has gone on to Washington in great trouble of mind about the whole affair. What is to become of popular government, he enquires, and of McClure, if such things are to be permitted?

At this point Judge Jameson of Chicago, the author of the well-known work on constitutional conventions, and doubtless the highest authority on this class of questions, appears on the scene, and, singling out Judge Poland, discourses to him, in a letter addressed to the Chicago *Tribune*, substantially as follows: "If the Arkansas case reminds you of the Dorr rebellion, it must be either because you never knew the facts of the Dorr rebellion, or have forgotten them. In the Dorr rebellion, a new State constitution was drawn up by a convention of persons who were not legal voters, and adopted by the votes of persons who were not legal voters, without any permission whatever from the legislature. In Arkansas, on the other hand, the convention was ordered by the legislature. If you say that that legislature was only empowered to provide for the amendment of the constitution, and not for the drafting of a new constitution under the rule of *expressio unius, exclusio alterius*, I reply that the applicability of this rule to the construction of the fundamental law is denied by good legal authority; but that, even if it be applicable, the revision of a whole constitution is a decidedly different thing from the proposal of slight amendments to it, and that, therefore, the granting of the power to do one thing in one way does not preclude the power to do a different thing in a different way. But you say the course of the legislature is "unprecedented." Here again you are wrong. There have been no less than twenty-six cases in which constitutional conventions have been called by legislatures which had no power to do so conferred on them by the constitution under which they sat. It is true that in three or four of these cases objections like yours were raised, but they were raised by a minority which wanted *no* change to be made, and they never received any attention. In fact, it may be said to be part of the public law of the United States that a legislature may call a convention to revise or remodel the constitution whenever it may deem it necessary to do so. The submission to the people of amendments to the constitution directly by the legislature was resorted to for the first time in American history by New York and Michigan in the present year; so that the scheme you are advocating in Arkansas, and not the one you oppose, may fairly be called 'unprecedented.' The inconvenience of your system it is hardly necessary to insist on. It might, in time of war or of other public trial, by impeding or delaying an expression of the popular will, subject the community to great loss or utter ruin."

Mr. Chamberlain, the new Governor of South Carolina, delivered his inaugural address to the Legislature of that State last week, and it appears to have given great satisfaction to sound men of all parties. If he lives up to its promises and professions, and can get the legislature to do so, he will prove the means of rescuing the State, and will be fairly entitled to a statue. The address is both able and interesting, but his description of the abuses which have to be remedied are sometimes very amusing for the illustration they afford of the manners and morals of the class which has had charge of the State government since 1868. He describes the existing mode of valuation of property for purposes of taxation as "purely arbitrary," and says that excessive valuations were made to conceal the real rate of taxation. He approves of the plan adopted last year of making appropriations for specific purposes—a fiscal requirement which had previously not been resorted to—and reveals the astounding fact that the sum of $376,832 had been used since 1868 for "contingent expenses"—that is, for objects not previously defined by law and without proper accountability; and denounces the "secret-service fund," which, of course, to the carpet-baggers and scalawags and their colored allies was simply what hunters call a *cache*—that is, a place where supplies could be had without telling anybody why you wanted them. He advised the Assembly to cut its sessions down from one hundred and six to thirty days, which he said was enough for the business, and mentioned that while the session of 1868–9, when the thieves were new to the work, cost only $169,005, that of 1871–2, when they had got to be old hands, cost $617,234, and besides this the rascals had issued due-bills for $192,272 on account of legislative expenses during the six years. He also suggested that the State expenses should be kept within the receipts—an idea which the Assembly will perhaps consider peculiar and original; and he recommended the Assembly not to follow the example of its predecessor by issuing "certificates of indebtedness" to the amount of $231,996.

What Mr. Chamberlain says about the public debt is probably what will most interest the outside world, and it is substantially this: that the act of the last Assembly by which the State committed bankruptcy, and offered to compound with its creditors by giving new bonds for fifty per cent. of the par value of certain bonds, stocks, and coupons which the State was unable to pay, amounting in all to $11,480,033, and repudiating totally the "conversion bonds" put on the market by Kimpton, was a good settlement, and ought to be carried out. The new bonds are to be secured by the appropriation, for the payment of the principal and interest, of a tax of two mills on the dollar on the actual taxable property of the State, which is to be considered a contract between the State and its creditors. As no future increase of the State debt can be made under the existing constitution without the approval of two-thirds of the voters voting at a general State election, we dare say everybody but the holders of the conversion bonds will be satisfied with this arrangement; but no civilized community ought to make such a proposal on such a state of facts without having previously committed to the penitentiary for a term of years, as part and parcel of the transaction, one or more of its financiers; and, in this case, we have no hesitation in designating Scott, Parker, and Kimpton as persons from among whom the selection for this sacrifice ought to be made. In the meantime, we wish Mr. Chamberlain success and tenacity.

In his annual message the President recommends in the strongest language immediate measures for a resumption of specie payment; denounces the present condition of the currency as dishonest; advises the repeal of the legal-tender act as to future contracts, suggests that as the only ground for issuing more legal-tenders is found in the wants, necessities, and liabilities of the "debtor class"

that it would be fairer, on the whole, to allow them to issue their own legal-tenders, if anybody is to do it. He recommends measures looking to an accumulation of gold in the Treasury, and refers to the separate report of the Secretary of the Treasury with approval, and recommends free banking with resumption. He says the foreign relations of the country are satisfactory; recommends a change in the tariff so as to raise a larger revenue from a smaller number of articles; and unites with the Secretary of the Treasury in advising a reimposition of the duties on tea and coffee, and an increase of the tax on whiskey. He refers to the Louisiana case by saying, that as he believes the Kellogg government to be the legally elected government of the State, he must continue to recognize it as such until Congress decides differently; announces his determination to enforce all legislation for the protection of the negroes, but at the same time suggests that Congress investigate the outrages reported in the newspapers before the recent elections, and ascertain whether they were real or not; declines to interfere in Arkansas, on the ground that Congress is investigating the affairs of the State; advises the country to consider the Southern situation with calmness; expresses sympathy for the Southerners, but asks whether they are themselves wholly blameless for the state of things every one so much deplores; declares that it is impossible to carry on civil-service reform without positive support from Congress, and that he will throw it up if Congress adjourns without such legislation; recommends the encouragement of ship-building by offers of "ample compensation" for carrying mails to American-built lines; and submits the report of the District Commissioners, from which it appears that the debt of the District is, in round numbers, $14,000,000.

The Secretary of the Treasury discusses the question of specie payments in language quite as direct and plain-spoken as that used by the President. He reminds Congress that it was never the intention even of those who passed the legal-tender act to create a permanently irredeemable currency; points out that while a "flexible" or "elastic" currency is needed, the flexibility and elasticity required is that which is given a currency by the laws of trade and commerce, and not that which is given either by arbitrary issues or contractions made by Secretary or by Congress, depending on party exigencies or the necessities of the Treasury; declares that the only effect of the continuance of the present inconvertible currency is to "blunt the moral sense" and "impair the natural self-dependence" of the people, training them to the belief "that the Government must directly assist their individual fortunes and business," helping them alternately into debt and out of it. The Secretary recommends the repeal of the legal-tender act at an early date as to future contracts, and the fixing of a day not remote for resumption, gold to be accumulated by the Government and the banks meantime, and a new loan at a low rate to be authorized also. Free banking he considers may be safely introduced with a general scheme of resumption. The Secretary reports of the $354,000,000 authorized national notes $2,000,000 as still unissued—there being no demands for them; a voluntary surrender by the banks of some $7,500,000 circulation, and about $6,500,000 of notes of banks in liquidation to be withdrawn, making altogether some $16,000,000 now or hereafter available for distribution—these figures showing the fallacy, as Mr. Bristow says, of the demand for an "expansion of currency" to correct a "contraction in the volume of business."

The friends of woman suffrage recently experienced a bad defeat in Michigan. In fact, the majority against them was so large, and the minority in their favor so small, that nobody has, since the election, thought it worth while to discuss the matter, except Mr. T. W. Higginson in the *Woman's Journal*, who, borrowing an argument from Mrs. Victoria C. Woodhull—who thought that, because she was persecuted, her cause must be just—maintains that the completeness of the defeat of the suffragists shows that their triumph must be near. In England, however, things look much more hopeful, because, according to the Cynics, "public women," to borrow the nomenclature of the Great Scandal, are less known in England than here; but, according to the Good and Pure, because public women in England have thus far been better educated and more sensible than their American sisters. We have ourselves another solution to offer, which we submit with downcast eyes, and it is this: the Conservative reaction has helped the cause of woman, because the Conservatives, like most men who find themselves fighting a losing battle, have become reckless in their choice of expedients, and have taught themselves to take short views of the future, and are consequently ready for any measure which promises them votes during the next five or ten years, beyond which they do not allow themselves to look. Now, as the admission of women to the franchise under the present law would bring in only spinsters of some property, it would undoubtedly greatly re-enforce the Conservative ranks; for English spinsters of property are the very firmest, most uncompromising supporters of the "constitution in church and state," and are apt to look on a Radical as a limb of Satan. Among the Liberal supporters of the change, too, are some sanguine benevolent gentlemen, like Mr. Russell Gurney, who flatter themselves that changes will never go any further than they think desirable, and that no woman *without* property will ever vote in England. At all events, at the recent annual meeting of the Women's Suffrage Society of London, the report was able to give a somewhat hopeful view of the prospects of the movement in the new House of Commons. It asserted that, while in the last Parliament it had 227 supporters and 328 opponents, in the present one it has 234 supporters and 230 opponents, while 50 members are neutral, and 140 of the new men "keep dark" as yet. Of course, analyses of this kind, when made by earnest agitators, are apt to be somewhat inexact, but, after making all due allowance for this source of error, and for the tendency of Englishmen to take a jocose view of the matter, and to promise lady canvassers more than they mean to perform, the outlook is decidedly more cheerful than it was last year.

When Alaska was transferred to the United States, the annexation was generally supposed to be for glory and the extension of the national sovereignty, and Mr. Seward was much laughed at for his folly. The speeches delivered, too, over our new Polar acquisition were popularly treated as so much buncombe. It seems, however, that the purchase is very likely to prove a piece of good luck for us, and perhaps in after-ages will redound to the credit of Mr. Seward's statesmanship, as having, at least, annexed more wisely than he knew. The Icelanders, after having lived what, from all accounts, must have been an uncomfortable life in Iceland for a thousand years, are preparing to celebrate their "millennial" period by emigrating *en masse;* and, in looking round over the globe for some place of settlement which shall at once be habitable, possess a comfortable climate, and at the same time remind them of home, they have hit upon Alaska. Some time since they appointed a commission to visit the country; and the United States, with very thoughtful liberality, lent the commissioners a ship to make the trip in. The *Portsmouth* has just returned, and the commissioners are reported as very much pleased with their visit. They consider the country an improvement on Iceland, and report that it is not only capable of sustaining life, but also profitable industries. The Icelanders are an intelligent and industrious people, who have had centuries of education and civilization of no mean kind, and probably only need a good country—such as they declare Alaska to be—to enable them to become a creditable addition to the population of the United States. The only opposition to the scheme anticipated is that likely to be made by the trading companies which have monopoly rights.

The dearth of exciting political topics in England is well shown by the eagerness with which the public has gone into the controversy raised by Mr. Gladstone, as to what Catholics would do in case they found their allegiance to the Queen in conflict with their allegiance to the Pope—a question which has been just as important any time within the last three years as it is now. It is still further illustrated by the fuss which has been raised over Mr. Disraeli's rhetorical allusion, in his speech at Guildhall, to the greater freedom from arbitrary arrests and domiciliary visits enjoyed by English workingmen than by "the nobility of other nations." This was taken up promptly by the French press and then by the German as "a dig" at the Prussians on account of their treatment of Count Arnim; whereupon Mr. Disraeli "authorized" the *Times* to say that he was not thinking of Count Arnim, as this nobleman was not arrested arbitrarily, but under the law—an explanation which the French papers and a portion of the English treat as too thin, and denounce as a paltry attempt to escape from the consequences of an indiscretion. Even the *Spectator*, which is apt to take the charitable view, thinks he ought either to have never made such a speech, or, having made it, let it pass without interpretation. In the meantime, Count Arnim's condition is one which many workingmen, both of England and other countries, might not consider desirable. He found some of the missing papers, which apparently he did not care to keep, and sent them by his counsel to the Foreign Office, whereupon he was arrested again, for divulging state secrets, as the counsel might have read the papers on the way—an offence to which a penalty of two years' imprisonment attaches, and the warrant found him sick in bed. In fact, his state of health is such as to inspire serious doubts whether he will be able to support the ordeal before him.

The Gladstone pamphlet has called forth further replies from leading English Catholics. Monseigneur Capel writes from the Catholic University College at Kensington to say that Lords Acton and Camoys have no weight among Catholics; that Lord Acton ought to have given his authority for his charges against the Holy See; that Lord Camoys, by his refusal to accept the doctrine of Papal Infallibility, "makes shipwreck of the faith, or *ipso facto* withdraws himself from communion with the Church"; that, before the Council of the Vatican, infallibility belonged to the Church and the Pope—since the Council, it belongs to the Pope alone, speaking *ex cathedra;* and that therefore Lord Camoys and Mr. Gladstone are mistaken in supposing that the Vatican Decrees have "touched the former domain of infallibility"; that the church has always held that the "ecclesiastical power is superior to the civil, and defines the limits of one and the other, and that where the civil power passes its proper province, the church has the right to raise its voice and condemn it." This is plain speaking, and admits all that Mr. Gladstone has contended for. Canon Oakeley writes in the same sense, but with additional explanations, to the effect that, though Catholics believe all the propositions of the Syllabus as a matter of abstract truth, such as the damnability of liberty of the press, of conscience, and of civil marriage, nevertheless they with full ecclesiastical propriety submit to and accept them in Protestant countries, or, in other words, wherever they cannot help it, and he says that if he is asked, "How can these things be? he cannot answer except by saying that so they are." Canon Oakeley is an old Tractarian, who went over with or soon after Dr. Newman. Mr. Henry Petre, a well-known Catholic layman, follows on the same side as Lord Camoys, and declares that, though a good Catholic and educated by the Jesuits, he cannot accept the dogma of infallibility, and that he foresees the possibility of a collision between church and state arising out of the present attitude of the Papacy, and intimates his determination, in such case, to stand by the state, or, ecclesiastically speaking, his willingness to be damned eternally. On the other hand, Lord Hervey, a Catholic peer, stands up warmly for infallibility, but repels the imputation of disloyalty.

The French Assembly has opened its winter session with a message from Marshal MacMahon, which is substantially what it was expected to be. He says the foreign relations of France are on an excellent footing, that the business of the country is improving, and the harvest unprecedentedly good, and the export trade never so good as during the last four months. He then solemnly appeals to the Assembly to establish a permanent government, and gives his idea of his position towards the Assembly and the country—viz., that he is not the servant of any party; that he has no aim but the defence of society and the restoration of the nation, and in this he claims the support of "men of good will," those whose personal preferences bow before the present necessities of the country. As for himself, he says he will keep at his post until the last day "with unshaken firmness and scrupulous respect for law," which is what everybody who knew anything of the Marshal expected from the beginning. There appears to be rather more prospect now than there has been for some time back of a combination in the Assembly which may lead to a permanent organization of the Government. Marshal MacMahon's appeal on his late tour through the provinces to "moderate" men of all parties to unite with him in constituting the Government, has made a good deal of impression on the popular mind, and is leading to a somewhat promising attempt to unite the Right and Left Centres, with some support from the Left, in an effort for the adoption of a constitution. But it is unsafe to predict anything as to the action of a body so heterogeneous as the French Assembly.

The recent elections in Italy have drawn renewed attention to the difficulty there is in bringing home to the people, in spite of their patriotism, the fact that they are expected to take any part in the working of the governmental machine. There are in the kingdom, out of a population of 26,000,000, only 528,932 qualified voters, though the qualification consists simply in ability to read and write, and the payment of $10 of direct taxes. Nevertheless, only 238,000 votes were cast at the late election, the Government getting of these only 146,000. The remaining 290,932 electors abstained for the most part through sheer indifference. A similar state of things prevails in Spain, where, indeed, the electoral apathy is still greater, and it would prevail in France if the Government were not so active in driving voters to the polls and supplying them with ballots. It is the result of centuries of exclusion from the management of their own affairs, and it is worthy of particular notice, as an illustration of the large part habit plays in the successful working of a free government—a fact to which we have often endeavored to call the attention of our more active and uneasy reformers. No system of government in the administration of which the people at large take part, will work easily and safely until people get used to it, and have it brought home to them by long use that votes have a direct effect on legislation. Your constitution may be never so good, the executive never so honest, the possession of the power by the people never so clear and indisputable, and their patriotism and their love of liberty never so well established, and yet, if they have not formed political habits, they will not take the trouble to exercise their political rights. One or two generations need to have yearly experience of the ability of the voters to make and unmake legislatures and ministries, and thus have their own way in the management of public affairs, before they learn to have a realizing sense of their power, and to look with interest and eagerness for election day—all of which is worthy of the serious consideration of those of us who believe that when a "Republic" is proclaimed in any country liberty is secured.

THE PRESIDENT AND THE TREASURY ON THE FINANCES.

THE President has falsified the predictions of the present Organ by coming out as boldly as ever in favor of specie payments, for which he argues with a laborious and somewhat clumsy good-sense, which we dare say will have more effect on public opinion than a statement of greater financial pretensions. There is, indeed, in nearly all his state-papers a vein of prejudice and misinformation and baseless expectation, which, by keeping him near the level of "plain people," gives his utterances a good deal of popular weight, and makes his steady adherence to the cause of sound money matter for national congratulation. It so happens, luckily, in this currency controversy, that the inflationists are all or nearly all metaphysicians and dialecticians. Their money is not real money, but money of the mind, and in order to pass current needs nearly as much faith and insight and repudiation of experience as the dogma of Papal infallibility. General Grant is, however, by no means either subtle or imaginative. He knows a dollar when he sees it as well as any man, and nothing that anybody can do to a piece of paper will make it appear to him anything better than the evidence of a promise to pay. This state of mind is that of the great bulk of men, and has always been so, as is proved by the constancy with which the race has for thousands of years stuck to the precious metals as measures of value. Every twenty or thirty years, in nearly every country, somebody rises up and undertakes, by some hocus-pocus, to substitute paper for coin as an instrument of exchange, and, if he can get hold of the government, he is generally allowed to make his experiment; but by the time he has finished, it is almost invariably found that the mass of the community have lost all interest in it, and are turning their property into gold or precious stones. Formerly, the performers of this great money-trick used to be kings, but in our time they are generally philanthropists and reformers. The kings were good, hearty fellows, with no hypocrisy about them, who when adulterating or clipping the coin, or putting out their due-bills, used to say frankly that the reason they did it was because they were short of money. What the philanthropists say in our day is that they wish "to relieve the people from degrading dependence on capitalists," or "to furnish a currency based on the honor and resources of the nation." As a general rule, however, their pictures have no lasting attraction. They have never got up a paper currency which anybody was, even for a day, found to prefer to gold. If we were to issue paper to-morrow morning based on a mortgage of all the land in the United States, it would be found before night that everybody would rather have coin. Men are distrustful of these big pledges, so that the talk of a plain, blunt man like General Grant in favor of hard cash finds, in the secret hearts of the people all over the country, a response against which the windy declamation of the Kelleys and Mortons about the money of the mind has no chance.

Fortunately, too, we have at last a Secretary, the first since General Grant came into power, who is satisfied that the financial knowledge of the world is not confined to his own breast, and that the currency is perhaps of all national concerns that in which the experience of other peoples is most valuable. Different kinds of taxation, of military organization, of land tenures, of jurisprudence, have been found to suit different nations and different ages; but no kind of money but one has ever been found to suit any nation in any age, and they have all tried various ways of doing without it, and have all failed. Mr. Bristow's report is on this point full of wisdom which is as old as Solomon. He is a man of his time, without illusions. He does not flatter himself, like one of his recent predecessors, that he is going to found a new school of economy, called "the Kentucky School," or pretend that he would himself be a good person to regulate the volume of the currency to be used by forty millions of a commercial people. He has no ambition about "moving crops" or "easing the market." He comes back again to the old story, that gold and silver coin are, and have been since the dawn of history, the current money of the world, and that any trading nation which does not use this money produces exchanges at an enormous disadvantage; and he perceives, therefore, that it is the state of our currency, or in other words of our unfunded debt, and not of our bonds, or funded debt, which most needs attention and regulation. From 1868 to 1872, the Treasury unfortunately preached a different gospel. Mr. Boutwell used all the weight of an office which, when he took it, still retained a good deal of weight, to make Congress and the country believe that to anticipate the payment of our bonds was our main concern, and that we need not trouble ourselves about the greenbacks—the fact being that it was the greenbacks which needed treatment, and that the conversion of a great quantity of them into bonds, or, in other words, the multiplication of bonds, was the very thing Congress ought to have done after the Reconstruction problem was settled. This policy Mr. Bristow now urges. He recommends that the volume of the greenbacks be diminished by contraction and conversion, and that then provision be made to redeem the remainder in gold on demand, and that they be deprived of their legal-tender character from a certain future date. It will be seen at a glance that these proposals are in direct opposition to all Mr. Boutwell's theory and practice during the four most important years of our financial history. Had the Treasury taken the same ground in 1868, and had the President supported it when his influence was still strong, and before the inflation folly had been bred and cherished by the panic and by Mr. Boutwell's disgraceful use of "the reserve" before the panic, there is little doubt that we should by this time have got out of the slough.

When we shall now get out of the slough, it would be hard to say. One can hardly help feeling, on reading Mr. Bristow's report, and finding that the President still stands firm, that our chances are considerably improved; but then it must be admitted that, as regards the finances, the political situation has not on the whole changed for the better. The Republican party has not actually lost its power, and will not do so for three months to come; but it is not likely that it will be disposed to make any move whatever with regard to the finances during the present winter. About the Democrats it is useless as yet to attempt any prediction, but there is good reason for believing that they too will be chary about taking the matter up, the reason being in both cases that the two parties are looking forward with hope and anxiety to the Presidential election of 1876, and each is afraid to make any move that will imperil its chances. Inflation, doubtless, is not possible as long as the President does not change his mind; but contraction might, the politicians think, produce "hard times" on the very edge of the canvass, and ruin any party which could be held responsible for it; and neither party has either enough strength of conviction on financial matters, or enough devotion to the country apart from the desire for power, to be willing to carry it back to specie payments at any cost of popularity. The chances seem to be, therefore, that we shall see a policy of financial inaction pursued on both sides, both during the remainder of the present and the whole of the next Congress. Each side will wish to go into the Presidential canvass unburdened with responsibility, and in a position to make any promises or pledges that may by that time seem most effective. All this is another way of saying that the value of every debt due in the United States at this moment, and of everybody's property in possession, has become one of the elements in the game of politics, and that offers to raise or lower it will now form a favorite weapon with the rival political parties. A more powerful argument against the power of Congress to issue legal-tender paper-money, or a more striking illustration of its dangers, could hardly be produced than this state of things affords, or a better justification, let us add, of the theory to which we trust the country will yet come back, that the framers of the Constitution, when they prohibited the States "making anything but gold and silver coin a tender in payment of debts," did not intend that Congress should do it either. If any such right resides in the National Government, we fancy most thinking men would say that the experience of the last ten years shows that it ought to be taken away.

Many people doubtless suppose, however, that a policy of inac-

tion will do no harm, and will perhaps ask whether it is not wise to leave the currency alone for the present, now that the power of the Treasury over the volume of it is taken away. To this there are two replies. The first is, that as long as the currency remains a political issue to be determined by votes, and entirely within the power of Congress, no postponement of the question will remove the cloud of uncertainty which its present condition throws over business. Wise men will feel reluctant to go into long enterprises or weighty enterprises when they have to calculate the chances of politics as well as the chances of trade, and take the opinion of Morton and Carpenter and Fernando Wood before they determine to enter on their ventures. The second is that the refusal of Congress to act will not keep things as they are. Things will not stay as they are. The currency is now inelastic, and the inconveniences of inelasticity are not felt as long as business is prostrated and capital lying idle in the banks. Business will not remain prostrated much longer, however. The signs of revival are already visible, and when the revival comes the demand for money will again become strong, and both the legal-tenders and the bank-bills will again be called into full activity. The natural tendency of this activity will be to increase rapidly, and as it increases money will grow tighter, and an influence more or less repressive will be exerted by high rates of interest; but trade and production will push against this barrier with increasing strength, and at last it will give way, and there will be another "crash." No commercial country can carry on business very long with a fixed amount of currency; there must be some quarter from which it can draw increased supplies of money to meet the increasing demands of its industry. The only legitimate quarter is the world's stock of coin; but from this resort we have deliberately shut ourselves out. To say that we can with impunity continue to shut ourselves out from it, or supply its place by inconvertible paper, which on the other hand could not be got rid of when our need was over, is simply to talk foolishly.

THE "PROTECTION" OF THE NEGRO.

THE disagreement of the Judges of the Circuit Court in Virginia will probably carry the question of the constitutionality of the Enforcement Law to the Supreme Court, and lead to a thorough discussion and, let us hope, to a satisfactory and final decision of the question of the real nature and extent of the changes which the Constitutional Amendments have worked in the relation of the States to the General Government. The importance of this question it is impossible to overestimate, for it does not, as many people try to believe, concern the colored people in their political and social status only; it touches the theory and structure of the United States Government, and has the most serious bearing on all the matters included under the general term "reform" which are now occupying the attention of the country, and are likely to occupy it for the next ten years at least. It ought to be borne in mind, first of all, that none of the reasons which led the framers of the Constitution to make the peculiar distribution of administrative duties between the State and Federal Governments which they did make, have lost their force through the experience of the last ninety years. On the contrary, the history of that period, both in Europe and in this country, has strengthened them. We have seen several attempts to set up republics in Europe defeated, and apparently defeated for an indefinite period, by high centralization, which has worked evil in two ways —by the excessive accumulation of power at the capital, and by the accompanying and resulting decline of political interest and sense of political responsibility in the provinces. At this moment, too, curiously enough, every free nation which has, consciously or unconsciously, drifted into the administrative practices and tendencies which the majority in our Congress have been preaching and fostering during the last fifteen years, is trying by might and main to get back to a position even remotely resembling that which we occupied before the war. It must be observed, too, that the immense additions made within the last thirty years to the means of communication do not tell against but rather in favor of the precautions which the men of 1787 thought salutary. It would undoubtedly be easier, as far as physical instrumentalities are concerned, to govern Colorado from Washington now, than it would have been to govern New York from Washington in the beginning of the century. But the objections to governing any State from Washington at that period were not physical simply—they were moral; and the moral objections to centralization are stronger now than they were then. The very facility and rapidity with which the President and Congress can now make their power felt all over the Union, furnishes a constant temptation to stretch it to its last limits, and to overstep those limits too. Nothing can furnish a stronger inducement to arbitrary meddling and unwarrantable assumption of authority than the ability to get news from New Orleans and Little Rock every minute of the night and day. It rouses and stimulates the passion for interference in the most moderate men to have telegrams for instructions coming in incessantly from the marshals and district-attorneys, and to know at the same time that these instructions may be carried into effect a thousand miles away within an hour after they leave the office; and, though last not least, the corrupt combinations of political conspirators and adventurers for using power for sinister purposes are made very much easier by the aids lent by modern science to the transmission of orders and receipt of reports. The railroad and telegraph have of themselves caused a steady flow of power to the political capitals of the world, the dangers of which could only be met by a great change in the character of political men. Of any such change there is no trustworthy sign. Therefore, instead of feeling less, there is plenty of reason for feeling more uneasy about this matter than the last generation felt.

When we say all this, we do not necessarily condemn the Republican party. The government it set up was essentially what the Duc de Broglie called a "gouvernement de combat"—the kind of government the Legitimists wish to set up in France—that is, a government which legislates and administers on the theory that a large proportion of the inhabitants of the country are public enemies, to be watched with horse, foot, and dragoons. No government of this kind, however, can last long as a free government; it has the seeds of ruin in it. It was the kind of government which the circumstances of 1860 made necessary, but it ought to come to an end as soon as possible; and the legislation produced by it—that is, produced by men who spoke and voted with the passions of civil war strong upon them—is to be examined in calmer times with zealous scrutiny. Now, the Constitutional Amendments, it is safe to say, contained the deliberate judgment of the country as to what were the changes in the organic law which the war rendered necessary. It is impossible to gainsay their soundness and appropriateness. The Fifteenth, in particular, was exactly what the circumstances of the case called for, as necessary to protect the negro against possible proscription on the part of his late master, and it was a kind of prohibition—that is, a prohibition of certain legislative acts—with which the people were perfectly familiar, for the Constitution contains several examples of it. The Constitution prohibits States from entering into treaties with foreign powers, granting letters of marque, coining money, issuing paper-money, passing bills of attainder, or *ex-post-facto* laws, or laws impairing the obligation of contracts, or granting titles of nobility, or levying customs duties, or keeping an army or navy in time of peace. The mode of enforcing these prohibitions, too, was one with which the country was also perfectly familiar, namely, the submission of the validity of the State laws passed in contravention of them to the judgment of the Courts of the United States in *bona-fide* suits. If, for instance, to take the most familiar and aptest illustration, a State passed a law impairing the obligation of contracts, or an *ex-post-facto* law, every American knew that it would be upset by a suit brought by private parties in the Federal courts. Nobody dreamed of any direct interference of the Federal authorities in the matter, except in execution of judgments of the courts of law. Nobody dreamed of going to Washington to complain to the Attorney-General that a State had legislated so as to violate contracts, or of

having Federal troops sent down to punish people for violating contracts, or of having Congress pass elaborate acts charging the District Attorney with the duty of prosecuting all violators of contracts, and so on.

Now, we venture to assert that when the Fifteenth Amendment was before the country, no person supposed that it could have any effect on State rights or duties greater or other than the prohibitory clauses already existing in the Constitution, or that it would lead to any violent or unprecedented departures from the beaten track of American constitutional law. Everybody said, "If we adopt this amendment, no Southern State will hereafter be able to disfranchise the negro. If any State attempts it, the negro will be able to go into the Federal courts and have the statute set aside. He will thus be able to protect himself in the enjoyment of the suffrage, and through the suffrage he will be able to ensure respect from the State authorities. If the whites should at first intimidate him, so as to keep him away from the polls by illegal means, why, we shall reach this by having seats thus secured contested in the regular way in Congress, and the successful candidate ousted. As regards State politics, the division of parties must, by the exercise of the commonest skill on the part of the leaders of the colored men, lead to the negroes holding the balance of power, even if they do not make common cause with one of the existing organizations, and thus obtaining their due share of influence and protection. A large body of voters cannot in America, in our day, very long be deprived of anything they choose to insist on or which is only denied them through prejudice. Politicians have neither prejudices nor passions, and a desire for the negro vote is sure very soon to make negroes in many States masters of the situation, and in all an influential element in politics. That this Amendment would lead to legislation giving the United States Government direct control of the elections, even when there was no such State legislation as the Constitution forbade, enabling it to go down and punish all offences committed against colored people, and likely to intimidate them at a near election—thus taking the police of the State virtually out of the hands of the State authorities; making almost any crime of violence cognizable in the United States Courts, and, in fact, greatly changing the division of administrative duties made by the Constitution—were things for which people were totally unprepared when it was passed. We certainly were. If we had foreseen in the smallest degree the construction the majority in Congress would put on the Amendment, we certainly never should have said a word in its favor until its scope had been more specifically defined. We need not say more in illustration of the evils this construction has worked than that under it a United States judge has prevented a legislature from meeting and set up a new one by an injunction issued at night and executed by a military force; that a case of ordinary murder has been taken out of the hands of the State police and brought before the Federal courts, on the ground that the murder was committed to hinder the murdered man from voting three months later; and that several persons have been arrested and compelled to give bail, at great distances from their homes, on charges of having intimidated voters by dismissing them from their employment—a precedent which would, of course, place every employer of labor in the country at the mercy of his men for months before election, and enable them to skulk or cheat him with impunity. The bare statement of these things is sufficient. The Enforcement Acts are not simply deep and far-reaching changes in the American system of government, but they have been sprung on the country and carried out without its consent or consideration, and are evidently capable of being made the instrument of monstrous political corruption and oppression.

If we are asked whether the fact that they protect the negro does not justify them, we reply that a military occupation in great force, for an indefinite period, would protect the negro far more effectually. An army of occupation of about 300,000 men, mainly mounted, with courts-martial sitting *en permanence*, armed with summary powers, in every Congressional District at the South, would make colored people as safe as it is possible for the arm of flesh to make them. We should ourselves, when Congress was beginning the work of Reconstruction, have preferred three or four years of this régime to the reign of the carpet-baggers. Why, then, do the friends of the negro at the North not advocate its maintenance for an indefinite period? Simply because they think it would entail enormous expense, and would seriously imperil the government of the Republic. That is to say, there are dangers and sacrifices which even his warmest friends are not prepared to incur for his sake. Just as they were ready to sacrifice a million of white men, if necessary, to save the Union on the battle-field, they are prepared to let four millions of black people suffer more or less temporary injustice and injury sooner than overturn the Government and set up a military empire. In fact, questions of political policy are, like most questions of domestic economy, questions of cost. People have to ask at every step whether this or that is worth what they will have to pay for it, either in present enjoyment or permanent advantage. The American people have, after full consideration and much observation, come deliberately to the conclusion—and, as we believe, a sound and happy one—that the perfect peace and "protection" secured by a great centralized government like the French Empire are not worth what they cost; that liberty, as we have it, well repays us for the turbulence, disorders, failures of justice, imperfections of administration, which undoubtedly accompany it. They are not, we believe, prepared to abandon this conclusion for the temporary benefit, real or supposed, of any class of the population, black or white, and they are happily sustained in this by another conclusion, no less sound and happy, and that is, that under our system such evils as afflict the South will be cured sooner than under any other system. Nobody will ever take care of the colored voters so well as the colored voters themselves, and a greater hindrance to their learning how to do so could hardly be devised than the Enforcement Acts. The whole doctrine, in fact, that the United States owes any class of citizens "protection" in any other way than that provided by the Constitution, is not simply borrowed from politics of a totally different character from ours, but is hostile to the theory of the educating effect of political action, upon which our political system rests.

Though last, not least, the Enforcement Acts are calculated to weaken the sense of responsibility in both State and Federal officers in all places subjected to their operation, and for this reason: Hitherto the spheres of Federal and State officers have been carefully marked off from each other, so that there was no doubt about their respective duties. The former pursued murderers on the high seas, the latter the murderers on land; the former caught pirates and counterfeiters, the latter forgers and thieves; and so on. Everybody knew to whom to look if any particular offences passed unpunished. But under the Enforcement Acts the Federal authority has been made to cover almost any offence which can be made to appear, in any degree, likely to "intimidate" a man. If he is threatened, assaulted, robbed, or murdered, dismissed from his service; or if his house is burned, or his wife insulted, or his children kidnapped, or custom taken away from his store, or people dissuaded from attending his lectures, or from subscribing to his paper, it may be said that his case is covered by the Fifteenth Amendment, although there may be State laws in force punishing these acts severely. Who, then, is normally responsible for his protection? It would be hard to say. If the Attorney-General at Washington chooses to interfere, the Federal courts may undertake it; but if he does not choose to interfere, he need not; and the State police are not likely to be very zealous in the discharge of a duty which may, at any moment, be taken out of their hands.

WAITERS AND WAITRESSES.

II.*

WE took the liberty of pointing out two years ago that much of the prevalent complaints made against the deficiencies of Irish servant-girls was unreasonable, because it was based on an assumption which employers, while using it, well knew to be untenable. The rage poured out inmost

* See the *Nation*, No. 491.

magazine articles over Bridget, for instance, draws an appearance of justifiability from the theory that Bridget offers her services as a trained servant, and is employed as such—the fact being that all parties to the contract know perfectly well that this theory is without foundation. Bridget in reality offers her services as a person who knows little or nothing of the business expected of her, and who would not be engaged to do it if the other party to the contract could get it done in any other way: that is to say, she is a *pis-aller*, and she behaves accordingly. An efficient, satisfactory *pis-aller* is, however, something which has never yet been seen. There are in Ireland, and in all the other countries from which the ranks of domestic service are filled, plenty of trained servants who make a business of cooking and waiting, but they do not emigrate, and would be very foolish if they did so. Indeed, there is no earthly reason why they should. They are there in a tolerably highly-paid calling, which has a well-defined place in the social organization, in which their habits and tastes are sufficiently provided for, and in which their ambition finds sufficient gratification. In coming here they would find themselves in a position which even those who preach most against Bridget consider degrading, which every native American will almost sooner starve than fill, which both our politics and our literature do everything to depreciate, and from which nearly all Americans hold it to be the duty of either man or woman to escape at the earliest possible moment. No calling can flourish or attract capacity or elicit training under such conditions. The domestic servant in America, such as she is, is the natural product of the tone of the American community on certain important social questions, and the natural result of the depreciation visited on all forms of menial service. If it were the fashion to represent bricklaying as degrading, we should before very long be reduced to employing hod-carriers to build houses, and the misery resulting from this would not be mended by a few reactionary articles or lectures showing that it was noble and holy to be a bricklayer, and that honor and shame came not from a man's occupation, but from his manner of following it. From this point of view, therefore, Bridget is an estimable citizen, who is performing certain very important functions, in a manner far from efficient, it is true, but as well as she knows how or we have any right to expect. She is not trained, but she is living in a community in which it is somewhat the fashion of even educated people to decry training, to the great injury and demoralization of the laboring class; and if she were trained she would probably never have come here. It is the part of wisdom, therefore, to make the best of her, instead of denouncing her, particularly as she is indifferent to public opinion, sees none of the magazines, and attends no meetings, except lectures by priests on the ancient glories of Ireland and on the present condition of the Pope, which seems to her very harrowing.

It is no part of our present purpose to consider her as a cook. It is as a waitress that we have to discuss her now, and as a waitress in the narrow sense of the word, meaning a person who waits at table. Her superiority to a "man waiter" for the common run of families is obvious enough. A household has to be rather large, expensive, and complicated to reconcile a man to the life of an indoor servant and call out his powers in it. This is true even in countries in which he is a member of a large class, and in which his calling is recognized as legitimate and suited to his sex, and has been long and well established. Even there the steady confinement to the house, and the constant immersion in the gossip and scandal of the women of the kitchen, and the restraints he has to impose on himself in his demeanor, have a disastrous effect on his morale. Hotel waiters even, who enjoy much more liberty, and lead a more stirring, active life than waiters in private families, are rarely proof against the strain which the calling puts on the male nerves. We have been told by a head-waiter of long experience in large hotels that the best waiters he had ever seen were sure to disappear at intervals of a few weeks, and pass some days in a state of beastly drunkenness. The monotony, the confinement, the pettiness of the details of which their duties are made up, the smallness of the demand on their muscles, the absence of fresh air, and the necessity of speaking in a low voice, are more than an ordinary man can bear very long without a nervous crisis, which not unnaturally seeks relief in some form of artificial excitement. Women bear this sort of ordeal much better. They eat less, and consequently tax their digestion less; they bear a sedentary life and confinement to the house better; have less craving for excitement, or get it more readily from the common incidents of family life. All these peculiarities have in England established their superiority to men as telegraph operators in stations where the calls are rare. It has been found impossible to get men to remain at their posts waiting, as women will, without wandering off in quest of company or entertainment. In this country, too, a male waiter finds public opinion thrown against his calling, and other avenues inviting him with such vigor as to keep him constantly in a state of suppressed revolt, and to make him in many cases a sort of domestic tiger, with immense capacity for insolence. There would probably be no more amusing volume than a history of the experience of those who have long employed him. There is, perhaps, hardly any form of human "cussedness" which they have not encountered, and probably nobody has thoroughly explored the more obscure recesses of human character who has not had the management of him. Of course, those who are willing to pay high wages, and whose household is brilliant enough to excite the imagination or task the powers of a menial mind, often light on men who are treasures for their particular purpose; but, as a general rule, the waiter as a permanent part of an American household is an anachronism and an anomaly, and may frequently prove a nuisance. The tendency to get him out of the house, and only call him in occasionally as a professional and on state occasions, has, we imagine, grown greatly within the last few years. The training of one is something which it would be unwise for any American to undertake, unless he is himself vigorous, athletic, and determined, and for a lady it is simply out of the question.

The training of waitresses is a matter which can never be successfully undertaken until the prevailing notion that the Irish girls who offer themselves in that capacity are impostors—that is, persons who represent themselves as something which they are not—has been abandoned, and until they are finally and fairly accepted as peasant girls, and nothing else. They cannot be fairly dealt with by persons who are angry because they are not equal either to the "notable" New England woman whom the magazines so often recall, who does all her own work in the best style by three o'clock in the afternoon, and who has the rest of the day to herself, or like the accomplished English parlor-maid, who relieves her mistress of all care about both drawing-room and dining-room. The fact is that when the Irish waitress first sees the dinner-table of a family of even moderate means and plain living, it bears to her somewhat the appearance of preparation for a mysterious heathen rite. The rules and regulations which control the setting of the table, the course of the dishes, the changing of the plates, and so on, are provisions for the gratification of tastes she does not possess, and which only years of training would give her. The whole subject of table manners is, in fact, as mysterious to her as parliamentary procedure or legal pleading. Why the eating of a meal should be surrounded by so much elaboration and ceremony she cannot conceive, unless it is for the satisfaction of empty pride. Explanation of the theory of the matter to her would, therefore, be impossible, for it is largely founded on faint repugnances and likings, which vanish as soon as we bring the cold eye of reason to bear on them. To try to make her feel about the table service as her mistress does—that is, give her the mistress's sense of propriety and decency and fitness—would be as absurd as to begin the education of a military recruit by a course of high strategy.

In all attempts to train persons in a very low stage of culture, and especially in attempts to train them to perform processes of which they do not understand the theory, the only chance of success lies in making them repeat incessantly certain acts in an invariable order. By the incessant repetition you create a sort of habit, and by the invariableness of the order you help that feebleness of the memory for unfamiliar facts which almost always accompanies deficiency of mental training. Therefore, if anybody wants to train a peasant girl to wait at table, she must be made to do the same thing every day in the same sequence, and with no omission or departure from the programme. This is, however, by no means the usual practice. The plan commonly adopted is to exact from her the least possible amount of service when the family are alone, and then, when they have any company, to put on her suddenly a great variety of new duties, the reason for which she does not see and the order of which she cannot for the life of her remember. The result is that the attention of the mistress of the house is wholly abstracted from the company and concentrated on Bridget, whose movement she watches with horrible interest, and whose memory she is obliged to jog every time a plate has to be changed; and that Bridget, if she is a modest or well-meaning girl, is overwhelmed through the whole dinner by remorse for the past and anxiety about the future, and probably often wishes she were dead before it is over. In short, no device can be a substitute for minute drill, such as a recruit gets. To prepare a soldier for the movements on the battle-field, he has to be taught day by day to perform certain movements in a certain way on the parade-ground, which will never be of use except on the battle-field, and this is the only way in which he can be prepared. That is, he has to acquire a certain mechanical routine, which he can follow in times of great mental disturbance with the force of habit. There would not be much use, as is seen in the case of ill-drilled militia, in explaining the manœuvres to him, and putting him through them once or twice a year. He has to be drilled until he can handle his arms and make the required manœuvres without thinking about what he is doing or going to do. Bridget is very much in the recruit's position. If you want her to wait easily on guests, you

must have your table served every day as you mean to have it served when you have company. There is no other way of getting efficiency out of her. Of course, this does not imply that you must always have as good a dinner when you are alone as when you have friends. There is a distinction, as Dr. Johnson has pointed out, between even a good dinner for yourself "and a dinner to ask a man to." But your poor family dinners must be served, as far as the work of waiting is concerned, in such a way that preparation for company shall mean simply the addition of another course or other courses, and not a total change in the method and a new distribution of duties. The waitress must not be called to do things which she has never done before, or only done very rarely, and has forgotten all about. She must simply have to do what she did yesterday and the day before, or only, if there is any change at all, have to do it a greater number of times. This undoubtedly would often involve some increase of elaboration in the service of the daily family dinner, but not nearly so much as one might suppose at first blush, and of course we do not present it as everybody's duty. We only offer it as a suggestion for the consideration of those who really wish to make it easy for them to see their friends at their table with less trouble and expense and confusion than hospitality now involves; and we must remind those who shrink from it that improvements in the manner of eating are not only a sign of increasing civilization, but a solid contribution towards it. The plainest and worst-served dinner in an American farm-house is an advance, which no one would like to see lost, on the meal eaten by Indians with their dirty hands out of the tribal pot. Nay, we might even go so far as to say, as we have said more than once before, that the great end and aim of civilization and of patriotism are or ought to be the multiplication of well-furnished parlors with well-bred women in them, and the multiplication of pleasant dinner-tables, with well-dressed people eating good food off them, served by calm and competent waiters or waitresses. Of these things no country can have too many.

There is one rule of training, however, which cannot be too strongly insisted on, and it is this: that a peasant girl cannot be readily, if at all, made into a good waitress if the dinner is served in the old Anglo-Saxon way in which Hengst and Horsa loved it—that is, if all the dishes, supposing there are more than one, are put on the table together, and the guests are allowed to choose between them, so that when one is taking turkey, another is eating beef, and another mutton. The table service cannot, under such a system as this, be efficient unless each person has a waiter to himself, and even then there are three or four persons employed in carving, and the utmost confusion is created by the crossing of plates and the simultaneous expression of varied desires. The practice is a relic of the old barbarian times, when the object of a meal and its main interest lay in the consumption of a great quantity of victuals. The more food the host could then display at once on the board, the more hospitable he seemed, and the pressing of the guests by himself and his wife to eat this and that, and to try something else, or to cram down a little more of what they had tried already, and the cutting up of the meat and its distribution, took the place of rational conversation, and in fact converted the dinner into a mere "feed." It has bred, too, in the minds of a great many people a strange, savage desire to see on the table before them all at once all that they are going to have, or can have—a fancy which hotel-keepers try to gratify by surrounding you with great numbers of little dishes, each containing something different, and many of which the diner does not mean to taste, but contents himself with gazing at as he eats. At Harvard College, where a gallant attempt is making to raise the standard in eating by supplying meals to four or five hundred students in the great hall, and serving them, not *à la Hengst et Horsa*, but in consecutive courses, many of the boys were at first distressed by not seeing the entire repast, pie and all, laid out before them when they sat down, and grumbled over the retention of any portion of it in the kitchen until the time came to serve it, showing that habit had really made the sight of "what was coming next" a source of real contentment, and, perhaps, an aid to digestion. But good waiting is not possible under any such system, and anybody who adheres to it must not try to teach servants to wait, for there is nothing to teach. The best way to distribute food under it is for the whole company to give themselves up unreservedly to pushing plates to and fro, and calling out their wants, and cutting up meat, and spooning out vegetables, and not make any attempt at rational talk about better things. The most the waitress can do, under such circumstances, is to carry some one person's plate now and then for something in the general confusion, and pour out ice-water, which always furnishes a ready escape from complete bewilderment.

In order to enable one woman to wait efficiently on many guests, and enable a small establishment to have many guests, and to keep down noise, racket, and disorder, and give opportunity for conversation, the way to serve the dinner, be it never so small or plain, is in courses—that is, to produce only one dish at a time, and give nobody any choice, and let anybody who does not like what is offered him wait until something else comes. This entails, doubtless, more frequent changes of plates and knives and forks, but the additional trouble in this direction is saved in other ways, to say nothing of the increase of comfort and the reduction in the amount of carving—the total disappearance of which from the table will assuredly be the next great step in the art of living. The order of service can in this way be taught and learnt and remembered. This leads us to ask one question, in closing, of those who are interested in the industrial training of women, and that is, why there are in our large towns and cities, where dinner-giving is frequent, no extra-menial waitresses competent to take charge of a dinner as waiters do, to carve, and see to the proper service of a large company? There is in every city a considerable number of men who make a very good living in this way, and many who have all winter far more than they can do, but waitresses of this kind one never sees. Yet the number of women who have to follow waiting as a calling is very large everywhere; and there is a large number of others who say they would follow it if it were not that it confines them all day long in another person's house, and at her beck and call, and gives them no control over their own time. Now, there is not a single American city where waitresses who understood their business, knew how to carve, and had the art of dressing neatly in black, might not obtain employment in large numbers at high wages from November till April, and yet live in their own lodgings, or fix the amount of work they would do. The life, too, would be vastly healthier, happier, more varied, and better paid than any of the occupations into which poor women who scorn domestic service now rush. They would be employed by great numbers of families, who, when they have more company than their own household is equal to, nevertheless dislike calling in a man, feeling him to be a sort of elephant who gives too much *éclat* to trifling occasions. Why is it that this has never been thought of by any elevator of woman, or suffrage worker, or enlarger of woman's sphere, or thrower open to women of a greater variety of resources?

ANDRÉ CHÉNIER.

PARIS, Novembr 20, 1874.

THERE has till now been no complete edition of the works of André de Chénier. His manuscripts were all in the possession of his nephew, M. Gabriel de Chénier, who allowed several editors and writers, Sainte-Beuve among others, to make copious extracts from them. As many of the poems are unfinished, the editors have hitherto published only a portion of Chénier's works. M. Gabriel de Chénier has finally himself made a complete and definitive edition of his uncle's poems, finished or unfinished. This beautiful edition is preceded by a long notice, which will be most interesting to all lovers of French literature. André de Chénier is the connecting link between the poetry of the eighteenth century and the Romantic school of our age. We find in his works many pages which remind one of Dorat, of La Fare, of Boufflers, and others. He attempted an 'Art d'aimer'; his bucolics and his elegies are full of shepherds and shepherdesses; but how different his muse appears from the powdered muse of the eighteenth century! The secret of his talent may be found in a single sentence of his: "In all my efforts I have always tried to approach (*cotoyer*) the ancients." He was not a scholar, a Classicist; it may almost be said that his mind really dwelt in Greece—and the reason of it is obvious: he was the son of a Greek lady, and was born in Constantinople (October 30, 1762). His father, who was Consul-General, had married a lady who was born in Cyprus, and who claimed the famous Lusignan among her ancestors. Her family name was Santé-L'Homaca; she was a well-instructed person, had formed a fine collection of Greek medals, and had some literary merit.

Critics may build fine theories on the transition from the conventional naturalism of the Dorat school to the pure and chaste naturalism of Chénier; to me his Hellenism appears to have been a mere accident, and it is certain that his reputation as a poet only began to be very great after the Romantic movement of the Restoration had given a sudden impulse to the public mind. Not that Chénier could be called a Romanticist in the sense now given to the word, but he was no Classicist of the dry, imperial school; he had broken through all the conventionalities of his epoch, or rather had ignored them, as if he lived at a very early age in the very atmosphere of antiquity.

We will say nothing of his college years; the only thing worth notice is his poetic vocation. At the age of sixteen he wrote very tolerable verses and translated wonderfully well some poems of Propertius, of Virgil, of Horace, of Ovid, of the Greek authors. He was of delicate health, and from his childhood troubled with attacks of the gravel—a malady which is apt to en-

gender hypochondria. He was sent for a little while to Strasbourg as a cadet in the regiment of Angoumois. But military life did not suit him; he returned to his father's house in Paris, and lived in a small circle of friends, among whom we find Lavoisier, the famous chemist, who was a *fermier-général*, the painter David, de Lamoignon, de Malesherbes, Florian, etc. M. Gabriel de Chénier defends his uncle with much indignation against the imputations of some writers, who have represented him as given over to the pleasures of the *soupers* of the end of the eighteenth century. All the *soupers* were not like those described by the pen of a Rétif de la Bretonne—a nasty writer to whom the bibliophiles of our day have, I am sorry to say, given too much importance. The friends of Chénier were not rakes, they were chiefly literary men, and men of good social reputation. There is an ideality in his works which separates him from the gross materialists of his time; and we may add, also, that his health was a continual check upon the folly of youth. He was not regularly handsome, but his large eyes, his open and round forehead, gave much expression to a face which had something feminine rather than masculine about it. At the age of twenty-two he travelled in Switzerland and in Italy; he was anxious to visit Greece, but he was recalled home. It was after this journey that he wrote the greater part of his pastoral and elegiac poems. At twenty-five he had still no profession, and he was glad to be called to London by a friend of his family, the Marquis de la Luzerne, who was ambassador at the Court of St. James. He remained four years in London, at first full of ardor, and afterwards discouraged by the sense of his solitude in the great English capital. He liked London, but the English climate tried his health. He collected the fine editions of the classics published at Cambridge and Oxford; in London, the British Museum was the place where he forgot his *ennui*; and he became especially acquainted in this famous library with the poets of the Italian renaissance, and especially with the lesser bucolic poets. His mind was always turned toward the form of poetry which Theocritus first used, which Virgil used after him, and which had become popular at the end of the eighteenth century, owing partly to the naturalistic revolution of Jean Jacques Rousseau. Parthenius Giannettasius (author of 'Carmina Piscatoria et Nautica'), Bernardino Baldi, and Sannazar (who wrote under the name of Actius Severus) became for a time the favorite authors of Chénier. He even wrote some Greek verses in honor of Actius.

We find Chénier at that period in correspondence with the Countess Alfieri, who was the widow of Charles Edward Stuart. She had, as is well known, first borne the name of Countess of Albany, till she married Count Alfieri; she received a pension from the French Court till the Revolution, and lived in Paris. She writes to Chénier at the beginning of the year 1791: "Our liberty is being gradually established; I believe that we shall be for some time yet in a state of anarchy. Liberty is a good and fine thing, but it is hard to see it take possession of a country. The best things in this world ought to be seen from a distance. The comparison may not be a noble one, but you, who are a *gourmand*, will not be displeased with it: it is like a good dinner which has an excellent appearance on the table, but if you had seen it preparing it would disgust you. I believe the same may be said of liberty." At the time this letter was written the work of the Revolution was already well advanced. Chénier had applauded the famous principles of 1789; he had become, with his friend, the Chevalier de Pange, a member of the "Society of 1789"; he had written a poem on the "Jeu de Paume" (the place in Versailles where the deputies of the Tiers swore to maintain the rights of the people); he had also published two political pamphlets, 'Advice to the French People' and 'Reflections on Party Spirit'; he had contributed to various newspapers of the time; he was a partisan of constitutional monarchy and of that type of government which was then identified with the name of England.

We must give a few details on a poem which afterwards brought Chénier to the scaffold. The Swiss regiment of Chateauvieux had mutinied; the Jacobins praised the mutiny as an act of independent patriotism, and Collot-d'Herbois made the motion to celebrate the mutiny in Paris by a public ceremony. The 1st of April, 1792, was the day chosen for this scandalous performance. Chénier published, under the circumstances, a small hymn, in which Robespierre and Collot-d'Herbois were both named:

"Quarante meurtriers, chéris de Robe-pierre, . . .;
. . . . . .
Le grand Collot-d'Herbois, ses clients helvétiques."

It is frightful to think that these two verses sealed the fate of a man, and of what a man!

André had a brother, Marie-Joseph, who did not discern as early as himself the true character of some of the heroes of the Revolution. He was himself a poet, and wrote successful tragedies, but was too fond of popularity. He was not quite in harmony with André, who had seen with horror the invasion of the Tuileries on the 10th of August, 1792, the excesses of the Marseillais, who had arrived in Paris on the 31st of July. The two brothers had very painful discussions. Marie-Joseph was the younger and the more ardent of the two. André wrote for the *Journal de Paris*, and he was one of the last who tried to keep the Revolution within proper bounds. After the 10th of August the *Journal de Paris* could no longer appear, and all its writers were dispersed. Chénier went for a little time to Rouen and to Havre, and then returned to his father's house in Paris. Wieland enquired for him at that time through a friend of his, and wished to know what was his part in the Revolution. "What I do in the Revolution?" wrote Chénier, in reply. "Nothing, thank God, absolutely nothing. . . . I am determined to keep aloof, to take no part in public affairs, and to form in my solitude, for the liberty, the tranquillity, and the happiness of the Republic, wishes which, to tell the truth, much surpass my hopes."

Marie-Joseph, his brother, had been elected a deputy of the Convention. As for himself, he only wished to have a safe asylum; but when M. de Malesherbes, the counsel of Louis XVI. (the uncle of M. de la Luzerne, who had taken Chénier with him to London), asked Chénier to help him, he did not refuse to do so, and he wrote a long memoir, in which he condensed all the arguments which could help the cause of the king. After the execution of Louis XVI. the Terror reigned supreme. Chénier at that time reminds one forcibly of the young and beautiful birds which still sing in the morning while the cruel arms are preparing which must shortly put an end to their existence. He lived often in Versailles, enjoying the majesty of its solitudes. He led the most retired life. But his fate was sealed. He made a visit to Madame Piscatory at Passy on the very day when her house was searched. In virtue of the warrant, every individual found in the house could be arrested. He was seized and brought to the prison of the Luxembourg; from there he was dragged to the prison of Saint Lazarus. His father would have done better to leave him there and to do nothing; he could not repress his anxiety, and went to the Committee of Public Safety to ask that his son should be set free. Barère received him with his usual cold and treacherous courtesy. Collot-d'Herbois heard of the arrest from Barère; he felt at once that revenge was now in his hands. The cruel Terrorist immediately sent orders in virtue of which the arrest of Chénier became legal. When Chénier the father returned to the prison, the *concierge*, who seems to have been a kind man, and who had previously explained to him that Chénier could not be detained long, as some formalities had not been accomplished, said to the unhappy father: "What have you done? I have now received the order to inscribe your son on the prisoners' list." After this formal inscription no prisoner could be set free if he did not appear before the Revolutionary Tribunal.

It is almost too painful to follow this sad history of the arrest of Chénier. His brother Sauveur, who was Adjutant-General in the Army of the North, was at the same moment arrested at Beauvais; he wrote several letters, asking to be transferred to the Conciergerie in Paris, and to appear at once before the Tribunal. He succeeded in his request, and was brought to the Conciergerie. It would be too long to explain in detail how the family of Chénier succeeded for a while in putting off the trial of the two brothers, and how, after an imprudence of Chénier the father, caused by his zeal, all the plans of the family were defeated. Chénier the father called once more upon Barère, and Barère said to him: "Your son will leave his prison in three days." So he did, but it was to mount the scaffold. He was brought to the Tribunal under a false denomination as André Chénier, man of letters, ex-adjutant-general—the qualifications of the two brothers had been united upon him. But this formal defect made no difference; he had been brought before the Tribunal with a batch of 27 prisoners, at nine o'clock in the morning. The bill of indictment was read, the list of questions was given to the jury; there were no defenders, as the law of 22d Prairial did not admit them. The questions asked the jury were general, and embraced crimes common to all the prisoners. The verdict was negative for one prisoner only. All the others, André among them, were executed before the end of the day.

The horrible execution (which had become a daily incident of Parisian life) took place on the 7th Thermidor; two days afterwards the revolution of the 9th Thermidor took place. Two days more, and Chénier would have lived, and would have finished so many poems which are now fragmentary. We can judge by the noble purity of these fragments of the grandeur of the designs of this poet, who died at the age of 31, a victim of the horrible passions of the Parisian Commune. He wrote verses almost to the eve of his death, and sent them to his father concealed in the linen which the washerwoman was allowed to carry away for him. There is in the new edition a facsimile of his last poem, written in almost invisible characters. I was much interested in finding that Chénier had planned a poem on America; the notes which he has left on this poem are worth reading.

Notes.

MARK TWAIN'S works have found a Danish translator in Mr. Robert Watt, editor of one of the daily journals of Copenhagen, and author of a book of travels in the United States; and a publisher in Mr. L. A. Jörgensen, of the same city, who sends us a number of favorable notices of the book from the Scandinavian press. It appears that, thanks to Mr. Watt also, Bret Harte had already been introduced to Danish readers.——A subscriber calls our attention to the fact that the common error of denominating Monsieur H. Taine *Henri* instead of Hippolyte, has crept into President Hopkins's 'Outline Study of Man' and the 'Bric-a-Brac Series.'——"Philosophical" is not exactly the word we should have applied to M. Paul Marcoy's reflections in his 'Travels in South America,' reviewed last week. The types made us adopt it, however, and it may be as well to explain that what we wrote was "philological," having in mind the numerous Indian vocabularies which, with other kindred matter, save the work from being a mere narrative of adventure. Let us improve this occasion to point out another error in the same issue, in the first line of page 365, where "every constituency *and* State" should read "every constituency *in a* State."——Mr. Albert Mason, in consequence of ill-health, has made arrangements with Hurd & Houghton to publish his entire list of books.——Johnson, Wilson & Co., of this city, announce as a subscription work a history of the United States from the discovery of America to July 4, 1876, by Benson J. Lossing, with illustrations by Mr. Darley. The title of the book will be 'Our Country.'

—Messrs. Estes & Lauriat permit us to make the following extract from a letter addressed to them by the London house of Hachette & Cie., dated Sept. 24: "You may be glad to hear that the fourth volume of Guizot ['History of France'] is completely in type, and the fifth and last volume in MS. in the hands of our Paris house. This grand work was just completed before the death of the eminent author."

—The *Cornell Review* for December describes the recent transaction by which Mr. Ezra Cornell has discharged his indebtedness to the State for the land scrip which he engaged to buy several years ago—the matter which was lately made the subject of investigation by the New York Legislature, with the result of fully vindicating Mr. Cornell's integrity. If we understand aright, the State has been paid some $180,000; the University, $500,000 (Mr. Cornell's originally promised endowment); and the title to the lands located by Mr. Cornell now rests with the trustees of the University, who have established a Land Bureau to facilitate the disposal of their new property. How the money was raised to reimburse the State is not indicated. In a previous number of the *Review* and in the *Cornell Era*, the manual-labor system has been discussed and been pronounced a failure in the University. Were it ideally well managed, as has been far from the case, it requires of those who expect to be supported by it in going through college an amount of constancy, fortitude, and self-restraint which is rarely found in students. Most of them, again, bring no skill or training in any mechanical art, and have to betake themselves to the coarsest form of manual labor, such as grading the grounds. Here there is too much competition, for one thing; and for another, the laborers must needs be very irregular in order to attend upon recitations. The result is that though this sort of work is paid for at fifteen cents an hour it is considered overpaid. Students prove not over-scrupulous in reporting the time that they are occupied, and false pretences of skilled labor are not unknown. The best men find employment in the town when the University has nothing for them. The latter pays twenty cents an hour for carpentering, and the average workman in the University press earns twenty-five cents an hour. "We are informed," says the *Review*, "that future prospects [for the press] are good, and that, if sufficient interest is taken in it by the authorities, the University printing office 'can be made a first-class book-printing concern.'" Even if it cannot, there is good reason, to our thinking, for maintaining the office as a valuable auxiliary in the instruction of the College. In the past six years $43,818 20 has been paid out for the more or less profitable labor of students; more than $10,000 having been expended in 1869–70, since which time there has been a steady falling off in amount ($5,194 46 in 1873–74). In the October *Bulletin* of the University of California it is stated, under the head of Agriculture, that "the manual labor of the students has been employed, and paid for at good prices"; and under the head of Manual Labor we learn that student labor is given the preference in the work required about the University building and grounds, and that many of the students have thus earned considerable sums in holiday and vacation time, but that only strong bodies and strong intellects have the power to do this. Telegraphy is taught, and forty-seven students are employed in the Berkeley Press.

—If "an undevout astronomer is mad," as good orthodox and poetical authority declares, very mad indeed must an undevout pomologist be. The Michigan State Pomological Society (*vide* Transactions, Vol. III.) means to keep well within the bounds of sanity. But there is method—and sometimes questionable method—in sanity no less than in madness. A specimen of it occurs in a Michigan pomological president's eulogy of "The White Muscat Grape," when he declares: "I cannot refrain from expressing my gratitude to the All-wise Giver of every good and perfect gift for the happy bestowment of this most precious variety, the White Muscat of Alexandria. It seems as if this was the last and most perfect work of God, of the vine to man." It used to be said that man was the last and most perfect work of God, and even that the vine, ever since the days of Noah, was not an unalloyed blessing. There was, in our opinion, equal devoutness and better taste in the more restrained enthusiasm of an early pomologist, good old Evelyn, when, in eulogizing his favorite fruit, this worthy writes: "It may well be that God might have created a more delicious fruit than the strawberry; all I can say is, that I do not believe he ever did." Then, in the inaugural address of the president of the year, the following sentence mixes practical pomiculture, rhetorical floriculture, natural theology, and figures of speech somewhat remarkably: "Michigan seems created to our purpose by the All-wise Hand that, around our loved peninsula, has poured the sacred waters of Michigan, Huron, and Superior, under whose sheltering ægis our noble orchards their brightest treasures spread to the sun in unfailing harvests." The exuberance natural to a fertile Western soil calls for more attention to pruning. We are bound to add that there are better things in the third annual report of this Society, but none richer.

—The admirable 'Pronouncing Dictionary of Biography and Mythology' of our countryman, Dr. Thomas, is especially strong in its inclusion of Oriental subjects; and the few great Chinese names which occur in Western literature will readily be found in it. Thus Confucius appears not only under the familiar Latinized form of the name, but under the original K'ung Fu-tsze; nor is his great contemporary and rival Lao Tsze omitted. Space would of course have been wanting for such purely national characters as Chang Hêng, the historiographer and astronomer (A.D. 78-139); or Ma Twan-lin, the great antiquarian of the fourteenth century; or Ts'ao Fuh-hing, the famous artist of the third century, who, "having painted a screen for his sovereign, carelessly added the representation of a fly to the picture, and so perfect was the illusion that on receiving the screen Sun K'üan raised his hand to brush the insect away"; or even Li Peh, "the most widely celebrated among the poets of China" (A.D. 699–762). These and similar names can excite an interest only in foreign readers of the Chinese; and for such students Mr. Wm. Frederick Mayers, British Secretary of Legation at Peking, has prepared a 'Chinese Reader's Manual' (London: Trübner; New York: John Wiley & Son), which is as pleasant reading as Lempriere. It is a hand-book of biographical, historical, mythological, and general literary reference, designed to furnish a clue to those "intricacies of allusion and quotation" of which Carlyle offers an exceptional example in English literature, but which, as Mr. Mayers says, in Chinese literary art assume the character of a canon. Hence we have in alphabetic order, along with the names of statesmen, emperors, warriors, and other worthies both male and female, the tiger (*Hu*), representing the masculine principle in nature; the fox (*Hu*, or *Hu-li*), who "has many peculiar attributes, viz., in color he partakes of that which is central and harmonizing (*i.e.*, yellow); he is small before and large behind; and at the moment of death he lifts his head upwards"; the peach-tree (*T'ao*), "an emblem of marriage and symbol of longevity"; the mountain, *Kw'ên Lun*; the Indigo bridge (*Lan K'iao*) at the ancient capital of China; the planets, the metals, etc.—in all, about a thousand notices. The second part of the book contains the numerical categories, *e.g.*, "the four members of the human frame, the four cardinal points, the four metropolitan prefectures of the T'ang dynasty, the four recluse greyheads, etc., etc.; the five notes of harmony forming the Chinese musical scale; the eight objects of government, viz., food, commodities, sacrifices, the minister of works, the minister of instruction, the minister of crime, the entertainment of guests, the army." Part III. is occupied with highly useful tables of the Chinese dynasties.

—The proverbial sayings and personal anecdotes with which Mr. Mayers enlivens his Manual are numerous and amusing. One Chang Ch'ang, an Imperial official of the first century B.C., having fallen into disgrace, "one of the subordinates, triumphing in this event, spoke of his chief as 'Prefect for five days more'; but Chang Ch'ang, hearing of this slight, seized and executed the offender, as a proof that even in the few remaining days of office he neglected no duty or prerogative. The phrase has become classical in this sense." President Johnson, Mayor Havemeyer, and many a retiring official have in our time furnished illustrations of it. Two centuries earlier than the preceding, Chao Kao, an ambitious eunuch, "in order to discover who were

boldest among the courtiers, on one occasion presented a stag to the young sovereign, saying, 'This is a horse for your majesty.'" Every Polonius among the courtiers, on being asked by the Emperor what the animal was, answered, "This is certainly a stag"—giving rise to the proverb "to call a horse a stag," in the sense of wilful misrepresentation. The honest courtiers kept silent, and were marked for speedy destruction by the contriver of the snare. To Su Ts'in, or his brother Su Tai (fourth century B.C.) is attributed the proverb, "It is better to be a fowl's beak than the hinder parts of an ox"—first man in a little village than second man at Rome. And Su Tai is also the reputed inventor of the first complete fable recorded in Chinese literature: "A mussel was sunning itself by the river bank when a bittern came by and pecked at it. The mussel closed its shell and nipped the bird's beak. Hereupon the bittern said; 'If you don't let me go to-day, if you don't let me go to-morrow, there will be a dead mussel.' The shell-fish answered: 'If I don't come out to-day, if I don't come out to-morrow, there will surely be a dead bittern.' Just then a fisherman came by and seized the pair of them." Ts'ao Chih (A.D. 192–232), a poet, third son of a usurper, was ordered by his jealous elder brother to compose an ode while taking seven paces; which he did in the following pointed manner:

"A kettle had beans inside,
And the stalks of the bean made a fire;
When the beans to their brother-stalks cried,
'We spring from one root,—why such ire?'"

Some of the women described in this Manual are noteworthy: one whose "skill in the art of dancing (posturing) was such that it is said of her she could dance on the palm of a hand or in a bowl"; another, the Princess of Lo Chang, who, in troublous times, when about to be separated from her husband, gave him half of a broken mirror, agreeing on a certain future day to expose the other half for sale in the capital—a means of identification and reunion like the familiar Western custom of tearing a card in two. Of the Empress Lü (third century B.C.) Mr. Mayers says that "hers is the only reign of a female sovereign to which Chinese history accords a legitimate title; and the crimes which disgrace it point a significant warning against female rule"—a rather sweeping generalization.

THE MAGAZINES FOR DECEMBER.

OF contributions to the December *Atlantic* probably the concluding instalment of Mr. Howells's "Foregone Conclusion" will have been the most eagerly looked for. This novel has already attained a substantial success, and we defer any extended criticism till we shall have had time to examine it as a complete book. Mr. Nadal's paper on English and American scenery has the merits that are getting to be recognized as distinctive of him; but he should have a care not to let his prose fall into rhythms more suitable to verse. In the final instalment of "A Rebel's Recollections" the most noticeable fact is that of the religious revival which passed through the Confederate army when all rational hope of success had been abandoned, and which excited a superstitious trust in Providential interference on their side. Besides these contributions, we have an article by Mr. Atkinson on the "Righteousness of Money-Making," not especially original, but none the less sound. "Only that commerce is to be deemed righteous," he says, "which is based on the idea of mutual service. . . . The capitalist demands a protective tariff in order that labor may be better employed, and really persuades himself that his motive is single. . . . He has been set up . . . as one who is to confer benefit, not to render service in what he does." Mr. Atkinson's object is to advocate the higher education for men preparing for business life. Mr. H. S. Mackintosh writes heavily about water-color painting, and thinks that "in seeking to establish a national school, while we lack the advantage of the hereditary transmission of skill, we have no preconcerted, traditional types nor long-established conventional styles to contend against." This is encouraging, but we should not forget that such types and styles are one very efficient means to reactionary progress—a progress more resolute, perhaps, than the one which has no starting-point, so to speak. Besides the book-notices and musical criticism, this number contains a brief screed on the drama, in which the critic discusses the "School for Scandal" as recently given at the Boston Museum, and also the play itself. The critic follows Taine's instructive discussion of the play in his 'English Literature' pretty closely, though he does not succeed quite as well as he might in making the reader understand why it is that this comedy holds the stage with such tenacity, that even Byron's assertion that it is the best in the language does not seem to most people overstrained praise, even now. The criticism will remind the reader that the Bostonians are fortunate in still possessing one of the best stock actors of the old school in Mr. William Warren—one of a race pretty much extinct elsewhere; and will startle the playgoer and lover of the stage by the suggestion that "visible change of scene is rapidly becoming a barbarism, and we strongly suspect that this circumstance will end by giving a death-blow to Shakspere as an acting dramatist."

We hope that Mr. J. S. Barry has not yet received his honorarium from the publishers of the *Atlantic* for his article on "Old Trees," which is one of the most flagrant cases of "lifting" it has ever befallen us to expose. It is ten pages long, and a good third of it is partly literal transcription, partly paraphrase of a paper on the "Longevity of Trees," contributed by Prof. Asa Gray to the *North American Review* for July, 1844. A considerable portion of the remainder is borrowed in like manner from Mr. George B. Emerson's 'Report on the Trees and Shrubs growing naturally in Massachusetts' (Boston, 1850). In neither case is credit given, though the work just named is once casually referred to. As if to cover up his tracks, Mr. Barry changes the order of Prof. Gray's illustrations; but he has the simplicity as well as temerity to appropriate the well-chosen poetical extracts with which the *North American* article was garnished. One of these, having in that article a general application, is palmed off as an apt description of a particular tree in South Scituate, which it is safe to say Mr. Barry never saw, or heard of till Mr. Emerson's report fell into his hands. He is so careless in his pilfering that where Prof. Gray speaks of trees as existing in 1828, 1831, 1844, and Mr. Emerson in 1850, Mr. Barry preserves the present tense, and avers (*e.g.*) that an olive at Pescia, "although *now* in a state of decrepitude, *continues* to bear a crop of fruit of considerable abundance," and that a dilapidated oak at Brighton, Mass., "*is still* clad with abundant foliage"—the last being Mr. Emerson's *ipsissima verba* a quarter of a century ago. The pretence that all this knowledge is original, or gathered by original research, of course makes Mr. Barry's offence a very serious one. When he says, in regard to the oak, "we must refer to the works of Evelyn and Gilpin, Strutt and Loudon," his readers would not suspect that these were Prof. Gray's words thirty years ago; yet such is the case. Mr. Barry's own padding is absolutely worthless, and ought to have furnished the *Atlantic's* editor a clew to the real character of the article. A sample of it is found in his "improvement" of a sentence from the *North American*, as shown below within brackets: "It was beneath this tree that Henry VIII. [by the Grace of God Defender of the Faith, etc.] first saw Gospel light in the [fair] eyes of Anne Boleyn."

Scribner's for this month brings to an end the "Great South" series. This energetic undertaking is said, in the editorial notes, to have cost the magazine publishers thirty thousand dollars. The papers are to be made into a subscription book for Great Britain and her colonies, as well as the United States; and Messrs. King and Champney and the publishers have a fair claim to thanks for their labors. Jules Verne's "Mysterious Island" continues to be mysterious; and the greatest mystery about it is how people can be entertained by reading it. The usual rough-and-tumble illustrations, by Barbant, accompany the serial. Wm. C. Conant supplies information about the Gorham Company and other matters, under the expansive heading, "The Silver Age." An illustrated paper on Madeira contains some interesting items. The problem of irrigation there has given occasion for some fine engineering: "The streams are tapped far up near their sources and diverted into *leradas*, or channels averaging fifteen feet in width, meandering along the vertical sides of stupendous precipices, and by easy gradations coursing all the gardens and terraces of the island." One of these streams is drawn from a waterfall, which is "on the north side, and has a sheer descent of one thousand feet at the head of a narrow gorge. . . . It was necessary for the workmen to lower themselves from the edge of the precipice, and thus suspended by ropes four hundred feet from the depths below, and often drenched by the cataract between which and the cliff they toiled," to blast a trench in the solid rock. Saxe Holm's 'My Tourmaline' drifts on through a second part; and Constance F. Woolson contributes one of her formless tales, called "Jeannette," very feeble, and gratuitously outraging the finer sensibilities in its crude attempt at force near the close. A brief paper on the transit of Venus and some editorial matter complete the number.

In the *Galaxy*, Miss Woolson has an article developing into a figure-sketch, suggested by the accidental burning of the old Indian Agency on Mackinac Island: it is better than most of her labors in this field The contents of the *Galaxy* make a good variety. "Leah," by Mrs. Edwards, progresses through its seventh chapter, and gives promise of being a dismally bright and disreputable "society novel," as that institution has nowadays come to be understood. Mr. Boyesen's "Norseman's Pilgrimage" is an agreeable contrast to this unhealthy story, and opens with a vigorous flavor and a dash of adventure. George Lowell Austin concludes his paper on etching, and promises more, which we shall look for with some pleasure. Then there is a paper on the duration of the Executive term, which the voters of last month will hardly need to peruse; some rose-colored reminiscences of recent advances in

Siam, from Mrs. Feudge; and a paper entitled "Apropos of Tyndall," by James Freeman Clarke. The article called "Was it Katie King?" by Mr. F. J. Lippitt gives an account of some "face-sittings"—*i.e.*, spiritualistic *séances* at which the faces of departed persons appear, and even more than that, their whole bodies sometimes. Katie King is the spirit most constantly produced in Mr. and Mrs. Holmes's parlor in Philadelphia, Katie being the daughter of a gentleman deceased a century or two since, named King *alias* Morgan, who was in his day a noted pirate, and whose exploits are celebrated, unless we are greatly mistaken, in a forgotten book called the 'History of the Buccaneers.' Whether this book contains any facts which might throw light on the truth of Katie's representations we do not remember, but to her father, whose repentant shade appears now and then shouting "ship ahoy" and other nautical phrases, she must be a source of great pride and consolation. Notwithstanding her probably neglected education, she has a "neat and studied" feminine handwriting, and is capable of writing the finest newspaper English. One of the Philadelphia papers, however, has sent a reporter to investigate some of these manifestations, and he pronounces the whole thing a very poor piece of jugglery; and it is a curious illustration of the difficulty of getting at any of the facts in connection with Spiritualism that this newspaper report on the machinery used, the amount of light admitted, and all the essential "conditions," gives a description of occurrences in no way resembling those of which Mr. Lippitt writes.

In *Lippincott* we have, among the "Monthly Gossip," some interesting statistics. The first, by Alexander Delmar (late Chief of our Bureau of Statistics), relate to the Foundling Hospital of Moscow. In 1869, the number of infants received there was 11,140; in 1870, 10,661; and in 1871, 10,756. The mortality is very great, being about 21 per cent.:

"Of the 11,912 on hand at the close of the preceding year and received during the year, no less than 2,426 had died before they attained the age of six weeks. The causes of this mortality are in great part traceable in the circumstances of the infants when brought. . . . In the first place, 98 per cent. are illegitimate. . . . Behind these results there remains much that is unrevealed, but enough is known to completely dissipate the social or communistic doctrines on this subject, which even in our own country have already found some defenders."

The community which should attempt to practise them, he thinks, would be overtaken by extinction. The other statistics are entitled "The Illiteracy of the Republic." Our census of 1860 included 1,126,575 white persons over twenty who cannot read or write. And "as more than half our population are under twenty-one, and as there has been no increase of educational facilities, there must be more than three millions of young persons who are growing up in ignorance to fill the ranks of illiteracy." The most surprising fact is that "eight out of eleven of those who cannot read are native-born." The late slave States are not responsible for this proportion; and, furthermore, "nearly all the States return more illiterate females than males." The writer concludes that "intemperance is directly chargeable with the great bulk of illiteracy among the native white population"—a conclusion seemingly not unfair. Among the larger contributions are the next to the last instalment of the "New Hyperion," crisp, clear, and amusing; sections of the two English serials, "Malcolm" and "Three Feathers"; an illustrated paper on Mentone; some recollections of Charles Lever, by T. Adolphus Trollope; and a review of Lord Lytton's Parliamentary life, by his son. Mr. Trollope made the acquaintance of Lever in Florence, in the days of the Grand-Duchy, and gives a description of his rollicking character which will please the lover of his books, as it is exactly such a one as they must have been led to expect—convivial, amiable, reckless, fond of adventure of the wildest kinds, particularly of sailing out to sea in extremely dirty and dangerous weather with his daughter Julia, who liked the sport quite as well as her father, extremely fond of cards, but so full of animal spirits that Mr. Trollope declares he has been seen to jump up from the whist-table while some sedater player was dealing, take possession of somebody's partner for a "turn," whirl her round the room, and take his seat again as the trump-card was turned up. Are there such spirits nowadays? Lord Lytton's account of his father is interesting as throwing some new light on a very remarkable career, and brings out strongly what we may be sure never occurred to Thackeray when he was lampooning "Bulwig," the deep-seated political sense which underlay all Bulwer's writing. In some of his books, as for instance 'Kenelm Chillingly' and the 'Parisians,' the politics and political characters are much the best part of the contents, and incline one now to forgive a good deal of theatrical sentiment which to the leader of the crusade against Snobdom could never be pardoned.

Old and New opens with editorial disquisition upon the defects of college instruction, and the disinclination of governing bodies of our colleges and universities to make public their discussion of methods and the reasons for changes adopted by them. This is followed by an address delivered by Mr. Hale before the graduating classes of Vassar and Cornell. At the end of the magazine is a college directory, giving the names of all instructors in all our colleges. This number contains also an interesting paper on the "Protestant Theory of Authority," by Dr. Martineau.

Harper's Magazine, this month, does not warrant a detailed notice, though full of reading-matter well adapted to a large and various audience. It contains the first part of an article on St. Augustine, Florida, bearing the title of the Ancient City. The transit of Venus gives occasion to an article rather more technical than that in *Scribner*; and Mr. Curtis, as usual, discourses pleasantly from his Easy Chair—this time on English intellectual independence, the discussion of a national university in this country, the significance of Tyndall's address, and other topics.

CHILDREN'S HOLIDAY BOOKS.*

III.

'MOONFOLK' is a handsome, good-sized, well-printed book, the design on the cover of which is almost a sufficient explanation of the design of the story. Little Rhoda, wishing to go to the place where fairy stories are true, is taken there by her friend the Chimney-Elf. This enchanted spot is the moon, and the way to get there is along the "moonglade," or bright path made across the water by the full moon when it rests on the horizon. In the moon Rhoda meets all her heroes and heroines, beginning with those chronicled in 'Mother Goose'; next, Sindbad, Aladdin, and a few more from the Arabian Nights; Cinderella, Rumpelstiltskins, Jack the Giant-Killer, and others from the old, stock fairy-tales; then the Pegottys and Little Em'ly, Paul Dombey and Little Nell; and, lastly, the Arthurian characters, whose doings occupy nearly a third of the book. It will be seen that the range of reading here presupposed is pretty wide, though perhaps not too wide to belong to precocious little dreamers, such as Rhoda is represented to be. A certain amount of pleasure could probably be got out of the book by a child to whom the characters were previously unknown, but the unexplained allusions would be rather tantalizing, and the flood of questions put to the nearest adult probably overwhelming. Mrs. Austin seems to be indebted to the 'Alice' books for the idea of making the old stories act themselves over and over again for ever in some magic place, as well as for the demeanor of Rhoda under trying circumstances, the style of conversation of the "creatures," etc., etc. There is the Man in the Moon always nibbling a piece of green cheese, while the Man in the South sits near hacking away at a dish of frozen porridge:

"'Oh my! oh!' groaned the Man from the South, dropping the knife into the bowl of porridge, and clapping both hands over his mouth. 'What's the matter? Burnt it again?' asked the Man in the Moon, staring at him."

'Tweedledum and Tweedledee' was very happily reproduced in somewhat this fashion, but the witty author of 'Alice' himself could not have served up the whole of 'Mother Goose' without the feast's soon becoming a dreariness and a surfeit. When Mrs. Austin gets into the older stories, and does not adhere so closely to the legend, there is rather more to interest; but even here her paraphrasing and combining of the different tales cannot be called successful. The children will probably prefer to adore Cinderella as a young woman of manifold perfections, who justly married the Prince and lived happy ever after, rather than to see her, by Mrs. Austin's analytic fault-finding, reduced to the level of a mere human being. The seventy pages relating to "Launcelot du Lac" and the other Round Table worthies show Mrs. Austin's skill in dealing with all the regulation "properties" of that era. She makes a most dazzling day-dream out of tourneys, lords and ladies, rescues, feasts, pageants, devoted knights, love and beauty, etc.—a dream just such as romantic little girls like Rhoda invent for themselves, only a thousand times more clever. Rhoda is in it all; Sir Launcelot makes *her* Queen of Love and Beauty at the tournament, leaving Guinevere to writhe with jealousy; Sir Percivale is her knight; Isolde and Ermengarde envy her; the king praises her. In every situation her behavior is grave, modest, childlike; Mrs. Austin arranges it so that she can have all these triumphs and premature tastes of the grand passion without being obliged to repent the sins of vanity or sentimentality—common compunctions with conscientious little romancers who have to invent their own plots. Rhoda's last journey is to the fairy godmother's "spectacle factory," where are manufactured spectacles "which have the faculty of making everything seen through them look just as the person looking wishes to see it." The "pay" for a pair of these spectacles is mostly "in common sense." The fairy then informs Rhoda that she has worn a pair without knowing it all her life. "And what have I given for them?" asked Rhoda,

* 'Moonfolk. A True Account of the Home of the Fairy Tales. By Jane G. Austin. Illustrated by W. J. Linton.' New York: G. P. Putnam's Sons.

a little terrified. . . . "Not much that was worth keeping, my dear," said the fairy godmother. . . . "Only a little of your childish gaiety, and content with common things, and a good deal of time, and some little health. I believe that is about all. I am sure the spectacles have more than paid you." We feel free to say that the price strikes us as a heavy one, although the fairy godmother probably did not overrate it. However, others, especially those with unromantic and robust little girls, may not agree with us. This is a free country, and we all have an inalienable right to eat mince-pies and candy when we want to.

It is a matter requiring more artistic judgment and dramatic instinct than any of our illustrators seem ever to have given to it, to make illustrations for the comprehension of children. Probably the cuts in the old 'New England Primer,' with all their crudeness and want of artistic training, are better fitted to interest a child than the most elaborate and excellent woodcuts on which the Tract Society prides itself. Good art for children is that which tells its story most directly, and which most resembles what children would do if they could draw. In a work like the 'Hieroglyphic Geography,' which aims solely at intelligibility, the extreme of simplicity is desirable; a true hieroglyphic has no proper connection with art, and should never be turned in an artistic form—a law which the designer of these cuts has mainly obeyed if she has not recognized it, and in most of them she (Anna A. Heermans, of the Cooper Union Engraving School) has put her images into the true child's mould, and in some of them is eminently successful. The engraver, Charlotte B. Cogswell, of the same school, has done her part with an unusual degree of sympathy with the purpose of the designer, and, taken as a whole, the book must be regarded as a decided success. Here and there the symbolisms are far-fetched and to a child untranslatable; as, for instance, in the sentence "the mountains in the northern *part*," the last word is indicated by a forehead and brows of a human face with the hair parted—a symbol which no child of ordinary human intelligence would ever hit. Again, on the same page, "an acre" is expressed by "4 sq. roods," which is not hieroglyphic at all, and is abstruse besides. There are too many of these insoluble riddles. The task set before a child should never be one which by no exercise of its wits can it perform, and there are passages of this geography which even an adult of more than average intelligence might be puzzled by indefinitely, and which no child could possibly translate without the key. Now and then the invention is weak, but when a designer is obliged to turn out a series of 600 to 800 designs for such a purpose, this was to be expected. Such cases, however, as a magnet and "ude" for "magnitude" are not admissible, as assailing sound orthography.

The history of 'Pussy Tip-Toes Family' is, as its title implies, for the smallest children. It seems almost a pity to waste such good print and cream-laid paper on such extremely infantile composition, diluted to the last degree and heavily seasoned with italics, as thus: "Oh! what a *dear* little kitten!" cried Milly. "May I hold it, Margie? Oh! I wish *we* had a kitten!" And so on for nearly 200 pages. But the pictures are mostly very good, though all familiar as having been seen in other books; and the story, though trying to parents and guardians who have to read it aloud, will probably be grateful to the majority of little trots who have mastered the primer. Its moral lessons are correct; and it is not wanting in hymns and prayers.

The children who last year read 'The Life of a Bear' will be glad to have the 'Life of an Elephant' from the same author. It is even a more entertaining book than its predecessor; first, because the subject is a richer one, and next because, if we have not forgotten, the historian has given more of the real habits and possibilities of the animal, and less of his fictitious biography. It is by exaggerating the personal feelings, family relations, and other human resemblances among the animal characters that so many animal stories are spoiled. We do not refer to the immortal fables of Æsop or La Fontaine, nor to any other story in which beasts are clothed in human gear to point a wise or a witty moral, but to the numerous tales which appear annually, and form a class by themselves, in which there will be presented the history of a household of rabbits, or squirrels, or mice, with a minute account of their sensations when their parents were slaughtered or when they fell in love. Much better than this sort of stuff do boys like an account of the real habits and manners of a creature, connected by a tolerably probable history of him as an individual, and attributing to him thoughts and feelings that he might really be supposed to entertain under certain circumstances, if he entertained any. In these respects the biographer of the Ceylon elephant, Tamil, has been fairly successful, and has given to his young readers a considerable amount of information about one of the most interesting of beasts in a lively, cleverly-invented story.

The title of 'Fantastic Stories' is a well-chosen one to describe a collection of tales of all sorts of lengths which are half fairy tales, half legend; or rather—as we suppose Herr Leander to be responsible for the invention of everything—fairy tales told in the legendary manner, with a poetic and melancholy or a grotesque vein running through them. They are thoroughly German, and the lessons they teach subtle and transcendental or quaintly satirical. Practical, matter-of-fact little folks will find themselves interested but much puzzled, like cats who look into a glass and then go behind it to investigate. The more finely attuned will be strongly moved as by poetry. Such writing is apt to impress any kind of a child more than he knows at the time, and is likely to recur to his memory in later life, when the dates of battles and boundaries of states have been forgotten, bringing with it the same sweetly painful sensations that stirred his young heart when he first read it. If the prolific Mr. Knatchbull-Hugessen could compose such pieces, he would be more nearly a disciple of Hans Christian Andersen than he now thinks he is.

'Pussy Tip-Toes Family. A Story for Our Little Girls and Boys. By Mrs. D. P. Sandford, author of the 'Rose Dale Books,' etc., etc.' New York: E. P. Dutton & Co.

'The Life of an Elephant. By the author of 'The Life of a Bear.' With 24 illustrations.' New York: Pott, Young & Co.

Fine Arts.

THE usual fortnight's exhibition of the Brooklyn Art Association opened on the 30th ultimo with the customary crush of a "private view." The pictures are abundant and creditable. The marked man of the season is, we should say, Mr. Frederick A. Bridgman, a pupil of Gérôme, who exhibited in this Brooklyn display a finely-wrought Cairo doorway with a donkey painted much as Decamps would have painted it; a half-length life-sized group of ladies whispering while rowing a boat (originally called "De Quoi Parlent les Jeunes Filles?"); and who sent, besides, another good Cairo scene to the contemporary exhibition of the Lotos Club. An interesting contribution, on a large scale, was the "Arch of Constantine," painted by Church, who is represented in the foreground as sitting at his task, while the subject further comprises portraits of McEntee, who threw in the background view of the Coliseum, and of Healy, who did the figures, besides Prof. Longfellow and Miss Longfellow, who are shown in the middle distance; the picture will be seen, if we have expressed plainly its mixed authorship, to be an interesting memorial work. Healy likewise represented on another canvas Lincoln and a couple of generals in conference, in that sort of monumental grouping which is such a pitfall to modern art, and results inevitably in a geometrical theorem of legs and pantaloons intersecting at hideous angles. Other native painters were F. H. De Haas, with a "Farragut's Fleet at New Orleans," S. R. Gifford, William Bradford, Constant Mayer, Lambdin, Edward Moran and his artist wife, Nicoll Irving, and Parton. The usual loans of recent French purchases, Bouguereau and the like, gave a kind of waxy veneer to the whole exposition, and the studies from the Packer and Polytechnic Institutes justified the educational character of the whole display.

—The 'Boydell Shaksperean Gallery,' reduced and re-engraved by the heliotype process, has been issued by Gebbie & Barrie, Philadelphia. Alderman Boydell's great effort for the establishment of academic art goes back to the date of 1805, when Benjamin West in England, and David and Raphael Mengs on the Continent, were severally cultivating the classical. It is the strangest history of missteps, the most curious study of national ineptitudes—one on which long essays might be written—the prosaic or practical development of the English temper which made art powerless in that country to sustain itself at the height where West pinned it up. Across the Channel, meantime, the classic ideality of David became a living power, whose influence has never yet died out. The result has been that France is filled with works of a monumental character, sometimes fatiguing and sometimes great, while England has the utmost difficulty in finding a mural artist, and goes about begging in a very plaintive manner when there is a church or a public hall to paint. We hope we shall never feel ourselves obliged to swell the ranks of West's detractors; that hour of unsuccessful pleading, when Reynolds vainly tried to persuade him to put a classical costume on the Dying Wolfe, would save him from contempt in our eyes if there were no other debts due to him. Yet the very keenness and sense shown in West on that occasion may be the reason that England has never succeeded in the academic line. Without opening up this curious speculation further than by a hint, we feel we ought to say that there is nothing in the 'Boydell Gallery' to show a great inferiority in English academics of the day to French art as exemplified by Vien and David. It is a monument of which the nation ought to be properly proud, and only accident, or want of some subtle *rapport*, or

'Fantastic Stories. By Richard Leander. Translated by Paulina B. Granville. Illustrated by M. Fraser-Tytler.' New York: Geo. Routledge & Sons.

inattention to the Elgin marbles, or unripeness of classical scholarship, or some such mischievous absence of the requisite good fairy, seems to have kept the smooth seed then dropped from perpetuating itself. We really think that nobody can honestly study the 'Gallery' without instruction and delight. For our own part, we are never tired of looking at the Court of Titania, in Fuseli's picture, where the attendant sprites, demurely dressed like Queen Charlotte's maids of honor, have the quaintest effect of making Shakspere seem to go waltzing off with Fanny Burney. We think, again, that the Ghost in "Hamlet" has never been better depicted than by Fuseli in that strange, Blake-like composition of his where it rises from the sea, whose waves leap around its feet, its motions followed by the curves of the immaterial and impossible armor, which flows over its limbs with the burnished accuracy of mail upon a caterpillar or larva, while its hollow eyes are wells of white flame, and the foggy air rolls into globes of electric fire. Nor is the Puck of Sir Joshua unworthy of Shakspere, with its gentle, English diablerie. In trying to rise to a height of more positive daylight dignity, the Boydell group of artists are not so successful. The heroes have a general Kemble look, usually set upon the godlike thighs of the Torso Belvedere, as in Westall's Hotspur. The labored comedy of Smirke, in Christopher Sly and Juliet's Nurse, is lacking in sympathetic quality. But tragedy and comedy both sustain successfully the comparison with what else was doing in the world at the time. Opie, the ex-coachpainter, contentedly labored away at the horrors of his Incantation of Bolingbroke, all unconscious that the other crack painter, Old Crome, was to get the suffrage of the future, while he should be forgotten. Constable, the true founder of our best landscape, perhaps, does not seem to have been approached for a contribution. It is the old official galaxy of West, and Northcote, and Romney, and Angelica Kauffman, who appear to us to have twinkled in their places with a great deal of timely dignity. We are glad to see this sturdy labor of Boydell's placed before the public in a cheap form, which, while it does not give the beauty of first proof impressions, is infinitely superior to any kind of copy-work not dependent on chemicals. The process employed by the publishers, differing from most others which have claimed our notice, is not confined to reproducing works in line. Stipple, and perhaps mezzotint, are equally adapted to its powers, and Westall's Wolsey at the Abbey, in Thew's fine stipple engraving, is copied with as much tone as Sharpe's masterpiece from West's Lear in the Storm. The present publication, in plates about seven by nine inches, reproduces one hundred out of the one hundred and seventy pictures published by Boydell in his two works of the 'Illustrated Shakspere' and the 'Gallery.'

Subscribers in and about this city will receive, by a separate mail, the annual holiday supplement to the NATION, in a new form specially adapted to the convenience of purchasers of Christmas Gifts. Non-suburban subscribers desiring copies will be supplied as far as possible on receipt of a two-cent stamp for postage.

JUST PUBLISHED.

VERS DE SOCIETE. Selected from Praed, Landor, Thackeray, Moore, Holmes, Calverley, Saxe, Locker, Dobson, and others, recent authors in this department. With Title and Vignettes, Drawn by John A. Mitchell. 8vo, cloth, gilt, $7 50; morocco, $15.

"If we have ever seen a daintier piece of book-making, we have forgotten it."—*N. Y. Evening Post.*

ANNOUNCEMENT.

HEART-STRAINS FOR CHRIST-MAS-TIDE.

FINELY PRINTED—ILLUSTRATED WITH PHOTOGRAPHIC FRONTISPIECE.

50 cents per copy.

Orders should be sent in at once.

Introductory Note. By Rev. James Mulchahey, S.T.D., of Trinity Parish, New York City.

The compiler of this little collection of Christmas Heart-strains has asked for a few introductory words of commendation. But, inasmuch as they are, very obviously, the choicest utterances of inspiration and devotional poetry, commendation would be presumption, except it relate simply to the plan and arrangement. These, it is believed, will commend themselves; and so, the little book may be safely left to win its way, as a most acceptable Christmas Gift, into many households. God grant its joyous Christmas message may gladden many hearts!

MACMILLAN & CO.'S NEW BOOKS.

A RAMBLE ROUND THE WORLD. 1871. By M. le Baron de Hübner, formerly Ambassador and Minister and author of 'Sixte Quint.' Translated from the French by Lady Herbert. One handsome 12mo vol , pp. 658, cloth extra, $2 50.

"We do not hesitate to say that 'A Ramble Round the World' is the most interesting book of its class produced in the last ten years. . . . The narrative of the author's travels through Japan and China is one of unbroken interest; there is not a page in it which the intelligent reader would willingly omit. All phases of society are reported after careful observation; the politics, religion, manners, and customs of each nation are exhibited with a sharp distinctness that we have never seen equalled in a work of this kind. . . . As a whole the book is thoroughly satisfying, and we commend it confidently to those who enjoy a narrative of travels at once substantial with information and pleasing with the wit and wisdom of a shrewd observer and with the art of a skilled narrator."—*The Literary World.*

"He was a quick-witted and candid observer, with a lively and entertaining way of telling his story; and his remarks on what he saw and heard well repay reading, both for their positive information and for the very readable way in which they are presented. . . . There is scarcely a dull page in the book."—*Boston Transcript.*

"It is difficult to do ample justice to this pleasant narrative of travel. The translator has admirably preserved the vivid style of the foreign original, especially in the racy minute manner in which grotesque little details—evincing the keen observer—are rendered into excellent English. . . . The work does not contain a single dull paragraph."—*London Morning Post.*

MICHAEL ANGELO BUONAROTI, Sculptor, Painter, Architect. The Story of his Life and Labors. By C. C. Black, M.A. Illustrated with Twenty Woodbury types. Medium 8vo, cloth, extra gilt, $12.

HOLLAND HOUSE. By Princess Marie Liechtenstein. With 5 Steel Engravings by C. H. Jeens, after Paintings by Watts and other celebrated Artists, and numerous Illustrations drawn by Professor Delamotte, and engraved on Wood by J. D. Cooper and others. Third Edition. In 1 vol. medium 8vo, cloth gilt, $7 50.

THE POETICAL WORKS OF JOHN Milton. Edited, with Introductions, Notes, and an Essay on Milton's English. By David Masson, M.A., LL.D., Professor of Rhetoric and English Literature in the University of Edinburgh. With three Portraits, engraved by Jeens and Radclyffe. Three vols. 8vo, $15.

"Will certainly be the standard edition of the great poet."—*Publishers' Weekly.*

ESSAYS ON SHAKESPEARE. By Karl Elze, Ph.D. Translated, with permission of the Author, by Dora L. Schmitz. 8vo, $4.

The author's wide reputation in Germany as a student of English language and literature, and more especially of Shakespeare, should make this volume of 'Essays,' contributed to the *Jahrbücher* of the German Shakespeare Society, of which Dr. Elze is editor, both valuable and interesting to all Englishmen, as a proof of the esteem in which their greatest poet is held in Germany.

A SHORT HISTORY OF THE ENG- lish People. By J. R. Green, M.A., Examiner in the School of Modern History at Oxford. With Genealogical and Chronological Tables and Colored Maps. Crown 8vo, pp. 848, $3.

"The aim of this work is defined by its title; it is a history, not of the English kings or English conquests, but of the English people. At the risk of sacrificing much that was interesting and attractive in itself, and which the constant usage of our historians has made familiar to English readers, I have preferred to pass lightly and briefly over the details of foreign wars and diplomacies, the personal adventures of kings and nobles, the pomp of courts or the intrigues of favorites, and to dwell at length on the incidents of that constitutional, intellectual, and social advance in which we read the history of the nation itself. It is with this purpose that I have devoted more space to Chaucer than to Cressy, to Caxton than to the petty strife of Yorkist and Lancastrian, to the Poor law of Elizabeth than to her victory at Cadiz, to the Methodist revival than to the escape of the young Pretender."—*Author's Preface.*

MENDELSSOHN. Letters and Recollections. By Ferdinand Hiller. Translated by M. E. von Glehn. With Portrait by Karl Müller. Extra crown 8vo, cloth, elegant, $2 25.

"Dr. Hiller's book cannot fail to be read with deep interest by all lovers of musical art. It abounds with anecdote and reminiscence strongly appealing to their favorite tastes."—*N. Y. Tribune.*

CHATTERTON; a Story of the Year 1770. By Professor David Masson of Edinburgh. Crown 8vo, $1 75.

WORDSWORTH, SHELLEY, AND Keats, and Other Essays. By Professor Masson. Crown 8vo, $1 75.

TALES IN POLITICAL ECONOMY. By Millicent Garrett Fawcett. Extra fcp. 8vo, $1.

UNDER THE LIMES. A New Novel. By the author of 'Christina North.' Crown 8vo, paper, $1 25.

"One of the prettiest and best told stories which it has been our good fortune to read for a long time."—*Pall Mall Gazette.*

HISTORY OF THE LIFE-BOAT AND its Work. By Richard Lewis of the Inner Temple, Barrister-at-Law, and Secretary to the Royal National Life-Boat Institution. With illustrations. Crown 8vo, $1 75.

THE PRINCESS OF SILVERLAND, and Other Tales. By Elsie Stryveline. With Frontispiece, by Sir Noel Paton. Globe 8vo, $1 50.

SYBIL'S BOOK. By Lady Barker, author of 'Stories About,' 'Station Life in New Zealand,' etc. With Illustrations. Globe 8vo, $1 50.

THE FAIRY FAMILY. A Series of Ballads and Metrical Tales. Illustrating the Fairy Mythology of Europe. By Archibald MacLaren. With illustrations. Crown 8vo, $1 75.

BIRDS: THEIR CAGES & THEIR Keep. Being a Practical Manual of Bird-Keeping and Bird-Rearing. By K. A. Buist, with Colored Frontispiece and other Illustrations. Crown 8vo, $1 75.

"The book is delightfully written, and the directions for the management and rearing of the birds and for their treatment in disease and illness, are so clear, sensible, and humane that the whole race of cage-birds ought to find a marked amelioration in their condition, especially in the articles of food and cleanliness."—*Athenæum.*

THE IMITATION OF CHRIST. Four Books. Translated, with Preface, by W. Benham, D.D., Vicar of Margate. Printed with Borders in the Ancient Style after Holbein, Dürer, and other Old Masters, containing Dances of Death, Acts of Mercy, Emblems, etc., and a variety of curious Ornamentation. Crown 8vo, purple and gold, $3.

"A pretty little volume altogether, and a good Christmas book of the serious kind."—*G. W. S. in New York Tribune.*

CAVE-HUNTING. Researches on the Evidence of Caves respecting the Early Inhabitants of Europe. By W. Boyd Dawkins, M.A., F.R.S., etc., Curator of the Museum, and Lecturer in Geology in the Owens College, Manchester. With colored Plate and Woodcuts. Medium 8vo, cloth, elegant, $7.

"As an active member of the band of original explorers of British caves. Mr. Boyd Dawkins is especially qualified to sum up and to illustrate, as he has in his recent volume undertaken to do, the earliest chapters of the archæology of man."—*Saturday Review.*

PHARMACOGRAPHIA. A History of the Principal Drugs of Vegetable Origin found in commerce in Great Britain and British India. By F. A. Flückiger, Ph.D., and D. Hanbury, F.R.S. 8vo, $6.

"This is a work of high professional value. . . . We recommend Mr. Hanbury and Prof. Flückiger's 'Pharmacographia' as one of the most useful works which for a long time it has been our privilege to introduce to our readers."—*Athenæum.*

POLARIZATION OF LIGHT. (Nature Series.) By W. Spottiswoode, LL.D., F.R.S. With numerous illustrations. Crown 8vo, $1.

THE COMMON FROG. (Nature Series.) By St. George Mivart, F.R.S. With numerous illustrations. Crown 8vo, $1.

"A good example of what popular science ought to be—within the comprehension of a wide circle of readers, and yet thoroughly abreast of the best investigation of the time."—*N. Y. Independent.*

THE TRANSIT OF VENUS. (Nature Series.) By George Forbes, B.A. With numerous Illustrations. Crown 8vo, $1.

"It is a compact sketch of the whole matter in all its aspects—historical, scientific, and practical."—*Saturday Review.*

THE ELEMENTS OF THE PSYCHO- logy of Cognition. By Robert Jardine, B.D., D.S.C., Principal of the General Assembly's College, Calcutta, and Fellow of the University of Calcutta. Crown 8vo, $2.

HISTORY OF ANCIENT PHILOSO- phy. By the Rev. Archer Butler, late Professor of Moral Philosophy in the University of Dublin. Edited by L. H. Thompson, D.D., Master of Trinity College, Cambridge. New and cheaper edition. Revised by the Editor. 8vo, $5.

THE VICTORY OF FAITH. By Julius Charles Hare, M.A., Archdeacon of Lewes. Edited by Professor Plumptre, with Introductory Notices by the late Professor Maurice and Dean Stanley. Crown 8vo, $2 25.

"We commend the whole volume as one which ought to be read both for the excellence of the sermons which it contains, and for the light which it throws upon the inner history of the English Church during the last half century."—*The Churchman.*

LIFE AND LETTERS OF JOHN Coleridge Patteson, D.D., Missionary Bishop. By Charlotte M. Yonge, author of 'The Heir of Redclyffe.' With Portraits engraved by Jeens. Third edition. 2 vols. crown 8vo, $5.

A GRAMMAR OF THE LATIN LAN- guage. From Plautus to Suetonius. By H. J. Roby, M.A., late Fellow of St. John's College, Cambridge. Part I., containing Sounds, Inflexions, Word Formation, etc., crown 8vo, $2 50; Part II., containing Syntax, Prepositions, etc. (just published), crown 8vo, $3 50.

ELEMENTARY LESSONS IN HIS- torical English Grammar. By the Rev. Richard Morris, LL.D., President of the Philological Society of London, author of 'Historical Outlines of English Accidence.' 18mo, $1 25.

A COMPENDIOUS DICTIONARY OF the French Language (French-English and English-French). Followed by a List of the Principal Diverging Derivations, and preceded by Chronological and Historical Tables. By Gustave Masson, Assistant Master at Harrow School. Square 12mo, half-morocco, $2 50.

"It will be seen that the 'Dictionary' is no ordinary compilation, and that its merits recommend it to all who seriously undertake the study of French."—*Nation.*

*** Macmillan & Co.'s Complete Classified Catalogue by mail for 6 cents.

MACMILLAN & CO., 21 Astor Place, New York.

" *Every Saturday*" *merged in* " *The Living Age.*"

The most eminent authors of the day, such as Prof. Max Müller, Prof. Tyndall, Dr. W. B. Carpenter, Prof. Huxley, Hon. W. E. Gladstone, The Duke of Argyle, R. A. Proctor, James Anthony Froude, C. Kingsley, Matthew Arnold, Arthur Helps, Anthony Trollope, Mrs. Muloch, Miss Thackeray, Mrs. Oliphant, Wm. Black, Geo. MacDonald, Erckmann-Chatrian, Ivan Turgueneff, Jean Ingelow, Alfred Tennyson, Robert Browning, and many others, are represented in the pages of

Littell's Living Age.

THE LIVING AGE has been published for more than thirty years with the warmest support of the best men of the country. It has admittedly continued to stand 'at the head of its class," and its success is now greater than ever before. It has absorbed its younger competitor, " EVERY SATURDAY," and is without a rival in its special field.

A weekly magazine of sixty-four pages, THE LIVING AGE gives more than

THREE AND A QUARTER THOUSAND

double-column octavo pages of reading matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a satisfactory completeness attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year the serial and short stories of the

LEADING FOREIGN AUTHORS

will be given, together with an amount unapproached by any other periodical in the world of the best literary and scientific matter of the day, from the pens of the above-named, and many other foremost living Essayists, Scientists, Critics, Discoverers, and Editors, representing every department of knowledge and progress.

The importance of THE LIVING AGE to every American reader, as the only satisfactorily fresh and complete compilation of an indispensable current literature—indispensable because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics—is sufficiently indicated by the following recent

OPINIONS.

" Simply indispensable to any one who desires to keep abreast of the thought of the age in any department of science or literature."—*Boston Journal.*

" Reproduces the best thoughts of the best minds of the civilized world, upon all topics of living interest."—*Philadelphia Inquirer.*

" In no other single publication can there be found so much of startling literary excellence."—*New York Evening Post.*

" The best of all our eclectic publications."—*The Nation, New York.*

" And the cheapest. A monthly that comes every week."—*The Advance, Chicago.*

" The ablest essays, the most entertaining stories, the finest poetry of the English language, are here gathered together."—*Ill. State Journal.*

" With it alone the reader may fairly keep up with all that is important in the literature, history, politics, and science of the day."—*The Methodist, N. Y.*

" A pure and perpetual reservoir and fountain of entertainment and instruction."—*Hon. Robert C. Winthrop.*

" The best periodical in America."—*Rev. Dr. Cuyler.*

" It has no equal in any country."—*Philadelphia Press.*

" Its publication in weekly numbers gives to it a great advantage over its monthly contemporaries in the spirit and freshness of contents."—*The Pacific, San Francisco.*

" The more noted new novels appear as serials, and the most distinguished foreign thinkers in criticism, science, and art are represented in its pages. . . . It is the only compilation that presents with a satisfactory completeness, as well as freshness, the best literature of the almost innumerable and generally inaccessible European quarterlies, monthlies, and weeklies—a literature embracing the productions of the ablest and most cultivated writers living. It is, therefore, indispensable to every one who desires a thorough compendium of all that is admirable and noteworthy in the literary world."—*Boston Post.*

Published weekly at $8 a year, free of postage. Volume begins January 1. New subscribers remitting now will receive the intervening numbers gratis.

Address as above.

RECENTLY COMPLETED,

AND FORMING A

FINE PRESENTATION VOLUME.

THE BOYDELL SHAKESPEARE GALLERY

CONTAINING ONE HUNDRED OF THE GRANDEST ILLUSTRATIONS EVER DESIGNED TO PORTRAY THE WRITINGS OF THE GREAT POET.

The illustrations in this volume are Heliotype Engravings, reproduced from proof before letter copies of the original folio editions, and faithfully represent every line, light, and shadow, in a permanent form. Each illustration is accompanied with appropriate selection of text.

So universal is the interest in the Boydell Shakespeare, that shortly after G. & B. commenced the publication of their work, an English firm followed in their footsteps, but unfortunately for the English edition, it contains less than one hundred illustrations, and omitted to produce some of the finest illustrations from the small folio; the number of square inches in each subject is only 36, while the American production averages 63 square inches, although the paper on which both editions are printed is the same size; and, as if the English edition had been planned to be unsuccessful, the illustrations lose tone and become discolored, accidents which cannot happen to the American edition. The result is that G. & B.'s edition gives entire satisfaction to the large number of subscribers who favored it, and that many copies of their book have been exported to England.

The book is now offered for sale in the following elegant styles of binding: Half Morocco, gilt edges, $33; Best Morocco, full gilt, extra, $40; Levant Morocco, illuminated, $45.

These publications can only be obtained from their authorized agents, or at their store,

730 *Sansom Street, Philadelphia.*

THE GREAT WORK ON MEXICO

KINGSBOROUGH'S (LORD)

Antiquities of Mexico:

Comprising facsimiles of Ancient Mexican Paintings and Hieroglyphics, preserved in the Royal Libraries of Paris, Berlin, and Dresden; in the Imperial Library of Vienna; in the Vatican Library; in the Borgian Museum at Rome; in the Library of the Institute of Bologna; and in the Bodleian Library at Oxford; together with the Monuments of New Spain. By M. Dupaix. Illustrated by many valuable inedited MSS. 9 vols. impl. folio, containing upwards of 1,000 large colored plates, embracing all the remains of Mexican Architecture, Art, Religion, etc (pub. at £175), hf. mor., gilt tops, £60. 1830–48.

" Cet ouvrage de la plus grande magnificence a été exécuté aux frais de Lord Kingsborough, qui en a fait homage à plusieurs bibliothèques publiques du continent, particulièrement à la Bibliothèque royale à Paris et à celle de l'Institut de France La prix de chaque exemplaire était de 175 livres (2,000 fr. Klaproth). Les quatre premiers volumes renferment les planches lithographiées, au nombre de plus de 1,000; les trois autres contiennent l'explication des planches et plusieurs mémoires inédits, écrits en differentes langues, ainsi que des appendices en anglais. Le septième volume est entièrement rempli par un ouvrage important qui a pour titre 'Hist. de las cosas de Nueva Espana, por el M. R. L. P. Fr. Bernardino de Sahagun.'"—*Brunet.*

After an interval of seventeen years, two more volumes of this extraordinary work were published, in every respect uniform with the preceding, consisting, 1, of Supplementary Notes in English and Spanish; 2, of extracts from the works of Torquemada, Acosta, and Garcia, illustrating the last portions of the Mexican paintings, contained in the collection of Mendoza, and showing the correspondence which exists between many of the Mexican and Hebrew laws; 3, Adair's History of the North American Indians, their customs and descent from the Jews; 4, Cartas ineditas de Hernando Cortez; 5, Cronica Mexicana de Tezozomoc; 6, Historia Chichimeca y Relaciones por Fernando de Alva Ixtlilxochitl.

Encyclopædia Britannica

NINTH EDITION.

Vol. I. of the Ninth Edition of the Encyclopædia Britannica will be ready in January, 1875.

4to, cloth, $9.

The great advances in almost every department of knowledge, especially in the Arts and Sciences, since the issue of the Eighth Edition, have rendered the preparation of the ninth a work of reconstruction rather than of alteration. While the general plan has been adhered to, the entire materials have been thoroughly revised—the available matter of the Eighth Edition being corrected and verified, and the additions, which, amount to far more than half of the whole work, have been contributed by the most competent writers. Special care has been bestowed on classification and arrangement, to the end of presenting the largest amount of information in the most accessible form. Subjects of general and popular interest have received fuller attention than they have had in any former edition, and the contributions of specialists will constitute a conspicuous and exceedingly valuable feature of the work. Among these contributions will be papers by Prof. T. H. Huxley, on the Animal Kingdom, Amphibia, etc.; Alfred R. Wallace, Acclimatization; Richard A. Proctor, Astronomy; Sir Alexander Grant, Aristotle; Professor Max Müller, Aryan Races and Languages; Edward B. Tyler (author of 'Primitive Culture'), Anthropology; St. George Mivart, Apes; Sidney Colvin, Art; Prof. John Nichol, American Literature, etc., etc.

The Ninth Edition is projected on the same scale as the Eighth—in twenty-one volumes of 800 to 900 pages each. The page is of quarto size, and the type clear and handsome. The text will be illustrated by many engravings on steel and wood.

It is the purpose of the publishers to issue the work at the rate of three volumes per year, the first to appear during January, 1875. The price per volume will be Nine Dollars.

TALKS WITH GIRLS. By Augusta Larned. $1 50.

"A pleasant fireside book, which treats of many every-day subjects in a strong and healthy manner. We hear of several girls who are reading the book aloud to their parents, and they like it. This is the highest praise the book could receive."—*Home Journal.*

SUNDAY AFTERNOONS. A Book for Little People. By E. F. Burr, D.D., author of 'Ecce Cœlum,' etc. 16mo, pp. 160, 75 cents.

"Six sermons preached to children, on The Soul, The Angels, God, The Empire, Laws and Word of God, are gathered in this little volume. They are great topics, but treated in a very simple style, but with pure English, and are pleasantly free from the lowness of expression and the triviality with which it is sometimes thought necessary to address children. It is a good and excellent book, and we should suppose that any child of good sense would find it a pleasant book to read, and a useful one as well."—*Christian Advocate.*

THE WEEK IN TRADE AND FINANCE.

DECEMBER 8, 1874.

THE money market has shown a tendency towards higher rates; the bulk of the business on call has been done at 4 per cent., and the extreme range of rates between 3 and 5 per cent. Commercial paper has been in rather less request, and the rates have advanced a fraction. Prime names are quoted 5½ to 6½ per cent., and paper of a lower grade is quoted from 7 to 10 per cent. The bank statement on Saturday was unfavorable, and reflects the large shipments of currency to the West. The statement does not show the full extent of the loss in reserve by the banks, as it is made up on falling averages of both legal tenders and specie, the actual amount of legal tenders and specie being probably $3,000,000 more than the amount stated—$5,942,300. The following is a comparison of the averages for the past two weeks:

	Nov. 28.	Dec. 5.	Differences.
Loans	$282,285,600	$286,072,800	Inc.. $3,787,200
Specie	17,329,300	14,467,200	Dec.. 2,862,100
Legal tenders	53,301,900	50,221,700	Dec.. 3,080,200
Deposits	222,767,300	219,632,100	Dec.. 3,135,200
Circulation	24,883,600	25,012,100	Inc... 128,500

The following shows the relations between the total reserve and the total liabilities:

	Nov. 28.	Dec. 5.	Differences.
Specie	$17,329,300	$14,467,200	Dec.. $2,862,100
Legal tenders	53,301,900	50,221,700	Dec.. 3,080,200
Total reserve	$70,631,200	$64,688,900	Dec.. $5,942,300
Reserve required against deposits	55,691,825	54,908,025	
Excess of reserve above legal requirem't,	14,939,375	9,158,500	Dec.. 5,158,500

The stock market closed on Saturday in rather an unsettled condition. The trouble among the directors of the Pacific Mail Steamship Company caused an uneasy feeling among the holders of the stock of that Company and a decline in its price, and it was not long before the whole market became weak and unsettled. The greatest strength during the week has been exhibited in the stock of the Western roads. St. Paul common advanced during the week 2½ per cent., Northwestern common 2 per cent., and Wabash 2½ per cent. Rock Island was also strong, the price rising 1⅝ per cent.

An active business was transacted in Government bonds, the principal buyers being the foreign bankers and the large savings institutions. Prices have been well maintained, and closed this evening as follows:

Coupon 6's, 1881	119¾	120	Coupon 6's, 5-20's, 1867	119½	119½
Coupon 6's, 5-20's, 1862	112⅝	112¾	Coupon 6's, 5-20's, 1868	119¼	119⅜
Coupon 6's, 5-20's, 1864	114¼	114½	Coupon 5's, 10-40's	113¾	114

The gold market was strong until Friday, when the announcement was made by cable that the Bank of England had commenced to gain in bullion. The price at once fell off from 112⅛ to 111½.

The following shows the course of the gold premium during the week:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Monday, Nov. 30	112⅜	112⅜	112⅛	112¼
Tuesday, Dec. 1	112¼	112¼	111⅞	112
Wednesday, Dec. 2	112	112¼	111⅞	112⅛
Thursday, Dec. 3	112¼	112¼	112⅛	112⅛
Friday, Dec. 4	112⅛	112⅛	111½	111⅝
Saturday, Dec. 5	111⅝	111¾	111½	111⅝

FISK & HATCH, Bankers,
No. 5 NASSAU ST.

U. S. Government Bonds, coupon and registered, all denominations, bought and sold; also gold coupons, and American and foreign gold and silver coin. Mercantile collections made, and approved accounts received from Banks, Savings Banks, Corporations, and individuals; also U. S. registered interest, coupons, and dividends collected for correspondents and others out of town, and promptly remitted for or placed to credit subject to draft. All marketable stocks and bonds bought and sold on commission. Every branch of our business has our personal attention, and any desired information will always be cheerfully given.

FISK & HATCH,

P. O. Box 235. New York.

AN UNPREJUDICED WITNESS

To the value of the Unabridged, Enlarged, and Corrected Edition of

DR. WILLIAM SMITH'S

DICTIONARY OF THE BIBLE,

comprising its Antiquities, Biography, Geography, and Natural History.

EDITED BY

PROF. HORATIO B. HACKETT AND EZRA ABBOT, LL.D.

The *Bookseller*, of London, writing of this edition, says: "In short, it seems that we have to thank America for the most complete work of the kind in the English, or, indeed, in any other language."

The grounds of its superiority to the English edition of the same work are these:

500 more pages and 100 more engravings in the American edition than in the original English.

26 American scholars represented.

More than 1,000 errors of reference corrected.

An Index of Scripture illustrated, 56 columns, in the American edition only.

4 vols. 3,667 pages. 596 illustrations.

PRICES AND STYLES.

In cloth, bevelled edges, strongly bound			$26 00
In full sheep	$30 00	In half calf, extra	36 00
In half morocco	35 00	In full calf	45 00

HURD & HOUGHTON, NEW YORK.

The Riverside Press, Cambridge, Mass.

NEW AND CHARMING BOOKS.

I.

THE LIFE AND TIMES OF

Sir Philip Sidney.

A New and Revised Edition, with Index, etc. Three steel plates, portrait of Sidney, view of Penshurst Castle, and facsimile of Sidney's manuscript. 12mo, silk cloth, bevelled boards, stamped with Sidney's Coat-of-Arms in ink and gold. $1 50.

Of the first edition of this book, the Philadelphia *Evening Bulletin* spoke thus:

"Once in a while—in a very long while, we are sorry to say—there comes before the reviewer some work so marked, both by choice of subject, treatment, and external garb, as a book of refined tone, elegant scholarship, and artistic feeling, that it seems out of place among the 'popular' and coarser literary wares of the day. Such, in the fullest sense of our eulogium, is the book before us, whose noble feelings and graceful expressions of spirited and refined thought are well heralded by the quiet elegance of its form. . . . Those for whom it was written will find it a most rare and choice book."

The present edition is as dainty as the appreciators of the accomplished Sidney could desire.

II.

A BORN STORY-TELLER.

The Man in the Moon,

AND OTHER PEOPLE.

By R. W. Raymond. Square 16mo, extra cloth, bevelled boards, handsome gilt and ink-stamped sides, gilt edges. $2.

Twenty of Ros Raymond's best stories, some published before, others not. They embrace Fairy Stories, Wonder Stories, Christmas Stories, Thanksgiving Stories, Stories of Adventure, of War, of Love, Stories about Dogs, about Birds, about Boys, and about Girls—and all bright, witty, engaging, and delightful.

The Brooklyn *Eagle* says: "His tales have won great popularity by their wit, delicate fancy, and admirable good sense."

Sent, postage paid, on receipt of price.

JUST PUBLISHED.

The Law of Injunctions.

BY FRANCIS HILLIARD,

Author of 'The Law of Torts,' 'The Law of New Trials,' 'The Law of Contracts,' etc. Third edition, 8vo, 837 pages; price $7 50.

That the work may continue to deserve the approbation as well as the favor with which the previous editions have been received by the profession, and that it may fully keep pace with the law, it has been, in this edition—the third—very carefully revised, rearranged, and in some portions rewritten; about one hundred pages being added, and a very large number of cases, particularly the most recent, not merely cited, but the points which they decide briefly stated.

KAY & BROTHER, LAW PUBLISHERS,

The Nation.

NEW YORK, THURSDAY, DECEMBER 17, 1874.

The Week.

THE accounts from Washington generally agree that members of Congress are taking the first step towards reforming the currency, by coming to the conclusion that there ought to be some decided financial legislation at this session of Congress, and it is believed, though we do not well know on what grounds, that there is a growing inclination to provide some scheme of resumption, preceded by a process of contraction, the inflationists to be satisfied by free banking, to which we presume there would, on a specie basis, be no objection in any quarter. The more banks the better, provided they redeem their notes in coin. Why not follow the example of the French, let us suggest, and direct the Secretary to withdraw greenbacks at a certain slow rate, until they are at par with gold? This point reached, two results would follow. There would be then no object in turning greenbacks into gold if resumption were attempted, and gold would be able to find its way into commerce, and contracts payable in coin would lose their terror for "the debtor class." In short, the public mind would be greatly soothed, and prepared for the final step. The French have done just this thing within three years of a frightful war, and, instead of its having ruined the country and beggared the debtor class, business is rapidly reviving, and the coming year is one of extraordinary promise. Kelley's 3.65 scheme still hangs in suspense, though, of course, there is no doubt about its fate. The bill and some of his own talk, such as that the taking away of the legal-tender qualities from greenbacks "would be the greatest crime since the partition of Poland," have led some people who have not known him long—Mr. Bonamy Price for one—to the conclusion that he is insane; but this is a mistake, as Mr. George Blunt testifies in the *Evening Post*. He is as sane, for all ordinary purposes, as he has ever been. That he is mentally unsound in one sense there is no doubt, but his unsoundness is not at all uncommon, and consists simply in a wild receptivity towards new schemes of social and political improvement, and a wild contempt for all facts outside the range of his own experience. We ought to add, too, that we have never met a man of the present day who advocated unlimited issues of paper-money who had not a queer look about his eye. It is undoubtedly a sign in our time of some cerebral disturbance, however slight.

The first business of importance which occupied the attention of the House of Representatives was a bill introduced on Tuesday by Mr. Beck, of Kentucky, to prohibit Senators and Members of Congress from acting as counsel or otherwise in suits or proceedings against the United States. Gen. Butler at first objected, and desired that the bill might be referred, but afterwards reconsidered the matter, explaining that he had no "personal interest" in the bill, as he "was generally on the side of the United States." The bill was then passed. This was followed by a debate on Judge Kelley's 3.65 convertible bond bill, which was begun by the Judge himself. He was followed by Gen. Butler, and the bill was opposed by Messrs. Garfield, Dawes, and Phelps. The general result of the debate was damaging to the bill, and Judge Kelley is reported as being hopeless of any measure of radical relief being passed this session. The Pacific Mail subsidy investigation has been undertaken by the Committee of Ways and Means, but nothing of importance has been discovered beyond the fact that $750,000 was paid to Irwin, the San Francisco agent, for which no account has been rendered. This Irwin was very active in the matter of the subsidy, and the money was paid in large amounts, one check being drawn for $650,000. The testimony of Mr. Russell Sage, late President of the Company, throws a good deal of curious light on the management of the Company during the subsidy period, when Mr. Stockwell was "the Board and all hands," but we must apparently wait until Irwin confesses before much is known about the subsidy in detail.

The history of the Pacific Mail subsidy is as follows: In 1865, the Postmaster-General was authorized by Congress to make a contract for the Asiatic mail service, and a contract was entered into with the Pacific Mail Company. With this old contract as a lever, the Company, in 1872, went to Congress and got another act passed, authorizing the Postmaster-General to make new terms for an "additional monthly mail service," with a proviso that the ships for this additional service should be American-built, iron, and of not less than 4,000 tons register. There was also a condition that the iron steamers should be inspected and reported to the Secretary of the Navy and the Postmaster-General before acceptance, the Government being thus amply protected. The price to be paid was $500,000 a year. At this rate the Company apparently have been drawing money ever since, though it appears from a report recently made by the Attorney-General that the Company has not had till very recently any vessels even remotely answering the description in the act. What the Postmaster-General and the Secretary of the Navy have been doing we do not know, but the Attorney-General, giving the contract a very liberal construction, has come to the conclusion that as the Company have actually furnished additional mail service of some sort, and have been building *bonâ fide* American ships of the kind required, the contract ought to be treated as still existing; and considering that it is as yet unsettled whether the contract was not obtained by fraud and corruption, the whole proceeding is, to say the least, benevolently loose, and is not calculated to impress anybody favorably with the President's plan of reviving industry by a vast system of subsidies of the same sort.

The Northern Pacific Railroad has published an explanation of the legislation it asks of Congress. The bill now pending provides for a new issue of 5 per cent. 30-year gold bonds to the amount of $50,000 a mile, the entire issue to be delivered to the Treasury, the interest of these bonds to be guaranteed by the United States, and the bonds themselves to be issued to the road—the Government taking back the old defaulted $7\frac{3}{10}$ bonds and the land-grant as well, to the amount of about 50,000,000 acres, the latter to be sold at a minimum price of $2 50 per acre as collateral security, and also retaining some of the new 5 per cent. bonds besides; creates a sinking-fund, and gives Congress the right to fix the rates of transportation, provided that such Government control shall not impair or defeat the security given by the Act. The points in favor of the bill are: 1st, That instead of being a continuance of the land-grant policy, it is a surrender of the "largest and best grant Congress ever made"; 2d, The bill breaks up the monopoly of transcontinental traffic; and, 3d, That the road does not ask for a dollar of public money, but merely "encouragement."

If the Northern Pacific road were now coming before Congress for the first time, there might be some reason for regarding an arrangement like this as advantageous to the Government; but we trust that no one is so blind as not to see what, under present circumstances, it means. It is merely a surrender of a road which private capital has found too heavy an enterprise, in return for a guarantee of interest. The Government is not asked to guarantee the principal, because once embarked in the scheme there will be no getting out. When we look at the artful clause tacked to the bill for getting the support of the Granger members of Congress and the Cheap Transportation party, it is impossible not to see that the passage of such a bill would be but the entering wedge in a

vast scheme of Government railroad aid, which would be as much worse than a land-grant policy as perpetual jobbery and corruption are worse than occasional over-liberal subsidies to important undertakings. This Northern Pacific scheme is only one of a great number which are coming before Congress this winter, and of course they all lobby together.

The recent disturbances in and about Vicksburg have been explained by a statement issued by a number of the principal men of the place, including the United States District-Attorney, the United States Commissioner, and a Republican State Senator. They say that the county officials in 1873 were nearly all negroes; that A. W. Dorsey was illegally appointed by Governor Ames to succeed T. W. Cardozo as circuit clerk, Cardozo and Dorsey being both known to be guilty of "issuing false and forged certificates"; that George W. Davenport, a negro, was elected chancery clerk, and as such was sole custodian of the public records and county seal, and on its being discovered that large amounts of "forged warrants" were in circulation, was called upon to make a report to the Board of Supervisors, but persistently failed so to do, even refusing to permit an examination of the records; that Dorsey, Davenport, and Cardozo were all indicted by the grand jury, composed of ten blacks and seven whites, and during the enquiry into the offence the books of the county treasurer and other valuable records bearing on the case were stolen, as well as other documents used in the investigation, and which had been put in charge of the sheriff—Crosby. He, being also tax-collector, had given a worthless official bond, and the Board of Supervisors refused to order a new one. In November, taxes "amounting to five per cent. of values" being due, the sheriff and tax-collector being insolvent and bondless, the Board of Supervisors having failed to take any measures against him, public records necessary to convict indicted officers having been stolen from the custody of the sheriff, and these officials being apparently banded together for mutual protection and plunder, the taxpayers demanded the resignation of the officials, and Crosby resigned and the others fled.

Thus far there had been no violence or bloodshed, but Crosby, evidently understanding Southern politics, at once went to Jackson, the State capital, and had an interview with General Ames, which resulted in a gubernatorial proclamation calling upon the taxpayers to "disperse," while at the same time Crosby issued a card denouncing the whites as ruffians and barbarians and calling the blacks to his aid. The negroes thereupon marched upon the city and were very quickly driven off, with fifty or a hundred killed and wounded. The city is now quiet, and all accounts agree that there is no fear of any further outbreak. But the carpet-baggers are by no means satisfied with this state of things. Ames has called an extra session of the legislature "to discuss the questions arising out of the Vicksburg troubles," as one correspondent says, and it is generally expected that they will discuss them in very much the way that a mass-meeting of citizens might discuss the questions arising out of a difficulty between two fire-companies. It only needs a split in the legislature to ensure interference and troops from Washington, and the beautiful spectacle of self-government would then be complete. The most encouraging thing about this Vicksburg business is the extremely temperate and restrained tone adopted by the whites, the language used in their appeals to the public offering (as at New Orleans) a refreshing contrast to the wild declamation and turgid bombast which we are accustomed to meet with in political papers.

We made, in the *Nation* of November 26, on what proves to have been imperfect information, some strictures on Mr. E. P. Smith, the present Indian Commissioner, in which we described him as having recently fallen very much in the opinion of the true friends of the Indian. We have since satisfied ourselves, both by our own enquiries and the testimony of his friends, that our remarks did him great injustice, and that what we said of the distrust of him entertained by the best friends of the Indians was exaggeration at least, and was only true, if true at all, of one or two of those who come under that category, and with these his differences are of long standing. It is right to add that we have never seen stronger expressions of confidence in a man's honor and integrity than have been called out by our remarks, that they have come from persons in whose judgment we have implicit reliance, and that he himself has made no complaint.

The most interesting incident of the week has been the appearance of the Great Scandal before the Courts. First came Miss Proctor's suit against Moulton. There was, as we pointed out some time ago, no defence to this, and accordingly the Beecher side were very anxious to get it tried before Tilton's suit against Beecher, for the sake of the discredit it would bring on the Mutual Friend. The Tilton side were, for similar reasons, very anxious to have it postponed, and for postponement, accordingly, Moulton's lawyers fought desperately. Relying on a technical error of the most trifling kind in the complaint, they appeared when the case was called and asked for its dismissal. Failing to obtain this, they asked for delay, on the ground that they expected to obtain the dismissal, and therefore had made no preparation for trial, and pretended that there were witnesses on whom they relied and whom they could produce if they got time. Finding the Court inexorable, however, they surrendered, and retracted and apologized, and agreed to pay all costs and expenses before a referee, Ben Butler appearing, as was fitting, to make Moulton's amende. We think the feeling of the public will be one of sincere regret if Moulton should get off so easily. The case called, if ever case called, for some form of corporal punishment over and above a mere pecuniary fine. Not only had he printed, in defiance of warning and explanation, a most disgusting libel on Miss Proctor, for the purpose of bringing discredit on Beecher, but he had done so without the poor excuse that Miss Proctor was in some way connected with the Tilton-Beecher controversy, which she was not in the remotest degree. To guide him in this delicate business, he had chosen one of the most disreputable lawyers in the country, and had acted under his advice, and when the case came to trial, after he had had months for reflection, far from apologizing and repenting, he quibbled and argued and pretended that all he needed to make good his beastly imputation was time, and only begged for mercy when his last chance of escape was gone, and then produced an old pettifogger without character or sense of decency to make the necessary verbal atonement. The criminal indictment is still hanging over him, however. If Miss Proctor lets him go on that, she will be guilty of a great wrong against society, admirable as has been her course with regard to the civil suit.

There has been much discussion for several days about "the bill of particulars" which the Court below refused, on the ground of inability, but which the Court of Appeals decided that the judge might grant if he pleased, and which he has granted accordingly, giving the Beecher side, however, somewhat less than they asked for; and against his decision Tilton has again appealed. As we consider the great object of this suit, as far as Beecher and the public are concerned, to be the vindication of his character, and the pecuniary result—the damages are laid, we believe, at $100,000—to be a matter of small if of any importance, we shall not be restrained, by the fact that the case is still pending, from giving some reasons for thinking that the victories of his lawyers about "the particulars" are not real victories for him, but checks, and we believe that we only express the opinion of the great majority of thinking people. The action which Tilton has brought is a proceeding which has long been considered the disgrace of Anglo-Saxon jurisprudence—inasmuch as it is based on the theory that a man can be compensated for his wife's infidelity by a round sum in money; accordingly, the law looks at the injury as it would at the loss of a horse, or the burning of a barn, or the breach of a contract to sell flour at a certain price. But as it is an injury which has,

from its very nature, to be proved by circumstantial evidence, or is, in other words, inferred rather than witnessed, it is one of which it is easy to accuse a man, and against which it is difficult for him to defend himself. Ordinarily, therefore, it is but right and safe that when it is laid at any man's door he shall be informed when and where it was committed, with such minuteness that it shall be easy for him, if innocent, to show at least the improbability of the charge. The law means, in short, that money shall not be got out of him lightly by pursuit of this description, and any defendant who is thinking only of his purse does well to ask for the "bill" before the trial, and tie the plaintiff down to it as closely as he can on the trial.

But Mr. Beecher, we take it, is not thinking of his purse at all, but of his fair fame, and of the welfare of various things more important with which his fair fame is bound up. This being the case, a man with whom he has been for many years on terms of intimacy and intercourse, at whose house he has been a constant visitor—not, be it remembered, a chance acquaintance, or an unknown assailant or blackmailer—comes and says, "I am led to believe by letters of yours and by letters of my wife's, by her confession to me and to other persons whom I shall produce, by your avowal to me and to other persons whom I shall produce, and by various suspicious circumstances which I shall prove, that your relations with her have been criminal, and I ask you to meet the charge in open court." Now, a man who cared nothing for his character, and wanted to save his money, would reply to this: "You may have the witnesses and documents which you mention, and you may be able to prove many suspicious facts about my relations with your wife, of whom it is true I have long been an intimate friend, and whom I have been in the habit of seeing almost daily for years at my house or yours; but I shall nevertheless not reply to your charges, or take any notice of them, and shall endeavor to get you turned out of court, unless you will name the exact day and the place in which you think I committed adultery. If you will select some day for the commission of the offence, I will cheerfully answer you, but if I should succeed in proving an alibi, will set you at defiance, and will treat all your witnesses and proofs as of no account, and will maintain before all the world that, as I did not seduce your wife on the day you yourself pointed out, I could not have done so on any other day, in spite of my frequent enjoyment of her society; and in that way you will be brought to shame and confusion." Surely this is not an answer for a minister to make, or to allow a paid lawyer, whose main duty is to get for him the full benefit of the legal procedure, to make for him.

The *Tribune* recently called attention to the fact that the late Mr. Greeley had subscribed to the stock and bonds of the Northern Pacific Railroad, but had paid up in full and in hard cash, although he supported the railroad in his paper, unlike some of his contemporaries, who took their stock and bonds and agreed to give the scheme their editorial support, and then, on being found out, declared falsely that they never gave it, thus piling one sin on top of another. We happen to have seen a transcript of Mr. Greeley's account, and find that the *Tribune's* statements about it are correct. Nevertheless, even to this arrangement some moralists might take exception. It is very doubtful, indeed, whether it is allowable in an editor to promote in his columns a financial venture in which he has himself a personal interest and without letting his reader know that he has it. But then it must be admitted that when Mr. Greeley began his career as a journalist, the judicial position of the newspaper was much less firmly established than it is now. To the old editor his paper was a machine for promoting certain ends which he thought desirable—some political, some commercial—and he pushed them as a lawyer pushes the interests of his client, making no secret of his advocacy. Under this theory, an editor was the better of a little stock in a new road or other scheme, as it quickened his zeal in its support. Mr. Greeley, however, was more likely to back his opinion with his money than to back his money with his opinion.

The recently published instructions of Mr. Fish, given to General Cushing in February last, show that the attitude of the Government on the Cuban question has undergone no material change. Mr. Fish reminds Mr. Cushing that it has long been seen that Cuba must, sooner or later, become one of the family of American Republics, with political forms and a public policy dictated by her own aims and interests; that "the desire of independence on the part of the Cubans is a natural and legitimate aspiration," as being Americans; and that "while such independence is the manifest exigency of the political interests of the Cubans themselves, it is equally so that of the rest of America, including the United States." That "the ultimate issue of events in Cuba will be its independence, however that issue may be produced, whether by means of negotiation or as the result of military operations, or of one of those unexpected events which so frequently determine the fate of nations," it is impossible, Mr. Fish continues, to doubt; he assures Mr. Cushing that the President is not an annexationist; that he will preserve our neutrality; that the policy of the United States with reference to Cuba is for the present one of "expectancy," but "with positive and fixed convictions as to the duty of the United States when the time or emergency of action shall arise."

Mr. Forster, the President of the Council under the Gladstone Ministry, the author of the Education Act, and perhaps the most effective and constant advocate of the North during the war, and who has been considered the probable successor of Mr. Gladstone in the Liberal party, has been travelling for some months in this country, and on Monday night delivered an address at a reception given him by the Union League Club in this city. He is an orator of the school of which Cobden was the best specimen—and which since his time has become the fashion among English politicians—that is, a plain talker who attempts nothing which a man may not appropriately say with his hands in his pockets. Speeches of this kind are by no means striking rhetorically, but they are wonderfully *effective*, in the ordinary sense of the word, and for purposes of simple persuasion can hardly be surpassed, and the emotions they rouse do not pass away when the hearer leaves the room. In this vein Mr. Forster is very successful, though the line he chose was perhaps not that best calculated to bring out his powers. He spoke mainly of his own experiences at the South, and urged the union and sympathy of all English-speaking peoples in the service of progress. It was all very good and telling, but we imagine the audience would not have been sorry to hear him a little more fully on his political experience at home. He gave one hit at the Pope, apropos of education, and dwelt strongly on what is the great lesson of all politics, the necessity of "individual self control," to make a successful and happy state.

The controversy over Gladstone's pamphlet has been raging fiercely in the columns of the English press, but curiously enough the combatants are almost altogether Catholics, and the London *Times* offers them, as might be expected, the largest hospitality. As far as producing general agreement on matters of doctrine and discipline is concerned, the promulgation of the dogma of infallibility has not, if we may judge from the present debate, done a particle of good. There appears to be the widest diversity of opinion still, both as to the validity of the dogma and its effect if valid. Mr. Archer Shee, a Catholic barrister of repute, maintains, and not unsuccessfully, against Mr. Johnson, Archbishop Manning's secretary, that the so-called Decrees of the Council of the Vatican were not the Decrees of the Council at all, but of the Pope, the Council only approving, and were not adopted and promulgated in proper form. There is also great dispute as to whether the Pope was infallible before the Council or not—the Ultramontane party maintaining that he was, and that the Council only recognized an existing fact; the others maintaining that he was not, and citing pamphlets, declarations, and catechisms of English and Irish Catholic Prelates, prior to Catholic Emancipation, however, and of eminent theologians in various ages, totally repudiating his pretensions in this particular.

THE BEST REMEDY AGAINST INFLATION.

IT is now nearly fifteen years—that is to say, nearly half of a generation—since gold and silver coin ceased to be the ordinary daily money of the country. Middle-aged men remember how coin passed current, and still look upon "legal-tenders" as a temporary expedient which will come to an end in a year or two, if not to-morrow. But of men below thirty, amounting to about one-third of the voters of the country, substantially all have never handled gold and silver as money. On the contrary, they have grown up, instructed by the observation of every day and hour, to believe that the paper notes of the United States constitute the only money wherewith the American citizen can pay his debts or grow rich. To be added to these young citizens are about a million of the freedmen, in whose minds the paper-money of the North is associated with freedom and their civil rights. Besides these two classes are several hundred thousand of immigrants, who have found in the new country that Treasury notes are the only medium of exchange, buying all that gold and silver buy in other lands, and forming or appearing to form an integral portion of American institutions. Taking all of these classes together, we have, or in a very few years shall have, as a majority of our voting population, persons who have had no experience of money in this country except in the form of paper, and who know of the precious metals as money only from the traditions of others or the teachings of newspapers. It is therefore apparent that time and "letting well enough alone" are slowly or rapidly (as people prefer to think) drifting us away from the point where resumption appeared to the masses as a necessity or as a matter of course. People who have been trained by all their little personal experience to regard coin as an exotic, will not be ready pupils in learning to esteem it as a necessity. On the contrary, such persons are only too ready to be taught by Messrs. Morton and Ferry that the Government can make money out of paper, and that printed promises to pay which have lasted in a broken condition through all of the holders' business lives, may live on unperformed *ad infinitum*. From such experiences and teachings it is but a step to the logical conclusion, that if the Government can make money out of paper at all, it may just as well, while it is about it, make money cheap and plenty.

But while there has been this drifting of the masses, there has at the same time been going on a better education of the reading and thinking portion of the people, and a clearer and stronger discussion of the principles of finance in business circles. It is not to be supposed that our intelligent classes will ever fall into the barbarism of believing that paper is money, or that broken promises rank as high in the commercial world as good faith. The business community has grown rapidly in a clearer perception of the evils of our present system and of the necessity of returning to the only standard of value known to the world at large. Unfortunately, the business community is but a minority in the voting community, and takes a smaller part and exercises a less influence in politics than its numbers entitle it to exercise. Unfortunately, also, it has unconsciously fallen into the error for a long time of setting a premium on inflation by lending the nominal dollar, when it was worth say eighty cents, with full permission to the borrower to repay it if he can when it gets to be worth but sixty. As a policy, this has been suicidal, and the best lesson that can be taught to the masses, and the best remedy that can be devised against inflation, and the only lever that can be brought to force the country into resumption, is to bring this policy absolutely to an end.

We have before this shown to our readers (*Nation*, No. 476) that there are two kinds of lawful money in this country; that the men who accumulate wealth by industry—the capitalists, and business portion of the community—have the right to buy and sell, to lend and trade, in whichever kind they prefer—in gold and silver, or in the protested paper of the Government; that loans payable in gold can be enforced and collected in gold; and that the Supreme Court of the United States has unanimously settled the matter, which has now become an unquestioned right. Whenever this right is decisively exercised—not in the daily hand-to-hand affairs of life, where it would be found inconvenient and ineffective, and where the law that the poorer money will drive out the better holds true, but in all "time transactions," whenever a loan is made or a credit given—then the premium will be shifted from inflation to resumption, and the game which our demagogues now find it easy to play will become a losing one. So long as men accumulate money by work and thrift, and lend it to men who, when they borrow it, expect with the aid of Congress to return but half of it, just so long we are helping, and in fact bargaining to perpetuate, the present evils. So long, too, as the business world goes on ignoring the coin in which it may, if it pleases, exclusively trade, just so long it is teaching the less-informed portion of the people that gold and silver need not exist. Mr. Ferry and Mr. Morton have been preaching so long that Congress can do what it pleases with the money of the country, that half the community really begin to believe that there is no other money than this which Congress puts up or down at pleasure. Is it not time for our chambers of commerce and boards of trade to begin to assert that the accumulating industry of the country has, in fact, the power to force resumption, just as the people of California forced a gold circulation, and that if resumption is thus forced it will be largely at the cost of those borrowing and speculating classes who are now clamoring for inflation? As to the necessity or advisability of this action by the representatives of trade and commerce, let us look squarely at the situation.

The indications are strong that the inflationists will be numerically stronger in the next Congress. Their gains will not be alarmingly great, nor sufficient to enable them to do anything worse than keep up the mischief which was a notable characteristic of the last session. On the one hand, we shall have, in all likelihood, a Congress not able to pass anything over the Executive veto, but able to beat around the bush with endless devices like the measure (the only measure, we believe) associated with the name of Mr. Dawes, and also able to act negatively by refusing to go forward towards resumption; on the other hand, we already have the positive assurance of the President that he will remain immovable in the position which he has all along occupied. The country, as a political whole, will remain in the valley of indecision; Congress will not allow it to go forward towards resumption, the President will not allow it to go backward towards inflation. Men, as individuals, have made up their minds here and there, though not universally, but the aggregated decision of the people is unknown. Furthermore, the party lines have not been drawn with regard to this question, and each party is in the same condition of uncertainty which characterizes the body politic. The more quiet leaders are doubtless cursing in their hearts a question that brings dissension into their own ranks and awakens harrowing doubts as to which may prove the stronger side—or, in other words, which leap may be the best to take. It is in such times as the present that the difference between the party leader and the real statesman becomes plain. The former is now endeavoring to postpone discussion and suffer events to shape a party policy; the latter would seize upon such an interval to instruct and mould the public mind. If Mr. Webster were with us, we can readily fancy how much he would do in the course of the next two years to bring the country to a wise decision. In the absence of such men—men whose utterances are imbued with great power and listened to with profound reverence—it behooves every man who appreciates the importance of this interlude and the far-reaching consequences that lie beyond it, to do something, knowing well, as every one must know, that he has no one person in the field to whom he can confide the whole responsibility of the impending battle. The raid of Messrs. Kelley and Butler, undertaken at the opening of Congress in the face of the veto of last winter and with the sound of the President's message still in their ears, shows how little hope there is of their being deterred from attempting and reattempting to carry out their schemes. Mr. Cox, when in reply he deprecated an agitation of the subject in Congress because it would disturb and alarm the business part of the community, uttered what in ordinary times would be excellent and truthful counsel.

But at this time the business community knows two things perfectly well: First, that though inflationists may re-enact all the follies of the past session, they cannot carry any substantial evil over the veto of the President; second, that though Congress follows Mr. Cox's advice to the letter, nevertheless the trouble is not at an end, and a day is approaching when it will come up and a decisive battle take the place, in all probability, of the present drawn one. That time will be when the next general election in 1876 enables the majority of the people to choose a Congress and a President who will no longer disagree on the only great political issue of the day.

In the brief interval which now remains of little over a year for men to make up their minds as to the course which the Government of the future shall pursue, the indications are not altogether hopeful. Such men as Morton and Butler will continue to do their utmost to mislead the ignorant and lead the unprincipled. The trivial accessions to their side in Congress will be magnified and used to draw doubting politicians to the conclusion that "expansion" will be the winning card in the game of parties. The speculative and gambling classes, who do not live by real industry, but who hope to grow rich by the nominal rise in prices, as a few men grew rich in the lucky days of the war, will be earnest supporters of any scheme that will help their own fortunes. Such men indeed look back upon the rebellion as one of the happiest times the country ever saw, and if Messrs. Morton and Butler were to try getting up a gigantic war to make money plentiful, they would have a considerable following ready to aver that war is a great national and financial blessing, and able to prove it by precisely the same facts with which they now prove inflation to be beneficial. Delusions, too, of this character have reigned for a time in almost every people; and when the delusion of being able to make something out of nothing by legislation has obtained a foothold among a people, the disasters of experience generally have been required to eradicate it.

If, through the inaction of the business world, inflation should be forced upon this country in 1878, which is the earliest time at which it can be put in motion, three results would probably follow. First, the increase of currency would be speedily absorbed by augmented values, and the interval of transition would be much briefer than in 1862 (when people foolishly clung to the old idea that a dollar is a dollar), and money would become consequently as scarce as it was before. Second, this would be followed by plans of further inflation, at which the business community would be aroused into doing what can be done much more easily now. The only credits would be gold credits, the only loans gold loans, the only bank discounts those of gold notes. Third, the labor of resumption would be incomparably harder than at present; the difference between gold and paper much greater; and the increased quantity of paper to be redeemed a serious loss to the Government.

"ORGANS."

THE untimely decease of the *Republic*, the paper which was set up some months ago to express in a semi-official way the views of the Administration and its immediate adherents on public questions, has a good deal that is tragic about it, as far as its principal conductor is concerned. That a man of as much experience of politics and of newspapers as Mr. Norvell the editor had, should have supposed it possible to start a daily morning paper in this city at a time when a successful daily is worth millions, and when there are four already in possession of the field, without any other claims on popular attention than its being the mouthpiece of the leading politicians of the party in power, and with a capital which in his dreams only reached $500,000, and in fact only $40,000, is a curious though sad illustration of the power of the press over the imagination even of persons long familiar with it. The failure of the enterprise, however distressing in some of its aspects, is valuable as establishing more conspicuously and firmly than ever two facts of considerable importance in relation to journalism. One is, that when politicians so deeply desire an organ as to be willing to set one up for the exclusive use of the party, it is a sure sign that the party is in serious danger of extinction. The other is, that the public mind is so fully made up that the position of a newspaper ought to be a judicial one, that all attempts to make a paper avowedly partisan can only be saved from commercial failure by large capital, extraordinary ability, and well-established prestige.

"Organs" took their rise when the sole use of a newspaper was to communicate intelligence, and when men in power found it convenient to have a channel through which they could let out certain things which they wished to be spread abroad. Out of this kind of relation to the government a small paper, which did not object to the humble rôle of a sort of official gazette, from which the earlier newspapers indeed differed but little, could of course always get a livelihood and perhaps a little of the dignity which comes from having or being supposed to have state secrets to keep. But the gradual addition to the "news-letter" of the sermon known as a "leader" or "editorial article," made the relation more and more difficult and finally impossible. The more pompous, portentous, and prophetic in their character the editor's comments on public affairs became, the less disposed was the public to allow him to retain the position of a paid agent of the state. It began to feel towards him as it would have felt towards the town-crier if he had put on a gown and bands, and insisted on accompanying his announcement of thefts and losses with homilies on the vanity of life and the right use of opportunities. The editor had, in short, to conduct his business in a manner befitting his newly-assumed duties as a prophet, and to pretend at least that his utterances were wholly independent and were due simply to a desire for the public good, as a prophet's ought to be. It is now very rare indeed that a Government is able to induce a well-established newspaper of the first class to act as its organ in the proper sense of that term, except by working on the vanity of editors. Almost all editors are a little sensitive about the imputation of being mere commentators or critics, and a little desirous of being thought "practical men" by those engaged in the actual working of political machinery. The "old editor" in this country in fact preferred to be thought a working politician, and liked to use his paper as a piece of political machinery for producing solid party gains, and in this way to be received into the circle of "workers" and "managers" as one of themselves; and to retain this position he was always willing to "write up" any view they suggested. His successor, though he cares less about being "a worker," and is able to secure the attendance of politicians at his office without running after them, is nevertheless more or less flattered by the confidences of men in power, and it often takes only a small amount of these confidences to make him surrender the judicial position and accept that of an advocate, and stand by them through thick and thin. But no leading journal has ever tried this position in our day very long without being forced out of it by the demand of the public for impartiality, and the consequent difficulty of avoiding giving offence in official quarters. Every Administration does things either through its chief or subordinates which will not bear defence, and which its judicious friends prefer to pass over in silence. But a journalist cannot keep silent. The Government may require him to hold his tongue, but the reader demands that he shall speak; and as the public supplies the sinews of war, and pays for the prophet's robes, he is sooner or later compelled to break with the Government, and to reproach it for not listening to the advice of its friends in time. It was indeed a conspicuous and somewhat ludicrous catastrophe of this sort which led to the establishment of the unfortunate *Republic*.

Moreover, in a country in which the press is free and newspapers abound, a party which contains a majority of the people cannot fail to have the support of a large and influential portion of the press. Its conductors, though prophets, do not wear camel's hair, nor is their diet locusts and wild honey. They form part of the community, live among the voters, and share, to a greater or less extent, their prejudices and expectations and sympathies. Every party, therefore, is sure, as long as it has a strong hold on the public, of having a strong hold on the press, and of having a con-

siderable number of the most influential editors among its defenders. One of the sure signs that it is losing its hold on the public is the defection of the press or its growing lukewarmness. Newspapers cannot, perhaps, build a party up or pull one down, but when you see the newspapers deserting a party it is all but proof that the causes which dissolve a political organization are at work. The successful editors may have no originating power or no organizing power, and no capacity for legislation, and they may even want the prophetic instinct; but a certain intuitive sense of the direction in which the tide of popular feeling is running is the principal condition of their success, and an anxious politician may therefore always safely credit them with possessing it. If they had not had it, their papers would not have succeeded.

We pointed out in these columns in April, 1873, that the Republican party was losing the support of the press; that the principal papers which had supported the party were either abandoning it or finding fault with it; and that one at least of the prominent politicians of the party, Mr. Schofield of Pennsylvania, had openly declared his opinion that this fact was the forerunner of defeat—that no party could stand long against the hostility or indifference of the daily press. Now, he may have attributed more influence to the daily press than it deserved, but he could not have overestimated its value as an indicator. The persons who manage the party in Washington, however, could not be got to see this. They were even so besotted as to fancy that the hostility of the press was the result of sheer malevolence on the part of the conductors, and that a little wholesome restraint in the way of coercive or minatory legislation might be profitably applied to them, and they bethought them of supplementing this by setting up openly an organ in New York to defend them and the party, and to supply enough "outrages" from the South to enable them to avoid legislation on all the more important problems of the day. The open establishment of an organ is, indeed, almost the sure sign that the work of disorganization is far gone and that public support is falling off. It is an almost invariable accompaniment of the last days of a party, and is apt to hasten its end. The *Republic*, as everybody knows, injured its employers from the first day, both by its principles and its practice, and its disappearance will of course be universally taken as a sign that the case is hopeless. The setting up of an organ is a grave symptom; the death of the organ for want of funds indicates, it is generally held, a fatal turn in the disease and the complete failure of remedial science.

If the incident or its lessons should result in establishing better relations between political men and the press, the sacrifice of the unfortunate projector of the *Republic* will, however, be a very small price to pay for a great gain. We do not, as our readers know, set up to be champions of the press, and have certainly never shown any disposition to underrate its defects or shortcomings. But there is one thing which no candid and careful observer can avoid seeing, and that is that the press of the country, as an instrument of discussion and popular education, has undergone within twenty years an improvement nothing analogous to which is to be found in the class of politicians. The newspapers are now, in the vast majority of cases in all our leading cities, conducted by men who are familiar with the leading ideas of our time and with the latest advances in science and the arts, including the art of government, and who write under the influence of these ideas and these advances, and who have consequently got a standard of efficiency in legislative administration which has not yet made its way into the political class. The result is that, after making all possible allowance for the carelessness and recklessness and dishonesty of reporters, and the personal biases and enmities of editors, the men who carry on the Government, excepting a few experts, have become objects of criticism on the part of the daily press, the deprecatory and contemptuous tone of which is not wholly unjustifiable or unnatural, and politicians repay this contempt with a hatred which is none the less fierce for having no adequate means of expression. The Republican party is suffering just now more than parties have ever had to suffer from a similar agency, because it has failed in two things on which newspaper critics are, in common with educated men all over the world, tolerably well informed—and that is the reform of the currency and of the civil service. Such a currency and such an administrative machine as we have, and such attempts to mend them as we have recently witnessed, are just the things to excite the scorn of "men of the closet," and the Washington statesmen have been made to feel it bitterly. They might have met it successfully if their morality was higher; but the less said the better about morality by men whose principal leader has been begging an American constituency to send a man like Butler to the national legislature. The best consolation we can offer them is by saying that we know of no case in late years in which a man properly equipped for the work of legislation by attainments and character, and who has pursued the public good honestly, and without reference to party or personal interests, has not had the support and approval of the newspapers; and, at the risk of seeming invidious, we shall mention as an illustration the rise of Mr. Schurz during the last six years, through much obloquy, several mistakes, and many unfavorable conditions, into a position in the confidence of the best portion of the community such as no other public man, with so few adventitious aids, can be said to enjoy. He has, nevertheless, had a good deal of newspaper abuse to encounter, but it did not hinder him, while a good deal of honest newspaper applause has helped him and will help him, and will help every man like him who offers the community enlightened service.

BISMARCK AND HIS ADVERSARIES.

BERLIN, November 19, 1874.

THE meeting of the Reichstag has pushed the Arnim affair somewhat into the background. About the real merits of the case the public does not know any more now than it did in the first days. Nevertheless, public opinion is pretty much made up as to the main question of practical political interest. The papers more or less hostile to Bismarck have tried to persuade the public that, in case the Chancellor is not sustained by the court, a great crisis culminating in his overthrow is inevitable. The public, however, have very decidedly refused to see this affair blown up to an importance it evidently does not have by its own merits. We have still a right to say, "There are judges in Prussia." If Bismarck's proceedings against his ex-ambassador are not justified, the court will so decide, and the people will accept the judgment, regretting that the Chancellor has suffered himself to be carried away by his rash and irritable temper; and that will be the end of it. Happily, the times are past when the mere fact that it is a count and an ex-ambassador who has been arrested and drawn before the court, could have been made a cause of impeachment of the man who has dared to strike such a heavy blow against the old adage, "Small thieves are hanged, big ones are let run." Even a Vienna paper severely lectures those of its contemporaries which have ventured to wink at an assault of this kind against Bismarck. On the other hand, if the court decides for Arnim, and if it should appear that the proceedings against him have been based on frivolous pretexts, the public would not consider it a *slight* offence, nor would they be very much astonished to find Bismarck guilty of it, for they know well enough how intolerant he is of any opinion differing from his own; as long as he is at the helm, we must expect to hear every now and then his *quos ego*, sometimes to the detriment of the public welfare, and always offending our attachment to a constitutional form of government. Yet in general one would be disposed to judge him leniently. We have suffered too long and too severely from the lack of one strong and paramount will not to submit with good grace now to the rather too large dose of this blessing. It is unjust, and proves a superficial view of the case, to attribute that entirely or principally to the conquering power of success. After the attempt on his life in Kissingen, Bismarck said to the party serenading him in the evening that the work to which all his faculties were devoted could not be destroyed by the pistol of an assassin. We fervently trust so, but we are not so blindfolded as not to see the dangers threatening it on all sides; and we have learned enough in these last eight years not to forsake too easily the man without whom the ravens would still be croaking around the Kyffhäuser, telling the awakening Barbarossa to sleep on another hundred years, and then ask again whether it was time to rise and to build anew the German empire.

You remember Henry Clay, when taken to task by his angry constituents about some measure supported by him and disapproved by them, asking an old marksman and friend of his whether his gun had never snapped; and then, being answered in the affirmative, putting the further question whether

he had then broken it and thrown it into the bush, or whether he had tried it again? Now, if the marksman was right in trying Henry Clay again, though he had reason for once to be dissatisfied with him, will the Germans not be right in trying Bismarck again though it appear that he has wronged Count Arnim? And there is no doubt that, in this question, the Emperor will think as the great majority of people do. Whether it is true that the missing despatches are only used as a pretext by Bismarck to take revenge on and rid himself of a rival, is as yet impossible to tell. Likely it certainly is not, though it is probable that Arnim has been intriguing against Bismarck with a view to supplant him. But there is no reason to suppose that Bismarck considers his own position so weak as to be tempted to defend himself and to take revenge in such a manner. Arnim undoubtedly deems himself by far the superior of the Chancellor, but thus far neither the Emperor nor the people seem at all disposed to be of the same opinion. Even if it be acknowledged that Bismarck would have done well to follow the advice given by Arnim during the Œcumenical Council—which, however, is a very debatable question—that would not prove that it would be wise to replace Bismarck by Arnim. Bismarck's value we know, and we deem ourselves justified in being rather satisfied with him, though we have to put up with a good many things. Arnim we know thus far only as a highly-gifted and dexterous diplomatist, the value of whose services is, however, greatly impaired by his inclination to intrigue "on his own hook" where he ought to obey orders; he dares to play an independent part where he has no right to do so; and—as the German proverb says—he who has not learned how to obey does not know how to command. It is as good as an established fact that he had his hands pretty deeply in the overthrow of M. Thiers, though Bismarck was far from wishing any change in the government of France. How far the case—it is to come up between November 27 and December 3—is to be argued in public cannot be known beforehand. Everybody wishes it to be as public as possible, but one is forced to acknowledge that grave reasons of state may, to a great extent, require secrecy. Some doubts are entertained as to the willingness of Arnim to do justice to these reasons. An "old diplomatist" advises him in the *Kreuz-Zeitung* to throw all considerations of state interest overboard.

It is a rather curious sight to see the motley mixture of Bismarck's adversaries on tiptoe watching the issue of what they persist in considering a duel between the Chancellor and the ex-ambassador. All of them, with the exception of a very small minority, have but an indirect interest in wishing Arnim success. They do not desire to see Arnim at the helm, but they want, by hook or by crook, to get Bismarck away from it. The *Vaterland* has been so lost to all shame that even the attempt of Kullmann had to serve as a weapon against the Chancellor just as far as it was possible without bringing Dr. Sigel in too dangerous a conflict with the laws; and the *Germania* has pretty well kept pace with the *Vaterland*. Their rage has of late been rather increasing than decreasing, and that is easy to be explained. On the one side there are here and there signs of their own ranks beginning to break badly, and on the other side the state pursues its way with utter calmness, but also with utter firmness. The defections in the camp of the Ultramontanes are as yet few; it is endeavored, with more or less success, to throw a veil over them. Their immediate effect is to make the faithful ones press together more closely, and return to the charge with more determination than ever. Every week there are some new cases of priests returning in defiance of the laws to their former flocks, preaching and administering the sacraments. Whether the May laws are, in every particular, exactly the thing one could wish them to be, is and will remain a controvertible question; but as long as they are laws they have to be executed. The priests have played a bold and high game to find out whether the government is really determined to do this under all circumstances; they know now that it is. The other day a refractory priest who, by means of a door in the church not known to the authorities, had several times escaped the policemen, was arrested in the church right after finishing the divine service. As the community offered resistance, the policemen had to draw their sabres. The outcry against this "outrage" has of course been immense. Indeed, what is to become of the world if even in the shelter of the walls of a church wilful and persistent law-breaking is no longer to be tolerated! The contest will last long and will be hard, but every day it becomes more certain that the state is to conquer at last. The Swiss adage says, "*Uebergewalt wird nicht alt*" (Excessive force does not grow old). With the Ultramontanes passion is every day more and more overpowering cool reason, and, in consequence, they are sawing with their own hands the branch on which they sit. Some ladies belonging to the highest aristocracy are at present publicly collecting money for a costly banner to be presented in the name of "the German Catholics" to the Holy Virgin of Lourdes. The manner in which it is done, and many a broad hint in the Ultramontane papers of Germany as well as of France, leave no doubt that it is meant to be, and also to be taken by friend and foe as, a symbolic pledge that France may count upon the friendship of the German Catholics. The bow that is overbent breaks. Those of the priests who know no home and no fatherland but Rome will find out that they have overbent the bow if they hope to make the great mass of the Catholics traitors to their country; in this they will not succeed, neither soon nor at any time, no matter how diligently and how cunningly they work to sow the dragon seeds of strife. The times of the Rheinbund—whether concluded by the princes or by the people—will never again return.

The Empire is about to forge a new weapon which it will be able to use with terrible effect against all its wayward sons at the only time when there could be any real danger of its falling a victim to their parricidal hatred—*i.e.*, when it is attacked from without. There is hardly a doubt that the bill presented by the Bundesrath to the Reichstag about the Landsturm will in some manner become a law. The Landsturm is not to be, as some persons have tried to make the public believe, under a new name the revival of what was called the second *Aufgebot* of the Landwehr; it can never be a means of attack, it is only a means of defence. All men between 17 and 42 years of age, not belonging to the army or navy (that includes the Landwehr), are to belong to the Landsturm, which can only be called into service when the country is invaded or when there is imminent danger of an invasion. The Landsturm, like the army, is to stand under martial law. That would be the powerful fetter on the arms of all those who would like to stab their country in the back while it is attacked in front from without. The *Neuer Socialdemokrat* is already now heard lamenting—"In future, therefore, a government can quite legally call into service the Landsturm, and so put all its adversaries under martial law. In Russia it has for a long time been the custom to put all turbulent people into the army of the Caucasus." None but the adversaries, not of the government, but of the country, have to apprehend any great danger from this power, as the calling into service of the Landsturm is to be restricted to the two cases aforesaid. The main view of the Government in introducing this bill is, of course, not to provide a means of defence against the "German Catholics" or the social democrats; but whosoever in a moment of great danger to the country should harbor any desire to excite civil strife or even civil war, would find himself before a wall, the mere attempt to overleap which might cost him his life.

Correspondence.

MOABITE INSCRIPTIONS.

To the Editor of the Nation:

Sir: There has been some question as to the genuineness of the Moabite pottery (collected principally by Mr. Shapira), in this country as well as in Europe, the reasons for which I think may now be dissipated by a statement of the case as it appears in the light of newly discovered facts. There are now extant about 1,000 incriptions, which arrange themselves in four or five systems, representing as many ages or dialects. They were gathered from various parts of the country east of the Dead Sea. The inscriptions are found almost exclusively on articles of pottery or terra-cotta, of which, including jars, images, and a number of indescribable objects, there are in all about 15,000, and of which there are no duplicates, either of the inscriptions or the objects.

For convenience the systems of writings are named: 1, the Zain; 2, the Tsaddi; 3, the Cursive; and 4, the Ligatured, besides which there are one or two minor subdivisions not named.

1. The zain system comprises about one-third of the whole number, and is so named because, in addition to the letters of the Greek alphabet, there is one called zain. Tsaddi, samech, kaf, and teth are always wanting, and gimel sometimes. Lamed is turned to the left.

2. The tsaddi system includes nearly one-half of the whole number, and in about one-third of these that letter is written reversed, while in the other two-thirds it stands as usual, turned towards the right. The lamed follows the tsaddi in position, turned with it to the left or to the right respectively. Several irregular letters occur in this system whose power is not yet known. Gimel is always present, and zain and samech have peculiar forms.

3. In the cursive system, the letters incline to the left. Gimel, samech, and tsaddi are wanting, and lamed is sometimes replaced by resh. Alef, beth, and yode are often reversed, and shin turned up sideways.

4. In the ligatured series there are twenty-two letters, including one supposed to be teth. The mode of connecting the letters was probably optional with the writer, and it is quite artistic in effect. The intention in some cases seems to have been to combine the letters of each word in a separate group or monogram. A small series of inscriptions have the letters supplied with bases, like the lower arm of L.

Six, or it may be eight, of the letters are uniform in all the systems, and also in the Mesho stone; all the others in the several systems differ from each other and from those in the Mesho stone. One or two forms are found in the Mesho stone that are not in the pottery, and three or four forms in the pottery are not on that monument. The several systems are so distinct and consistent in themselves that any one of them may be determined from an examination of a few of the peculiar forms of the letters, and there is no one of the inscriptions that mingles any two of the systems. The antiquity of some of the forms of the letters may be established by their identity with those on the coins of the ancient rulers, as for instance on those of Antigonus, King of the Jews, dated 38 to 36 B.C.; of Hyrcanus I., 135 to 103 B.C.; and of Eleazar, high-priest of the Jews, who caused the Pentateuch to be translated into Greek for the Ptolemy, about 270 B.C., and on all of whose coinage are found letters closely resembling, and on some forms identical, with those in the Moabite inscriptions, and written both in the normal and the reversed positions.

An analysis of the literal structure of the inscriptions, when compared with the language of the Hebrews, the Greek, the Phœnician, and also with the English, presents a complete and consistent whole. The number of letters in 180 inscriptions was nearly 5,000, of which alef formed a proportion of 12½ per cent., daleth 8⅛, he 6⅛, gimel 3, and so on. This coincidence could hardly have been the result of invention. The grammar resembles that of the ancient Egyptians in some points; as, for example, the verb has only two conjugations. It is believed by some scholars that the Hebrew verb originally had but two conjugations, and that the five additional forms were quite a recent improvement. A more thorough knowledge of the Moabite inscriptions may possibly determine not only the age of these supplemental additions, but also open the way towards more definitely dating some of the writings in the Old Testament.

The various hypotheses advanced from time to time concerning the manufacture of this pottery have been abandoned one by one, until the matter now rests between Mr. Shapira, Selim el Gari, and the Bedawin. Of Mr. Shapira, one of the best scholars in Europe has said he is a good Hebrew scholar, knows German, is almost unacquainted with Greek or Latin, not well read in the modern languages, and is deficient in the knowledge and ability requisite for the invention of the inscriptions or any one of the systems. Selim is a Greek, knows German, French, and the Bedawin Arabic, simply from association. In conversation with him I found his knowledge of ancient history or of the Hebrew language entirely inadequate to the work ascribed to him, being only such as is found floating about in vague traditions in Oriental society. It would be difficult to tell how, in a country where the only fuel is dry grass or sun-dried dung gathered in handfuls, enough could have been accumulated to bake such considerable amounts of pottery. The Bedawin being devoid of literature, and having no other knowledge of history than has come down to them orally, it seems strange indeed that they should have had the consummate knowledge of the ancient language and religion of the Phœnicians, Hebrews, and Greeks that would have been essential for the construction of these inscriptions.

Concerning the alleged forgery or manufacture of the pottery, it may be said that so far it has been impossible to imitate, even approximately, the color, texture, or density of the antique specimens, although many attempts have been made at Jerusalem and elsewhere, by others as well as myself, with clay from every known deposit in Syria and Egypt. The tints range from drab to dull buff, dull orange, and russet. The peculiar appearance of the pottery can be produced only by time and the elements. The time-marks on these antiques are sure and unmistakable, and have been intensified by a long exposure to the salts which abound in the dry soil of Moab. Some of the objects fell into fragments soon after exposure to the sun and air. Many have to be soaked in water a long time to remove the destructive agents. Some were covered with flowers of salts, which rose to the surface while they were under the eye of the artist at Berlin. This peculiar process may be seen in the Metropolitan Museum, where the water has dropped on the heads of some of the Di Cesnola antiquities, causing the salts to rise to the surface of the soft limestone, where it is deposited in minute flowers.

Dr. Birch of the British Museum says that he believes that there have been a few genuine objects in pottery or terra-cotta found in Moab, some of which he has seen, bearing inscriptions, but that in his opinion, judging chiefly from reports, the great majority of them are forgeries. I have examined some of the localities where the pottery is found, this year, taking great precaution against deception, with such results as have satisfied myself and others that the articles found in those places are antiquities. Those found elsewhere, whether inscribed or not, bear the same evidences of antiquity, in size, color, texture, density, and general appearance. Successful searches have also been made by Pastor Weser and Mr. Serapion, Chancellor of the Prussian Consulate, Jerusalem, and by a committee of savants sent on an express errand by the Prussian Government. An underground chamber at Masooh, near Heshbon, when explored under my supervision, gave the following results: The floor had been raised eight feet near the entrance, and six at the further side. On exposing a perpendicular face of this drift, there appeared a large number of strata of earthy deposits, leached through and through by many floods, and silted up from a depth of five feet in regular succession, without evidence of recent disturbance. At this level fragments of Roman pottery were found like that in Cyprus and elsewhere, dated five or six centuries before Christ. Below two or three feet more of drift on the rock-bottom were fragments of Moabite pottery bearing letters or parts of letters. A niche in the rocky side of the cave contained a whole jar, seventeen inches high, the body eight inches broad, bearing an inscription in four lines, in letters about an inch and a half high, extending around the object. There was also in the niche a disk of pottery six inches across, having on one side of it a crescent and seven shallow holes. The niche was closed by cement harder than the limestone of the cave.

An examination of several cisterns in Moab showed that the uneven rock of the sides had been levelled up with a rubble composed of cement or mortar mixed with broken stones and pottery. A similar finish was observed by Mr. Henry Maudslay, Member of the Institute of Civil Engineers, London, in five cisterns on Mount Zion, Jerusalem. The antiquity of one of these cisterns may be estimated from the fact that it had been filled with stones, and a wall twelve feet thick built over it, which had evidently formed part of a fort mentioned by Josephus, the stairs of which, cut in the rock, were uncovered this season. These cisterns were disused, and were undoubtedly antiquities in the time of Josephus, and may have been built many centuries previous. Both pottery and glass were found in all of them, like that of Moab as to age and consistency. The many ruined cities, temples with lofty porticos of stone, the thousands of cisterns, the roads paved with squared blocks, and other evidences of a high state of civilization, including the inscriptions, which were written in honor of their dead and of their gods, indicate that the broad and fertile plains of Moab were once occupied by a cultured people, whose alphabet, language, and religion left a profound impression on surrounding nations, traces of which may still be found on monuments in Egypt, Assyria, Greece, France, and notably in the literature of the Hebrews.

A. L. RAWSON.

Notes.

COLLEGE students are not the only class in the community who stand in need of "general rules for punctuation and for the use of capital letters." A concise manual of 20 pages, bearing this title, has just been prepared by Mr. A. S. Hill, and published by C. W. Sever, Cambridge. We can recommend it highly to those who feel the want of such guidance. In another edition a few pages might usefully be added to exemplify some of the typical exceptions to the rules laid down; and the value of the colon in Continental punctuation, as a sign of equation of thought, might be noted. ——General George W. Mindil, former aide-de-camp to General Kearney, has printed for private distribution a limited number of copies of his reply to General Joseph E. Johnston concerning the battle of Fair Oaks. It was worth writing, and will repay reading, though exception may be taken to the writer's conclusion, that "in indecision and vacillation of character General Johnston is much like General McClellan, and in neither can we discern a single trait of the successful soldier."——The Greville Memoirs, whose revelations have created a real sensation in England, are to be served up in specimen extracts in the "Bric-a-brac Series" of Scribner, Armstrong & Co.——We regret to see it announced in the *American Naturalist* for December that this excellent periodical is not yet self-sustaining. The five hundred additional subscribers which it needs ought certainly to be found in as many families having sons and daughters who show a taste for natural history. The programme for the forthcoming year is specially attractive.

—The valuable Squier collection of American antiquities (from Peru, Central America, and the Mississippi Valley), now and for some time past on temporary deposit at the Central Park Museum, is in the market, and is, we fear, likely to be sold out of the country. There are a number of institutions which would be glad to purchase it if their means permitted; and it would perhaps find its most appropriate destination in the National Museum at Washington. There are special reasons at this time why the money will be hard to raise from any source; but the sum required is, we believe, not so large as to tax private munificence unduly. The collection is one which, taken as a whole, could not be replaced, and that it ought to remain in

this country must be the conviction of every one who knows anything about it.

—When we wrote last week concerning the settlement effected between Mr. Ezra Cornell, the Trustees of the University which he founded, and the State of New York, we little supposed we should immediately be called upon to chronicle the death of Mr. Cornell. This took place on Wednesday week, at Ithaca, which had been his home for forty-six years, and where was begun that mechanical and agricultural training which made him the eminently fit patron of a college in which instruction in these branches was a condition of national endowment. The mechanical part of his training, indeed, bore much earlier fruit in the share which Mr. Cornell had with Professor Morse in introducing the electric telegraph, and in perfecting the apparatus for the transmission of messages. This phase of his career is little known to the generation which has honored him as an educational benefactor, but it may be questioned whether he accomplished more for the good of his countrymen in the latter rôle than by the intelligent self-seeking which furnished him the means to indulge his philanthropy. In the case of the telegraph he certainly "builded better than he knew"; in founding the university, his idea was so far in advance of anything that has ever yet been realized in institutions of this kind, that his work was by comparison a failure. No one with half a million dollars, or with fifty times that sum, is going to found off-hand a university at which "any one may learn anything he desires"; and there was nothing in the start which Mr. Cornell gave to his creation which either did or could bring it nearer his idea than the older colleges like Yale and Harvard, by furnishing it something which should take the place of their accumulated wealth, traditions, and culture. There was, if we may say so without the slightest disrespect to his memory, in his belief in the power of mere money to accomplish what he sought, something of the "short-cut" notion to which "self-made men" seldom rise superior, and which is a main cause, perhaps, of that scattering of endowments which we daily have to deplore. To abstain, however, from praising the liberality of his conception simply because it was one which would not have been entertained by a highly-educated man, possessed of even greater means, would of course be absurd. He will be permanently and prominently remembered among those Americans, already too numerous to recall by a single effort of the memory, who have returned to the public the wealth which they had acquired by their own exertions. He had the good sense to make this return in his lifetime, and the good fortune to witness the contagion of his example leading to the still further endowment of his university on a scale hardly less munificent than his own. Mr. Cornell was born at Westchester Landing, N. Y., in January, 1807, and consequently had not quite completed his 68th year.

—On the night between Tuesday, December 8, and Wednesday, the 9th, the planet Venus passed over the disc of the sun for the first time since 1769. The sun being below the horizon both in America and Europe, expeditions for observing the transit were fitted out by our own Government and by the principal ones of Europe. Many of the stations are beyond the reach of telegraphic communication, so that news has yet been received from but three out of the eight American stations—the Japanese and Siberian stations in the northern hemisphere and Hobart Town, Tasmania, in the south. The American parties were unequally divided, only three being sent to the north, while five were stationed in the south. The explanation of this course is that the chances of good weather are much greater in the north than the south. In Siberia and Northern China an entirely cloudy day is rarely seen during December, while at Nagasaki there is a large preponderance of fine days. On the other hand, the whole of the southern hemisphere where the transit is visible is unfavorable as regards weather, and the station on Kerguelen Land is in the midst of the stormiest ocean on the globe. Although this course was no doubt wise, in consideration of the prospects presented by the several stations, the imperfect despatches thus far received lead to the fear that it may not prove to have been fortunate in respect to the results to be obtained from the photographic operations. At Vladivostock, the Siberian station, the sky was hazy during the first hour, and the despatch from Professor Hall mentions that thirteen photographs were taken. As there were three hours remaining, during which the weather was clear enough to admit of photographing the sun, and the photographs could be taken at the rate of thirty or forty per hour, it may be hoped that some error has been made in telegraphing the number. If the number is correct, then only seventy-three photographs were taken at two out of the three northern stations. On the other hand, one hundred and thirteen photographs are reported from the Hobart Town station alone in the southern hemisphere. We thus have more photographs reported from one out of the five southern stations than from two out of the three northern ones. We may hope that observations at Peking were so successful as to make up for the failure in Siberia, but reports from that station cannot be received for several days.

—If we consider the optical observations, the result may be different, as these were very successful both in Japan and Siberia, while it may be inferred that they failed at Hobart Town. It is on these observations that the English have placed their main dependence, while the American Commission has regarded them as secondary to the photographic determinations. For this reason the hot discussion in England respecting the relative merits of "Halley's method" and "De l'Isle's method" has no significance as applied to the operations of our parties, a result which it may be well to explain for the benefit of those newspaper-writers who occupy themselves with the discussion, as well as for the public, who must often have wondered whether our Commission was in accord with the Astronomer-Royal or with Mr. Proctor. The difference between the two methods is simply this: In Halley's method, the time at which Venus enters upon the solar disc, and the time at which it begins to leave it, are both carefully observed, and the difference of the two times shows how long Venus was in crossing the sun's disc at any station. The solar parallax is given by the differences of these durations, as determined at the several stations. In De l'Isle's method, the parallax is determined by the differences between the absolute moments of Greenwich time at which Venus was seen either to enter upon or to leave the sun at the several stations. If both contacts are observed at two stations, the observations can be treated by either method, as the only difference will be that to use De l'Isle's method the longitude of the stations must be known beforehand, while the application of Halley's method would amount practically to supposing the longitude unknown, and determining it from the observations of the transit of Venus itself. With the modern means of determining longitudes, there is no doubt that the observations will be treated by De l'Isle's method, although made according to the plan of Halley. We may expect, in the course of the coming week, to hear from New Zealand, Campbelltown, and Peking. We shall then be in a position to form a much better judgment of the measure of success which has attended the operations of the American parties.

—As good news as any that has come from Germany for a long time is that the abominable script of that myopic nation is finding a Nemesis in the enhanced price of German books. According to the *Academy*, the well-known publisher, B. G. Teubner, of Leipzig, explains how this came about, in a deprecatory circular addressed to whom it may concern. The Leipzig compositors have during the past year obtained an increase of wages—the mathematical, of 100 per cent.; the classical, of 40 to 50 per cent. Of course the cost of corrections has gone up:

"German authors seem to send their manuscript to the printers in a perfectly disgraceful state. The printers have the greatest difficulty in deciphering what is sent to them, and hence the first proof-sheets are full of the most troublesome mistakes. Many authors seem to look on the first proof sent to them as a kind of fair copy, on which they add and change *ad libitum*. The result is, as the firm of Teubner points out, that the expenses are doubled and tripled; and as the author declines to pay for the additional outlay caused by his own carelessness, the extra charge must of course be made up by the price of the book."

This difficulty, comments the *Academy*, has long since been met in England by publishers allowing a certain sum for corrections, and deducting anything in excess of this from the author's honorarium. When it proceeds to ask, "Are we to suppose that in Germany the honorarium is in most cases so small that nothing can be deducted from it?" it hits the nail on the head, for such is incontestably the fact. The scale of intellectual remuneration in Germany is sufficiently indicated by the pay of university professors. We lately heard of a translator (into English) of a standard but difficult German novel who received for the labor of months the sum-total of 60 thalers; the work being done, we believe, for the Tauchnitz or Asher series. It would seem now as if the type-setter were more than ever to be envied, on the score of remuneration, by the author, who still maintains the luxury of a script which at its best deserves to be banished from the face of the earth. Next to the metric system, is there anything whose general adoption by civilized mankind is more desirable than a common text, as well literary as typographical? In their printing the Germans are partly emancipated; their handwriting yet awaits the reforming influence of the effete Latin races.

—Adolf Ebert has just published at Leipzig the first volume of his great work on the literature of Western Europe during the Middle Ages ('Allgemeine Geschichte der Literatur des Mittelalters im Abendlande'), bearing the separate title, 'Geschichte der Christlich-Lateinischen Literatur von ihren Anfängen bis zum Zeitalter Karls des Grossen.' The old school of literary historians always regarded their subject as an isolated phenomenon, without beginning or development. It has only been of late years that a

school has arisen whose principle is to explain what now is by what was, and which, in the case of the literatures of Europe, recognizes the importance of establishing the continuity between them and those of Rome and Greece. To this school Ebert belongs. He says in his preface that the Latin literature of the Middle Ages begot the different national literatures, furnishing them examples and models in the various departments, and by its influence perfecting their poetic as well as prose forms. He begins, therefore, with the Christian Latin literature, all whose writers (how many known to us only by name!), from Tertullian to Beda, are presented in order, with concise analyses of their works, which enable even the unlearned reader to follow the author's argument with ease. The subject is of far more general interest than is usually supposed. The theologians of the early church have seldom been considered from a literary point of view, and we are accustomed to believe that a few hymns compose all the belles-lettres of this period. Ebert has treated his subject in a masterly manner, and his previous contributions to the history of mediæval Romance literature assure us that the rest of his work will be equally well done.

—We have received the first volume of *Italia*, the new German-Italian periodical which we noticed quite fully from the prospectus in our issue of September 10. We find the high expectations there expressed more than realized, while the typography and arrangement of the work are admirable. Especially noticeable is the outspoken critical spirit manifested in every page, and which makes us suspect the authors are not without hope that their articles will be read in Italy. Gallenga, for instance, in an excellent account of an excursion into the Abruzzi and a visit to Aquila, says it would be a delightful summer residence if there were only decent lodgings to be had, but he adds: "Until the railroad has worked wonders, let no mortal have the cruelty to recommend it even to his deadliest enemy." It is pleasant, by the way, to find that municipal extravagance is not confined to America. In the above-named town a theatre has been built at a cost of a million francs, the Monte di Pietà pledging all its funds until the opening of the theatre. The building alone has, however, absorbed all the money, not leaving a penny to furnish it, while there is nothing left in the treasury to relieve the needs of the suffering poor. Still sharper is a note by the editor, who complains that a certain German work has not been translated into Italian, and says: "It would, indeed, not be easy to find a publisher even for a single volume like this, in a land where books are no longer read and fewer bought." This independent tone is renewed in an article by Barzellotti on the literary movement in Italy since 1848, from which one may see how the same causes work in literature and in politics. The literature of Italy down to 1848 was essentially political and polemical; after the regeneration of the country, Italian writers were very much in the same condition as our Republican party after the war: their occupation was gone. This explains the evident falling off in literary activity, and there has not been time for the development of a new national literature. The other articles are all good. The first, by Bonghi, on the church question, is on a subject of increasing importance, and will be read with interest here as well as in Europe. We can thoroughly commend the whole number to our American readers, and some portions especially to our political economists.

—Students of the Romance languages will be glad to learn that a journal devoted especially to Italian philology has been established at Imola, under the direction of L. Manzoni, E. Monaci, and E. Stengel, with the title, *Rivista di Filologia Romanza*. It appears quarterly, and has just completed its first year. The four numbers before us contain several articles of interest to students of literature as well as to mere philologists. Among these are an article by Stengel on the "Provençal Lyric Manuscripts of Florence and Rome," one on the "Vatican MS. 3214," containing a precious collection of old Italian lyrical poetry, from which twenty-nine pieces are now for the first time published. For those interested in folklore there are two country-stories in the Vaudois patois with glossary, and ten Sicilian fairy-tales collected by Pitrè. The distinguished scholar, P. Rajna, contributes two fragmentary romances of chivalry which he has lately discovered, and Theophilo Braga, of Lisbon, has an article on the "Portuguese Origin of Amadis de Gaula." The last number contains a most valuable artice, by Monaci, entitled "Uffizj drammatici dei Disciplinati dell' Umbria," giving an account of dramatic representations (or *laude*, as they are called), written probably in the thirteenth century, and represented by one of the bands of penitents then so common under the names of Flagellanti, Disciplinati, or Battuti. The *laude* are much older than any dramatic composition in Italian which we now possess, and the article is a most welcome contribution to the history of the drama in the Middle Ages. Besides these literary works there are several articles on Italian philology, by Prof. U. A. Canello and others, reviews, etc. Taken altogether, this new journal is not unworthy to stand by the side of the *Romania* and the *Jahrbuch für Romanische und Englische Sprache und Literatur*.

HART'S GERMAN UNIVERSITIES.*

THE two different institutions, the American College and the German University, agree, of course, in the one main point that they are concerned about books and study, and in the broader features that they have professors and students, examinations and degrees. But here all close resemblance ends. The slightest examination into details shows the wide discrepancy in the plan, point of view, object, and method of the two. The American college we know is, or till within a few years has been, merely a boarding-school somewhat enlarged. It assumes that its pupils are under personal as well as intellectual tutelage, and claim from it something like parental care and authority. The students are, as compared with other countries, young, and are often treated as if they were even younger. They are lodged, fed, sermonized, and watched over by the college like children of slightly elder growth. Their professors hear them recite lessons; give them marks and prizes; reprimand, suspend, or expel them for idleness; grant them leave to go out of town; enquire into their hours and habits, their downsittings and their uprisings. In the essential matter of study, the college assumes a partial right at least of selection and direction, and laying down the broad principle that there are a certain number of things which no intelligent youth should fail to know, besides a liberal selection of other things among which he *must* make a choice, proceeds to "funnel them in," as a German would say, in parental and solicitous fashion. Having so brought the student to his twenty-first birthday and his bachelor's degree, the college proper has done with him, and relegates him to his especial school, scientific, theologic, juristic, or what not, which urges him henceforth to narrow his range of work and concentrate his energies on the essential matter of acquiring practical knowledge for his life pursuit.

All, or most of this the German university precisely does *not* do. The work of the American college it leaves to the gymnasium, receiving the young *Primaner* at eighteen or nineteen nearly or quite as well drilled in all essentials as the American A.B. one or two years later. School and preparatory training, it is assumed, are finished; henceforward the youth is supposed to know his own mind, to have fixed on some definite line of labor and thought, and to be ready to set about it with intelligence and determination. But not for this is he condemned to the narrowing labors of the professional school and the technicist merely. The university assumes that the future lawyer, physician, or civil functionary is to be a thinker first, and a specialist afterwards. Though it teaches him one thing, or one closely related group of things, it does so from the ideal standpoint; it aims to give the literature, the broad principles and views, the science, in brief, of the branch in question, leaving to the courts, offices, and hospitals of later life to crystallize the young theorist into the technicist and practical worker. It sets high models, and works by exacting methods. In the official theory, it should be the student's aim to master the *omne scibile*, all attainable information, however recondite or collateral, in his science, in order if possible to extend its boundaries in his own future investigations. Should he choose to settle down later into the mere practising barrister, or police functionary, or woods and forests inspector, very well; but the university has done its best that he have the chance to be all of this, and a philosopher into the bargain. As a natural consequence, the minuteness and research in study inculcated both by precept and example in the German lecture-room are something almost incredible to our Western haste and superficiality. The professor undertakes not so much to teach the student directly all which is or may be known in any given science, as to select special points in it, and show him with what infinite pains and elaboration they may be worked up, leaving him to take the hint in his own private labor, at his own times and seasons.

In order to this, the university leaves him the greatest possible liberty of choice in all his personal habits, as well as in the minutiæ of his course and habits of study. He lodges where he pleases; eats, drinks, sleeps, or travels much at his own pleasure. A certain reasonable number of lectures, bearing more or less directly on his professed department, he must subscribe for, and something like the pretence of regularity of attendance must be certified by the professor's signature; but in the selection of his professors, the question whether he shall diligently copy after their dictation in the class-room, the actual number of absences he may allow himself, the text-books to be consulted, and the like, a freedom of personal choice and taste is allowed which, to the average American professor, would seem like self-destructive license. He may change, and indeed is rather invited to change, his university once or more during his course. His beer-drinking and what comes of it, the university cares nothing about, so long as he has not broken any one's windows or made an unpleasant spectacle of himself on the street. Even in the to our notions dubious pastime of duelling, the government is careful not to disturb him so long as his honor does not need unreasonably

* German Universities. A Narrative of Personal Experience. By James Morgan Hart. New York: G. P. Putnam's Sons. 1874.

frequent vindication. He may "spree it" pretty steadily for the first year or so, and practically is very apt to do so; but the university quietly bides its time, sure that before long the brooding shadow of that terrible final examination will tone him down, and that the last half of his course at least will be given less to *Tief-quart* and unlimited beer, and more to the Pandects, the "Pure Reason," or the laboratory. If his "Kneiping" or duelling exceed traditional moderation, if he break windows, heads, or the public peace, the university has primary jurisdiction over him. For minor offences, it may suspend, fine, imprison, or expel him, and only in extreme cases turns him over to the secular arm. In and through all, the authorities leave him as much as possible to himself, only setting before him the paramount necessity of getting sooner or later such a thorough and comprehensive knowledge of his subject as shall bring him well through the final examination. This it conducts fairly and generously, but comprehensively and severely, and from its result the young doctor may expect a more or less benign influence on his future steps in the various walks of life which, still under the watchful eye of the state authorities, he now contemplates. Without some fair degree of success in this his final trial, professional life (*i.e.*, state service) in any form—and only the German mind can conceive what manifold forms state service may be made to assume—is closed to him. Failure in a final attempt, however, is not fatal, and the ranks of any given university can show an appreciable number of "mossy heads" whose lack of brains or moral resolution has left them plodding on among their juniors after the coveted "doctor title," without which they must be content to settle down on the farm, in the workshop, or the counting-room.

Such in brief is the main distinction between the American and the German systems, which forms a prominent feature of Mr. Hart's book on German University life. In this excellent little volume the author has told with singular clearness, fidelity, and simplicity the story of his student life in Göttingen, Leipzig, and Berlin. The memories of many an old *Studiosus Georgiæ Augustæ*, now plodding away in the ranks of our own literary or professional men, will bear ready testimony to the photographic truth of his descriptions. We could have borne a little more of the humorous and delineative element in certain parts of a subject so open to picturesque treatment; but Mr. Hart's chapters on the *Kneip*, the *Mensur*, etc., show that the descriptive faculty is not so much lacking with him as held in abeyance by the earnestness with which he pursues the serious and more important phases of his subject. The untechnical reader will hardly enter into the affectionate minuteness of his disquisitions on the Roman law, but the friend of education will recognize in these passages only a consistent part of the author's plan to tell the American reader, in the most vivid and realistic way, exactly how German students study. Many of his collateral remarks and conclusions are not only admirable in themselves, but bear most effectively on the "burning questions" of the day. When he lectures college benefactors on their mania for putting heavy sums into dormitories and museums instead of properly endowing the more directly educational forces of the college, he will have the grateful assent of every half-starved professorling from Maine to Missouri. The retort of the fresh-water Don who replied to some pæan of praise over a new architectural wonder in the college grounds—"Yes, we asked for *bread*, and they gave us a *stone!*" aptly comments this chapter of the book. Nothing, too, could well be better or more suggestive for students of modern languages than the author's account of his method in learning German.

Some of Mr. Hart's inferences must fairly be considered, as he doubtless would himself view them, as open questions, and intended to provoke discussion. Such, for instance, would be his half-hesitating advocacy of the *Paukerei*, or duelling system; or, to take a better case, his evident admiration of the distinctive features of the university lecture as at present adopted throughout Germany. How much criticism, satire, and opposition this peculiar feature has always excited both here and abroad, no student of pedagogy will need to be reminded. There will always be an evident objection in common sense to the system which keeps the student for some hours a day painfully copying from the lecturer's lips at railroad speed a treatise which might better be studied from the printed page at home, and which in practical fact may very often be had in good compact shape at the university bookstore. Every German scholar will remember Mephistopheles' sarcastic advice to the freshman of the period:

> "Five hours a day, you understand,
> And when the clock strikes, be on hand!
> Prepare beforehand for your part
> With paragraphs all got by heart,
> So you can better watch, and look
> That naught is said but what is in the book:
> Yet in thy writing as unwearied be,
> As did the Holy Ghost dictate to thee!"

But on a theme so interesting to the technical mind, it is easy to pass from the reviewer to the controversialist.

CHILDREN'S HOLIDAY BOOKS.*

IV.

WANT of space and the large number of books coming in at this late date to be noticed before the holidays, make it necessary to restrict the remarks about each to a small compass—smaller in some cases than the books deserve. 'The Old Woman that Lived in a Shoe' is a very bright story, and suggestive of much matter for reflection to parents and guardians; but, being obliged to come to the point quickly, we must confess to having found it a work of misdirected talent. The story is that of a poor grandmother in a little old country-house left with the care and support of six grandchildren. One day these three boys and three girls collect in the garret and amuse themselves by saying in turn what each would like to have happen to him. The pretty Florence wishes some lady would drive past, stop for a glass of water, take a fancy to her and adopt her. Joe wants to be a sailor, be shipwrecked, and finally come home laden with gifts for the family. Hal desires to become a florist; Kit, a violinist; Charlotte—the romp—to run away. The remainder of the thick book is a showing how all these wishes came true. Now, what can be out of the way in such innocent pastime, especially when it is carried out in the spirit of kindliness, cheerfulness, and all charitableness? and when the children are so clever and funny? and when the grandmother is such an example of love and patience? when, in short, the intention of the book is so obviously good? Simply this, that all egregiously false pictures of life not openly called fairy tales or allegories are hurtful, like all other false things, and the more cleverly they are made to simulate reality, the greater is their power for harm. The history of the successful castle-building of these poor children is calculated to stimulate the habit of castle-building in other children. Nor will all the sense of the ludicrous, as shown by the author, to the saving of many of her romantic scenes, secure the young reader from the unfortunate effects of her deliberate instruction in the making of sentimental "situations." Take, for instance, that of Charlotte—the once ugly, now a beauty, who has run away alone to New York with her portfolio of remarkable pictures under her arm—taking her stand in a fresh white dress in front of a picture store on Broadway. She is unknown and penniless—almost despairing; but she "closes her red lips resolutely together," and accosts the first fine-looking man that issues from the shop and shows him her portfolio. Of course he is a connoisseur, at once recognizes her genius and acknowledges her beauty; and from that point her life becomes a success. Delightful dream to any dissatisfied girl—to take her compositions, sketches, or embroidery under her arm, run away to New York, stand on Broadway and look her prettiest; out of the multitude of fine-looking and benevolent gentlemen that may chance to come along, surely there will be one to give her merits "recognition." There is no love-sick nonsense in the story, which should be mentioned among its better points. On the whole, it is a surprise that a book can be so good as this and yet no better. Joe is much funnier than most boys in books of this character. The Van Wyck scenes are unpardonably low comedy.

The 'Slavonic Fairy Tales' are a collection of folk-tales which, to quote the preface, are "not the peculiar property of children any longer; the gravest scholars do not disdain to examine and discuss them." Like all such lore, they have a curious interest attaching to them as a repository for national superstitions, and as exhibiting often the crude original traits of a people unmodified by education and experience. The resemblance between the traditions of all nations is an old observation, and the present volume only confirms the truth of it. Children will probably take greater pleasure in Grimm's 'Valiant Little Tailor' and 'Four Accomplished Brothers' than in the Russian 'Story of Gol Voyansky' or the Bohemian 'Wise Judgment,' with which the first-named are in substance identical. But even if the Slavonic legends are shorter and divested of so much circumstance, they have a fresh charm of their own which does not seem to have lost by the translation. The volume will be a curious and pleasant possession for old and young.

We referred last week to a certain kind of animal stories, now so numerous as to form a class by themselves, in which the resemblances of the animal characters to human beings were so exaggerated and distorted as to be both untrue and unpleasing; and we now have a good illustration of what we meant in the pretty little volume entitled 'Mrs. Mouser; or, Tales of a Grandmother.' It is open to about all the objections that could be urged against a story of this kind. It is a history of several cats, containing no *natural* history of any cats, no good cat anecdotes, nor anything of any possible worth about the feline race. A cat family and their friends are por-

trayed, the black brother being a hardened villain, the white sister a beauty with admirers; and all the possible vicissitudes of cat-life are drawn upon to make material for the story. Within these narrow limits there is sufficient invention to satisfy only the crude desires of a young child, while the treatment of the subject is in coarse and clumsy forgetfulness of childish innocence and tender-heartedness. The black cat is a "thief, a beggar, and a murderer," and all the strong language used about him is mixed up with the jocularity that might be appropriate to a real cat's proceedings, but is wholly inconsistent with the cat provided for the time being with human traits. "The more the cat fought and struggled, the more he clutched and bit him; but the poor creature might just as well have submitted quietly, and I dare say he would have spared himself some pain if he had, for, as he must have known from the beginning that he would get the worst of it, he might have thought that his life had not been useless, as he would certainly make Job a very good breakfast." Papa "kicked me [the grandmother cat] all the way down the kitchen stairs"; the same gentleman says to his little girl, "We'll tie a stone round his [the black cat's] neck and pitch him into the duck-pond." Mamma talks in the same strain; and when you get down to the conversation of the cooks and gamekeepers, you find an equal ratio of violence and vulgarity. Hanging, poisoning, shooting, catching in traps —these themes are dwelt upon in language to match. "Horrid little wretch," "nasty ugly cat," "I caught him and gave him a good thrashing," "she would like to scratch his face for daring to say such a thing," "hang him on the spot," and so on all through—from which it is easy to conclude, even were there not other internal evidence, that the book was composed under the "bloody blue skies" of Old England.

The excellent theory as to selection of poems laid down in the preface to 'Chimes for Childhood' is scarcely supported by the compilation itself. Many good pieces of course it must contain, though "Lilliput Levee" is too heavily laid under tribute, especially as it has already served so many other collections. Most readers could also spare "Mary had a Little Lamb," "I want to be an Angel," "Casabianca"; and still less will they care to preserve certain vapid lullabies and newspaper selections which were good for the time only, and not very good then, and only fit for adults. As a specimen of positive bad taste, take the parody on Jane Taylor's "My Brother," p. 191; and of unsuitableness for children, Walter Scott's "Proud Maisie in the Wood." The illustrations, to which attention is especially called in the preface, are about as poor as it is possible to make reprints.

History could not well be conveyed in a pleasanter form than it is in Mr. De Liefde's 'Dutch Admirals,' originally a series of papers in *Good Words for the Young*. De Ruyter occupies of right a third of the volume, and the introduction to him as a young monkey climbing to the top of the spire of Flushing cannot fail of its intended effect on the youthful reader. This admiral and Cornelis de Witt particularly recommend themselves by a boyhood which is not only father to their manhood, but is at the same time thoroughly boyish, and therefore sure of the sympathy and admiration of boys the world over. It is, perhaps, one of the very few unidiomatic expressions which we detect in our author, when he speaks of both of these youngsters as "wicked" instead of naughty or wilful, and of their "vices" when he probably means nothing worse than waywardness. Mr. De Liefde's style is simple and familiar, and his patriotism, though strong, will bear favorable comparison with that of Dryden, laureate *in petto*, in his 'Annus Mirabilis.' It might have led him, we should think, to substitute for the not very valuable illustrations a map of Holland, another of the west coast of Africa, and a third of the Dutch East Indies.

'Fairy Gifts' and 'The Golden Fence' are volumes of philosophical fairy stories, which under that guise launch shafts of satire at the weaknesses of modern society. In the latter book is an account of a "Queer School," called the Great Nineteenth Century Mundane Academy, in which the pupils are taught to spell backwards, to define Patriotism as "getting all you can out of your country"; Poet, as "one who writes a peculiar kind of prose"; Positivist, as "one who is not certain of anything," etc. In this school the blind paint pictures which nobody else can understand; the boys are instructed in "Political Gymnastics" and "jumping over high bars called CONSTITUTIONS"; also in the definition and practice of universal suffrage. A vote is taken on the question whether Black is as good a color as White, the majority to get all the prizes. After great confusion the Blacks win, "and there was even some talk of the poor Whites getting a whipping all round for taking the wrong side." We will spare our readers any more of such sapience. The story preceding this is not nearly so bad, being tolerably fit for children, and not without some pretty notions; but the first one, the "Golden Fence," contains some preposterous social propositions, besides being too much of a love-story. Further than these we have not read.

'Fairy Gifts' opened with such a fine picture of the Fairy Rubinetta in scarlet, with her gold-handled broom, blue cat, and one-eared dog, that it was with disappointment we found that everything in her wallet was destined to point a miserable moral, accompanied by some such profundity as this: "And now you see what a state of things the Fairy Rubinetta found in Cornertown; no wonder for her to look cross. Everybody's head was full of female education and geometry, combined with rights, the latter being of a somewhat uncertain and vague description." A prize was offered to the girls for "the best essay on female education and the first principles of Geometry." When the essays come to be read, the fairy's touch converts them all into a bundle of feathers which fly out of the window, and the prize is awarded to the little girl who has no thought beyond housework, and who offers instead of an essay a pile of sewing done with a magic needle, a gift out of the fairy wallet. Some portions of the stories show considerable picture-painting power, and would merit more than ordinary attention were they not so frequently marred by labored and fantastic notions, expressed in showy but yet obscure phraseology.

If it did not seem like bordering on temerity, we should venture to say that Gail Hamilton had improved. 'Little-Folk Life' is certainly free from some of the faults that disfigured her 'Child World' of last year, while the fertility of her invention and the vigor of her style are enhanced in attraction by the apparent restraint put upon both in the interest of "working" mothers, or of any persons in charge of children who have to follow up all clever and thoughtless stories with the proper antidotes. To speak plainly, we are glad to acknowledge the pleasure we have taken in this fresh and wise little volume; and although the author's progress in caution and "quietness" is not so complete as to leave no wish for its increase, it is too marked not to make criticism difficult and gratitude agreeable. A weighty drawback to the enjoyment of Mrs. Stoddard's "Lolly Dinks's Doings" is that none of our great grandmothers can read it. It would be a satisfaction to know what those estimable ladies would say to such a specimen of a nineteenth-century story-book, to the audacity and lawlessness of Lolly Dinks, and to the brilliant foolishness and *abandon* of his mamma. There is a good deal that is absurdly funny in the book, mixed up with a good deal that is absurd without being funny. But, on the whole, it would probably be a welcome present to parents, especially to grandparents, (if they are not hopelessly old-fashioned), of any masterful, wilful, pretty, restless, imperative, bright boy. The accounts of his depredations and tyranny, and the dismays of his seniors, will undoubtedly be agreeable reading to them. The book, as a suitable one for Lolly Dinks himself and his acquaintances, it is not worth while to discuss.

The Hanging of the Crane. By Henry Wadsworth Longfellow. With illustrations. (Boston: James R. Osgood & Co.. Small 4to, pp. 64.)—Since everybody reads what Mr. Longfellow writes, and everybody enjoys and is the better for it, there is no need of commending any new poem of his. The critic's judgment coincides with the popular approval. In Mr. Longfellow's work the claims of art are satisfied as well as those of sentiment. Whatever he writes is an expression of fine culture as well as of pure feeling, and of the skill no less than the fancy of the poet.

This new poem, of which the title is the only fault, as being a little too remote from common association fully to express its intent and design, is the story, told in seven brief scenes, of a married life in a happy home, from its fortunate beginning to its fortunate close. The sweet domestic quality of the sentiment, its tenderness and simplicity, its freedom from exaggeration of all sorts, are characteristic of the poet. So, too, is the exquisite ease of the versification; verse following verse in melodious flow, as if thus to flow were in its own nature, like the blowing of the wind or the running of the brook. The little poem is full of peace and serenity, the product, as it were, of the highest philosophy of life—the philosophy of sympathy and content. It is a poem of maturity and experience, in which there is alike the abundance and the ripeness of autumn. It is a poem to make the best loved of poets still better loved.

It is but a brief poem, but it makes, as the publishers have given it to us, a considerable volume. It is lavishly illustrated, printed on paper thick as card-board, and bound in the most showy fashion. Altogether, the volume, as regards its external quality, is a characteristic specimen of the modern gift-book or holiday-book. If it suits the public taste at all, it will no doubt suit it extremely well. But we trust that the publishers have made a mistake in supposing that the public really like this sort of book. The worth of the

'Chimes for Childhood. A Collection of Songs for Little Ones. With twenty Illustrations by Birket Foster, Millais, and other eminent Artists.' Boston: Estes & Lauriat.

'The Great Dutch Admirals. By Jacob De Liefde.' New York: Geo. Routledge & Sons.

'Fairy Gifts; or, A Wallet of Wonders. By Kathleen Knox, author of 'Father Time's Story Book.' Illustrations by K. Greenaway.' New York: Pott, Young & Co.

'The Golden Fence, and Other Tales.' Philadelphia: J. B. Lippincott & Co.

'Little-Folk Life Series. By Gail Hamilton and Mrs. R. H. Stoddard.' Boston: Wm. F. Gill & Co.

poem, and the demand for an acceptable present at the gift-giving season, may secure a large sale for the volume, but a large sale under such conditions should not be taken as an indication of its merit or of approval of its style.

It is unfortunate that a poem so simple and domestic as 'The Hanging of the Crane' should appear in the form and with the illustrations with which the publishers have sent it out. The pains, and they were no doubt considerable, with which the volume has been got up have been largely wasted through want of taste and of culture. The spirit of the designs is thoroughly out of harmony with that of the poem, and exhibits the incapacity of the artists to appreciate its real and permanent qualities. They show, too, a lack of fancy that would be surprising were not fancy so rare a gift that its absence is not to be wondered at. But the want of it is in this instance so conspicuous as to indicate essential disqualification for the task. The designer's conception of the chief scenes is not only feeble and false, but peculiarly displeasing, by attaching images of affectation and bad taste—scenes as it were from a second-rate theatre instead of from real life—to verse the simplicity and sincerity of which should have protected it from such association. In merely technical qualities the engravings do not deserve praise, though they show a certain skill in effects and a certain vague and distant apprehension of the excellences to be aimed at in work of this kind. But the designs appear often to have been bad in outline and in light and shade, and the execution of them upon the block has exaggerated their original defects. But it is not worth while to examine this sort of work in detail. Mr. Longfellow should give us an edition of his poem free from illustrations, the effect of which, if they have any, upon character and feeling must be directly opposite to that which his work ought and is fitted to produce.

Gift-Books.—Some of the works for which this name is a conventional designation have already received notice at our hands. Such are Marcoy's 'Travels in South America,' 'Boydell's Shakspere Gallery,' the Bida illustrated Bible, the 'Hanging of the Crane,' etc. We still have on our table, from Porter & Coates, 'The Stately Homes of England,' by Llewellyn Jewitt and S. C. Hall; from Henry Holt & Co., 'Vers de Société,' selected from recent authors by Charles H. Jones; from Scribner, Armstrong & Co., Saintine's 'Myths of the Rhine'; and from J. B. Lippincott & Co., 'The New Hyperion.' 'The Stately Homes of England' first appeared as a serial in the London *Art Journal*, and there we are told to look for succeeding papers, ultimately to become volumes, on the same attractive subject. We shall do no injustice to this compilation if we describe it as a sort of glorified guide-book, having reference in our epithet to its handsome apparel and to the two hundred and ten engravings on wood which illustrate the text. These are of various degrees of merit, but of most of them we may say that they are worth printing, and that many of them convey lessons in domestic architecture by which very humble homes in this country might profit, to say nothing of our public buildings. Domestic economy, too, has something to learn occasionally; for example, from the washing-tally found at Haddon Hall figured on p. 231, in which the disk principle of so many office-calendars in our day is successfully applied to the keeping account of the "handkercher," "bootehose," "pillowberes," etc.—up to one dozen of each—sent to the wash. The letterpress is statistical and antiquarian, and if it betrays no high artistic sense nor unusual descriptive powers on the part of the editors, is free from rhapsodical overflow. The book is good to have and good to give away.

The drawing-room poetry which Mr. Jones has selected will be found, we believe, not deficient in quantity by any one, and as for quality the best pieces are there. We have not read 'Vers de Société' by candlelight, and it is possible that if we had we should agree with the taste which prints the verses on an ashen tint, enclosed by a faint purple border. By daylight, we confess, the painstaking after an elegant and pleasing effect does not seem to us altogether rewarded. The binding is, as is customary with Mr. Holt's publications, a novelty and a success.

Similar in size to the foregoing, but if anything a little more sumptuous, is Saintine's 'Myths of the Rhine,' translated by Prof. Schele De Vere, with illustrations by Doré. This light and pleasant discourse about the supernatural, ranging from Odin to the Kobold, from Friedrich Barbarossa to Heinrich Heine, and not omitting the Lorelei, the Wild Huntsman, and the tree Ygdrasil, is exactly adapted for the publisher's holiday purposes. Doré's illustrations, it is enough to say, are characteristic; sometimes characteristically bad, as in the design which represents every created being giving a tear to Balder.

To another work of Saintine's we owe, with that sort of indebtedness which the French express by *d'après*, 'The New Hyperion,' the clever story which has been running through *Lippincott's Magazine* for several months past, and of which we have frequently had occasion to speak in praise as it proceeded. The preface honestly gives credit to Saintine, but the borrowing or imitation appears to have arisen mainly out of the necessity, having once appropriated Doré's illustrations of the French text, of keeping the English in accord with them. There is much more originality in the work than the scrupulous adapter lets be supposed, and his brightness and wit will thoroughly amuse his audience. The *nom de plume* of "Edward Strahan" is understood to cover the authorship of Mr. Earl Shinn.

A Dissertation on the History and Development of the English Verb. By Emil Schwerdtfeger, Class '77, Cornell University. (New York: Henry Holt & Co. 1874.)—They have a linguistic prodigy at Cornell University to whom attention is invited by the publication of a monograph on the history and development of the English verb. A preface by Professor Corson tells us that "Mr. Schwerdtfeger entered the University at the beginning of the winter term of 1873-74, he not being of the required age—sixteen years—to enter at the beginning of the year," a statement which has a comical air at first to an old college man, as though Schwerdtfeger had caught up with his class in age as three-year-old children do with four-year-olds by having a birthday. The old notions of age were connected with ripeness for certain studies, and colleges which announced that "no one was admitted to the Freshman class till he had completed his fifteenth year," added "or to an advanced standing without corresponding increase of age"; but that is not the University idea. Professor Corson further says: "His studies in English philology have all been pursued since his admission to the University," and during the winter and spring terms, in addition to the studies of his class, he "read entire or examined with care the works cited on the last page." These works are thirty-eight in number, three of them in the Danish tongue, seven in the German, nineteen in Anglo-Saxon and Early English. Several of the works have two or three volumes each, and big volumes, too, making their thousand-and-more pages to the work. This is a stint for the full time of a ripe scholar, master of German and Danish; Schwerdtfeger, knowing English, so far as appears, and little of that, takes it as by-play, and writes this pamphlet of fifty-six pages besides as a prize essay. The dissertation is a digest of the facts as stated in the latest works on the subject, and is a very good one—accurate, methodical, full, and perspicuous. It would bear criticism very well as the work of one of our full-grown scholars. As to most matters in which it seems open to unfavorable comment, it is to be said that a student in such a case would of course follow the classifications and method of the professor with whom he is studying. It was no drawback, for example, to the prize essay that it begins with dividing the verb into twenty-five conjugations, since Professor Corson adopts that classification, though it gives us the verb in shreds and patches to start with. It seems to be an oversight of the essayist that he gives no discussion of the past participle of the weak verb. On the whole, however, this is probably just about the essay that was aimed at when the subject was given out, and is justly ranked among remarkable essays of its kind. It is an assurance of good work done in the University classes, and a promise of good work hereafter, and a good deal of it, from the happy prizeman. So may it be. But let not every industrious college-student imagine himself a Schwerdtfeger, and think to bear off prizes by writing essays as long as his. Bulky papers made up of good-enough summaries of the opinions of the best books on the topic assigned are often handed in for prizes; they are, in fact, the terror of the unhappy men who are pressed to serve as prize committees. They seldom win prizes. Committees, it is to be feared, do not always read them. They seek for evidence of originality in the fancy and passion and grace of youth, and care little for the extent or rarity of the knowledge displayed; they know that a lad of sixteen can serve up the contents of a rare book just about as well as of a common one, if you put it in his hands, and that he can write as long as paper and pen hold out if he can have his books open before him.

The Life of Thomas Fuller. With Notices of his Books, his Kinsmen, and his Friends. By John Eglinton Bailey. 8vo. pp. 800. (London: Pickering.)—The eminent pulpit orator, tractarian, historian, and witty divine of the seventeenth century is often, perhaps commonly, spoken of as "Old Fuller," but in a reverential spirit, as one of the olden time, as discoursing of old worthies, and in the spirit of his own quaint lines, forming part of the inscription he made for the tomb of Denys Rolle, Esquire, cir. 1638:

> "Witt and Wisedome sate as Peeres,
> Till Death mistooke his Virtues for his Yeares,"

—for he died in London, August 16, 1661, only fifty-three years of age. There have been an abundance of so-called lives of Fuller, one of the best, an anonymous one, published by some ardent admirer the year of his death, and the Royalist Winstanley, that dizzard of a critic, as he has been termed, (who, writing of Fuller's contemporary, Milton, says: "But his Fame is

gone out like a Candle in a snuff, and his memory will always stink, which might have ever lived in honorable repute, had not he been a notorious Traytor, and most impiously and villanously bely'd that blessed martyr, King Charles the First"), in the brief sketch in *his* 'Worthies,' paid a warm tribute to Fuller's consistency and virtues. This tribute to his consistency was of value coming from the source it did, for Fuller, entering life in the waning days of Charles I., lived throughout the troubled times of the Protectorate true to his Royalist proclivities, but wittingly giving offence to none. Prognosticating the Restoration, he published his 'Contemplations in Better Times,' with the happy motto, so characteristic of the man, and so suggestive to the American statesman and politician of to-day, "Let your moderation be known to all men, the Lord is at hand."

Mr. Bailey has performed a marvel of labor, and, by a careful study of Fuller's writings, has given us, to a marked degree, an autobiography and most thorough work. Evidently aware that in these hurrying days his book, in its "voluminous and luminous" detail, will be appreciated by the few, his publishers announce an edition of the sermons, to be accompanied by a biography more strictly "a Life." In editing any edition of the sermons, of the 'Pisgah Sight of Palestine,' the 'Holy and Profane State,' the 'Church History,' or the 'Worthies of England,' we may be assured that Mr. Bailey will give us Fuller's text as he wrote it, and not as some modern publishers have sought to improve it, by modernizing the orthography. As indicating the nature of the volumes, the promise of the title is kept in the most ample way; but, furthermore, we have in an introductory note a compendium of Fuller's biographers, as also reference to his critics, Lamb, Coleridge, Crossley in the *Retrospective Review*, and Prof. Rogers, late of the College, Withington; and in the bibliography, pp. 719, 720, an article on Fuller and the Worthies is mentioned, which appeared in the *Christian Examiner*, Boston, 1831, the author acknowledging the courtesy of Mr. Sibley, the Librarian of Harvard College, in sending to him a copy of the number containing the article. Indeed, Mr. Bailey seems to have sought everywhere in the republic of letters for information, and the response made to his enquiries by his fellow-countrymen from State, university, and curacy, by collectors and publishers, by near friends and entire strangers, must have been flattering to him, indicating a hearty appreciation of the direction of his researches and of his masterly manner of conducting them.

After giving in chronological order Fuller's parentage, birth, youth, and college career, the thread of personal biography is amplified by historical episodes and by running commentaries upon the motives and circumstances incident to the framing and publication of the various works by which he is best known. Beyond this, the volume is replete with plates of interest, and some of rarity. There are genealogical tables, and registers of births and deaths, while sixty-one pages are allotted to a carefully-prepared bibliography, evidently not the least labor of the author. Is there an index? There are indices, which, in their fulness and Fullerness, Fuller and his antagonist in literary warfare, "the lying Peter," as Carlyle terms Dr. Heylyn, would have delighted to fight over, in the verbal affectation of the day. There are indices Nominum, Rerum, Locorum, and an index of archaic words and old-fashioned phrases. Here, as elsewhere, the reader and student will have reason to pay more than a passing tribute to that undisputed womanly right of entering heart and soul into a husband's labors, for Mr. Bailey says in his preface: "Finally, the work has been throughout furthered in no small degree by the co-operation of my devoted wife."

We call attention to this 'Life of Fuller' not only because, being published by subscription, few copies of this especial edition will be found on the booksellers' shelves, but as being a monument of industry, careful research, and discriminating criticism, more than satisfying a long-sought-for desideratum. If any object to the bulk of the volume, the volume is not for them, and they must patiently await the promised digest. Mr. Bailey, as we learn, wields in Manchester a double pen, as did at the India House the gentle Elia, whose mention of Fuller he speaks of so appreciatingly. No one who reads or consults the volume will assent to the author's self-deprecatory remark, that "there is ground for regret that some Cambridge scholar as well beneficed, as kindly witted, and as zealously antiquarian as the famous Cavalier Parson, has not given to the church a worthy record of one of its illustrious ornaments," but, on the other hand, will be grateful that this worthy record has at last been accomplished by so loving and competent a hand.

*** *Publishers will confer a favor by always marking the price of their books on the wrapper.*

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Art-Journal, November, swd.	(Virtue & Yorston)	
Abbott (Rev. J. S. C.), Life of John Paul Jones	(Dodd & Mead)	$1 50

Fine Arts.

MR. MARSHALL, the engraver, has finished in pure line the large bust-portrait of Mr. Beecher which he has been preparing for four years past. The subject is a somewhat colorless one, requiring all the arts of the burin to give it vivacity. The artist has treated the whole plate in a key of silvery pallor, abandoning perforce the contrasts and deep tints that have given effect to some of his previous heads. In coloring his work, and setting his point to express the quiet tints of nature in a suit of different grays, he shows himself struggling with uncommon activity, commensurate with the obstinacy of his theme. Mr. Beecher's countenance in fact challenges the engraver to put all possible coloring-power into the instrument, for the purpose of giving life to a subject which, reduced to light and shade, is about as uniform as a terra-cotta. Mr. Marshall, working to no low standard, has usually prepared himself, as in this instance, by carefully painting his subject in oil, and in many cases by modelling it in clay besides. Arriving at the multiplying process of plate-engraving, he aims to concentrate on the steel the facts of color, the juicy quality of oil-painting, and the modelling of the solid object. The head of Mr. Beecher, being without "values," but not without color, can be treated only in an uneasy straining of the warm and cold grays—"warm," in conventional truth, for engravers freely speak of the happy or false "color" of their work, expressed in all sorts of courageous and inventive strokes. In this sort of originality Mr. Marshall has had many a success, of the kind that occur to a man working at a distance from all the schools, and with an eye kept single to nature. In this work the directions of the line, as assisting the modelling, appear to be judicious; the shading of the flesh generally, if somewhat ashen, is firm and expressive; the defective saliency, as with many excellent portraitists, and notably often with Couture and Gallait, is enforced here and there with a thick, dark stroke like an out-

line in crayon or bitumen, as in the boundary-line of the nose, and that separating the neck from the linen; the textures selected for drapery and accessories are very massy, paint-like, and harmonious. Upon the whole conception as a work of *portraiture* we prefer to say nothing. It is as a contribution to its own proper technic that it interests us. Pure-line engraving is not now a very favorite or remunerative art in this country. Those who once practised it among us with distinction are aging or dead; publishers demand new, faster, and cheaper processes; and indeed the Banknote Companies form the only guild of the craftsmen known among us, the only group of engravers working with any notion of solidarity, and the only school which occasionally turns off young artists to attract notice independently on the basis of academic instruction received in this branch of the fine arts.

—It is unnecessary to shorten still further the term of an art-career which death has made all too short, and we may correct the statement repeatedly printed that the late Fortuny became first known by the exhibition of a number of works in 1869. Many a connoisseur will remember the proud air of mystery with which, in 1866, the head of the house of Goupil used to take appreciative visitors into that well-known curtained closet of the Rue Chaptal, the room where the pictures are kept that will not bear a neighbor, the room of the *solitaires;* and there, in an impressive solitude, expose the treasured picture by the man with the unheard-of name, Fortuny, whose work had so little need of previous renown to make it conspicuous. The success of the "Marriage in the Vicaria," and the hot eulogy of Gautier in the *Journal Officiel*, came afterward. The great discerning clairvoyance of M. Goupil had even then long marked Fortuny, and had kept him, with other promising sprouts of the Goupil nursery or *pépinière*, in a safe condition of growth and development in Italy. The youthful trio whom art has lately lost, Zamacoïs, Regnault, and Fortuny, were innovators in the ratio in which we mention their names. Zamacoïs was the least important, his genius being largely literary in character, and Fortuny the most so. "Ah, Fortuny, tu m'empêches de dormir," we find in the correspondence of Regnault, himself a sort of later Velasquez, and also helped or hindered by a grand dramatic talent which partly withdrew his attention from his pure technical faculty, and impelled him to tell glorious stories with it. Fortuny, of the three, had the purest addiction to paint for its own sake, and was most intensely the artist of artists. This distinction came to him early in life, for Mariano Fortuny at his decease was but thirty-six years old. He died at Naples. His funeral, from the church of Santa Maria del Popolo in Rome, was attended by a throng of artists and by very many of the upper clergy. His body was placed in a vault in the cemetery of San Lorenzo, prior to its removal to Madrid. Madrazo, Villegas, Boldini, and many lesser talents are left, to continue awhile in weeds of mourning that school of emancipated color which Fortuny and Regnault led as masters. What it will develop into, with its best lights so prematurely put out, would be hard to prophesy; but in promise and boldness it certainly made the great hit of the age, and perhaps took a more authentic step than any since the Renaissance. Of its meaning and scope we hope to speak at length hereafter.

—A miniature art enterprise has been undertaken by Geo. Goodwin & Co., Boston, in printing from the original plates the Twelve Apostles designed and engraved by Hans Sebald Beham. The preservation of a set of plates of the date assigned to these, 1545, in a condition to give perfect impressions, is in itself a sufficient motive for their republication; but when, as in this case, they are really admirable examples of their school, they become an accession of no inconsiderable value to the collection of amateurs of pure engraving. Their miniature proportion (1⅛ in. by 1¾ in.) is in fit relation to their delicacy of execution, which is remarkable. As examples of Düreresque treatment of draperies they are equally noteworthy.

—The illustrations to the New Testament from Bida's designs now appear in an English edition of the Gospels under the charge of Messrs. Cassell, Petter & Galpin. We need not say how much they seem to gain in being at last associated with a translation which is not only one of the very few translations immeasurably superior in style to their own original, but a version which is the perpetual monument, standard, and pride of a noble language. In their association with the French text these etchings after Bida were the flower of the long career of the Maison Hachette & Cie. All book-collectors know the story of how this important house prepared themselves for the publication of the great Bible intended to be a landmark of our century; how twenty years of effort culminated in the publication; how fifteen of the best French etchers were set to copy the designs; how the type was cut express; how chemistry was commissioned to prepare a new and improved ink, with which the text and pictures were printed upon paper made on purpose in Holland. The result was a characteristically French one—a success in technicalities quite dazzling, along with a text that has always seemed to leave much to be desired, and an artistic invention rather polished than profound; in fact, the old familiar French triumph of care and thoroughness, lacking nothing but "miracle." The English version does not attempt all the typographical perfection of its exemplar; it simply gives a fair folio page of heavy paper, on which a large, lean type, *not* of the popular kind called antique, presents the beauties of King James's version. Many of these leaves have passed thrice through the press, for the printing, for the rubrication, and for the line-engravings of tail-pieces or ornaments. As for the etchings, it is at once hard to blame and hard to praise unreservedly. When we think how often French art has dared to treat Biblical subjects in a sentiment of the most determined melodrama, we feel for these drawings, stamped all over with a chaste, intellectual, if not a spiritual distinction, the debt of reverence and respect. But M. Philippe Burty, in criticising Bida, was right enough in saying that "Biblical themes, under this measured pencil, receive too ethnographic a form." The Bible illustrations do not differ in quality from M. Bida's simple souvenirs of travel, as seen in the Luxembourg collection. In everything he has done, in his Oriental views as well as in the heated, conservatory atmosphere of Musset's poetry, the artist remains fatally calm, elegant, and self-possessed. Several times here, as in the illustrations to the fourth gospel, he elaborates a Rembrandt effect—a Lazarus, a Gethsemane, a Crucifixion—and elaborates it with a completeness, a success in analyzing and applying Rembrandt's secret that few artists could emulate; yet there is a frigidity or calculation visible in his most tender gradations, and after having been touched by his subtle and penetrating shadows one feels that he has been touched by rule. What we like best, and what we feel sure that all may like, are his achievements of mental analysis and penetration, such as the St. Thomas at his task of humbly sifting the evidence, his Pilate with the fine head of a Roman cynic, the Michael-Angelesque mingling of emotions in the profile of the typic mother who rejoices amid her anguish because a man-child is born into the world. This last is etched upon the copper by Bida himself; but we do not find that the other aquafortists have been behindhand in the task of subtly interpreting the artist's work. The commission was a triumph for such etchers as Messrs. Flameng and Veyrassat and Mme. Henriette Brown. Flameng's treatment of light on water, as in the Miraculous Draught and Walking on the Sea, and on architecture, as in the Scourging the Money-Changers and Entry into Jerusalem, is all that artist could desire. It is not a perfectly easy task to interpret through the fine-webbed lines of etching the style usual with Bida, which (as may be seen in that large cartoon of his now hung in the Metropolitan Museum) is full of shifts obtained by gratination of the paper, rubbings in lithographic fashion, and powdery stipplings. The etchers have perhaps improved, by taking away the grit, this dryness of Bida's manner; otherwise they seem to be fidelity embodied. We cannot see that the plates in the English version, on the carefullest comparison with the original French impressions, are inferior; they are doubtless printed in Paris under that same supervision by M. Hédouin which has made the first proofs so successful. In conclusion, we may say that the connoisseur will possess in this edition a Biblical work of great purity, a type of the Galilean at once refined and historically probable, an exquisite series of authentic Judean landscapes, and whatever can assist his Bible-reading as a task of intellectual culture.

—A neat portfolio of photographs of sketches by A. Hendschel is published by F. B. Patterson, 32 Cedar Street, New York. They are effective representations of life under various aspects, partly sentimental and partly comical—some of the latter being well fitted to illustrate the Danbury Newsman's buffoonery, at least the more refined portion of it. A morning caller kept waiting would be glad to find these outlines on the centre-table.

—Goupil & Co.'s photographs of Baudry's decorations for the New Opera at Paris are now being received at the house of the firm in this city. The subjects are, "The Group of Seven Arcadian Shepherds," "The Judgment of Paris," "The Flaying of Marsyas," and the two from sacred history, the "Salome" and "Saint Cecilia." These photographs are reddish in tint, 26 by 23 inches, on very large mounts—a great size and adequate representation even of paintings so large as the originals, which are 14¼ by 12¾ feet. From them and from the photogravures in the *Gazette des Beaux Arts* some competent idea of Baudry's labors for the Opera foyer may be had. The treatment is the reverse of frivolous: some of the draperies, in particular, would be grand even among the designs of Michael Angelo, who has evidently been the inspiration throughout; there are many ingenuities, many original poses, and, along with much nudity, the completest absence of sensual appeal. Such figures as the "Angry Juno," the "Melpomene," the "Marsyas," and a "Group of Angels before Saint Cecilia," are real gains to art. Although the painter idealizes his shapes, he keeps a delicate but perpetual distance between his place and the antique; one would say that if Greek sculpture followed up primitive life to its ideal, so does this artist detect the ideal of contemporary life and its forms. His faces are like neither Venetian nor ancient models; they are conscious, keen, experi-

enced, entirely modern. It is understood that in this work of embellishment Baudry has quite abandoned his positive, Venice-like color, as seen in his best-known pictures, the "Fortune" and the "Pearl and Wave"; the color-harmony is here very monotonous and subdued, and the figures are not much darker nor brighter than their backgrounds; the decorator evidently is determined not to "cut holes" in his ceiling, and the continuous flow of embossed forms in a warm hue suggests the effect of bas-reliefs rather than figures detached from a sky or from scenery. The whole achievement, while less distinctly beautiful than many might desire, seems to exhibit a most satisfying scholarship and dignity.

JUST PUBLISHED.

VERS DE SOCIETE. Selected from Praed, Landor, Thackeray, Moore, Holmes, Calverley, Saxe, Locker, Dobson, and others, recent authors in this department. With Title and Vignettes, Drawn by John A. Mitchell. 8vo, cloth, gilt, $7 50; morocco, $15.

"If we have ever seen a daintier piece of book-making, we have forgotten it."—*N. Y. Evening Post.*

"One of the most exquisite books ever printed. . . . Mr. John A. Mitchell, whose grotesque of 'The Seasons' has been so popular, has drawn some of the most charming bits imaginable for centre-page titles."—*N. Y. Evening Mail.*

ELEGANT BOOKS FOR PRESENTS

PUBLISHED BY

MACMILLAN & CO.

A RAMBLE ROUND THE WORLD, 1871. By M. le Baron de Hübner, formerly Ambassador and Minister, and author of 'Sixte Quint.' Translated from the French by Lady Herbert. 12mo, pp. 658, cloth extra, $2 50.

"We do not hesitate to say that 'A Ramble Round the World' is the most interesting book of its class produced in the last ten years. . . . The narrative of the author's travels through Japan and China is one of unbroken interest; there is not a page in it which the intelligent reader would willingly omit. All phases of society are reported after careful observation; the politics, religion, manners, and customs of each nation are exhibited with a sharp distinctness that we have never seen equalled in a work of this kind. . . . As a whole the book is thoroughly satisfying, and we commend it confidently to those who enjoy a narrative of travels at once substantial with information and pleasing with the wit and wisdom of a shrewd observer and with the art of a skilled narrator."—*The Literary World.*

HOLLAND HOUSE. By Princess Marie Liechtenstein. With 5 Steel Engravings by C. H. Jeens, after Paintings by Watts and other celebrated Artists, and numerous Illustrations drawn by Professor Delamotte, and engraved on Wood by J. D. Cooper and others. Appletons' Journal.

A Magazine of Popular Literature.

New and interesting features will be added to APPLETONS' JOURNAL during the ensuing year, and strenuous efforts will be made to give the American public a periodical of a high and at the same time popular class—combining instructive material with picturesque statement, superior fiction with critical and descriptive essays.

A New Novel, by Rhoda Broughton, author of 'Red as a Rose is She,' 'Good-by, Sweetheart,' etc., will be begun in an early number.

"Southern By-Ways" (Illustrated), by Christian Reid, will be a feature of the ensuing volume.

Illustrated Papers on the Industrial Arts will afford an interesting and valuable department.

Travel, Adventure, Exploration, Natural History, Social Themes, the Arts, Fiction, Literary Reviews, Current Topics, will each have a large place in the plan of the JOURNAL.

Published Weekly. Price 10 cents per number; $4 per annum, with postage prepaid.

THE

Popular Science Monthly

(*Established May*, 1872.)

Conducted by Prof. E. L. YOUMANS.

THE POPULAR SCIENCE MONTHLY was started to promote the diffusion of valuable scientific knowledge, in a readable and attractive form, among all classes of the community, and has thus far met a want supplied by no other periodical in the United States.

The great feature of the magazine is, that its contents are not what science was ten or more years since, but what it is to-day, fresh from the study, the laboratory, and the experiment; clothed in the language of the authors, inventors, and scientists themselves, which comprise the leading minds of England, France, Germany, and the United States.

THE POPULAR SCIENCE MONTHLY is published in a large octavo, handsomely printed on clear type, and, when the subject admits, fully illustrated. Each number contains 128 pages.

TERMS: $5 per annum, postage free, or 50 cents per number.

APPLETONS' JOURNAL and THE POPULAR SCIENCE MONTHLY together, for $8 per annum, postage prepaid by the publishers.

D. APPLETON & CO., PUBLISHERS,

549 and 551 Broadway, New York.

WHAT SOME EMINENT MEN THINK OF

St. Nicholas.

JOHN G. WHITTIER says:

"It is little to say of this magazine that it is the best child's periodical in the world, and I think the editor has great reason to congratulate herself upon it."

BAYARD TAYLOR writes:

"The typography, illustrations, and general arrangement are wholly admirable and delightful."

REV. C. S. ROBINSON, D.D., in the *Sunday-School Times*, gives a clergyman's view:

"I am ready to say that a cleaner, purer, more trustworthy periodical for children cannot be named. The best writers are engaged upon it. It is printed beautifully, and illustrated in the highest style of art. I know the proprietors, and if ever a high, noble purpose was cherished by any public people it is found here. The magazine does not claim to be religious, but it is on the side of all that is true and good, from beginning to end."

DR. R. SHELTON MACKENZIE, the literary editor of the Philadelphia *Press*, says:

"*St. Nicholas*, I tell you in private, as I have told my readers in public, is the very best magazine for young people that I have ever seen. It is far more difficult, I think, to edit a periodical of this class than one intended for adults, and Mrs. Dodge deserves unlimited praise for the judicious manner in which she has executed her task. I have found heaps of things in *St. Nicholas* which I had forgotten, had imperfectly known, or had been wholly ignorant of. So I, too, sit at the feet of Gamaliel."

EDMUND CLARENCE STEDMAN says:

"Without and within it is a household charm, and certainly surpasses any Children's Year-Book, English or American, that I have ever seen."

CHARLES DUDLEY WARNER writes:

"Never before, I think, has so much literary and artistic talent co-operated in the service of children, and I will not resist the hearty impulse to say to you that you have made the best magazine for children of all ages that I have ever seen. I do not see how it can be made any better, and if the children don't like it, I think it is time to begin to change the kind of children in this country."

The subscription price of *St. Nicholas* is $3 a year. Volume I., elegantly bound in red and gold, $4; with gilt sides and gilt edges, $5. One year's subscription and Volume I., bound, $6. Postage on all the above prepaid by us.

For sale and subscriptions received by all Newsdealers and Booksellers.

NEW BOOKS

FOR THE

CHRISTMAS SEASON,

PUBLISHED BY

D. APPLETON & CO.,

549 AND 551 BROADWAY, NEW YORK.

MILITARY AND RELIGIOUS LIFE in the Middle Ages, and at the Period of the Renaissance. By Paul Lacroix. Illustrated with Fourteen Chromo-lithographic Prints, by J. Kellerhoven, Réjamey, and L. Allard, and upwards of Four Hundred Engravings on Wood. 1 vol. royal 8vo, half-bound, $12; half-calf and morocco, $15; calf, $18; tree calf, $21; morocco, extra, $20; super-extra, $25.

THE AMAZON AND MADEIRA Rivers. Sketches and Descriptions from the Note-book of an Explorer. By Franz Keller. With Sixty-eight Illustrations on Wood. 1 vol. folio, cloth, gilt, price $7 50.

ROME. By Francis Wey. Illustrated with Three Hundred and Forty-six Engravings on Wood, by the most celebrated artists, and a Plan of Rome. With an Introduction, by W. W. Story, Esq. Folio, French morocco, extra, gilt edges, $30; antique, $40; tree calf, $45.

A new and cheaper edition. 1 vol. 4to, cloth, $15.

MIDSUMMER-NIGHT'S DREAM. By William Shakspere. With Illustrations by Alfred Fredericks. 1 vol. 4to, cloth, extra gilt, price $7 50; morocco, antique, or extra, $12.

The artist who executed the designs for this volume has fully entered into the spirit of the author's text, each page presenting some surprising flight of Fancy. The Engravings are done by the best engravers on wood, and printed with a tint, in a style which fairly entitles the work to pre-eminence as a gift-book.

THE BOYDELL GALLERY. A Collection of Ninety-eight Engravings, by the Artists of Great Britain, illustrating the Dramatic Works of Shakspere. Reproduced from the Originals, in permanent Woodbury type. 1 handsome folio volume, bound in cloth, extra, gilt edges, $25; morocco, $40.

THE SHYP OF FOOLES. Translated by Alexander Barclay, Preste. Being a Faithful Reprint of the Pynson Edition of 1509. With Introduction, Notes, and Glossary, by T. H. Jamieson, Keeper of the Advocates' Library, Edinburgh. Illustrated with nearly One Hundred and Twenty Quaint and Interesting facsimile Wood Engravings. 2 vols. crown 4to, cloth, $25; half-morocco, gilt top, $35; half vellum, $40; morocco, $50; smooth morocco, $50.

The attention of book-lovers is invited to the reproduction of this extremely curious, interesting, and once widely-popular satire, which, under the allegory of a ship freighted with fools of all kinds, held the mirror up to the prevailing vices and follies of every rank and profession at that important and suggestive period of history immediately preceding the Reformation.

A Catalogue of Illustrated Books for the Holiday Season now ready, and sent to any address on application.

A CHRISTMAS BOX—$1 50.

Fourteen Little Books of Selected Poems (illustrated), in a neat case, $1 50.

Each little book is neatly printed on fine paper and bound in a tasteful paper cover; the XIV volumes (with the XVth, price 10 cents) forming the first series a library of standard poetry (illustrated).

The second series of this library will be begun in January, and will consist of 20 books.

Subscription price (invariably in advance), $2.

KILBOURNE TOMPKINS,

16 Cedar Street, New York.

The most Sumptuous Volume ever Offered to the American Public.

THE

Turner Gallery.

A Series of Sixty Engravings, from the most celebrated works of J. M. W. Turner, R.A., executed by Jeens, Armytage, Willmore, E. Goodall, Brandard, Wallis Cousen, and Miller. With biographical sketch and descriptive text, by Ralph Wornum, keeper of the National Gallery, London. One volume, imperial folio, large paper, Artists' Proofs. Sumptuously bound in half polished velvet morocco, extra, gilt edges, $110. (Published at £42.)

From the London Art Journal.

'In selecting the subjects the publisher has chosen judiciously. Turner's art life is divided into three epochs; it was therefore necessary that the series should include examples of each period; but as the last is that in which his genius—or fancy, as some say—took the strangest and most unintelligible form, so there is here the smallest number of engravings; while the period when, perhaps, it reaches its culminating point, is that containing the greatest number. Of the first epoch, extending from 1800 to 1819, there are twenty-two subjects, including four or five of the celebrated marine pictures, and "The Goddess of Discord," "Hannibal Crossing the Alps," "The Blacksmith's Shop," "Dido and Æneas," "Abingdon," "Crossing the Brook," "Dido Building Carthage," "The Meuse," "View of Cologne," etc., etc. Among the twenty-seven works of his second epoch, extending from 1820 to 1839, we find "The Bay of Baiæ," "Fishing-Boats off Calais," "Ulysses Deriding Polyphemus," "Childe Harold's Pilgrimage," "Petworth," "Grand Canal, Venice," "Ehrenbreitstein," "Mercury and Argus," "The Parting of Hero and Leander," "Ancient Italy," "Modern Italy," "The Fighting Téméraire," etc., etc.; what a grand catalogue! The third epoch, extending from 1840 to 1850, has eleven subjects, including three Venetian scenes, "The Burial of Wilkie," "Bacchus and Ariade," "Brain, Steam, and Speed," "Whalers," etc.

'Many of his grandest productions are in this series of engravings, and the ablest landscape engravers of the day have been employed on the plates, among which are some that, we feel assured, Turner himself would have been delighted to see. These proof impressions constitute a volume of exceeding beauty, which deserves to find a place in the library of every man of taste. The number of copies printed is too limited for a wide circulation, but, on that account, the rarity of the publication makes it the more valuable

'A series of engravings from Turner's finest pictures, and of a size and quality commensurate with their importance, has not till now been offered to the public; nor, indeed, could it have been produced but for the glorious legacy bequeathed to the country. During his lifetime he exercised supreme control over his works, and he would allow none to be engraved but what he chose; the large sums, moreover, paid to him for "touching the proofs," which he considered equivalent to what he would have received for copyright, acted almost as a prohibition to such engravings getting into the hand of any but the opulent.

'It is not too much to affirm, that a more beautiful and worthy tribute to the genius of the great painter does not exist, and is not likely to exist at any future time.'

These beautiful impressions, if sold separately, would readily command from $10 to $25 each.

SAINTINE, ILLUSTRATED BY DORE.

A NEW AND BEAUTIFULLY ILLUSTRATED GIFT BOOK.

By the author of 'Picciola.'

Myths of the Rhine.

With One Hundred and Fifty Illustrations by

GUSTAVE DORE.

One vol. royal 8vo, extra cloth, full gilt side and top, in box, $10; extra morocco, $18.

From the Boston Daily Advertiser.

"This is a most sumptuous book, of the most attractive kind in contents and dress. The French author, X. B. Saintine, has collected the myths of the Rhine of all kinds, and from all nations, and relates them in a singularly agreeable and sprightly manner. It would seem as if all the myths of all the nations of Europe had been preserved on the banks of the Rhine, for there are myths of all the primitive time, of the Druids, of the Romans who came as invaders, of Odin and his race of gods, of giants and dwarfs and wizards, of missionary women, nd a multitude of the strange, wild fabrications of the imagination which have a home in, or at all events have haunted for ages, that lovely region. Doré has lent his genius to the illustration of the work, and could hardly have found a more congenial opportunity for the development of his peculiar traits of imagination and fancy. His illustrations in this volume appear to us as fine examples of his wondrous skill as we have yet seen. The theme, the author, and the artist seem certainly adapted each to each, and the result is a volume which will not fail to gratify all who have any taste for literary and artistic work of this description.

☞ For sale by all booksellers. Sent, post-paid, on receipt of the price by the publishers,

SCRIBNER, ARMSTRONG & CO.,

No. 654 Broadway, New York.

TWO STRIKING BOOKS,

Published Saturday, Dec. 12,

BY

HURD & HOUGHTON, New York;

The Riverside Press, Cambridge, Mass.

HIS TWO WIVES. By Mary Clemmer Ames, author of 'A Memorial of Alice and Phœbe Cary,' 'Eirene,' 'Outlines of Men, Women, and Things,' etc. 1 vol. 12mo, cloth, $1 75.

*** This novel will unquestionably take its place as the writer's most noticeable work. She has given full play to her powers as a story-teller and a keen observer of men and things, and the intense scenes of the book will live in the memory.

A REBEL'S RECOLLECTIONS. By George Cary Eggleston, author of 'A Man of Honor,' etc. 1 vol. 16mo, cloth, $1 50.

*** A racy book, full of anecdotes and tales of the Rebellion. The prominent men—Stonewall Jackson, Generals Lee and Stuart, and others—are characterized from personal acquaintance; and altogether it is a decided contribution to our literature.

"The only regret is that he has not made the book twice as long as it is."—*Boston Saturday Evening Gazette.*

"We select, first, a portrait of Stonewall Jackson, which strikes us as the best pen-and-ink sketch of him that we have ever seen."—*The Newbernian, Newberne, N. C.*

THE WEEK IN TRADE AND FINANCE.

DECEMBER 14, 1874.

THE money market has remained easy most of the time during the past week, but occasionally there was a tendency towards higher rates, and money loaned as high as 5 per cent.; the ruling rate of the week may fairly be quoted, on call loans, 3 to 4 per cent. The tendency of money is decidedly towards a firmer feeling among buyers of commercial paper, very little paper of the best grade passing below 6 per cent. A fair quotation for good double-name paper would be 6½ to 7 per cent. for that having from sixty days to four months to run.

The bank statement on Saturday was not so unfavorable as had been looked for, especially as it had been known that large amounts of gold had been withdrawn from the banks for shipment. The reason for the small decrease in specie as shown by the statement has not as yet been satisfactorily accounted for. The statement shows that the banks have lost during the week $248,400 in specie and $751,400 in legal tenders; the deposits are down $1,224,100. An analysis of the figures of the statement shows that the banks now hold $9,087,100 in legal tenders and specie above the required legal amount against $9,780,875 last week—a decrease in the surplus reserve of only $693,775.

The following is the statement in detail:

	Dec. 5.	Dec. 12.	Differences.
Loans	$286,063,000	$284,903,300	Dec.. $1,159,700
Specie	14,467,200	14,218,800	Dec.. 248,400
Legal tenders	50,221,700	49,470,300	Dec.. 751,400
Deposits	219,632,100	218,408,000	Dec.. 1,224,100
Circulation	25,012,100	24,804,300	Dec.. 208,300

The following shows the relations between the total reserve and the total liabilities:

	Dec. 5.	Dec. 12.	Differences.
Specie	$14,467,200	$14,218,800	Dec.. $248,400
Legal tenders	50,221,700	49,470,300	Dec.. 751,400
Total reserve	$64,688,900	$63,689,100	Dec.. $999,800
Reserve required against deposits	54,908,025	54,602,000	
Excess of reserve above legal requirem't.	9,780,875	9,087,100	Dec.. 693,775

The stock market was active during the early part of the week, ending dull on Saturday. The fluctuations in prices were unimportant, except those in Pacific Mail, which seems to have been the objects of a combined attack, by newspapers, Congressional committees, and "bear" operators in Wall Street. Under such powerful influences it is not surprising that the price of the stock should have tumbled down from 41½ to 39. The story of the troubles which have been going on between the directors of the Company has been published daily in the newspapers, and shows plainly that some of its officers and directors have been paying more attention to their own speculative interests in the stock than they have to those of its stockholders in improving the condition of their property. The course of prices in the balance of the active list has been confined within the limit of from 1 to 2½ per cent., the highest and lowest prices having been as follows: N. Y. Central, 102⅛, 101½; Erie, 28, 26; Northwestern Common, 47½, 45¼; Wabash, 31¼, 29¾; Rock Island, 102⅛, 101; St. Paul Common, 39⅛, 37⅞; Union Pacific, 35¾, 35; Ohios, 32⅛, 30⅝; Western Union, 83⅛, 81⅝.

The demand for railroad bonds has continued good, with very little concession in prices from the highest that have been reached. The Chicago, Burlington and Quincy Railroad Company has made application to have its 7 per cent. consolidated mortgage bonds placed upon the list at the Stock Exchange. This Company has recently negotiated a large amount of these bonds, and will use the money received for them in paying off other bonds falling due, or such of its bonds bearing a higher rate of interest as can be called in.

The price of gold declined early in the week owing to speculative sales, which carried the quotation down to 110½ on Tuesday; the heavy demand for gold for shipment later in the week caused a sharp reaction in the price, and the market finally left off on Saturday at 111⅝.

The following shows the course of the market during the week:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Monday, Dec. 7	111½	111½	111¼	111¼
Tuesday, Dec. 8	111¼	111¼	110⅝	110⅝
Wednesday, Dec. 9	110⅝	111⅛	110⅝	110⅝
Thursday, Dec. 10	110⅝	111⅛	110⅜	111¼
Friday, Dec. 11	111⅜	111¾	111⅜	111⅝
Saturday, Dec. 12	111⅜	111⅝	111¼	111⅝

The shipments of specie for the week amounted to $2,774,900, making the total for the year, $54,784,833, against $46,732,116 last year, and $68,081,772 in 1872.

FOR THE HOLIDAYS!

LORD MACAULAY'S WORKS.

In 16 vols, extra cloth $32 00 Half calf, $64 00
" 8 " " " 16 00 " 32 00
" 6 " " " 12 50 " 25 00

7 vols. sheep, $17 50.

The Works of Lord Macaulay are the best gift-books in the English language; for while they have the interest of so many novels, they are as rich in facts as an Encyclopædia. Their word-pictures are more attractive than the engravings of the most expensive gift-books.

The Essays, History, Poems, and Speeches may be had separately.

ALBERT MASON, Publisher, New York.

"These modest little volumes deserve the hearty favor of the public, and will be found pleasant and sympathetic companions, giving richly, and asking almost nothing in return."—*Boston Daily Advertiser.*

Quiet Hours.

A COLLECTION OF POEMS,

Arranged under the following headings—viz., "Nature," "Morning and Evening," "Life and Duty," "The Mystery of Life," "Inward Strife," "Prayer and Aspiration," "Trust and Peace," "Submission," "Death and Immortality." One handsome volume, to match 'Sea and Shore' and 'Verses. By H. H.' Square 18mo, cloth, red edges, price $1 25.

"The compiler might have been proud to acknowledge her work if it had been much less successful than it is. Its special merit is that it brings together in one volume a great many fugitive pieces which have never been collected before or printed otherwise than in some magazine or newspaper. Many a piece that has long been cherished in our scrap-book here finds more sumptuous quarters. The title of the book is not an idle one. It indicates the character of the poems, which are, almost without exception, of a quiet and meditative sort. . . . Such a book as this seems to us much better adapted than any formal book of devotion to beget a calm and prayerful spirit in the reader. It will no doubt become a dear companion to many earnestly religious people."—*Boston Christian Register.*

"This is another of the little books, convenient in form, attractive in appearance, and admirable in its contents—one of the little square volumes, with flexible covers, as full of gems as any casket can be of jewels. It is a collection of exquisite poems, of a serious cast, many of them gathered for the first time in a book, and by writers of varied religious opinion, but all imbued with deep religious feeling."—*New Bedford Mercury.*

ISSUE:

TALKS WITH GIRLS. By Augusta Larned. $1 50.

"A pleasant fireside book, which treats of many every-day subjects in a strong and healthy manner. We hear of several girls who are reading the book aloud to their parents, and they like it. This is the highest praise the book could receive."—*Home Journal.*

SUNDAY AFTERNOONS. A Book for Little People. By E. F. Burr, D.D., author of 'Ecce Cœlum,' etc. 16mo, pp. 160, 75 cents.

"Six sermons preached to children, on The Soul, The Angels, God, The Empire, Laws and Word of God, are gathered in this little volume. They are great topics, but treated in a very simple style, but with pure English, and are pleasantly free from the lowness of expression and the triviality with which it is sometimes thought necessary to address children. It is a good and excellent book, and we should suppose that any child of good sense would find it a pleasant book to read, and a useful one as well."—*Christian Advocate.*

ENCYCLOPÆDIA BRITANNICA.

NINTH EDITION.

Vol I. of the Ninth Edition of the 'Encyclopædia Britannica' will be issued during January, 1875, and the other volumes will followt, wenty-one in all, at the rate of three per year. More than one-half of the matter in this edition is new, and comprises special contributions by many of the most eminent writers of the day, including Prof. Huxley, Max Müller, A. R. Wallace, R. A. Proctor, and St. George Mivart. The volumes will be illustrated, and in typographic excellence will be unsurpassed.

This edition will embody the results of the ripest learning of the nineteenth century, in Art, Literature Philosophy, and Science.

Price of the volumes $9 each.

The Nation.

NEW YORK, THURSDAY, DECEMBER 24, 1874.

The Week.

ON Wednesday of last week, the District of Columbia Bill came up in the Senate and the Legislative Appropriation Bill in the House. During the debate on the latter, an attempt was made to revive the franking privilege by striking out an appropriation for official postage stamps, and Mr. Kelley of Pennsylvania supported the old system with considerable earnestness, arguing that the free circulation of the agricultural report alone "more than paid all the fraud that might have been practised under it"; but the attempt failed by a vote of 71 to 77. Gen. Butler reported a new Supplementary Civil-Rights Bill, which resembles the one passed by the Senate at the last session, except that it permits separate schools, and omits all reference to cemeteries. On the next day, in the course of a debate on the Appropriation Bill, it was discovered that the Post-office was paying $4,200 a year for the rent of a house worth $18,000. The property, it turned out, belonged to Shepherd, and the lease had been reported on by Mullet; no satisfactory explanation was given, and the appropriation was cut down. In the Senate the District of Columbia Bill was again taken up, and Mr. Morton strongly opposed the disfranchising clauses. On Friday, the day was mainly devoted to the reception of King Kalakaua, while in the consideration of the Appropriation Bill in the House Mr. Beck charged the Department of Justice with being "honeycombed with frauds," and more specifically with corruptly dismissing appeals in cotton cases, declared that in the Louisiana case the Attorney-General had been "a more guilty man than Judge Durell himself," and promised to make good his accusations; this attack, however, resulted for the day only in a laughable discussion between Mr. Garfield and the Democrats as to the parliamentary character of the terms "vampires," "thieves," "robbers," and "swindlers," when applied to officers of the Government.

The only business of importance in the Senate on Monday was the introduction by Mr. Sherman of the Finance Committee's Resumption Bill. The District of Columbia Bill was then debated, the argument turning on the point whether popular elections in the District were or were not a failure. On the same day a very important resolution was introduced in the House by Mr. Holman of Indiana, pledging Congress to refuse all subsidies in money, bonds, lands, or credit to private companies, and limiting all appropriations at present to the imperative necessities of the public service. This resolution received 149 votes in the affirmative to 75 in the negative. Two-thirds were required to suspend the rules, so that the resolution was not adopted, but the overwhelming majority shows probably the temper of the House, and the fate that is in store for the schemes of Scott and Jay Cooke, the application of the Pacific Mail Company, the double-track steel-rail freight railroad from Council Bluffs to New York, and the canal warming-pan movement. From the gratification with which this vote has been received by the press and the people generally, we believe we may say that the present Congress has at last succeeded in discovering the real sentiment of the country as to subsidies, bonuses, bounties, and all other plans for using the credit of the Government for the sake of saving embarrassed persons the necessity of paying their debts.

The Senate passed the Resumption Bill on Tuesday by a vote of 32 to 14. The principal features of this measure are: a provision for the resumption of specie payments in 1879, by the use of the surplus gold in the Treasury at that date, and, should this prove insufficient, the sale of bonds to replenish the stock; the coining of silver by the Treasury as fast as possible, to be put in circulation in lieu of the fractional currency; the removal of all restrictions on the number of national banks and the volume of national bank-notes; and the withdrawal and destruction of greenbacks to the amount of eighty per cent. of all bank currency thus issued. To this we are sorry to offer the following objections, which, let us add, are tolerably obvious to persons possessing even a limited acquaintance with financial matters: 1. That nothing that is known with regard to the demands on the world's available stock of gold warrants the belief that a portion of it sufficient for the purposes of resumption could be accumulated in this country for any length of time without causing a serious financial crisis, as long as the Government paper, which is to be offered for redemption, bears a discount of twelve to fourteen per cent.; and that the only way of getting rid of this discount, and thus making the demand for redemption less heavy and pressing, is such a diminution in the volume of the paper as will bring it to par with gold; and that if this par were but established there is every reason to believe that resumption could be begun and carried out almost without exciting attention. 2. That it is not possible to keep silver in circulation as long as the discount on paper legal-tenders stands as high as it does now, and that the point to which it must be brought down in order to keep silver afloat can be readily ascertained at any exchange broker's office in this city, if not Washington; and that it would be too bad to plunge Mr. Bristow into such an experiment as that which made Mr. Richardson ridiculous. 3. That the demand for more bank-notes does not exist, as is shown by the working of the present law, and that, therefore, the proposed measure would either produce no effect on the volume of the currency at all, or would increase it, and therefore prove a means of inflation; and any banking scheme which does not involve redemption in coin is a mockery and delusion and a snare.

At this moment American silver coin is selling at 97 cents on the dollar in gold—that is, at a premium of 108 in currency. The price, however, is a fancy one, caused by a demand from certain localities which would be filled were it not for the smallness of the supply. As large an increase as this bill would create could not be marketed above its value as bullion. Silver bullion rules at present unusually low, and the recent news from the Comstock lode makes a further decline more probable than an advance. Therefore, it is possible that a silver currency at our present standard might circulate so long as gold remained under 8 to 10 per cent. premium. But gold stands considerably higher than this now, and silver would therefore be exported as fast as it was issued, and we should find ourselves reduced to postage-stamps for small change, as in the first year of the war. Stated roughly, the rule is that whenever one hundred ounces of our standard silver will bring more in foreign markets than can be bought here for $125 in paper currency, we cannot keep silver in circulation. If these facts are not generally known in Washington, we will undertake to prove them before a joint committee of investigation, if it will come here for the purpose with power to send for persons and papers; and we trust Mr. Bristow will in the meantime cry out lustily, and not allow himself to be placed in a false position.

The new bill for the government of the District provides for the creation of a department to be called the Department of the District of Columbia, with a board of three regents at the head of it, to be appointed by the President and Senate, and removable by the President for cause, with a term of six years, salaries of $4,500, and almost the whole power of government; no officers to be elected by the people except three members of the Board of Education; fixes

the rate of taxation at two per cent, and makes all taxes payable into the United States Treasury through the Collector of Internal Revenue. Mr. Morrill, of Maine, has the bill in charge.

Irwin still refuses to tell what he did with the $750,000 given him by the Pacific Mail Company to get their subsidy bill through Congress. He swears that he paid none of it to "any Senator or any Member of Congress, or any officer of the present Congress who was a member or officer of the Forty-second Congress"; but this has not satisfied everybody. Mr. Dawes pointed out on Monday, in making a motion to have Irwin arrested and brought before the bar of the House, that it is extremely unlikely that his method of getting the bill through was by walking up and down the "halls of debate" with a bag of gold, distributing it among the members as he went along; and the House agreed to the motion, after listening to some remarks from General Butler and Mr. Alexander Stephens, who expressed the opinion that Congress had not the power to punish for contempt, while General Butler went further and maintained that Congressional investigations were of no value except as "mud-machines." As he has expressed the same opinion with regard to investigations as carried on by the press, we can only infer that he is opposed to human investigation altogether, and would prefer to leave such matters as Crédit-Mobilier frauds, Pacific Mail subsidies, and Sanborn contracts to a higher court of appeal. Messrs. Beck, Dawes, and other members convinced the House, however, that this was an erroneous position, and the motion passed.

The President has issued a proclamation, at the request of the Legislature of Mississippi, calling on the whites in Warren County to cease their riotous proceedings, and go to their homes within five days. What is to be the next step is not stated, but we suppose Governor Ames will reinstate, or attempt to reinstate, the sheriff of the county, over whose official bond a great deal of the trouble originally arose. It is difficult to make out what grounds for the proclamation there are now, as there has not been any fighting at Vicksburg for two weeks, and if the State government is not strong enough to keep the peace in a single town it must be in so very feeble a condition as to need permanent assistance. As to the character of the Warren County disturbances, all accounts agree that the whites used no actual violence till the negroes marched upon the city; but that the proceedings which led to the resignations of all the black office-holders were decidedly revolutionary there can be little doubt either. That is to say, the whites, driven to desperation by the misgovernment of the place, paid domiciliary visits in unnecessary numbers to the office-holders, and with the greatest politeness informed them that on the whole it would be for the greatest interest of the greatest number if they resigned their offices without unnecessary delay. A visit of this sort to a person in authority, however politely it is done, will naturally be looked on by him as an act of intimidation, and he will regard his resignation as obtained by duress, though he was neither knocked on the head until he signed it, nor ridden out of the place on a rail with a coat of tar and feathers.

Mississippi is a thoroughly negro State. Not only is there an actual negro majority on which the Republican Government rests, but this majority is said to be increasing from the overflow of the negro population from the neighboring States. In Vicksburg they have had such complete control that they have been able to bid defiance to the law itself. Having governed the place as corruptly and ignorantly as possible, and having been indicted for it, to prevent expulsion from office they steal the judicial records of the indictments. This theft was the real cause of the rising of the whites, and though we regret the violence and loss of life which ensued, it seems an almost inevitable result of the state of society and government. The Cincinnati *Commercial* and the Hartford *Courant* have published interesting letters from the scene of the fight, but though there seems no doubt that the complaint of the whites as to the sheriff's bond was a mere quibble, there is as little that the difficulty between the blacks and whites is too deep to be settled by anything short of a revolution like that which has taken place in so many other Southern States, handing the machinery of the government over to the stronger and, on the whole, better race. As an illustration of the character of the Vicksburg government, the *Commercial* correspondent quotes a Republican and ex-Federal soldier, who has been living there for ten years, as saying that neither the sheriff nor any of his deputies could write a simple return; while the clerk of the Chancery Court, Davenport, was not able to enter a plain continuance on the records. Another election, we believe for sheriff, is to be held in a few days.

The concern now so well known as the "Emma Silver Mining Company (limited)" has been brought before Vice-Chancellor Malins in the English Court of Chancery, on the application of a stockholder, named Askew, for an order to enable him to examine the books and papers in aid of a petition, which he has filed, to wind up the company. After hearing counsel against the motion, the Vice-Chancellor at once granted it, saying that "the case made by the petition was one of gross fraud on the part of the original promoters of the company"; that the shareholders had been led to expect dividends of 70 or 80 per cent.; "that dividends of 1½ per cent. a month had been paid for the period of ten months," but the money had been borrowed for the last two; that "enormous sums had been obtained from the shareholders upon the faith of statements which to all appearance were totally untrue." We may now add that there is at least a fair prospect of light being let in on this nefarious transaction on both sides of the water. The new board of directors and a new solicitor of the company recently took office, and they at once determined to make an attempt to bring the principal promoter of the swindle to justice, cost what it might. Indeed, there is a stockholder in England, whose assistance, however, they have declined to accept, who offers to spend ten thousand pounds of his own money, if necessary, in trying to effect this object. The chairman of the board, therefore, General Gardiner, and Mr. Turner the solicitor, came to this country about three months ago on what Dr. Wines would call a "penological" excursion; and, after a full examination of the whole matter in Utah, have begun a suit against Trenor W. Park, Senator Stewart of Nevada, and General Baxter, for fraud and conspiracy, for $5,000,000, and will push it vigorously to the bitter end. In the suit which Park's manager at the mine, Silas Williams, has brought against the *Nation*, we only hoped to lay one chapter in the fraud before the public, but now we think we can promise the whole story—and a shameful story it is, full of mischief to honest American enterprises and of disgrace for the American name. Park has just got control of the Panama Railroad, and Stewart is of course known to everybody as a rich "Administration Senator."

The mention of the Emma leads us to say a word or two about our Minister, General Schenck. The retention of him in a place which, before the late reform in the civil service began, was reserved for Americans of the highest standing and character, is perhaps one of the worst incidents in the history of the coarse and venal régime under which we now live, to which the late elections gave such a stinging blow, and to which all honest men will be prepared, we trust, to give another, and a finishing one, two years hence, should it be necessary. He has been principally known and contemned in English society for the last years for his connection with the Emma Mine and his skill as a player of "poker." So little sensitiveness does he possess, however, that he has just brought out a hand-book of "poker" in a little green pamphlet, for private circulation—a work which we need hardly say has still further raised him and his country in foreign eyes. To crown all, he went down, the other day, to a public dinner at Sheffield, and bragged of the field which America offered for English investments, and joked over the fact that some of them were not very profitable, knowing well of what particular investment his audience were thinking, with a coarse cynicism worthy of Fisk, jr.

The controversy in England over the effect of the Decrees of the Vatican Council and the *ex-cathedrâ* utterances of the Pope on the civil allegiance of Catholics continues, and, if we may judge from the letters and reports in the newspapers, the confusion grows greater. The Catholic theologians, of all shades of opinion, differ greatly about all the matters in dispute. They differ about the nature and extent of the Pope's infallibility before the meeting of the Council; about the nature and effect of the Decrees of the Council; about the extent of the Pope's jurisdiction—that is, about the meaning of the term "faith and morals" and of the term "*ex cathedrâ*"—and in fact, humanly speaking, about everything necessary to form a judgment as to the precise position the Pope now occupies. In the controversy between Mr. Martin Archer Shee, a Catholic barrister, and Dr. Johnson, Archbishop Manning's private secretary, as to the regularity of the proceedings of the Council, and especially of the form in which the Decrees were adopted, it seems clear, to the carnal eye, that Dr. Johnson got the worst of it. Lord Acton, nothing daunted, has come forward with his authorities for the charges he recently made against former Popes, and has apparently held his ground on all points. Mr. De Lisle, too, a well-known Catholic gentleman who has founded an abbey on his estates and built several Catholic churches, writes an approval of Gladstone's pamphlet, and protests strongly against the reckless statements of Monsignor Capel and Monsignor Patterson with regard to the Pope's authority, and says "such pretensions will be endured no longer." Mgr. Capel, in the meantime, shows a disposition to take in sail, and tries to explain away the phrase, "personal infallibility of the Pope," which he used, and somebody else shows that Mgr. Patterson's wild talk in the *Contemporary Review* was really justified by the language of the bull *Unam Sanctam*. In fact, nearly everybody in the fight has thus far produced a bull or decree to justify him. This bull was called out by a Papal quarrel with Philip the Fair, and declared that it was "absolutely necessary for salvation to every human creature to be subject to the sovereign pontiff"; which drew from Philip a vigorous denial of this doctrine, so far as temporals were concerned, in which he addressed the Pope as "Your Folly" (*Tua Fatuitas*)—instead of "Your Holiness"—a form which apparently does not lose its use as the ages roll on.

Apropos of all this, a very large gathering of English Catholics, both clerical and lay, is reported at Rome, and the correspondent of the London *Times* gives as a credible rumor the story that the English Bishops have submitted a plan for something in the nature of a Catholic revival in England—to be carried out by the establishment of new Catholic missions and periodicals, and the increased endowment of Catholic schools and colleges, with professors renowned for combined piety and learning, the raising of the standard of culture for parish priests, and the extension of the operations of the Society of St. Vincent de Paul. It would appear, too, from a lecture recently delivered in Dublin by Father Burke, at which Cardinal Cullen presided, that the church, as far as Great Britain is concerned, is disposed to take the scientific bull by the horns, and accept any theory of the origin of life the philosophers may please to suggest which does not go behind matter, and in this way bring Huxley and Tyndall to confusion. This course is facilitated by the fact that the church is not tied to the Bible as the Protestants are, and makes Dr. Draper's theory that science and the Catholic Church cannot be "reconciled," while science and the Protestant Church can, look somewhat doubtful. The *Osservatore Romano*, the organ of the Vatican, in the meantime attempts none of the compromises or explanations of the English divines. It says, apropos of Gladstone's pamphlet, that modern civilization had its origin through Protestantism, "that is to say, through an open and wicked rebellion against Christ, and its increment through the struggles of rabid sophists," and that he who opposes it "is a servant of God, a worthy successor of the martyrs, a vindicator of true liberty." Of the Pope's Syllabus it says, "Unhappy is he who does not recognize it as his law, a law superior to all laws, because it is divine."

Dr. Kenealy, the hero of the Tichborne trial, has at last been disbarred by the benchers of Gray's Inn, to which he belonged, and the Lord Chancellor had previously, we believe, either resolved to strike his name from the list of Queen's Counsel, or had actually done so. He has appealed to the judges. His career has been a strange one. He is a man of brilliant talents, of great forensic power, of high literary culture and considerable legal learning, and has achieved distinction as a writer of English verse, and, in spite of an erratic temper, had succeeded at the bar, and was made Queen's Counsel, we believe, in 1868. His behavior at the Tichborne trial was, however, very bad, and since then he has started and conducted a scurrilous paper called the *Englishman*, for the purpose of avenging himself on his enemies, a category which includes the judges, the jury in the Tichborne case, the leading members of the bar, and especially the members of his own Inn, all of whom he blackguarded in the regular Yahoo style, with which more than one organ of public opinion has made us familiar here. After standing it a good while, the benchers of Gray's Inn, of whom he is one, expelled him, and some public comment has been excited by the fact that the tribunal which has thus kicked him out of his profession was composed, in part at least, of his personal enemies; to which the tribunal replies that it resembles a court-martial, and its members are therefore no more disqualified for sitting on him than the officers of a regiment or a brigade are for sitting on one of their own number, by whom they have been insulted, and who has been generally insubordinate and disorderly.

The Deputies from Alsace-Lorraine in the German Parliament have for some time shown a disposition, by no means unnatural, to make themselves slightly unpleasant to the Imperial Government, and even to put on an air not only of being oppressed but of being irreconcilable. The other day they objected stoutly to a loan bill introduced on behalf of their province, on the ground that it provided for too large an endowment of the Strassburg University, and made appropriations for educational purposes in the interest of the empire rather than of the provinces themselves. This drew from Bismarck one of those declarations which his enemies call brutal, and which doubtless are brutal, but which have the sovereign merit of doing away with all misunderstanding, and letting everybody know where he stands. In fact, we can hardly avoid considering it an act of kindness to the Alsace-Lorrainers. He said the bill, it was quite true, did concern the empire and not the provinces in question; that the university is to serve imperial purposes; that the provinces were conquered for the benefit of the empire, and are retained for the benefit of the empire; that the conduct of the deputies in the Imperial Parliament showed that a Provincial Parliament would not work; that his policy with regard to Alsace-Lorraine would "always be guided by the interests of the empire and its safety; that he would not be frightened from his course by reproaches, threats, or intimidation," and that he built his hopes of peace and tranquillity on the rising generation, and must, therefore, see to their education.

Count Arnim has been found guilty and sentenced to three months' imprisonment, the month he has already undergone to pass as part of the penalty. Nothing has transpired to enable one to form any clearer judgment as to the moral aspect of the treatment inflicted on him. It appears to be very plain, however, that he had acted illegally, perhaps defiantly, and in violation of good order and discipline, but then some allowance has to be made for the effect on a man of the Count's temper and antecedents of his own estimate of himself and his importance, and of the habits bred by long and intimate friendship with his chief. The affair has ended somewhat ludicrously for those who believed it would result in Bismarck's overthrow, or would lead to any startling revelations. A correspondent in another column furnishes some useful information as to the law of the matter.

THE LEGAL-TENDERS AND "THE DEBTOR CLASS."

THE proposal made by the Secretary of the Treasury that the Legal-Tender Act should be repealed at an early day as regards future contracts, has caused a good deal of commotion among those politicians who have taught themselves that irredeemable paper is the true foundation of popular government; so much so that Mr. Kelley—whose sanity is vouched for by Mr. George W. Blunt—declares it would be "the greatest crime committed since the partition of Poland." It has caused, too, more or less apprehension among that remarkable body of persons now known in political discussion as "the debtor class," and who are popularly supposed to be very poor and needy and in constant fear of a visit from the sheriff, but who, whenever one calls for names and goes into particulars, are usually found living in large mansions, in Beacon Street, Fifth Avenue, and Chestnut Street, with huge safes stuffed full of stocks and bonds, but especially stocks.

Now, we are among the number of those who hold that Mr. Bristow's plan would be not only harmless as regards future contracts, but as harmless as regards all contracts as any change in the currency of which due notice is given can ever be; and that the popular fondness for the legal-tender character of the Government paper is based on a delusion as to the power of Government over any paper not redeemable in coin—a delusion current even among educated men ever since 1861, and of which Mr. Chase took advantage in a very adroit way when he issued paper-money in sufficient quantities to give his bonds the appearance of being sold at par when they were really being sold at sixty cents on the dollar. Whenever the history of the war comes to be thoroughly written, with due attention to the civil side of the struggle, the state of the popular mind on this subject will furnish materials for a chapter of extraordinary interest, as illustrative of the curious psychological support which even a system of bad finance may draw from patriotic enthusiasm. The opinion has prevailed from the date of the first issue of greenbacks almost down to this hour that the poor and "the debtor class," and in fact consumers generally, were protected in some way against creditors and vendors by the fact that the greenbacks were made a legal-tender. The truth is that neither the Government nor anybody else, except debtors on contracts made before the war, derived any advantage from it whatever. All persons who had made contracts before 1861, or during the years 1861-2, falling due before 1864 or until the decline in gold set in, undoubtedly made money by the payment of their creditors in the depreciated paper. On the other hand, all persons who made contracts in the years 1862-3-4 which have matured since 1865, have lost money, owing to the appreciation of the paper since that time, so that it may be said that "the debtor class," as a whole, has made very little if anything by paper legal-tenders. Any one who made contracts during or before the year 1862 payable any time before the close of 1869, profited by the legal-tenders. Any one who made contracts in 1863 payable before 1869, came out about even; any one who made contracts in 1864 payable any time since that, however, has lost heavily. The debtors of 1865, in like manner, only escaped by paying in or before 1869. The same may be said of the debtors of 1866, 1867, and 1868.

In fact, the following table of the average price of gold each year—based on the highest price of each month, and dropping the fractions—from 1862 to 1873, will show better than anything we can say the vicissitudes through which "the debtor class" has passed since the suspension of specie payments, in spite of the legal-tenders:

1862	118	1868	142
1863	154	1869	137
1864	220	1870	117
1865	166	1871	112
1866	146	1872	114
1867	139	1873	115

It will thus be seen that the greenback has risen over thirty-three per cent. in value as compared to gold since the war, or, in other words, that a man who made a contract in 1865 has, in paying his obligations under it now, to pay one-third more in the money of the world, or foreign goods, than he contemplated at that period. In the years 1869-70, the greenbacks rose in value fully one-seventh, which ought, under the theories we hear propounded as to the dreadful effects that would result from a further rise of ten or eleven per cent., to have ruined the debtors of 1869, but as yet there has not been, so far as we have heard, a word of complaint from them. They appear, in fact, to be able to stand any fluctuations in the value of the currency, however great, as long as they do not bring us back to specie payments or a gold basis, and remind one of a patient who should say to his physician, "Physic me, doctor! amputate my legs and arms, cauterize, cup, bleed, or trepan me as much as you please, but for heaven's sake don't cure me, or I shall die."

Nothing, too, could illustrate more forcibly than this table the fallacy of supposing that the legal-tender quality of the greenbacks gave them any stability in value, or did anything for them beyond making them an effective instrument in the hands of such debtors as were able to pay off their liabilities, previously contracted, between 1862 and 1865. Nor did the Government gain more by it than private persons, as any one may satisfy himself by an examination of the prices it had to pay for the commodities it purchased during the war, and the rates in gold at which it sold its bonds. Its paper circulated, as nearly as can be ascertained, precisely as one might have expected it to circulate as a promissory note of the United States, which nobody need have taken unless he pleased. The non-interest-bearing notes of such a government would, like its interest-bearing bonds, always have had a certain value in the market, which would have been, we venture to assert, about what that of the greenbacks was. They would have risen and fallen, according to the quantity of them issued, and according to the ups and downs of the war, as the legal-tenders actually did. Moreover, they would have been used as currency pretty much as the legal-tenders were. There is a notion afloat, which the admirers of the greenbacks studiously spread and uphold, that Government notes without the legal-tender character would not have circulated as money unless they were redeemable in coin at the Treasury on demand, but there is no foundation for this either in the history of finance or in our experience of human nature. Anything which furnishes a convenient currency, and which has a fair prospect of redemption some time or other, always circulates in hard times *at some rate*. Indeed, there are numerous examples of the circulation of things as currency which had no intrinsic value, and were never likely to have any, because they supplied for the moment the needs of trade. The greenbacks would always have circulated, as the promises to pay of a powerful nation, though of course at an open discount instead of a covert one. Gold would not have gone wholly out of use, because there would have been a certain demand for it. So that when you asked the price of a thing you would have been told what it was in coin, and also what it was in paper, and you would doubtless have been allowed to pay in either; for the notion that dealers refuse to carry on business unless they can get payment in the money they prefer, instead of the money customers find it most convenient to give them, is another of those illusions got up by "the debtor class," and which also has no foundation in experience. Dealers always sell for the kind of money the mass of customers have to offer, and protect themselves against its possible badness in fixing their price. This is what they would have done in taking greenbacks, even if greenbacks had never been made a legal-tender. This, too, is exactly what they did after greenbacks had been made a legal-tender. "The debtor class" supposed foolishly that when they went into a store and asked the price of a thing, and the storekeeper gave it them in paper, he thought nothing about the real price in gold; and that this forgetfulness of his was due to the salutary legal-tender feature stamped on the paper by the wisdom of Congress. But there could not be a greater mistake. When he marked his price on a piece of goods, he always calculated, first what it cost him in gold, and then what he would sell it at in paper; and in doing this he considered first what the discount on paper was at that moment, and then added it to his paper price. Then he considered what the discount might become under the influence of fresh issues or military disasters when he

came to pay his notes, or renew his stock, and added something more in order to cover the risk thus incurred. If we were to-day to ask any dealer in the United States whether in marking his goods at any time since 1861, the legal-tender character of the greenbacks made any difference to him, he would be pretty certain to reply that he never thought of them except as paper in which he would probably be paid, and which was at that time depreciated in the market, and likely to remain so. The notion that it was money like gold did not enter into his head. He dealt with it as he would deal with cowries in Africa or government notes in Hayti. It was only barbarian politicians like Logan, or ignorant negroes, who made fetish of it, and worshipped or wept over it.

The Government ought not, however, to do anything to the paper which may possibly change its value as between parties to existing contracts, except as a means of redeeming it in gold. It was guilty of a great wrong when it in this manner interfered with existing contracts in 1861. That wrong was recognized fully when the war was over; and the Supreme Court attempted to prevent its continuous perpetration, when all semblance of excuse for it had ceased, by the decision in Hepburn *v.* Griswold, which was afterwards set aside by the intervention of two new judges, the majority of the Court then deciding in effect that the power of raising forced loans and permitting debtors to defraud their creditors was constitutional, and might prove necessary to the national safety. This was a great misfortune; for the interference of a government to disappoint the reasonable and lawful expectations of men in their private dealings is the mode in which national swindling is most commonly committed. It ought not, therefore, to be repeated. Any man who has made a contract which he expected to pay, and his creditor expected him to pay, in greenbacks, at such discount as prevailed in the market, ought not to be disappointed by any legislation which has not for its object the fulfilment of Government obligations. But Mr. Bristow does not propose any such disappointment. He proposes simply that any man who makes a contract now, payable on or after a certain date, shall understand that it will be payable in coin, and nothing else. There is nothing objectionable about this. It simply makes legally imperative the calculation which prudent men have always hitherto made, whether openly or privately. Every man who has made contracts during the last fourteen years has really made his calculations in gold, though he may have expressed them in paper. What Mr. Bristow proposes now is that he shall not only make but express them in gold. There is here no interference with the obligation of contracts, and no encouragement or suggestion of any description of fraud; and if the suggestion forms part of a scheme for the redemption of greenbacks in coin within a reasonable period, it is absolutely free from objection of any kind.

THE DEPARTMENT OF JUSTICE.

THE creation of a new department of the Government by act of Congress in 1870 was looked upon by lawyers generally throughout the country with a good deal of satisfaction. The steady increase of the number of States and of the population of the country, and the growing importance of the business of the United States courts, had begun to render it necessary to organize in some way the legal machinery at Washington. The courts were overrun with business, while the numerous legal officers of the Government, scattered over a vast extent of territory or huddled together in the various bureaus in the District of Columbia, were subject to little or no organized discipline, responsible to no common head, and were frequently engaged in the solution of legal questions at cross-purposes, to the great delay of justice and confusion of law. To remedy these evils, so far as they related to the courts, Congress increased the number of Federal judges, and the new offices were filled by the President to the satisfaction of the public and the legal profession. To remedy the confusion, continually growing worse confounded, in the other branch, it was decided to create a new department of the Government, having at its head the Attorney-General, and under him all the legal advisers of the various departments, as well as the district-attorneys in their various districts, in such a way as to give the Attorney-General for the time being complete control of the suits brought by and of the legal advice given to the United States. The name given the new bureau was the Department of Justice—a misnomer, certainly, for there is little resemblance between an American Attorney-General and a European Minister of Justice. Possibly we may see in the magnification of the title evidence of a vagueness of design on the part of the authors of the bill.

The new judges have, we believe, performed their duties satisfactorily; the Department of Justice has discharged its new functions peculiarly. So far as it was intended to give the Attorney-General more power, and to make him the head of the machinery for executing laws, it has worked admirably. He has for some years made and unmade governors, reprimanded judges, and issued orders for enforcement or non-enforcement of laws through a large part of the country, pretty much at his discretion; and almost the last news from Washington is that a caucus of Southern Republican Congressmen have determined that the only way to restore peace and tranquillity at the South is by appropriating money for the War Department and the Department of Justice, making the appropriation for two years instead of one, so that it may not be interfered with by the Democrats when the next House comes together. It is only a few weeks since it was given out from Washington that a highly respectable judge had earned the displeasure of the Department of Justice, by returning answers to the questions of a grand jury on the construction of statutes of the United States. Indeed, as most of the Attorney-General's important operations do not consist of acts of any kind for which he can be held responsible, but merely of legal opinions, he enjoys perhaps a more utterly irresponsible power than any other officer even of our despotic system. The President may be impeached; members of Congress may be expelled; but when the Attorney-General, having a certain state of facts presented to him, and being asked, on the facts, what is the law, replies that the law is so-and-so, when it is as matter of fact exactly the reverse—for him no punishment is provided, nor even seems possible.

For these reasons, the most important thing in organizing the Department of Justice was the selection of a fit person as Attorney-General. Reforms in departments of government are not automatic. Their character depends generally on that of the men who undertake to carry them out; and it is not due to the censorious disposition of the public that the administration of the Department of Justice has become identified with the name and career of the present Attorney-General, Mr. George H. Williams, he having been the most prominent incumbent of the office since the date of the act of Congress increasing his powers. Mr. Williams has had an opportunity of appearing publicly on some very important occasions, when large interests were involved, and on the whole he has been, strictly speaking, a more conspicuous Attorney-General than any of his distinguished predecessors. He has appeared as legal adviser to the Government in all the Reconstruction cases which have arisen; he has undertaken on behalf of the Government to recover large sums of money of which it was unquestionably defrauded by the Crédit-Mobilier corporators; he has attempted to guide the Government through the intricacies of the *Virginius* case; he has very recently advised the Government with regard to the Pacific Mail subsidy; he has been a candidate for the Chief-Justiceship. In some of these cases his knowledge of the law has been put to the test, in others his judgment and discretion, and in his candidature for the Supreme Court his whole previous life and character were carefully examined. From the glare of publicity which has been shed upon his office, we are in a position to determine pretty accurately the character and value of the "Department of Justice." We shall not attempt to discuss here the Attorney-General's proceedings and advice under the Reconstruction acts, but merely touch upon certain points lying wholly without the domain of party politics.

In the *Virginius* case, Mr. Williams had an opportunity of show-

ing what he knew of international law. The *Virginius* was a Cuban vessel, well known to all the world and to the Government to be engaged in a hostile expedition against a friendly state. Her character was indeed a matter of such common notoriety that the Government has been strongly suspected of a grave dereliction of duty in not preventing her ever having the opportunity of making the attempt to invade Cuba. Having been driven off in attempting to land a hostile expedition on the shores of the island, she was captured on the high seas, and, after some hasty drum-head proceedings, large numbers of those on board were shot, some of them being English and some American citizens. This execution furnished a ground for just complaint; but the Attorney-General, on the case being referred to him, decided that the real outrage was not so much the execution as it was the fact that the *Virginius* was flying the American flag at the time of her capture—thus taking the extraordinary position that any pirate or buccaneer who could manage to procure a fraudulent register and a piece of bunting with stars and stripes on it, could bid defiance to any government, hovering about its coasts just three miles out, and landing hostile expeditions whenever opportunities should occur. The capture of the vessel by Spain was justified by one of the fundamental principles of international law—the right of self-defence; and in the end we were obliged to dispense with the salute to the flag, and to bind ourselves to have the *Virginius* and all concerned in the violation of our laws proceeded against in the courts. Meanwhile, the English Government, simply proceeding against Spain on the ground of the massacre, recovered indemnity without having any flag in the case at all. This was a curious termination of the case, looking at it from any point of view; and we are forced to come to the conclusion to which nearly every well-known publicist in the country who has discussed the question seems to have come, including Mr. R. H. Dana, jr., of Boston, the editor of Wheaton, and President Woolsey of Yale College, that the opinion of the Attorney-General shows a singular ignorance of the principles which govern the intercourse of nations.

The law of nations, however, is, in the opinion of some jurists, so difficult to reduce to fixed rules, and so coarse in the sanctions it imposes, that they are inclined to devote themselves to other branches. If Mr. Williams belonged to this class, it would be fairer to compare him with men like O'Conor and the late Judge Curtis, than with Mr. Webster; and his friends might on this account prefer to have him judged by his opinions on questions of municipal law. The Pacific Railroad was built, as every one knows, by the Crédit-Mobilier Company, and the money came from the United States. The construction was, from first to last, tainted with fraud, and after the exposure in Congress it was determined to recover the money in the courts. Into the question of the proper method of doing this it is unnecessary to enter here. It is enough to say that Congress passed an act directing the Attorney-General to recover the money in one of the United States Courts. The interests involved were enormous: the defendants were represented by the ablest lawyers that could be found in the country; the United States were represented by Mr. Williams. Whether he had a strong case or a weak case we shall not definitely know until it is decided by the Supreme Court at Washington; but as to how well the Government's interests were represented by him there is no doubt. He made a failure; he made even so bad an appearance, and exposed so much ignorance of his case and his duties, that the contrast between himself and Mr. Evarts (himself an ex-Attorney-General), became almost painfully ludicrous.

Turning to the Pacific Mail case, we find that the matter of the payment of the subsidy was recently turned over to the Attorney-General. The Pacific Mail is a company which hardly belongs to a class that we should expect Government officials to look on with a favorable eye in doubtful cases. It is, to be sure, an American line; but, on the other hand, its stock is the foot-ball of speculators; its management is so reckless that a list of ten ships has been recently made out as lost by it; and, worse than this, it is strongly suspected that the act authorizing the subsidy was obtained by fraud and corruption. Add to this the fact that the subsidy was to be paid to the company on the condition of their having ships of a certain class to perform the service, and you have the case which the Attorney-General had before him. There was a clear technical default on the part of the company, and at the first blush it would seem that the Government had an excellent opportunity of getting out of a very suspicious bargain. Under these circumstances, the Attorney-General decided in favor of the subsidy, and on the ground of the *bona fides* of the company. The case, it will be seen, was a mixed matter of fact and law, and involved no delicate points of international or municipal jurisprudence. It was rather a case involving discretion and good sense.

But we have not only had these public illustrations of Mr. Williams's judgment and forensic skill and legal attainments, we have also had an indirect official enquiry into his qualifications for office, when the Senate had his name under consideration for the Chief-Justiceship. It was then discovered, not that his character was bad, for we doubt whether the "charges" under which he was laboring at the time were substantially proved, but that he was no lawyer. He had acquired what legal experience he possessed in Oregon. He proved to be, in fact, a politician who turned his law to account in the scramble for place, but professionally had neither reputation nor the right to it. Indeed, his nomination was publicly denounced by the Bar Association of this city as that of a man "wanting" in the qualifications of "intellect, experience, and reputation." It is safe to say that the evidence brought before the Senate at that time showed him quite as unfit to be the head of the "Department of Justice" as to be Chief-Justice.

Such is the professional history, so far as the public knows it, of Mr. Williams and his Department. There may have been a multitude of cases which he has decided correctly; as he has many faithful subordinates, the routine work of the office may have been well done where he has not interfered with it. But the cases in which a minister of justice puts himself to the test are the public and notorious ones in which he appears as the chief legal officer of the country. Particularly is this so when he appears before the country in charge of machinery for the improvement of a branch of administration. As we observed the other day, "reform" in the minds of nine-tenths of the people who demand it does not mean a mere change or amendment of laws—it means the substitution of men fitted by character, reputation, ability, and attainments in positions of trust and authority for incompetent or corrupt place-hunters. When the Department of Justice was instituted, the Administration had a good opportunity for improvement within narrow and well-defined limits, but people smile now when they hear of the "Department of Justice," because it means merely to them Mr. George H. Williams. We doubt if the Democrats, should they carry the next Presidential election, will have any better field for the exercise of their loudly-expressed desire for reform than in the appointment of Mr. Williams's successor.

SCIENTIFIC MEN AS PUBLIC TEACHERS.

A CORRESPONDENT raises in another column a question of considerable interest (apropos of what we have recently said of Professor Tyndall's utterances at Belfast), which seems to call for a fuller explanation of our meaning. Mr. Tyndall's views as to the origin of life have undoubtedly great psychological interest. So have those of any eminent physicist who is constantly working, as he is, on the edge of the great mystery, and, even in a trifling degree, pushing back its limits. But then his views in the case under discussion were not offered as a psychological study, but as a real contribution to the explanation of a problem of great moment; and our objection to his offering them in the way in which he did offer them is justifiable, we think, on grounds which we shall state as briefly as possible.

Science is in all but undisputed possession of the physical world, and it is making claims which grow stronger every day to jurisdiction over the moral and mental world, which it insinuates, if it does not allege, are but provinces of the physical world. The scientific man not only tells me how the earth was prepared for me to inhabit, and how I grew on its surface into the kind of

animal that I am—"an unstable chemical combination," held together by an instrumentality which he calls "vital force"—but he says he is almost certain that my mental action, and consequently my morals, are the result of chemical or mechanical changes in the structure of my brain, and that he greatly doubts whether my freedom of the will, over which I crow so much as distinguishing me from the brutes, is not an illusion; for he adds that he is at present engaged in the study of sociology as well as of biology, and expects to show us before long that though he cannot tell how any one of us will behave, he is able to predict pretty accurately how a herd of us, forming what we call a nation, will conduct ourselves under given circumstances. In fact, he knows all about us, either jointly or severally. He knows the origin and composition of our bodies, the source of our gestures, appetites, affections, tastes, and customs; the origin and history of our habitat; the effect on our structure and mental action of all gases, deposits, exposures, permeations, and environments of every description. He is competent, and he maintains that nobody else is, to tell us what to eat, drink, and avoid—when to marry, how to bring up our children; to indicate the source of our vices, and determine the exact nature and extent of what we call our moral responsibility; and to point out the proper mode of getting rid of our disgusting remains after death.

Now, these claims taken together really constitute a demand on our physical and moral submission and obedience such as were never made by any order of priests since the world began. They make the pretensions of the Pope and the Councils seem slight and shadowy, because while the Church has always had a clear-cut theory of the universe, she has admitted that the world was governed by an apparently capricious Deity, whose purposes she could not reveal, though it was her business to appease him. The scientific man, on the other hand, professes to be the minister of a power in whom is really no variableness, and whose plans can be foreshadowed, and whose rule over the universe is absolute, and of whose requirements he, in his character of chemist, or biologist, or physiologist, or naturalist, is the only interpreter. We doubt much whether the contempt of a mediæval doctor for a lay opinion on a theological question was any greater than that of a natural philosopher in our day for a non-scientific opinion on a scientific question; and, as we have just pointed out, *all* questions are rapidly becoming scientific questions.

But no matter what solution of the problem of liberty and necessity sociologists may reach, the fact is that the great bulk of the work of the world will always have to be done on the theory that man's will is free. By this we do not mean to lay down dogmatically, with the metaphysicians, that men's voluntary actions are in any part undetermined by what has preceded and accompanies them in the characters and circumstances of the agents; or are absolutely capricious, baffling the computation of infinite intelligence; we mean only that to finite intelligences (including the scientific men) the case is *practically* as the metaphysicians put it. All that is essential in what we maintain against the preaching of the "scientists" is, that men's actions, whether determined or not by their antecedents and surroundings, cannot be scientifically predicted or guided, even so well as the weather; or can be foreknown only in vague outlines, and in particulars which are dubiously volitional. Such prediction and guidance as are possible in the simplest of the physical sciences, astronomy, and in the exactest of useful and experimental arts, are as impossible in human actions (notwithstanding the pretensions of the scientists) as if these actions were absolutely free from the law of causation. The poor fellow whose case Professor Huxley commented on at Belfast, as a suggestion, if not more, of the hypothesis that man is an automaton, was not and could not be treated as an automaton by his officers when they were holding the burning village of Bazeilles, amid sights and sounds of the utmost horror. By far the larger part of human activity will always have to be aroused or stimulated by agencies by no means scientific. Doctors, lawyers, ministers, teachers, legislators, soldiers, editors, must always play a very prominent part in carrying on human society, and must constantly rely for success on processes which a scientific man might smile over. Mr. Herbert Spencer, in his latest work on the 'Study of Sociology,' twitting Mr. Gladstone on some of this gentleman's objections to the doctrine of evolution, nevertheless treats his mental attitude, which is one of combined reliance on Providence and on human exertion, as an illustration of "the healthful process of compromise between the old and the new" which is going on in the public mind generally in our day. He mentions as other illustrations of the same thing the fact that when the Prince of Wales "outlived certain abnormal changes in his blood," on his recovery "providential aid and natural causation were unitedly recognized by a thanksgiving to God and a baronetcy to the doctor;" and he adds that "while the prayers with which each legislative sitting commences show a nominal belief in an immediate Divine guidance, the votes with which the sitting ends, given in pursuance of reasons which the speeches assign, show us a real belief that the effects will be determined by the agencies set to work." Mr. Spencer evidently, however, thinks this state of mind is of recent origin, and is transitory, and that "the old" will before long give way wholly to "the new." This is a point on which we may, however, permit ourselves to differ with him. There is about as much chance of any such consummation as there is of the mass of men receiving a thorough scientific training. The "compromise" is as old as civilization itself. To go no further back, Cæsar, after the defeat of Sabinus and Cotta, held out the prospect of deliverance to the troops through "the favor of the immortal gods and their own valor," and Cromwell's advice to his troops in Ireland, "Put your trust in God and keep your powder dry," has almost passed into a proverbial expression of the popular notion of the relation between faith and works. So, still more recently, when the old Scotch judge, Lord Braxfield we think it was, warned a prevaricating witness that "the eye of Almighty God and of the police of Edinburgh was upon him," he mentioned two sanctions for truth-telling which his audience recognized as about equally powerful. People may cease to believe in what we now call Providence, but as long as they sometimes see the best-laid schemes miscarry and the wisest and most heroic efforts fail, or, at other times, see fools and sluggards carry off the prizes of life, they will put in the place of Providence some other deity which scientific men will probably think contemptible. They will worship Fortune or Fate, or, in other words, the disturbing, uncertain element in human life, if they can worship nothing else, until such times as science makes it as easy to govern, or teach, or fight, or cure, or persuade, as to calculate an eclipse or decompose water.

This amounts to saying, however, that the great body of men will always remain to a greater or less extent under the domination of authority in the conduct of their lives. Not knowing themselves where the line lies which separates the certain from the uncertain, they will listen reverently to anybody who does or says he does. The training which will enable a man to stand up against or overhaul the conclusions of the leading scientists of the day on subjects over which they claim jurisdiction, will never be given in schools or colleges to the bulk of any community. The great majority will always have to sit at somebody's feet, and take their truths on trust from somebody who professes to have made a special study of them. In times past the clergy have occupied this relation to the people. There are numerous signs now that the scientific men are gradually taking their place, and that they are by no means unwilling to take it; but it is of great importance that they should not be allowed to make priests of themselves, and that we should not forget that there are more things in heaven and earth than are dreamt of in any man's philosophy. They, like the rest of us, are "unstable combinations," with varying amounts of vital force. They are modified by various external agencies. Their nervous system is disturbed, as is that of the Pope and the bishops, by indigestion, by cold, by heat, by ambition and self-love, and divers other passions. They are consequently, ministers and interpreters of nature though they be, liable to fall into many sorts of errors and illusions, and it is the duty of those who have to live under them to see to it that they do not get into the way, like that with which the clergy have been so often reproached, of considering themselves and science as the same thing, and giving forth their own utterances as if they were hers. They are constantly tempted and stimulated into this attitude by the intoxicating influence of popular admiration. There are already plenty of people ready to receive anything Tyndall or Huxley says as scientific, whether it be a mere guess or the result of experimental demonstration, just as plain Catholics will surely take all the Pope says as "gospel truth," whether he speaks *ex cathedrâ* or not. For instance, we have no doubt that Professor Tyndall's history at Belfast impressed most of his audience as fully as reliable as his pure science, yet on the former he was no authority at all, and made some evident mistakes.

The only way to guard against this sacerdotal tendency—for so we may call it—is to insist on scientific men adhering rigidly to their own rules of reasoning. The public ought not to permit their appearance in the metaphysical or theological arena, to clothe pure speculation with the authority derived, and only derivable, from careful experimentation. The objection to their joining the theologians and metaphysicians in speculating about the first cause, is that in doing so they are departing, which the theologians are not, from their own method, and drawing conclusions which science forbids them to draw. The reason why the public listens to them with deference is, that it believes that they are now the only teachers whose assertions are made on the strength of inductions from facts. In short, the definition given by Newton in the 'Principia' of a scientist's position with regard to such questions as Tyndall touched on at Belfast when he made his "confession" about matter, is one to which the public supposes that scientists in our day adhere, and it is one to which the public ought to insist on their adhering if they are going to play the

part of lecturers on nearly all great moral problems of our time, and are going to make a practice of submitting to promiscuous audiences the darkest and most tremendous suggestions of the laboratory and the dissecting-room. Newton is discussing the source of gravity, just as Tyndall was discussing the source of life, and though Newton is addressing a scientific audience he thus clears his conclusions carefully of all speculative vapor: "But hitherto I have not been able to discover the cause of these properties of gravity from phenomena, and I frame no hypotheses, for whatever is not deduced from phenomena is to be called a hypothesis, and hypotheses, whether metaphysical or physical, whether of occult qualities or mechanical, have no place in experimental philosophy. In this philosophy particular properties are inferred from the phenomena and afterwards rendered general by induction; thus it was that the impenetrability, the mobility and impulsive force of bodies, and the laws of motion and gravitation, were discovered."

Scientific men are, we believe, of opinion now that Newton was too cautious about hypotheses, and had too much aversion to them. Newton treated in such brief and obscure terms of hypothesis and its use in science in the passages usually quoted, that his meaning ought to be sought in his practice. From this it appears evident that he did not mean by the hypotheses he condemned the questions, suppositions, or interrogations of nature, in which his imagination was even more fertile than Kepler's; but any assumptions not proved by induction from phenomena directly, or indirectly through the mathematical deduction of consequences, which could be tested by observation or experiment. In the beginning of his 'System of the World,' he proposes to treat by this latter method, or, as he says, "in a mathematical way," the theory of gravity, or of the *centripetal* force (which is all that he asserts of its nature) that holds the planets in their orbits, "in order to avoid all questions about the nature or quality of this force, which we would not be understood to determine by any hypothesis." Kepler, Descartes, Hooke, and others had attempted such hypotheses; that is, assumptions from which they deduced nothing "in a mathematical way" that if found true would prove the hypothesis, or if false would disprove it. Such were the hypotheses which Newton did not make, or at least tried to avoid, more particularly (it ought to be noted) in respect to the theory of gravity, which he wished especially to disencumber from unnecessary considerations. In hypotheses of the other sort, that is, questions, or *verifiable* hypotheses, no genius was ever more fertile. Their value, and the value of fertility, or even of rashness, in framing them, in the pursuit of scientific truth, are admitted. Every successful explorer probably owes a large measure of his success to his readiness in inventing them; and in fact, all that scientific men exact of each other with regard to them is, that they shall not be held one minute after the attempt to verify them by an examination of the facts has failed. An investigator may, in short, use as many of them as he finds necessary for his purpose—that purpose being the discovery of some law of nature—and cast them aside without discredit when he finds them worthless. But this license is granted solely on the supposition that he remains in his laboratory or observatory, and communicates only with his fellows in the course of his investigations. It certainly was never contemplated, and ought not now to be suffered, that when scientific men step forward as popular lecturers before promiscuous audiences, they may produce their various unverified and perhaps unverifiable guesses, and offer them for inspection as quasi-scientific results which plain people would do well to ponder and retain in their memories.

It may be replied by some one that Mr. Darwin has not acted on this rule, and has promulgated a theory of the origin of species in general, and of the human race in particular, which is still unproved. But he did not produce it until he was able to accompany it with an enormous mass of evidence, to present it in a book on which he had spent many years of labor, or without surrounding all his positions with the most careful limitations and reserves. If anybody draws from his suggestions stronger inferences than they can be made to support, it is certainly not for want of pains on his part. It ought not to be forgotten that one of the greatest scientific men who ever lived—Kepler—preceded his great discoveries by a series of fanciful hypotheses, of which his biographers are ashamed; that he believed in astrology, and even cast nativities. It is not at all unreasonable to ask men of science, therefore, to lay down the rule for themselves, not to communicate *ex cathedrâ* to popular audiences any hypothesis as scientific which, while it is capable of producing great moral confusion, is not capable of verification. It may be true, for instance, that matter contains "the promise and potency of every form and quality of life," and it may be interesting to Mr. Tyndall's friends to know that he believes it; but the verification of this hypothesis is and must for ever remain beyond the boundary of experimental evidence. After all, perhaps we treat the matter seriously. The scientific spirit is so much diffused that it would, we admit, be difficult if not impossible to build up in our time anything like a scientific church, with charlatans or bigots for the clergy; but it is worth while, in the interest of the unlearned and unstable, to utter a protest that may at least help to keep the young scientists modest and self-distrustful, or, in other words, thoroughly scientific.

THE STATE OF PARTIES IN FRANCE.

PARIS, Dec. 4.

AT the time when the Chamber meets again after its long recess, it will perhaps not be inopportune to make a general review of all our parties and, as it were, a reconnoissance of their positions. I will at once begin with the party which has become, in the opinion of many, the most formidable—the Bonapartists. The forces which have been at work in its favor are of two kinds; some are negative, some positive. The negative forces have been the famous *pacte de Bordeaux*, the want of a definitive government, and the faults of the Comte de Chambord. During the whole period of the Gambetta Government and of the struggles of the country with the invaders, the Legitimists had taken an excellent position in the country; they had accepted the rôle of adventurers, and had fought at Coulmiers and other places. Everybody was astonished when the country, at the end of the war, sent to Bordeaux a very large number of Legitimists; the Orleanists were even in larger numbers. It was evident that the instincts of the people could never find better expression than at a moment when France was in danger, and when the nation turned its eyes on the men whom it judged the most capable, the most trustworthy, the most honest. The Assembly, when it met at Bordeaux, was monarchical; but M. Thiers took advantage of the old divisions of the Legitimists and the Orleanists, and he made the famous truce which placed him in possession of the government. The monarchical tide was only arrested for a moment; it rose against the Commune with an overwhelming force; and when the troops reentered the capital, still covered with barricades, the proclamation of the Monarchy on the smouldering ruins of the Tuileries would have been applauded by all the Conservatives in the provinces. M. Thiers continued to oppose the efforts of the Monarchists, and when it became evident that he had only used the truce he had imposed on all parties in the interest of a party, the Monarchical majority of the Chamber hurled him from power on the famous night of the 24th of May.

The crown was soon afterwards offered to the Comte de Chambord. The representative of the branch of Orléans had gone to Frohsdorff and declared that he recognized in the eldest Bourbon the only legitimate pretender; the two fractions of the Monarchical party had forgotten all their old differences; the Orleanists had sacrificed their ambitions, their preferences, in the interest of France and of a union which the progress of communistic and anarchical ideas, as well as the defeats of the war, had rendered absolutely necessary. I need not say what followed. The Comte de Chambord showed himself quite unworthy of the high trust which Providence offered him. He did not understand his time, his country, his duty. But this great monarchical tide, which had set in as early as the beginning of the war, which had become all the more impatient as it had been stopped by so many obstacles, could it cease to flow? It could not run in the old monarchical channel; it was quite natural that, after some hesitation, it should return to the lately-abandoned channel of the Empire. And when once instincts have found their pole, it is marvellous how obediently intelligence will find arguments in their favor. Even the death of the Emperor Napoleon served the Bonapartist cause; the peasants made the legend of the vanquished of Sedan; the Emperor was no longer what he had been—he was sick; he had been forced into the war by treacherous enemies, dragged like a victim with the wagons of the army to the field of Sedan and to captivity. His star had faded, his fortune had left him; they only remembered his old triumphs of the Crimea and of Italy, his unbounded generosity; they sighed for the long years of calm during which France had become so rich and prosperous. We must always bear in mind that there are in France about three millions of peasants who hold small properties; they care little for the liberty of the press or for parliamentary prerogatives; this calm of the Empire, which to so many of us seemed so oppressive that we had to leave France to take a bath of free air, was to them the natural atmosphere of a strong and good government. After a kind of total eclipse, the Bonapartist party has therefore come again to the front, as bold as ever, confiding apparently in the decrees of universal suffrage, and challenging all other parties to make a direct appeal to the people.

I would say nothing against the Legitimists; it is not their fault if their cause is now lost. They have behaved throughout with honesty. They were perhaps too confident at Bordeaux in the promises of M. Thiers, and did not see through his policy; but during the evil days of the Commune, when so many men at Versailles spoke of conciliating the rebels, they never

allowed the dignity of the Assembly of France and of its army to be lowered. They are men of honor, and would have nothing to do with assassins. They were the first to denounce M. Thiers when he signed his alliance with the Radicals, and they were foremost in the parliamentary coalition of the Conservatives which placed MacMahon in power. It is not their fault that the Comte de Chambord did not accept the conditions of modern sovereignty; and it is probably in their ranks that the most bitter criticisms of his conduct might be heard. The conduct of the Legitimists was quite fair till the time when, after the letter of the Comte de Chambord, the powers of Marshal MacMahon were prolonged for seven years. They voted for what is now called the Septennat in a moment of fear lest Thiers and the Radicals should return to power together; and now they will not accept the consequences of their own conduct. It is not fair, not loyal, not equitable to place a man in the most responsible and difficult position, and to refuse to him the very definition of his rights, of his prerogative and his duties. The Marshal at the present time is something more than the delegate of the Assembly: he is invested for six years more with the executive power, and he will, in consequence, survive the Assembly; yet the Legitimists refuse to make the constitutional laws. They are in revolt against their sovereign (for the vote of the Septennat was a vote of revolt), and they dare not be courageous to the end. In the eyes of the Comte de Chambord, they acted like rebels when they excluded him from the throne for seven years; and he continues to send orders to them. It is just as if a husband who had separated from his wife for the gravest motives should continue to consult her on the color of his cravats.

The Legitimists made a great mistake, from their own point of view, when they made a coalition with the Republicans against the Duc de Broglie. They gained nothing by it. The Duc Decazes, who is now the soul of the cabinet, has been constrained to conduct the foreign policy of France in a direction which is not theirs. He has wisely recalled the *Orénoque*, and has enforced on the Spanish frontier the rules of neutrality against the Carlists. The Duc de Broglie would not have acted differently. In reality, the Legitimists are secretly divided. There are among them those who are more Clerical than Legitimist, and those who are more Monarchical than Clerical. The moderate Right—this is the name given to the latter fraction of the Legitimists—feels the necessity of giving the guarantee of some constitutional laws to the executive power which it helped to create. The *chevau-légers*—the name under which we designate the blind followers of the Comte de Chambord—will vote no law which could even for a day hinder the proclamation of the monarchy.

What shall I say of the old Constitutionalists, of the Orleanists? They are perhaps more discouraged than the members of all the other parties. Twice after the disasters of France, the Legitimists have been returned to our parliaments in large numbers, in 1849 and in 1870. They feel that the most formidable events cannot entirely destroy their cause. But the Constitutionalists have suffered some severe injuries. Long before the end of the Empire, M. Thiers, who was their acknowledged leader, did all he could to disorganize the party of the constitutional monarchy. Even under Napoleon III. he had already marked out for himself the rôle of a great citizen, which we have seen him since trying to play. He had, by the charm of his conversation, by the hope of office, drawn to himself many men like M. de Rémusat, M. de Lasteyrie, M. Casimir-Périer, and persuaded them that his was after all the best government. These men have preserved a platonic affection for the Princes of Orléans, but they long ago abandoned the cause of the monarchy of 1830. Thiers was a great power in himself. He is an admirable orator, especially well suited for a parliament which contains somewhat ignorant elements; in the eyes of the small *bourgeoisie* he has the merit of being a *parvenu*, a *petit bourgeois*, as he once called himself; in the eyes of the Republicans, he is still the historian of the Great Revolution, the man who smiled in 1832 on the sacking of the Archbishopric of Paris. Even the diplomatic world has always surrounded him with its admiration, as it looked upon him as the representative of Parliamentary government. When the Constitutionalists lost him as a leader, they had to look for other men; they found such men as the Duc de Broglie, the Duc Decazes, none of whom had the wonderful gifts of M. Thiers. Whoever knows the present leader of the Republicans, his indefatigable activity, his incessant propagandism, his adroit management of men, must acknowledge that his loss was almost fatal to the Parliamentary cause. There are hundreds of old Orleanists who have always been more disposed to follow M. Thiers than to obey the Princes of Orléans, and these men have now become the staff of the Republican party. It must be said, however, that if the Orleanists have lost their chief, they have not renounced their principles. As soon as the Comte de Chambord expressed convictions adverse to these principles, they abandoned his cause; they did not sacrifice the country to the king, and they remain rigidly faithful to the national sovereignty.

It would seem that all these reasons must have added much to the strength of the Republican cause. It is true that the Republican party can now boast of many followers who are men of great fortune and of good standing. Still, as a party, they do not yet form the majority in the country, and to proclaim the Republic to-day would be simply to place the government in the hands of a party; as soon as this were done, all the others would coalesce against the new administration. France is, in reality, profoundly divided—divided into four parties; and when one is dominant, the three others combine. Under such conditions, the best plan seems to me to place the government above all parties, and to invest it with a great force. It is idle to talk of American or Swiss institutions in France; each country must have a government adapted to its circumstances. Marshal MacMahon holds now a position which is neither Monarchical nor Republican: it is, as I have before had occasion to point out, somewhat analogous to that of the old Stadtholders in the Low Countries: he is the head of the army, as France may be forced any day to go to war or to suppress rebellions; he can call into his councils the patriotic men of all parties. We do not well see that much more can be done. When France was saved in former days, it was saved sometimes by very extraordinary means and persons. Our position is illogical, our government must be so. The Septennat is a government of necessity and not of theory, and necessity must have its way. This Septennat may be followed by another, and then by another. Who knows? One thing is certain: as long as France is in the state which I have attempted to describe, it must find a safeguard in a sort of anonymous government, and such a government will be all the stronger as it will only be exercised in the name and in the interests of the country.

SOME LEGAL ASPECTS OF THE ARNIM CASE.

BERLIN, Dec. 5, 1874.

MR. DISRAELI extolled the advantages of the British workingman in his immunity from arbitrary arrest and from domiciliary visits, to which even the nobility of some countries of the Continent are liable; but he afterwards averred that he could not have had the case of Count Arnim in mind, inasmuch as all the proceedings against the ex-ambassador had been in strict accordance with law. He might have added that this case is a signal example of the supremacy and the impartiality of the law as now administered in Prussia. The stigma of "arbitrary arrest" that lurked in Mr. Disraeli's supposed allusion to Arnim is effaced by the simple statement that he was arrested under a strictly legal process. But what of the law itself—of the domiciliary visit, of the secret investigation, of the close imprisonment? If in form there was neither *lettre de cachet* nor Star Chamber—though some American journals will have it there were both—was not the liberty of the subject as really violated through the privacy of the arrest, the rigor of the confinement, the obsequiousness of the court, as if the Chancellor had ordered Arnim to be seized for the gratification of his private malice? The Sacramento *Record* said the other day that in no country not under military rule would the people submit to such an outrage. Yet here upon the ground the national liberal party justify the proceedings against Arnim, and to impartial observers it seems as though something valid had already been gained for the fundamental principle of equality before the law. Naturally enough, many in England and in the United States are scandalized or confused by the seemingly abrupt and violent, or the secret and one sided methods, of Prussian legal administration; but when one analyzes the law as applied to Arnim's case, it is surprising how slight is the difference in fact between American and German law as herein involved.

First, as to domiciliary visits. In the light of such a case as this at Berlin, it is curious to observe the qualified terms in which the Constitution of the United States provides against the invasion of a man's house—the "castle" of the common law: "The right of the people to be secure in their persons, houses, papers, and effects, against *unreasonable* searches and seizures, shall not be violated; and no warrants shall issue but upon *probable cause*, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized" (Amend. IV.) The Commissioners of the Code of the State of New York recommended the following sections as restrictions upon search: § 176. "Every peace officer who, in executing a search-warrant, wilfully exceeds his authority or exercises it with unnecessary severity, is guilty of a misdemeanor." § 220. "Every person who maliciously and without probable cause procures a search-warrant to be issued and executed, is guilty of a misdemeanor." By these very cautions and limitations the right of search is distinctly reserved; in the case of Murray's Lessee *v.* Hob. Land and Imp. Co. (18 How. 272) the Court ruled that the Fourth Amendment to the Constitution has no application to proceedings for the recovery of debts; and, in point of fact, "warrants have been allowed to search for stolen goods, for goods supposed to have been smuggled, for implements of gaming or coun-

terfeiting, for lottery tickets or prohibited liquors kept for sale contrary to law, for obscene books and papers kept for sale or circulation, and for powder or other dangerous or explosive material, so kept as to endanger the public safety. And in some States searching is provided for by statute for books and papers of a public character retained from their lawful custody [which is precisely the charge against Arnim]; for females supposed to be concealed in houses of ill-fame; for children enticed or kept away from parents and guardians; for concealed weapons; and for counterfeit money and forged bills or papers" (Cooley's 'Constitutional Limitations,' Chap. X.) Here is a goodly array of searches provided for by American law and practice. Was not every house in Philadelphia searched for the abducted child of Mr. Ross? Were not the books and papers of Phelps, Dodge & Co. seized and carried off to a dark chamber of the Custom-house, and searched for material for a damaging accusation? Did not Butler gloat over a barrel full of private telegrams, seized by authority of Congress, and which he still uses for tormenting his political enemies or rivals? Why, then, this ado about the searching of Arnim's house? That "domiciliary visit" was made under strict authority of law, and conformed in every particular to the Fourth Amendment of the Constitution of the United States and to the statutory provisions of some States of the Union.

The successor of Arnim at Paris found that sundry papers duly registered in the books of the Embassy were missing from its archives. He notified the Foreign Office at Berlin, and the secretary of that department applied to Arnim for information concerning these despatches. Arnim admitted that he had taken several of them, returned some, but retained others, upon the ground that they were of a private character, and necessary to his own justification—a point of which he assumed to be the sole judge. The Foreign Office now demanded the restitution of the papers, but Arnim denied its authority. Here, then, were "papers of a public character retained from their lawful custody" by an officer relieved from his post, who admitted that he had taken them. In this strait the Foreign Office laid the facts before the proper court, and the judge, finding a "probable cause," issued a not "unreasonable" warrant for a search, "particularly describing the place to be searched and the things to be seized." Why should that be the "arbitrary act of a military government" in Germany which is provided for, in precisely the same form, by the Constitution of the United States?

A difference between American law and Prussian law in respect to searches lies in the immunity of the party procuring or ordering the search from retaliatory measures on the part of the defendant. In the famous case of John Wilkes in England, in the last century, the defendant obtained heavy damages against the Government for trespass in the unwarrantable seizure of private papers. In Prussia the law provides no such remedy; the case hinges upon the integrity and discretion of the judge.

For instance, if a creditor makes affidavit to such suspicious acts on the part of a debtor as give reasonable ground for the belief that he is concealing property in his house, the plaintiff can obtain an order to search for such property. If after such searching it is proved that the defendant has acted in good faith, and that the affidavit is unfounded, the defendant must rest satisfied with his acquittal, without remedy at law against the plaintiff. Though his house has been searched, he cannot sue for trespass; though his honor has been sullied, he cannot sue for slander. The proceedings were under an order of the court, which was issued in good faith, upon reasonable evidence presented in the affidavit; at most, therefore, there can only have been an indiscreet action on the part of the judge in granting an order, and for this no action can be had. In the United States the plaintiff who should procure a search-warrant would do so at the risk of a suit for trespass. Second, as to sudden arrest and imprisonment under the laws of Prussia, if the plaintiff in a civil action makes an affidavit showing good grounds of belief, from some action or words of the defendant, that he is about to leave the country or the jurisdiction, or otherwise to evade legal process, then the plaintiff can apply for an order for the arrest of the defendant. If the court is reasonably satisfied of the plaintiff's allegations, such order can be had and served within twenty-four hours. Now, in the case of Arnim there was ground for the suspicion that he was preparing to quit the country, and upon foreign soil to use the documents in his possession to the prejudice of the Government in whose confidential service he had been employed; or there was reason to fear that he would use his liberty to defeat the ends of justice in the case. His arrest was strictly legal, for reasons set forth.

But Prussian law provides no remedy for unjust arrest. In the Middle Ages one could retaliate and find a remedy of his own; in more recent times one could satisfy his honor by a duel; but in these days it is held that the defendant's honor has been vindicated by the verdict of acquittal. Indeed, in the strict conception of Prussian law, there can be no such thing as an *unjust* arrest; the affidavit of the plaintiff gives true and suspicious acts of the defendant as the ground of the order of the arrest.

Third, the principle of the English Habeas Corpus Act is recognized in Prussian law. Thus, in a criminal process the prisoner could demand an immediate hearing within forty-eight hours after his arrest; and the result of such a hearing would be either his acquittal, or his release on bail, or his detention for trial, according to the facts of the case. Arnim had an early hearing, but the court decided that there was good reason for holding him; and out of consideration for his health, he was put into a ward of the hospital under strict guard.

Fourth, bail is much less common in Prussia than in the United States. Arnim, however, was finally released upon a bail of 100,000 thalers, which, in view of his offence, his position, and his circumstances, was not *excessive*, as that term is vaguely used in the Constitution of the United States.

Fifth, the secresy of the preliminary investigation, and the proposed secresy of the reading of the documents during the trial, are features of this case in wide contrast to American procedure. They are here justified by the plea that the publication of the documents involved would be inconsistent with the public welfare. This very case, however, is likely to give emphasis to the movement in Parliament for requiring publicity in judicial proceedings. The American doctrine is, that the safety of the accused requires publicity in the trial. But what of the safety of the public? Would it not be an unspeakable mercy to the community if the Beecher-Tilton case could be hermetically sealed within the walls of the court-room, or even if some special chamber of oblivion could be constructed for it under ground?

The law under which Arnim is indicted makes the abstracting of official papers an offence to be punished by imprisonment for a term not exceeding five years. There is no question that if a clerk in the Treasury or the Post-office had been guilty of this offence, he would have been made to feel the power of the law; and it is hardly credible that Americans, who hold to the fundamental doctrine of the equality of all men before the law, will deem it an act of arbitrary power that this law is now applied in all its rigor to a nobleman and ambassador.

The following works are recommended to those who are interested in the legal points of the case: 'H. von Bayer, Vorträge über den gemeinen ordentlichen Process.' 'Bergmann, Beiträge zur Einleitung in die Praxis der Civilprocesse von deutschen Gerichten.' 'Besseler, Privatrecht.' 'Berner, Strafrecht'; und 'Heffter, Strafrecht, 2 Theil. 1856.' J. P. T.

Correspondence

WHAT IS THE BUSINESS OF SCIENTIFIC MEN?

To the Editor of the Nation:

Sir: A brief and well-meant admonition of the *Nation* to "scientific men as such" not to meddle with philosophy or theology—*i.e.*, "the origin of things or the existence of a God"—seems prompted by some perhaps unnecessary fears regarding the tendency of the rather misty and rhetorical utterance of Professor Tyndall, who, perhaps in common with all naturalists, sees "in matter the promise and potency of all [terrestrial] life"—as if the scientific man as such could imagine the existence of life without matter.

We would ask whether it is "meddling" with philosophy to enquire into the origin of life and its different forms? Can an enquiry into the origin of things be confined wholly to the origin of angels, demons, ghosts, the modern "spirit," and innate ideas? Can questions as to the origin of the chemical elements, of minerals, plants, animals, of man, and even his intellect and soul, be turned over exclusively to the followers of Kant, Hume, Locke, Berkeley, and Mill?

Why does Mr. Paley argue for the existence of God, and build up a system of natural religion upon the facts and conclusions of biology as known in his day? Why did an Andover professor recommend Agassiz's 'Essay on Classification' as an excellent aid in studying natural theology? In short, why are other systems of natural theology constructed on the conclusions of geologists, anatomists, and physiologists as to the constitution and probable origin of the earth and its inhabitants, unless those deductions are legitimate and useful to genuine religion? The influence of the conclusions of science on theological thought is certainly not unimportant.

Now, who forms these conclusions? who philosophizes on the facts collected by the scientist? Certainly not the theologian. He takes them at second-hand. Does the philosopher discuss and arrange the facts observed by the scientist? We think not, unless, like Aristotle, or Newton, or Descartes, or Spencer, he is both scientist and philosopher. It may be a question as to how much use a philosopher's opinion about the origin of things is, unless he has done some scientific work before reflecting in his study

upon the facts observed. The genus of old-time philosophers who depended on their intuitions and the facts of consciousness for light on the origin of things, material or immaterial, will become extinct, simply for want of food for thought, unless they become experimenters and observers. Reasoning by exclusion, we are forced to believe that "scientific men as such" are their own philosophers, and that it is as useless to divorce philosophy from science as it is to divorce philosophy from religion. Without science philosophy becomes scholasticism, and religion tends to become a superstition. For how can one reason intelligently as to the existence of a First Cause without a critical enquiry into the organization of the cosmos? Can we study the being and mind of an artist without seeing his pictures? How can we study the "origin of things," (rather an indefinite expression), without becoming Daltons, or Herschels, or Lamarcks, or Darwins, and studying the mode of formation of the elements of worlds and the origin of the forms of life?

"Scientific men as such," then, so far from "meddling" with the business of the theologian and philosopher, afford, it seems to us, the one the grounds on which to build his faith, and the other the pedestal on which to sit and think.

Happily there is a common ground upon which all three may meet. We know little about the origin of things, and thus far the existence of a First Cause is not capable of proof, and may always be only a highly probable assumption. The mystery surrounding these primary facts seems at present insoluble. The recent addresses of Lovering, Tyndall, Wurtz, and Du Bois Reymond before the American, British, French, and German scientific associations, or in their journals, acknowledge the mystery of matter and the need of acknowledging or assuming the existence of a First Cause. These men are neither atheists nor materialists, and represent the average scientific and philosophical thought of our age. There are atheists and materialists among scientific men as among philosophers, but materialism is not a characteristic of the Anglo-Saxon mind, nor of the French mind of to-day, nor was it of German scientific thought in the days of Goethe and Oken. It is left to Vogt, Haeckel, and Büchner, who in speculative matters have exhibited as little common sense as they evince in dealing with politics. Unless the meddlesome scientific men continue to pry into the nature of things, we may indulge in the doubt whether philosophy, at least, will be a subject worth meddling with. SCIENTIST.

[If a "Scientist" will look again at the report of Professor Tyndall's address, he will see that he announced his belief "that he saw in matter the promise and potency of every form and quality of life" as "a confession" which "he felt bound to make," and in making which he "abandoned all disguise." It would be very ridiculous for a naturalist to produce in this fashion a belief which he held "in common with all naturalists," and which, according to "Scientist," it is impossible for "a scientific man as such" not to hold. Naturalists surely have no occult creed, which they only reveal to the initiated or under great excitement.—ED. NATION.]

VIRGINIA SCHOOLS.

TO THE EDITOR OF THE NATION:

SIR: Lest my long silence might be misunderstood, allow me to say that immediately on seeing Miss Putnam's statement concerning the misfeasance of certain school officers in Northumberland County, Va., I wrote to the superintendent of schools for that county, who is a gentleman above reproach, and not personally referred to (as will be shown hereafter), sending him a copy of your paper, and instructing him to hold a court of investigation, after duly inviting Miss Putnam to be present. I at the same time wrote to the lady herself, asking her to appear, and assuring her of every facility and courtesy.

The court was promptly held, and Miss Putnam appeared; but as she was not prepared with evidence, the court was adjourned to a future day.

The testimony will all be recorded and sworn to, and as soon as received here will be forwarded to your office. I have great hopes that the reputation of the old State will survive this trial; and I still stand prepared to investigate any other charges of a similar character which may be brought to my attention. Let us hear from all complainants.

Very truly yours,

W. H. RUFFNER,

Superintendent of Public Instruction of Virginia.

RICHMOND, Dec. 16, 1874.

JUDGE JAMESON ON THE REVISION OF CONSTITUTIONS.

TO THE EDITOR OF THE NATION:

SIR: In your summary of my letter to the Chicago *Tribune* respecting Arkansas affairs, contained in the *Nation* of the 10th inst., you failed to state one point quite correctly. I was represented by you as saying that "the submission to the people of amendments to the constitution directly by the legislature was resorted to for the first time in American history by New York and Michigan, in the present year." This I did not say. What I did say was, that "no attempt *to revise an entire constitution* by the action of the legislature submitting amendments to the people, was ever made until the late cases of Michigan and New York." There is a wide difference between these two propositions. Some forty or fifty constitutions in different States have contained provisions authorizing *amendments*, through the action of their legislatures; and those bodies, in most if not all of those States, have availed themselves of the power. But the amendments have nearly always been few and simple, by no means involving a revision or recasting of the whole Constitution and Bill of Rights. Such a work is a herculean one, and, as I stated in the letter referred to, has never been attempted except in the States named. In those cases the legislatures recognized the impracticability of attempting the task of revision as an ordinary act of legislation. They appointed commissions of eminent gentlemen of both parties, not, as I understand, members of their own bodies, to revise the fundamental law, and to report a coherent and adequate scheme, to be submitted, *as a whole*, to the people. The submission was made, but the result was not very satisfactory; for one or both of the legislatures insisted upon revising this scheme before submitting it, thus disturbing its balance, perhaps, or infusing into it partisan provisions. If it were possible to avoid this tampering with the work of such commissions by compelling our legislatures to submit it, without modification, to the people, such a mode of proceeding would present important advantages, but that, of course, could be effected only by amending our fundamental law so as to authorize such a submission. However that may be, the actual consequence was that, in Michigan, the work of the commission was rejected *in toto*, and that in New York it was, if I have not been misinformed, rejected in part. It was this mode of revising an entire constitution to which I referred, as not having occurred before the present year.

As tending to show the reality of the distinction I have made, let me state that in, I believe, every case where our constitutions have authorized a change to be made in their provisions, without calling a convention, they have used only the word *amend* or *amendment*, and that where they have authorized the calling of a convention, they have employed the words *revise* or *revise and amend*, in stating the duty of the body when assembled.

JOHN A. JAMESON.

CHICAGO, December 14, 1874.

[As far as the popular vote goes, the work of the New York Commission has been adopted *in toto*. There is a question raised as to the effect of the alterations made by the second legislature in two of the amendments.—ED. NATION.]

Notes.

ANOTHER Boston magazine has changed hands. *Old and New*, heretofore published by Roberts Bros., has been transferred to Lee & Shepard, but still remains the property of a duly chartered corporation consisting of gentlemen and ladies who, if named, says the prospectus, "would be recognized as among the leaders in the life of New England, or, as we have a right to say, of the United States."——Willmer & Rogers, 31 Beekman Street, New York, have been appointed agents for this country of the *Contemporary Review*.——The Eighth Annual Exhibition of the American Society of Painters in Water-Colors will open at the Academy of Design on the first of February, and continue for about one month. Contributors need especially to be informed of the new regulations in regard to frames. Information on this and other points may be had of J. C. Nicoll, Secretary, 51 West Tenth St.——Surgeon General Barnes's annual report to the Secretary of War states that 700 pages of the second part of the 'Medical and Surgical History of the War' have been printed, and that nearly all the plates have been prepared. The data for the 'Descriptive Anatomical Catalogue of the Army Medical Museum' have been perfected, and authority is again asked for to print a thousand copies of this valuable work. The Museum has been increased by 1,185 specimens, and during the year ending June 30, 1874, was visited by upwards of 26,000 persons.——Part 24 of 'Stieler's Hand-Atlas' (New York: L W. Schmidt) contains, besides a title

page for the entire work, a map of Turkey in Europe and one of Africa, in which the most notable feature is that the identification of the Lualaba with the Congo is provisorily adopted. No. 53 of the Berlin Geographical Society's *Journal* contains an excellent map of the latest North Polar discoveries. For more details in regard to Franz-Joseph Land one should consult the map of this hitherto unknown tract in the December number of the *Geographical Magazine* (New York: John Wiley & Son). We are glad to see it announced, by the way, that the price of this always readable journal is to be reduced one half (from two shillings to one shilling per number).

——Quoting from general recollection is dangerous; but the *Nation* has such well-informed readers that its slips are soon corrected. Two valued correspondents have kindly supplied us with the right wording and origin of the eulogy of the strawberry, viz., "Doubtless God might have made a better fruit than the strawberry; but, doubtless, God never did." It is in the 'Complete Angler' of Isaac Walton, who cites it as a saying of Dr. Boteler.

—A correspondent writes us as follows: I find in the second volume, second edition, of Whewell's 'Philosophy of the Inductive Sciences,' published in London in 1847, a formal recommendation of the word "scientist," with the rule for its derivation, and the reason for its introduction into the English vocabulary. Under the head of "Aphorisms concerning the Language of Science," on page 549, Dr. Whewell lays down the rule for the derivation or formation of new words when they are needed, in the form of an aphorism, as follows: "In the composition and inflection of technical terms, philological analogies are to be preserved if possible, but modified according to scientific convenience." In the specific application of this rule to a variety of cases, the author remarks, on page 560, as follows:

"The terminations *ize* (rather than *ise*), *ism*, and *ist*, are applied to words of all origins: thus we have to pulverize, to colonize, witticism, heathenism, journalist, tobacconist. Hence we may make such words when they are wanted. As we cannot use *physician* for a cultivator of physics, I have called him a *physicist*. We need very much a name to describe a cultivator of science in general. I should incline to call him a scientist. Thus we might say, that as an artist is a musician, painter, or poet, a scientist is a mathematician, a physicist, or a naturalist."

This dates the use of the word in England back twenty-seven years from this time—two years earlier than Mr. B. A. Gould claims to have recommended its introduction into the English vocabulary. If the word is found in the first edition of Dr. Whewell's work, published in 1840, this would carry the date of its use by this distinguished author back seven years earlier, or nine years prior to Mr. Gould's recommendation.

—In No. 53 of Koner's *Zeitschrift der Gesellschaft für Erdkunde zu Berlin* (New York: L. W. Schmidt), H. Kiepert examines the 'Historical Atlas of Ancient Geography, Biblical and Classical,' issued by Dr. Wm. Smith and Mr. G. Grove, of which the first three parts of six have appeared. His review is by no means favorable to this pretentious specimen of Dr. Smith's bookmaking, in which the responsible work has really been done by Mr. Grove and Dr. Karl Müller. Not to mention the more delicate historical and philological slips or ignorances, the coloring is very poorly and carelessly done, and the delineation of the surface is faulty. In Sicily and Southern Etruria many mountains are given which have no existence, and in Gallia whole chains are wanting; while in Brittany and Normandy the mountains are drawn higher than those of Eastern Switzerland. In many instances there is a pitiable ignorance of recent or even modern geographical studies. Kiepert regrets sarcastically that in using his 'Atlas von Hellas' recourse has been had to an old and incomplete edition, in apparent ignorance of that of 1867–70, and of Kiepert's maps of Thessaly, Epirus, and European Turkey, issued in 1870. Kiepert points out the absurdity of issuing a map of Palestine now in preference to waiting for the results of the new survey, which will be completed in two or three years—that is, for the part west of the Jordan. Here Mr. Grove does not even use recent trustworthy French investigations (Callier, Guérin, and Clermont Ganneau). But the map of Jerusalem particularly exasperates Kiepert; on it pretty nearly everything that was well established is turned wrong.

—The late J. A. Hartung, whose 'Religion der Römer,' published in 1836, may be said to have laid the foundation for the scientific treatment of Roman mythology, as distinguished from Grecian, was engaged, at the time of his death, in 1867, upon a companion work, 'Die Religion und Mythologie der Griechen.' Three parts of this were already published, and the fourth part was published some months ago by his son. It is not stated whether this completes the work as laid out by the author; so far as we can judge, however, it covers the entire field of Grecian mythology, and is provided with an excellent index. The treatment of the details is very compendious, and even bare; but this is because the theoretical portion is taken up by itself very fully and in a very interesting manner—the whole first part being of this character, and each division being introduced by a general statement of principles, which these details are made to illustrate. In this way the work is confined to quite moderate compass, making, when bound, two very thin octavos. The view presented is that of a pure religion of nature, starting from the fetish, or indwelling spirit of natural objects and phenomena. In developing this view, Hartung draws his materials rather from the fragments of popular belief and local custom, chiefly survivals of a primitive belief—as found especially in such writers as Pausanias—than from the poets, who have worked over and modified the religion of their time, and who are thus in great part not merely the channel of information, but the actual authors of the mythology that has come down to us. It is noticeable that he almost wholly neglects the prevailing comparative view of Greek mythology, considering it exclusively as the outgrowth of the Greek national genius.

—At the conference of meteorologists, held at Leipzig in August, 1872, the question of the usefulness of telegraphic weather reports was one of the subjects under discussion. In view of the practical bearing of this question, it was referred to a committee, consisting of Messrs. Buys-Ballot, Scott, and Neumayer, who were to enter into correspondence with meteorologic authorities in all parts of the world, and to present the views thus obtained at the next conference, to assemble at Vienna. Circulars in German, English, and French were consequently sent out, and answers to six formulated questions solicited. The report of the committee, edited by Dr. G. von Boguslawski, with a preface by Dr. G. Neumayer, has now appeared in print, under the title of 'Bericht über Wetter-Telegraphie und Sturmwarnungen,' etc. Replies were received from the following places: Berlin, the Bermudas, Bombay, Buda-Pesth, Calcutta, Christiania, Copenhagen, Dorpat, Edinburgh, Emden, Fiume, Florence, Greenwich, Halifax, Lisbon, Liverpool, London, Manchester, the Isle of Mauritius, Silloth (Cumberland), Stockholm, St. Petersburg, Toronto, and Utrecht. Singularly enough, the United States is not represented in this list. The answers received—among which we may mention those of Buys-Ballot, the late G. B. Donati, Dove, H. Mohn, and the Meteorological Societies of London and Edinburgh—are for the most part published in full, but the report of the commission gives a résumé of their salient features. The practical importance of telegraphic weather reports was generally conceded, and, in order to secure for them the widest possible usefulness an interchange of observations between the central stations of different countries was proposed. An international central station once established, reports are to be sent to it every evening from the various points of observation, which, in turn, are informed the next morning by the central station of the state of the weather throughout Europe. Atmospheric disturbances of importance, particularly approaching storms, should be announced, but general predictions of the weather are unanimously discountenanced. Stress is laid on the importance of an international system of signals for shipping, and the co-operation of the various governments is invoked.

—The Italian Bureau of Statistics has issued its ninth annual review of the population from the civil point of view; being for the year 1871. No account is taken of emigration, and the total population is estimated by adding the difference in number between the births and the deaths to the total population assigned to the preceding year. In 1871, accordingly, the estimated population was 26,093,822; the increase since 1862 having averaged 0.75 per cent. per annum, at which rate the kingdom would be 92 years in doubling its population. Registered marriages averaged (1863–1871) 189,864; births, 948,425 (of which one in thirty-seven was a still birth); and deaths, 765,225. The proportion in 1871 of legitimate births to marriages was 4.65 of the former to each of the latter. In Central Italy the population is most fruitful, and shows the greatest number of first marriages; in Southern Italy and Sicily early marriages prevail. For the whole country the brides under twenty furnish 16 per cent. of the whole number. February and November are the favorite months for getting married; the first being the carnival season, the last the season of repose for the agriculturist. Corresponding considerations make March and July the months when matrimony is least thought of. The extent and direction of Italian emigration are inferable from the Postmaster-General's report for 1872, according to which money-orders amounting to $625,870 were sent home from Buenos Ayres; $341,318 from Montevideo; $154,205 from New York. The Italian mail-service, by the way, which in 1862 cost the state $3,160,000, is now self-sustaining, and in 1872 paid into the treasury the significant sum of $630,147. The Indian mail alone, which, after leaving Calais, passes through the Mont Cenis tunnel and crosses the peninsula to Brindisi, netted nearly $70,000.

—The typhoon of Sept. 22–23, which made a wreck of Macao, came late as a retribution for the sins of the former slave emporium. The town was already suffering from the stagnation caused by the abolition of the coolie-

traffic when it was overwhelmed by wind, an unprecedentedly high tide, and by fire, and in the course of a few hours lost thousands of lives and a million of property. The granite sea-wall was torn away in huge masses; the new fort was washed out, with all its guns, and all but one of the guard perished; buildings were blown down in all directions; and hundreds of vessels of all sizes were sunk or washed inland—sometimes to great distances. The man-of-war *Principe Dom Carlos* is said to have been carried 12 miles inland and stranded in a rice-field, and a similar fate overtook the gunboat *Camoëns*. The poet's name is associated with still another disaster, which, from a sentimental point of view, will be widely regretted. Among the places devastated in Macao was the famous "Camoëns's Garden." The grotto to the memory of the author of the 'Lusiad,' and the garden in which it stands, where the poet is said by tradition to have composed the greater part of his work when in exile, were long the property of the Macaese Government. They, however, sold it some time ago to a Señor Marques, who with his family occupied a substantial house on the estate. From this gentleman, who was very courteous to strangers, permission had to be obtained to visit the garden. The typhoon swept over it with fearful fury, breaking and uprooting the splendid trees with which it was planted, and strewing the ground with them in all directions. The magnificent banyans, some of which in their youth may have shaded the poet, were reduced to firewood. The historical grotto is almost uninjured; but it will be years before the garden of Camoëns recovers its old-time beauty of branch and foliage.

—The momentary distress and confusion furnishing a rare opportunity for plunder and violence (the fires, indeed, are supposed to have been incendiary), it became necessary to reinforce the police, and for this purpose the Portuguese governor enrolled in the National Guard large numbers of the Macaese, ex-coolie-hunters and the like, whom the suppression of the coolie-trade had reduced to poverty. These choice spirits immediately attempted a Communistic revolt, which was, however, speedily put down, and there will probably be less talk than before of reviving the odious traffic. Emigration will still go on, but not under the auspices of private speculators, nor will Macao be the chief port of departure. Peru, which has just concluded with China a treaty of friendship and commerce, has stipulated for free yet regulated emigration, and this will probably be effected by means of steamers plying, under strict Government supervision, between the northern ports of China and Peru. The satisfactory condition of the Chinese already in Peru, and the protection uniformly accorded them by the Government, are strongly asserted by Mr. Markham in the last number of his *Geographical Magazine*. In the preceding number the editor had done Portugal the justice of rehearsing the steps she had taken to mitigate the evils of the coolie-traffic at Macao from its very inception in 1851. These are clearly set forth in a report of the present Portuguese Minister of Foreign Affairs, Señor João de Andrade Corvo, to whose initiative the suppression of contract emigration last March was due. The story reads much like the efforts of our successive administrations to deal justly by the Indians: fair motives, unexceptionable legislation, and no results. It was even more difficult to regulate a distant colony through a governor on the spot, than to watch Indian agents and traders on a comparatively near frontier. The Portuguese character abroad—in China, in Peru, on the coast of Africa—has stood sorely in need of vindication; and it is gratifying to be assured that at home it is still moral and enlightened.

FAR FROM THE MADDING CROWD.*

MR. HARDY'S novel came into the world under brilliant auspices—such as the declaration by the London *Spectator* that either George Eliot had written it or George Eliot had found her match. One could make out in a manner what the *Spectator* meant. To guess, one has only to open 'Far from the Madding Crowd' at random: "Mr. Jan Coggan, who had passed the cup to Henery, was a crimson man with a spacious countenance and a private glimmer in his eye, whose name had appeared on the marriage register of Weatherbury and neighboring parishes as best-man and chief witness in countless unions of the previous twenty years; he also very frequently filled the post of head godfather in baptisms of the subtly-jovial kind." That is a very fair imitation of George Eliot's humorous manner. Here is a specimen of her serious one: "He fancied he had felt himself in the penumbra of a very deep sadness when touching that slight and fragile creature. But wisdom lies in moderating mere impressions, and Gabriel endeavored to think little of this." But the *Spectator's* theory had an even broader base, and we may profitably quote a passage which perhaps constituted one of its solidest blocks. The author of 'Silas Marner' has won no small part of her fame by her remarkable faculty as a reporter of ale-house and kitchen-fire conversations among simple-minded rustics. Mr. Hardy has also made a great effort in this direction, and here is a specimen—a particularly favorable specimen—of his success:

"'Why, Joseph Poorgrass, you han't had a drop!' said Mr. Coggan to a very shrinking man in the background, thrusting the cup towards him.

"'Such a shy man as he is,' said Jacob Smallbury. 'Why, ye've hardly had strength of eye enough to look in our young mis'ess's face, so I hear, Joseph?'

"All looked at Joseph Poorgrass with pitying reproach.

"'No, I've hardly looked at her at all,' faltered Joseph, reducing his body smaller while talking, apparently from a meek sense of undue prominence; 'and when I see'd her, it was nothing but blushes with me!'

"'Poor fellow,' said Mr. Clark.

"''Tis a curious nature for a man,' said Jan Coggan.

"'Yes,' continued Joseph Poorgrass, his shyness, which was so painful as a defect, just beginning to fill him with a little complacency, now that it was regarded in the light of an interesting study. ''Twere blush, blush, blush with me every minute of the time when she was speaking to me.'

"'I believe ye, Joseph Poorgrass, for we all know ye to be a very bashful man.'

"''Tis terrible bad for a man, poor soul!' said the maltster. 'And how long have ye suffered from it, Joseph?'

"'Oh, ever since I was a boy. Yes—mother was concerned to her heart about it—yes. But 'twas all naught.'

"'Did ye ever take anything to try and stop it, Joseph Poorgrass?'

"'Oh, aye, tried all sorts. They took me to Greenhill Fair, and into a great large jerry-go-nimble show, where there were women-folk riding round—standing up on horses, with hardly anything on but their smocks; but it didn't cure me a morsel—no, not a morsel. And then I was put errand-man at the Woman's Skittle Alley at the back of the Tailor's Arms in Casterbridge. 'Twas a horrible gross situation, and altogether a very curious place for a good man. I had to stand and look at wicked people in the face from morning till night; but 'twas no use—I was just as bad as ever after all. Blushes have been in the family for generations. There, 'tis a happy providence I be no worse, so to speak it—yes, a happy thing, and I feel my few poor gratitudes.'"

This is extremely clever, and the author has evidently read to good purpose the low-life chapters in George Eliot's novels; he has caught very happily her trick of seeming to humor benignantly her queer people and look down at them from the heights of analytic omniscience. But we have quoted the episode because it seems to us an excellent example of the cleverness which is only cleverness, of the difference between original and imitative talent—the disparity, which it is almost unpardonable not to perceive, between first-rate talent and those inferior grades which range from second-rate downward, and as to which confusion is a more venial offence. Mr. Hardy puts his figures through a variety of comical movements; he fills their mouths with quaint turns of speech; he baptizes them with odd names ("Joseph Poorgrass" for a bashful, easily-snubbed Dissenter is excellent); he pulls the wires, in short, and produces a vast deal of sound and commotion; and his novel, at a cursory glance, has a rather promising air of life and warmth. But by critics who prefer a grain of substance to a pound of shadow it will, we think, be pronounced a decidedly delusive performance; it has a fatal lack of magic. We have found it hard to read, but its shortcomings are easier to summarize than to encounter in order. Mr. Hardy's novel is very long, but his subject is very short and simple, and the work has been distended to its rather formidable dimensions by the infusion of a large amount of conversational and descriptive padding and the use of an ingeniously verbose and redundant style. It is inordinately diffuse, and, as a piece of narrative, singularly inartistic. The author has little sense of proportion, and almost none of composition. We learn about Bathsheba and Gabriel, Farmer Boldwood and Sergeant Troy, what we can rather than what we should; for Mr. Hardy's inexhaustible faculty for spinning smart dialogue makes him forget that dialogue in a story is after all but episode, and that a novelist is after all but a historian, thoroughly possessed of certain facts, and bound in some way or other to impart them. To tell a story almost exclusively by reporting people's talks is the most difficult art in the world, and really leads, logically, to a severe economy in the use of rejoinder and repartee, and not to a lavish expenditure of them. 'Far from the Madding Crowd' gives us an uncomfortable sense of being a simple "tale," pulled and stretched to make the conventional three volumes; and the author, in his long-sustained appeal to one's attention, reminds us of a person fishing with an enormous net, of which the meshes should be thrice too wide.

We are happily not subject, in this (as to minor matters) much-emancipated land, to the tyranny of the three volumes; but we confess that we are nevertheless being rapidly urged to a conviction that (since it is in the nature of fashions to revolve and recur) the day has come round again for some of the antique restrictions as to literary form. The three unities, in Aristotle's day, were inexorably imposed on Greek tragedy: why shouldn't we have something of the same sort for English fiction in the day of Mr. Hardy? Almost all novels are greatly too long, and the

* 'Far from the Madding Crowd. By Thomas Hardy.' New York: Henry Holt & Co. 1874.

being too long becomes with each elapsing year a more serious offence. Mr. Hardy begins with a detailed description of his hero's smile, and proceeds thence to give a voluminous account of his large silver watch. Gabriel Oak's smile and his watch were doubtless respectable and important phenomena; but everything is relative, and daily becoming more so; and we confess that, as a hint of the pace at which the author proposed to proceed, his treatment of these facts produced upon us a deterring and depressing effect. If novels were the only books written, novels written on this scale would be all very well; but as they compete, in the esteem of sensible people, with a great many other books, and a great many other objects of interest of all kinds, we are inclined to think that, in the long run, they will be defeated in the struggle for existence unless they lighten their baggage very considerably and do battle in a more scientific equipment. Therefore, we really imagine that a few arbitrary rules—a kind of depleting process—might have a wholesome effect. It might be enjoined, for instance, that no "tale" should exceed fifty pages and no novel two hundred; that a plot should have but such and such a number of ramifications; that no ramification should have more than a certain number of persons; that no person should utter more than a given number of words; and that no description of an inanimate object should consist of more than a fixed number of lines. We should not incline to advocate this oppressive legislation as a comfortable or ideal finality for the romancer's art, but we think it might be excellent as a transitory discipline or drill. Necessity is the mother of invention, and writers with a powerful tendency to expatiation might in this temporary strait-jacket be induced to transfer their attention rather more severely from quantity to quality. The use of the strait-jacket would have cut down Mr. Hardy's novel to half its actual length and, as he is a clever man, have made the abbreviated work very ingeniously pregnant. We should have had a more occasional taste of all the barn-yard worthies—Joseph Poorgrass, Laban Tall, Matthew Moon, and the rest—and the vagaries of Miss Bathsheba would have had a more sensible consistency. Our restrictions would have been generous, however, and we should not have proscribed such a fine passage as this:

"Then there came a third flash. Manœuvres of the most extraordinary kind were going on in the vast firmamental hollows overhead. The lightning now was the color of silver, and gleamed in the heavens like a mailed army. Rumbles became rattles. Gabriel, from his elevated position, could see over the landscape for at least half a dozen miles in front. Every hedge, bush, and tree was distinct as in a line engraving. In a paddock in the same direction was a herd of heifers, and the forms of these were visible at this moment in the act of galloping about in the wildest and maddest confusion, flinging their heels and tails high into the air, their heads to earth. A poplar in the immediate foreground was like an ink-stroke on burnished tin. Then the picture vanished, leaving a darkness so intense that Gabriel worked entirely by feeling with his hands."

Mr. Hardy describes nature with a great deal of felicity, and is evidently very much at home among rural phenomena. The most genuine thing in his book, to our sense, is a certain aroma of the meadows and lanes—a natural relish for harvestings and sheep-washings. He has laid his scene in an agricultural county, and his characters are children of the soil—unsophisticated country-folk. Bathsheba Everdene is a rural heiress, left alone in the world, in possession of a substantial farm. Gabriel Oak is her shepherd, Farmer Boldwood is her neighbor, and Sergeant Troy is a loose young soldier who comes a-courting her. They are all in love with her, and the young lady is a flirt, and encourages them all. Finally she marries the Sergeant, who has just seduced her maid-servant. The maid-servant dies in the work-house, the Sergeant repents, leaves his wife, and is given up for drowned. But he reappears and is shot by Farmer Boldwood, who delivers himself up to justice. Bathsheba then marries Gabriel Oak, who has loved and waited in silence, and is, in our opinion, much too good for her. The chief purpose of the book is, we suppose, to represent Gabriel's dumb, devoted passion, his biding his time, his rendering unsuspected services to the woman who has scorned him, his integrity and simplicity and sturdy patience. In all this the tale is very fairly successful, and Gabriel has a certain vividness of expression. But we cannot say that we either understand or like Bathsheba. She is a young lady of the inconsequential, wilful, mettlesome type which has lately become so much the fashion for heroines, and of which Mr. Charles Reade is in a manner the inventor—the type which aims at giving one a very intimate sense of a young lady's *womanishness*. But Mr. Hardy's embodiment of it seems to us to lack reality; he puts her through the Charles Reade paces, but she remains alternately vague and coarse, and seems always artificial. This is Mr. Hardy's trouble; he rarely gets beyond ambitious artifice—the mechanical simulation of heat and depth and wisdom that are absent. Farmer Boldwood is a shadow, and Sergeant Troy an elaborate stage-figure. Everything human in the book strikes us as factitious and insubstantial; the only things we believe in are the sheep and the dogs. But, as we say, Mr. Hardy has gone astray very cleverly, and his superficial novel is a really curious imitation of something better.

HISTORIES OF INDIA.*

A FIRST-CLASS history of India, in the fullest sense of the expression, is still to be produced. James Mill's voluminous work, of which there is a spiritless continuation by Prof. H. H. Wilson, has been highly praised by Lord Macaulay; and Lord Macaulay's praise of that portion of it which he was qualified by his studies to estimate may be endorsed without much reservation. Mill had diligently groped out, and weighed with merciless equity, all the facts of any importance available in his day that bear on the foundation and extension of the Indian Empire, but there his merit pretty nearly ends. Of his sole rival, Mr. Edward Thornton, it is scarcely needful to do more than merely make mention. Southey's 'History of the Peninsular War' was at once extinguished by Sir William Napier's; and Mr. Thornton's 'History of India' stood no chance of success whatever before the immeasurable superiority of James Mill's. That a repellent tinge of Benthamism colors the views of Mill in his occasional philosophical excursions, is true enough. Mr. Thornton, however, mistook in supposing this to be a blemish which would prove fatal, on the emergence of a competitor, to the historiographical fame of his predecessor. The simple avoidance of what revolts the popular mind is by no means positive excellence; and for more than such avoidance it is hard to discover, in Mr. Thornton's monotonous pages, anything to commend.

Neither Mill nor his feeble emulator knew the East personally; and the former was at the pains to frame a sophistical argument, which, it is to be hoped, gave himself more satisfaction than it can have given any one else, to demonstrate that he was the better able to write impartially about the people of India from never having been there. Yet the Hindu which he composed from books and his inner consciousness is in nowise a thing of hazy outlines and vague features. Nothing can be more distinct or can bristle with sharper saliencies. A character in one of O'Keeffe's farces asks, "What, an't I a priest, and know what wickedness is?" Somewhat similarly, James Mill, who was in his younger days a theological student, found his early lucubrations eminently helpful when he sat down to portray the Hindu. Among his juvenile acquirements, there must have been included a most scientifically complete conception of total depravity. In this conception, particularized and labelled, we have his picture of our Aryan cousin at the antipodes. Very ingenious are the wrenching and wresting to which he subjects Sanskrit literature, with design to make out that his representation is that of reality; and his ingenuity has borne ample and bitter fruit. Though it may be questionable whether anybody has ever accepted that representation as wholly worthy of reliance, doubtless it has weighed with thousands of Britons who have sojourned in India, and has shaped to a lifelong attitude of undeserved harshness and contempt towards its natives many a youth who, if imbued with other lessons, would have found the dark man of Hindustan hardly distinguishable, on the whole, from the white man of his own home. Professor Wilson, Mill's annotator and continuator, going on the directly contrary track, has delineated the Hindu as a good deal more of an angel of light than one expects ever to meet with on this planet. Many years as the Professor was a resident in India, his experience was limited almost entirely to Calcutta; and his much whitewashed Bengalee, presented as a typical Hindu, must have struck with amazement countless "old Indians" who have seen things with their own eyes. Let the Hindu be seen at his best where he may, he is surely to be seen at his very worst in the lower valley of the Ganges.

While Mill was no Orientalist, Professor Wilson was little but a Sanskritist, and, as such, far short of being a master. A most inexact linguist, and totally void of mental grasp and even of average power of constructiveness, he has left to the world, as the best bequest he was capable of leaving it, a huge mass of translated matter, prose and verse, very readable and very untrustworthy. To supply what Mill wanted was, notwithstanding his learning, entirely beyond him. A whole ocean of facts about ancient and mediæval India, unknown to Mill, was accessible to him, but it needed much more than his intellectual calibre to turn these facts to account. The reader of German is at no loss to possess himself of the information in question, as regards India before the time of the Mahometans there; and of Mahometan India we shall, before long, be enabled to form a desirably definite idea from the writings of the late Sir Henry M. Elliot, now in course of publication. Still, to construct, independently, a history of the India of all ages, a much wider knowledge of languages than that of a Gibbon is first of all necessary; and, this knowledge apart, no mind inferior to that of a Gibbon could hope to deal with the multiplied difficulties of the subject adequately. India, it may be gathered, is likely therefore to go a long while without a thoroughly competent historian.

*'History of India. From the Earliest Times to the Present Day. By L. J. Trotter.' London: Society for Promoting Christian Knowledge; New York: Pott, Young & Co. 1874.

The so-called 'History of India' by Mr. Trotter is, in about equal proportions, pretentious and abortive. Its author positively seems to be endowed with no one qualification out of the many requisite for the due execution of the task he has essayed. In his "introduction" he call the Jains "an offshoot from Buddhism," a description to which no scholar, we suspect, would assent. There, too, we are told that "the most purely Aryan" of the vernaculars of India is the Hindî—the Bengalee being so out of all comparison. A chapter of 42 pages comprehends all that he has to say of India before the Mahometan invasions, and the chapter contains at least as many groundless or dubious assertions as it contains paragraphs. As to the Vedas, "it is safe to assume, with Dr. Max Müller, on evidence of a very strong kind," that they "were composed between 1,200 and 1,500 years before Christ." Contrariwise, it is very unsafe to assume anything of the kind; and the evidence alluded to is of the airiest. The founder of Buddhism flourished "about the end of the sixth century before Christ." Indeed? The laws of the Mânavas were "compiled about 900 years before Christ." Again, indeed? "The Purânas held that Brahmâ, Vishnu, and Siva were but different attributes of one same [*sic*] godhead." Comment must here be superfluous. Rammohun Roy "proclaimed a pure theism"; and the Hindus believe in a "great unseen spirit." The Mahâbhârata "was probably composed by Vyâsa, in the second century before Christ"; and the Râmâyana "would seem to have been composed ten or eleven centuries before Christ." "In the twelfth century of our era, Bhâskar Achârya, of Ujjain, had forestalled by five hundred years the analytical methods of Newton and Leibnitz." We might fill a column with such rashnesses as these. Wherever we open the book they meet our eyes. Even the most familiar of the Hindoo eras, that of Vikramâditya, the author knows so little of that he postdates it by a year. Hindu philosophy he nowhere alludes to; and of the monism which underlies all the forms of the Hindu religion he certainly has never heard. There is a censurable intrepidity suggested by things like these; and we are not much surprised that, mixed up with them, we should read of Lord Macaulay's "curious want of insight" and "perverse blindness." But the author is somewhat addicted to devious moods. What India has to do with the United States of America is not very obvious. For all this, to please somebody or other, the imaginative statements are ventured that, in our country, "all classes are equal before the sovereign people," and that here "wealth has set up an aristocracy of its own."

But, after all, it is the author's pedantry, quite as much as any of his other peculiarities, that will annoy a scholar of the old school. He claims to spell Oriental words after a novel and improved fashion; and very novel is his fashion, at all events. The most elementary acquaintance with the Nâgarî and Arabic alphabets would here have saved him from scores of blunders. His "Dâsyus," "Gûru," "Mûni," and "Râjmahâl," which instances might be multiplied tenfold, are utterly wrong; still more laboriously so are his "Dâra Sheko," "Hindû Khûsh," "Narbadha," "Sedâsheo," and "Soliman"; and he shows himself all at sea, as regards sibilants, in his "Shakas," "Shesha," and "Siva." His "satti, or widow-burning," is to be corrected (if we would have a real word and its definition) to "*satî*, or a widow who is cremated with her husband." To close this wearisome list, "Maharajah Adirâj," a piece of cabalism belonging to no known language, is rendered "Lord Paramount of the Old Empire." *Mahârâjâdhirâja*, which we conjecture to be intended, is Sanskrit, and signifies "supreme king of great kings."

Among smaller histories of India, that by Mr. J. C. Marshman, son of the celebrated missionary, may confidently be recommended, much rather than anything else of the same kind, to our readers. It was compiled at the request of the University of Calcutta, and appeared in 1867. It is in three small volumes, and is published by Longmans, London. On neither side of the Atlantic has the reception hitherto given to it been at all proportionate to its excellence.

A Ramble Round the World—1871. By M. le Baron de Hübner, formerly Ambassador and Minister, and author of 'Sixte Quint.' Translated by Lady Herbert. (New York: Macmillan & Co. 1874.)—Baron Hübner left Queenstown on the 14th of May, 1871, and reached Marseilles, by way of New York, San Francisco, Japan, and China, on the 10th of January, 1872, thus "doing" the world in the space of eight months of exceedingly rapid travelling, which seems to have been amusing to him, and the results of which make a volume of entertaining light reading. Readers of a scientifically accurate habit of mind would perhaps do well to consult other itineraries as well as this of Baron Hübner if they wish to have a perfect mental picture of the various countries he visited before them, but they cannot fail to get from his journal a very vivid impression of the way in which the men and things the author saw struck his own mind. When (p. 24) he describes his surprise at finding the debates of the Senate at Washington conducted, contrary to his expectations, in an orderly manner, without constant resort on the part of the honorable members to revolvers or even to bad language, and describes their oratory in this way—"In speaking they alternately raised and let fall their voices, and only in certain eloquent moments struck the palm of their left hand, stuck out horizontally, with their right finger"—the reader gets a glimpse of the pleasant presumptions and preconceptions as to American manners existing abroad, and also a rather good off-hand description of one kind, and a well-known kind, of national oratory. Take also the account of the pessimistic Western governor, who, having asked the diplomatic author what he thinks of our glorious country, and having received an answer as satisfactory as it is possible for any human answer to be to the truly patriotic mind, continues the conversation by saying: "Yes, we are a great nation—a glorious country. But we are sick. We are suffering from the consequences of a precocious childhood—a too sudden growth. As young men, we lived in a forcing-house; arrived at maturity, we undertook too much, and are now wearing ourselves out with overwork. It is possible, but not probable, that we shall arrive at old age. The Union, I fear, has no future." Here, though there may be a little exaggeration, we feel that we are on American ground, and that it is a statesman in whose presence we are standing—a statesman not apparently belonging to the dominant party—whose views on the future of the Union and the condition of the negro would probably be found to have materially changed since the recent elections turned the majority in the House of Representatives, and whose statesmanship was naturally, before those elections, of a hopeless kind. On page 33, where Baron Hübner discusses the question of the passion of Americans for titles, we may doubt the accuracy of the statement that titles of nobility, "the forbidden fruit of the republican American," are pronounced with a sort of "voluptuous pleasure"; for, according to our experience, most Americans are so unfamiliar with the delicate shades of meaning and etiquette of titles of nobility that they avoid using them with foreigners, or if they do use them the voluptuous pleasure is apt to disappear in the trepidation caused by a doubt whether they are correctly applied; and when Baron Hübner tell us that he never made the acquaintance of a descendant of the French Huguenots, the Puritans, or the early Dutch emigrants who did not at once begin the conversation by saying, "I am of a very old family—my ancestors arrived in this country two hundred years ago," we cannot help wondering how many of the scions of these three stocks he actually met in his hurried trip. At the same time, it is impossible to deny the justice or the delicacy of his observation, that as to such titles as governor, senator, colonel, or general, "to him who gives it, as to him who receives it, it is felt to be an equal honor," though the remark need not be confined to these titles or to this country, for the fact on which it rests exists in the abysmal depths of human nature.

Correct generalizations are not to be expected of a traveller whose rambling is done at the rate of two or three hundred miles a day, and who belongs to a class the members of which are said by M. de Hübner to be known in America as "globe-trotters"; and to the foreign globe-trotter some inaccuracy may be pardoned. So the startling statement (p. 53), that American women attach so much importance to "globe-trotting" that young men of a serious turn of mind who think of marrying take pains to ascertain first whether the object of their affections has a strong desire to go to Europe—in which case, as we understand it, they break off the engagement—is probably founded altogether on the amusing story of the disconsolate husband who kept a colored photograph of his deceased wife in the cover of his watch, and lamented her with many tears as "a first-rate manager" and who "never asked to be taken to Europe." "No Europe-going, no such nonsense."

On the whole, we have found the account of the author's travels in China and Japan more interesting, though not so entertaining as his observations on America. In both these countries he had unusual opportunities of seeing what was worth seeing, and in Japan he had the benefit of much conversation with many of the local magnates, including the leader of the reform party, Iwakura, and had the honor, then almost unprecedented, of a presentation to the Mikado. His reproduction of the account given on the spot by the friends and enemies of reform and the European movement in Japan, is well worth reading. Of course he does not pretend to do more than repeat what he heard from the Japanese and the foreign residents; but he managed to pick up altogether the most consistent and coherent account of the movement that we have seen anywhere. His conclusions are that there is grave reason to doubt both the sincerity of the reformers and the possibility of doing the people of the country any lasting good by the changes now being introduced. The Mikado he represents as a mere puppet of a number of crafty chieftains who are making use of him, raising an army, and govern-

ing in his name, and playing at philo-Europeanism with great good-will. From Iwakura down to the lowest official, the stereotyped reply universally made to any question on the subject of the time probably necessary to accomplish the change of Japan into a modern country is—"In three years; it will be finished in three years."

William Blake's Illustrations of the Book of Job. With descriptive letterpress and a sketch of the artist's life and works. By Charles Eliot Norton. (Boston: J. R. Osgood & Co.)—These designs, for which, in addition to the biographical sketch, Mr. Norton furnishes short critical notices, are tolerably well known by reputation as the most important artistic work of their author. The rough photolithographs of them, contained in Alexander Gilchrist's 'Life of Blake,' published by Macmillan in 1863, must be familiar to a great many persons in this country, as the last-named book has been common in bookstores for years past, and cheap, and must be pretty widely distributed by this time. The original engravings are, however, somewhat difficult to find, and the set brings a high price; so that it is probable that there are few persons in America who have seen the originals, or, in the dearth of public or accessible collections, who have any immediate chance of seeing them. It is well, therefore, to have more adequate copies than the small Gilchrist lithographs. The Osgood heliotypes are of the same size as the originals, and are so far successful as reproductions that they give the grouping and general action clearly, and so much of the light and shade as to show to the careful student what Blake intended. Mr. Norton's words in regard to the heliotypes, at the very end of the book, are as follows: "They reproduce, with the closeness of a facsimile, the general character of the original engravings; but they fail to render the most delicate beauties of expression and the finest touches of execution." And, again, it is said that they give "the distribution, though not the scale, of the light and shade of the original." These criticisms are just. It may be said, further, that they are about the equivalent of very late impressions, taken after the plates are much worn by printing. It is clear what the designer meant to do with his figures in action, gesture, grouping; what he meant to express in his background; what the general composition of lines and masses was. But the design in light and shade is lost, the delicate gradations of tone are not even to be guessed at, and the expression of the faces cannot be judged of satisfactorily. It should be said, in qualification of our judgment, that a somewhat careful comparison of the heliotypes with proof copies of the originals has led us to think better of the former than we were inclined to on a first inspection. They are not the same thing; but then, is it very important that they should be the same thing? The quaintness, the originality, both for good and evil, the unlikeness to conventional renderings of nature and of thought, are all fairly well shown to whosoever will examine the heliotypes carefully, and for the rest it may well be argued that these copies at ten dollars are better worth buying than the originals for seventy dollars or more. It may be that if you have at all an engraving by Dürer, an etching by Rembrandt, or Haden, or Meryon, or a print from the 'Liber Studiorum,' you should not spare money, but get the finest impression possible—that there is no comparison between the finest and all others, and no question but that one print in a fine state is worth many less fine. But Blake's light and shade is not of such value as that; and a comprehension of its full merits is not incumbent upon most persons of cultivation. They can afford to disregard it if they choose to do so, and to study the general significance of the work in other than perfect examples. It is probable, indeed, that what there is of Blake in this book is enough for anybody but professed students of art. Mr. Norton's brief "sketch" is a model of selection and condensation, and gives facts enough and criticism enough to answer the purpose of all but the especially curious in strange manifestations of artistic power. One error should be pointed out: in the quotation from Mr. Ruskin on the last page, "light" should be read instead of "life."

The Naturalist on the River Amazons. By Henry Walter Bates, F.L.S. Third edition, with illustrations. (Boston: Roberts Brothers. 1874.)—Mr. Bates's South American experiences covered the eleven years from May 26, 1848, to June 3, 1859, and the first edition of this account of them was published in London eleven years ago. No one who reads his delightful narrative will wonder that it has maintained itself so long. The opening pages at once attest the writer's unusual descriptive powers, and from first to last there is no dull spot in them. Moreover, his professional observations are kept from being too technical; and a final reason for a third edition at this late day is furnished by Mr. Bates's sympathy with those views of natural creation which have since come to be known (and denounced) as Darwinian. He was for a part of the time the companion of Mr. Alfred Russel Wallace, who afterwards in another hemisphere, and quite in ignorance of Mr. Darwin's enunciation of the same doctrine, deduced from his own researches the theory of "natural selection." Mr. Bates's narrative was therefore sure to profit by the extraordinary revival of science to which Darwinism in all its length and breadth has led. It is not, however, so pronounced or so path-breaking a work as to be compared, for instance, with the 'Voyage of the *Beagle*'; and those who read it without bias will be surprised that an American historian of Brazil has thought it necessary to qualify his recommendation of this "most charming and valuable work" by an allusion to its scientific heresy. Not scientific so much as theological, of course, for the historian in question is a clergyman. His exact words are worth quoting. Mr. Bates, he says, "has given the world many important facts concerning the great valley, aside from information in regard to its natural history. Only one drawback to many [*qu.* important facts?] is to be found in his 'Darwinian' views; but they are 'put' so modestly, and his investigations are so much better than his theory, that one becomes only interested in the great theme of his book, 'the King of Waters.'" Incoherent as this disclaimer is, it is plain that the praise of Mr. Bates is natural and hearty, the reproof perfunctory merely. But our clergyman wrote in 1866, when the obligation to mention "drawbacks" was very much stronger for his class than it is now.

SCRIPTURE ILLUSTRATED AT LAST.

In order to bring the undermentioned magnificent work within the reach of persons of moderate means, Messrs. Cassell, Petter & Galpin have arranged to issue it periodically, in parts or volumes, at the option of the subscriber. Six parts are now ready for delivery, price $2 each; and also the volume of Matthew, price $40. Subscriptions received only for the complete work, viz., 65 Parts, or 4 Vols., at $140. Completion may be confidently looked for within twelve months, but deliveries may be arranged to suit the convenience of subscribers.

Our Agents will be happy to submit specimens for examination to reliable parties on application to us, the book not being found in the stores. Full information and Prospectuses free, by mail. We append selections from some press notices. The work has not once been adversely criticised.

THE FOUR GOSPELS.

WITH 132 FULL-PAGE STEEL ETCHINGS BY M. BIDA.

From the Nation, Dec. 17.

"The illustrations to the New Testament from Bida's designs now appear in an English edition of the Gospels under the charge of Messrs. Cassell, Petter & Galpin. We need not say how much they seem to gain in being at last associated with a translation which is not only one of the very few translations immeasurably superior in style to their own original, but a version which is the perpetual monument, standard, and pride of a noble language. . . . We cannot see that the plates in the English version, on the carefullest comparison with the original French impressions, are inferior; they are doubtless printed in Paris under that same supervision by M. Hédouin which has made the first proofs so successful. In conclusion, we may say that the connoisseur will possess in this edition a Biblical work of great purity, a type of the Galilean at once refined and historically probable, an exquisite series of authentic Judean landscapes, and whatever can assist his Bible-reading as as a task of intellectual culture."

From the New York Times, Dec. 8

"This edition of the Gospels has been long looked for with great interest. It has been known in literary circles that M. Bida spent ten years in the Holy Land preparing his designs for the illustration of the sacred text. A portion of his work is now access ble to the public, and there can be no doubt that it fully realizes the expectations of those who are best familiar with M. Bida's remarkable gifts. . . . We believe most people who see it will come to the conclusion that practically the sacred text is now illustrated for the first time. . . . The artist has evidently approached his task in a spirit becoming a man who undertakes to illustrate themes which the civilized world regards with veneration and affection. . . ."

From Christian Union, Dec. 23.

"Messrs. Cassell, Petter & Galpin, London and New York, have commenced the republication, in English, of the Four Gospels, with etchings after Bida's noted designs. Of illustrators of the Bible M. Bida is unquestionably the most capable and faithful. . . . M. Bida is, besides being a skilful artist, a Jew by birth and education, and a Christian by profession, so that his every line may be implicitly trusted. In minor details the artist is of course correct; the Jewish features, dress, characteristic poses, and material surroundings are given with the accuracy which is based upon actual knowledge. As an artist, in distinction from being merely a Jewish artist, Bida is great. His groupings are absolutely wonderful. Not a figure is introduced except for individual effect, and yet none of his pictures seem out of proportion for the lack of figures such as many distinguished artists scatter about a canvas only to preserve its artistic balance. . . . Judging by the past history of Bible illustration, we feel justified in asserting that there is little probability that Bida's superior will ever be found, and that to coming students of art applied to Scriptural subjects he will be the master."

The heliotype reduction of one of the etchings, which appeared as frontispiece in the "Nation's" Holiday Supplement, will be sent on receipt of ten cents

CASSELL, PETTER & GALPIN, 596 Broadway, New York.

The Law of Injunctions.

BY FRANCIS HILLIARD,

Author of 'The Law of Torts.' 'The Law of New Trials,' 'The Law of Contracts,' etc. Third edition, 8vo, 837 pages; price $7 50.

That the work may continue to deserve the approbation as well as the favor with which the previous editions have been received by the profession, and that it may fully keep pace with the law, it has been, in this edition—the third—very carefully revised, rearranged, and in some portions rewritten; about one hundred pages being added, and a very large number of cases, particularly the most recent, not merely cited, but the points which they decide briefly stated.

KAY & BROTHER, LAW PUBLISHERS,

17 and 19 South Sixth Street, Philadelphia.

A NEW SUNDAY-SCHOOL Magazine. To be Published Monthly. For Pastors, Superintendents, Normal-class Teachers, etc. Not to interfere with the *Sunday-School Journal*. To begin January, 1875.

D. APPLETON & CO.,

549 and 551 Broadway, New York.

THE WEEK IN TRADE AND FINANCE.

DECEMBER 22, 1874.

MONEY has remained easy at from 3 to 4 per cent. on call loans; at times as high as 5 per cent. was paid by borrowers who had delayed making up their accounts till very late in the day. Commercial paper remains as last quoted, the best names passing at 6 to 6½ per cent. We have heard of sales, however, as low as 5½ per cent., but this rate was exceptional.

Cable advices from London on Thursday report that the Bank of England had gained £521,000 in bullion during the week ending on that day. The rate of discount was left standing at 6 per cent.

The weekly bank statement on Saturday showed further losses in specie and legal tenders. The small loss in specie—$599,300—is difficult to explain, as during the week which the statement covers $5,725,000 in gold was withdrawn from the banks, and either shipped to Europe, placed in the Treasury for California account, or deposited in the Treasury on account of custom receipts. The Treasury disbursed during the same time $2,000,000 gold, on account of 5-20 bonds redeemed, and $500,000 gold sold, in all amounting to $2,500,000; this amount, deducted from the $5,725,000 withdrawn, leaves $3,225,000, which the banks have actually lost, while the statement shows only $599,300.

The following is the statement in detail:

	Dec. 12.	Dec. 19.	Differences.
Loans	$284,903,300	$285,409,800	Inc.. $506,500
Specie	14,218,800	13,619,500	Dec.. 599,300
Legal tenders	49,470,300	47,931,700	Dec.. 1,538,600
Deposits	218,408,000	215,707,800	Dec.. 2,700,200
Circulation	24,804,300	24,731,600	Dec.. 72,700

The following shows the relations between the total reserve and the total liabilities:

	Dec. 12.	Dec. 19.	Differences.
Specie	$14,218,800	$13,619,500	Dec.. $599,300
Legal tenders	49,470,300	47,931,700	Dec.. 1,538,600
Total reserve	$63,689,100	$61,551,200	Dec.. $2,137,900
Reserve required against deposits	54,602,000	53,926,950	
Excess of reserve above legal requirem't,	9,087,100	7,624,250	Dec.. 1,462,850

The stock market, up to Friday, was without special features. On Friday, a bear movement began to develop itself, with the main efforts to depress prices directed against Wabash, which sold down to 25, carrying the balance of the speculative list along with it from ½ to 2 per cent. There were rumors afloat that the company would not be able to pay the January interest on its bonds. The investigation by the Congressional Committee into the mode of obtaining the subsidy from the Government for the Pacific Mail S. S. Company has had a very depressing effect upon its stock, which has declined to 33⅝—the decline having been accelerated by the severe attacks of newspapers, which the Street considers to have been made wholly in the interests of a certain large operator who is short of the stock.

On Saturday a little piece of stock-operating took place which, happily, is not often witnessed in the Stock Exchange. A broker named Wright, without capital or credit, finding himself short of funds, thought that the best way to improve his condition would be to go into a little operation on his own account in Wabash. He bought in all 18,000 shares of stock, and then, finding that the market did not respond to his large purchases and go up, quietly left the Exchange, and shortly afterwards announced to the President of the Board his inability to meet his contracts. Wright was summoned to-day before the Governing Committee, and expelled from the Board for having been "guilty of obvious fraud" in his transactions.

The announcement of Wright's failure brought about, for a short time, a panic in Wabash stock. The parties who had sold to him, still having the stock on their hands, immediately commenced protecting themselves by selling out "under the rate." The price tumbled rapidly from 26¾ to 21½; it afterwards rallied to 24⅞, and finally closed at 22⅞. The whole market became unsettled and weak. The bears now became buyers, and on their purchases to cover shorts the market rallied from 1 to 2 per cent. from the lowest quotations.

Government bonds have been active, and prices have advanced from 1 to 1¼ per cent. on the entire list. The principal buyers were the insurance companies, who seem to be anxious to have a large supply on hand in order to make a favorable exhibit in their January statement. The gold market has remained quiet, with the range of fluctuations confined between 111¼ and 111¾. The specie shipments for the week amount to $2,849,000, consisting principally of gold coin.

FISK & HATCH, Bankers, No. 5 NASSAU ST.

U. S. Government Bonds, coupon and registered, all denominations, bought and sold; also gold coupons, and American and foreign gold and silver coin. Mercantile collections made, and approved accounts received from Banks, Savings Banks, Corporations, and individuals; also U. The Nation.

NEW YORK, THURSDAY, DECEMBER 31, 1874.

The Week.

THE Louisiana Returning Board has, after two months' work, completed its labors, and made a report showing the election of three Democratic and three Republican members of Congress, a slight Republican majority in the House, and the adoption of all the constitutional amendments. The report which accompanies this return explains at considerable length the proceedings of the Board. The law requires that they shall first canvass the votes from all polling places where there has been a "fair, free, and peaceable registration and election," rejecting any polling place where there has been "any riot, tumult, acts of violence, intimidation, armed disturbances, bribery, or corrupt influences, which prevented or tended to prevent a fair, free, and peaceable vote," postponing the investigation of these doubtful cases until they have disposed of the others. On examination of the returns, however, it appeared that the election had been so loosely conducted that "at not one-tenth of the polls in the State were the forms required by law observed"; and the report declares that, "had the Board decided that anything like a strict compliance with the forms of law in holding the election" should be required, the result would have been to throw out so many of the polls "that there would have been no election in the State." The Board therefore adopted what they say was a "just and reasonable" rule, that in cases where there was any evidence of an election having been held, "although it be only a tally-sheet unsigned and not sworn to," it would consider this the official record, and compile the vote from it, in the absence of "fraud or intimidation." But where a charge of fraud or intimidation was made, the Board proceeded to receive affidavits on the subject. The Board, however, did not exclude any poll except "on satisfactory proof" that the intimidation had been sufficient to "change the result."

The affidavits taken, it seems, showed the existence of a widespread Democratic conspiracy throughout the State to prevent the negroes from voting the Republican ticket, to prevent them from holding office, to compel Republican office-holders to resign, and to drive the white Republicans out of the State; and the Board admits that as all acts of intimidation were perpetrated in favor of the Democratic party, and against the Republican party, "the polls excluded from compilation generally gave majorities in favor of the Democratic party, and their exclusion from compilation reduced the vote of that party, and in some instances had the effect of returning representatives and other officers of the opposite party." Having given the Board's version of their performances, let us now give our own. In the first week of November an election was held in Louisiana, for members of Congress and other officers. The returns of this election were sent in to the Returning Board, which on going over them found that nine-tenths of the returns were illegal and void, either on account of their not complying with the requirements of the law, or on account of bribery, intimidation, and so on. They thereupon determined to hold the election over again, and for two months past they have been engaged in "fixing" the politics of the State according to their own impression of what it ought to have been, first passing all the necessary laws and then construing them in their own way, with the above result. The Conservatives have issued a protest, declaring the report of the Board an outrage; they maintain that the election was carried by the Democrats; and what we maintain is that, on the Returning Board's showing, the election was not held by the people of Louisiana at all, but by half a dozen gentlemen assembled in a room in New Orleans, and, as the politicians of the Tweed school say, the people were "voted" by them. Mr. Arroyo, one of the members of the Board, resigned in disgust before the result was announced.

Congress has adjourned over the holidays, the first month having been mainly occupied with the District of Columbia and Finance Bills in the Senate, and the Appropriation Bills in the House. Just before the adjournment an active dispute took place in the House over the Navy-Yard election abuses. Mr. Hale, of Maine, having charge of the Naval Appropriation Bill, began the disturbance by declaring that he "did not envy any man upon this floor who had a navy-yard in his district," and added that any such member would always find it "a source of trouble and disappointment"; on which Mr. Creamer, of New York, declared that the Navy Department "above all other departments of the Government" needed investigation, and enforced his remarks by a reference to the district represented by Mr. Gooch, of Massachusetts (including the Charlestown Navy-Yard), "where men to the number of fifteen hundred were employed two months before the election, and discharged upon the very opening of winter, immediately after the election was over." Mr. Hale defended the Department, producing statistics for the years 1873 and 1874 to show that the New York Navy-Yard had more men a year ago than during the same months this year. Mr. Archer suggested that "a year ago was the time when we supposed we should have trouble with Cuba," but Mr. Hale said that the months he had selected for comparison were earlier, and then proposed to go back to the year 1856, and see how it was "in the pure days of Democratic administration." This led to a lively discussion between Mr. Hale and Mr. Schumaker, the latter insisting that the Presidential years 1868 and 1872 must be taken, if a fair comparison was desired; Mr. Hale suggested in reply that Mr. Schumaker was getting "nervous," but admitted that, knowing as he did the utter groundlessness of the charges, he felt no wonder at it. Mr. Schumaker denied with some feeling that there was "anything nervous about him," and added that he hated to see a gentleman enjoying "a reputation for candor and fairness attempting to perpetrate a fraud upon this House." Mr. Gooch himself then appeared and substantially admitted the charge that the Navy-Yard force always increased before an election, but declared that the increase at Charlestown had been caused by the necessity of employing some men to "protect" some live-oak timber—a statement which was received with broad smiles of incredulity by the House.

The new Finance Bill seems to meet with little favor in any quarter. We have not met with a single word of general praise of it in any paper. The occasional commendation of it, on the ground that it fixed a day certain for a return to specie payments, which was at first elicited has been, in the larger number of cases within our observation, withdrawn on a closer inspection of the bill. It is generally recognized that we cannot resume without contraction; that mere pledges by Congress to return to specie payments at a remote period are of no value, considering what twistings and turnings Congress has already gone through on currency matters; that the part of the scheme relating to national banking means unmitigated inflation; that the powers given to the Secretary are enormous and alarming; that the absence of any provision for the destruction of the redeemed greenbacks is a trick looking to the establishment of another "reserve"; and that the sudden passage of the bill, without discussion in the Senate, is an unworthy attempt of the Republican managers to humbug the public, by appearing to

legislate on a subject which they really mean to shirk, and by appearing to stand up for hard money when they are really playing into the hands of the inflationists.

When one reads about a fatal "street-fight" at the South between editors or politicians, one's horror over the breach of the public peace is almost always moderated by the reflection that somebody was killed, and that though possibly "an estimable citizen in private life," as the reporters say, the public was the better of his removal. We fear this or something like this has been the state of mind of most people of the North on reading that Warmoth, the carpet-bagger and ex-governor of the State, had slain in single combat one Byerly, the White League editor of the New Orleans *Bulletin*. Byerly, it appears, had been advocating in his paper separate street-cars for colored people, and Warmoth, to his honor, been opposing the plan, also in print, which led to arrangements for a duel between him and a Mr. Jewell, one of the editors. Pending this encounter, however, Byerly assaulted Warmoth in the street with a common domestic cudgel, whereupon Warmoth drew a knife, and they both "clinched" and fell, and when they got up "it was found," says Warmoth, "that Byerly was cut, and I understand that I am accused of doing the cutting." The fact was that Byerly was "cut" in six places so deeply that he has died, and the plan of having separate cars for colored people, so important to the interests of Southern society, will perhaps now miscarry.

We are bound to say that Warmoth has borne himself better in this transaction than his successor Kellogg, the actual governor, who, when a few weeks ago a brother politician approached his carriage in what he thought was a threatening manner, drove off rapidly, firing out of the window at the foe in the crowded street as he went, happily without damage to bystanders. If a governor or ex-governor has to fight with knives or pistols in the State capital, we think he ought, for the credit of his office, to kill his man, and ought to stand his ground while doing the shooting or "the cutting." We now sincerely hope that there will be no Conservatives in New Orleans besotted enough to get up sympathetic excitement for Byerly. A dog's death is, in the estimation of the civilized world, good enough for a street-fighter, and street-fighting is a custom worthy only of savages. Southerners must somehow get this idea into their heads. They have got over the illusion that slavery was to spread over the earth; they must now get over the notion that they can be considered within the pale of civilization as long as murder is a favorite mode of avenging insults and settling differences of opinion, and murderers go unwhipped of justice. Their present state of mind on this subject is only worthy of Gaul in the sixth century.

There was another long discussion before the General Term of the Court in Brooklyn on Monday over the "bill of particulars" in the Tilton-Beecher case which had been ordered by the Court below, in terms which forbade the defendant "to produce on the trial proof of the occurrence of any specific acts of adultery at any other time and place than such as shall be set forth in the bill of particulars." The "argument" of the lawyers, which fills one side of the *Tribune*, in very fine print, was very discursive, and indeed bore a striking resemblance to the statements of the parties published last summer in the newspapers. In fact, most of the speeches appear to have been really aimed at the public out-of-doors. Mr. Shearman, who at the last argument cited the case of Susanna and the Elders, in this cited the case of Athanasius, delivered a glowing eulogy on his client, and, by way of justifying his desire to tie Tilton down to "particulars," mentioned "that one of the most respectable members of the bar in this city had told him (Shearman) that he (the member of the bar) had heard Tilton say that adultery could be committed by parties who were at the time forty miles apart," which sounds like something Susan B. Anthony might say at a suffrage tea-party. He also cited, for the same object, one of Tilton's silly articles in the *Independent* some years ago, advocating legal divorce for "adultery of the soul." In fact, thus far it cannot be said that the case has fared much better at the bar than among the newspapers. The Court has refused the bill.

The writer of the money article in the *Tribune* has for some time past by his persistent gloom excited more or less merriment even among those who generally concurred in his financial views. Not very long ago he stated that property in railroads might before long be found no more valuable than property in slaves was found to be in 1860, and he half predicted a virulent Granger movement in this State. He looked hopefully for numerous failures towards the close of the year, and was plunged in the deepest distress by the arrival of Christmas and the attempts of his fellow-Christians to enjoy it. Calling it "merry," and trying to be merry on Christmas day, roused his hearty indignation, inasmuch as he apparently felt satisfied that everybody who looked at his year's accounts must see that he was ruined. Everybody who said he had been doing a good business he apparently suspected either of mental unsoundness or of some criminal design. Now come McKillop & Sprague, however, with the annual report of their Commercial Agency, and its conclusions are worth any number of speculative groans. These are that though the first half of the year 1874 has been generally unprofitable, the second half "has, in many lines of business, been generally profitable," and "the quantity of goods gone into consumption during the last six months has been a fair average." It sets down the amount saved by economy during the year at $400,000,000, and the number of failures in 1874 about the same as in 1873, many of them, however, belonging to the latter year. The Southern States, it says, have, on the whole, done well; in the West the speculative fever has very much diminished; and it thinks a survey of the whole field justifies "satisfaction with the status and prospects of business" for the coming year. One source of consolation remains, however, to the writer in the *Tribune*, no matter what people may say about the business outlook, and that is, that human nature has not improved to any perceptible extent since the panic, and that crime is still rife all over the continent. Lying is not uncommon, and theft is resorted to with distressing frequency, and the railroad men all continue sinful or absorbed in the pursuit of temporal riches.

Perhaps nothing in the history of William M. Tweed has been more curious than his prison life. He had hardly reached his prison when the Commissioners of Charities and Correction—three in number, appointed by a reform Mayor elected in the middle of the "uprising" caused by Tweed's robberies—who have charge of the city prisons, were charged with either ordering or permitting him a great number of indulgences. Instead of wearing the prison dress he was allowed to attire himself in the simple garb of a "Boss"; instead of occupying a cell, he had a suite of apartments assigned him, including a capacious and well-furnished dining-room and sitting-room; instead of engaging in the coarse labor of a convict, he occupied himself with what he calls his "private business," or, in other words, in the management of the money stolen by him from the city, and in this he had the assistance of a "private secretary." *Harper's Weekly* published an accurate picture of the rooms, and the whole story of Tweed's immunities and avocations was laid before the public, but it excited really comparatively little attention. At last Governor Dix interfered and called Mayor Havemeyer to account, and he called the Commissioners to account, and an enquiry was pending when the Mayor died. His successor, Mr. Vance, followed the matter up by removing the Commissioners, and it now remains to be seen how Tweed will fare under a Democratic administration. Mr. Myer Stern, however, has sent us a letter

addressed to Mayor Vance denying his charges, and challenging him to waive his privilege and stand a libel suit.

What a very little way into the Republican skin the reform has penetrated has been well illustrated by the politicians' criticisms on Mr. Vance's action after removing the Commissioners. He is only *ad interim* Mayor until the 1st of January, when his Democratic successor takes office. Accordingly, he felt it to be his duty when making any removals to allow his successor to fill the vacancies. It was his duty for two reasons—first, because it would be unjust and unfair to seize the opportunity afforded by a month's tenure of office to saddle the new Mayor with employés for whom he would be responsible but whom he had not selected; and secondly, because all hope of reform in municipal government rests on the possibility of establishing the practice of treating the offices not as the spoils of party, but as trusts to be administered by whatever party holds them for the public good. Mr. Vance's course was therefore not only just but expedient in the highest degree. Nevertheless, the Republican politicians denounce him fiercely, we are told, as a traitor, and think that, when he made a vacancy, he ought to have "euchred" his successor by popping one of their "workers" into it.

The November elections nowhere caused greater rejoicing in the South than in Alabama, where the whites were raised from a state of despondency to one of exceeding hopefulness. They saw that the colored vote was divided, and they had good reasons for believing that it would never again be cast solidly for any party. The Republican officials, by a cunning use of the bacon which Congress had appropriated for the relief of sufferers by overflows, did what they could in the way of bribing the blacks, but in vain. There was noticeable during the canvass an extreme indifference to the contest on the part of the colored population. So striking, indeed, was it that the whites suspected some deep-laid scheme, since in former years the negro laborers would abandon the most pressing work at the call of their political leaders. The explanation of this remarkable transformation is one which throws much light on the tendency of affairs at the South. It is one, too, offered by the negroes themselves, who say they had attended meetings and voted year after year as they had been ordered, and had seen no good come of it to themselves. They were growing steadily poorer and more deeply in debt to their white neighbors, and it was time to look after their own interests. Here we have, in fact, the key to the whole situation. The whites of Alabama are poor, destitute of capital. They have, however, intelligence and superior position. The negroes are still poorer, and are weighted down by ignorance and social demoralization. They will be longer in rising, and in the meantime will come more and more under the influence of the more prosperous whites among whom they live, and who are at present their creditors. They have already ceased to furnish a basis for the pseudo-Republican party at the South, and in future we may look to see them divided at the polls as the whites are divided—a consummation devoutly to be wished for every Southern State.

Ecclesiastical matters are now, as will be seen from our correspondent's letter, occupying the public mind in England, almost to the exclusion of all others. Little incidents are constantly occurring to fan the flame of excitement, and some of the clergy lend themselves to the work with strange fatuity. For instance, the Bishop of Lincoln a short time ago supported a minister of his own diocese in a rude, and almost certainly unlawful, refusal to allow a Wesleyan minister to place at his daughter's grave a headstone on which the bereaved father had caused the term "Rev." to be attached to his own name. This roused the Dissenters fiercely, and made all sensible people weep; but the Bishop could not get it out of his head that he was discharging a lofty duty. Now he has again got into a collision with another of his clergy by forbidding him to invite Dr. Colenso to preach in his church. Dr. Colenso, while Bishop of Natal in Africa, propounded certain views touching the Pentateuch which were considered heretical by the other bishops of South Africa, and they tried and deposed him. He appealed, however, to the Privy Council, which pronounced the whole proceeding null and void; but then forty-three English bishops united in a request that he would resign, and the English Convocation and other Episcopal bodies approved of the action of the South African bishops. But now comes Mr. Fletcher, the minister who has invited him to preach, and says that the Bishop of Lincoln has no legal right to interfere, and that he will not regard his inhibition, and Dean Stanley supports him by inviting Dr. Colenso to preach in Westminster Abbey, following this closely by a similar invitation to Dr. Cardwell, a Scotch Presbyterian divine. These things all help to mark more distinctly the line between the English clergy who are willing to live under the law of the state and those who are not, and help to turn the minds of the laity more and more towards disestablishment as the best cure for these disturbances and dissensions.

The Emma Mine scandal grows in England under the stimulation of the Court of Chancery and the spectacle of callous indifference to the moral aspects of the affair exhibited by our own Government. Mr. Conway writes to the Cincinnati *Commercial* that it now furnishes materials for "jocular allusions" to it and our share in it at the Opéra Comique and elsewhere, and the interest in it is heightened by the fact that a person connected with the American Legation, whom Mr. Conway calls "a gallant colonel," has recently been operating vigorously on the London Stock Exchange, doubtless inspired by the example of his poker-playing chief. To crown all, Mr. Moran, who has been for seventeen years the secretary of the Legation, and has won everybody's respect in the place, and has been of late, in fact, almost the only unimpeachable person connected with it, has just been appointed Minister at Lisbon, the story goes, for the purpose of getting him out of the way. Mr. Conway adds some very timely observations on the influence which the present condition of that Legation is exerting in England on American credits, and the increasing suspicion with which the pecuniary ventures of a community which can have Mr. Schenck for its Minister are regarded. To put it plainly, and in language which he and General Grant will understand, it does not "pay" to keep him there.

A despatch of Prince Bismarck to Count von Arnim, which was produced on the trial of the latter, has been published, and it throws more light on the cause of the differences between them, and does more credit to Bismarck's character and cause, than anything we have yet seen. In the first place, he warns Arnim against transmitting to Berlin, at a crisis of such importance, hasty and unverified impressions about French affairs, as if they were well-established conclusions; against disregarding or trying to set aside the foreign policy resolved on by the Chancellor; makes some very sound and shrewd remarks on the difficulties which would be wrought in Germany's relations to France by the overthrow of the Thiers Republic and the establishment of a monarchy; shows the strength which such an occurrence would give to the Ultramontanes, and points out, by reference to the experience of the last forty years, that the influence of French democracy on the neighboring states depended not on the kind of government which existed in France, but on the weight and authority in Europe possessed by France It is altogether an exceedingly able state-paper, although sharp and peremptory throughout, and one sees, from the nature of the reproofs it contains, not only that Arnim's faults were of an irritating kind, but that much forbearance had been already exercised towards him.

THE LATEST "HAPPY ADJUSTMENT."

WE wish most sincerely that the financial unsoundness of Mr. Sherman's bill was the only objection to it; but the political and moral objections are just as great. It is, in the first place, a plain attempt on the part of the Republican leaders to cover up the division among them on a vital question of the day by a very transparent sham. The absence of any policy on the subject of the currency was undoubtedly one of the causes of the late defeats at the polls. This can neither be denied nor concealed. It was no answer to this charge, as we have often pointed out, that the Democrats had no policy either, because the Democrats were not in power. An opposition is not bound to have a policy on any question. It may confine itself to criticism if it pleases. The party charged with the conduct of the Government must make up its mind on such leading questions of the day as really call for legislation, and this duty the Republicans have for ten years persistently shirked, and have turned over the finances of this great commercial nation to very obscure and ignorant persons like Mr. Boutwell and Mr. Richardson, whom the President, a soldier without experience in civil affairs, raised to power to preserve order, chose in his caprice to put in charge of the Treasury. The license, indeed, extended to Mr. Boutwell is without a parallel, considering his antecedents, in the history of constitutional government.

The bill now pending has, therefore, been evidently got up to produce both an appearance of union where no real union exists, and an appearance of doing something where nothing is done, or where something entirely different from what the country expects is contemplated. Nothing about the bill is, however, more objectionable than the *manner* of its passage in the Senate. Government by caucus has just received a very severe rebuke at the polls by the overwhelming defeat of scores of the regular party candidates. But was there ever a worse attempt to govern by caucus than the concoction of a bill which is not surpassed in importance by more than two or three pieces of legislation within the present century, which may exert a deep and lasting influence on the prosperity and business of a great nation, by a self-appointed party committee sitting in secret, and its passage through the Senate almost without debate—that is, without any complete statement of the arguments for or against it—and without giving the public time to consider it?

At the bottom of all these attempts of our Republican financiers at compromises and "happy adjustments," there is a kind of child's faith, such as George Eliot has so admirably described in the case of Hetty Sorrel, that the rules of arithmetic and the order of nature can somehow be evaded; that it cannot be that paper-money will produce the bad effects here it has produced elsewhere; that the American people will somehow, at some time or other, struggle into specie payments without any special efforts or sacrifice, and, above all, without "hurting the party." But Mr. Sherman, Mr. Dawes, and all their colleagues will find, like Hetty, that this is a miserable delusion, that the day of reckoning must come and the sacrifice be made, and that when it comes the greatness of the calamity will be in the direct ratio of the length of the period of evasion.

The bill, as we explained hastily in our last issue, is either a delusion or a snare. The attempt at specie payments is deferred for four years, which, in the way of direct delay, is the limit of possibility to any man now concerned in legislation. Even then it is to be made under conditions which will render its failure or further postponement inevitable. Political economy has long settled that no currency can be kept equal to coin while its issue exceeds the requirements of a specie basis. Neither the wit of man nor any sacrifice upon the part of the nation will avail to alter this condition. Yet the bill fails—utterly, and, considering its origin, we doubt not purposely fails—to secure such contraction as will make resumption possible. Thirty-two and a half million national bank-notes must be issued before the twenty-six million greenbacks, legalized in a former compromise, will cease from doing mischief. One hundred and two and a half millions added to the present circulation must choke the filled channels of trade before the legal-tender notes can be brought as low as three hundred million dollars. Here contraction will stop. The bill expressly forbids reduction below this minimum. It does not, however, prohibit the reissue of the retired notes, that point, as Mr. Sherman was not ashamed to declare, "being a question for consideration four years from now." Suspense is ruin to business men. They complain of it at this moment bitterly and justly. Yet the Senator offers them as a Christmas present four years of doubt, compared with which their present condition is certainty itself.

But perhaps anxiety is needless regarding the reissue of paper-money so unlikely to be withdrawn. For the contraction of greenbacks depends upon an increase of national bank-notes, and in what year may the larger, or even the smaller, of the above-mentioned additions to these be looked for? The Comptroller of the Currency tells us that, of $54,000,000 circulation authorized by the Act of July 12, 1870, no more than $37,720,411 had been absorbed up to the 1st of November last; at which date $16,279,589 remained for distribution. Thus the increase has averaged only 8¼ millions per annum. But this is not the worst of his showing for the bill. The growth has diminished rapidly and very steadily throughout the period, until it is now nothing, *or less*, as the following table will prove:

Issue from	July 12, 1870, to Nov. 1, 1871	$24,773,261
do.	Nov. 1, 1871, to Nov. 1, 1872	16,220,210
do.	Nov. 1, 1872, to Nov. 1, 1873	7,357,479
do.	Nov. 1, 1873, to Nov. 1, 1874	3,576,297

—and, during the last year, $7,714,550 greenbacks were deposited by banks for the withdrawal of their circulation.

Arithmetic fails us in calculating the date when the outstanding legal-tenders may be expected to approach $300,000,000 under this bill, which, as regards the advancement of resumption by a contraction of greenbacks, is a device so transparent that it will impose upon no person who does not wish to be deceived. Its other provisions deserve notice only because of their rashness or absurdity. We are to have free banking without the restrictions of either a limited circulation or redemption in coin. Nay—and this we may call the crown of the bill—one hundred dollars in national bank-notes are to replace each eighty dollars of greenbacks withdrawn. The former, being semi-legal-tender, and requiring no reserve, will continue, until specie payments have been secured, to be as great an obstacle to resumption as the latter themselves. But paper—ever more and more paper—is what contractionists must submit to who desire the company of such currency reformers as Messrs. Morton, and Logan, and Ferry of Michigan.

The withdrawal of fractional currency and its replacement by silver coin are excellent steps in the proper place. But they must not be taken too soon. We showed in our last issue that silver coin cannot be used as money unless the premium upon gold shall fall to a point so low that there will be no profit from shipments of silver. At its present value in the markets of the world, it would certainly be driven abroad by a gold premium higher than ten per cent., while any material rise above this figure would export it quite as fast as it could be issued from the mint.

For another reason, a premature attempt to use silver as money must be deprecated. Every dollar circulated here means either a dollar of gold sent abroad, or the retention of the latter by such an advance in the premium as shall enable us to replace it with otherwise unexportable merchandise. Silver is a very important component of our exports. From New York, at which point the bullion movement for the whole country centres, there have been shipped thus far this year $18,340,360 in silver bars. Gold and silver are not separated in the regular specie returns; but we have carefully prepared a table to show the movement in the latter during the past three years:

Net export, deducting imports, of silver from New York in 1872				$19,669,770
Do.	do.	do.	do. in 1873	29.688,897
Do.	do.	do.	to date in 1874	17,309,498

Surely these figures are sufficient to prove that resumption in silver must come to us as the companion, not the herald, of resumption in gold.

The redemption clause is quite as ill-judged and valueless as any other section of the bill. What is meant by the surplus revenue which the Secretary of the Treasury is authorized to use? Is it to be a surplus in excess of the requirements of the Sinking Fund? None other could have been contemplated, but there is no possibility of its existence. For the current fiscal year the Secretary estimates that the deficiency in the Sinking Fund Account will amount to $22,093,748. Even were the fund entirely ignored throughout the next four years, any probable surplus of revenue would be more than absorbed by purchases of silver wherewith to redeem $40,284,952 outstanding fractional currency, in obedience to the provisions of this bill. The authority given to the Secretary "to issue, sell, and dispose of, at not less than par in coin, either of the bonds described in the Act of Congress approved July 14, 1870," will avail him but little on the 1st January, 1879, for none of the bonds authorized by this Act which he has the slighest prospect of selling at par remain to be disposed of. The Syndicate owns, and for another month will own, a call upon the whole $122,688,550 unsold Fives. What a mockery it is to authorize the sale of 4½ per cent. bonds at not less than par, when the 5 per cent. bonds are being marketed with difficulty at one quarter per cent. below it.

But the bill we are dealing with is not an attempt wisely framed, after deliberate discussion, to accomplish resumption in the surest, easiest manner, as the safety of business requires. The purpose, the only purpose, from the very first caucus has been to enable Mr. Dawes to inform his friends in Massachusetts that this is a measure of contraction and a happy adjustment, while at the same time Mr. Morton can assure his supporters in Indiana that it is a measure of inflation and a happy adjustment. Thus statesmen labor for their own popularity and the future of a great national party. We have much pleasure, and no difficulty, in believing that their work will receive its reward.

THE MISSOURI SENATORSHIP.

THE week after the elections, when it was plain that the return of a Democratic majority in the Missouri Legislature put Mr. Schurz's seat in peril, we ventured to remark that "few things the Democrats could do to inspire confidence in themselves and in their policy, and make the way easy for them in 1876, would be more effective than sending him back again." The idea is one which of course suggested itself to almost everybody who did not look on the Democratic victory as unmixed evil, and who believed it possible for something in the nature of a reform organization to grow out of it. It suggested itself, too, as a matter of course to all those shrewd and sensible Democrats who perceived that their triumph was by no means the triumph of the Democratic party, and that it would depend on the behavior of the party during the coming two years whether it proved of any real and permanent advantage to them or not. People, of course, do not expect of the party, on the strength of a majority in one house, any striking display of legislative capacity. What they do expect of it is the display of a real spirit of reform and real comprehension of what reform means in the limited field of activity which is now open to it. In other words, they will judge by the speeches, resolutions, reports, and elections of the next two years whether it will be safe or desirable to entrust the general Government to Democratic hands at the end of that period. Moreover, the class which is looking on and making up its mind, and which turned the scale at the last election, and may turn it at the next, is not a large or stupid one. It comprises what is keenest and most watchful and independent in both parties, and is not to be deceived by buncombe speeches or resolutions, as a good many Republican politicians now know to their cost. When these gentlemen found everything else fail, they tried to retain their hold on power by telling dreadful stories of what would happen if the Democrats came into power, and upon a great many of the Republicans these stories undoubtedly produced the desired effect. But upon the class of which we are speaking, they ceased to produce any effect, and when it determined to try the Democrats, Republican ascendancy was at an end.

Now, this class has to be satisfied as to Democratic intentions, and it will not be satisfied by fine words, but by the use Democrats make of such scraps of power as now come into their hands. For instance, it will watch with interest the kind of Speaker they elect, and the kind of committees he appoints, the kind of enquiries on which they enter, and the spirit in which they conduct them, the character of the measures they propose and support, and the kind of senators Democratic legislators send up—and we would warn Democratic politicians that unless they give satisfaction on these points, they will be again consigned to powerlessness and obscurity in 1876. We know that they flatter themselves that as "practical men" they know more about these things than we do who do not attend caucuses, and do not know how to "control primaries," but we tell them they are mistaken. We know a great deal more about the way the opinion of that portion of the public which controls elections is going than they do, and that they are hardly ever so far astray as when they think they are doing "cute things" and outwitting the "theorists." Their little electioneering tricks and their windy rhetoric do not reach the people who hold the balance of power, and we know what these people are feeling and thinking far better than the able-bodied gentlemen who do the "subsoiling" and "managing."

We think we may safely say that this confidence has of late derived abundant justification from events, and it impels us once again to call the serious attention of the Democratic chiefs to the senatorial election in Missouri. We must remind them that they have no great principle on their side to lead people to overlook even small mistakes. The recent history of the party is not illustrious, and in the matter of ideas or policy they are not one whit better off than the Republicans, if indeed they are as well off. If they dismiss Mr. Schurz from the Senate, too, they will not be able to justify it on the score of party usage or tradition. They themselves deliberately broke up that usage and tradition in 1872 when they adopted Horace Greeley as their candidate for the presidency—a man who had all his life been the bitter enemy of their organization, had never made a pretence of belonging to it, had vigorously opposed all their distinctive doctrines, and had connived at and supported many if not most of the abuses they were openly denouncing. When they nominated him, they proclaimed to the world that they were willing to do anything for success; and it will not do for them two years later to pretend that they must sacrifice everything to party discipline and fealty. Any Democrat who was able to swallow Greeley would be estopped from making wry faces over Schurz, even if Schurz were no better than Greeley.

But Schurz is better than Greeley, from the Democratic standpoint as well as from the standpoint of all intelligent and patriotic men, for a variety of reasons. If the Democratic party says that his course during the last eight years has been such that Democrats cannot trust him, then the class which turns the scale at elections will most certainly reply that the country cannot trust the Democratic party. In the first place, as has been often pointed out, reform means, at this juncture, not so much improvement in legislation as in administration and in the personnel of the Government. The country wants to see men of higher character and greater knowledge, and of better aims, in prominent positions than it is now treated to, and wants to see the public revenues and patronage used for public ends. It wants, in short, to see the term "statesman" restored to its original meaning and taken away from the motley crew of rhetoricians, tricksters, and thieves who have of late years appropriated it. Looked at from this standpoint, Mr. Schurz is a man who cannot be excluded from any party in the country at this moment calling itself a reform party. He is the most prominent man in the history of all recent attempts at reform. He has vigorously opposed, step by step, that downward course on

which the Administration entered when it appointed Tom Murphy collector of this port, and which ended in handing the control of the "reformed" civil service in the State of Massachusetts over to Ben Butler. He was the earliest and ablest promoter of that system of investigation which has already brought so much corruption to light, and which we have no doubt, if firmly prosecuted, will bring a great deal more to light hereafter. He has all along, in particular, set his face against that alliance of the Administration with the corrupt element in Southern politics which forms so disgraceful a chapter in the history of Reconstruction. He has, too, in all this been the object of especial detestation and vilification on the part of the Administration and its adherents. Its agents in the press have made him the object of vituperation and caricature which was too ruffianly to injure any man, but which carried the American press to as low a depth of degradation as it has ever reached. He belongs also to a class of men whom it must be the end and aim of any reform party to bring more prominently into public life. He speaks upon the leading questions of the day with an eloquence, ability, and fulness of information which it is no exaggeration to say is just now unequalled, and he has thus, by mere force of contrast, done much to create that disgust with the ignorance and absurdity of some leading Republican politicians which has given the Democrats their present opportunity. If these things do not entitle him to any mark of honor and confidence the Democrats have it in their power to bestow, then we are sure the country will say that the work of purifying the Government ought not to be committed to Democratic hands, and we venture to predict that it will not be.

In saying all this, we are of course not unmindful of the error into which Mr. Schurz fell in supporting even feebly the folly known as "the Greeley movement." We are, however, as well qualified as anybody to weigh this, because nobody condemned it more freely. But we knew very well that it was condemned by his own better judgment, and that he went to Cincinnati in furtherance of the very ends on which those Republicans who gave the Democrats their victory in November are now intent. We now know, too, what we then believed, that he did not go to Cincinnati a minute too soon, and that if his views had been carried out the country would either have been spared the scandals and disgraces of the past two years, or reformers would have had an organization which they would have no reason to distrust or feel ashamed to turn to for comfort or deliverance. His weakness in accepting Greeley's nomination as the result of a serious political movement was of course deplorable, but it was a weakness with which Democrats certainly cannot reproach him, and which any honest Republican politician who recalls the queer things and queer people he has himself supported in order to avoid scandal and dissension, and preserve the faith of voters in each other, will be shy about criticising. In short, if Mr. Schurz has not reached the loftiest standard of political duty and perspicacity, he has reached a standard the general adoption of which by public men would solve the problem by which the souls of patriotic Americans are to-day most vexed. If the Missouri Legislature substitutes for him one of the ignorant and obscure or ignoble busybodies or intriguers who now so often play the game called "a senatorial election," it will not only be a serious injury to the country, but as serious a disaster as could befall the party to which the majority of the members belong and which, we presume, they are anxious to serve.

CHURCH QUESTIONS IN ENGLAND.

LONDON, December 11, 1874.

"EVERYTHING in the Empire," as Lord Cockburn somewhere says in his lately published journal, "is tinged for the present with Church." English society is deeply stirred by ecclesiastical questions. Wherever you go you find that the conversation has a bias towards Church politics. Members of Parliament, addressing their constituents, have given up speaking of the past. The five years of Liberal government and Conservative opposition, and the causes of the estrangement of the people from the Gladstone government, as topics for extra-parliamentary speeches, are relegated to the domain of history. The future is again in the ascendant, and all the more important utterances of late have reference to the relations of Church and State. Newspapers are full of the same subject; and whether in society, or in the public speeches of members of Parliament, or in the newspapers, much the same view is accepted, and that view Mr. Fawcett, the member for Hackney, puts in these words: "Nothing is more remarkable than the change which has come over the Disestablishment question. Twelve months ago the disestablishment of the English Church was spoken of as the distant dream of a few enthusiastic fanatics, but now even moderate politicians speak of it as a change certain to come, and the only question is by whom and in what form it shall be done." It is difficult to say how this has come about. It has not been sought for or pushed into the front prematurely, but it seems as if the question had struck its roots far down, and in the process of maturing had taken an unusual start with unexpected rapidity. The Government are in a sense responsible. The stream was flowing very languidly, but an impetus was given to it by the prominence assigned to ecclesiastical questions last session. The Public Worship Regulation Act and the Abolition of Church Patronage (Scotland) Act opened the sluices, and the Government claim the credit and must take the responsibility of both these measures. The immediate result has been a pamphlet controversy in England, the brunt of which is borne by Mr. Gladstone, and a pamphlet controversy in Scotland, the brunt of which is borne by Mr. Gladstone's late colleague, the Duke of Argyll, and, indirectly, both these controversies have given a new prominence to the question of disestablishment.

Mr. Gladstone's paper on Ritualism in the *Contemporary Review* for October was in itself of small political significance. It was interesting and suggestive as containing the thoughts of a single Christian addressed to his fellow-Christians, warning them against letting any forms or ceremonies that give them pleasure stand in the place of real communion with God, and as illustrating the simplicity and piety of nature which the author has preserved pure through a long political career. The second paper, that on the Vatican Decrees, is of a different character, and has, as you are well aware, moved society in Western Europe both inside and outside the church of Rome, and especially in Germany, in a manner that is almost startling. Its direct effect on English politics is likely to be small. Henceforth it is probable that the Irish vote both in the constituencies and in Parliament will be even less to be depended on by either party than heretofore; and that, to my mind, is not of much consequence. Since the Emancipation Act was passed the Irishmen in the House of Commons have been more Liberal than Tory, because they had, or imagined they had, more to expect from the former party than from the latter. But now that they see no prospect of future favors from the Liberals, they are verging towards the other side, to which, moreover, the traditions and temperament of the Catholic faith incline. By all means let them go if the Tories want them; or let them drift about, a powerless body in the Legislature, now on one side and now on the other. In the past they could never be trusted in emergencies by either party, and they never will be in the future. Mr. Gladstone's pamphlet, however, may indirectly have considerable political influence. It will strengthen the hold which he has upon the more evangelical and dissenting bodies in the state—a hold which malignant and persistent insinuations about his Romish tendencies had somewhat relaxed—and while in one sense it may, by directing attention to the Church of Rome, weaken the strain which is upon the Church of England at present, in another sense it will tighten it, because by keeping the public mind fixed upon ecclesiastical questions it cannot but tend to hasten on the wider questions of the relation of church and state which are looming in the future, and with which, it is now pretty generally believed, Mr. Gladstone will not be averse to grapple when public opinion is prepared to follow him.

In Scotland matters are much nearer to a crisis, and, as might be expected in a practical country, the issues are more tangible and definite than in England. The Presbyterian Church is fundamentally a democratic institution, and one of its leading principles is that the minister shall be elected by the congregation to whom he ministers. This principle of election prevailed until the reign of Queen Anne, when a Tory government smuggled through Parliament an act restoring the rights of patronage to the Crown and to individual patrons. Out of this act of Parliament, which was directly antagonistic to the genius of the Scotch Church, the various secessions from the Establishment, including the great disruption of 1843, have all arisen. These secessions have weakened, and, indeed, almost destroyed the influence of the church. The present generation of Scotch Tories, wiser, or, it may turn out, more foolish, than their predecessors of Queen Anne's time, seeing that the Church of Scotland was undergoing shipwreck, determined last session to make a bold bid for safety by undoing the hasty legislation of a century and a half ago, and they passed an act which repealed the obnoxious statute of Anne, and gave the right of presentation to each congregation of the Es

tablished Church. It was a daring venture, and thirty years ago, had such an act been passed, it would have prevented the disruption and saved the church. Now it is too late. The Free Church and other dissenting bodies outnumber the Established Church by nearly three to one, and they have vigorously commenced a crusade against it. In Queen Anne's time, and indeed down to 1843, the Established Church was the Church of Scotland; Dissenters were but a fraction of the population. It is not so now. The Established Church is the church of the minority. In some Highland parishes such a thing as a congregation belonging to the Established Church has no existence. It is a farce to give the right of presentation to a congregation consisting of a couple of families (the minister's and the schoolmaster's) and a few sheep dogs. In such cases the right of presentation should be given to the parish, not to the congregation. The Established Church, by the act of last session, has voluntarily separated itself from the land and from the Crown—in other words, from the nation. It has become a sect free from all national trammels and all state control, but living on national property. So the opponents of the church have begun to argue, and, in an important public meeting held two days ago in Edinburgh, in which some of the leading politicians and ministers belonging to the dissenting denominations took an active part, resolutions were passed condemning the existing relation between the state and the church in Scotland, and pledging the meeting to commence hostile operations against the church.

But being, as I have said, a practical people, the Scotch have set a tangible and definite proposal before them. Their proposal is this: The funds, they say, engrossed by the present church establishment in Scotland, if fully realized, would amount to upwards of £300,000 annually. This is national property. Let this national property be applied to a national object. The providing of a sound secular and religious education for the children of Scotland is a national object. It takes about £300,000 annually to maintain the Scotch school system. Why should not the Established Church be left to support itself, like the other Presbyterian churches, and the £300,000 which it monopolizes be applied for providing, not a pauper, but a free education for the whole youth of Scotland? This is plain speaking, and, if you grant the minor premiss, it is sufficiently logical to satisfy even the Scotch mind. It is to meet these and similar arguments growing out of the Patronage Abolition Act that the Duke of Argyll has rushed into a pamphlet controversy. He had better have left it alone. He has done no good either to himself or to the cause. His motives in supporting the measure introduced by his political opponents were no doubt good. His desire was and is to see a really national church in Scotland sufficiently comprehensive to include all Presbyterian sects within itself. But he did not calculate upon the amount of animosity which the Established Church had raised in the breasts of leading members of the non-established churches. Perhaps the promoters of the measure did not do so either. However that may be, the result promises to be fatal to the Establishment. At the next general election Disestablishment and Disendowment will be the shibboleth in the Scotch constituencies, and while in England we may watch with interest how the problems work themselves out in the sister country, we may take this lesson to heart, that if we wish to keep up the relations between the church and the state here we had better leave the church alone. Left to itself, it may survive for many years, but if any party in the state commence to tinker it with the view to its improvement, they will only bring the fabric down upon their heads.

TWO DEBATES IN THE REICHSTAG.

BERLIN, Dec. 7, 1874.

"THE fight has grown hotter." So the leader of the Ultramontanes in the Reichstag confessed last Friday. Mr. Windthorst deserves the grateful acknowledgments of all his adversaries for this frank confession. During the summer and the early fall, rumors, which could be traced to high sources, were afloat that the bishops were seriously discussing the project of a compromise with the Government, and, though nothing was done to that effect, yet the rumors were to some extent kept alive by the apparent calm during the first two weeks of this session of the Reichstag. There were many people who, in spite of their earnest desire to help the speedy return of peace, could not help wishing that the rumors might prove to be unfounded, for they were firmly convinced that, under the actual circumstances, such a compromise could not be anything but a foul truce. The last week has proved the correctness of this view to many who at first did not hold it: the storm has cleared away the fog.

Before I proceed to a description of the last exciting incidents of the conflict, let us cast a glance at the battle-field and review the combatants. It will be well known to your readers that the Reichstag is divided into ten to twelve different parties, none of them commanding a majority of all the votes. The whole number of deputies is 382. In 1871, of these 382 seats, 127 were held by the National-Liberals, 62 by the Centre, 56 by the Conservatives, 37 by the Deutsche Reichspartei, 29 by the Liberale Reichspartei, 45 by the Fortschrittspartei, 2 by the Social Democrats; the remaining 24 seats were held by the Poles, Particularisten, Volkspartei, and Protestpartei. In 1874 the Conservatives have lost 34 seats (22), the Liberale Reichspartei 26 (3), the Deutsche Reichspartei 4 (33); the Social-Democrats have gained 7 seats, Fortschrittspartei 4, National-Liberale 28, Centre, 29. These numbers, however, do not sufficiently indicate the relative strength of the parties. The number of electors voting for the candidates of the Fortschrittspartei has increased from 349,048 to 479,151 (+ 130,103, + 0·6 per cent.); National-Liberale from 1,202,039 to 1,601,368 (+ 409,329, + 1·3 per cent.); Social-Democrats from 120,108 to 339,058 (+ 218,950, + 3·7 per cent.); Centre from 693,875 to 1,442,627 (+ 748,752, + 11·0 per cent.). So the Centre, and next the Social-Democrats, can boast of having gained the most ground. To draw from this undeniable fact the conclusion that the Empire is sliding down-hill would, however, be wholly unjustified. In 1871, of all the people entitled to vote, 51 per cent. actually voted; in 1874 (without Alsace and Lorraine), the vote polled was 61·6 per cent. of the whole number of electors. With the exception of five election districts, the number of voters has everywhere increased; by far the greatest increase is found in the districts where a majority of the population belong to the Roman Catholic Church. The heaviest vote has been polled in Swabia, 84·4 per cent.; the place next to the last is occupied by Berlin, 36·3 per cent. In all the districts where there has been a vote polled of over 74 per cent., the majority of the population are—with the single exception of the older branch of Reuss—Roman Catholics; and wherever the majority of the population are Roman Catholics the voting has been above the average. On the other side, in all the districts where the vote polled is below 50 per cent., three-quarters or more of the whole population belong to either of the Protestant churches. So we see that a great majority of those who have thus far stood aloof from the polls can be safely presumed to be friendly to the Empire. However severely they deserve to be blamed for neglecting their political duties, there is no question that they will step forward whenever it comes to the worst. The Ultramontanes, on the contrary, have already brought forth pretty nearly their last man. This ought to be kept in view. It will, to some extent, help us to understand their apparent folly in bending the bow with such violence at the risk of breaking it before the time.

Wherever there is openly avowed or covert enmity against the Empire, there has been a general and passionate outcry against Bismarck for having met the criticism passed by Mr. Winterer on the administration of Alsace and Lorraine with the brutal barbarian's *væ victis!* The short and disjointed sentences reported by the telegraph gave some color to such an interpretation of the Chancellor's speech. Since the full text of the provocation and of the answer have been spread before the public, no candid and impartial man will any longer sustain the accusation. For many a year it has been notorious that Bismarck disdains the common art of diplomatists of dealing blows from behind a screen of smooth and oily words. He pleases himself with calling things by their right names, and, if irritated, he does this in the manner of a very outspoken or even somewhat rough man. Thus far Bismarck had been astonishingly cautious in the selection of his phraseology towards the representatives of the Provinces. They did not choose to understand him; it remains to be seen whether the roaring of the Lion finds an easier access to their ears. Only the manner in which he spoke was new and rather striking; what he said he had repeated already many times, and it is so self-evident that no man capable of a sober political thought needs a Bismarck to see the correctness of it. The representatives of the Provinces start in all their reasoning from the fact that they do not like at all to belong to the Empire. Bismarck, on the other hand, starts from the fact that they do belong to the Empire, and that they have been joined to it for a purpose. These two starting-points being opposed to each other, the parties, of course, find each other more widely separated the further they go. Mr. Winterer tells what the Provinces wish to get, and claims it as right, and founds the title on general abstract theories and the above-mentioned dislike. Bismarck answers bluntly: The question is not at all what *you* like, but what best serves the purpose for which we conquered you. That, certainly, is not agreeable to hear; but no one ever asserted that it is agreeable to be a conquered province. The question is not now whether it was right or wrong to conquer the provinces. Germany has conquered them and is resolved to keep them, and, as Bismarck has now emphatically repeated, not because they were once stolen from her, nor because the inhabitants are a German tribe, but because she was victorious in a just war, and needed them as a wall against the enemy who for centuries has never missed an opportunity of gratifying his thirst for glory and increasing his power at her expense. And as long as they do nothing but "squint with one eye towards France,

and with the other towards Rome," as the Chancellor said, they cannot serve as such a wall unless they are held with the iron grasp of the conqueror. In their own hands it lies to loosen this grasp. Bismarck's assertion is sustained by the fact that he had not only hoped but also expected that he would at an earlier moment be able to trust the provinces with a larger share of self-government. But it is a strange way for conquered provinces to support their demand for self-government by most violent attacks against everything he has done, against all his dearest interests, against the very principles of his *whole* policy. The Government is engaged in a struggle for life and death with the Ultramontanes, and one of the main arguments of Mr. Winterer for the necessity of the immediate grant of self-government is the crime of the Chancellor, in that he has taken the schools out of the hands of the clergy, and that the University at Strassburg is fostering a German spirit. The sooner and the more completely the provinces learn to feel and to act as a part of Germany, the sooner they will be allowed to assume the position of an equal; the more and the longer they choose to stand aloof with the sullen looks of enemies, the more and the longer theirs will be the hard lot of the vanquished. They are as yet far from enjoying self-government, but they are no longer under the absolute dictatorship of the Chancellor. They have already received proof that the Government knows full well that their value as a rampart against France will be increased just in proportion as their interests become identical with those of the Empire and their attachment to it increases, and that it is not guilty of the folly of believing a dictatorship the right means to bring about such an attachment. But this is, under all circumstances, a plant of very slow growth. No sensible man expects as yet to see even the first germs of it. What the Government wants to know is only how far it may safely trust. It has taken the first step forward, and now it is for the Alsatians to meet it half-way. In this announcement culminates the speech of Bismarck, in which his adversaries affect to find nothing but a *væ victis!*

Whether it would not have been better policy to take a somewhat larger step towards meeting the Alsatians is, of course, a debatable question. In order to answer it correctly, one must, however, not forget that, like the Jews, we dare not lay aside sword and shield while we are building the temple, for at any moment the enemy may be down upon us from all sides. Those who think that there is exaggeration in this statement may read the full report of last Friday's debate in the Reichstag. The battle was opened by Mr. Jörg of Bavaria, the leader of the Ultramontanes of South Germany, whom the party has chosen to take the vacant place of the late Mr. Malinckrodt. He commenced by accusing Bismarck of keeping the diplomatic committee of the Bundesrath (in which Prussia is not represented and Bavaria holds the principal place) out in the cold, insinuating that some fine day we might find ourselves engaged in a war, which would have been avoided if the Chancellor had suffered the other governments really to exercise their constitutional influence on the foreign relations of the Empire. This was followed up by an enumeration of the cases in which Bismarck has been guilty of a "flagrant intervention in the home concerns" of foreign states, *i.e.*, his remonstrances against the insults heaped upon the Empire by the French bishops, and the recognition of the Spanish Republic. According to the speaker, the Chancellor was in both cases prompted by nothing but his desire to strike a blow at the Ultramontanes wherever he found them. The recognition of the Spanish Republic Dr. Jörg deems a terrible fiasco, because Russia has failed to recognize her too, and because Russia is at present more than ever before the arbiter of Europe. This fiasco, which has sapped the good understanding between the three emperors, would have been avoided if the legitimate action of the diplomatic committee had not been superseded by the personal government of the Chancellor. In a not very logical way, but for a reason which it is not difficult to understand, the speaker managed to bring in the attempt at Kissingen, and called Kullmann a "half-crazy man." It is probable that Dr. Jörg did not expect quite so rough a handling from the "century-man" as he was treated to. The insinuations as to the first point Bismarck characterized as "fit for novels and children's reading-books." The foreign relations of the Empire were "a pretty clean wash." He did more than strict duty required to keep the other German governments *au courant;* there was no desire to weaken their legitimate influence, and they did not need the perfidious instigations of Dr. Jörg to take good care of it. As to Spain, his (Bismarck's) first thought after receiving the news of the shooting of Captain Schmidt had been: "To an English, American, Russian, or French newspaper correspondent that would not have happened." The government at Madrid he could not hold responsible for it, and to retaliate on the Carlists in a barbarian's way he could not do, either; so he chose "to strengthen by recognition the remnants of political consolidation still to be found" in the unhappy country. Russia had followed a different policy, which had to be respected; but if Dr. Jörg has thought, "with his small arrows aiming in that direction, to cause a little ill-temper, he only excites our mirth. Heaven be thanked, our relations there stand firm and tower high above such little attempts. If the gentleman spoke of my fiasco, I can only answer, I would not like to exchange it for the one which has just happened to him." As to Kullmann, several eminent physicians have officially testified to the fact that he was entirely in his senses. That Dr. Jörg and his party protest with disgust against being brought into any connection with this "assassin" is a matter of course, and nobody will doubt their candor; "but yet he holds fast to your coat-tails; he calls you *his* fraction." At the statement of these "historical facts," cries of "Fie! fie!" arose from the benches of the Centre, and a scene ensued such as was never before witnessed in the Reichstag. After the president had at last succeeded in restoring order, Mr. Windthorst came to the rescue of his worsted friend, speaking of the "unfortunate" Kullmann, and making Bismarck responsible for the conflict, the natural consequence of which was that "here and there unfortunate men are seized with madness."

The judgment not only of the majority of the Reichstag but also of the nation on this debate may be read in the short speech of Mr. Lasker: "It is not the first time that the German Government is accused of planning and plotting to provoke the peace-loving French nation into war. This manœuvre I want to stigmatize before all Germany. . . . To declare this of the governments of Germany in public assembly, to incite in this manner all foreign powers against Germany, is unworthy of a representative. And I want to brand this policy, that henceforth all the attacks of this gentleman (Mr. Windthorst) may appear before Germany as what they really are, and not as what they pretend to be—as crimes against the Fatherland." Mr. Lasker was called to order for using unparliamentary language. Mr. Forkenbeck was right in doing so; but Mr. Simson, Mr. Bennigsen, and all the other prominent members who rushed up to Mr. Lasker to grasp his hands, were right too.

I am far from having told my whole story. Many facts giving particular significance and importance to these two debates might and perhaps should be mentioned yet. But your patience will be exhausted, and, as the play is going on, some other opportunity will be offered to take notice of them in their proper connection.

Correspondence.

AN ALLEGED DICTUM OF COPERNICUS.

To the Editor of the Nation:

Sir: In his 'Outlines of Cosmic Philosophy' (vol. i., p. 272) Mr. John Fiske advances the proposition that "while metaphysics is satisfied with nothing short of subjective congruity, it is quite enough for a scientific hypothesis that it gives a correct description of the observed coexistences and sequences among phenomena," and then adds in a note: "This is distinctly stated by Copernicus: 'Neque enim necesse est eas hypotheses esse veras, sed sufficit hoc unum, si calculum observationibus congruentem exhibeant.'" For this quotation Mr. Fiske gives the authority of Mr. Lewes ('Aristotle,' p. 92; 'Problems of Life and Mind,' vol. i., p. 317).

Without desiring at this time to raise the question whether or not Mr. Fiske's proposition, in the broad and unqualified form in which he states it, is tenable, I beg leave to call attention to the fact that Copernicus is in no wise responsible for the sentence attributed to him. This sentence is found in the prefatory epistle to Copernicus's great work, and was written, not by Copernicus, but by Osiander, as Mr. Lewes ought to have known, even if he quoted at second-hand. Many years before the publication of Lewes's 'Aristotle' (in which, by the way, the sentence referred to is misquoted) Mr Whewell wrote ('History of the Inductive Sciences,' vol. i., p. 268; Appletons' reprint of 3d ed., published in 1858): "In another epistle prefixed to the work (by Andreas Osiander) the reader is reminded that the hypotheses of astronomers are not necessarily asserted to be true by those who propose them, but only to be a way of *representing* facts." That Mr. Whewell is right appears from a notice in the well-known Warsaw edition of the book in question ('Nicolai Copernici de Revolutionibus Orbium Cœlestium libri sex.' Varsaviæ, 1854), where we read, p. xxxii:

"Prima operis Copernici editio in hunc modum facta est. Copernicus postquam librum scripsit, diu perpolitum tandem Tidemanno Gysio Episcopo Culmensi sibi amicissimo, qui multis jam annis eum ut ederet hortatus erat, sua voluntate typis excudendum tradidit. Gysius misit Rhetico-professori Wittembergensi, qui Norimbergam ad librum in lucem edendum aptissimam judicaverat, et librum typis excudendum curaturos Joannem Schonerum et Andream Osiandrum elegit. Osiander autem, ut videtur, eo consilio usus, ut animi nova doctrina incitati mitigarentur, Copernici præfatione rejecta, ipse pauca, *Copernici rationi et sententiæ non consentanea*, ad lectorem ita præfatus est, ut novam doctrinam tanquam conjecturam proponeret. Quod ægre ferens Gysius, in literis die mensis Julii, anni 1543 (*i.e.*, duobus

mensibus post Copernici mortem) ad Rheticum datis, malam fidem et editoris et typographi deplorat."

J. B. S.

CINCINNATI, Dec. 20, 1874.

THE MOOD OF SCIENCE AND THE MOOD OF FAITH.

TO THE EDITOR OF THE NATION:

SIR: In your note to "Scientist's" letter, and in your able article on the same subject, you seem to me *rem acu tetigisse*. Men are essentially gregarious, and in thought as in politics follow models and leaders rather than reasons. Physical science has well earned the great authority she enjoys for solidity of premiss and certainty of conclusion. But how has she earned it? By the modesty of her aims and the excellence of her method, and by these alone. By her method of verification she has racked and riddled and cross-examined every theory and every detail of fact, before letting it pass muster; and where the subject was too vague quantitatively for such control to be devised, she has avowedly held all conclusions as provisional and subject to future correction. Hence her prestige, hence the relative discredit of moral speculation, whose votaries have insisted on defining and characterizing the entire universe in one single effort.

But now that an age of synthesis seems approaching, scientific men obey the current, cut loose from the old traditions of taking things piecemeal and contentedly ignoring much, and commit themselves to vast theories which, whether true or false, stand at least as much unverified to-day, in the strict scientific sense of the word verification, as any of the theosophies of the past. Your correspondent "Scientist" says they have a perfect right to do so. As men, of course they have! Heaven forbid that they should not sometimes outstrip the proof, and, no longer sicklied o'er with scruples about crucial experiments and adequate evidence, yield to the pleasure of taking for true what they happen vividly to conceive as possible. Only when this exhilarated, but by no means unhealthy, mood is upon them, let it be distinctly recognized for what it is—the mood of Faith, not Science. And when the partisan herd girds itself up to exercise its right of following its leaders, let it be told beforehand by what route they are to pass, whether over scientific highways and bridges or by balloon. But when the leaders assume to be mouthpieces still of Science, while throwing off all that has been hitherto distinctive in that service; when like Dr. Tyndall they "abandon disguise" and "confess"—what presumably must have been authentically imparted to them; or when like Prof. Huxley they propound what is merely one out of several equally unverified conceptions as if it were an established truth, and proceed to rally the faithful around them by pealing the slogan, and branding in advance all critics of this particular hypothesis as minions of "Ecclesiasticism": why then it behooves every clear-headed guide of public opinion to insist as loudly as he can upon the truth that in these perilously recondite regions no man's *authority* is worth a jot. A man's authority means the presumption that his opinion will be right in a given matter—in that matter, namely, in which he has had a great personal experience of concrete particulars. In the matter of radiant heat, most of us will do well to submit our judgment to Dr. Tyndall's, and in the matter of the bones of the ear or the pedigree of porpoises to bow to Dr. Huxley's mere opinion. But in the question of the essence of life, terrestrial or other, I feel sure Dr. Tyndall has access to no data which are not open to any other person of equally enthusiastic nature—to Mr. Beecher for example; nor do I think Prof. Huxley's "expertness" in anatomy entitles him to hold his notion that consciousness is something less than the fabled fly on the coach-wheel, any more dogmatically than Archbishop Manning's ordination authorizes in him the opposite opinion. In "science," as a whole, no man is expert, no man an authority; in other words, there is no such thing as an abstract "Scientist"—fearful word! And where the subject-matter is vague, and sedulously kept *in abstracto* (as in these questions of the potencies of matter and the dynamics of consciousness), no man is expert beyond his neighbor, nor can any one, except perhaps the Pope, fall back upon his antecedent occupations for support.

By all means let every man who has a stomach for the fray be admitted to the speculative arena. But let it be on an equal footing with all comers, all to wear the speculative colors, no odds given, and no favors shown. And may the critics help fair-play as much as possible by pointing out to the excellent but rather unperceptive public that this wild-eyed champion, who is now seen throwing in his hat and cracking his joints, *was* no other than the laborious and accurate physicist, chemist, or physiologist Blank, who, having got tired for a time of the laboratory's confinement, now appears in his new and brilliant rôle of Blank, the Audacious and Ingenious Speculative Philosopher, in which he hopes to outdo even those who are to the manner born.

And who knows but that now, in honestly disusing the colors of a "scientist," and refusing to imperil their hard-earned lustre, he may even gain a victory over his antagonists? Not I surely, for I am

Yours very truly,

IGNORAMUS.

CAMBRIDGE, MASS., Dec. 25, 1874.

THE AMENDMENTS.

TO THE EDITOR OF THE NATION:

SIR: May I be permitted a few suggestions upon the subject discussed in a recent issue of the *Nation* (No. 493) under the caption "The Protection of the Negro"—viz., the scope of the last Amendments? Heartily agreeing as I do with your strictures upon the extreme enactments of Congress against the acts of individuals, under the pretense of enforcing certain prohibitions upon the States as such, as being unwarranted by the Amendments upon any principle of constitutional interpretation which obtained prior to their adoption, yet I cannot but think that you underestimate the actual change—and that a most dangerous one—which the Amendments have wrought in the relation of the States to the Federal Government. It seems to me only too plain that certain clauses in the Fourteenth and Fifteenth Amendments have had, and while unrepealed will increasingly have in the future, "an effect on State rights and duties greater and other than the prohibitory clauses already existing in the Constitution," and an effect sure to lead to "unprecedented departure from the beaten track of American Constitutional Law."

Prior to these late grafts upon our political system, there was but one way to enforce any prohibition of the Constitution upon State action, viz., through the orderly operation of an appeal to a National Tribunal from the decision of a State Court upholding any assumption of unconstitutional powers by the State. The principle was well established that positive legislation by Congress to enforce prohibitions upon the States did not belong to that class of laws which were "necessary and proper" to carry into effect the powers granted to the government. Now, the Amendments have certainly changed all this. Incorporated in each of them is a special grant of power to Congress to enforce its provisions, by "appropriate legislation." It is idle to say that this legislation means no more than Congress might have enacted before, viz., the facilitating of appeals from State to Federal Courts upon questions involving the Amendments. "Appropriate legislation," under the circumstances, means something more and different from that to which Congress had heretofore been competent.

What then is it? Certainly it must comprehend, by any just construction of the grant, the exercise of the most sweeping powers in the contingency of State action contravening the provisions of the Amendments, and that in such contingency these powers must operate upon individuals, I think can hardly be denied by any one who will fairly consider what, under such circumstances, would be "appropriate" to the case, and what was contemplated in the proposal of the Amendments for adoption. If this be so, we can see at a glance that a vast increase has been made in the original civil jurisdiction of the Federal Courts, and that a province of criminal legislation has been opened to Congress which is simply appalling. If it be said that the clauses in the Amendments authorizing legislation by Congress can practically add nothing to the power which is already given by the provision of the Constitution extending the original jurisdiction of the United States Courts to all cases arising under the Constitution and the laws of Congress, the only answer is that then the objection is even stronger, for under that provision Congress can make that jurisdiction exclusive, and an exclusive jurisdiction of all matters comprised in the Fourteenth Amendment would deprive the State Courts of a very large province of their common-law powers. The question of *personal* rights involved in that amendment is a very much broader one than that of national *citizenship*—partially defined in the "Slaughter-House Cases"—and one which as yet has received no adjudication in the court of last resort. What is to hinder Congress to-day from opening the United States courts in California for the purpose of securing to the Chinaman the rights of person and property that are denied him under the State laws?

The effect of such a vast increase in the power and functions of the Federal governmental machinery within the several States as has been here suggested would be unmistakable. It would essentially alter the relation of the individual to the national government, and by so much would serve to extinguish, both in his estimation and as an actual fact, the integrity of the State as a commonwealth. What the exact conditions must be upon which Congress can act is also, it seems to me, a question of considerable difficulty. It certainly cannot be limited to the contingency of positive legislation by a State. Cases where, from the established decisions of the State Courts upon the subject-matter, parties would reasonably fear that their rights under the Amendments would not be secured in those courts, would of course come

within the rule The recent decision of the Indiana Supreme Court on the question of public instruction could very plausibly be urged as a fair instance. How undefined the limits of this new Federal domain are—viz., what is sufficient action by a State to warrant Federal legislation—may be seen by the opening jurisdictional clause of the Ku-Klux Act of April, 1871. It provides against the acts of individuals "under color of any law, statute, ordinance, regulation, *custom, usage,* of any State," etc. Just how far we must go in this gradation before the point of rightful Congressional interference is reached might well tax a greater mind than his who drew this bill. More can be said, I feel forced to admit, on the side of a constructive denial of "the equal protection of the laws" (instance, the third section of the Ku-klux Act) than I should wish. Certain it is that the Congress which passed this bill meant to claim the broadest power possible under any construction of the amendment, and the opening clause quoted above only serves to exhibit the difficulty and danger with which the subject is fraught. However remote the possibility may be of a State legislature or its courts directly contravening the provisions of the Amendments, yet it certainly is plain that a large additional province of most pernicious Federal interference within the States has been created, and by so much has the national Government been aggrandized at the expense of the States, and our original Constitutional system mutilated. And the danger arising is not merely from the propagation and enforcement of such extreme views as are found in portions of the legislation of recent Congresses and in some of Mr. Blaine's late speeches. These dissipate with the passions and party exigencies which prompted them. What I apprehend is the growth of a body of law based upon the actual change—be it greater or smaller—which I consider the Amendments to have made in our confederated system of government, and which will serve to perpetuate that change with its attendant evils. Indeed, the danger, to my mind, is so real that I can look to nothing short of further fundamental legislation to avoid it.

P. S.

111 Broadway, December 21, 1874.

Notes.

THE several educational monthlies of the Eastern States are to be merged hereafter with the *College Courant* under the title of the *New England Journal of Education.* The new journal, which will resemble the *Courant* in size and style, will be published weekly in Boston, with Hon. T. W. Bicknell (formerly of the *Rhode Island Teacher*) as editor-in-chief. Each State will be represented on the staff of the paper by a local editor. The subscription price is three dollars.——Mr. Stephen Noyes, of the Brooklyn Mercantile Library, has sent us the second edition of his convenient Class List of English Prose Fiction (including juveniles and translations), with a supplement of four pages, covering the accessions from November 1, 1873.——Americans abroad, and may be some at home, will be interested in the sale of the well-known art collection of Hon. H. S. Sanford, late U. S. Minister to Belgium, which takes place in Brussels on the 15th of February next, in consequence of a change of residence on the owner's part. Catalogues may be obtained of Etienne Le Roy, rue des Chevaliers, Brussels.——We have received from B. Westermann & Co. the concluding parts (there are eighteen in all) of 'Ritter's Geographisch-statistisches Lexicon,' which will be found extremely useful to persons engaged in commerce (with Germany in particular), and answers most of the ordinary purposes of a gazetteer. It is in two volumes.——Mr. J. W. Bouton, 706 Broadway, has taken the American agency of Mr. P. G. Hamerton's well-known art-journal, the *Portfolio,* which is published monthly at twelve dollars per annum.

—Apropos of the strawberry, we have received still another communication which is worth printing. The writer says: Your correspondent has not given exactly the "right wording" of the eulogy of the strawberry, as Walton quoted it. Read, "As Dr. Boteler said of strawberries, 'Doubtless God *could* have made a better *berry,* but doubtless God never did.'" In this form, nearly, it may be found in an older book than Walton's, namely, Roger Williams's 'Key into the Language of America,' printed in London in 1643, ten years before the first edition of the 'Complete Angler.' "This Berry," wrote Williams, "is the wonder of all the Fruits growing naturally in those parts: It is of it selfe Excellent: so that one of the chiefest Doctors of England was wont to say, that God could have made, but God never did make a better Berry." ('Key,' p. 98.) Did Walton take the quotation from Williams? or, as seems more probable, did both take it from some earlier writer?

—Gerrit Smith died in this city on Monday last, and in him, as so recently in Ezra Cornell, Central New York loses a conspicuous and useful citizen, as generous and philanthropic as he was wealthy, and actively concerned with all questions of public interest up to the very sudden termination of his long career. His warm heart, keenly sensitive to every form of suffering brought to his attention, controlled all the other elements of his nature, and more than once led him impulsively to assume positions from which a logical consistency would have kept him. In this respect he resembled not a little both Mr. Greeley and Mr. Beecher; and there was even a still closer resemblance to the former in the mental disturbance by which Mr. Smith was temporarily unsettled after the John Brown raid, just as Mr. Greeley's mind was hardly able to endure the reality of civil war when it came. In spite of his hearty denunciation of rumsellers and slaveholders, Mr. Smith was incapable of lasting resentment towards any one, and his charity, like his goodness, knew no bounds. No one who had not been the recipient of his unostentatious bounty, or who had not known him personally either away from or beneath his most hospitable of hospitable roofs, could form a just idea of the real and rare beauty of his character. In his own neighborhood he was a most excellent friend and helper to all who sought his advice or excited his never-failing sympathy. His political career was not remarkable for strength or effectiveness; mainly for independence of thought and action. He was something more than a Free-soiler or Republican; something less than an Abolitionist. The fugitive slave had no better friend. Mr. Smith was born at Utica, March 6, 1797, and received his education at Hamilton College, which he has since endowed liberally. He succeeded to the vast estates of his father, Peter Smith, residing at Peterboro', not far from Syracuse. From this delightful retirement he often emerged to take part in public proceedings, but for many years also kept up his connection with the outer world by means of tracts, in the shape of letters, which he had printed in his own home, and which he distributed widely to the press throughout the country. Perhaps the view most at variance with public sentiment which he persisted in urging was, that the care of schools (as of churches) falls wholly outside the limits of government and wholly within the range of "the voluntary principle."

—The *Athenæum* of December 12 is unusually readable, owing to its early reviews of two important works, viz., 'The Last Journals of David Livingstone,' and Halliwell's 'Illustrations of the Life of Shakespeare.' We find in it also the reply of Messrs. Lippincott & Co. to the editorial statement of Dr. W. Chambers in regard to the mutilation of his Encyclopædia. They say that they were not aware of many of the alterations made in the American edition; that they will not attempt to justify the action of their editors in changing the articles specially referred to (Free-trade, Protection, Slavery, etc.); that these articles ("certain articles"), in being rewritten, "were naturally made to express what was believed to be the most recent and correct views of the subjects treated, from an American standpoint," seeing that it was expected that the revised edition would be sold in this market only. In other words, "the changes were made solely with a view to the adaptation of the work to the requirements of this country, and many of them were absolutely necessary to correctly present facts, especially in relation to America." This leaves the matter where we supposed it would be left—*i.e.,* on the shoulders of the publishers, so far as marking out the general line of revision goes, including doubtless the free-trade portions of the Encyclopædia; and on the shoulders of the editors, wherever it has been or might be shown that they exceeded their instructions or overstepped the natural limits of propriety. Messrs. Lippincott assert that they sufficiently advertised their revision "in numerous circulars and in the concluding editorial notice"; but they apparently left their subscribers to detect the revised articles by the insulting expressions having reference to Great Britain which were contained in them. The voluntary amends which they propose to make the Messrs. Chambers is to designate their issue hereafter as the American Revised Edition, and they offer besides to "cheerfully take such action as will relieve the Messrs. Chambers of the responsibility of the revisions." We shall be surprised if the Messrs. Chambers do not find the voluntary amends rather scanty; and since the Messrs. Lippincott shield themselves behind an imaginary "American market" to which they are under no obligations to apologize, we feel bound to say that there is no American demand for protectionist articles in cyclopædias American or foreign (encyclopædias ought to be expository, not propagandist or vituperative), or articles apologetic of slavery or abusive of the British monarchy and its present representatives; and that, from an "American standpoint," the least the Messrs. Lippincott could offer to do would be to rewrite the articles in question in a decent, temperate spirit, alike respectful to the Edinburgh publishers and to the country to which they belong.

—The most eminent textual critic of the New Testament, Professor Tischendorf, died in Leipzig, after a lingering illness of a year and a half, on Monday morning, Dec. 7, aged fifty-nine. His first critical edition of the New Testament, published when he was a young man, was received with such favor as to indicate distinctly his future career. In order to compare the different manuscripts of the New Testament, he was compelled to make

numerous and extensive travels. He had been three times in England and three times in the East. On one of his Oriental tours he was so fortunate as to discover the Sinaitic manuscript, which is the oldest known copy of the New Testament, and of inestimable worth in textual criticism. Much of his brilliant reputation was due to this discovery, supported as it was by the keenest critical acumen and a marvellous power of physical endurance. His revisions have been circulated everywhere, and to an extent beyond all precedent. In Leipzig alone not less than twenty-two of his critical editions have been published. His authorized English New Testament, containing the variations of the three most important manuscripts, was published by Tauchnitz, and in the first year (1869) nearly fifty thousand copies were sent into the United Kingdom. He died before he had finished the work upon which he was employed, a large and comprehensive critical edition of the New Testament being left incomplete. A manual of Palæography, which no one else is in a position to write as he could have written it, he had not even begun. The procession which followed his body to the grave was one befitting his work and life. The different societies of students attended *en masse*, or were represented by delegates. Many of the university professors were present, as also members of all classes of society, commercial, civil, and military.

—Cotta announces a new "pocket edition" of Goethe's complete works in ten volumes. The text of previous editions has been quantitatively determined by the edition of Riemer and Eckermann in 1836, which was based on the author's last revision. The new text, it is said, will be improved according to the latest knowledge. In an appendix to the first volume will be given two hundred poems of undoubted genuineness which were not printed in former editions. The index to the lyrics and epics will contain the date of each poem or of its first publication. Gödeke's introductions, which have also been much improved, will be used. The "Schweighausersche Verlagsbuchhandlung" of Basel is issuing a series of monthly pamphlets, containing "lectures delivered in Switzerland" by various gentlemen, principally professors. Some twenty-seven numbers have been issued. The volume (twelve numbers) costs 10 francs, though single numbers are sold. It in no way rivals the admirable 'Sammlung' of Virchow and Von Holtzendorff.

—The fifth centenary of Petrarch's death was celebrated, as is well known, last July at Avignon, Padua, and Arquà, where the great poet expired. The literature occasioned by this festival is already large and on the increase. It embraces new editions of the poet's works, notably of the 'Africa,' the Latin poem on which Petrarch based his hopes of future fame; bibliographies of the manuscripts containing his works; biographies, etc. One of the shortest but most interesting contributions is the oration by the distinguished poet Giosuè Carducci, which was delivered near the poet's tomb in Arquà, little out-of-the-way village on the slopes of the Euganean hills, where Petrarch sought rest from his troubled life, and found it in a peaceful death. An enterprising photographer has published seven views of the poet's house and tomb, including the fountain called after the poet, and the street leading to his house. One view gives the interior of the dining-room with its quaint fireplace and the poet's favorite cat over the library door; another view is of his desk and of the arm-chair in which he is said to have died with a copy of Virgil on his lap. These photographs are not only of interest to Petrarch's admirers, but will serve very well to illustrate Mr. Howells's pleasant account of his visit to Arquà in his 'Italian Journeys.'

—The beauty and excellence of the illustrations which accompany the original editions of Mr. Ruskin's writings are well known to the students of his works. They are in themselves works of art of a high order; and there are no better recent specimens of wood-cutting, of steel-engraving, and of various applications of photography than his volumes afford. He is, as is well known, now occupied in printing a series of volumes at his own cost which in every sense may be properly called the author's own edition of his works. One of the most valuable and important of these is the 'Aratra Pentelici,' six lectures on the elements of sculpture, printed in 1872. Of the illustrations to this volume he says in a note to the preface, p. viii.:

"Photography cannot exhibit the character of large and finished sculpture; but its audacity of shadow is in perfect harmony with the more roughly picturesque treatment necessary in coins. For the rendering of all such frank relief, and for the better explanation of forms disturbed by the lustre of metal or polished stone, the method employed in the plates of this volume will be found, I believe, satisfactory. Casts are first taken from the coins in white plaster; these are photographed, and the photograph printed by the heliotype process of Messrs. Edwards & Kidd. Plate XII. is exceptional, being a pure mezzotint engraving of the old school, excellently carried through by my assistant, Mr. Allen, who was taught, as a personal favor to myself, by my friend and Turner's fellow-worker, Thomas Lupton."

The woodcuts, Mr. Ruskin adds, were drawn and engraved by Mr. Burgess, one of the most skilful, accomplished, and exact of living wood-engravers. This note appears without alteration in the American edition of 'Aratra Pentelici,' published by John Wiley & Son; but the illustrations are not the same in the American edition as in the original. The heliotypes of the original, which are admirable specimens of the art, appear to have been photographed, and from the photographs thus obtained a new heliotype reproduction by a process inferior to that of Mr. Edwards has been made. The beauty of the original plates, their sharpness of definition, their balanced light and shade, are obscured, and often completely lost. The American plates are ugly and misleading. Nor is this all. The exquisite woodcuts of Mr. Burgess have been copied by an incompetent artist, their expression changed, and all that was most delicate and refined about them entirely destroyed. Anybody who can get good out of Mr. Ruskin's books ought to possess them in the original editions. They cost more, it is true, than the unsatisfactory reprint; but Mr. Ruskin asks no more for them than the cost of their getting up. They are well printed, well illustrated, and well bound. Nobody is likely to be improved by his writings who has not the small self-control required to meet the difference in cost between the author's edition and that which so unfairly represents him. It should be a point of self-respect among his readers to read his words in the style in which he offers them, even if there were no motive of self-interest in doing so. His books may be obtained from Mr. George Allen, Sunnyside, Orpington, Kent, England.

—A quarter of a century ago, at a sale of pictures in London, Mr. Morris Moore, a gentleman of some claims to a knowledge of art, bought at a small price a small painting ascribed to Mantegna. Nothing was known of the history of the picture, of which the subject was the contest between Apollo and Marsyas, but that it had been, in the last century, in the possession of a well-known collector, Mr. John Barnard, and had been sold at the sale of his pictures in 1787. The picture represented Marsyas seated on the left, playing on his flute, while Apollo stands in full front, listening to the music of his presumptuous rival. He holds a staff in his right hand; his lyre is hung upon a tree; his bow and quiver lie on the ground. Behind is a rich, varied, exquisite landscape. Mr. Morris Moore, upon study of the work, became convinced that he had obtained a treasure—nothing less than an original early painting by Raphael. It happened that in the course of the year of the purchase, 1850, Herr Passavant, the distinguished art student and author of a most elaborate and thorough 'Life of Raphael,' being in London, was asked by Mr. Moore to come and inspect his new acquisition and to give his judgment upon it. Upon looking at it, Passavant recognized the picture as an old acquaintance. He had seen it in London in 1831, in the hands of the dealer, Mr. Duroveray, and incautiously enough, like an honest German, he told Mr. Moore that, in the absence of any external evidence, he could not believe the picture to be by Raphael, but should attribute it rather to the school of Francesco Francia. It might, he thought, very well be the work of Timoteo Viti of Urbino, a favorite pupil of Francia, and an assistant of Raphael in the execution of his designs of prophets and sibyls in the church of Santa Maria della Pace at Rome. Mr. Moore was very angry. Other judges and critics supported his opinion; still others refused to believe the work to be what he asserted. He engaged in active controversy concerning it. Articles and pamphlets were published in English, French, German, and Italian. He seems to have had a bellicose temper, and if he could not convince he could at least abuse his opponents. His rhetoric was more vigorous than refined. His temper did not grow calm, in spite of testimonials of Italian academies and commendations of known and unknown authorities. He addressed his pamphlets to Passavant with inscriptions like these: "A lesson for the idiot and liar, Passavant"; or, "Encore une leçon pour le vil menteur Passavant, l'infame espion Waagen, et leurs consortes du Deutsches Kunstblatt." He exhibited the picture in different cities in Italy. In Venice, in the collection of the Academy, was found a pencil-drawing of the composition. It had been ascribed by Count Cicognara to Benedetto Montagna. Its author was not known; but now, on comparison with the picture, it was ascribed to Raphael, and its existence cited as a proof of the genuineness of the picture itself. Mr. Moore has long wished to sell the picture, but he has asked a price considered by the rich owners of private collections and the directors of public galleries too large for a work which, whatever its merits, could not be proved to have come from the hand of Raphael. He offered it in Paris, it is said, some years since for five hundred thousand francs. The picture is undoubtedly a beautiful and rare little work. The composition is graceful and simple, the coloring harmonious, the execution careful and elaborate. It is a work that belongs among the excellent Italian paintings of the end of the fifteenth or the beginning of the sixteenth century. It may be the work of Raphael, it may be the work of some less famous but still admirable artist. In the English translation of Passavant's 'Life of Raphael,' published in 1872, no attempt is made by the translator to dispute Passavant's opinion. And, indeed,

opinion in England has been very much divided on the matter. We learn that Mr. Moore would now be glad to have this picture, together with some others that he possesses, purchased in America. We may soon have an opportunity of seeing for ourselves the subject of controversy. But even if the picture were certainly by Raphael, it would not be worth what Mr. Moore asks for it—not worth it, that is, as a work of art; no price that can be got is too high for a dealer to ask for an article of *vertu*.

STEPHEN'S 'HOURS IN A LIBRARY.'*

EVERY intelligent person fancies that he can act as his own critic. But this supposition is erroneous. Of the ten thousand men and women who read a popular novel, not ten can either form or give a rational opinion on its merits and defects. Whoever doubts this should ask the next lady who sits by him at dinner what she thinks of 'Middlemarch' or 'Phineas Redux.' She will express her likes or dislikes with the wearisome emphasis of unmeaning superlatives, but it will soon become apparent that she cannot criticise the works either of Trollope or of George Eliot. The difficulty of criticism becomes yet more apparent if any one will examine either his own or his neighbors' estimate of what are called standard authors—of those writers, in short, whom everybody thinks himself to have studied, and not one person in a hundred has read. A candid enquirer will, if he pushes his investigations far, be astonished at his own ignorance. He will find that of Shakspere, of Pope, of Richardson, or of Swift he and his acquaintances have read but very little. His next feeling will be astonishment at the extreme difficulty of critically estimating any of those works which he may chance to have perused. It is easy to make up one's mind that one does or does not like the satires of Pope, but it is a work of considerable labor to decide even for one's self what are the characteristics which distinguish Pope from other satirists, such as Dryden or Byron. That a marked difference exists is obvious. To analyze the nature and causes of this difference, or, in other words, to justify one's admiration or dislike, is no light matter, while to express clearly the conclusions at which one has arrived, and to convince others that they are sound, is a work to which many intelligent persons are totally unequal. The truth is that in matters of literary criticism every one can give a verdict in accordance with his own sympathies or antipathies, but not one person in a thousand can deliver judgment in accordance with fixed principles of taste or of clear common-sense. Nor does this inability argue any special stupidity. A man who would criticise with effect must possess considerable knowledge, and he must have read, if not all, yet the most remarkable of an author's works, and he should also be well-versed in the writers who throw light upon the subject of his criticism. Mere learning, though essential in order to afford the material for comparison, will not of itself go far. Insight, sagacity, calm good-sense, the capacity for analysis, and the talent for expressing fine distinctions, are all gifts necessary to make up a competent critic. No one need be ashamed of not possessing all these talents; but no one is forced to perform the part of literary censor. And it would be well if readers would recognize both the fact that they are not themselves in a position to pass decided judgments on works of established reputation, and, further, that writers who can criticise with effect perform a work at once of considerable importance and of considerable difficulty. The mass of the world are apt to think that what is done easily is easy to be done, and thus to underrate a difficult performance, because of the skill of the performer.

There is some danger lest the sterling merits of Mr. Leslie Stephen's essays should thus be underrated. They are the writings of a thoroughly sensible, acute, and unpretentious critic. They read like the conversation of a clever, well-educated man, and thoughtless readers may overlook the fact that the conversation with which Mr. Stephen whiles away the hours in a library is exactly that kind of "good talk" which, as every one knows on reflection, is one of the greatest and, at the same time, rarest of intellectual enjoyments. Half Mr. Stephen's readers perhaps think they could talk as he writes. In matter of fact, they probably could not sustain for ten minutes a literary conversation of which were it printed down they would not be heartily ashamed. But persons who would find it an impossible task to imitate what seems in Mr. Stephen's hands so easy an achievement may yet gain a great deal both of interest and instruction from a study of his essays. Mr. Stephen's great merit, in our judgment, is the care with which he studies the objects of his criticism and the skill with which he applies to them the calm good-sense of a well-educated, clear-sighted man, who possesses just that kind of humor the absence of which constantly renders worthless the meritorious labors of industrious critics. That he avoids all errors of judgment which are due to stupidity would not be worth mentioning were it not that men of repute, and sometimes men of great ability, have exhibited an amount of dulness in their literary judgments which, were it not well recorded, would appear almost incredible. Take, for example, Mr. Elwin, whose offences as an annotator of Pope receive well-deserved chastisement from Mr. Stephen. Here is a man of some name who has studied day and night the wittiest of English satirists, and the result of his efforts is simply to show that he does not understand the simplest canons of sound criticism, and that the most intimate study of Pope's wit will leave a dull man as dull as nature made him. Or take Mr. Darley. He is not, as far as we know, a person of more than average stupidity, but he has discovered that the sentiment, "An honest man is the noblest work of God," is "false and degrading to man, derogatory to God"; and supports the silly issue by the illogical argument that "an honest man who is also a wise man must be a nobler work than a person who has no merit but honesty." That Pope should be misunderstood by dullards is not surprising. What does excite astonishment is that men like Charles James Fox and De Quincey should have stumbled over such lines as those which conclude the attack on Addison. De Quincey censures them on the ground that the same phenomenon is supposed to make you laugh in one line and weep in the other, and that, therefore, the thought is inaccurate, "as if," to quote Mr. Stephen's words, "it would not be a fit cause for tears to discover that one of our national idols was a fitting subject for laughter."

The critical errors of really clever men are in most cases due to what is the most subtle and the most dangerous failing of critics—the desire rather to display their own acuteness than to elucidate their author. This is the defect which mars the whole school of which Mr. Matthew Arnold is the chief. No one can say that he himself, whatever may be asserted of his disciples, is deficient either in discernment or power of expression. But whether the subject of his patronizing appreciation be Pope or St. Paul, or the "tendency which makes for righteousness," he never allows his readers to forget for a moment the cleverness of the critic in the importance of the subject. From this defect Mr. Stephen is entirely exempt. He can express himself with great neatness and with singular vigor. One often feels that he deals with a question so as to settle it once for all; as, for example, when he summarily disposes of Mr. Elwin's absurd assertion that Pope's 'Essay on Criticism,' written when he was about twenty-three, was "below his years." But though Mr. Stephen can express himself with terseness and vigor, one does not for a moment feel that his object is to parade his own acuteness or to sum up the complicated characteristics of great authors in some happy expression which may be a permanent monument of his own cleverness. This merit will detract from his influence with a certain class of students. Many persons desire nothing so much as to be provided with a short formula which sums up the merits or defects of an author, which it is easy to remember and equally easy to repeat. To such readers it is everything to learn that Pope writes "in the grand style," that De Foe is "a Philistine," or that some third writer is deficient in "intelligence." Such formulas give to those who adopt them the appearance of acuteness, whilst saving them the trouble of thought. Mr. Stephen does not provide any such short critical dogmas. He thinks honestly himself, and stirs up those who read him to think for themselves. This gives the permanent value to his work. No one reader will probably agree with the whole of Mr. Stephen's criticisms. To some he will seem to have overrated Pope and to have underrated Scott; others may doubt whether justice has been done to Balzac's insight into character; but disagreement with Mr. Stephen's conclusions does not diminish the interest of his essays. No one should read them for the sake of dogmatic instruction. They should be studied in the same spirit in which you listen to the conversation of an intelligent and well-instructed gentleman. You do not expect to agree with every word he utters, but you expect that what he says will be worth hearing, and that you will learn a good deal by a comparison of the points in which you disagree.

This is, at any rate, exactly the result of reading 'Hours in a Library.' A person must be either extremely clever or extremely stupid who does not learn much from Mr. Stephen's pages. His estimate of Pope, for instance, is one of the best and fairest we have ever read. Pope's weak points, both as a man and as an author, are fully admitted, but Pope's permanent merits are brought into a clear light; and no sensible man can, after reading the two essays on the greatest of English satirists, doubt either that his fame is fully deserved or that it will last as long as the English language. The chapter on Scott will naturally excite some difference of opinion, for, as Mr. Stephen points out, Scott's reputation is at the present moment passing through a stage which is very trying to the fame of all authors. He has ceased to be a writer of the day. His style and his thoughts have lost the charm of novelty. The temporary circumstances which gave him an artificial success have passed away. His works, on the other hand, have not yet taken the place of classics. Scott has therefore at the present moment neither the ad-

*'Hours in a Library. By Leslie Stephen.' London: Smith, Elder & Co.

vantages of George Eliot or Trollope, who, in quite different ways, meet exactly the spirit of their time; nor has he the advantages of Fielding or Richardson, who are admired, for the most part, simply because they have established a prescribed right to admiration. With Scott the question is, whether he will or will not take rank as a classic. Time alone can decisively answer this enquiry. "When naturalists," writes Mr. Stephen, "wish to preserve a skeleton, they bury an animal in an ant-hill, and dig him up after many days with all the perishable matter fairly eaten away. That is the process great men have to undergo. A vast multitude of insignificant, unknown, and unconscious critics destroy what has no genuine power of resistance, and leave the remainder for posterity. Much disappears in every case, and it is a question whether the firmer parts of Scott's reputation will be sufficiently coherent to exist after the removal of the rubbish." Mr. Stephen's opinion obviously is that part of Scott's work, though a small part, will survive the test of time. It may be so, but we confess to a suspicion that in future centuries Scott's genius will be acknowledged by students principally because of the effect his writings have indubitably produced on the current of European feeling, but that when the tide of sentiment which still runs strong in favor of mediævalism has turned, and the world has recovered from the illusion that light and truth are to be found in the darkness and ignorance of the Middle Ages, Scott's novels will be little read by generations who have ceased to think a hero interesting because he is dressed in armor, or conversations witty because they are carried on in broad Scotch.

Of the 'Hours in a Library' those are certainly the best which are spent with our older English authors. The remark, for example, that in De Foe's time writers were scarcely able to draw accurately the line between fiction and falsehood is original, and throws light on some of the peculiarities both of De Foe and of Richardson. The account, again, of the source of Richardson's influence is well worth consideration by any one who wishes to understand the spirit of the eighteenth century.

Politics for Young Americans. By Charles Nordhoff. (New York: Harper Bros. 1875.)—The object of this little work, as stated in Mr. Nordhoff's preface, is "to explain in simple language, and by familiar illustrations fitted for the comprehension of boys and girls, the meaning and limits of liberty, law, and government, and human rights, and thus make intelligible to them the political principles on which our system of government is founded"; and he adds that "the book grew out of an attempt in a few letters to instruct his oldest son in the political knowledge which every American boy ought to possess to fit him for the duties of citizenship." These extracts indicate pretty clearly where to look both for the merits of the works and its defects. As a volume of advice on the leading questions of contemporary politics, addressed by a thoughtful and conscientious father to a bright boy of sixteen or seventeen, who had been already familiarized by the household talk and newspaper reading with political nomenclature and the relations and in some slight degree the history of existing parties, it may be highly commended. It would be difficult to find indeed a safer guide for a young man getting ready to "cast his first ballot," and we say this all the more readily because we are in hearty agreement with nearly all Mr. Nordhoff's political and economical opinions. The chapters on "Property," "Money," "Labor and Capital," the "Usury Laws," "Banks, Banking," and "Currency," "Greenbacks" and "Commerce," "Strikes," "The Malthusian Theory," "Prohibitory Laws," and on economical questions generally, are excellent. It would indeed not be easy to improve on them for the purpose we have named. But they have essentially the characteristic of good editorial articles in a newspaper, in that they assume considerable familiarity already with political questions and political phraseology on the part of the reader.

For these reasons the book would hardly serve the purpose of a school manual. Besides drawing its illustrations too largely and with too much heat from contemporary history both of our own and foreign countries, it contains few accurate definitions—than which nothing is more necessary in an educational work—of such much-used terms as "rights," "duty," "people," "law," "government," "republic," and so on, which are constantly used by the same person in widely different senses, and loose thinking about which causes so much foolish writing, speaking, and legislating. For instance, when Mr. Nordhoff holds up Mr. Blaine and Mr. Dawes (p. 63) as good specimens of legislators, he places his readers under the disagreeable necessity of explaining to their children that Mr. Dawes, during the past fall, made many speeches in an endeavor to induce an American constituency to elect General Butler to Congress, and that General Butler is one of the greatest rascals in the country—a liar, a cheat, and a demagogue. It is, therefore, not safe to use living men as illustrations at all, at least in the political field. Then, again, when Mr. Nordhoff describes "government" as a "necessary evil," he uses a term which is rather a good epigram than a good definition, and calculated to mislead a young person. One might say with as much truth that civilization itself is a necessary evil, inasmuch as it consists of a series of laborious and often painful efforts to win comfort and security from stern and remorseless nature. Besides, government is only in part a means of repressing men's bad tendencies or guarding against the consequences of their folly. It is also an instrument of co-operation, as when it levies taxes to build a bridge or pave the streets; and it is an instrument for deciding things in which there is neither right nor wrong, darkness nor light, but about which some general agreement is necessary to the proper transaction of the business of life. For instance, the rule of the road which requires us to pass to the right in driving settles no moral question, and is no better than a rule requiring us to go to the left; but it establishes a consensus which promotes the general safety and welfare. Any one can multiply such illustrations for himself. The only other objection we can make to Mr. Nordhoff's book is that, as was natural for a father instructing his son, it treats as finally settled and beyond dispute a good many questions which the boy on going out into the world will find still under fierce debate. A boy who has obtained his political education from his father may be able to resist successfully the surprise of this discovery, but one who learns from the book might not be so happy. Educational books on politics ought therefore, as far as possible, to confine themselves to the inculcation of fundamental principles, and to the training of the boy to reason for himself from these over the wide range of topics with which he will find himself brought face to face when he comes to vote. It is only in pure science that it is quite safe in our day to teach a child by sheer force of authority. In matters not so well settled, dogmatic instruction often contains the seeds of subsequent reaction or revolt. Nothing is commoner than to meet with men who are rationalists largely because they were brought up rigidly orthodox at home, protectionists because they were vehemently made to be free-traders in their boyhood, and so on. In short, the best training for politics, as for most other things that one can give a boy, is to teach him not so much *what* to think as *how* to think, and above all to think accurately and closely.

Honest John Vane. A Story. By J. W. De Forest, author of 'Kate Beaumont,' 'The Wetherel Affair,' etc. (New Haven: Richmond & Patten. 1875.)—Mr. De Forrest, who has written several entertaining novels, offers us in this volume a political satire. His tale was published more than a year ago, we believe, in the *Atlantic Monthly*, and he has judged it worthy after this considerable interval of being resuscitated. Mr. De Forest is capable of writing a story which holds the attention, but we should not have said, from our acquaintance with his works, that he possessed the cunning hand of a satirist. We have heard him called an American Charles Reade, and, *mutatis mutandis*, the analogy might stand. We know that when Mr. Charles Reade shows up a public abuse, his irony does not suffer from being drawn too fine, nor his moral go a-begging for want of being vigorously pointed. Mr. De Forest's colors are laid on not exactly with a camel's-hair pencil, and he has the drawback of pleading for political purity in a phraseology which is decidedly turbid. "The lobby proved to be every way more imposing and potent than he had imagined it. True, some of its representatives were men whom it was easy for him to snub—men of unwholesome skins, greasy garments, brutish manners, filthy minds, and sickening conversation; men who so reeked and drizzled with henbane tobacco and cockatrice whiskey that a moderate drinker or sucker would recoil from them as from a cesspool; men whose stupid, shameless boastings of their trickeries were enough to warn away from them all but the very elect of Satan." This is painting black black with a good will, and the most heedless reader will know whither he is being led. His hero's "pulpy pink face," the author tells us, when the wages of sin seem falling due for this recreant functionary, "wore an air of abiding perplexity which rivalled that of his Dundrearyish friend Ironman. At times it seemed as if its large watery features would decompose entirely with irresolution, and come to resemble a strawberry-ice which has been exposed to too high a temperature." The work contains an unclean and unscrupulous lobbyist, Darius Dorman by name, of whom it is told us, in like manner, that he "started up and paced the room briskly for some seconds, meanwhile tightly grasping his dried-up blackened claws across his coat-skirts, perhaps to keep his long tail from wagging too conspicuously inside his trousers—that is, supposing he possessed such an unearthly embellishment." The author's touch, in this and similar cases, has more energy than delicacy, and even the energy aims rather wildly. Did Mr. De Forest refresh his memory of Swift before writing the adventures of John Vane? He would have been reminded that though that great master of political satire is often coarse and ferocious, he is still oftener keenly ingenious.

'Honest John Vane,' however, may pass as a tract for popular distri-

bution, and the important thing with tracts is that they be printed in big letters and be adapted for a plain man's comprehension. Mr. De Forest's cause is so good and his temper apparently so fervid that, as matters stand with us, it will be no harm if they make their way even at the cost of a good deal of loose writing and coarse imagery. The work records the career of a (presumably) Republican Representative in Congress from the town of Slowburgh, and traces his progress from primitive integrity to corruption inevitable for an irresponsible barbarian. As a portrait of one of our average "self-made men" and usual legislators, the picture has a good deal of force, and will renew the familiar blush in the cheek of the contemplative citizen of this unwieldy Republic. John Vane, who has begun life as a country joiner, and risen to local eminence as a manufacturer of refrigerators, is a large, bland, cautious, and unsophisticated personage, whose benevolent visage and pastoral simplicity have earned him his honorable sobriquet. His intellectual culture is limited to the arts of writing and ciphering, but he is a promising national legislator, from the caucus point of view, and his election to Congress is triumphantly carried. He marries the showy and belated daughter of the mistress of a students' boarding-house, and repairs to Washington to breast the mingled political and social tide. Of how little use to him, under direct pressure, his uninstructed, mechanical, empirical probity turns out to be, and of how he goes into the great Sub-Fluvial Tunnel swindle and becomes shrewder in his turpitude than he ever was in his virtue, the volume offers a sufficiently lively recital. The most artistic stroke it contains is the history of his successful hocus-pocussing of the committee of investigation, and his ignobly triumphant evasion of disgrace. Mr. De Forest did well not to sacrifice to the vulgar need for a dénouement, but to leave his hero's subsequent career to the irritated conscience of the reader. He is a national legislator at this hour, with his precious outfit and his still more precious experience, and of this interesting circumstance the tale is a pertinent reminder. Otherwise, there is little "story" in the book; the dramatic element expires before it has really tried its paces, and the narrative becomes chargeable with a certain flatness. Several characteristic political types are sketched, coarsely from the artistic point of view, but wholesomely, it may appear, from the moral. In Darius Dorman, the "smutty" wire-puller, as Mr. De Forest is fond of calling him, the author has tried his hand at the grotesque and fantastic; but if he recalls Hawthorne, it is not altogether to his own advantage. We might repeat, however, that, *par le temps qui court*, his flag should be suffered to cover his cargo, if it were not for some such final reflection as this. Whether accidentally or intentionally we hardly know, 'Honest John Vane' exhales a penetrating aroma of what in plain English one must call vulgarity. Every note the author strikes reverberates with a peculiarly vulgar tone; vulgarity pervades the suggestions, the atmosphere of his volume. This result has doubtless been in a great measure designed; he has wished to overwhelm the reader with the evil odor of lobbyism. But the reader, duly overwhelmed, and laying down the volume with a sense of having been in irredeemably low company, may be excused for wondering whether, if this were a logical symbol of American civilization, it would not be well to let that phenomenon be submerged in the tide of corruption.

The Maintenance of Health: A Medical Work for Lay Readers. By J. M. Fothergill, M.D., London. (New York: G. P. Putnam's Sons. 1874. Pp. 400.)—The character of this work is indicated in the preface. "It is not a family practice of medicine, but aims at the inculcation of those principles which ought to guide us in our search for health." The first three chapters, after the introduction, are devoted to the hygienic requirements of man during youth, maturity, and advanced age. These special or "epochal" hygienes might, perhaps, have been better placed after the general hygiene which is here made to follow them. But their separate presentation constitutes a novel and useful feature, and the references in a subsequent chapter to the effects of occupations on health suggest that in works of this kind distinct sections might well be devoted to the hygiene of certain employments; or, still better, separate works might be prepared to meet the peculiar needs of the soldier and sailor, the miner, the artisan, and the farmer. This would make the information more directly available, and at a much less expense than is now involved—a matter of some consequence, since, as a rule, the classes most exposed to unhealthy influences are those least likely to acquire physiological knowledge in the course of general education, and also least able to pay for high-priced works upon the subject.

Chapter V. discusses Food and Clothes; Chapter VI., Stimulants; and Chapter VII., The Effects of Inheritance. The three following treat of the Election of a Pursuit, Overwork and Physical Bankruptcy, and Mental Strain. Then comes a very long and rather heterogeneous chapter upon General Hygiene, which, as already suggested, might better have come earlier in the work, but which is nevertheless the most compact summary of the subject which we have ever seen. On the other hand, the succeeding very brief chapter upon What to do in Certain Emergencies, though it contains some judicious remarks upon the direct and indirect effects of railway accidents, should, we think, either have been much extended or wholly omitted, with a reference to such excellent little manuals as Hope's 'Till the Doctor Comes.'

Positive errors in Dr. Fothergill's work are very few. We note only the denial of any oxygen in fat, and the statement, by implication at least, that the conversion of starch into glucose is accomplished only by saliva. In his zeal for the prevention of tubercle, our author seems to us somewhat to exaggerate the necessity of eating fat. To many persons fat is positively repulsive, and more stress might have been placed upon the fact that cream and butter are perfect substitutes; that milk, if used as a beverage, will supply a large amount of fat; and that, among Americans at least, there is a general tendency to use too much fat, especially in cooking. It may be that the hard-working farmer and laborer cannot get his respiratory food in any other way; but the majority of our people would improve in health and mental power if they would banish lard and suet from their kitchens. And if a part of the money now spent for the liquor required to aid the digestion of such gross matter were devoted to the purchase of the more refined but expensive substitutes for fat—milk, cream, butter, and olive-oil—another American vice might be diminished.

Our author's opinion upon the use of stimulants, especially alcoholic, is essentially that which is now entertained by nearly all scientific men. Acknowledging that "the whole subject is a complex problem not to be rashly solved, and that the complete evidence is not yet before us" (p. 166), he says (p. 164) that "we know numerous instances of high moral worth, unimpeachable integrity, and unimpaired health in men who have taken alcohol more or less from their youth upward. How does all this contrast with the hasty assumption, often so freely launched, that alcohol is a poison? Rash statements, arguments radically weak, urged with a pertinacity and intolerance in inverse proportion to their intrinsic weight, have done much to retard the cause of the abstainers. They have shown incontestably that the abuse of alcohol is one of the most terrible curses with which the earth is smitten. But we may well pause ere rushing to the conviction that therefore it is a poison, and never useful or even harmless." As a "moral anæsthetic," Dr. Fothergill earnestly deprecates the use of alcoholics, believing that when thus taken, "to make existence endurable, there is little hope of amendment." With regard to the milder stimulants which are "non-intoxicant," he remarks (p. 173) that "the habit of taking a cup or two of tea instead of more food, in order to enable the individual to take so much more out of herself, is as common among women as the use of alcohol for similar ends is among men. . . . It is painful to have to acknowledge that where the so-called temperance movement has spread, the use of other stimulants than alcohol has marched along with it step by step. In Maine and Massachusetts, the consumption of opium is terribly on the increase [he ought to give his authorities for the statement], and amidst the followers of Father Mathew the practice of drinking ether obtains." As to tobacco and its precise effects our author, "although a smoker, has little more to say" than that "in moderation, with adults, it exercises no injurious effects and neither lessens appetite nor encourages drinking" (p. 176). But he adds that there is no question about its deleterious action upon boys and youth.

The chapter on "The Effects of Inheritance" treats a confessedly difficult and delicate subject in a very plain and straightforward way. The importance which our author attaches to sexual physiology is further shown by the frequent allusions to various branches of the subject throughout the work. Still, the space given to it, although more than is generally allowed in popular works, is so small in comparison with its absolute importance to the individual and the community, that one is all the more impressed with the truth of the remark that "there is only one direction in which unalloyed good can be looked for, namely, *more general knowledge upon the subject.*" An excellent feature of the work is the appending to each chapter of a series of "Propositions," briefly stating the facts and conclusions therein presented. Indeed, these propositions, with some additions and changes, would form an excellent little pocket manual of hygiene. It is singular that in a treatise of this character we should have to lament the want of an index.

A History of the Character and Achievements of the so-called Christopher Columbus. By Aaron Goodrich. With numerous illustrations and an Appendix. (New York: D. Appleton & Co. 1874. 8vo, pp. 403.)—One is tempted to ask on glancing at this book, What has Columbus, or any one of his descendants, done to Mr. Goodrich, or any of his ancestors, that has inspired so intense an animosity? It does not read like the dispassionate discussion of an historical question relating to a far-distant epoch, but the

angry remonstrance of one who has been personally wronged. The discoverer's very name is a grievance to him, and he will have it that his rightful appellation was Nicolò Griego. No charge is too monstrous to urge against his memory; no language too strong to describe him. Perhaps the following brief paragraph relating to the rebellion of Roldan will be a sufficient, as it is a fair specimen of the style of the book: "The particulars of this rebellion form one of the most disgraceful pages in the history of Columbus; it illustrates alike his treachery, cowardice, and inability to rule, save by the grossest tyranny" (p. 263). It must not be imagined, however, that this list exhausts the evil qualities ascribed to this unfortunate man; for such a list, one must go to works on moral philosophy.

It would be too much to say that no plausible charges are advanced. The facts are perhaps presented in such a way as to afford a presumption of guilt in many cases; but the whole is urged with such heat, and there is such an absence of just criticism and fair reasoning, and the references and citations are so incomplete, that it is impossible to say what is proved, or even what is made probable. For the matter of that, we do not need at the present day to be told that Columbus was no saint, and, on the other hand, we cannot make out that Mr. Goodrich has proved him to be a double-dyed villain. He admits that he existed, and commanded the expedition which discovered America, and here we are content to let the matter rest for the present. There is a little poem of Clough's in which Columbus's sufficient title to the admiration of mankind is well set forth:

> "How in Heaven's name did Columbus get over,
> Is a pure wonder to me, I protest.
> . . . . . .
> What if wise men had, as far back as Ptolemy,
> Judged that the earth, like an orange, was round?
> None of them ever said, 'Come along, follow me,
> Sail to the West, and the East will be found.'
> Many a day before
> Ever they'd come ashore,
> Sadder and wiser men
> They'd have turned back again;
> And that *he* did not, but did cross the sea,
> Is a pure wonder, I must say, to me."

Whoever undertakes to determine just the degree of credit to which Columbus is entitled must, among other things, present a distinct and accurate view of the state of science in his day. In place of this, Mr. Goodrich has filled his introductory chapters with an ill-digested sort of matter relating to Babylon, Egypt, Central American remains, and a number of other things which are equally irrelevant to the subject of his book. Even the interesting chapter upon the discoveries of the Northmen has no very evident bearing upon his argument. The illustrations are many of them curious and interesting; others quite worthless; none more curious, perhaps, than the numerous portraits of Columbus, differing as widely from one another as possible—a better argument, it would seem, for Mr. Goodrich's view than pages of his diatribes. We ought not to neglect to add that, next to Columbus himself, Queen Isabella is the object of the author's most vehement hatred, and that he extols Vespucci as vigorously as he defames his rival.

Singers and Songs of the Liberal Faith: Being Selections of Hymns and other Sacred Poems of the Liberal Church in America, with Biographical Sketches of the Writers, and with Historical and Illustrative Notes. By Alfred P. Putnam. (Boston: Roberts Brothers. 1875. 8vo, pp. xxiii., 556.)—Poetry is happily not confined to any one sect in the Church universal, and the Rev. Mr. Putnam has shown in this volume how widely diffused, if not the genius of poetry, at least the art of hymn-writing has been among the leaders of the Unitarian denomination in America. He gives us between five and six hundred hymns and sacred poems, the production of seventy-three writers. In such a work critical discrimination is not so much to be desired, or expected, as a genial spirit sympathetic with the moral and religious sentiment which it is the object of the writers of hymns to express and to arouse. And in this respect Mr. Putnam is excellently qualified for his task. The lovers of song and poetry, for mere poetry's sake, will not turn to these pages for frequent delight. The conditions under which devotional verse is written are not favorable for the free exercise of the imagination. But readers who are fond of hymns, and who are interested to know how some of the best reputed and most devout men and women of our time have expressed their religious emotions and aspirations, will find here ample satisfaction in the utterances of sincere, if not always inspired faith. There is naturally in such a generous collection a great difference to be observed in the quality and merit of separate pieces; but it is, perhaps, characteristic of the denomination from which these hymns proceed, that the level of excellence in its kind is high, and that the forms of composition and of thought give evidence of culture and refinement. And it is not less characteristic that with much earnestness there is but little of such fervor as sometimes discovers itself in the intense lines of a mediæval Latin hymn, or of such mystical ardor as now and then burns in the verse of Wesley and his followers.

Mr. Putnam's notices of the different writers, though brief, are comprehensive enough to afford all needed information concerning the outward conditions of their lives, and will be, doubtless, of much interest to the readers of the volume. It would have been better to be less lavish in terms of praise and more discriminating in their application. Certainly living writers would prefer, if they possess proper modesty, to have the enumeration of their virtues postponed till the customary occasion for eulogy. Mr. Putnam's over-estimates are not always merely those of an amiable disposition. For instance, it is an error to speak of Mr. Alger's respectable book on the 'Doctrine of a Future Life' as "unquestionably the most learned and elaborate theological work ever produced in this country"; and it is a misuse of terms to speak of Mr. Bryant "as possessing an imagination of marvellous sweep and power."

Prepayment of Postage on the NATION to Subscribers being compulsory after January 1, 1875, the subscription price for a full year will be $5 20 (Clergymen $4 20); or the paper will be sent for 50 weeks for $5 (Clergymen $4).

MESSRS. HENRY HOLT & Co., 25 Bond St., New York, confidently invite the attention of readers of the Nation to Gautier's 'Winter in Russia.' Price $2.

FAMILY PEDIGREES TRACED by Col. J. S. Vivian, Genealogist, who solicits correspondence with American families of English descent. Searches made at the Herald's College, Record Office, Parish Registries, Depositories of Wills, etc. Pedigrees correctly drawn and Arms furnished. Address Col. J. S. VIVIAN, 11 Walpole Street, Chelsea, London, England.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of ten cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

The Four Gospels.

With 132 Full-Page Steel Etchings
By M. BIDA.

Messrs. Cassell, Petter & Galpin have the honor to announce that they will issue in America the English edition of the above magnificent work. It will be published by subscription only, in parts and volumes, and is now ready for issue.

The work has been produced at an outlay of more than two hundred and fifty thousand dollars. The N.Y. *Times* says of it: "There have been no such illustrations to the Bible until now. . . . We earnestly advise our readers to become acquainted with them for themselves."

Prospectuses on application to 596 Broadway, New York, where specimens may be seen and subscriptions registered.

CASSELL, PETTER & GALPIN,
596 Broadway, New York.

THE WEEK IN TRADE AND FINANCE.

DECEMBER 28, 1874.

THE occurrence of two holidays so close together has created a tendency towards greater ease in the money market for call loans, which we quote as ranging between 3 and 4 per cent., with the bulk of business doing at 3½ per cent. The market for commercial paper has been rather sluggish, as is usual just before the new year, and rates are rather lower, prime paper being quoted at 5½ to 6 per cent.

Cable advices report no change in the Bank of England rate of discount, which remains standing at 6 per cent. The Bank gained £187,000 in bullion for the week ending on Thursday last. The Bank of France continues to gain in specie—the gain last week amounting to 1,179,000 francs.

The bank statement on Saturday was another engima to the Street—an unaccountably small decrease in the specie line being shown. The banks lost in total reserve $990,700, and now hold $7,088,100 in excess of the legal requirement.

The following is the statement in detail:

	Dec. 19.	Dec. 26.	Differences.
Loans	$285,409,800	$283,665,300	Dec.. $1,744,500
Specie	13,619,500	13,397,100	Dec.. 222,400
Legal tenders	47,931,700	47,163,400	Dec.. 768,300
Deposits	215,707,800	213,889,600	Dec.. 1,818,200
Circulation	24,731,600	24,610,100	Dec.. 121,500

The following shows the relations between the total reserve and the total liabilities:

	Dec. 19.	Dec. 26.	Differences.
Specie	$13,619,500	$13,397,100	Dec.. $222,400
Legal tenders	47,931,700	47,163,400	Dec.. 768,300
Total re-erve	$61,551,200	$60 560,500	Dec.. $990,700
Reserve required against deposits	53,926,950	53,472,400	
Excess of reserve above legal requirem't,	7,624,250	7,088,100	Dec.. 536,150

The stock market was firm and prices well maintained during the early part of the week. Later the market became weak, and prices on the more speculative shares declined, partly in sympathy with the rapid drop in Wabash, against which a most determined attack was made by the bears, with the effect of carrying the price to-day down below 20. Western Union, Northwestern, and Pacific Mail were very weak, and up to this writing have recovered but a part of the decline of the past few days. The dividend-paying stocks were but slightly affected by the weakness in the speculative list. The question of a dividend on Lake Shore has agitated the Street. A meeting of directors will be held to-morrow to settle the matter. Meantime, the price of the stock has advanced to 80 and above, and seems disposed to remain there until the question of the dividend has been decided. The following are the extreme prices of stocks during the week ending on Saturday: Northwestern 60¾, 58; Rock Island 101¾, 100¼; Delaware, Lackawanna and Western 109¼, 108⅝; Erie 27¼, 26⅝; Lake Shore 81, 78⅜; Michigan Central 82½, 80; Milwaukee and St. Paul 37¼, 35⅛; New York Central 101, 100⅝; Ohio and Michigan 31½, 29⅜; Pacific Mail 37½, 33⅝; Wabash 24½, 22½; Union Pacific 35¾, 33⅜; Western Union 81⅞, 78⅛, ex. dividend.

Government bonds have been in sharp demand, and prices have advanced a full 1½ per cent. on the different January and July 6 per cent. bonds. The only large sellers are the foreign bankers, but the supply derived from that source is insufficient to meet the demands from home investors, which comprise not only the insurance companies and banks, but a large number of persons who prefer to invest their money temporarily in Governments, upon which they can realize promptly, until they see an opportunity to place it in other ways. The following are the closing quotations to-night:

	Bid.	Asked.		Bid.	Asked.
U. S. Currency 6's	117¾	118	Coupon 5-20's, 1865	120⅞	121
Coupon 6's, 1881	121¾	122¼	Coupon 5-20's, 1867	12 ¾	122
Coupon 5-20's, 1862	114⅛	114⅜	Coupon 5-20's, 1868	121¼	122
Coupon 5-20's, 1864	116	116⅛	Coupon 10-40's	114¾	115
Coupon 5-20's, 1865	118	118¼	Coupon 5's, 1881	118⅛	118¾

Railroad bonds are strong and higher. New York Central firsts sold to-day at 114; New York Central 1st Consolidated, recently placed upon the Stock Exchange, at 102⅞; C., B. and Q. 7 per cent. Consolidated at 105¼, having been quoted in the market only since Saturday. Union Pacific mortgages and also those of the Central Pacific are in demand at higher quotations, and sell freely at every call at gradual increasing prices. The demand for bonds after the first of January from investors is likely to carry prices of the better issues to considerably higher prices.

The gold quotations have been confined between 111½, which was the opening price on Monday, and 112⅛. The specie shipments during the week amounted to $2,257,000, principally in gold coin.

FISK & HATCH, Bankers, No. 5 NASSAU ST.

U. S. Government Bonds, coupon and registered, all denominations, bought and sold; also gold coupons, and American and foreign gold and silver coin. Mercantile collections made, and approved accounts received from Banks, Savings Banks, Corporations, and individuals; also U. S. registered interest, coupons, and dividends collected for correspondents and others out of town, and promptly remitted for or placed to credit subject to draft. All marketable stocks and bonds bought and sold on commission. Every branch of our business has our personal attention, and any desired information will always be cheerfully given.
